

Murray County
Spring 2010

OKLAHOMA STATE DEPARTMENT OF HEALTH

State of the County's Health Report

Working Together For Health

Murray County

Oklahoma ranks near the bottom in many key health status indicators. Most of these outcomes are related to conditions that Oklahomans must live with every day. Poverty, lack of insurance, limited access to primary care, and inadequate prenatal care, along with associated risky health behaviors (low fruit/vegetable consumption, low physical activity, a high prevalence of smoking) all contribute to the poor health status of our citizens.

The vision of the Oklahoma Health Improvement Plan (OHIP) involves local partnerships and communities working together to improve and sustain the physical, social, and mental well-being of all people in Oklahoma. The targeted flagship initiatives of children's health improvement, tobacco use prevention, and obesity reduction will help to maximize opportunities for all Oklahomans to lead healthy lives. If you would like more information about OHIP, please visit the Oklahoma State Department of Health website at http://www.ok.gov/health/Organization/Board_of_Health/OHIP.html.

This report focuses on health factors and demographics in Murray County. Awareness and thoughtful application of this health data can assist us in our joint endeavors to improve the health status of our local citizens.

County Demographics

Population estimates¹

- 5.1% increase from 1990 to 2000 (11,979 to 12,592)
- 1.5% increase from 2000 to 2008 (12,592 to 12,784)
- Ranked 34th for growth in state

2008 Census Estimates²

- Hispanic/Latino ethnicity = 4.8%
- Race
 - Whites = 83.8%
 - Native Americans = 13.3%
 - Blacks = 2.5%
- Age
 - Under 5 = 6.5%
 - 65 and over = 17.9%
 - Median age = 39.8 years

2000 Census³

- Housing units
 - Occupied = 5,003 (77%)
 - Vacant = 1,476 (23%)

- Disability (ages 21 to 64) = 24.9%
 - state = 21.5% national = 19.2%
 - 53.1% of disabled (ages 21-64) are employed

Individuals below poverty = 14.1%
state = 14.7% national = 12.4%

- Families below poverty = 11.1%
 - state = 11.2% national = 9.2%

1990, 2000, & 2008 Population by Age Groups,

Murray County

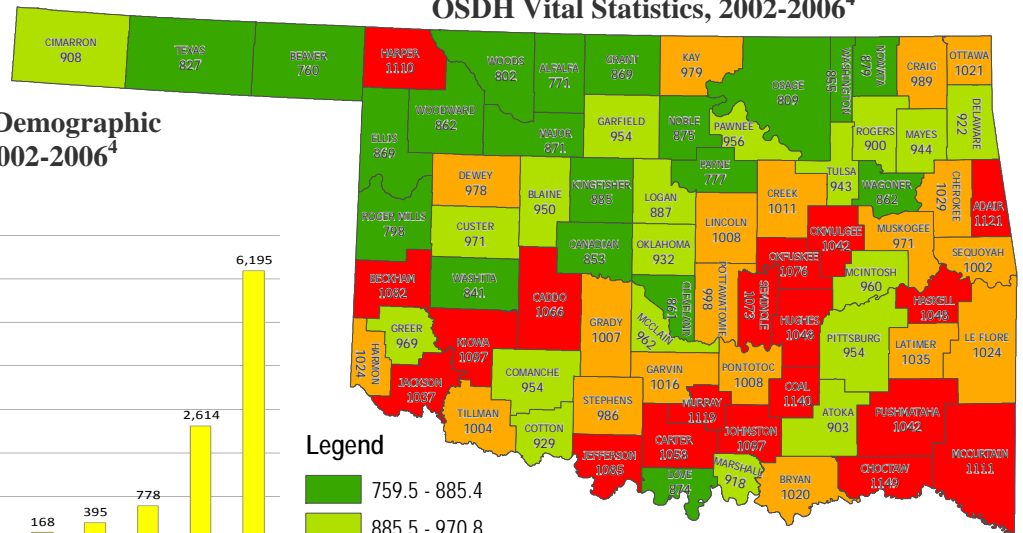

Top 10 Leading Causes of Death

The top 10 leading causes of death⁴ table on the next page displays a broad picture of the causes of death in Murray County. Since many health-related issues are unique to specific ages, this table provides causes of death by age group at a glance. The causes of death that are present across almost every age group have been highlighted. From 1983 to 1993 heart disease killed 1,129 people in Murray County and is still the leading cause of death with all age groups combined.

