

SURENDRA SINGH, UNIVERSITY OF TULSA

What did you want to be when you grew up? Making dreams a reality for Oklahoma college students, the OCAST R&D Intern Partnership program is providing hands on learning opportunities for undergraduate students at Oklahoma scientific and technical firms.

Dr. Surendra Singh, associate professor of electrical engineering, initiated the University of Tulsa engineering internship program in 2002 and has placed more than a dozen electrical, chemical and mechanical engineering students with some of the area's most prestigious scientific and engineering companies including Qual-Tron, John Zink Company, Tucker Technologies, Railroad Signal International, Century Geophysical Corp. and Centrilift.

Students gain practical work experience and learn more about their field of interest. It is an important step in keeping Oklahoma's best and brightest in the state by connecting them to high-paying, technically-challenging jobs.
