1. Incidence rates represent the number of injuries or illnesses per 100 full-time workers and were calculated as  $(N \times 200,000) / EH$  where:  
N = number of injuries and illnesses,  
EH = total hours worked by all employees during the calendar year, and  
200,000 = base for 100 full-time equivalent workers (working 40 hours per week, 50 weeks per year).

N.R. = Non-respondent

---

1. Incidence rates represent the number of injuries or illnesses per 100 full-time workers and were calculated as  $(N \times 200,000) / EH$  where:  
 N = number of injuries and illnesses,  
 EH = total hours worked by all employees during the calendar year, and  
 200,000 = base for 100 full-time equivalent workers (working 40 hours per week, 50 weeks per year).

N.R. = Non-respondent

TULSA	3394	13.8	6.2	1.1	6.3
OKLAHOMA CITY	5205	14.1	7.8	3.6	2.6

1. Incidence rates represent the number of injuries or illnesses per 100 full-time workers and were calculated as  $(N \times 200,000) / EH$  where:  
 N = number of injuries and illnesses,  
 EH = total hours worked by all employees during the calendar year, and  
 200,000 = base for 100 full-time equivalent workers (working 40 hours per week, 50 weeks per year).

1. Incidence rates represent the number of injuries or illnesses per 100 full-time workers and were calculated as  $(N \times 200,000) / EH$  where:  
N = number of injuries and illnesses,  
EH = total hours worked by all employees during the calendar year, and  
200,000 = base for 100 full-time equivalent workers (working 40 hours per week, 50 weeks per year).

Source: Oklahoma Department of Labor Statistical Research and Analysis Division.

1. Incidence rates represent the number of injuries or illnesses per 100 full-time workers and were calculated as  $(N \times 200,000) / EH$  where:  
N = number of injuries and illnesses,  
EH = total hours worked by all employees during the calendar year, and  
200,000 = base for 100 full-time equivalent workers (working 40 hours per week, 50 weeks per year).

Source: Oklahoma Department of Labor Statistical Research and Analysis Division.

1. Incidence rates represent the number of injuries or illnesses per 100 full-time workers and were calculated as  $(N \times 200,000) / EH$  where:  
 N = number of injuries and illnesses,  
 EH = total hours worked by all employees during the calendar year, and  
 200,000 = base for 100 full-time equivalent workers (working 40 hours per week, 50 weeks per year).
