Re: DEQ Application No. OKG11T212
Greenhill Concrete Products Inc., Rogers County, Oklahoma
Facility ID No. I-72002740

Dear Mr. Ritchie:

Your application for an Oklahoma Department of Environmental Quality (DEQ) permit to treat and dispose of wastewater was received by this office on November 30, 2011. As specified in OAC 252:004-7-7 of the DEQ rules, your application has been determined to be complete.

Your Authorization to treat and dispose of wastewater under OPDES General Permit No. OKG11T is enclosed. The effective date and the expiration date of this Authorization appears on the cover page.

Should you have any questions regarding the Authorization, please contact the Industrial Permits Section at the letterhead address or telephone (405) 702-8100. Should you have any questions regarding compliance with the conditions of this Authorization, please contact the Industrial Enforcement Section at the same address and phone number.

Sincerely,

Carol Paden

Carol Paden, P.E., Manager
Industrial Permits Section
Water Quality Division

CMP/BMC/ab WTC/SLT/AR

OKLAHOMA DEPARTMENT OF ENVIRONMENTAL QUALITY
AUTHORIZATION FOR DISCHARGE AND/OR DISPOSAL
UNDER GENERAL PERMIT NO. OKG11

AUTHORIZATION NO.: OKG11T212
FACILITY ID NO.: I-72002740

In compliance with Title 27A O.S. §2-6-201 *et seq.*, as amended (the OPDES Act), the Rules of the Department of Environmental Quality promulgated thereunder, and in reliance on the certified statements and representations heretofore made in its application,

Sherwood Construction Co., Inc., dba Greenhill Concrete.
P.O. Box 10
Catoosa, OK 74015

is hereby authorized to dispose of process wastewater and discharge non-contact stormwater runoff associated with the following activities: (1) truck mixer drum washout and (2) external truck wash and oil spray down, and associated stormwater runoff from their facility located at:

SE ¼, NW ¼, NW ¼, Section 10, Township 20N, Range 14 EIM
Rogers County, Oklahoma
or at 5411 N. 145th East Avenue, Owasso, OK 74055

The wastewater consists of truck mixer drum washout and stormwater from the plant area and is classified as Class III wastewater in accordance with OAC 252:616-1-2.

The above-referenced facility is also authorized to dispose of wastewater in one flow-through impoundment (F01) and one total retention surface impoundment (T01), as described in the Appendix. Surface impoundments shall be maintained in accordance with conditions set forth in the Concrete Batch Plant General Permit No. OKG11 and in Parts I, II, III, and the Appendix of this Authorization.

Discharge of wastewater contained in the authorized surface impoundment(s) to the waters of the state is specifically prohibited.

Issuance of this Authorization in no way or in any respect affects the permittee's civil or criminal responsibility regarding disposal of wastewater, except with respect to the permittee's legal responsibility under the OPDES Act and DEQ Rules.

This Authorization is non-transferable and is granted summarily by and at the discretion of the Executive Director in accordance with applicable DEQ Rules and provisions of the above-referenced Permit.

This Authorization replaces and/or supersedes OPDES Permit No. OKG11MT23 that became effective on August 1, 2007.

This Authorization shall become effective on September 7, 2012.

This Authorization shall expire at midnight, on January 4, 2014.

This is to certify that the proposed wastewater treatment and disposal systems described in this Authorization meet the requirements of the Oklahoma Water Quality Standards, as amended, and the DEQ Rules.

Issued this 7th day of September, 2012.

Carol Paden

Carol Paden, P.E., Manager
Industrial Permits Section
Water Quality Division

PART I
EFFLUENT LIMITATIONS, MONITORING AND OTHER REQUIREMENTS

SECTION A. EFFLUENT LIMITATIONS AND MONITORING REQUIREMENTS

Not applicable since discharge to waters of the state is prohibited.

SECTION B. HOUSEKEEPING PROGRAM REQUIREMENTS

Where the DEQ has determined that the facility has established a strong housekeeping program to maintain a clean plant site and has segregated process wastewaters from plant area stormwater, the plant area stormwater may be covered under Part I, Section H of the Concrete Batch Plant General Permit or Part I, Section C of this Authorization. **If this determination has been made by the DEQ, it will be noted in this Authorization.** The following conditions shall apply to all permittees for the establishment of a strong housekeeping program:

a. The area under and around the mix plant shall be kept clean of solids and other contaminants on a daily basis.
b. Solids and other contaminants that may accumulate on the ground under the mix plant and surrounding area shall be picked up by dry methods such as sweeping, shoveling, etc., or may be washed down to a process wastewater impoundment for treatment and containment.
c. Based on information provided by the applicant, the DEQ has determined that this facility has established a strong housekeeping program.

SECTION C. STORMWATER MONITORING REQUIREMENTS

1. Monitoring Requirements

All facilities, without exception, will be subject to visual monitoring.

a. Quarterly Visual Monitoring

The requirements and procedures for quarterly visual monitoring are applicable to all facilities covered under this General Permit.

- The Permittee must perform and document a quarterly visual examination of a stormwater discharge associated with industrial activity from each outfall, except discharges exempted below. The visual examination must be made during daylight hours (e.g., normal working hours). If no storm event resulted in runoff from the facility during a monitoring quarter, the permittee is excused from visual monitoring for that quarter provided the permittee documents in the monitoring records that no runoff occurred. An authorized representative of the facility must sign and certify the documentation.

- The visual examinations must be made of samples collected within the first 30 minutes (or as soon thereafter as practical, but not to exceed 1 hour) of when the runoff or snowmelt begins discharging from the facility. The examination must document observations of color, odor, clarity, floating solids, settled solids, suspended solids, foam, oil sheen, and other obvious indicators of stormwater pollution. The examination must be conducted in a well-lighted area. No analytical tests are required to be performed on the samples. All such samples must be collected from the discharge resulting from a storm event that is greater than 0.1 inches in magnitude and that occurs at least 72 hours from the previously measurable (greater than 0.1 inch rainfall) storm event. Where practicable, the same individual should carry out the collection and examination of discharges for the entire Authorization term.

The following Table is an example of what the permittee should look for in a visual monitoring sample.

Visual Monitoring		
Parameter	**Method**	**Results**
Color and Extent	Visual	Clear, yellow, red, blue, green, brown, black, milky, etc.
Odor	Smell	None, earthy, sewage, musky, rotten eggs, petroleum, etc.
Clarity or Turbidity	Develop a test such as, clean off the label from a 2 liter clear plastic bottle, fill with the sample, and try to see things through it.	1) can't see through the bottle 2) can see through but could not read newsprint 3) can see through and can read newsprint 4) pretty clear, but not as clear as bottled water 5) as clear as bottled water
Floating solids	Visual	Yes/no - describe what they are.
Settled solids	Use same 2 liter bottle	Tablespoons or cups of material or millimeters of solids on bottom after 24 hours
Suspended solids	Look through the container.	What do you see?
Foam	Visual	Yes/no - how thick is the foam? How much of the surface does it cover? What color is the foam?
Oil sheen	Visual	Color and extent
Other obvious indicators of stormwater pollution	Indicate what was observed that would lead a reasonable person to believe that the stormwater was polluted.	Tell it like you see it.

- Representative Outfalls - Substantially Identical Discharges.

  If the facility has two (2) or more outfalls that the permittee believes discharge substantially identical effluents, based on similarities of the industrial activities, significant materials or stormwater management practices occurring within the outfalls' drainage areas, the permittee may examine the effluent of just one of the outfalls and report that the examination also applies to the substantially identical outfall(s). For this to be permissible, the permittee must describe in the pollution prevention plan the following: locations of the outfalls; why the outfalls are expected to discharge substantially identical effluents; estimates of the size of the drainage area (in square feet) for each of the outfalls; and an estimate of the runoff coefficient of the drainage areas (low: under 40 percent; medium: 40 to 65 percent; high: above 65 percent).

- The Permittee must maintain the visual examination reports onsite with the Storm Water Pollution Prevention Plan (SWP3). The report must include the examination date and time, examination personnel, the nature of the discharge (i.e., runoff or snow melt), visual quality of the stormwater discharge (including observations of color, odor, clarity, floating solids, settled solids,

suspended solids, foam, oil sheen, and other obvious indicators of stormwater pollution), and probable sources of any observed stormwater contamination.

- Inactive and unstaffed sites: When the facility is unable to conduct visual stormwater examinations at an inactive and un-staffed site, the facility may exercise a waiver of the monitoring requirement as long as the facility remains inactive and un-staffed. If the waiver is exercised, the Permittee must maintain a certification with the pollution prevention plan stating that the site is inactive and unstaffed and that performing visual examinations during a qualifying event is not feasible. An authorized representative of the facility must sign and certify the waiver.

