SITE CLEANUP ASSISTANCE PROGRAM

City performed sampling in September of 2021

- Asbestos and lead-based paint located in building
- Over 5200 sq.ft. of LBP wall and flooring removed
- 11 doors and windows with LBP removed
- Multiple ACM components removed
- Abatement completed in June of 2024 and plan to use space for future housing

That Calvin L. Keller & Melruth Keller,
Husband and Wife

of Custer County,

State of Oklahoma, part ies of the first part, in consideration of the sum of Ten (\$10.00) DOLLARS

in hand paid, the receipt of which is hereby acknowledged, does hereby Grant, Bargain, Sell and Convey unto The Town of Thomas, Oklahoma, a Corporation

of Custer County, State of Oklahoma, parties

of the second part, the following described real property and premises situate in Custer

County, State of Oklahoma, to-wit:

All of Lot 22 in Block 84, Original townsite of Thomas, Oklahoma, according to the recorded plat thereof EXCEPT AND SUBJECT TO: (a) Easement in and to stairway on east side of building, all as shown of record in Book 13 of Deeds page 66. (b) Contract and Conveyance of Second Floor of building on said lots as shown of record in Book 3 of Misc. at pages 21 and 22 and (c) Paty wall agreement as shown of record in Vol. 35 of Deeds Page 314.

State of Oklahoma, Custer County, ss. Filed March 13, 1974 10:10 a.m.
Recorded in Book 299 Page 355 M. S. DICK ESICK, County Clerk
Grantor Grantee Numerical By Marie Switzer Deput.

together with all the improvements thereon and the appurtenances thereunto belonging, and warrant the title to the same.

TO HAVE AND TO HOLD said described premises unto the said parties of the second part, their heirs and assigns forever, free, clear and discharged of and from all former grants, charges, taxes, judgments, mortgages and other liens and incumbrances of whatsoever nature.

Signed and delivered this 12th day of February, 1974

Calvin L. Keller
Melruth Keller

STATE OF OKLAHOMA }
COUNTY OF Custer } SS: INDIVIDUAL ACKNOWLEDGMENT
Oklahoma Form

Before me, the undersigned, a Notary Public in and for said County and State on this 12th day of February, 1974, personally appeared Calvin L. Keller and Melruth Keller,
Husband and Wife

to me known to be the identical persons who executed the within and foregoing instrument and acknowledged to me that they executed the same as their free and voluntary act and deed for the uses and purposes therein set forth.

Given under my hand and seal the day and year last above written.

My commission expires 7-27-74 Bubba Moore Notary Public

Intergovernmental Agreement

This Intergovernmental Agreement (Agreement) between the Oklahoma Department of Environmental Quality (DEQ) and The City of Thomas Economic Development Authority (City) is for environmental cleanup services provided by DEQ for the Property located at 121 W. Broadway, Thomas, Oklahoma 73669, Custer County. The areas of responsibility and relationships presented herein provide the conceptual framework under which the project will be executed.

- I. **STATUTORY AUTHORITY AND EFFECTIVE DATE:** This Agreement is authorized pursuant to and in accordance with the provisions of Title 27A Okla. Stat. (O.S.) § 2-3-201, 27A O.S. § 2-3-202, 74 O.S. § 581, and 74 O.S. § 1008. This Agreement shall begin on April 1st, 2024 or when executed by all parties whichever date occurs of the later and will continue through March 31st, 2025 or until completion of project or through an amendment whichever occurs first.
- II. **ENVIRONMENTAL CLEANUP SERVICES:** The City has requested environmental cleanup assistance from DEQ. DEQ agrees to provide the environmental cleanup services outlined in the attached Statement of Work (**Exhibit "A"**) and the City agrees to these services.
- III. **RESPONSIBILITIES OF ALL PARTIES:** The City and DEQ mutually agree that the responsibilities shall be as stated below:
 - 1) City's Responsibilities: The City shall be responsible for the duties listed below and shall not hold DEQ responsible for any of the duties. Those duties shall include:
 - a) Appoint a representative to serve as the central point of contact on matters relating to this Agreement and submit said representatives name and contact information to DEQ within ten (10) days of the effective date of this Agreement;
 - b) Restrict occupant's use/presence in the facility during remediation, as requested. This could include but is not limited to removing equipment, vehicles and other items that may be in the way of cleanup activities;
 - c) Attend routine update calls with DEQ during the remediation process; and
 - d) Perform any continued operations and maintenance required to keep remedy protective. An Operations and Maintenance Plan will be provided by DEQ if necessary.
 - 2) DEQ's Responsibilities: DEQ shall be responsible for the duties listed below and shall not hold the City responsible for any of the duties. Those duties shall include:
 - a) Appoint a representative to serve as the central point of contact on matters relating to this Agreement and submit said representatives name and contact information to the City within ten (10) days of the effective date of this Agreement;
 - b) Provide regular verbal progress reports via calls with the City;
 - c) Manage work and cover costs associated with the environmental cleanup work outlined in the attached Statement of Work (**Exhibit "A"**);
 - d) Supply the City with a final report of all DEQ activities within 90 days of completion of work.

- IV. **ACCESS TO PROPERTY:** All access to property shall be enforced by the executed Environmental Access Permit that shall accompany this Agreement upon execution.
- V. **PUBLIC INFORMATION:** The City is generally responsible for all public information. The City shall acknowledge the DEQ cleanup services outlined in this Agreement when making public statements regarding this building. The City will allow DEQ to place signs on the property during the environmental cleanup work. DEQ may make public announcements and respond to all inquiries relating to the environmental cleanup work in this Agreement. DEQ reserves the right to approve all press releases and publications where the agency is mentioned or included before publication. The agency shall provide a contact for publicity approval within ten (10) days of execution of the Agreement. The City shall have the agency's approval before using the DEQ logo or moving any DEQ signs the agency has placed. The City and DEQ shall give the other party advance notice before making any public statement regarding work contemplated, undertaken, or completed pursuant to this Agreement.
- VI. **TERMINATION:** This Agreement is expressly contingent upon funding and shall terminate without penalty either in whole or in part if funds are not made available to DEQ. Either party may terminate this Agreement by giving written notice at least sixty (60) days prior to the desired date of cancellation.
- VII. **ACCEPTANCE OF AGREEMENT:** The parties acknowledge and agree that they have read the Agreement and that they accept the responsibilities with which they are charged. The City agrees to comply with the building use restrictions during cleanup and understands that failure to comply with said restrictions or failure to adhere to the responsibilities enumerated in this Agreement may result in delayed remediation. This Agreement shall not affect any pre-existing or independent relationships or obligations between the parties. The City's Acceptance of this Agreement from DEQ constitutes acceptance of all current DEQ Purchasing terms and conditions. Terms and conditions are subject to change and may be found at <https://www.deq.ok.gov/wp-content/uploads/deqmainresources/DEQ-Terms-and-Conditions.pdf>
- VIII. **UNAUTHORIZED OBLIGATION:** At no time during the performance of this Agreement shall the City have the authority to obligate DEQ for payment of any goods or services.

In witness whereof, this Agreement, consisting of four (4) pages has been executed and delivered effective as of the date first above written.

Environmental Access Permit

THIS PERMIT made and entered into by and between **City of Thomas Economic Development Authority** hereinafter called the PERMITOR, and the **DEPARTMENT OF ENVIRONMENTAL QUALITY**, hereinafter called the PERMITTEE.

