What's New

This week's report includes a special analysis of preliminary COVID-19-Associated Hospitalizations in Oklahoma from January 2020-June 2021 using inpatient hospital discharge data.

View this report on pages 2-6.

SPECIAL REPORT – PRELIMINARY DATA ON COVID-19-ASSOCIATED HOSPITALIZATIONS FROM INPATIENT HOSPITAL DISCHARGE DATA, JANUARY 2020-JUNE 2021

Hospital discharge data are collected in accordance with the Oklahoma Health Care Information System Act, defined in 63 O.S. (Supp. 1994) § 1-115 et seq. Oklahoma state licensed hospitals are required to submit specific data related to patient discharges from their facilities. The analysis that follows is based on preliminary 2020 and 2021 data through June 30, 2021. At the time of this report, 82% of facilities have completed reporting through June 30, 2021. Data for 2020 is complete at this time however quality assurance procedures are still taking place.

It is important to note that these data come from a different source than the hospitalized case numbers which are routinely included in this report and on the OSDH COVID-19 dashboard. Whether or not a COVID-19 case is reported as hospitalized is dependent on the reporting facility providing this information when submitting case information. It is important to also note that the daily COVID-19-associated hospitalizations that are reported in the Situation Updates come from a different source as well (HHS Protect). These tend to include all COVID-19 associated hospitalizations (principle diagnosis or secondary) as a different level of care, staffing, and PPE could be required to care for these patients.

A search of the available 2020-2021 inpatient discharge data for any records which listed a diagnosis of COVID-19 (ICD-10 code: U07.1) was conducted. Records identified had COVID-19 listed as either the principle diagnosis (Principle COVID-19-Associated Hospitalization) or as one of 15 possible secondary diagnoses (Secondary COVID-19-Associated Hospitalization). If COVID-19 was not identified as a one of the listed discharge diagnosis codes, the record was marked as a Non-COVID-19-Associated Hospitalization.

