

2021 Oklahoma Minority Health at a Glance

State Population Estimate: 3,986,639¹

OVERALL HEALTH

In 2021, Oklahoma’s Overall Health was ranked as **46th** (up from 47th in 2020) in the United States; New Hampshire was the healthiest state and Louisiana was the least healthy state (see Figure 1)².

Figure 1: State Ranking Map, 2021

Overall State Strengths ²	Overall State Challenges ²
<ul style="list-style-type: none"> • Low prevalence of excessive drinking • Low prevalence of high-risk HIV behaviors • High supply of mental health providers 	<ul style="list-style-type: none"> • High premature death rate • High prevalence of non-medical drug use • High percentage of households with food insecurity

The ranking for senior health was **46th** in 2021, with strengths in low prevalence of excessive drinking, high flu vaccination coverage, low prevalence of severe housing problems, and challenges in High prevalence of physical inactivity, high prevalence of food insecurity, high early death rate.

The ranking for Health of Women and Children was **47th** in 2021, with strengths in low prevalence of excessive drinking among women, low racial disparity among children in poverty, low prevalence of illicit drug use among youth, and challenges in high infant mortality rate, high teen birth rate, low prevalence of exercise among women.

– Prenatal Care	15
– Low Birth Weight	16
– Teen Births	16
EDUCATION	17

NOTES:

- *Data for categories above are reflective of 2020 unless otherwise noted.*
- *In charts below, H → Hispanic, NH → Non-Hispanic, Multi → Multi-racial, AmIndian → American Indian, AsianPI → Asian and Pacific Islander.*

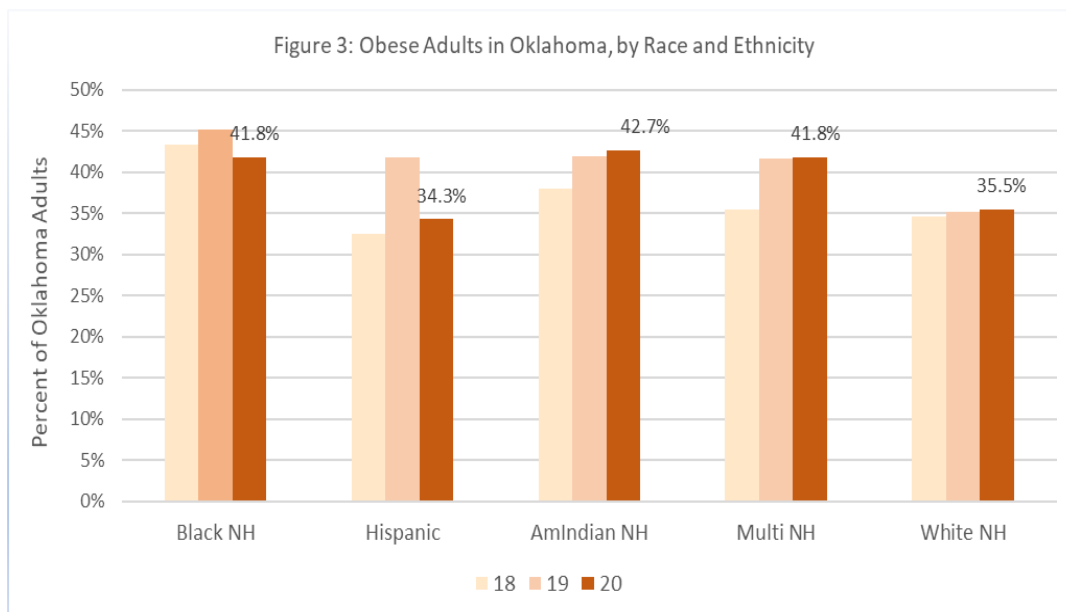

SMOKING

In 2020, the prevalence of adult smokers (aged 18 years or older) was **highest** among **non-Hispanic American Indian** adults (26.7%, down from 31.7% in 2019; see Figure 2).³

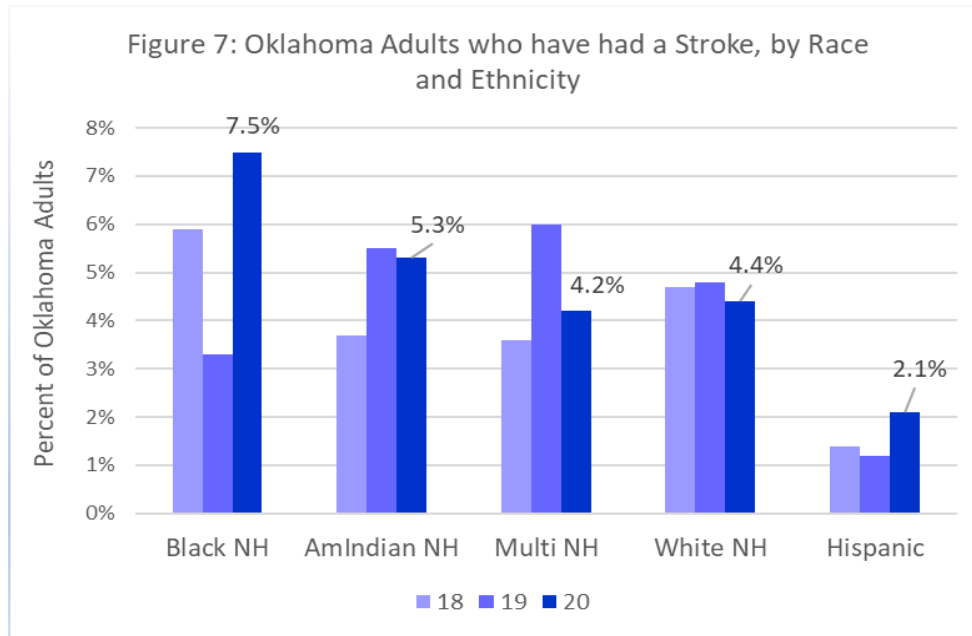

OBESITY

In 2020, the percent of obese adults (aged 18 years or older; Body Mass Index of 30 or more) was **highest** among **non-Hispanic American Indian** adults (42.7%, up from 41.9% in 2019; see Figure 3).³