From 2006-2008, the total charges for all heart disease-related hospitalizations for Murray County residents was \$24,751,083.00, which translated to an average of \$35,308.25 per discharge.⁵ Total charges are an indicator of community health, however, these are hospital-based charges and not payments or costs of actual illness. The direct and indirect costs of disease are actually much higher (i.e., loss of employee wages, loss of tax revenue, loss of years of life).

Age-Adjusted Death Rates by County, OSDH Vital Statistics, 2002-2006⁴

Heart Disease Death Rates by Demographic Groups, Murray County, 2002-2006⁴

March 2009

Nutrition & Overweight

With obesity at epidemic levels, steps need to be taken to control this issue. Surveillance systems have improved and been expanded to obtain more accurate county-level data. While efforts continue on this front, communities must utilize this information to improve the problem itself. With health care costs being, on average, \$395 more for a person under the age of 65 who is obese than a person of the same age who is not obese⁶, estimated health care costs related to obesity for Murray County soar to almost \$8.6 thousand. These costs only go up when the 65 and over population are included.

The Youth Risk Behavior Surveillance System (YRBS)⁷, while not producing county-level data, shows that in 2005, 2007, and 2009 combined, 15.8% of high school children participating in the survey classified themselves as overweight. Further, 14.7% classified themselves as obese. Interestingly, 8.9% of the males said they were obese compared to 5.8% of females. This trend was reversed in the overweight category with 8.0% of females and 7.8% of males, statewide. Although, neither weight category is statistically significant by gender.

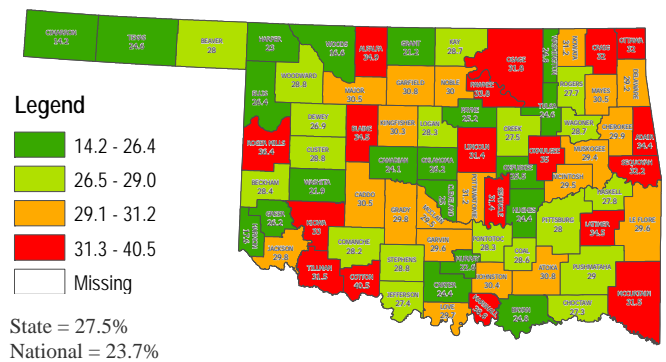

According to the Behavioral Risk Factor Surveillance System (BRFSS, 2003 & 2005)⁸, 89.9% of Murray County adults did not eat the recommended 5 servings of fruits and vegetables a day. Increasing fruit and vegetable consumption is an economical way to control many health-related issues such as obesity and diabetes.

Percent of Adults who are Overweight, BRFSS, 2003-2008⁸

* Note: Data classified by Quartiles

Percent of Adults who are Obese, BRFSS, 2003-2008⁸

* Note: Data classified by Quartiles

Physical Activity & Fitness

Percent of Adults with No Physical Activity Within Past Month, BRFSS, 2003-2008⁸

* Note: Data classified by Quartiles

The increasing inactivity of the U.S. population is contributing to an increase in numerous poor health-related outcomes. Physical inactivity robs the body of precious energy needed to function properly, in turn health declines, and rates of various chronic diseases escalate.

According to the 2003-2008 BRFSS⁸, it is estimated that 26.1% (2,507) of people in Murray County had no leisure activity in the past month (at the time they were surveyed) and over two-thirds of the adults (69.8%) did not reach the recommended physical activity level.