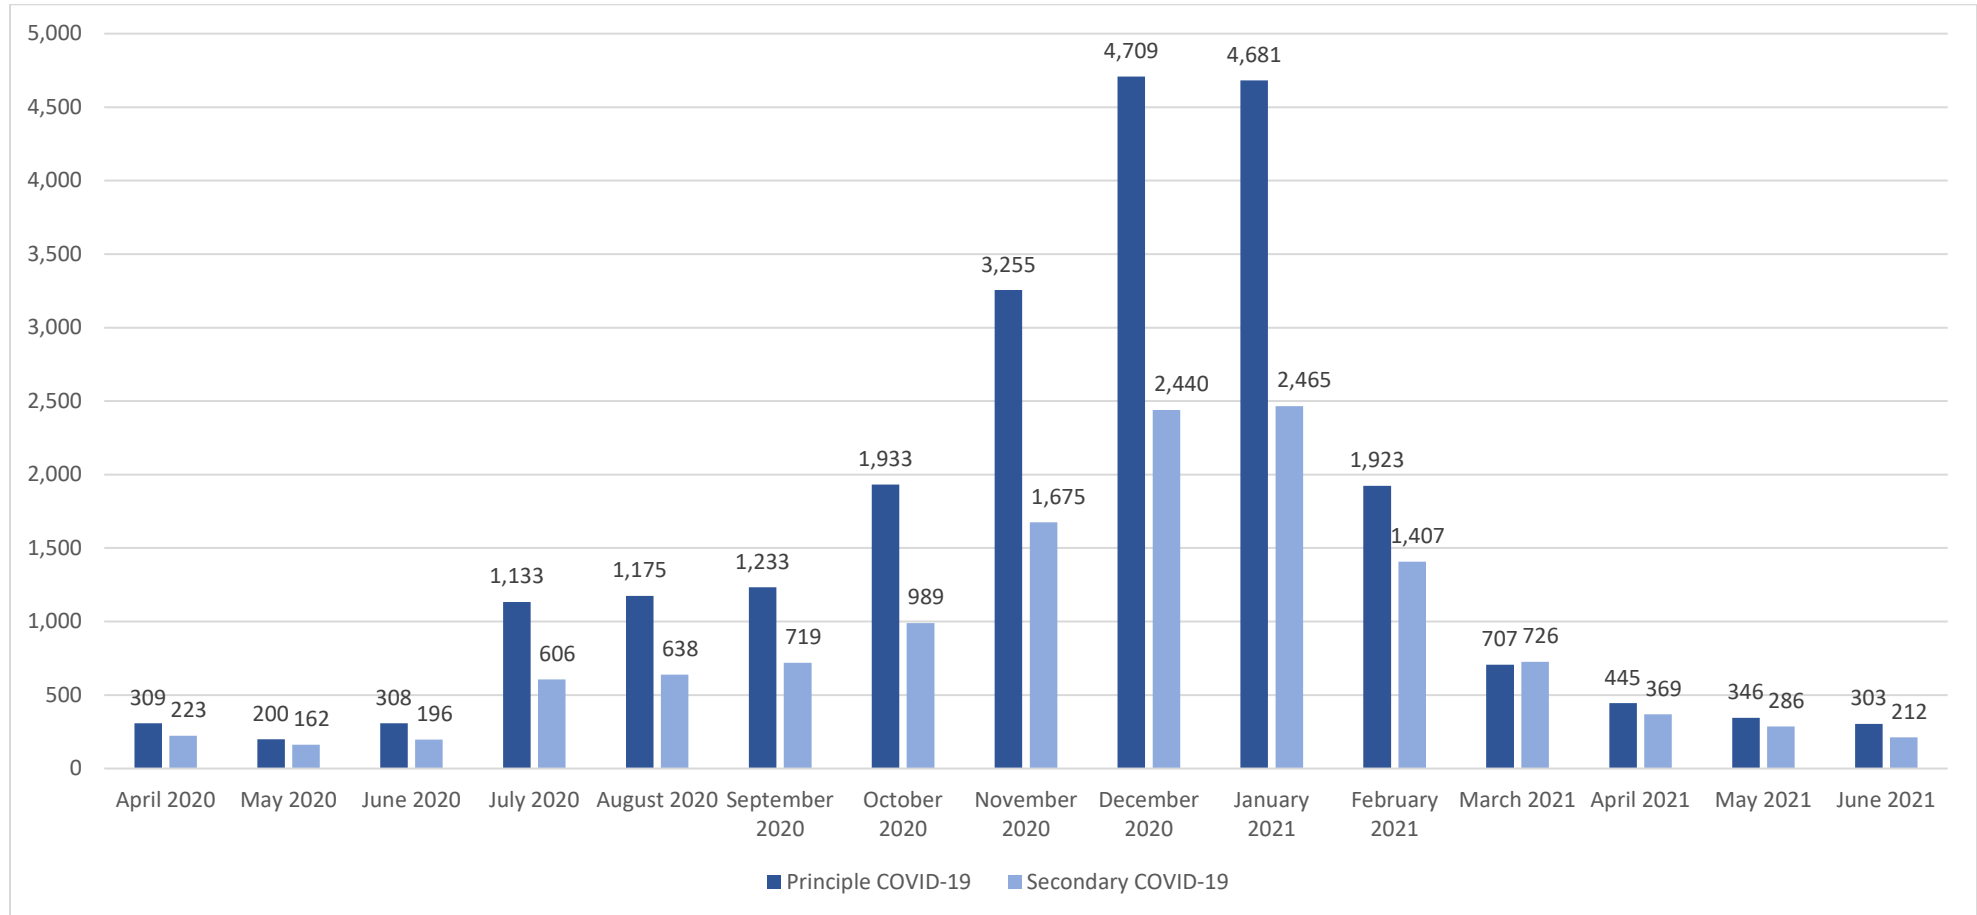

There were a total of **35,773** COVID-19-associated inpatient hospitalizations which account for **5.8%** of all inpatient hospitalizations discharged between January 1, 2020-June 30, 2021 (Table 1). The majority of identified COVID-19-associated hospitalizations had a Principle Diagnosis of COVID-19 (63.3%). These hospitalizations started increasing significantly in October 2020 and peaked in December of 2020. Numbers decreased slightly in January 2021, followed by a steep decline in February that continued through June 2021 (Graph 1). Current hospital census data being reported to HHS, however indicate that hospitalizations are once again increasing in Oklahoma.