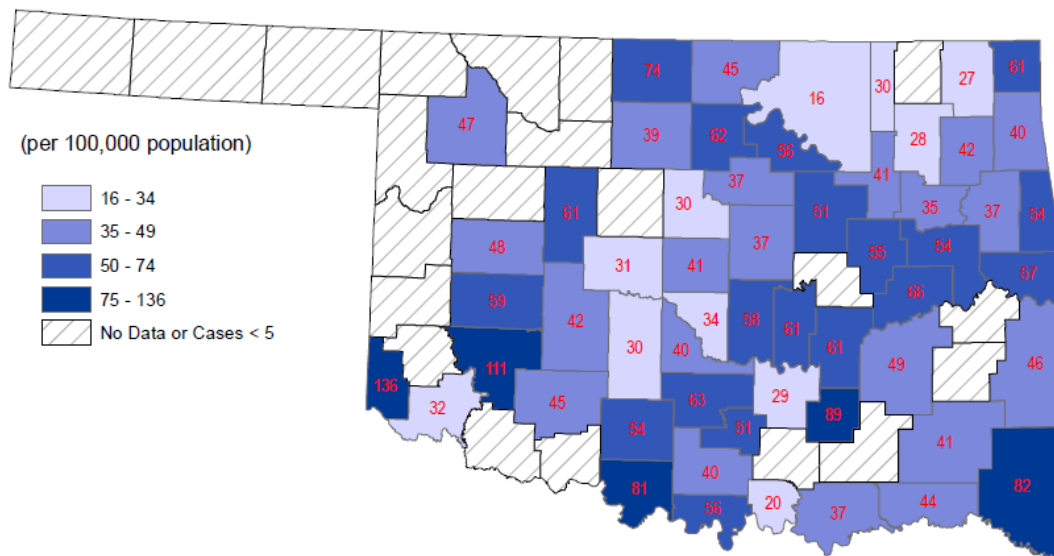

STROKE

In 2020, the percent of Oklahoma adults (aged 18 years or older) who had ever had a stroke was **highest** among **non-Hispanic Blacks** (7.5%, up from 3.3% in 2019) and consistently lowest among Hispanic individuals (see Figure 7).³

In 2020, **non-Hispanic Blacks** had the **highest** age-adjusted cerebrovascular disease death rate (61.0 deaths/100,000 population, up from 47.0 in 2019), followed by non-Hispanic American Indian (50.5), and non-Hispanic Whites (39.5); Hispanic Whites had the lowest rate (25.8). Osage County had the lowest age-adjusted stroke death rate (16.4) and Harmon County had the highest (135.8; see Figure 8).⁴

Figure 8: Age-Adjusted Stroke Death Rates in Oklahoma, by County, 2020

CANCER

(2018 was the most recent year that data is available via OK2Share for all types of cancer **incidence**, as of the date this report was generated.)

In 2018, **non-Hispanic Whites** had the **highest** age-adjusted incidence rate of cancer (489.8 new cases/100,000 population, up from 487.4 in 2017), while Hispanic American Indians had the lowest (134; see Figure 11).⁵ In 2020, **Hispanic American Indian** adults had the highest age-adjusted death rates from cancer (228 deaths/100,000 population, up from 126.9 in 2019; see Figure 12), followed closely by Hispanic Blacks (215.7, down from 296.2 in 2019). Beaver County had the lowest rate (131.9) and Grant County the highest (265.5, see Figure 13).⁴

