Reference: Federal Aviation Administration (FAA) Study Number: 2020-WTW-1400-OE and 83 associated structures

Dear Mr. Morris,

Thank you for your participation in the Mitigation Response Team (MRT) to assess and overcome military impacts from your proposed Blue Canyon Wind Power II wind farm project in Lawton, Oklahoma. In a letter dated June 12, 2020, the Department of Defense (DoD) described the potential impacts to military operations for the project.

As a result of discussions between EDP Renewables North America and the U.S. Army, the construction of the Blue Canyon Wind Power II wind project, submitted to the Federal Aviation Administration on 2/28/2020, will not present an adverse impact to military operations.

Further expansion beyond the current project area may present an adverse impact. We encourage you to engage DoD prior to any proposed expansion.

If you have any further concerns, please contact Mr. Michael Lignowski, Military Aviation and Installation Assurance Siting Clearinghouse, at 571-372-6853.

Sincerely,

A handwritten signature in blue ink, reading "Steven J. Sample".

Steven J. Sample  
Deputy Director  
Military Aviation and Installation