Table 1. Preliminary COVID-19-Associated Hospitalizations by Year and Percentage of Total Hospitalizations, January 2020-June 2021

Year of Discharge	Principle COVID-19-Associated Hospitalizations (Percentage of All Hospitalizations)	Secondary COVID-19-Associated Hospitalizations (Percentage of All Hospitalizations)	Total COVID-19-Associated Hospitalizations (Percentage of All Hospitalizations)
2020	14,255 (3.4%)	7,648 (1.8%)	21,903 (5.2%)
2021*	8,405 (4.2%)	5,465 (2.7%)	13,870 (7.0%)
Total	22,660 (3.7%)	13,113 (2.1%)	35,773 (5.8%)

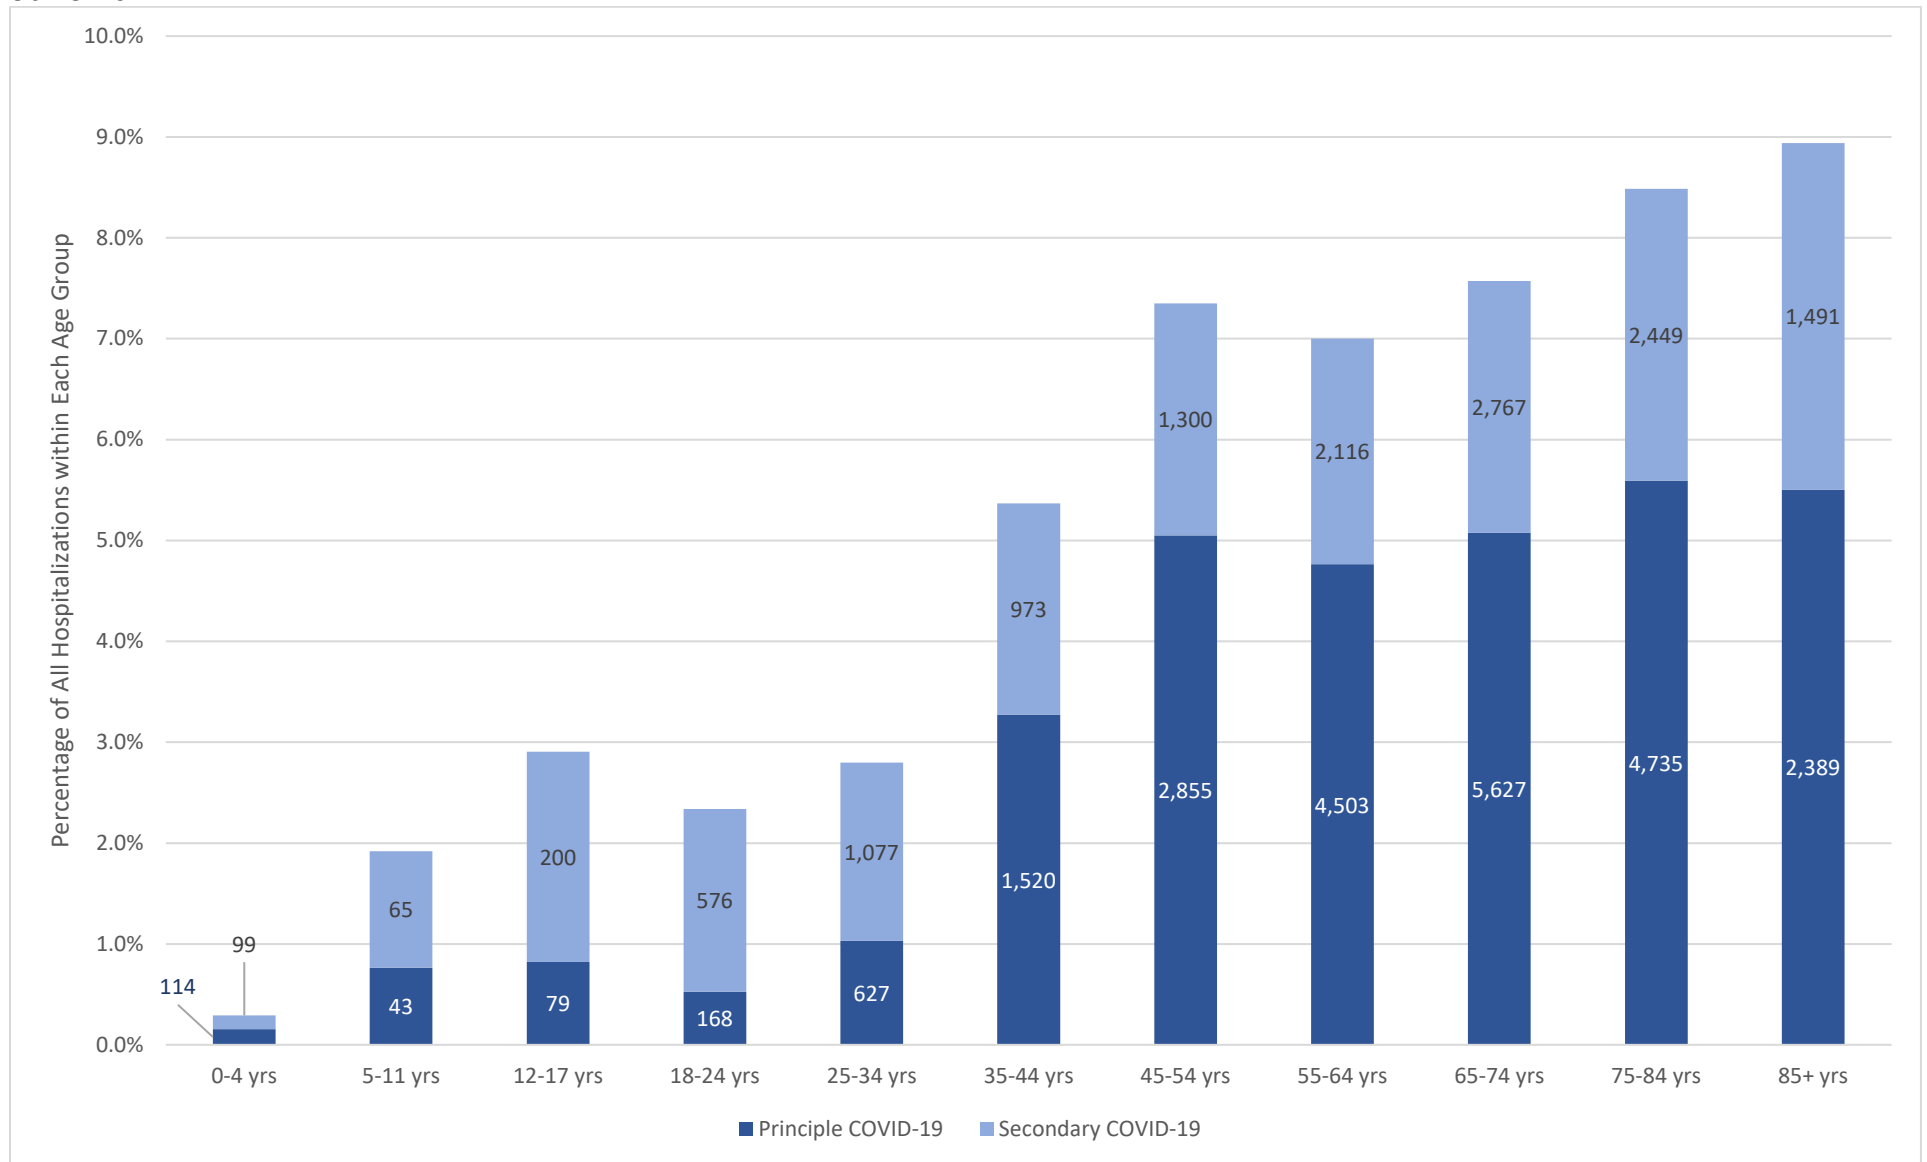

*2021 data is limited to hospitalizations with a discharge date on or before June 30, 2021. At the time of this report, 82% of facilities have completed reporting for this time period.