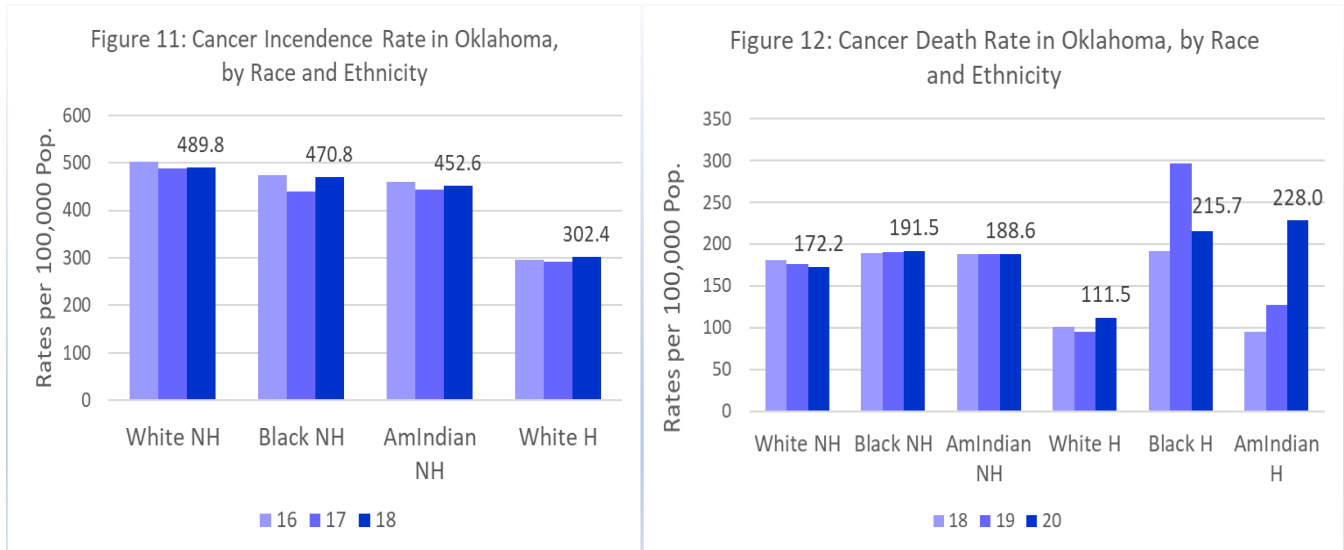

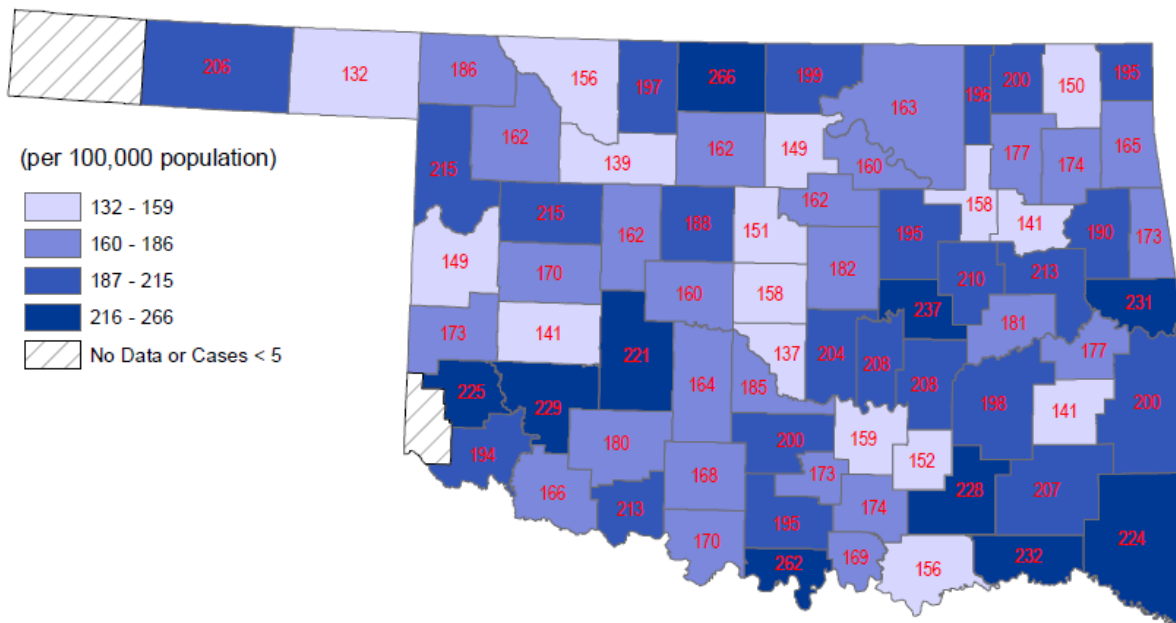

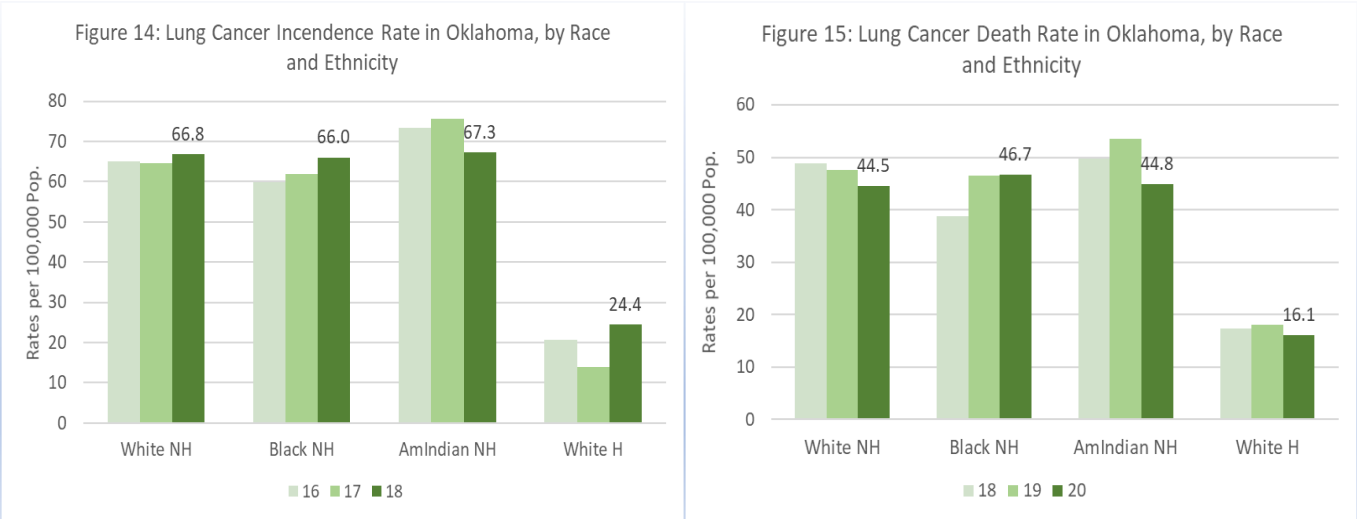

Figure 13: Age-Adjusted Death Rates for Cancer in Oklahoma, by County, 2020

LUNG CANCER

In 2018, **non-Hispanic American Indians** had the **highest** age-adjusted incidence rate of lung cancer (67.3 new cases/100,000 population, down from 75.6 in 2017), while Hispanic Whites consistently had a much lower rate (24.4; see Figure 14).⁵ In 2020, **non-Hispanic Blacks** had the **highest** age-adjusted death rate from lung cancer (46.7 deaths/100,000 population, slightly up from 46.5 in 2019), Hispanic Whites consistently stayed the lowest (16.1; see Figure 15).⁴

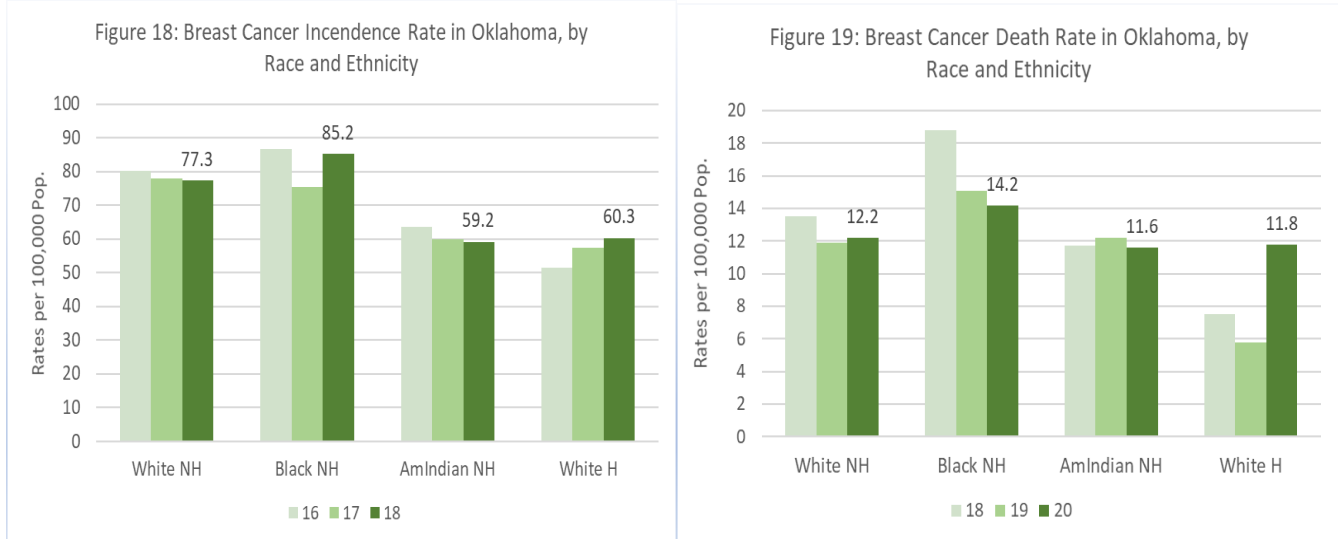

COLON CANCER

In 2018, **non-Hispanic American Indians** (30.2 new cases/100,000 population, down from 32.2 in 2017) had the **highest** age-adjusted incidence rates for colon cancer (excluding rectum; see Figure 16).⁵ In 2020, **non-Hispanic American Indians** had the **highest** age-adjusted death rate (20.8 deaths/100,000 population, down from 21.1 in 2019; see Figure 17). Hispanic Whites had the lowest incidence and death rates.⁴

