

## Information Regarding CCTV-RSA Category

The CCTV-RSA category was created specifically for businesses to install those CCTV systems that would normally be purchased by a homeowner and where the homeowner will do their own monitoring. This is a stand-alone system which means it does not tie into any other system or panel (fire, burg, nurse call, etc.). Also, this is only for RESIDENTIAL customers, not a business.

Anyone wanting to install integrated systems, commercial systems or systems that will use a monitoring service must have the CCTV Technician license.

An individual that holds a CCTV-RSA license is **not** permitted to perform within any licensed category as a trainee as is permitted for a CCTV Technician. They are limited to CCTV-RSA.

Finally, an individual with a CCTV-RSA license **will not** be able to upgrade to a Manager with this license. They must hold a CCTV Technician license to upgrade to Manager.

### **380:75-3-9. Closed circuit television license requirements (CCTV)**
