# LEAD TESTING

IN PUBLIC SCHOOLS & CHILD CARE FACILITIES

District: Broken Bow Public Schools

School: Broken Bow High School

Sampling Dates: 4/8/2022, 2/17/2023, 8/12/2025

Status: Completed Sampling

## RESULTS

Below are the results from the first, second, and third rounds of testing of drinking water for lead that was conducted at Broken Bow Public Schools - Broken Bow High School. The initial sampling event occurred on April 8, 2022. The second sampling event occurred on February 17, 2023. The third sampling event occurred on August 12, 2025.

In the initial sampling, thirty (30) outlets were tested resulting in a total of sixty (60) samples being sent to the lab.

- Forty-seven (47) samples had no detectable level of lead.
- Twelve (12) samples had a low detection of lead between 1.0 and 14.9 µg/L.
- One (1) samples had a high detection of lead equal to or above 15.0 µg/L.

In the second sampling, four (4) outlets were tested resulting in a total of eight (8) samples being sent to the lab.

- Four (4) samples had no detectable level of lead.
- One (1) samples had a low detection of lead between 1.0 and 14.9 µg/L.
- Three (3) samples had a high detection of lead equal to or above 15.0 µg/L.

In the third sampling, two (2) outlets were tested resulting in a total of four (4) samples being sent to the lab.

- Two (2) samples had no detectable level of lead.
- Two (2) samples had a low detection of lead between 1.0 and 14.9 µg/L.
- Zero (0) samples had a high detection of lead equal to or above 15.0 µg/L.

The table below shows all sample results. Sample results are in micrograms per liter, shown as µg/L. For more information on how to read this report, please see our **Results Interpretation Fact Sheet**.