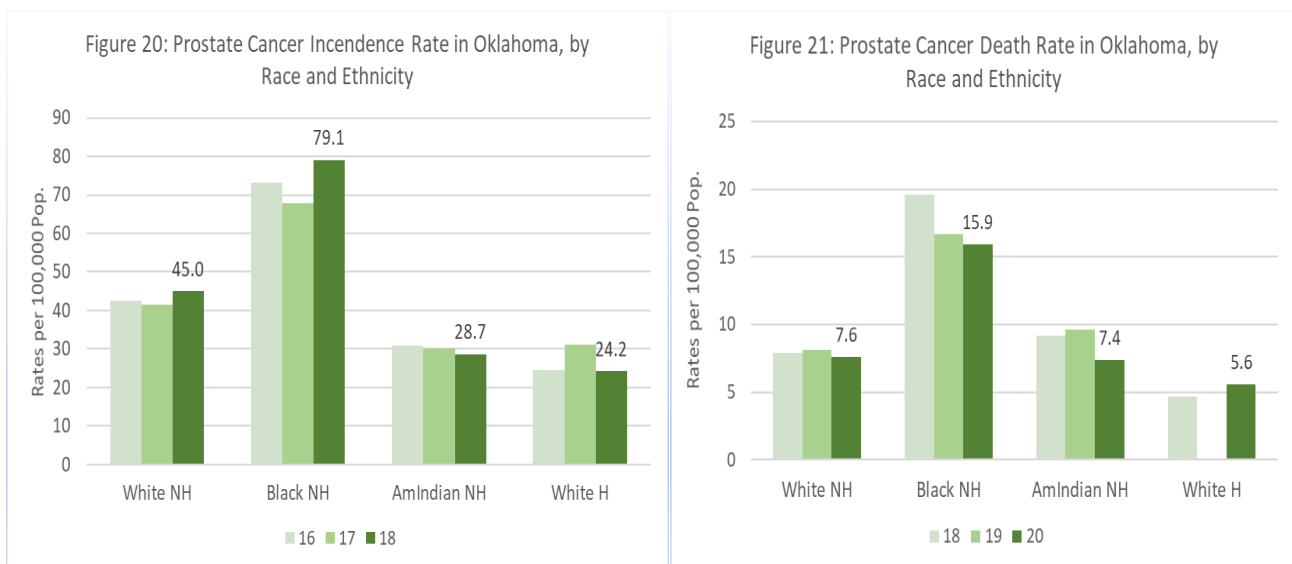

BREAST CANCER

In 2018, **non-Hispanic Black** (85.2 new cases/100,000 population, up from 75.3 in 2017) Oklahoma adults had the **highest** age-adjusted incidence rates for breast cancer (see Figure 18).⁵ In 2020, **non-Hispanic Blacks** had the **highest** age-adjusted death rate (14.2 deaths/100,000 population, down from 15.1 in 2019) from breast cancer (see Figure 19).⁴

PROSTATE CANCER

In 2018, **non-Hispanic Blacks** had the **highest** age-adjusted incidence of prostate cancer (79.1 new cases/100,000 population, down from 68.8 in 2017)⁵. Hispanic Whites had the lowest incidence rates (see Figure 20). In 2020, **non-Hispanic Blacks** had the **highest** age-adjusted death rate from prostate cancer (15.9 deaths/100,000 population, down from 16.7 in 2019; see Figure 21).⁴ Hispanic Whites had the lowest prostate cancer death rates.

ALZHEIMER'S DISEASE

In 2020, **non-Hispanic Whites** had the **highest** age-adjusted death rate (39.8 deaths/100,000 population, up from 39.6 in 2019) for Alzheimer's disease among Oklahoma adults (see Figure 22). McIntosh (15.4) counties had the lowest death rates, while Kiowa had the highest (82; see Figure 23).⁴