2. Stormwater Reporting Requirements

Visual monitoring results must be retained with the SWP3. Do not submit to the DEQ unless requested to do so by the Executive Director.

3. Annual Comprehensive Site Compliance Evaluation Reporting Requirement

An Annual Comprehensive Site Compliance Evaluation Report using DEQ Form 605-006 must be filed each year by each facility covered by this Authorization. The report must be filed by April 1st of each year.

The report must include a certification signed and dated by an authorized representative of the facility that states the following:

I certify under penalty of law that I have read and understand the requirements for filing this Comprehensive Site Compliance Evaluation Report, that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gathered and evaluated the information submitted. Based upon my inquiry of the person or persons who manage the system, or those persons directly involved in gathering the information, the information submitted is to the best of my knowledge and belief true, accurate and complete. I am aware there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

SECTION D. SURFACE IMPOUNDMENTS

The use of surface impoundments for treatment and/or disposal of process wastewater at concrete batch and pre-cast concrete product plants are authorized by the General Permit, subject to additional State requirements as specified below in accordance with OAC 252:616.

1. Construction Requirements

Impoundments T01 and F01 shall be constructed in accordance with OAC 252:616-7 and maintained in accordance with OAC 252:616-7-1.

2. Wastewater Classification

The process wastewater generated from routine operations of concrete batch and pre-cast concrete product plants is classified as Class III wastewater in accordance with OAC 252:616-1-2.

3. Liner Requirements

Surface impoundment F01 has a Concrete liner. Surface impoundment T01 has a limestone bedrock liner. Since the wastewater being retained is Class III, it is the Best Professional Judgment (BPJ) of the permit writer that concrete and limestone bedrock liners are appropriate and compatible liner systems in accordance with OAC 252:616-7.

4. Specific Requirements

a. Wastewater contained in surface impoundments may be recycled for use in product, dust suppression, stockpile watering or wash water.

b. At such time as surface impoundments are to be permanently taken out of service or at such time as the contents of surface impoundments pose a risk to the environment or waters of the State, the owner or operator of the facility shall follow all closure requirements contained in OAC 252:616-13.

c. In all other respects, surface impoundments shall be subject to standard conditions for surface impoundments contained in OAC 252:616, Subchapters 5, 7, and 13, including but not limited to requirements for construction, operation, maintenance, monitoring and closure.

Each Authorization may include other specific requirements for each surface impoundment based on information submitted by the applicant, facility inspection, and DEQ rules.

5. Freeboard Requirements

A minimum freeboard of two (2) feet shall be maintained on all flow-through surface impoundments and all surface impoundments that are equipped to transfer process wastewater to a permitted outfall, other permitted surface impoundments, recycle/reuse system or a land application system. However, a minimum freeboard of one (1) foot shall be maintained on all flow-through surface impoundments constructed with a concrete liner in accordance with OAC 252:616-7. Impoundment F01 shall maintain one (1) foot of freeboard.

A minimum freeboard of three (3) feet shall be maintained on all total retention surface impoundments that are not equipped to transfer process wastewater to a permitted outfall, other permitted surface impoundments, recycle/reuse system or a land application system. However, a minimum freeboard of two (2) feet shall be maintained on all total retention surface impoundments constructed with a concrete liner in accordance with OAC 252:616-7. Impoundment T01 shall maintain three (3) feet of freeboard.

6. Depth to Groundwater

Surface impoundments as required by OAC 252:616-7-1(4) are required to be located such that the base of the liner is at least (15) feet above historic maximum groundwater table. Since the wastewater from the activities covered by this general permit is classified as Class III, this requirement may be waived in accordance with OAC 252:616-7-1(4)(B). However, at no location shall the bottom of a surface impoundment be equal to or below the highest seasonal groundwater elevation. Due to the class of wastewater and topography of the area, the groundwater separation requirement has been waived.

SECTION E. TANK SYSTEMS

The use of underground tank systems to manage process wastewater for treatment and/or disposal of process wastewater at concrete batch plants and pre-cast concrete product facilities is authorized by the General Permit, subject to additional requirements as specified below in accordance with OAC 252:616.

1. Authorized Use of Tank Systems (OAC 252:616-9-1)

   The use of tank systems for all wastewater classifications is authorized as follows:

   a. Tank systems without lateral lines can be used for the treatment of Class I, II, III, and V wastewater.

2. Tank System Materials (OAC 252:616-9-2)

   Tank systems may be constructed of concrete, metal, plastic, or fiberglass in accordance with OAC 252:616-9-2.

3. Tank System Requirements (OAC 252:616-9-3)

   Tank systems must be constructed in accordance with OAC 252:616-9-3.

SECTION F. LAND APPLICATION AND BENEFICIAL REUSE OF PROCESS WASTEWATER

Land application of process wastewater for dust suppression and/or reuse of process wastewater for construction or stabilization at concrete batch plants and pre-cast concrete product facilities are authorized by the General Permit, and are subject to the requirements as specified below and in this Authorization, in accordance with OAC 252:616-11.

1. Process wastewater that is reused or land applied for dust suppression must be classified as Class III wastewater in accordance with OAC 252:616-1-2.

2. Process wastewater to be land applied for dust suppression shall be free of a visible sheen of oil or globules of oil or grease.

3. The process wastewater to be land applied for dust suppression shall be visually inspected prior to land application.

4. Process wastewater that is recycled back into the concrete mixture is exempt from monitoring requirements.

5. There shall be no land application of process wastewater for dust suppression in areas where the depth to the maximum seasonal groundwater level is less than two (2) feet in accordance with OAC 252:616-5-1(b)(2)(E).

6. There shall be no land application of process wastewater for dust suppression during periods of precipitation or when soil is saturated or frozen.

7. There shall be no runoff of process wastewater used for dust suppression.

SECTION G. RECYCLABLE CONCRETE MATERIAL AND DISPOSAL OF OTHER SOLIDS

Recyclable concrete material recovered from the scatter pile, impoundments and/or other means may be removed from the facility and may also be used by the applicant at the permitted facility at any time. No records are required.

SECTION H. SCHEDULE OF COMPLIANCE

The permittee will achieve compliance with the following schedule.

SCHEDULE OF COMPLIANCE

Item	Due date
1. Remove trees and overgrown plant life, and repair the liner of T01.	Three (3) months from effective date of permit authorization
2. Submit an approvable plan, signed and sealed by a professional engineer licensed to practice in the state of Oklahoma, to construct impoundment F02 and the conveyance to transport water to T01.	Three (3) months from effective date of permit authorization
3. Submit as-built construction designs for F02 before use of F02.	Six (6) months from effective date of permit authorization

PART II
OTHER PERMIT CONDITIONS AND REQUIREMENTS

1. This Authorization does not convey any exclusive privileges or authorize any injury to property or invasion of rights or any infringement of federal, state, or local laws or regulations nor does it obviate the requirement to obtain permission from any landowners whose property will be affected by this Authorization.

2. Detergents used for truck washing should be low-phosphate, low-sudsing and biodegradable.

3. Laws and Rules Applicable

   The DEQ Rules, as amended, are applicable to and are incorporated by reference into the Concrete Batch Plant General Permit and any Authorizations under it. The permittee is hereby given notice that this Authorization is in all respects subject to compliance with and actions under any and all applicable and relevant terms, conditions, provisions and requirements and all amendments of the laws of the State of Oklahoma, the Department of Environmental Quality Rules, and Oklahoma's Water Quality Standards. The absence of any express reference within this permit to any particular statutory requirement, rule(s), regulation(s), or standard(s) shall in no respect be deemed or construed to exempt or preclude the application of such requirement, rule(s), regulation(s), or standard(s) to this permit of the permittee. By DEQ approval, grant, and issuance of this Authorization, permittee acknowledges responsibility to obtain correct and current copies of applicable DEQ Rules (as amended), provided, however, that permittee further acknowledges that any and all amendments thereto shall become a part of this Authorization.

APPENDIX

Description of Wastewater Treatment/Disposal Surface Impoundments

Classification OAC 252:616-1-2		Liner Description	Holding Capacity and/or Dimensions OAC 252:616-7-1(6) [b]	Wastewater Destination
ID [a]	Wastewater Description			
F01	Wastewater generated from concrete drum cleanout and stormwater Class III	Concrete	233,375 gallons 25' x 130' x 10'	T01 and Recycle
T01	Wastewater generated from effluent from F01 and stormwater Class III	Limestone Bedrock	4,978,500 gallons 172' x 200' x 20'	Total Retention and Recycle

[a] Designation T refers to total retention surface impoundment.
Designation F refers to flow-through surface impoundment.

[b] Based on information provided in application. Freeboard requirements in Part I.D.5 must be met.

