Introduction

Provider organizations are a vital component of the health care workforce landscape. They serve as centers of employment for health care workers and the locales for the delivery of care. This draft baseline assessment looks at select provider organizations in Oklahoma and how they are distributed, geographically, across the state. Typically, these are larger organizations or businesses that employ a number of health care professionals. The workforce employed by these provider organizations ranges from physicians to entry-level paraprofessionals. It should be noted that individual professional practices were not necessarily included in this assessment. Some individual practices are included due to the nature of the data, but no attempt was made to systematically include them all.

This draft assessment is organized into six sections based on the nature of care delivered by the provider organizations. Section one, ***Hospitals***, looks at those organizations that provide inpatient medical care and other related services for surgery, acute medical conditions or injuries. The second section, ***Ambulatory & Independent/Group Practices***, focuses on organizations that provide outpatient services. Section three, ***Long-term Care***, addresses organizations that provide long-term care, post-acute care and rehabilitative services. ***Home & Community Based Services*** form the fourth section which focuses on organizations that provide opportunities for individuals to receive health care services in their own home or community. Section five, ***Health Care Informatics***, focuses on organizations that use health information technology to improve care, provide data, resources, devices, and methods required to optimize the acquisition, storage retrieval, and use of information in health and biomedicine. The final section, ***Other Organizations***, includes those entities that do not necessarily fit in one of the above categories, but are important provider organizations.

Methodology

The data used to complete this draft baseline assessment was supplied by the Oklahoma State Department of Health (OSDH) and the Health Resources Services Administration (HRSA) Data Warehouse. The data from OSDH contained 2,658 records of organizational providers. Each record contained the necessary fields to conduct geocoding operations. ESRI's ArcGIS v10.2 for Desktop and ArcGIS World Geocode Service were used to geocode the addresses. 2,447 records matched at the street address or point address level. The remaining 211 records were rematched manually to achieve total match scores of over 80 for all of the records. Twenty-two organizational providers did not have an Oklahoma address and were eliminated from further analysis. Data from the HRSA Data Warehouse contained 1,290 records all of which were spatially referenced and did not require geocoding. The data provided by both organizations often "overlapped," meaning identical (or near identical) content was contained in both datasets. Deference was given to the dataset that provided the most useful analysis.

Given the nature of the supplied data, this is primarily a geographic assessment. Each section contains maps that typically show the distribution of organizational providers and total number of providers by community. These maps permit readers to understand better

the spatial distribution of the provider organizations and the relative concentration of providers among the various communities in the state. Much can be learned from this type of assessment. It also represents a vital starting point for future analysis.