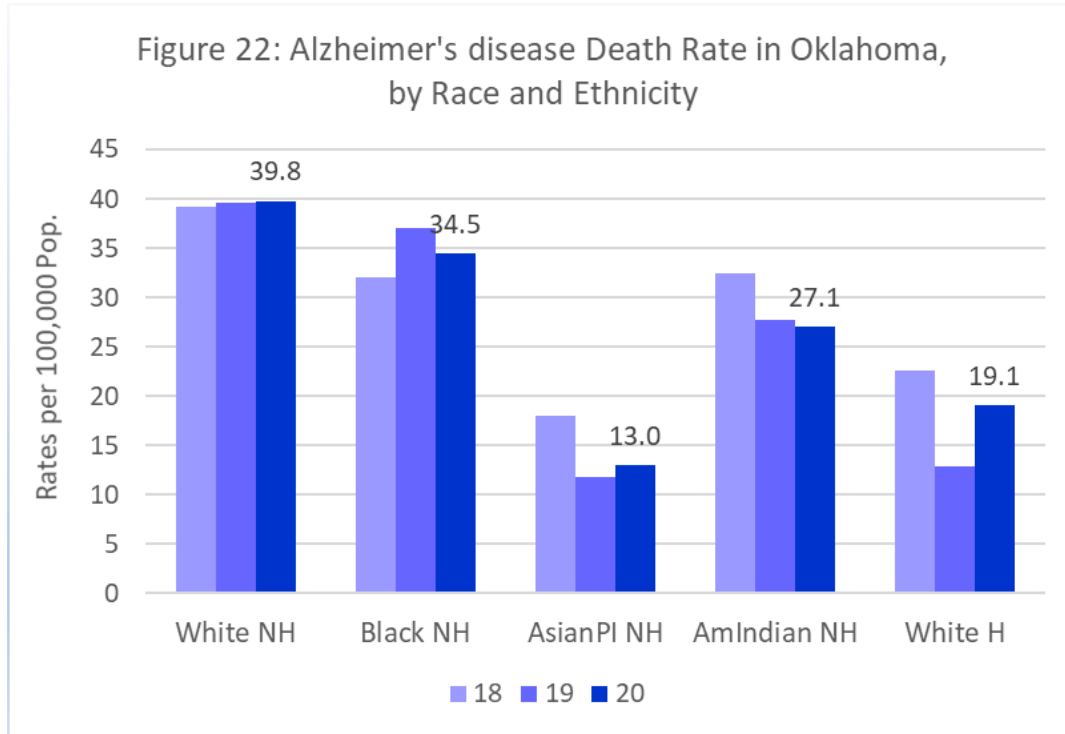

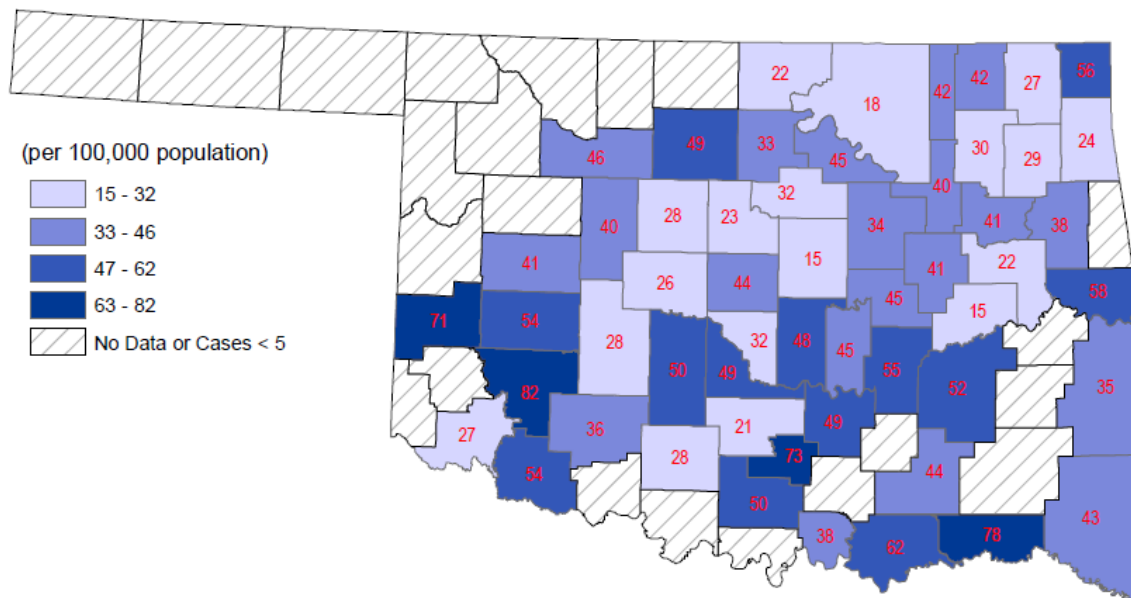

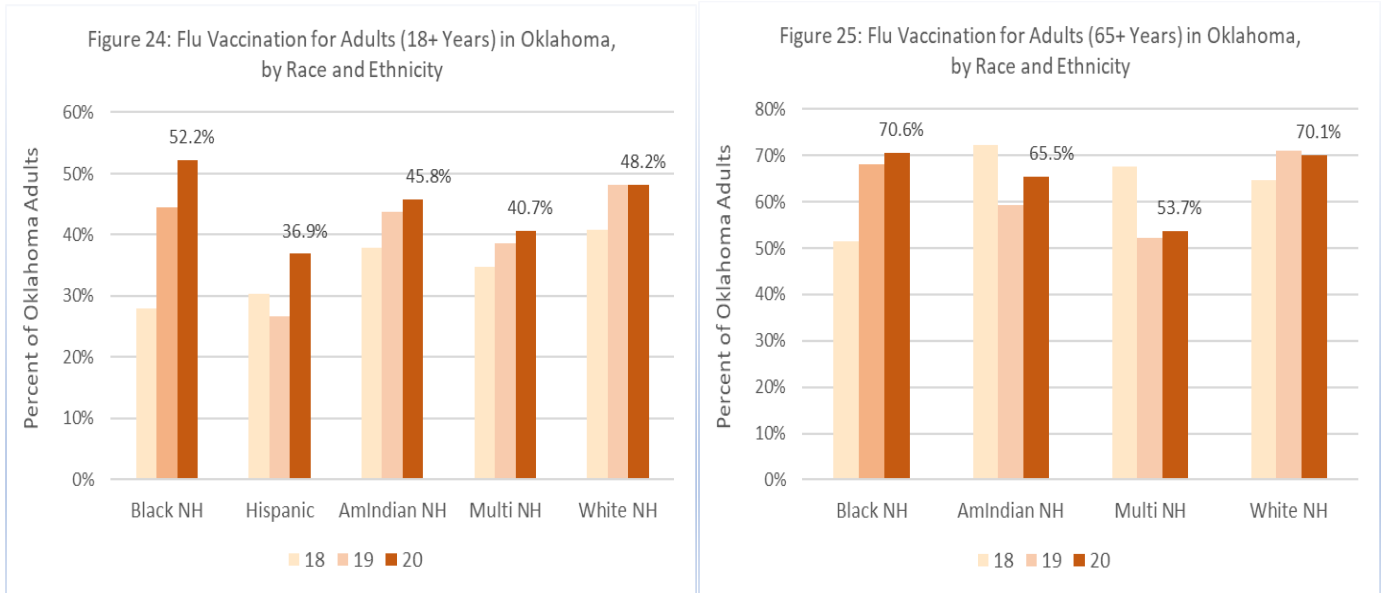

Figure 23: Age-Adjusted Death Rates for Alzheimer's Disease in Oklahoma, by County, 2020

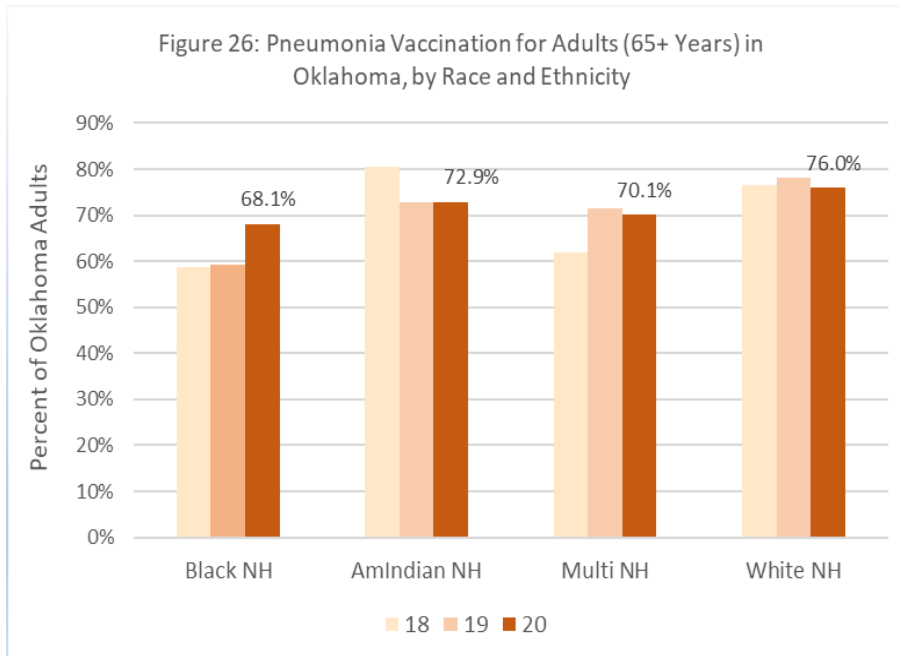

FLU AND PNEUMONIA

In 2020, flu vaccination rate (within a 12-month period) among adults was lowest among Hispanics (36.9%, up from 26.7% in 2019) and **highest** among **non-Hispanic Blacks** (52.2%) (see Figure 24). Among seniors (aged 65 years and older), flu vaccination within a 12-month period was **highest** for **non-Hispanic Blacks** (70.6%), closely followed by non-Hispanic Whites (70.1%) and lowest for non-Hispanic multiracial (53.7%, up from 52.2% in 2019; see Figure 25).

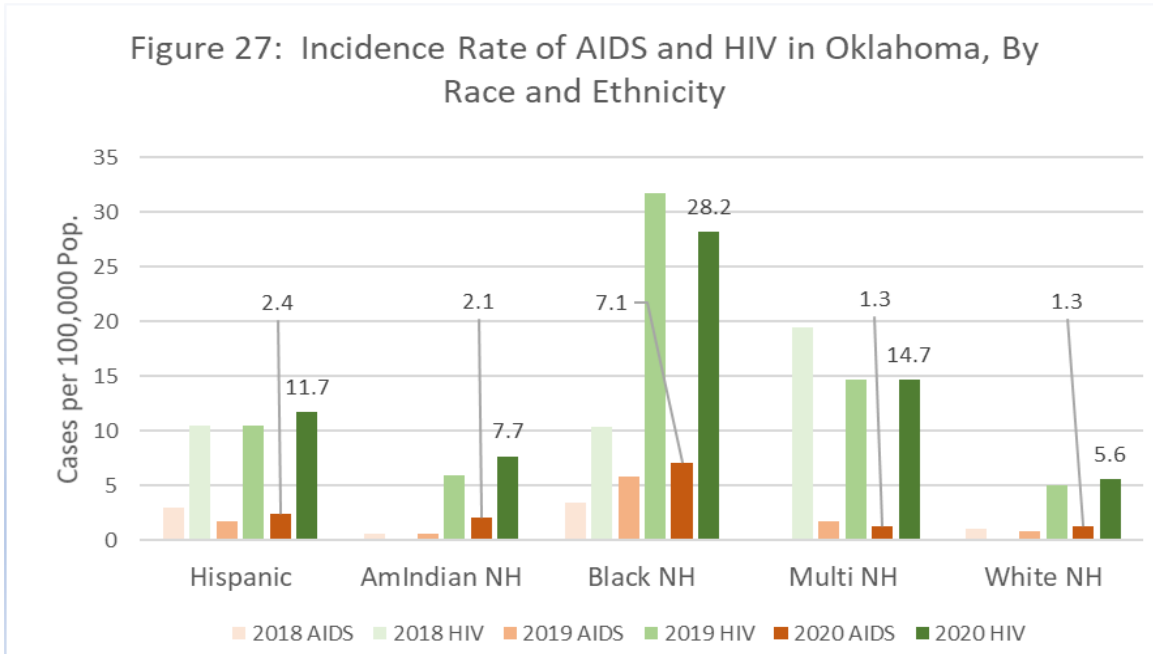

Non-Hispanic Blacks (68.1%, up from 59.3% in 2019) had the lowest rates of pneumonia vaccinations (aged 65 years and older), while **non-Hispanic Whites** had the **highest** (76.0%; see Figure 26). There were no data for flu or pneumonia vaccinations for Hispanics aged 65 and older.³

