## RESULTS

Below are the results from the first and second rounds of testing of drinking water for lead that was conducted at Sunbeam Family Services – Millwood Early Education Center. The initial sampling event occurred on May 17, 2024. The resampling event occurred on June 13, 2025.

In the initial sampling, eleven (11) outlets were tested resulting in a total of twenty-two samples being sent to the lab.

- Twenty-one (21) samples had no detectable level of lead.
- One (1) sample had a low detection of lead between 1.0 and 14.9 µg/L.
- Zero (0) samples had a high detection of lead equal to or above 15.0 µg/L.

In the resampling, eleven (11) outlets were tested resulting in a total of twenty-two (22) samples being sent to the lab.

- Twenty-two (22) samples had no detectable level of lead.
- Zero (0) samples had a low detection of lead between 1.0 and 14.9 µg/L.
- Zero (0) samples had a high detection of lead equal to or above 15.0 µg/L.

The table below shows all sample results. Sample results are in micrograms per liter, shown as µg/L. For more information on how to read this report, please see our **Results Interpretation Fact Sheet**.