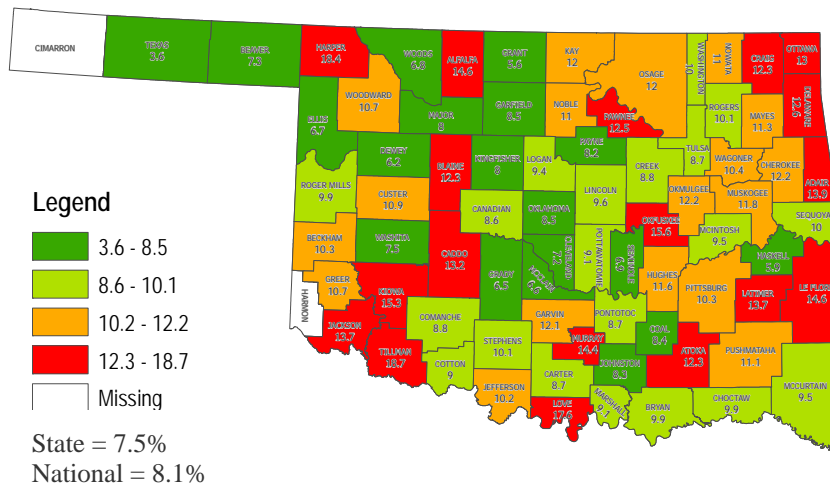

Statewide, 55% of high school students did not participate in physical activity for at least 60 minutes per day on five or more days in a week.⁷ Efforts need to be made to increase physical activity for our youth to build long-term healthy habits.

Diabetes

As stated previously, poor nutrition and lack of physical activity are linked to many chronic issues including diabetes. It is often hard to distinguish between Type I and Type II diabetes in large datasets but looking at the overall impact of diabetes is necessary to examine a community's health.

From 2006 to 2008, there were 93 hospital discharges for diabetes among Murray County residents.⁵ This accounted for a total of 423 days in the hospital and \$1,528,646.00 in total charges.⁵ This was an average of 4.5 days and \$16,437.05 in charges.⁵

Percent of Adults Who Have Ever Been Told They Have Diabetes, BRFSS, 2004-2008⁸

According to the 2004-2008 BRFSS, it is estimated that 14.4% (1,383) of Murray County citizens have been diagnosed by a health professional as having diabetes.

In 2007, the per capita annual healthcare costs for people with diabetes was \$11,744 compared to \$5,106 for people without diabetes.⁹ Persons with diabetes accumulate an estimated \$18,318,565.15 in health care costs in one year for Murray County. Actual hospital charges account for only 2.2% of the total health care impact of diabetes.

* Note: Data classified by Quartiles

Teen Births

While births to teen mothers (age 15 to 19) have been on the decline in both the U.S. and Oklahoma, Oklahoma has moved down in the rankings according to the United Health Foundation.¹⁰ In 1993, the rate for teen births in the U.S. was 60.3 per 1,000 15-19 year old females and 67.1 in Oklahoma, ranking 35th in the country.¹⁰ In 2003, the rate decreased to 47.7 in the U.S. and 59.7 in Oklahoma, accounting for a decrease of 21% and 11%, respectively.¹⁰ However, while the rate decreased, Oklahoma continued to fall in the rankings (41st). In 2009, the rate of teen births stayed the same for Oklahoma (59.6) but the state ranked 45th in the country.¹⁰

Children of teen mothers are more likely to display poor health and social outcomes than those of older mothers, such as premature birth, low birth weight, higher rates of abuse and neglect, and are more likely to go into foster care or do poorly in school.¹¹

According to Oklahoma Vital Statistics, Murray County had a teen birth rate of 113.5 in 2007, which accounted for no change from 2003 (84.3) and a 96% increase from 1993 (57.8)¹². The map represents a five-year average of teen birth rates, 2003-2007.¹²

On average in Oklahoma, births to teen mothers accumulate \$3,807 a year for each teenage birth¹³, which is often passed on to citizens. With an average of 28.6 births per year (2003-2007)¹², teen pregnancy costs the citizens of Murray County \$91,520.00 a year.