Location of Surface Impoundments

ID	Legal Location Description	General Location and Description
F01	SW¼, NE¼, NW¼, Section 10, Township 20N, Range14EIM, Rogers County, Oklahoma	Southeast of office, South of plant

CLOSURE PLAN

Pond F01

Greenhill Concrete
Rogers County, OK

Greenhill Concrete proposes to relocate Pond F01 at its concrete batch plant located 5411 N. 145th East Avenue, Owasso, Oklahoma 4015. The reasons for this relocation are:

1. To collect additional runoff from around the batch plant for haul road watering,
2. To expand the aggregate storage area in the vicinity of the existing pond.

1. **Background: Describe the activity that took place at the site during the life of the impoundment. Describe the current condition of the impoundment, including the amount of water remaining and an estimate of the amount of sludge remaining.**

Pond F01 has been in use at this facility since it went into operation in late 2007. This pond receives flow from washing concrete residue from the mixer barrels on Company cement trucks. Water from the impoundment is then used for watering the facility haul roads. Periodically, accumulated concrete is removed from the pond and stockpiled onsite. Existing Pond F01 will be emptied of water and concrete prior to closure. Water will be applied to facility haul roads and concrete will be removed and stockpiled. This pond will then be filled with native soil and/or aggregate material and the facility's aggregate stockpiles will be expanded over the former pond location.

2. **Proposed Closure Activities: Please indicate what will be done with the water and sludge remaining in the impoundments.**

   a. Water in this impoundment:

   _____ will be allowed to evaporate.
   _____ will be pumped out and disposed in a POTW.
   _____ will be pumped out and used for watering facility haul roads.
   __X__ will be used for dust suppression (total volume).
   _____ will be left in place.

   b. Sludge. There is no sludge in this impoundment, however, accumulated concrete will be removed and stockpiled onsite for later use as onsite or offsite fill material.

3. **Backfill:**

The existing impoundment will be backfilled using onsite soil material and/or aggregate materials.

4. **Disposal:**

There is no piping or other material associated with the existing pond that will require disposal during closure.

5. Certification of Closure:

Greenhill Concrete will complete construction of replacement Pond F01 and place the relocated pond in service. The Company will then complete closure of existing Pond F01. After completion of the above activities, DEQ will be notified via a signed certification that all closure activities were completed in accordance with this Plan as required by OAC 252:616-13-4(d).

6. Plan Deviation:

If there is a need to deviate from this Plan in any way, or the closure plan is not approved by the DEQ, then the closure certification for the facility will be submitted by a Registered Professional Engineer, licensed by the State of Oklahoma.

RE: Closure Plan for ODEQ Application No. OKG11T212
Greenhill concrete Products Inc., Rogers County, Oklahoma
Facility ID No. I-72002740

Dear Mr. Ritchie:

Your closure plan for impoundment F01 was received by this office on September 14, 2012. The DEQ had reviewed your closure plan and approves of the closure plan. Once the closure activities are complete, you will need to submit a letter to the DEQ certifying that you closed the impoundment in accordance with your approved closure plan. Once the DEQ receives the Certification of Closure, the DEQ will reissue your authorization.

Thank you for your cooperation. If you have any questions concerning this submittal or DEQ procedures, please contact Bryce Callies at (405) 702-8212.

RE: Design Details, New Pond F01, Greenhill Concrete Products, Inc., Rogers County, OK.
ODEQ Application No. OKG11T212.
Facility ID No. I-72002740.

Dear Mr. Jordan:

In accordance with your letter of September 22, 2012, we are providing you with the design details of the new Pond F01 at the above facility. This replacement pond is equipped with a concrete bottom and sidewalls comprised of earth and concrete block. A 12-inch subsurface discharge line routes overflow to total retention pond T01. Water is pumped from Pond F01 to an adjacent mixer truck washout pad and then routed back to Pond F01.

Detail sheets have been attached showing the Pond F01 drainage area, a ditch that routes water from the Greenhill Concrete plant to the pond, the subsurface drainage line and the mixer truck washout pad.

Please contact me (randy.beeson@secompliance.com) or Mr. Matt Ritchie (mattr@greenhillconcrete.com) if you or your staff has any questions regarding this replacement pond.

Sincerely,
SUPERIOR ENVIRONMENTAL COMPLIANCE, INC.

Re: Application for Renewal of General Permit Authorization OKG11
Sherwood Construction Co., Inc. dba Greenhill Concrete - Mobile, Tulsa County
Permit No: OKG11T212
Facility ID: I-72002740

Dear Environmental Manager:

The above referenced general permit will expire on January 4, 2013. The Oklahoma Department of Environmental Quality (ODEQ) requests that you submit a General Permit Authorization application in order to renew your Concrete Batch Plant authorization. An application form is enclosed for your convenience. It should be filled out completely, signed, and returned to this office no later than January 4, 2013.

In accordance with OAC 252:616-3-3 of the DEQ rules, effective July 1, 2011 an application fee is due when submitting an application for a permit authorization. The application fee is non-refundable and is due when an application is filed with the DEQ. A summary is enclosed describing your application fee. Please detach and return the bottom half with your payment.

If this facility is no longer in existence or in use, please contact us regarding a closure plan for the existing permit. If you have already completed and submitted an application please notify us as soon as possible. Thank you very much for your cooperation.

If you have questions regarding this matter, please contact Brandon Tyler at (405) 702-8215.

Sincerely,

Carol Paden

RE: Renewal Application, OPDES Permit No. OKG11T212, Greenhill Concrete Products, Inc. Main Plant, Facility ID No. I-72002740.

Dear Mr. Tyler:

Attached please find a General OPDES Permit Renewal Application that we are filing on behalf of our client, Greenhill Concrete Products, Inc., for its Main Concrete Batch Plant located in Rogers County, Oklahoma.

The facility currently operates with a total retention permit. The plant will remain a total retention facility, since flows to T01 seldom occur and this pond has never discharged to the best of anyone's knowledge.

Please feel free to contact me (randy.beeson@secompliance.com) or Mr. Matt Ritchie (mattr@greenhillconcrete.com) if you have any questions regarding this application.

Sincerely,
SUPERIOR ENVIRONMENTAL COMPLIANCE, INC.

FORM 606-G11	OKLAHOMA DEQ	APPLICATION FOR AUTHORIZATION UNDER GENERAL PERMIT NO. OKG11 **CONCRETE BATCH PLANTS**

A. TYPE OF AUTHORIZATION REQUESTED (Applies to all applicants)

NEW		RENEWAL		MODIFICATION		DISCHARGE		IMPOUNDMENT	
	x								

B. NAME OF FACILITY (Applies to all applicants)

Greenhill Concrete Products, Inc.

C. FACILITY CONTACT (Applies to all applicants)

1. NAME & TITLE	2. PHONE (area code & number)
Matt Ritchie	918-266-6861

D. FACILITY MAILING ADDRESS (Applies to all applicants)

1. STREET OR P.O. BOX	2. TELEFAX (area code & number)	
P.O. Box 10	918-266-6482	
3. CITY OR TOWN	**4. STATE**	**5. ZIP CODE**
Catoosa	OK	74015

E. FACILITY LOCATION (Applies to all applicants)

1. STREET, ROUTE NO. OR OTHER SPECIFIC IDENTIFIER	2. COUNTY	
5411 N. 145th East Avenue	Rogers	
3. CITY OR TOWN	**4. STATE**	**5. ZIP CODE**
Owasso	OK	74055

6. LEGAL DESCRIPTION (¼, ¼, ¼, Section, Township, Range)

NW/4, Section 10, Township 20 North, Range 14 East, Rogers County, OK

F. OPERATOR INFORMATION (Applies to all applicants)

1. NAME	2. Is the operator also the owner?			
Greenhill Concrete Products, Inc.	YES	x	NO	
3. STATUS OF OPERATOR (enter appropriate letter in box; if "Other," specify)			**4. PHONE** (area code & number)	
F = FEDERAL, S = STATE, P = PRIVATE; M = PUBLIC (other than federal or state), O = OTHER (specify)	P	(specify)	918-266-6861	
5. STREET OR P.O. BOX			**6. TELEFAX** (area code & number)	
P.O. Box 10			918-266-6482	

7. CITY OR TOWN	8. STATE	9. ZIP CODE	G. Is facility located on Indian land?			
Catoosa	OK	74015	YES		NO	x

H. MAP (Applies to all applicants)

1. Attach a topographic map (or plat or aerial photo if a topographic map is unavailable) extending one mile beyond the property boundaries. The map must show the outline of the facility, the location of each of its outfalls, surface impoundments, septic tank systems, vehicle wash pads, storage facilities, and containment devices; and those wells, springs, other surface water bodies, and drinking water wells listed in public records or otherwise known to the applicant.
2. Attach a facility site plan showing the location of any buildings, outfalls (discharge points), surface impoundments, septic tank systems, vehicle wash pads, materials storage piles, other storage facilities, containment devices, driveways, parking areas and other permanent structures. A site plan prepared for another state agency may be acceptable provided the wastewater storage, treatment and disposal information is indicated thereon.