WITNESSETH, PERMITTEE is hereby granted permission and authority to enter upon the following described property, situated in Okfuskee County, Oklahoma, hereinafter referred to as the "Property":

121 West Broadway, Thomas, Oklahoma 73669

Attached and incorporated by reference as Exhibit "A": Property Location Map

TERMS AND CONDITIONS OF PERMIT:

1. **TERM:** This Permit shall be for a period of 1 year beginning April 1, 2024, and ending March 31, 2025.
2. **USE OF PROPERTY:** PERMITTEE and its consultants or contractors may enter upon said property for the performance of remedial activities, install, erect, operate, maintain, remove, and perform all work associated with said remedial activities. PERMITTEE and its consultants and contractors shall have the right of ingress and egress, to and from said site across adjoining lands of the PERMITOR. PERMITOR and PERMITTEE acknowledge that all equipment and improvements of PERMITTEE to support the said operations shall be deemed personal property of PERMITTEE.
3. **MAINTENANCE:** PERMITTEE agrees that no other changes shall be made to the Property without prior written permission of the PERMITOR other than what is necessary for the purpose of the Permit.
4. **INDEMNIFICATION:** PERMITOR agrees on its behalf and that of any successors or assigns to hold harmless, defend and indemnify the PERMITTEE, its officers, agents, employees, representatives, successors, and assigns, from and against any and all losses, liabilities, expenses, claims, demands, injuries, damages, fines, penalties, costs or judgments, including, without limitation, attorney's fees and costs of any kind. Without waiving any defense or immunity, and subject to the Oklahoma Governmental Tort Claims Act, such indemnification shall exclude any such liability to the extent caused by the negligence or willful misconduct of the PERMITTEE, its officers, agents, employees, representatives, successors, and assigns while acting within the scope of their employment.
5. **NO WARRANTIES:** The PERMITTEE makes no representations or warranties of any kind in connection with this Permit. This Permit is subject to all existing conditions, restrictions, reservations, easements, servitudes and right of ways of record.
6. **ASSIGNMENT:** This Permit cannot be assigned in whole or in part without the written approval of the PERMITTEE.
7. **TERMINATION:** Either party may terminate this Permit, or any renewals of this Permit, by giving written notice at least sixty (60) days prior to the desired date of cancellation.
8. **APPLICABLE LAW:** This Permit shall supersede any and all previous agreements whether oral or written and shall be governed by the laws of the State of Oklahoma.
9. **NON-WAIVER:** Failure of either the PERMITOR or PERMITTEE to exercise any right given hereunder or to insist upon strict compliance with regard to any term, condition or covenant specified herein, shall not constitute a waiver of the PERMITOR or PERMITTEE'S right to exercise such right or to demand strict compliance with any term, condition or covenant under this Agreement.

10. **ENTIRE AGREEMENT:** This Permit constitutes the sole and entire agreement of the parties and is binding upon the PERMITOR and the PERMITTEE, their heirs successors, legal representatives and assigns.

REF: Limited Asbestos Containing Materials and Lead-Based Paint Survey of the City of Thomas Building, Christensen Building, Miller Building, and Brantwein Building in the City of Thomas, Oklahoma.

Dear Mr. Moore:

A & M Engineering and Environmental Services, Inc. (A & M) performed a Limited Asbestos Containing Materials and Lead-Based Paint, Survey of the City of Thomas Building, Christensen Building, Miller Building, and Brantwein Building in the City of Thomas, Oklahoma on April 21, 2021. Please find enclosed our report providing the monitoring findings and recommendations.

Thank you for choosing A & M. If you have any questions, please feel free to contact us at (918) 665-6575 or via email.

Respectfully,

A & M Engineering and Environmental Services, Inc.

1.0 EXECUTIVE SUMMARY

A & M Engineering and Environmental Services, Inc. (A & M) completed a Limited Asbestos Containing Materials and Lead-Based Paint Survey (Survey) of the City of Thomas Building, Christensen Building, Miller Building, and Brantwein Building in the City of Thomas, Oklahoma. The surveys were done in preparation of renovating the four spaces into apartments. The Survey was conducted on April 21, 2021.

The Survey to identify Asbestos Containing Materials (ACM) at the above referenced site was conducted in accordance with the National Emissions Standards for Hazardous Air Pollutants (NESHAP) for Asbestos (40 CFR Part 61, Subpart M). The following is a summary of the asbestos findings:

No asbestos was present in the four (4) buildings second floors surveyed.

Lead Based Paint (LBP) regulations are provided by the United States Environmental Protection Agency (EPA), and Department of Housing and Urban Development (HUD). The Occupational Safety and Health Administration (OSHA) regulates lead from a worker exposure position. A & M conducted a survey to determine what lead hazards may be present. The following is a summary of the LBP findings:

Plaster Walls	All four (4) Buildings
Window Frames and doors	Thomas, Miller, Brantwein Buildings
Door Frames and Doors	Thomas, Miller, Brantwein Buildings
Stairwell Railing	Thomas Building
Fire door	Thomas Building

Based upon the findings and visual observations made during the survey, the following recommendations are provided:

LBP was identified in the plaster walls in all four (4) buildings. The window frames and windows in the City of Thomas Building, Brantwein Building, and Miller Building also tested positive for LBP.

All remediation activities need to be done using safe-lead practices to capture any debris and/or dust that is formed. Clearance lead testing needs to be conducted following remediation.

2.0 BUILDING DESCRIPTION

The building surveys were limited to the buildings second (2nd) floors. Three (3) of the four buildings (4) second (2nd) floors were vacant and used for storage. The fourth space is currently being used as an apartment. It was reported the four spaces had construction dates and square footages as follows:

- Building 1 – City of Thomas Building; 2200 square feet (SF) and constructed 1903
- Building 2 – Christensen Building; 2000 (SF) and constructed 1911
- Building 3 – Miller Building; 2000 (SF) and constructed 1905

- Building 4 – Brantwein Building; 2000 (SF) and constructed 1907

The buildings were constructed with a brick exterior and interior walls were of plaster construction. The Christiansen Building was reported to have had previous renovations started.

3.0 ASBESTOS

A & M completed a Pre-Demolition/Renovation Survey (Survey) on April 21, 2021 to identify Asbestos Containing Materials (ACM) at the above referenced site in accordance with the National Emissions Standards for Hazardous Air Pollutants (NESHAP) for Asbestos (40 CFR Part 61, Subpart M). The following table summarizes the findings of this Survey:

Table 1 (below) provides a summary of the samples that were collected for asbestos analysis.

Table 1
Asbestos Sampling Results

Materials	Friable	Location(s) of the Homogeneous Material	Samples Collected	% Asbestos Content	Quantity	Condition
Brown Plaster w/ White Skim Coat - Paint	No	City of Thomas Building	5	ND	NQ	Fair

White Drywall - Paper				ND		

White Drywall – Wallboard material				ND		
NOTE: NO ROOF SAMPLES WERE OBTAINED. ALL OTHER BUILDING MATERIALS ARE CONSIDERED TO CONTAIN ASBESTOS UNTIL PROVEN OTHERWISE. SF: Square Feet; LF: Linear Feet; ND: None Detected; NQ: Not Quantified						

Sampling Strategy, Protocols and Limitations

Samples were collected in accordance with the Asbestos Hazard Emergency Response Act (AHERA) sampling protocol by Justin Scott, Oklahoma-licensed Asbestos Inspector #159757. A visual inspection of the building was conducted and Homogeneous Areas (HAs) of suspect ACM were identified and listed. Photographs of each Homogeneous area sampled are provided in Appendix B. A copy of asbestos licenses and certifications are provided in Appendix C.

A physical assessment was performed for each HA identified during the visual inspection. This physical assessment evaluated the condition (intact, damaged, or significantly damaged), friability, and potential for disturbance of each suspect ACM. “Friable Materials” are defined as those materials that can be crumbled or reduced to powder by hand pressure alone. Each suspect ACM was further classified into one of the following three (3) categories:

Surfacing Materials: Spray- or trowel-applied surfaces such as plaster ceilings and walls, fireproofing, textured paints, textured plasters, and spray-applied acoustical surfaces.

Thermal System Insulation: Insulation used to inhibit heat gain or loss on pipes, boilers, tanks, ducts, and other building components.

Miscellaneous Materials: Friable and non-friable materials that do not fit in any of the above two categories such as resilient floor covering, baseboards, mastics, adhesives, roofing materials, caulking, glazing, and siding.