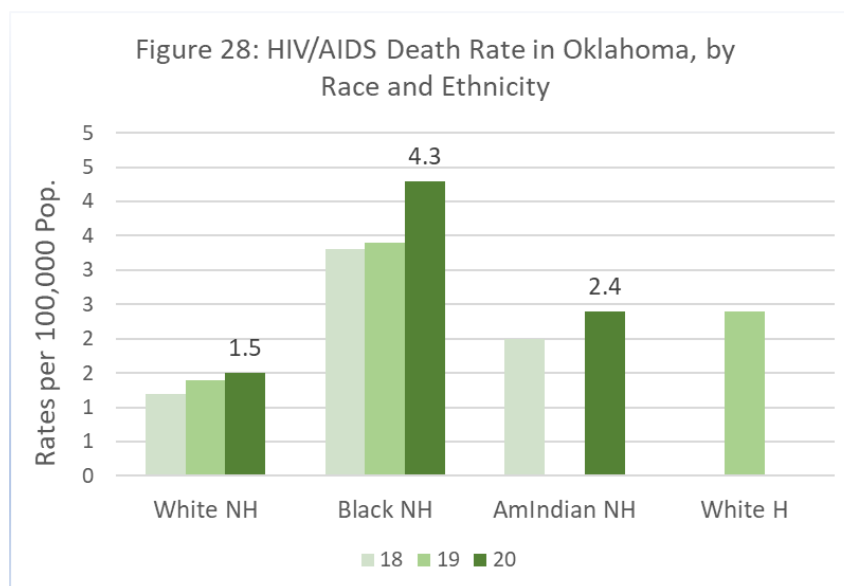

HIV/AIDS

In 2020, **non-Hispanic Blacks** had the **highest** rate of newly diagnosed HIV cases (28.2 cases per 100,000 population) and newly diagnosed AIDS cases among newly diagnosed persons with HIV (7.1, see Figure 27). **Blacks** also had the **highest** rate of people living with HIV at 600.5 cases (per 100,000 population), followed by Hispanics (181.4), Multi Race individuals (169.4), Whites (142.4), Asian/Pacific Islanders the lowest (124.5), and American Indians (117.4)⁶.

In 2020, **non-Hispanic Blacks** had the **highest** age-adjusted HIV death rate (4.3 deaths/100,000 population, up from 3.4 in 2019; see Figure 28).⁴ There were no data for HIV/AIDS death rates for Hispanic individuals between 2018 and 2020 (except Hispanic Whites in 2019 at 2.4), suggesting there were fewer than five cases per year. Altogether, Oklahoma’s Black adults were disproportionately affected by HIV/AIDS for new diagnoses, living cases, and deaths.

UNINTENTIONAL INJURY DEATHS

In 2020, **non-Hispanic American Indians** had the **highest** age-adjusted death rate due to unintentional injuries (81.6 deaths/100,000 population, up from 69.1 in 2019), while non-Hispanic Asian/Pacific Islanders had the lowest (25.6; see Figure 29).

Wagoner County had the lowest rate (35.3), while Seminole County and Blaine County (both 132.1) had the highest (see Figure 30).⁴