Graph 1. Preliminary Principle and Secondary COVID-19-Associated Hospitalizations by Month of Discharge, April 2020-June 2021

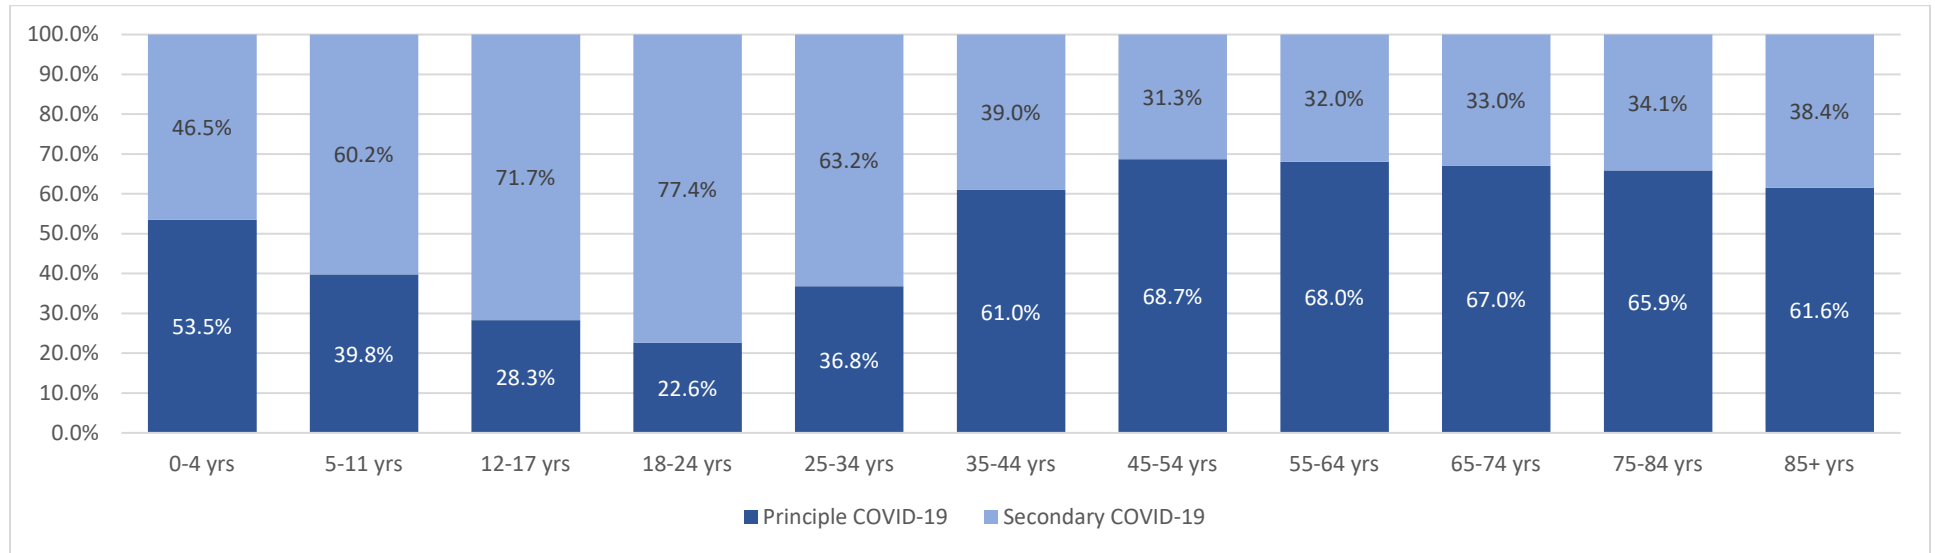

Generally speaking, COVID-19-associated hospitalizations tended to be older than non-COVID-19-associated hospitalizations (Graph 2). COVID-19-associated hospitalizations represented between 7.0 to 8.9% of all hospitalizations in older age groups (45 years to 85+ years) versus less than 3% for younger age groups (0-34 years). The median age for non-COVID-19-associated hospitalizations was 57 years old versus 67 and 65 years old for Principle and Secondary COVID-19-associated hospitalizations.