Forty-seven (47) samples were collected from fourteen (14) HAs. Samples were collected, to the extent possible, from discrete locations that were identified to be removed during renovation or not readily visible. Samples were placed in uniquely marked, individual, airtight containers. Notations documenting each HA and each sample location were made at the time of the Survey. A site map documenting the sample locations and locations of positive ACM is attached in Appendix D.

Samples were shipped under chain-of-custody protocol to Cates Laboratories, a National Voluntary Laboratory Accreditation Program (NVLAP)- accredited laboratory, to be analyzed by Polarized Light Microscopy (PLM) according to US Environmental Protection Agency (EPA) Method 600/M4-82-020. Due to multiple layers in some samples, a total of One hundred fourteen (114) analyses were performed. A copy of Cates Laboratory’ Report is provided in Appendix A. A copy of Cates Laboratories Accreditation is provided in Appendix C.

No roofing materials were sampled as part of this Survey.

4.0 LEAD-BASED PAINT

Lead Based Paint (LBP) regulations are provided by the United States Environmental Protection Agency (EPA), and Department of Housing and Urban Development (HUD). The Occupational Safety and Health Administration (OSHA) regulates lead from a worker exposure position. The Oklahoma Department of

Environmental Quality (ODEQ) has adopted the LBP regulations by the EPA and HUD. The LBP regulations cover what is termed Target Housing and a Child Occupied Facility.

A Child Occupied Facility is defined as a building, or portion of a building, constructed prior to 1978, visited regularly by the same child, under 6 years of age, on at least two different days within any week (Sunday through Saturday period), provided that each day's visit lasts at least 3 hours and the combined weekly visits last at least 6 hours, and the combined annual visits last at least 60 hours. Child-occupied facilities may include, but are not limited to, day care centers, preschools, and kindergarten classrooms. Child-occupied facilities may be in target housing or in public or commercial buildings. With respect to common areas in public or commercial buildings that contain child-occupied facilities, the child-occupied facility encompasses only those common areas that are routinely used by children under age 6, such as restrooms and cafeterias. Common areas that children under age 6 only pass through, such as hallways, stairways, and garages are not included. In addition, with respect to exteriors of public or commercial buildings that contain child-occupied facilities, the child-occupied facility encompasses only the exterior sides of the building that are immediately adjacent to the child-occupied facility or the common areas routinely used by children under age 6.

The LBP survey was conducted by Jeff Jenkins, an ODEQ licensed LBP Inspector/Risk Assessor (OKRASR13417) on April 16, 2021 between the hours of 9:00 AM and 2:00 PM. A copy of the LBP Licenses and certifications are provided in Appendix G. The survey was conducted using an Innov-X-Alpha Series A-4000 (serial # 6379) X-Ray Fluorescence (XRF) analyzer. The alpha unit is a HUD compliant XRF.

Sampling Strategy, Protocols and Limitations

The LBP inspection is a surface-by-surface investigation to determine the presence of LBP. The survey followed the HUD 1997 inspection protocol. LBP is any paint, varnish, shellac, or other coating on surfaces that contains 1.0 mg/cm² or more of lead. XRF values are collected by placing the scanner on the test surface and exposing the lead paint film to gamma radiation. XRF analyzers are usually capable of penetrating up to 25 layers of paint to determine lead content. At the conclusion of each test, the shutter is closed and the display on the control console shows the lead concentration in mg/cm² for manual tabulation and stores the data in memory for transferring to a computer for sorting and report generation.

The XRF is calibrated prior to use by checking Standard Reference Materials (SRM) a minimum of three times initially. The calibration is rechecked every four (4) hours and again at the completion of the survey using the blank and the SRM. The SRM's used were:

- SRM2570 < 0.01 mg/cm²
- SRM2573 1.04 mg/cm²

XRF results are identified as positive, negative, or inconclusive based on Performance Characteristic Sheets (PCS), developed by HUD and EPA for each model of XRF device that is commercially available. **"Positive"** refers to XRF results greater than or equal to the threshold of 1.0 mg/cm². **"Negative"** refers to XRF results less than the threshold of 1.0 mg/cm². Table 2 summarizes the materials that tested Positive for LBP. A copy of the XRF data is provided in Appendix E.

Table 2
Confirmed Lead-Based Paint Results

Materials	Color	Location(s)	Conc. Lead (mg/cm ²)	Quantity	Condition
Plaster Walls	varies	City of Thomas Building	> 2.00	2,000 – 2,500 SF	Poor
Window Frames and trim	White		> 3.00	15 SF	Intact
Door Frames and Door	White		> 5.00		Intact
Fire Door	Gray		> 5.00	40 SF	Intact
Stair Railing	Off-white		0.91	20 LF	Intact
Plaster Walls	varies	Brantwein Building	> 1.50		Poor
Window Frames and trim	White		> 1.00		Intact
Door Frames and Door	White		> 1.00		Intact
Plaster Walls	varies	Miller Building	> 3.00		Poor
Window Frames and trim	White		> 1.40		Intact
Plaster Walls – east exterior wall	Varies	Christensen Building	> 1.00	250 SF	Intact

SF: Square Feet; LF: Linear Feet; ND: None Detected; NQ: Not Quantified

Each room tested had all four (4) walls, ceiling (if painted), one (1) door and one (1) door component, one (1) window and one (1) window component, cabinets (frame and moving component), and one of anything else that is painted. For purpose of identifying sample locations the wall on the address side (main entrance) of the facility was identified as side “A”, The walls are then numbered going clockwise as “B”, “C” or “D”.

5.0 LIMITATIONS

The information provided in this report are representative of the conditions present on the day of monitoring. Changes in any of these conditions may affect the findings and recommendations. Although, unlikely there may be materials hidden in the walls, floors, etc. that were not accessible and thus not sampled. Any materials found will need to be assumed to be asbestos containing until tested and proven otherwise.

6.0 FINDINGS AND RECOMMENDATIONS

Findings

No asbestos was present in the four (4) buildings second floors surveyed.

Lead Based Paint (LBP) regulations are provided by the United States Environmental Protection Agency (EPA), and Department of Housing and Urban Development (HUD). The Occupational Safety and Health Administration (OSHA) regulates lead from a worker exposure position. A &M conducted a survey to determine what lead hazards may be present. The following is a summary of the LBP findings:

Plaster Walls	All four (4) Buildings
Window Frames and doors	Thomas, Miller, Brantwein Buildings
Door Frames and Doors	Thomas, Miller, Brantwein Buildings
Stairwell Railing	Thomas Building
Fire door	Thomas Building

Recommendations

Based upon the findings and visual observations made during the survey, the following recommendations are provided:

LBP was identified in the plaster walls in all four (4) buildings. The window frames and windows in the City of Thomas Building, Brantwein Building, and Miller Building also tested positive for LBP.

All remediation activities need to be done using safe-lead practices to capture any debris and/or dust that is formed. Clearance lead testing needs to be conducted following remediation.

7.0 DISCLAIMERS

The asbestos and lead-based paint results identified herein this report apply only to the building(s) tested. The surveys were conducted in accordance with standard industrial hygiene practices and the requirements of the regulations. A & M Engineering and Environmental Services, Inc. does not make any warranty regarding the materials or conditions not evaluated or sampled as identified in this report.

The materials and/or surfaces that did not contain asbestos above 1% or lead-based paint above 1.0 mg/cm² may still pose a hazard if disturbed and be subject to OSHA regulations for employee (worker) safety.

CL912009	123-5-A	Electrical Sheathing	None Detected

These samples were analyzed by layers. The overall percent asbestos for the sample is reported when relevant. The EPA considers a material to be asbestos containing only if it contains greater than one percent asbestos by Calibrated Visual Area Estimation (CVAE). EPA regulations also indicate that Regulated Asbestos Containing Materials (RACM) – materials that are friable or may become friable – be further analyzed by point counting when the results indicate less than ten percent asbestos by CVAE. CatesLab utilizes CVAE on a routine basis and does not include point counting unless specifically requested by the client. The results may not be reproduced except in full.