I. SIC CODES (4-digit, in order of priority) (Applies only if the facility has activities in addition to concrete batching)

1. FIRST		2. SECOND	
(number) 3273	(specify) Concrete batch plant	(number)	(specify)

J. STORM WATER PERMITTING (Applies to all applicants)

Does facility have a Stormwater Pollution Prevention Plan (SWP3) on file at the Facility? If not, a SWP3 plan must be prepared before an Authorization under this General Permit can be issued.	YES	x	NO	

FOR OFFICIAL USE ONLY

AUTHORIZATION NO.	FACILITY ID NO.	
OKG110____ OKG11T____	I- ENGINEER: _____	RECEIVED NOV 04 2013 WATER QUALITY DIVISION Date Stamp

K. NATURE OF BUSINESS (Applies to all applicants)

1. PRODUCTS AND SERVICES

a. Is this facility a central mix plant or transit mix plant?	Central	x	Transit	
b. Will facility operations be seasonal or temporary in nature?	Seasonal		Temporary	x

c. If so, indicate the anticipated seasons of operation and/or life of the facility.

2. FACILITY OPERATIONS

a. Process/Operation	b. Product	c. Daily Quantity (units)
Concrete Batch Plant	Ready Mix Concrete	350 cy/day (average)

d. Briefly describe any practices used for recycling/reuse of wastewater (concrete make-up water, wash water, reuse for construction/stabilization, land application for dust suppression, etc.)

Wash water is reused to clean mixer drums. A portion of the wastewater is land applied for dust suppression.

e. Briefly describe facility housekeeping practices. Indicate whether mix plant area housekeeping uses dry clean-up or water washdown. If water washdown is used, indicate whether and how washdown water is segregated from mix plant area storm water.

Washdown water is captured in F02 for reuse in mixer washout. Pond F01 was recently closed and replaced with Pond F02.

3. Date facility began/will begin operations: Existing Facility

4. Number of employees at this location: Approximately 25

5. Facility normally operates: 8-10 hours per day, 5-7 days per week, in 1 shifts.

L. SOURCES OF WATER SUPPLY AND AMOUNT USED (Applies to all applicants)

Identify all sources of facility water by entering the appropriate letter(s) in the boxes below and then providing the appropriate description(s), as indicated in parentheses. List each source on a separate line. If you have more than one source of a given type, indicate this by entering the letter, followed by two digits (e.g., if your water comes from three wells, the sources would be indicated as G01, G02 and G03). For each source, estimate of the average daily use. Continue on additional sheets if needed.

G = GROUNDWATER WELL	(legal description of well location)
S = SURFACE WATER	(name of stream, river, lake, etc., and legal description of intake)
P = PUBLIC WATER SUPPLY	(name of entity from which water is obtained)
W = WASTEWATER TREATMENT PLANT	(name of entity from which water is obtained)
O = OTHER	(source of supply, and legal description if applicable)

1. SOURCE	2. DESCRIPTION	3. AVG. DAILY USE (GPD)
P	City of Tulsa Public Water Supply	8,000 gpd (average)

M. INVENTORY OF CHEMICALS AND RAW MATERIALS (Applies to all applicants)

1. List all chemical compounds and raw materials in containers of 55 gallons or more, used in plant operations and stored outside a building (e.g., solvents, cleaning compounds, water treatment chemicals). Describe the storage location and the purpose for which each chemical is used. Continue on additional sheets if needed.

No change since previous submittal of April 27, 2012.

2. Attach Material Safety Data Sheets (MSDS) for any additives, detergents, spray oils or treatment chemicals used.

N. OUTFALL LOCATION (Applies only to applicants that discharge wastewater to waters of the state)

1. For each outfall, list the legal description (¼, ¼, ¼, Section, Township, Range) to the nearest 10 acres and the name of the receiving water. Outfalls should be numbered 001, 002, etc. Continue on separate sheets if necessary.

a. ID NO.	b. LEGAL DESCRIPTION	c. RECEIVING WATER
NA		

2. For each outfall, list the latitude and longitude. Continue on separate sheets if necessary.

a. ID NO.	b. LATITUDE	c. LONGITUDE
NA		

O. FLOWS, SOURCES OF WASTE, AND TREATMENT (Applies to all applicants)

1. Attach line drawing showing water flow through the facility. Indicate sources of intake water, operations contributing wastewater to the effluent, and treatment units (grit traps, oil/water separators, surface impoundments, etc.) labeled to correspond to the more detailed descriptions in Item 2. Indicate disposal pathways of the wastes and wastewaters, including evaporation, recycle, discharge, solid waste storage, septic tanks, impoundments, land application, landfill or other pathways. Provide a water balance (measured or estimated) on the line drawing that shows average flows between sources, unit processes and disposal pathways.
2. For each outfall (001, 002, etc.), provide a description of: (1) All operations and other sources of pollution which contribute waste to the outfall, including but not limited to process wastes, sanitary wastes, and stormwater; and (2) The average, maximum and minimum flows contributed by each operation or other source of pollution. Provide the same information for any surface impoundments (F01, F02, T01, T02, etc.) used for treatment or disposal. Continue on additional sheets if needed.

a. ID NO.	b. OPERATION(S)/SOURCE(S)	c. DAILY FLOW (GPD)		
		(1) AVERAGE	(2) MAXIMUM	(3) MINIMUM
NA				

P. EFFLUENT CHARACTERISTICS (Applies only to applicants that discharge wastewater to waters of the state)

1. Report estimated amounts (daily maximum and daily average) of the listed pollutants to be discharged from each of your outfalls, and the source of information. For pH, indicate daily maximum and daily minimum. Data for each outfall should be on a separate page. Continue on separate sheets if necessary.

Outfall No. ____

a. Pollutant	b. Maximum Daily Value (units)	c. Average Daily Value (units)	d. Source of Information
Flow	NA		
Chemical Oxygen Demand (COD)			
Oil and Grease			
Total Suspended Solids (TSS)			
pH			
Alkalinity			

Q. IMPOUNDMENT LOCATION (Applies only to applicants that use surface impoundments for treatment/disposal)

For each industrial surface impoundment, provide the ID number, legal description, and indicate if the impoundment is located in the 100 year flood plain. If the impoundment(s) have previously been permitted, use the ID number(s) contained in the previous permit. If the impoundment(s) have not previously been permitted, ID numbers should be assigned using the appropriate letter followed by two digits (e.g., if you have three flow-through impoundments, their ID numbers would be F01, F02 and F03). Each type of impoundment should be numbered separately (e.g., if you have one flow-through and one total retention impoundment, their ID numbers would be F01 and T01, rather than F01 and T02). Use the same numbers throughout this form. Continue on additional sheets if needed.

F = FLOW-THROUGH SURFACE IMPOUNDMENT T = TOTAL RETENTION SURFACE IMPOUNDMENT

1. ID NO.	2. LEGAL DESCRIPTION (¼, ¼, ¼, Section, Township, Range)	3. FLOOD PLAIN (yes or no)
F02	Center, NW/4, Section 10, T20N, R14E	No
T01	Center, NW/4, Section 10, T20N, R14E	No

R. IMPOUNDMENT AND LINER INFORMATION (Applies only to applicants that use surface impoundments for treatment/disposal)

1. For each impoundment, attach drawings or plans with the following: (1) Length and width at top and bottom; (2) Total depth; (3) Designed minimum and maximum freeboard; (4) Interior and exterior side-slopes (ratio of horizontal to vertical distances); and (5) Inlet and outlet structures.

2. For each impoundment, list the holding capacity in gallons (assuming a minimum freeboard) and the dimensions in feet. The following abbreviations are used in the table to indicate the various impoundment dimensions. Continue on separate sheets if necessary.

BW = BOTTOM WIDTH TW= TOP WIDTH D = DEPTH
BL= BOTTOM LENGTH TL = TOP LENGTH F = MINIMUM FREEBOARD

a. ID NO.	b. HOLDING CAPACITY (gallons)	c. DIMENSIONS (1) BW (ft)	(2) BL (ft)	(3) TW (ft)	(4) TL (ft)	(5) D (ft)	(6) F (ft)
F02	59,441	33.67	59	33.67*	59	0-8' (ave. =4')	3
T01	4,978,500	165	195	172	200	20	3+
	*Sidewalls are comprised of vertical concrete blocks.						