Rate of Births to Teen Mothers (Age 15-19), OSDH Vital Statistics, 2003-2007¹²

* Note: Data classified by Quartiles

Injury and Violence

Across the nation and the state of Oklahoma, unintentional and violence-related injuries are on the rise. Unintentional injuries account for the 5th leading cause of death in the United States and Oklahoma for 2002-2006. For persons ages 1 to 44 in Oklahoma, unintentional injuries are the leading cause of death.⁴

This trend does not change much in Murray County. Unintentional injuries are the leading cause of death for ages 15 to 44 in Murray County.

It is estimated that for every motor vehicle-related death \$1.3 million in economic costs are incurred (2008 data).¹⁶ For Murray County, which has an average of 4.8 motor vehicle-related deaths a year⁴, the estimated economic costs are almost \$6.2 million a year.

Violence-related injuries (homicide and suicide) in Murray County are ranked in the top 10 causes of death for persons from 15 to age 64 and suicide is the 2nd leading cause of death for ages 25 to 34.⁴

Age-Adjusted Suicide Rate by County, OSDH Vital Statistics, 2002-2006⁴

Tobacco Use Prevention

According to the 2005 State of the State's Health Report¹⁹, tobacco use among Oklahomans has remained fairly stable from 1990 to 2002. The good news is that total cigarette sales in Oklahoma (tribal and non-tribal combined) have dropped from 98.2 packs per capita in fiscal year 2005 to 86.7 packs per capita during fiscal year 2008. The national average dropped during this same time period.²⁰

Tobacco use is no longer just the problem of the individual but also the community as a whole. With health care costs on the rise, targeting areas such as tobacco use is an effective way to control those costs. The Oklahoma Tobacco Helpline (1-800-QUIT-NOW), supported jointly by the Oklahoma Tobacco Settlement Endowment Trust and the Oklahoma State Department of Health, continues to experience high call volume. Over 37,800 Oklahomans received free cessation assistance through the Helpline in fiscal year 2009.²⁰ Since inception of the Helpline in August 2003, over 110,000 Oklahomans have received free cessation assistance.²⁰

Per Capita Cigarette Sales: Oklahoma & United States²⁰

The CDC estimated that a person who used tobacco accrued over \$3,300 in health care costs per year.²¹ According to the BRFSS (2005-2009)⁸, it is estimated that 25.3% (2,430) of adults in Murray County use tobacco of some sort. Medical costs accumulated by those persons are over \$8.0 million a year for Murray County.

Percent of Adults by Smoking Status, Murray County, 2001-2009, Five-Year Averages⁸

Healthy People 2010 Table

Healthy People 2010 Indicators	Most Recent Data: Year(s)						2010 Target
	Murray County		Oklahoma		United States		
Prevalence of Obese (Aged 18+)	2002-2008	21.9%	2008	31.0%	2008	26.7%	15%

The Oklahoma Turning Point Initiative is public health improvement in action involving partnerships between the state and county departments of health, local communities, and policy-makers. The Oklahoma Turning Point engine is fueled by a community-based decision making process whereby local communities tap into the capacities, strengths, and vision of their citizens to create and promote positive, sustainable changes in the public health system, and the public’s health.

We are at a cross roads in our state and in Murray County. Please come and be part of the solutions that will lead Oklahoma and Murray County to becoming a healthy place to live, work and learn.

“If we are together nothing is impossible.
 If we are divided all will fail.” - [Winston Churchill](#)

Murray County Coalition

Coalition Priorities:

1. Increase Partnerships with organizations to improve the effectiveness of coalition.
2. Community Involvement.

2009 Significant Outcomes:

- ◆ Community Participation.
- ◆ Creating a Healthy & Safe Environment.
- ◆ Promoting Wellness.
- ◆ Promotion of Downtown Sulphur & Davis.
- ◆ Education of Nutrition, Physical Activity.
- ◆ Safe Places for Community Members to Walk.
- ◆ Community Building.
- ◆ Providing Resources to the Community.
- ◆ Crystal Darkness Campaign/ Watch Party.
- ◆ Biggest Loser Contest.