On 4/22/2021, forty-seven (47) bulk samples were submitted by a representative of A&M Engineering & Environmental Services for asbestos analysis by PLM/DS. Copies of the lab data sheets are attached; additional information may be found therein. The results are summarized below:

Lab Sample No.	Client Field I.D.	Sample Description/Location	Asbestos Content
CL912010	123-6-A	Multi-Colored Sheet Vinyl Flooring	None Detected - Sheet Flooring None Detected - Fibrous Backing
CL912011	123-6-B	Multi-Colored Sheet Vinyl Flooring	None Detected - Sheet Flooring None Detected - Fibrous Backing
CL912012	123-6-C	Multi-Colored Sheet Vinyl Flooring	None Detected - Sheet Flooring None Detected - Fibrous Backing
CL912013	123-7-A	White Sheet Vinyl Flooring	None Detected - Sheet Flooring None Detected - Fibrous Backing
CL912014	123-7-B	White Sheet Vinyl Flooring	None Detected - Sheet Flooring None Detected - Fibrous Backing
CL912015	123-7-C	White Sheet Vinyl Flooring	None Detected - Sheet Flooring None Detected - Fibrous Backing
CL912016	BW-1-A	Plaster w/White Skim Coat	None Detected - Paint Layer None Detected - Plaster Topcoat None Detected - Plaster
CL912017	BW-1-B	Plaster w/White Skim Coat	None Detected - Paint Layer None Detected - Plaster Topcoat None Detected - Plaster
CL912018	BW-1-C	Plaster w/White Skim Coat	None Detected - Paint Layer None Detected - Plaster Topcoat None Detected - Plaster
CL912019	BW-1-D	Plaster w/White Skim Coat	None Detected - Paint Layer None Detected - Plaster Topcoat None Detected - Plaster
CL912020	BW-1-E	Plaster w/White Skim Coat	None Detected - Paint Layer None Detected - Plaster Topcoat None Detected - Plaster
CL912021	M-1-A	White Drywall	None Detected - Paper None Detected - Wallboard Material

These samples were analyzed by layers. The overall percent asbestos for the sample is reported when relevant. The EPA considers a material to be asbestos containing only if it contains greater than one percent asbestos by Calibrated Visual Area Estimation (CVAE). EPA regulations also indicate that Regulated Asbestos Containing Materials (RACM) – materials that are friable or may become friable – be further analyzed by point counting when the results indicate less than ten percent asbestos by CVAE. STATEMENT OF LABORATORY ACCREDITATION

The samples were analyzed in general accordance with the procedures outlined in the Method for the Determination of Asbestos in Bulk Building Materials, EPA/600/R-93/116 or the U.S. Environmental Protection Agency EPA 40 CFR Appendix E to Subpart E of Part 763, Interim Method of the Determination of Asbestos in Bulk Insulation Samples, by polarized light microscopy. The results of each bulk sample relate only to the material tested and the results shall not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST, or any agency of the Federal Government.

Specific questions concerning bulk sample results shall be directed to the Laboratory Director.

Analyst: Curtis Grigg

Laboratory Director: John R. Cates, P.G.

Asbestos Certifications and Licenses

Oklahoma Department of Labor Asbestos License

This certifies that **Justin Scott**
has successfully met the certification requirements under
the Oklahoma Asbestos Control Act 40 O.S. § 450, et seq.
Abatement of Friable Asbestos Material Rules OAC
380:50 in the following:

Inspector

Leslie Osborn
Labor Commissioner

License # : 159757

Expires : 01/20/2022

Issued : 04/13/2021

Not intended for identification purposes

Oklahoma Department of Labor

Jeffrey Jenkins

has filed in the office of the Commissioner of Labor of the State of Oklahoma
an application for a Limited Asbestos Contractor's license for

AHERA MANAGEMENT PLANNER

Now, therefore, The Commissioner of Labor of the State of Oklahoma, by virtue of
the power vested in her by law hereby issues to the applicant license

No. OK-MP133987.

Asbestos Sample Locations

United States Department of Commerce
National Institute of Standards and Technology

Certificate of Accreditation to ISO/IEC 17025:2017

NVLAP LAB CODE: 200569-0

Cates Laboratories, Inc.
Dallas, TX

is accredited by the National Voluntary Laboratory Accreditation Program for specific services,
listed on the Scope of Accreditation, for:

Asbestos Fiber Analysis

*This laboratory is accredited in accordance with the recognized International Standard ISO/IEC 17025:2017.
This accreditation demonstrates technical competence for a defined scope and the operation of a laboratory quality
management system (refer to joint ISO-ILAC-IAF Communique dated January 2009).*

2021-04-01 through 2022-03-31

Effective Dates

A handwritten signature in black ink, appearing to read "Peter S. Lander".

Certificate of Analysis

Standard Reference Material® 2573

Lead Paint Film

For Portable X-Ray Fluorescence Analyzers – Nominal 1.0 mg/cm²
(Color Code: Red)

This Standard Reference Material (SRM) is intended for checking the calibration of portable, hand-held, x-ray fluorescence analyzers when testing for lead in paint coatings on interior and exterior building surfaces. A unit of SRM 2573 consists of a white polyester sheet, approximately 7.6 cm wide, 10.2 cm long, and 0.2 mm thick, coated with a single, red-colored paint layer, approximately 0.04 mm thick. A blank, SRM 2570, is also provided. The blank is coated with a lead-free, lacquer layer on a white polyester sheet of the same thickness as the lead paint samples. All sheets are over-coated with a clear, thin, plastic laminate to protect the surface from abrasion. SRM 2573 and SRM 2570 are two of a set of six paint films (SRM 2570 to SRM 2575) available as SRM 2579a.

The certified values for lead for this SRM and the blank, SRM 2570, are reported in Table 1 in units of mg/cm². These values are based on measurements by isotope dilution inductively-coupled plasma mass spectrometry.

Table 1. Certified Lead Values

Level	Color Code	Lead Concentration, in mg/cm ²
SRM 2570	White (Blank)	<0.001
SRM 2573	Red	1.040 ± 0.064

The uncertainty of each certified value is expressed as an expanded uncertainty, U , at the 95 % level of confidence and is calculated according to the method described in the ISO Guide [1,2]. Because of variability in the paint film between different sheets of each SRM, the uncertainties are 95 % prediction intervals. The expanded uncertainty is calculated as $U = ku_c$, where u_c is intended to represent, at the level of one standard deviation, the combined uncertainty due to material variability and measurement uncertainty. The coverage factor, k , is determined from the Student's t -distribution corresponding to the calculated effective degrees of freedom and 95 % level of confidence.

Expiration of Certification: The certification of SRM 2573 is valid, within the measurement uncertainties specified, until **01 July 2020**, provided the SRM is handled and stored in accordance with the instructions given in this certificate (see "Instructions for Use"). The certification is nullified if the SRM is damaged, contaminated, or otherwise modified.

Maintenance of SRM Certification: NIST will monitor this SRM over the period of its certification. If substantive technical changes occur that affect the certification before the expiration of this certificate, NIST will notify the purchaser. Registration (see attached sheet) will facilitate notification.

The overall direction and coordination of the analytical measurements leading to certification were performed by G.C. Turk and J.D. Fassett of the NIST Analytical Chemistry Division. Analytical measurements were performed by K.E. Murphy, J.R. Sieber, A.F. Marlow, L.J. Wood, P.R. Seo, and M. Lankosz of the NIST Analytical Chemistry Division. The SRM was fabricated under the direction of J.R. Sieber of the NIST Analytical Chemistry Division.

Stephen A. Wise, Chief
Analytical Chemistry Division

Gaithersburg, MD 20899
Certificate Issue Date: 24 March 2009
See Certificate Revision History on Last Page

Robert L. Watters, Jr., Chief
Measurement Services Division

Statistical consultation for this SRM was provided by E.S. Lagergren and N.F. Zhang of the NIST Statistical Engineering Division.

