RESULTS

Below are the results from the first round of testing of drinking water for lead that was conducted at Southwest Oklahoma Community Action Group - Elk City Head Start on October 29, 2024. Overall, ten (10) outlets were tested resulting in a total of twenty (20) samples being sent to the lab.

- Nine (9) samples had no detectable level of lead.
- Eleven (11) samples had a low detection of lead between 1.0 and 14.9 μ g/L.
- Zero (0) samples had a high detection of lead equal to or above 15.0 μg/L.

The table below shows all sample results. Sample results are in micrograms per liter, shown as $\mu g/L$. For more information on how to read this report, please see our **Results Interpretation** Fact Sheet.