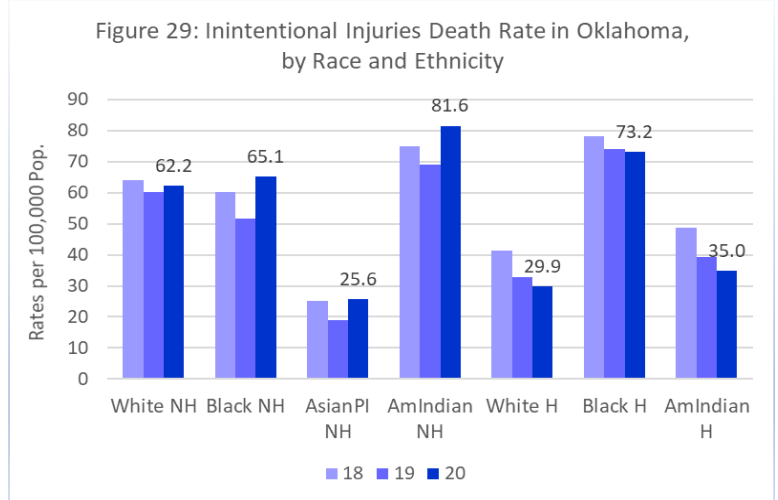

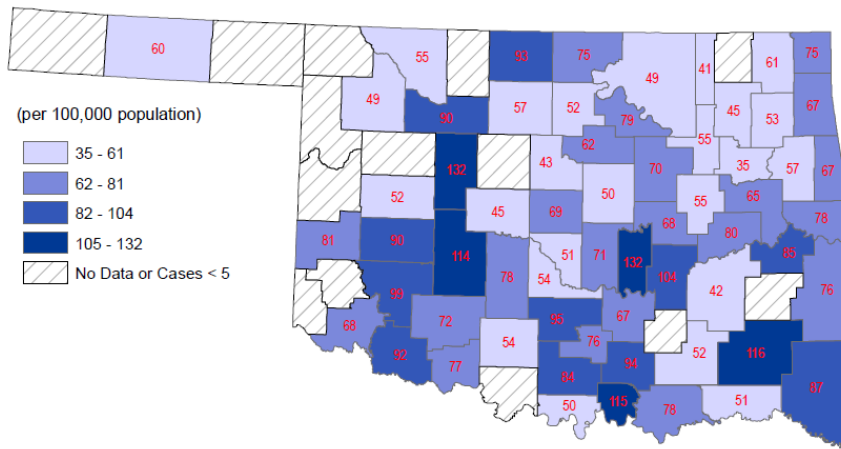

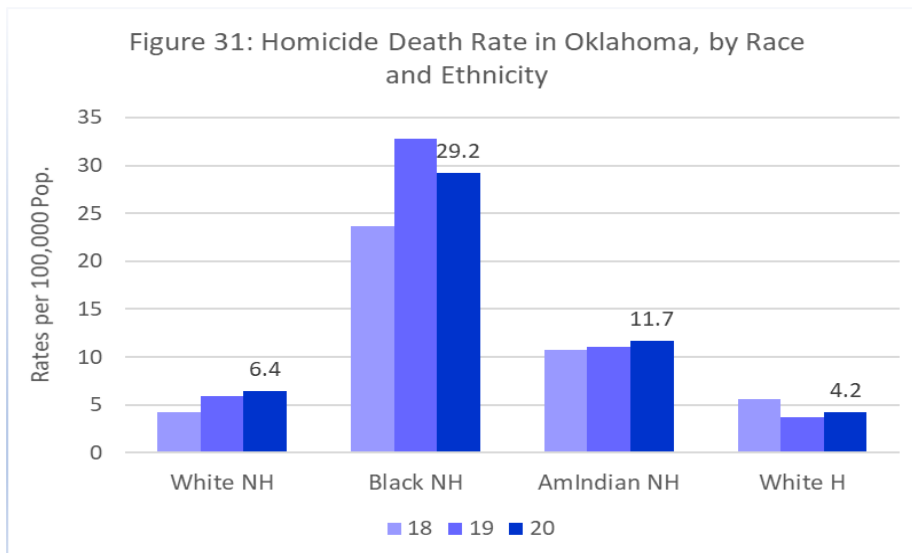

Figure 30: Age-Adjusted Death Rate for Unintentional Injuries in Oklahoma, by County, 2020

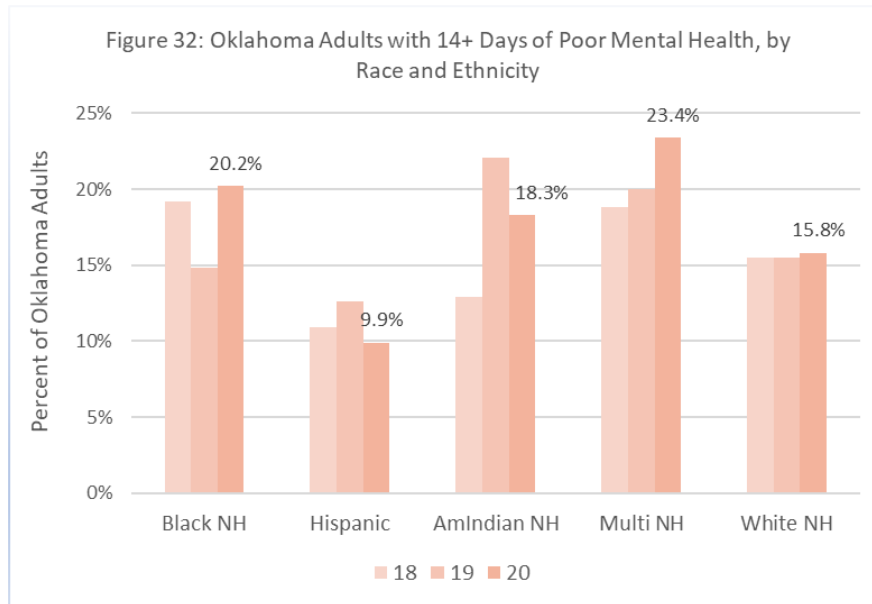

HOMICIDE DEATHS

In 2020, **non-Hispanic Blacks** had a much **higher** age-adjusted rate of homicide deaths (29.2 deaths/100,000 population, down from 32.8 in 2019) compared to other races/ethnicities, Hispanic Whites had the lowest (see Figure 31).⁴

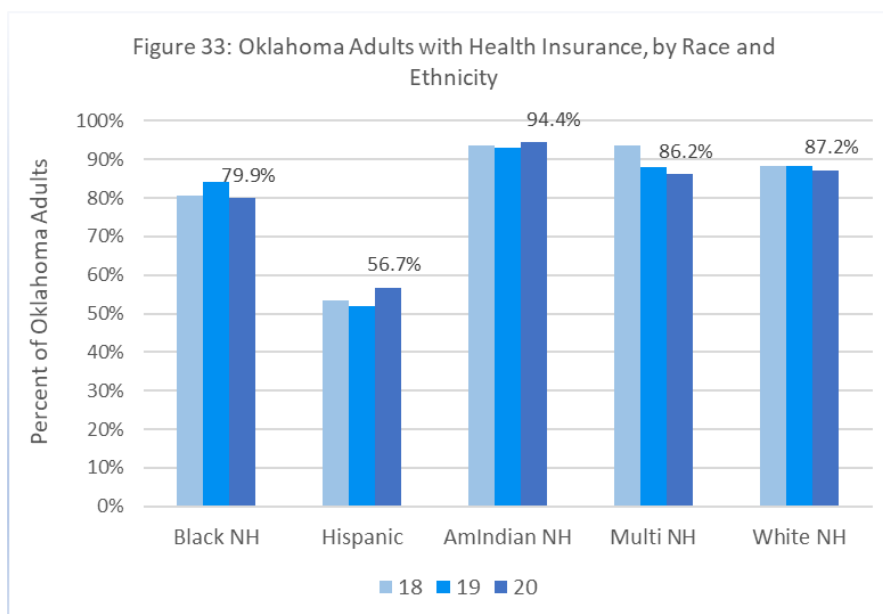

POOR MENTAL HEALTH

In 2020, the percentage of adults with 14 or more days per month of poor mental health was **highest** for **non-Hispanic multiracial** individuals (23.4%, up from 20.0% in 2019), and lowest for Hispanic (9.9%, down from 12.6%, see Figure 32).³

INSURANCE

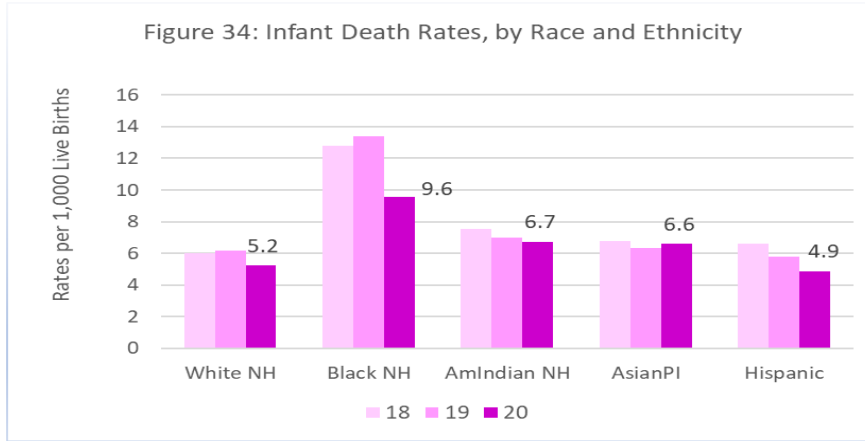

In 2020, the lowest percentage of adults (aged 18 years and older) with health insurance was for Hispanics (56.7%, up from 51.9% in 2019s); **non-Hispanic American Indian** individuals had the **highest** percentage covered by health insurance (94.4%, up from 93.1% in 2019, see Figure 33).³

CHILD HEALTH

INFANT MORTALITY

In 2020, **non-Hispanic Black** mothers had the **highest** infant mortality rate (9.6 deaths/1,000 live births, down from 13.4 in 2019), while non-Hispanic White mothers had the lowest (6.37; see Figure 34).⁴