Support aspects involved in the issuance of this SRM were coordinated through the NIST Measurement Services Division.

NOTICE AND WARNING TO USERS

NOTE: This SRM contains lead, as a lead chromate pigment, which is toxic and a suspected carcinogen to the lung and kidney. The SRM must be handled with care and disposed of according to the U.S. Environmental Protection Agency (EPA) practices and procedures.

INSTRUCTIONS FOR USE

The SRM sheet must first be removed from the plastic sleeve in which it is stored and then positioned so that the side labeled with the NIST logo and SRM number faces the x-ray source. For best results, the size of the x-ray beam from the field unit should irradiate an area of the SRM that is at least 2.5 cm in diameter and is centered on the sheet. Care must be exercised not to compromise the protective plastic laminate which prevents scratching or chipping of the painted surface and the potential release of dust containing lead. Upon completion of the measurement, the SRM must be re-stored in the plastic sleeve provided. It is also recommended that this SRM be stored indoors at ambient room temperature and away from direct sunlight when not in use.

Stability: This SRM is considered to be stable during the period of certification. NIST will monitor the SRM and will report any significant changes in certification to the purchaser. Return of the attached registration card will facilitate notification.

PREPARATION

SRM Preparation: The paint-coated, polyester sheets were prepared by an automated coating process at a commercial facility under contract to NIST. Known concentrations of a lead chromate pigment were dispersed in a commercial paint vehicle to prepare the lead paints. A lead-free, organic tint was added to each paint mixture to give the desired color. A thin, protective overlay of plastic laminate was applied to each paint film. The attenuation of lead $L_{3-}M_{4,5}$ ($L\alpha_{1,2}$) X-rays due to the protective overlay does not exceed 2 % relative, while that of $K-L_{2,3}$ ($K\alpha_{1,2}$) x-rays commonly used for field measurement is negligible.

Performance Characteristic Sheet

Performance Characteristic Sheet

EFFECTIVE DATE: October 12, 2006

EDITION NO.: 1

MANUFACTURER AND MODEL:

Make: *Innov-X Systems, Inc.*
Models: *LBP4000 with software version 1.4 and higher*
Source: *X-ray tube (no radioactive isotopes)*

FIELD OPERATION GUIDANCE

OPERATING PARAMETERS:

Inspection mode, variable reading time.

XRF CALIBRATION CHECK LIMITS:

1.0 to 1.1 mg/cm² (inclusive)

SUBSTRATE CORRECTION:

Not applicable

INCONCLUSIVE RANGE OR THRESHOLD:

INSPECTION MODE READING DESCRIPTION	SUBSTRATE	INCONCLUSIVE RANGE (mg/cm ²)
Results not corrected for substrate bias on any substrate	Brick	0.6 to 1.1
	Concrete	0.6 to 1.1
	Drywall	0.6 to 1.1
	Metal	0.6 to 1.1
	Plaster	0.6 to 1.1
	Wood	0.6 to 1.1

BACKGROUND INFORMATION

EVALUATION DATA SOURCE AND DATE:

This sheet is supplemental information to be used in conjunction with Chapter 7 of the HUD *Guidelines for the Evaluation and Control of Lead-Based Paint Hazards in Housing* ("HUD Guidelines"). Performance parameters shown on this sheet are calculated from the EPA/HUD evaluation using archived building components. Testing was conducted on 146 test locations, with two separate instruments, in December 2005.

OPERATING PARAMETERS:

Performance parameters shown in this sheet are applicable only when properly operating the instrument using the manufacturer's instructions and procedures described in Chapter 7 of the HUD Guidelines.

XRF CALIBRATION CHECK:

The calibration of the XRF instrument should be checked using the paint film nearest 1.0 mg/cm² in the NIST Standard Reference Material (SRM) used (e.g., for NIST SRM 2579, use the 1.02 mg/cm² film).

If the average (rounded to 1 decimal place) of three readings is outside the acceptable calibration check range, follow the manufacturer's instructions to bring the instrument into control before XRF testing proceeds.

SUBSTRATE CORRECTION VALUE COMPUTATION:

Chapter 7 of the HUD Guidelines provides guidance on correcting XRF results for substrate bias. Supplemental guidance for using the paint film nearest 1.0 mg/cm² for substrate correction is provided:

XRF results are corrected for substrate bias by subtracting from each XRF result a correction value determined separately in each house for single-family housing or in each development for multifamily housing, for each substrate. The correction value is an average of XRF readings taken over the NIST SRM paint film nearest to 1.0 mg/cm² at test locations that have been scraped bare of their paint covering. Compute the correction values as follows:

Using the same XRF instrument, take three readings on a bare substrate area covered with the NIST SRM paint film nearest 1 mg/cm². Repeat this procedure by taking three more readings on a second bare substrate area of the same substrate covered with the NIST SRM.

Compute the correction value for each substrate type where XRF readings indicate substrate correction is needed by computing the average of all six readings as shown below.

For each substrate type (the 1.02 mg/cm² NIST SRM is shown in this example; use the actual lead loading of the NIST SRM used for substrate correction):

$$\text{Correction value} = (1\text{st} + 2\text{nd} + 3\text{rd} + 4\text{th} + 5\text{th} + 6\text{th Reading}) / 6 - 1.02 \text{ mg/cm}^2$$

Repeat this procedure for each substrate requiring substrate correction in the house or housing development.

EVALUATING THE QUALITY OF XRF TESTING:

Randomly select ten testing combinations for retesting from each house or from two randomly selected units in multifamily housing.

Take one XRF reading on each of the ten testing combinations selected for retesting.

Determine if the XRF testing in the units or house passed or failed the test by applying the steps below.

Compute the Retest Tolerance Limit by the following steps:

Calculate the average of the original XRF reading and the retest XRF reading for each testing combination.

Square the average for each testing combination.

Add the ten squared averages together. Call this quantity C.

Multiply the number C by 0.0072. Call this quantity D.

Add the number 0.032 to D. Call this quantity E.

Take the square root of E. Call this quantity F.

Multiply F by 1.645. The result is the Retest Tolerance Limit.

Compute the average of all ten original XRF readings.

Compute the average of all ten re-test XRF readings.

Find the absolute difference of the two averages.

If the difference is less than the Retest Tolerance Limit, the inspection has passed the retest. If the difference of the overall averages equals or exceeds the Retest Tolerance Limit, this procedure should be repeated with ten new testing combinations. If the difference of the overall averages is equal to or greater than the Retest Tolerance Limit a second time, then the inspection should be considered deficient.

Use of this procedure is estimated to produce a spurious result approximately 1% of the time. That is, results of this procedure will call for further examination when no examination is warranted in approximately 1 out of 100 dwelling units tested.

TESTING TIMES:

For the variable-time inspection paint test mode, the instrument continues to read until it has determined whether the result is positive or negative (with respect to the 1.0 mg/cm² Federal standard), with 95% confidence. The following table provides testing time information for this testing mode.

Testing Times Using Variable Reading Time Inspection Mode (Seconds)						
	All Data			Median for laboratory-measured lead levels (mg/cm ²)		
Substrate	25 th Percentile	Median	75 th Percentile	Pb < 0.25	0.25 ≤ Pb < 1.0	1.0 ≤ Pb
Wood, Drywall	2.1	2.3	5.4	2.2	5.4	2.2
Metal	2.6	3.2	5.3	2.7	5.1	5.1
Brick, Concrete, Plaster	3.1	4.0	5.7	3.2	4.0	5.9

CLASSIFICATION OF RESULTS:

When an inconclusive range is specified on the *Performance Characteristic Sheet*, XRF results are classified as positive if they are greater than the upper boundary of the inconclusive range, negative if they are less than the lower boundary of the inconclusive range, or inconclusive if in between. The inconclusive range includes both its upper and lower bounds. If the instrument reads "> x mg/cm²", the value "x" should be used for classification purposes, ignoring the ">". For example, a reading reported as ">1.0 mg/cm²" is classified as 1.0 mg/cm², or inconclusive. When the inconclusive range reported in this PCS is used to classify the readings obtained in the EPA/HUD evaluation, the following False Positive, False Negative and Inconclusive rates are obtained:

FALSE POSITIVE RATE: 2.5% (2/80)
 FALSE NEGATIVE RATE: 1.9% (4/212)
 INCONCLUSIVE RATE: 16.4% (48/212)

Scope of Work

STATEMENT OF WORK

For

Remediation of Lead Contamination at the Thomas Apartment

The Oklahoma Department of Environmental Quality (DEQ) is requesting a work plan and cost estimate for remediation services at the second level apartment located in Thomas, Oklahoma. This statement of work (SOW) describes removal and proper disposal of lead-based paint and lead dust. This work shall be performed to provide for safe re-use of the facility. The inspection report is attached (**Attachment 1**) and the apartment is referenced as City of Thomas Building in the report.

