1. Incidence rates represent the number of injuries or illnesses per 100 full-time workers and were calculated as $(N \times 200,000) / EH$ where:
 N = number of injuries and illnesses,
 EH = total hours worked by all employees during the calendar year, and
 200,000 = base for 100 full-time equivalent workers (working 40 hours per week, 50 weeks per year).

1. Incidence rates represent the number of injuries or illnesses per 100 full-time workers and were calculated as $(N \times 200,000) / EH$ where:
N = number of injuries and illnesses,
EH = total hours worked by all employees during the calendar year, and
200,000 = base for 100 full-time equivalent workers (working 40 hours per week, 50 weeks per year).

N.R. = Non-respondent

-
1. Incidence rates represent the number of injuries or illnesses per 100 full-time workers and were calculated as $(N \times 200,000) / EH$ where:
N = number of injuries and illnesses,
EH = total hours worked by all employees during the calendar year, and
200,000 = base for 100 full-time equivalent workers (working 40 hours per week, 50 weeks per year).

N.R. = Non-respondent

Source: Oklahoma Department of Labor Statistical Research Unit.

1. Incidence rates represent the number of injuries or illnesses per 100 full-time workers and were calculated as $(N \times 200,000) / EH$ where:
 N = number of injuries and illnesses,
 EH = total hours worked by all employees during the calendar year, and
 200,000 = base for 100 full-time equivalent workers (working 40 hours per week, 50 weeks per year).

1. Incidence rates represent the number of injuries or illnesses per 100 full-time workers and were calculated as $(N \times 200,000) / EH$ where:
N = number of injuries and illnesses,
EH = total hours worked by all employees during the calendar year, and
200,000 = base for 100 full-time equivalent workers (working 40 hours per week, 50 weeks per year).

1. Incidence rates represent the number of injuries or illnesses per 100 full-time workers and were calculated as $(N \times 200,000) / EH$ where:
N = number of injuries and illnesses,
EH = total hours worked by all employees during the calendar year, and
200,000 = base for 100 full-time equivalent workers (working 40 hours per week, 50 weeks per year).

1. Incidence rates represent the number of injuries or illnesses per 100 full-time workers and were calculated as $(N \times 200,000) / EH$ where:
 N = number of injuries and illnesses,
 EH = total hours worked by all employees during the calendar year, and
 200,000 = base for 100 full-time equivalent workers (working 40 hours per week, 50 weeks per year).
