Below are the results from the first round of testing of drinking water for lead that was conducted at Big Five Community Services - Jackie Watson Child Development Center on November 25, 2024. Overall, twenty-seven (27) outlets were tested resulting in a total of fifty-four (54) samples being sent to the lab.

- Forty-three (43) samples had no detectable level of lead.
- Nine (9) samples had a low detection of lead between 1.0 and 14.9 μ g/L.
- Two (2) samples had a high detection of lead equal to or above 15.0 μg/L.

The table below shows all sample results. Sample results are in micrograms per liter, shown as $\mu g/L$. For more information on how to read this report, please see our **Results Interpretation** Fact Sheet.
