Technical Notes
Infant death = a live birth dying before day 365 or completing one year of life
Infant mortality rate = \( \frac{\text{number of deaths before day 365} \text{ } \text{total number of live births}}{1000} \)
Birth rate = \( 1000 \times \frac{\text{number of resident live births}}{\text{resident population}} \)
Low birth rate = birth weight 500-2499 grams
Very low birth rate = birth weight 500-1499 grams
Gestational age data shown in this report are derived from the obstetric estimate of gestation and date of last menses
Preterm births = 20-36 weeks gestation
Early term/late preterm births = 37-38 weeks gestation