PRENATAL CARE

In 2020, **White** mothers had the **highest** percentage of first trimester prenatal care (73.6%), while Asian/Pacific Islanders mothers had the lowest (63.2%, down from 62.5% in 2019; see Figure 35). Le Flore County had the lowest percentage of mothers receiving first trimester prenatal care (54.0%), while Murray County had the highest (87%; see Figure 36).⁴

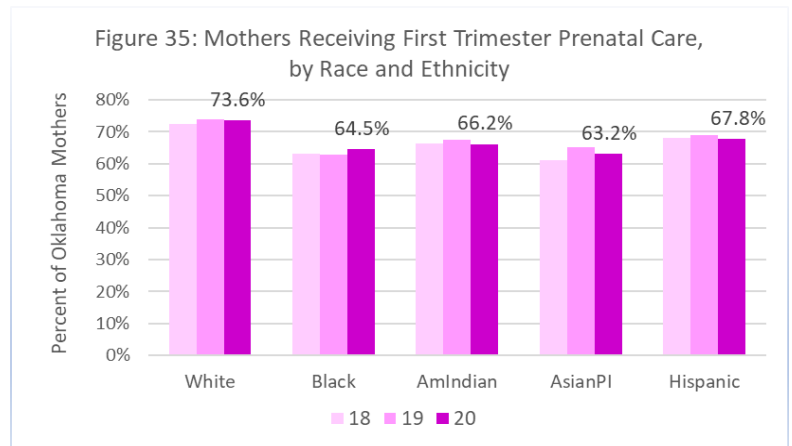

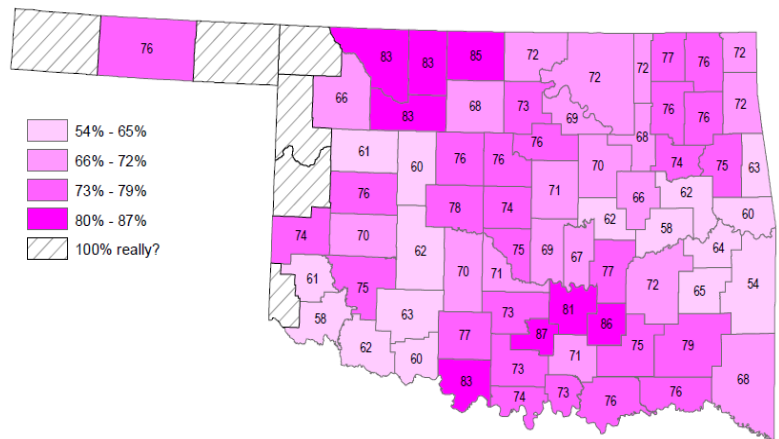

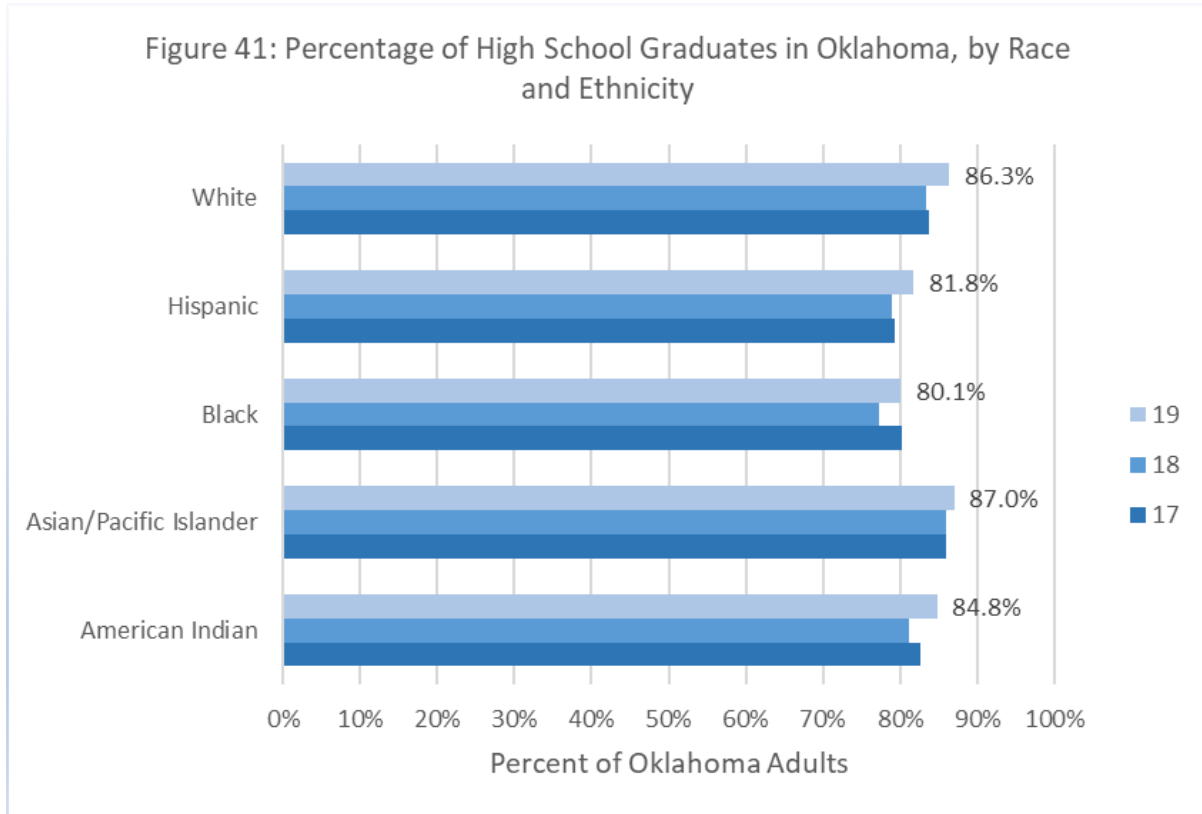

Figure 36: Oklahoma Mothers with First Trimester Prenatal Care, by County, 2020 (in %)

EDUCATION

In 2019, the most recent school year with data available, Black Oklahomans were the lowest percentage to graduate from high school (80.1%, up from 77.2% in 2018), while **Asian/Pacific Islanders** had the **highest** (see Figure 41).²

Endnotes

(Majority of data were accessed and gathered around January 2022, only those for infant mortality and HIV/AIDS around March 2022)

<https://www.americashealthrankings.org/explore/annual/measure/Outcomes/state/ALL?edition-year=2021>

Rankings under Overall Health are based on Overall values provided in 2021 Reports by America's Health Rankings, as advised by Aaron Clark, Epidemiologist, Arundel Metrics, Inc. "Thank you for your interest in America's Health Rankings. America's Health Rankings chose not to include overall state rankings out of the shared understanding that the country faces ongoing challenges due to the COVID-19 pandemic in the 2020 and 2021 editions. Overall rankings are available from 2019 to 1990. Keep in mind, our model has evolved over the years so how states were ranked does change over the time range. Oklahoma's Annual ranks are below:

Edition Name	Edition Year	Value	Rank
2019 Annual (omitted)	2019	-0.777	46
1990 Annual	1990	-0.098	32

Ranking the Overall value would allow one to correctly calculate rank." Received by Miles Xiao (OSDH), January 25, 2022, email.