Graph 2. Percentage of All Hospitalizations within Each Age Group with Principle and Secondary COVID-19, January 2020-June 2021

When looking at the percentages for Principle and Secondary COVID-19-associated hospitalizations, teenagers and young adults (12-24 years old) had a lower percentage with COVID-19 listed as the principle diagnosis (22.6-28.6%) compared to adults 35 years and older (61.0-68.7%) (Graph 3).

Graph 3. Percentage of COVID-19-Associated Hospitalizations within Each Age Group by COVID-19 Diagnosis Type, January 2020-June 2021

The median length of stay (LOS) was longer for COVID-19-associated hospitalizations (Principle COVID-19 LOS 5 days, Secondary COVID-19 LOS 6 days) than non-COVID-19-associated hospitalizations (2 days) (Table 2). This difference may be impacted by the younger age distribution of non-COVID-19-associated hospitalizations (Graph 2). A statistical test for significance was not done at this time.

Table 2. Preliminary Median Length of Stay (LOS) in days for Principle COVID-19, Secondary COVID-19 and Non-COVID-19-Associated Hospitalizations, January 2020-June 2021

Year of Discharge	Median LOS for Principle COVID-19-Associated Hospitalizations (Interquartile Range)	Median LOS Secondary COVID-19-Associated Hospitalizations (Interquartile Range)	Median LOS for Non-COVID-19-Associated Hospitalizations (Interquartile Range)
2020	5 days (3-9 days)	5 days (3-11 days)	3 days (2-6 days)
2021*	6 days (4-12 days)	6 days (3-12 days)	3 days (2-6 days)
Total	5 days (3-10 days)	6 days (3-12 days)	2 days (2-6 days)

*2021 data is limited to hospitalizations with a discharge date on or before June 30, 2021. At the time of this report, 82% of facilities have completed reporting for this time period.

For secondary COVID-19-associated hospitalizations, the most frequently reported principle diagnoses were:

- Other Specified Sepsis (n=4,196, 32.0%)
- Sepsis, Unspecified Organism (n=1,136, 8.7%) and
- Other Viral Diseases Complicating Childbirth (n= 364, 2.8%).

The median LOS for hospitalizations with a principle diagnosis of Other Specified Sepsis, and Sepsis, Unspecified Organism was longer when combined with a secondary diagnosis of COVID-19 compared to hospitalizations without a secondary diagnosis of COVID-19 (Table 3).

There was no difference in median LOS observed for those with a principle diagnosis of Other Viral Diseases Complicating Childbirth with or without a secondary diagnosis of COVID-19. This may indicate that these COVID-19-associated hospitalizations were likely incidental COVID-19 cases which were captured as a result of routine COVID-19 testing administered when women are admitted for childbirth. It is important to note however that these hospitalizations only represent 1.0% (n= 364) of all COVID-19-associated hospitalizations identified for this analysis.

When comparing the LOS for these three conditions to historical data from 2016-2019, the LOS was similar to the observed LOS for non-COVID-19-associated hospitalizations (Table 3). Statistical tests for significance were not done at this time.

Table 3. Preliminary Median LOS for Hospitalizations with Top 3 Most Frequently Reported Principle Diagnoses that were Associated with Secondary COVID-19 Hospitalization Compared to Non-COVID-19-Associated Hospitalizations* and Historical Data**

Principle Diagnosis (ICD-10 Code)	Median LOS for Secondary COVID-19-Associated Hospitalizations (Interquartile Range)	Median LOS for Non-COVID Hospitalizations (Interquartile Range)	Median LOS for All Hospitalizations Historical Data from 2016-2019 (Interquartile Range)
Other Specified Sepsis (A4189)	8 days (4-14 days)	5 days (3-10 days)	5 days (3-9 days)
Sepsis, unspecified organism (A419)	7 days (4-14 days)	5 days (3-8 days)	5 days (3-8 days)
Other viral diseases complicating childbirth (O9852)	2 days (2-3 days)	2 days (1-3 days)	2 days (2-3 days)

*January 2020-June 2021; 2021 data is limited to hospitalizations with a discharge date on or before June 30, 2021. At the time of this report, 82% of facilities have completed reporting for this time period.