The apartment is located on the second floor at 123A West Broadway, Thomas, Oklahoma 73669. The building was constructed in 1903. The building will have available water and electricity to use during remediation.

SPECIAL PROVISIONS:

- Work Schedule: The contractor shall schedule all work to be completed within 60 calendar days after date of the written “Notice to Proceed.” Coordination of work shall be scheduled with DEQ.
 - All on-site work shall be completed by the contractor five (5) days prior to the scheduled contract completion date, with the remaining five (5) days utilized for final inspection and correction of all deficiencies.
- Conditions of Work: The following conditions of work will apply in accomplishment of this contract:
 - All work shall be performed in accordance with all applicable State and Federal regulations.
 - Contractor shall not cause damage to building structures such as property, walls, and fixtures during remediation process. If damage is caused to these items, contractor is responsible for repairing the damage at no cost to DEQ.
 - Coordination of work areas shall be scheduled with DEQ.
 - All work shall be performed in such a manner that it does not put workers’ health and safety at risk.
 - Disposal of Removed Materials: All materials removed by the Contractor under this contract shall be disposed of in accordance with State and Federal regulations. DEQ will sign as generator, if necessary.

CONTRACTOR SHALL:

- Attend pre-construction walk through;
- Follow all appropriate OSHA and ODOL safety requirements;

Submit With Bid:

- Copy of ODOL Asbestos Abatement Contractor License;

Submit After Notice to Proceed:

- A Work Plan with planned activities and schedule to DEQ for approval;

LEAD-BASED PAINT ABATEMENT INSTRUCTIONS

See Lead-Based Paint Inspection Report
for details (**Attachment 1**)

Non-Friction and Non-Impact Surfaces

- All items listed below shall be wet scraped, painted with a neutral-colored primer, and encapsulated with DEQ approved elastomeric encapsulant. A list of DEQ approved elastomeric encapsulants is attached (**Attachment 2**). Encapsulant shall be a minimum of 20 millimeters thick.
 - Approximately 2,500 ft² of plaster walls throughout the building
 - Approximately 5 windows frames and trim
 - Approximately 1 fire door
 - Approximately 20 linear feet of stair railing
- Deteriorated paint removed from building will be properly disposed of.

Friction and Impact Surfaces

- 1 barndoor style fire door and its components are contaminated with lead-based paint.
 - Door and door frame are metal and will be left in place.
 - Remove all paint from original door frame, repaint with a neutral-colored primer, and repaint the frame the proper color.
 - Remove all paint from Impact Surface of Door. Entire door shall be wet scraped, painted with a neutral-colored primer, encapsulated, and re-painted the proper color. If door componets are painted, remove paint, repaint with a neutral-colored primer, and repaint the components the proper color.

Clearance Inspection

- DEQ to perform a visual inspection to confirm lead-based paint has been removed appropriately before surfaces are painted or sealed.
- Once lead-based paint abatement is complete and after room floors are cleaned, contact DEQ before having post abatement clearance sampling in those areas performed.
 - If samples do not meet EPA and HUD standards for lead dust (10ug/SF for floors), areas will need to be re-cleaned and re-sampled;

Sampling and Disposal

- DEQ assumes that all lead-based paint chips removed from surfaces are considered hazardous waste. Lead-based paint removed from surfaces shall be disposed of as appropriate.
 - If Contractor uses a paint stripper that exhibits a characteristic of hazardous waste, or contains hazardous waste constituents, it is the contractor's responsibility to characterize this waste under 40 CFR 262.11 and if it is determined to be hazardous waste, disposing of them as such. The Final Report shall contain all relevant information regarding the waste determination.
 - A completed and signed waste manifest, Land Disposal Notification Form, Certificate of Disposal, or any other forms demonstrating that the paint chips were properly disposed of must be included in the Final Report.

FINAL REPORT

Write final report and submit to DEQ;

- Final report shall include:
 - A detailed summary of work including any warranties and data;
 - Waste manifests (if any); and
 - Photo documentation of work
 - Photo documentation of work will have color digital photos with captions describing photo;
- Final report will be submitted electronically.

RE: ABATEMENT OVERSIGHT | THOMAS APARTMENTS – 121 WEST BROADWAY AVENUE, OK 73669

Dear Trenton Wilhelm:

During the period of May 6 through May 30, 2024, Marshall Environmental Management, Incorporated (MEM) oversaw the abatement (i.e., removal) and disposal of the Asbestos Containing Materials (ACM) and Lead Based Paint (LBP), conducted by Tec-An, Inc., that was present within the Thomas Apartments located at 121 West Broadway Avenue in Thomas, Oklahoma. The following ACM and LBP and components were removed/disposed of in accordance with safe work practices within the guidelines of the Environmental Protection Agency (EPA), by an Asbestos Abatement Contractor (Tec-An):

- Plaster Walls with LBP: ~ 2,500 ft²
- Window Frames and Trim with LBP: ~5 Windows
- Fire Door Components with LBP: 1 Door
- Doors and Frames with LBP: ~ 5 Doors
- Stair Railing with LBP: ~ 20 Linear Feet
- Ceiling Panels with LBP: ~ 1,500 ft²
- Wood and Tile Flooring: ~ 1,200 ft²
- Assumed ACM Cement Panel: ~ 3 ft²
- Assumed ACM Heater Backing: ~ 3 ft²

While abatement activities were in progress, air samples, representative of the abatement workers breathing zone and the immediate work areas (i.e., 2nd floor of the building), were collected for the purpose of ensuring the effectiveness of the administrative and engineering controls being utilized. The samples were submitted and analyzed, for airborne fiber (NIOSH 7400 method) and airborne lead analysis (NIOSH 7303 method), by an American Industrial Hygiene Association (AIHA) proficient laboratory. The analytical data for the exposure assessments is included in the Appendix to this Report.

Once the abatement activities were complete, Marshall Environmental Management, Incorporated (MEM) conducted a clearance sampling event that took place on May 29th and 30th, 2024, within the interior of the Thomas Apartments located at 121 West Broadway Avenue in Thomas, Oklahoma. As part of the clearance sampling event, a visual assessment took place. In addition, samples of airborne fibers and surface dust were collected from various interior rooms (i.e., floors in all rooms where abatement activities occurred). Samples were submitted for laboratory analysis to ensure that the relevant areas were not contaminated with airborne fibers and/or lead-laden dust as a result of the abatement activities. It should be noted that at the request of the Client, asbestos clearance and surface dust samples were collected in all rooms potentially impacted by the abatement activities. The analytical data for the ACM and LBP Abatement Activities and Clearance Sampling events are included in the Appendix to this Report.

According to the Environmental Protection Agency (EPA) with regard to *Target Housing and Child-Occupied Facilities*¹, a LBP Hazard² is any condition that creates, or has the potential to create, an exposure to lead-contaminated dust, soil, or paint by means of deterioration, friction and/or impact, which could result in adverse human-health effects. EPA's clearance levels are for interior surfaces which include, 10 micrograms (µg) of lead in dust per square foot (ft²) for floor dust and 100 µg/ft² for windowsill dust³. For reference purposes, settled-dust collected from window troughs and all other exterior surfaces containing lead in concentrations ≥400-micrograms per square foot (≥400-µg/ft²) is defined as a LBP Hazard.