3. In the table below, list the type of liner material (e.g., excavated soil, compacted clay, flexible membrane, composite, soil/bentonite, concrete, or alternative) to be installed or currently in use. List the thickness (in inches, feet, or mils) and permeability rate (in inches/hour or centimeters/second) of each liner as proposed or as built. Also list the type of soil (series name and USDA texture) underlying the impoundment. Continue on separate sheets if necessary.

a. ID NO.	b. LINER TYPE	c. THICKNESS (units)	d. PERMEABILITY (units)	e. SOIL TYPE (1) SERIES NAME	(2) USDA TEXTURE
F02	Limestone Bedrock	~90 feet	0.00 to 0.06 in/hr	CmB	SiL-SiCL
T01	Limestone Bedrock	~90 feet	0.00 to 0.06 in/hr	CmB	SiL-SiCL

4. For each impoundment, list the actual or engineering estimate of the volume of sludge generated annually. Indicate whether the sludge will be periodically removed from the impoundment (give frequency of removal and how sludge will be disposed) or will accumulate in the impoundment as a site of final disposal. Also indicate wbether you possess analytical data on the sludge generated in each impoundment. Continue on separate sheets if necessary.

F02 - Approximately 468 TPY of concrete washout/sludge is removed from the pond annually.

T01 - Very little, if any, sludge accumulates in this impoundment which is normally dry.

5. Describe the treatment purpose of each cell or impoundment (e.g., settling, oil/water separation, aeration, evaporation, or final disposal). List any chemicals and equipment used for eacb treatment method. Continue on separate sheets if necessary.

a. ID NO.	b. TREATMENT (1) DESCRIPTION	(2) CHEMICALS/EQUIPMENT
F02	Settling trap for truck washout	None
T01	Evaporation of wastewater from plant ops	None

S. GROUNDWATER INFORMATION (Applies only to applicants that use surface impoundments for treatment/disposal)

1. For each surface impoundment, list the depth to groundwater, the direction of groundwater flow, and the legal description of each well used to determine groundwater information. Continue on additional sheets if necessary.

1. ID NO.	2. DEPTH TO WATER (feet)	3. DIRECTION OF FLOW	4. LEGAL DESCRIPTION OF WELL
T02	90+ feet	South toward Bird Creek	NA
F01	90+ feet	South toward Bird Creek	NA

2. For each well (water and monitoring), attach the well log or drillers log, if available. Well logs may be obtained from the Oklahoma Water Resources Board (OWRB). If no water or monitoring wells are found within ½ mile, attach a copy of the OWRB letter indicating no wells were found in their records search.

T. SANITARY WASTEWATER DISPOSAL (Applies to all applicants)

1. In the table below, list the estimated volume of sanitary wastewater and the method of sanitary wastewater disposal.

a. VOLUME OF SANITARY WASTEWATER	b. METHOD OF SANITARY WASTEWATER DISPOSAL
	Port-A-Potties

U. OTHER DISPOSAL METHODS (Applies to all applicants)

Briefly describe any other methods of waste disposal used by your facility. Examples include disposal wells, septic tanks (with or without leach fields), aboveground or underground storage tanks, and waste hauling. Include information on the nature and volume of wastes disposed of by each of these other methods. Continue on additional sheets if necessary.

No other methods are in use.

V. DEQ LANDOWNER NOTIFICATION AFFIDAVIT (Applies to all applicants)

1. Does applicant own all land subject to the application:	Yes		No	X

If yes, proceed to section W. If no, proceed to part 2 of this section.

2. Application(s) for which the applicant does not own all the land subject to the application must notify the owner(s) of leases and/or pipeline right-of-ways that a permit application has been submitted to the DEQ. The basis for this requirement is OAC 252:004-7-13(b). DEQ Form 100-810 shall be used for this purpose and is available on the DEQ web page.

W. CERTIFICATION (Applies to all applicants)

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and true belief, true, accurate and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

1. NAME & OFFICIAL TITLE (type or print)	2. SIGNATURE	3. DATE SIGNED
Matt Ritchie, Materials Manager	Matt Ritchie	10/25/13

ATTACHMENT 1

Landowner's Affidavit

DEQ LANDOWNER NOTIFICATION AFFIDAVIT

Tier I, II or III permit applicants must provide notice to the landowner(s). The basis for this requirement is Title 27A of the Oklahoma Statutes, Supplement 1996, § 2-14-103(9), as described in OAC 252:4-7-13 (b).

Please note that you MUST fill out and return this affidavit even if you don't have to give any landowner notice.

A	NOTICE TO THE LANDOWNER(S) IS NOT REQUIRED because: (check one)
	My application does not involve any land.
	My application involves only land owned by me (or applicant business).
X	I have a current lease given to accomplish the permitted purpose.
	I have a current easement given to accomplish the permitted purpose.

OR

B	NOTICE TO THE LANDOWNER(S) IS REQUIRED because the land is owned by someone other than myself or the applicant business AND I HAVE NOTIFIED the following (check one):		
	Landowner(s)	**X**	Lessor or Administrator or Executor of the land
METHOD OF DELIVERY (check one):			
	Actual notice, for which I have a signed and dated receipt		
	Service by Sheriff or private process server, for which I have an affidavit		
	Service by certified mail, restricted delivery, for which I have a signed return receipt		
	Legal publication, for which I have an affidavit of publication from the newspaper, because the landowners could not be located through due diligence		

LANDOWNER AFFIDAVIT CERTIFICATION			
I, as the applicant or an authorized representative of the applicant, hereby certify that I own the real property, have a current lease or easement which is given to accomplish the permitted purpose (per Option A above), or have provided legal notice to the landowner(s) (per Option B above) about the permit application for the facility described below.			
Company Name	Greenhill Concrete Products, Inc.	Facility Name	Greenhill Concrete
Facility Address or Legal Description.	5411 N. 145th E. Ave., Owasso, OK 74055		
Responsible Official (signature)	Matt Ritchie	Date Signed	10/25/13
Responsible Official (typed)	Matt Ritchie	Title	Materials Manager

If the landowner notice applies to your application (Option B above) you can send the following form to them as your notice:

Re: Renewal of General Permit OKG11
Sherwood Construction Co., Inc. dba Greenhill Concrete - Mobile, Tulsa County
Permit No: OKG11T212
Facility ID: I-72002740

Dear Environmental Manager:

This letter is to inform you that the Oklahoma Department of Environmental Quality (ODEQ) has prepared a draft General Permit renewal for all Concrete Batch Plants. This draft is in the process of being publicly noticed by the ODEQ. After the public notice process, the ODEQ will issue the new general permit.

Because the General Permit has not yet been renewed, the ODEQ has elected to place all applications for Concrete Batch Plant authorizations on hold until the permit renewal process has been completed. The terms and conditions of your existing authorization will remain in effect until you are issued a new authorization. If you have any questions regarding this matter please contact Brandon Tyler at (405) 702-8215. Thank you for your cooperation.

Sincerely,

Carol Paden

Re: Minor Modification, Sherwood Construction Company, Inc. (Greenhill Concrete Products, Inc.) Concrete Batch Plant, 1601 E. Houston Street, Broken Arrow, OK 74012. Facility ID No. I-72002620. Permit No. OK0045781.

Dear Brandon:

Based on our recent telephone conversation, on behalf of Sherwood Construction Company, Inc., we are submitting this request for a minor modification of the above General Discharge Permit, *viz.*, removal of the shallow groundwater monitoring program in the vicinity of closed Pond F03. Prior to July of this year, the former Tulsa Dynaspan, Inc. property (44 acres M/L) included two dry concrete batch plants operated by Arrow Concrete, a subsidiary of Tulsa Dynaspan. In July, Sherwood Construction Company, Inc. purchased the batch plants and the west 14 acres (M/L) of the property. The concrete batch plants' General Discharge Permit was subsequently transferred into Sherwood's name and the facility is now operated by Greenhill Concrete Products, Inc., a subsidiary of Sherwood.

At the time of the permit transfer, Arrow Concrete's discharge permit required semi-annual sampling, analysis and reporting for the shallow groundwater beneath Pond F03 that had previously been closed. Three temporary monitor wells (MW-1 through MW-3) were present with MW-1 and MW-2 located on the Tulsa Dynaspan property and MW-3 located on the boundary of the Tulsa Dynaspan and Sherwood Construction Company properties.

At the time that Arrow Concrete closed Pond F03, sediment accumulated in the bottom of the pond was removed, disposed offsite and replaced with clean soil, prior to installation of the temporary groundwater monitor wells. Arrow Concrete and Greenhill Concrete have conducted semi-annual groundwater sampling, analysis and reporting, as required by their respective permits. Copies of these reports are attached.