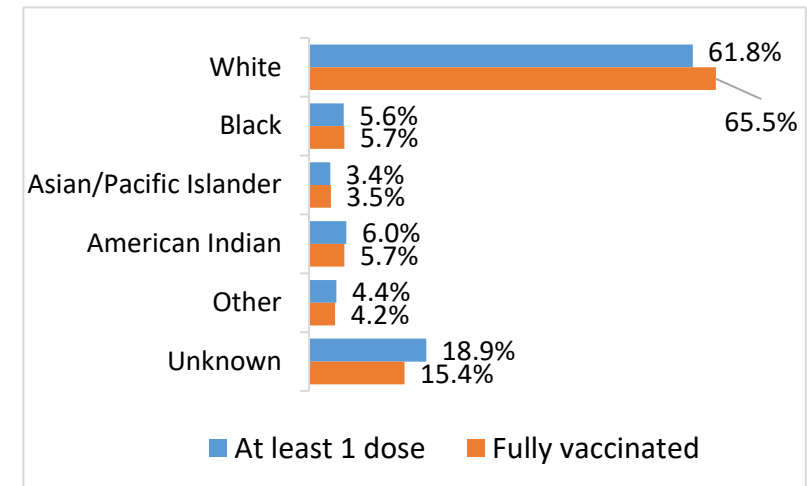

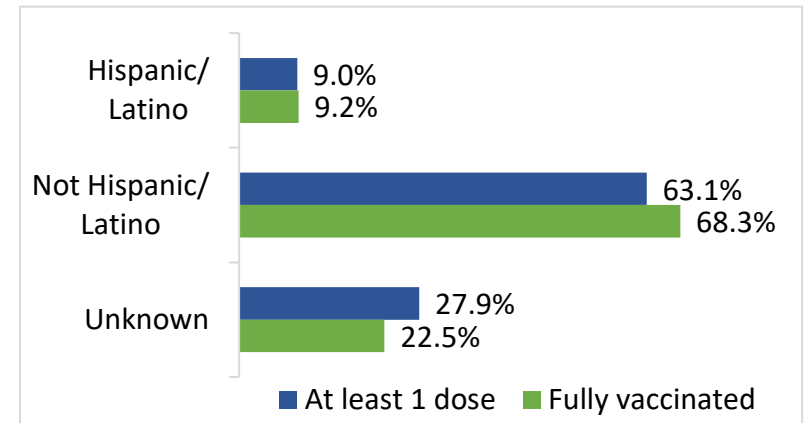

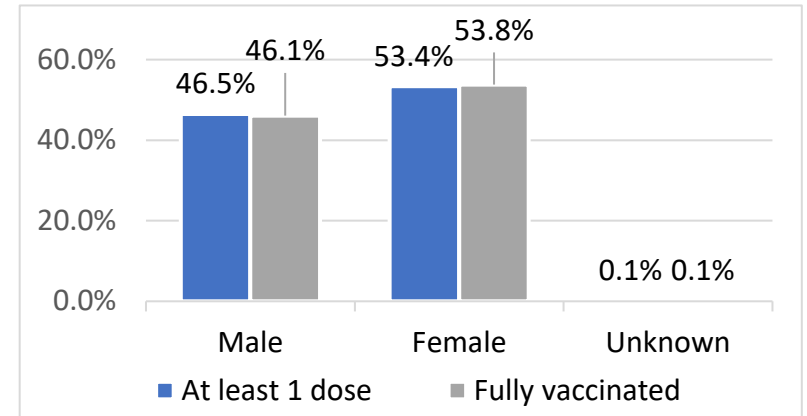

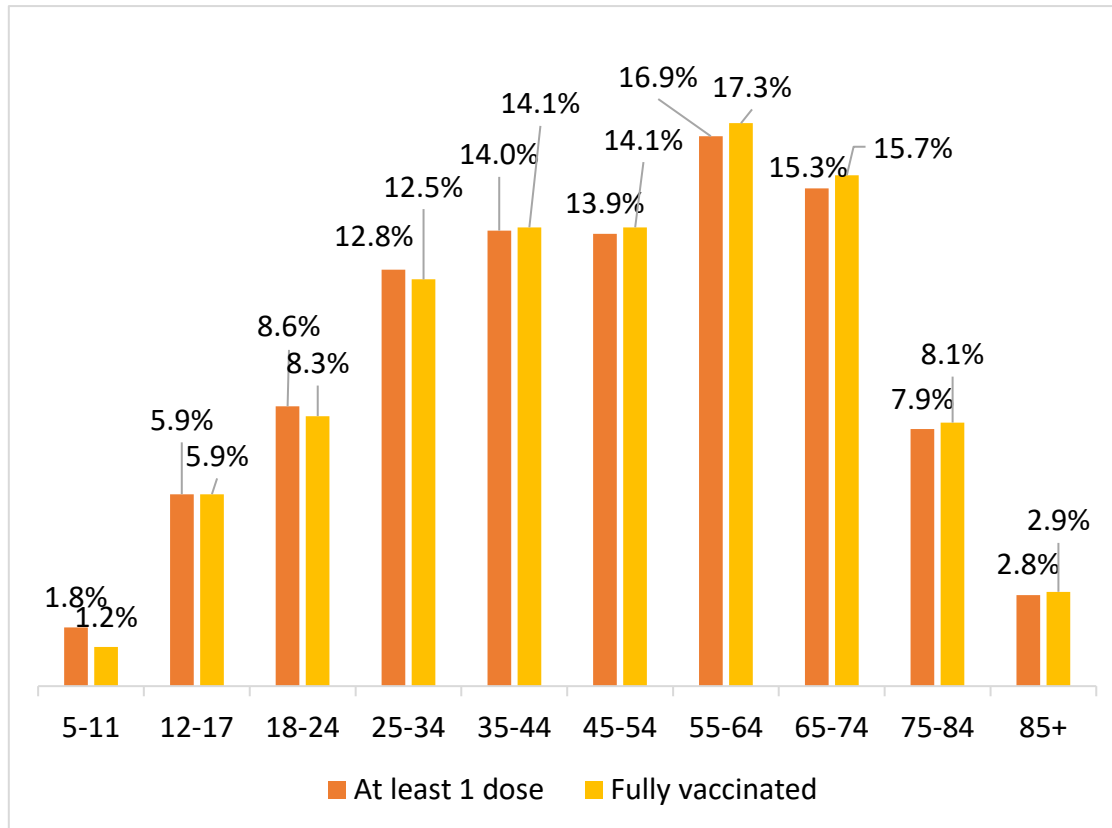

**2016-2019 data

As previously mentioned this report is based on preliminary data and numbers may be subject to change. Due to this, caution should be used before drawing any conclusions from this data.

COVID-19 VARIANT STRAINS

Genetic variants of SARS-CoV-2 have been emerging and circulating around the world throughout the COVID-19 pandemic.

- A variant has one or more mutations that differentiate it from other variants in circulation. As expected, multiple variants of SARS-CoV-2 have been documented in the United States and globally throughout this pandemic.

*Fully Vaccinated Vaccine breakthrough cases are defined as an individual with a COVID-19 positive laboratory results (PCR/Antigen) and documentation of COVID-19 vaccination that meets the definition of fully vaccinated. (Individuals are considered fully vaccinated ≥ 2 weeks after receiving the last dose in the COVID-19 vaccine series.)

**Partially Vaccinated Vaccine breakthrough cases is defined as an individual with a COVID-19 positive laboratory result (PCR/Antigen) and documentation of one COVID-19 vaccination. (Individuals are considered partially vaccinated ≥ 2 weeks after receiving the first dose in a 2-dose COVID-19 vaccine series.)

***Numbers based on hospital admission date within the past 30 days as reported in the OSDH PHIDDO system.