During the visual assessment, there were no visible contaminants in the work area. The interior of the building appeared to be clean and free of debris. As a result, laboratory analysis revealed that with the exception of the floor sample collected in the staircase, all remaining surface lead dust samples collected in the from the floors within the work areas exceeded the respective EPA clearance level of 10-µg/ft². Alternatively, all clearance airborne fiber concentrations were below the applicable Occupational Exposure Limits (OEL), which includes the OSHA permissible exposure limit (PEL) of 0.1 fibers per cubic centimeter (F/cm³) and the Oklahoma Department of Labor (ODOL) PEL of 0.01 F/cm³. A summary of the surface sample results can be found in Table I below and airborne fiber clearance results can be found in the Attachment to this report.

TABLE I: SURFACE DUST LABORATORY RESULTS

SAMPLE ID	BUILDING COMPONENT	LOCATION/ ROOM EQUIVALENT	AREA	SUBSTRATE	RESULTS	EPA ACTION LEVEL
LW-1	FLOOR	ROOM 1 – CENTER	1-FT ²	WOOD	100-µg/ft ²	10-µg/ft ²
LW-2	FLOOR	ROOM 2 – CENTER	1-FT ²	FLOOR TILE	55-µg/ft ²	10-µg/ft ²
LW-3	FLOOR	ROOM 3 – CENTER	1-FT ²	WOOD	78-µg/ft ²	10-µg/ft ²
LW-4	FLOOR	ROOM 4 – CENTER	1-FT ²	WOOD	47-µg/ft ²	10-µg/ft ²
LW-5	FLOOR	HALLWAY – CENTER	1-FT ²	WOOD	29-µg/ft ²	10-µg/ft ²
LW-6	FLOOR	ROOM 6 – CENTER	1-FT ²	WOOD	32-µg/ft ²	10-µg/ft ²
LW-7	FLOOR	STAIRCASE – CENTER STAIR	1-FT ²	WOOD	<5.0-µg/ft ²	10-µg/ft ²
LW-8	FLOOR	BLANK	N/A	N/A	<5.0-µg/ft ²	10-µg/ft ²

µg/ft² MICROGRAMS PER SQUARE FOOT

As a result of this evaluation, general recommendations are as follows.

- Surface clean the floor throughout the entire building utilizing high efficiency particulate air filtration [HEPA] vacuuming and wet wiping methods where feasible, or provide sufficient LBP abatement controls.
- Surface dust clearance activities can be repeated following the cleaning activities to ensure the cleanup activities were adequate.
- General recommendations suggest cleaning measures (e.g., dusting, sweeping, mopping, and/or vacuuming) should take place on a routine basis to prevent dust accumulation. Additionally, all cleaning activities should be conducted in a manner that suppresses the dispersion of dust (e.g., wet wiping and using high efficiency particulate air filtration [HEPA] vacuuming).

In conclusion, these analytical results are limited to the sampling locations and parameters analyzed as part of this ACM and LBP Clearance Sampling event and do not represent an Asbestos or LBP Inspection or Risk Assessment. The abatement activities and

Dear Jamie Marshall:

Enclosed are the analytical results for the samples received by our laboratory on May 13, 2024. All samples on the chain of custody were received in good condition unless otherwise noted. Any additional observations will be noted on the chain of custody.

Please contact client services at (888) 432-5227 if you would like any additional information regarding this report. Thank you for using SGS Galson.

Sincerely,

SGS Galson

Terms and Conditions & General Disclaimers

- This document is issued by the Company under its General Conditions of Service accessible at <http://www.sgs.com/en/Terms-and-Conditions.aspx>. Attention is drawn to the limitation of liability, indemnification and jurisdiction issues defined therein.
- Any holder of this document is advised that information contained herein reflects the Company's findings at the time of its intervention only and within the limits of Client's instructions, if any. The Company's sole responsibility is to its Client and this document does not exonerate parties to a transaction from exercising all their rights and obligations under the transaction documents. Any unauthorized alteration, forgery or falsification of the content or appearance of this document is unlawful and offenders may be prosecuted to the fullest extent of the law.

Analytical Disclaimers

- Unless otherwise noted within the report, all quality control results associated with the samples were within established control limits or did not impact reported results.
- Note: The findings recorded within this report were drawn from analysis of the sample(s) provided to the laboratory by the Client (or a third party acting at the Client's direction). The laboratory does not have control over the sampling process, including but not limited to the use of field equipment and collection media, as well as the sampling duration, collection volume or any other collection parameter used by the Client. The findings herein constitute no warranty of the sample's representativeness of any sampled environment, and strictly relate to the samples as they were presented to the laboratory. For recommended sampling collection parameters, please refer to the Sampling and Analysis Guide at www.sgsgalson.com.
- Unrounded results are carried through the calculations that yield the final result and the final result is rounded to the number of significant figures appropriate to the accuracy of the analytical method. Please note that results appearing in the columns preceding the final result column may have been rounded and therefore, if carried through the calculations, may not yield an identical final result to the one reported.
- The stated LOQs for each analyte represent the demonstrated LOQ concentrations prior to correction for desorption efficiency (if applicable).
- Unless otherwise noted within the report, results have not been blank corrected for any field blank or method blank data.

Accreditations SGS Galson holds a variety of accreditations and recognitions. Our quality management system conforms with the requirements of ISO/IEC 17025. Where applicable, samples may also be analyzed in accordance with the requirements of ELAP, NELAC, or LELAP under one of the state accrediting bodies listed below. Current Scopes of Accreditation can be viewed at <http://www.sgsgalson.com> in the accreditations section of the "About" page. To determine if the analyte tested falls under our scope of accreditation, please visit our website or call Client Services at (888) 432-5227.

Date Analyzed: 16-MAY-24 - 17-MAY-24

L625963 (Report ID: 1424633):

For applicable NYS sampling events, laboratory accreditation through NYSDOH applies only to Lead results.

Reported results reflect elemental analysis of the requested metals. Certain compounds may not be solubilized during digestion, resulting in data that is biased low.

SOPs: MT-SOP-29(15), MT-SOP-28(16), MT-SOP-27(21)

L625963-1-3,5,7-11 (Report ID: 1424633):

One out of eight blank spikes recovered below control limits (85.9 to 115%) at 84.6% for Lead .

L625963-4,6 (Report ID: 1424633):

Particulate present on the back-up pad. Back-up pad was included in the digestion and analysis. Reported results greater than LOQ may be biased high due to possible background from back-up pad. Statistical accuracy statements do not apply to samples that include back-up pad media.

L625963 (Report ID: 1424633):

Accuracy and mean recovery data presented below is based on a 95% confidence interval (k=2). The estimated accuracy applies to the media, technology, and SOP referenced in this report and does not account for the uncertainty associated with the sampling process. The accuracy is based solely on spike recovery data from internal quality control samples. Where N/A appears below, insufficient data is available to provide statistical accuracy and mean recovery values for the associated analyte.

Parameter	Accuracy	Mean Recovery
Lead	+/-9.6%	100%
Lead (L625963-4,6)	+/-10.1%	103%

www.ssgsgalson.com

Client Name : Marshall Environmental Management
Site :
Project No. : 0215-LBP-040124-JK

Date Sampled : 13-MAY-24 - 16-MAY-24 Account No.: 27140
Date Received: 20-MAY-24 Login No. : L626606
Date Analyzed: 23-MAY-24 - 24-MAY-24

L626606 (Report ID: 1425938):

For applicable NYS sampling events, laboratory accreditation through NYSDOH applies only to Lead results.

Reported results reflect elemental analysis of the requested metals. Certain compounds may not be solubilized during digestion, resulting in data that is biased low.