Prior to selling the Arrow Concrete operation to Sherwood Construction Company, Tulsa Dynaspan had ceased production of precast concrete panels at this facility. Since the sale of Arrow Concrete, the eastern 32 acres (M/L) and associated structures have since been leased to Arrowhead Precast, LLC which intends to install its own concrete batch plant in the immediate vicinity of closed Pond F03 in order to supply its planned precast concrete structure operation.

RECEIVED
JAN 08 2014
WATER QUALITY DIVISION

Phone: 918-739-4780|Mobile: 918-695-8840|Fax: 918-739-4799|P.O. Box 1822 Catoosa, OK 74015|
randy.beeson@secompliance.com| www.superiorenviro.com

Thus, there will shortly be two separate companies operating industrial facilities on two separate but adjoining properties.

In the meantime, during surveying and establishment of a boundary between the properties, temporary monitor well MW-3 was destroyed and can no longer be accessed for sampling. Thus, both remaining monitor wells are now located on Arrowhead Precast's property but the responsibility for conducting shallow groundwater monitoring remains on Sherwood's General Discharge Permit.

Review of the attached groundwater analytical data does not indicate the presence of any significant level of any of the parameters specified in the permit. Based on these facts, Sherwood Construction Company, Inc. is requesting a minor modification of its General Discharge Permit removing the shallow groundwater monitoring requirement in the vicinity of closed Pond F03.

Please contact me if you or your staff has any questions regarding this request, or if you would like to visit these facilities.

Sincerely,
SUPERIOR ENVIRONMENTAL COMPLIANCE, INC.

RE: Arrow Concrete

Dear Irfan Taner:

Green Country Testing, Inc. received 3 samples on 7/14/2011 for the analyses presented in the following report.

In accordance with your instructions, Green Country Testing conducted the analysis shown on the following pages on samples submitted by your company. The results related only to the items tested. Unless otherwise noted, all analysis was conducted using EPA approved methodologies. Test reports meet all the NELAC requirements. All relevant sampling information is on the attached chain-of-custody form. The initials SUB as the analyst designate any testing sub-contracted by Green Country Testing.

Certifications/Accreditation: OK - 7604
AR - ADEQ
KS - E-10232
LA - 4002

A scope of Certified/Accredited parameters is available upon request. If you have any questions regarding these tests results, please feel free to call.

Sincerely,

Brian Duzan

RE: Arrow Order No.: 1112081

Dear Turgay Ertugrul:

Green Country Testing, Inc. received 1 sample(s) on 12/6/2011 for the analyses presented in the following report.

In accordance with your instructions, Green Country Testing conducted the analysis shown on the following pages on samples submitted by your company. The results relate only to the items tested. Unless otherwise noted, all analysis were conducted using EPA approved methodologies. Test reports meet all the NELAC requirements. All relevant sampling information is on the attached chain-of-custody form. The initials SUB as the analyst designate any testing sub-contracted by Green Country Testing.

Certifications/Accreditation: OK - 7604 - AR - ADEQ - KS - E-10232 - LA - 4002

A scope of Certified/Accredited parameters is available upon request. If you have any questions regarding these tests results, please feel free to call.

Sincerely,

Brian Duzan
Laboratory Director

RE: 2012 First Semi-Annual Post Closure Groundwater Monitoring Report for the closed Waste Water Impoundment F03 Arrow Concrete Company, Broken Arrow, Oklahoma, OPDES Permit No. OK0045781

Dear Ms. Chard-McClary:

Enclosed is a copy of Arrow Concrete Company's 2012 First Semi-Annual [(the second sampling event since the new Oklahoma Pollutant Discharge Elimination System (OPDES) Permit was accepted)] required Ground Water Monitoring Report. The sampling event was conducted on June 29, 2012.

If you have any questions or need additional information, please call me at (918) 665-6575.

Respectfully,

Ty Ertugrul
Project Manager / Environmental Specialist

TEL: (918) 409-7988
FAX (918) 656-6576

RE: Arrow Concrete 2067 Order No.: 1206470

Dear Turgay Ertugrul:

Green Country Testing, Inc. received 3 sample(s) on 6/29/2012 for the analyses presented in the following report.

In accordance with your instructions, Green Country Testing conducted the analysis shown on the following pages on samples submitted by your company. The results relate only to the items tested. Unless otherwise noted, all analysis were conducted using EPA approved methodologies. Test reports meet all the NELAC requirements. All relevant sampling information is on the attached chain-of-custody form. The initials SUB as the analyst designate any testing sub-contracted by Green Country Testing.

Certifications/Accreditation: OK - 7604 - AR - ADEQ - KS - E-10232 - LA - 4002

A scope of Certified/Accredited parameters is available upon request. If you have any questions regarding these tests results, please feel free to call.

Sincerely,

Brian Duzan
Laboratory Director

RE: Groundwater Monitoring Semi-Annual Report prepared for Arrow Concrete, Broken Arrow, Oklahoma.

Dear, Ms. Chard-McClary

Enclosed is one copy of the Second Semi Annual Monitoring Report for Arrow Concrete of Broken Arrow, Oklahoma, conducted in the second half of the year 2012. The report is a requirement as part of the Facilities Stormwater Discharge Permit.

If you have any questions, please call me at (918) 665-6575.

Sincerely,

Ty Ertugrul
Project Manager

RE: Arrow Concrete Semi-Annual Order No.: 1211038

Dear Turgay Ertugrul:

Green Country Testing, Inc. received 3 sample(s) on 11/2/2012 for the analyses presented in the following report.

In accordance with your instructions, Green Country Testing conducted the analysis shown on the following pages on samples submitted by your company. The results relate only to the items tested. Unless otherwise noted, all analysis were conducted using EPA approved methodologies. Test reports meet all the NELAC requirements. All relevant sampling information is on the attached chain-of-custody form. The initials SUB as the analyst designate any testing sub-contracted by Green Country Testing.

Certifications/Accreditation: OK - 7604 - AR - ADEQ - KS - E-10232 - LA - 4002

A scope of Certified/Accredited parameters is available upon request. If you have any questions regarding these tests results, please feel free to call.

Sincerely,

Brian Duzan
Laboratory Director

RE: Groundwater Monitoring Semi-Annual Report prepared for Arrow Concrete, Broken Arrow, Oklahoma.

Dear, Ms. Chard-McClary

Enclosed is one copy of the First Semi Annual Monitoring Report for Arrow Concrete of Broken Arrow, Oklahoma, conducted in the first half of the year 2013. The report is a requirement as part of the Facilities Stormwater Discharge Permit.

If you have any questions, please call me at (918) 665-6575.

Sincerely,

Ty Ertugrul
Project Manager

RE: Arrow Concrete Semi-Annual Order No.: 1304037

Dear Turgay Ertugrul:

Green Country Testing, Inc. received 3 sample(s) on 4/3/2013 for the analyses presented in the following report.

In accordance with your instructions, Green Country Testing conducted the analysis shown on the following pages on samples submitted by your company. The results relate only to the items tested. Unless otherwise noted, all analysis were conducted using EPA approved methodologies. Test reports meet all the NELAC requirements. All relevant sampling information is on the attached chain-of-custody form. The initials SUB as the analyst designate any testing sub-contracted by Green Country Testing.

Certifications/Accreditation: OK - 7604 - AR - ADEQ - KS - E-10232 - LA - 4002

A scope of Certified/Accredited parameters is available upon request. If you have any questions regarding these tests results, please feel free to call.

Sincerely,

Brian Duzan
Laboratory Director

Suspended Solids (Residue, Non-Filterable)	105	5.00						103.0	2.87	5	

Qualifiers:

- * Value exceeds Maximum Contaminant Level
- E Value above quantitation range
- M Manual Integration used to determine area response
- P Second column confirmation exceeds 40%
- RL Reporting Detection Limit
- B Analyte detected in the associated Method Blank
- H Holding times for preparation or analysis exceeded
- N Non-NELAC Accredited Parameter
- PL Permit Limit
- S Spike Recovery outside accepted recovery limits
- C Value is below Minimum Compound Limit
- J Analyte detected below quantitation limits
- ND Not Detected at the Reporting Limit
- R RPD outside accepted recovery limits

RE: Groundwater Monitoring Semi-Annual Report prepared for Greenhill Concrete, Broken Arrow, Oklahoma.

Dear Ms. Chard-McClary,

Enclosed is one copy of the Second Semi Annual Monitoring Report for Greenhill Concrete of Broken Arrow, Oklahoma, conducted in the second half of the year 2013. The report is a requirement as part of the Facilities Stormwater Discharge Permit.

If you have any questions, please call me at (918) 665-6575.

