RESULTS

Below are the results from the first and second rounds of testing of drinking water for lead that was conducted at Community Action Agency of OKC – Plainview Head Start. The initial sampling event occurred on August 20, 2024. The resampling event occurred on July 31, 2025.

In the initial sampling, seven (7) outlets were tested resulting in a total of fourteen (14) samples being sent to the lab.

- Thirteen (13) samples had no detectable level of lead.
- One (1) samples had a low detection of lead between 1.0 and 14.9 μ g/L.
- Zero (0) samples had a high detection of lead equal to or above 15.0 μg/L.

In the resampling, one (1) outlet was tested resulting in a total of two (2) samples being sent to the lab.

- One (1) sample had no detectable level of lead.
- One (1) sample had a low detection of lead between 1.0 and 14.9 μ g/L.
- Zero (0) samples had a high detection of lead equal to or above 15.0 μg/L.

The table below shows all sample results. Sample results are in micrograms per liter, shown as $\mu g/L$. For more information on how to read this report, please see our **Results Interpretation** Fact Sheet.