SOPs: MT-SOP-29(15), MT-SOP-28(16), MT-SOP-27(21)

L626606-10 (Report ID: 1425938):

Particulate present on bottom filter and o-ring. Bottom filter and o-ring were included in the digestion and analysis.

L626606-5 (Report ID: 1425938):

Particulate present on the back-up pad, bottom filter, and o-ring.

Back-up pad, bottom filter, and o-ring were included in the digestion and analysis.

Reported results greater than LOQ may be biased high due to possible background from back-up pad.

Statistical accuracy statements do not apply to samples that include back-up pad media.

L626606 (Report ID: 1425938):

Accuracy and mean recovery data presented below is based on a 95% confidence interval (k=2). The estimated accuracy applies to the media, technology, and SOP referenced in this report and does not account for the uncertainty associated with the sampling process. The accuracy is based solely on spike recovery data from internal quality control samples. Where N/A appears below, insufficient data is available to provide statistical accuracy and mean recovery values for the associated analyte.

Parameter	Accuracy	Mean Recovery
Lead	+/-10.1%	103%

Dear Jamie Marshall:

Enclosed are the analytical results for the samples received by our laboratory on May 28, 2024. All samples on the chain of custody were received in good condition unless otherwise noted. Any additional observations will be noted on the chain of custody.

Please contact client services at (888) 432-5227 if you would like any additional information regarding this report. Thank you for using SGS Galson.

Sincerely,

SGS Galson

Terms and Conditions & General Disclaimers

- This document is issued by the Company under its General Conditions of Service accessible at <http://www.sgs.com/en/Terms-and-Conditions.aspx>. Attention is drawn to the limitation of liability, indemnification and jurisdiction issues defined therein.
- Any holder of this document is advised that information contained herein reflects the Company's findings at the time of its intervention only and within the limits of Client's instructions, if any. The Company's sole responsibility is to its Client and this document does not exonerate parties to a transaction from exercising all their rights and obligations under the transaction documents. Any unauthorized alteration, forgery or falsification of the content or appearance of this document is unlawful and offenders may be prosecuted to the fullest extent of the law.

Analytical Disclaimers

- Unless otherwise noted within the report, all quality control results associated with the samples were within established control limits or did not impact reported results.
- Note: The findings recorded within this report were drawn from analysis of the sample(s) provided to the laboratory by the Client (or a third party acting at the Client's direction). The laboratory does not have control over the sampling process, including but not limited to the use of field equipment and collection media, as well as the sampling duration, collection volume or any other collection parameter used by the Client. The findings herein constitute no warranty of the sample's representativeness of any sampled environment, and strictly relate to the samples as they were presented to the laboratory. For recommended sampling collection parameters, please refer to the Sampling and Analysis Guide at www.sgsgalson.com.
- Unrounded results are carried through the calculations that yield the final result and the final result is rounded to the number of significant figures appropriate to the accuracy of the analytical method. Please note that results appearing in the columns preceding the final result column may have been rounded and therefore, if carried through the calculations, may not yield an identical final result to the one reported.
- The stated LOQs for each analyte represent the demonstrated LOQ concentrations prior to correction for desorption efficiency (if applicable).
- Unless otherwise noted within the report, results have not been blank corrected for any field blank or method blank data.

Accreditations SGS Galson holds a variety of accreditations and recognitions. Our quality management system conforms with the requirements of ISO/IEC 17025. Where applicable, samples may also be analyzed in accordance with the requirements of ELAP, NELAC, or LELAP under one of the state accrediting bodies listed below. Current Scopes of Accreditation can be viewed at <http://www.sgsgalson.com> in the accreditations section of the "About" page. To determine if the analyte tested falls under our scope of accreditation, please visit our website or call Client Services at (888) 432-5227.

L627290 (Report ID: 1427260):

Accuracy and mean recovery data presented below is based on a 95% confidence interval (k=2). The estimated accuracy applies to the media, technology, and SOP referenced in this report and does not account for the uncertainty associated with the sampling process. The accuracy is based solely on spike recovery data from internal quality control samples. Where N/A appears below, insufficient data is available to provide statistical accuracy and mean recovery values for the associated analyte.

Parameter	Accuracy	Mean Recovery
Lead	+/-9.6%	100%

Dear Jamie Marshall:

Enclosed are the analytical results for the samples received by our laboratory on May 31, 2024. All samples on the chain of custody were received in good condition unless otherwise noted. Any additional observations will be noted on the chain of custody.

Please contact client services at (888) 432-5227 if you would like any additional information regarding this report. Thank you for using SGS Galson.

Sincerely,

SGS Galson

Enclosure(s)

Terms and Conditions & General Disclaimers

- This document is issued by the Company under its General Conditions of Service accessible at <http://www.sgs.com/en/Terms-and-Conditions.aspx>. Attention is drawn to the limitation of liability, indemnification and jurisdiction issues defined therein.
- Any holder of this document is advised that information contained herein reflects the Company's findings at the time of its intervention only and within the limits of Client's instructions, if any. The Company's sole responsibility is to its Client and this document does not exonerate parties to a transaction from exercising all their rights and obligations under the transaction documents. Any unauthorized alteration, forgery or falsification of the content or appearance of this document is unlawful and offenders may be prosecuted to the fullest extent of the law.

Analytical Disclaimers

- Unless otherwise noted within the report, all quality control results associated with the samples were within established control limits or did not impact reported results.
- Note: The findings recorded within this report were drawn from analysis of the sample(s) provided to the laboratory by the Client (or a third party acting at the Client's direction). The laboratory does not have control over the sampling process, including but not limited to the use of field equipment and collection media, as well as the sampling duration, collection volume or any other collection parameter used by the Client. The findings herein constitute no warranty of the sample's representativeness of any sampled environment, and strictly relate to the samples as they were presented to the laboratory. For recommended sampling collection parameters, please refer to the Sampling and Analysis Guide at www.sgsgalson.com.
- Unrounded results are carried through the calculations that yield the final result and the final result is rounded to the number of significant figures appropriate to the accuracy of the analytical method. Please note that results appearing in the columns preceding the final result column may have been rounded and therefore, if carried through the calculations, may not yield an identical final result to the one reported.
- The stated LOQs for each analyte represent the demonstrated LOQ concentrations prior to correction for desorption efficiency (if applicable).
- Unless otherwise noted within the report, results have not been blank corrected for any field blank or method blank data.

Accreditations SGS Galson holds a variety of accreditations and recognitions. Our quality management system conforms with the requirements of ISO/IEC 17025. Where applicable, samples may also be analyzed in accordance with the requirements of ELAP, NELAC, or LELAP under one of the state accrediting bodies listed below. Current Scopes of Accreditation can be viewed at <http://www.sgsgalson.com> in the accreditations section of the "About" page. To determine if the analyte tested falls under our scope of accreditation, please visit our website or call Client Services at (888) 432-5227.

Date Sampled : 28-MAY-24 - 30-MAY-24 Account No.: 27140
Date Received: 31-MAY-24 Login No. : L627675
Date Analyzed: 04-JUN-24 - 06-JUN-24

L627675 (Report ID: 1427975):

For applicable NYS sampling events, laboratory accreditation through NYSDOH applies only to Lead results.
Reported results reflect elemental analysis of the requested metals. Certain compounds may not be solubilized during digestion, resulting in data that is biased low.
SOPs: MT-SOP-29(15), MT-SOP-27(21)

L627675-2 (Report ID: 1427975):

Particulate present on the back-up pad. Back-up pad was included in the digestion and analysis.
Reported results greater than LOQ may be biased high due to possible background from back-up pad.
Statistical accuracy statements do not apply to samples that include back-up pad media.

L627675 (Report ID: 1427975):

Accuracy and mean recovery data presented below is based on a 95% confidence interval (k=2). The estimated accuracy applies to the media, technology, and SOP referenced in this report and does not account for the uncertainty associated with the sampling process. The accuracy is based solely on spike recovery data from internal quality control samples. Where N/A appears below, insufficient data is available to provide statistical accuracy and mean recovery values for the associated analyte.