Sincerely,

Ty Ertugrul
Project Manager

RE: Greenhill Concrete Order No.: 1311087

Dear Ty Ertugrul:

Green Country Testing, Inc. received 2 sample(s) on 11/7/2013 for the analyses presented in the following report.

In accordance with your instructions, Green Country Testing conducted the analysis shown on the following pages on samples submitted by your company. The results relate only to the items tested. Unless otherwise noted, all analysis were conducted using EPA approved methodologies. Test reports meet all the NELAC requirements. All relevant sampling information is on the attached chain-of-custody form. The initials SUB as the analyst designate any testing sub-contracted by Green Country Testing.

Certifications/Accreditation: OK - 7604 - AR - ADEQ - KS - E-10232 - LA - 4002

A scope of Certified/Accredited parameters is available upon request. If you have any questions regarding these tests results, please feel free to call.

Sincerely,

Brian Duzan
Laboratory Director

Re: Second Semi-Annual 2013 Groundwater Monitoring Report, Greenhill Concrete Products, Inc. (Formerly Arrow Concrete) Report, Facility ID I-72002620, OPDES Permit No. OK0045781.

Dear Ms. Chard-McClary :

Attached please find the semi-annual shallow groundwater monitoring report required by the referenced report. Unlike previous reports, however, this report includes analytical results for only two monitor wells; one upgradient and one downgradient.

At the time the original facility permit was issued to Arrow Concrete, Arrow was a division of Tulsa Dynaspan, Inc. and was located on property owned by Tulsa Dynaspan. Greenhill Concrete now owns a 14.43-acre tract on the west side of the original property owned by Tulsa Dynaspan and Tulsa Dynaspan will retain ownership of the remaining portion of the property.

Surface drainage from the Arrow Concrete and Tulsa Dynaspan properties originally flowed to Pond F03 and discharged offsite via a common discharge point . Pond F03 was closed in about 2010 which led to the installation of three (3) temporary monitoring wells around the former location of Pond F03. Temporary Monitor Well Nos. 1 and 2 are now located on property that Greenhill Concrete does not own but which it is required to monitor under its OPDES discharge permit. Temporary Monitor Well No. 3 was inadevertently destroyed during clearing operations to establish the new boundary between the properties.

I believe that, in fairness to both new property owners, the Water Quality Division needs to review the attached report, along with semi-annual reports previously submitted, and decide whether groundwater monitoring needs to continue and,if so, who is responsible. The current permit does not specify any particular concerns and I have been unable to identify any obvious groundwater violations in all of the monitoring reports I have reviewed for this property.

Since neither of the remaining temporary monitoring wells is located on Greenhill Concrete's property, we also need to know whether Greenhill's discharge permit will need to be

RE: Greenhill Concrete Order No.: 1311087

Dear Ty Ertugrul:

Green Country Testing, Inc. received 2 sample(s) on 11/7/2013 for the analyses presented in the following report.

In accordance with your instructions, Green Country Testing conducted the analysis shown on the following pages on samples submitted by your company. The results relate only to the items tested. Unless otherwise noted, all analysis were conducted using EPA approved methodologies. Test reports meet all the NELAC requirements. All relevant sampling information is on the attached chain-of-custody form. The initials SUB as the analyst designate any testing sub-contracted by Green Country Testing.

Certifications/Accreditation: OK - 7604 - AR - ADEQ - KS - E-10232 - LA - 4002

A scope of Certified/Accredited parameters is available upon request. If you have any questions regarding these tests results, please feel free to call.

Sincerely,

Brian Duzan
Laboratory Director

Re: Second Semi-Annual 2013 Groundwater Monitoring Report, Greenhill Concrete Products, Inc. (Formerly Arrow Concrete) Report, Facility ID I-72002620, OPDES Permit No. OK0045781.

Dear Ms. Chard-McClary :

Attached please find the semi-annual shallow groundwater monitoring report required by the referenced report. Unlike previous reports, however, this report includes analytical results for only two monitor wells; one upgradient and one downgradient.

At the time the original facility permit was issued to Arrow Concrete, Arrow was a division of Tulsa Dynaspan, Inc. and was located on property owned by Tulsa Dynaspan. Greenhill Concrete now owns a 14.43-acre tract on the west side of the original property owned by Tulsa Dynaspan and Tulsa Dynaspan will retain ownership of the remaining portion of the property.

Surface drainage from the Arrow Concrete and Tulsa Dynaspan properties originally flowed to Pond F03 and discharged offsite via a common discharge point . Pond F03 was closed in about 2010 which led to the installation of three (3) temporary monitoring wells around the former location of Pond F03. Temporary Monitor Well Nos. 1 and 2 are now located on property that Greenhill Concrete does not own but which it is required to monitor under its OPDES discharge permit. Temporary Monitor Well No. 3 was inadevertently destroyed during clearing operations to establish the new boundary between the properties.

I believe that, in fairness to both new property owners, the Water Quality Division needs to review the attached report, along with semi-annual reports previously submitted, and decide whether groundwater monitoring needs to continue and,if so, who is responsible. The current permit does not specify any particular concerns and I have been unable to identify any obvious groundwater violations in all of the monitoring reports I have reviewed for this property.

Since neither of the remaining temporary monitoring wells is located on Greenhill Concrete's property, we also need to know whether Greenhill's discharge permit will need to be

RE: Groundwater Monitoring Semi-Annual Report prepared for Greenhill Concrete Products, LLC., Broken Arrow, Oklahoma.

Dear Ms. Chard-McClary,

Enclosed is one copy of the Second Semi Annual Monitoring Report for Greenhill Concrete Products, LLC. of Broken Arrow, Oklahoma, conducted in the second half of the year 2013. The report is a requirement as part of the Facilities Stormwater Discharge Permit.

If you have any questions, please call me at (918) 665-6575.

Sincerely,

Ty Ertugrul
Project Manager

RE: Greenhill Concrete Order No.: 1311087

Dear Ty Ertugrul:

Green Country Testing, Inc. received 2 sample(s) on 11/7/2013 for the analyses presented in the following report.

In accordance with your instructions, Green Country Testing conducted the analysis shown on the following pages on samples submitted by your company. The results relate only to the items tested. Unless otherwise noted, all analysis were conducted using EPA approved methodologies. Test reports meet all the NELAC requirements. All relevant sampling information is on the attached chain-of-custody form. The initials SUB as the analyst designate any testing sub-contracted by Green Country Testing.

Certifications/Accreditation: OK - 7604 - AR - ADEQ - KS - E-10232 - LA - 4002

A scope of Certified/Accredited parameters is available upon request. If you have any questions regarding these tests results, please feel free to call.

Sincerely,

Brian Duzan
Laboratory Director

RE: ODEQ Permit No. OKG11T212
Greenhill Concrete Products, Inc., Rogers County, Oklahoma
Facility ID No. I-72002740

Dear Mr. Ritchie:

Your application for an Oklahoma Department of Environmental Quality (DEQ) waste disposal permit was received by this office on November 4, 2013. As specified in OAC 252:004-7-7 of the DEQ rules, your application has been determined to be administratively complete.

Please note that additional information may be requested at a later date to clarify, modify, or supplement information already provided in this application. Requests for such additional information will not render your application incomplete.

Thank you for your cooperation. Should you have any questions concerning this submittal or the permitting procedures, please contact Brandon Tyler at (405) 702-8215.

Sincerely,

Brandon Tyler

RE: DEQ Application No. OKG11T212
Greenhill Concrete Products, Inc., Rogers County, Oklahoma
Facility ID No. I-72002740

Dear Mr. Ritchie:

Your Authorization to treat and dispose of wastewater under OPDES General Permit No. OKG11T is enclosed. The effective date and the expiration date of this Authorization appears on the cover page.

Should you have any questions regarding the Authorization, please contact the Industrial Permits Section at the letterhead address or telephone (405) 702-8100. Should you have any questions regarding compliance with the conditions of this Authorization, please contact the Industrial Enforcement Section at the same address and phone number.

Sincerely,

Carol Paden

OKLAHOMA DEPARTMENT OF ENVIRONMENTAL QUALITY
AUTHORIZATION FOR DISCHARGE AND/OR DISPOSAL
UNDER GENERAL PERMIT NO. OKG11

AUTHORIZATION NO.: OKG11T212
FACILITY ID NO.: I-72002740

In compliance with Title 27A O.S. §2-6-201 *et seq.*, as amended (the OPDES Act), the Rules of the Department of Environmental Quality promulgated thereunder, and in reliance on the certified statements and representations heretofore made in its application,

Greenhill Concrete Products, Inc.
P.O. Box 10
Catoosa, OK 74015

is hereby authorized to dispose of process wastewater and discharge non-contact stormwater runoff associated with the following activities: (1) mix plant area washdown, (2) truck mixer drum washout and (3) external truck wash and oil spray down, and associated stormwater runoff from their facility located at:

NW¼, Section 10, Township 20N, Range 14EIM
Rogers County, Oklahoma
or at 5411 N. 145th East Ave., Catoosa, OK 74015

The wastewater consists of truck mixer drum washout and stormwater from the plant area and is classified as Class III wastewater in accordance with OAC 252:616-1-2.

