Media Advisory

Roan Resources has informed the Oil and Gas Conservation Division of the Oklahoma Corporation Commission that it has decided to end all hydraulic fracturing operations at its well completion operation in the Bridge Creek area where earthquakes have recently occurred. After an earthquake event Sunday evening which the Oklahoma Geological Survey currently places at a 3.4 magnitude, OGCD directed Roan Resources to stop operations at the well pending further investigation and data review.

STATEMENT OF OKLAHOMA COMMISSION CHAIRMAN DANA MURPHY ON ROAN RESOURCE ACTION IN BRIDGE CREEK

“The decision of Roan Resources to stop hydraulic fracturing operations at the company’s well site in the Bridge Creek area is certainly good news, and the company is to be commended for its decision. This action means the Commission’s Oil and Gas Division will be able to direct its full efforts toward developing further, necessary revisions in the requirements operators must follow when there is seismicity around their well completion operation.”