The above-referenced facility is also authorized to dispose of wastewater in one flow-through impoundment (F02) and one total retention surface impoundment (T01), as described in the Appendix. Surface impoundments shall be maintained in accordance with conditions set forth in the Concrete Batch Plant General Permit No. OKG11 and in Parts I, II, III, and the Appendix of this Authorization.

Discharge of wastewater contained in the authorized surface impoundment(s) to the waters of the state is specifically prohibited.

Issuance of this Authorization in no way or in any respect affects the permittee's civil or criminal responsibility regarding disposal of wastewater, except with respect to the permittee's legal responsibility under the OPDES Act and DEQ Rules.

This Authorization is non-transferable and is granted summarily by and at the discretion of the Executive Director in accordance with applicable DEQ Rules and provisions of the above-referenced Permit.

This Authorization replaces and/or supersedes OPDES Permit No. OKG11T212 that became effective on September 7, 2012.

This Authorization shall become effective on March 1, 2014.

This Authorization shall expire at midnight, on February 28, 2019.

This is to certify that the proposed wastewater treatment and disposal systems described in this Authorization meet the requirements of the Oklahoma Water Quality Standards, as amended, and the DEQ Rules.

Issued this 11 day of February, 2014.

Carol Paden

Carol Paden, P.E., Manager
Industrial Permits Section
Water Quality Division

PART I
EFFLUENT LIMITATIONS, MONITORING AND OTHER REQUIREMENTS

SECTION A. EFFLUENT LIMITATIONS AND MONITORING REQUIREMENTS

Not applicable since discharge to waters of the state is prohibited.

SECTION B. HOUSEKEEPING PROGRAM REQUIREMENTS

Where the DEQ has determined that the facility has established a strong housekeeping program to maintain a clean plant site and has segregated process wastewaters from plant area stormwater, the plant area stormwater may be covered under Part I, Section H of the Concrete Batch Plant General Permit or Part I, Section C of this Authorization. **If this determination has been made by the DEQ, it will be noted in this Authorization.** The following conditions shall apply to all permittees for the establishment of a strong housekeeping program:

1. The area under and around the mix plant shall be kept clean of solids and other contaminants on a daily basis.
2. Solids and other contaminants that may accumulate on the ground under the mix plant and surrounding area shall be picked up by dry methods such as sweeping, shoveling, etc., or may be washed down to a process wastewater impoundment for treatment and containment.
3. Based on information provided by the applicant, the DEQ has determined that this facility has (has not) established a strong housekeeping program.

SECTION C. STORMWATER MONITORING REQUIREMENTS

1. Monitoring Requirements

   All facilities, without exception, will be subject to visual monitoring.

   a. Quarterly Visual Monitoring

      The requirements and procedures for quarterly visual monitoring are applicable to all facilities covered under this General Permit.

      - The Permittee must perform and document a quarterly visual examination of a stormwater discharge associated with industrial activity from each outfall, except discharges exempted below. The visual examination must be made during daylight hours (e.g., normal working hours). If no storm event resulted in runoff from the facility during a monitoring quarter, the permittee is excused from visual monitoring for that quarter provided the permittee documents in the monitoring records that no runoff occurred. An authorized representative of the facility must sign and certify the documentation.

      - The visual examinations must be made of samples collected within the first 30 minutes (or as soon thereafter as practical, but not to exceed 1 hour) of when the runoff or snowmelt begins discharging from the facility. The examination must document observations of color, odor, clarity, floating solids, settled solids, suspended solids, foam, oil sheen, and other obvious indicators of stormwater pollution. The examination must be conducted in a well-lighted area. No analytical tests are required to be performed on the samples. All such samples must be collected from the discharge resulting from a storm event that is greater than 0.1 inches in magnitude and that occurs at least 72 hours from the previously measurable (greater than 0.1 inch rainfall) storm event. Where practicable, the same individual should carry out the collection and examination of discharges for the entire Authorization term.

The following Table is an example of what the permittee should look for in a visual monitoring sample.

Visual Monitoring		
Parameter	Method	Results
Color and Extent	Visual	Clear, yellow, red, blue, green, brown, black, milky, etc.
Odor	Smell	None, earthy, sewage, musky, rotten eggs, petroleum, etc.
Clarity or Turbidity	Develop a test such as, clean off the label from a 2 liter clear plastic bottle, fill with the sample, and try to see things through it.	1) can't see through the bottle 2) can see through but could not read newsprint 3) can see through and can read newsprint 4) pretty clear, but not as clear as bottled water 5) as clear as bottled water
Floating solids	Visual	Yes/no - describe what they are.
Settled solids	Use same 2 liter bottle	Tablespoons or cups of material or millimeters of solids on bottom after 24 hours
Suspended solids	Look through the container.	What do you see?
Foam	Visual	Yes/no - how thick is the foam? How much of the surface does it cover? What color is the foam?
Oil sheen	Visual	Color and extent
Other obvious indicators of stormwater pollution	Indicate what was observed that would lead a reasonable person to believe that the stormwater was polluted.	Tell it like you see it.

- The Permittee must maintain the visual examination reports onsite with the Storm Water Pollution Prevention Plan (SWP3). The report must include the examination date and time, examination location, examination personnel, the nature of the discharge (i.e., runoff or snow melt), visual quality of the stormwater discharge (including observations of color, odor, clarity, floating solids, settled solids, suspended solids, foam, oil sheen, and other obvious indicators of stormwater pollution), and probable sources of any observed stormwater contamination. If applicable, the report shall include why it was not possible to take samples within the first 30 minutes.

- Inactive and unstaffed sites: When the facility is unable to conduct visual stormwater examinations at an inactive and un-staffed site, the facility may exercise a waiver of the monitoring requirement as long as the facility remains inactive and un-staffed. If the waiver is exercised, the Permittee must maintain a certification with the pollution prevention plan stating that the site is inactive and unstaffed and that performing visual examinations during a qualifying event is not feasible. An authorized representative of the facility must sign and certify the waiver.

2. Stormwater Reporting Requirements

   Visual monitoring results must be retained with the SWP3. Do not submit to the DEQ unless requested to do so by the Executive Director.

3. Annual Comprehensive Site Compliance Evaluation Reporting Requirement

   An Annual Comprehensive Site Compliance Evaluation Report using DEQ Form 605-006 must be filed each year by each facility covered by this Authorization. The report must be filed by April 1st of each year.

   The report must include a certification signed and dated by an authorized representative of the facility that states the following:

   I certify under penalty of law that I have read and understand the requirements for filing this Comprehensive Site Compliance Evaluation Report, that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gathered and evaluated the information submitted. Based upon my inquiry of the person or persons who manage the system, or those persons directly involved in gathering the information, the information submitted is to the best of my knowledge and belief true, accurate and complete. I am aware there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

SECTION D. SURFACE IMPOUNDMENTS

The use of surface impoundments for treatment and/or disposal of process wastewater at concrete batch and pre-cast concrete product plants are authorized by the General Permit, subject to additional State requirements as specified below in accordance with OAC 252:616.

1. Construction Requirements

   Impoundments F02 and T01 shall be constructed in accordance with OAC 252:616-7 and maintained in accordance with OAC 252:616-7-1.

2. Wastewater Classification

   The process wastewater generated from routine operations of concrete batch and pre-cast concrete product plants is classified as Class III wastewater in accordance with OAC 252:616-1-2.

3. Liner Requirements

   Surface impoundment F02 has a concrete liner. Surface impoundment T01 has natural limestone liner. Since the wastewater being retained is Class III, it is the Best Professional Judgment (BPJ) of the permit writer that the concrete liner and limestone liner are appropriate and compatible liner systems in accordance with OAC 252:616-7.

4. Specific Requirements

   a. Wastewater contained in surface impoundments may be recycled for use in product, dust suppression, stockpile watering or wash water.

   b. At such time as surface impoundments are to be permanently taken out of service or at such time as the contents of surface impoundments pose a risk to the environment or waters of the State, the owner or operator of the facility shall follow all closure requirements contained in OAC 252:616-13.

c. In all other respects, surface impoundments shall be subject to standard conditions for surface impoundments contained in OAC 252:616, Subchapters 5, 7, and 13, including but not limited to requirements for construction, operation, maintenance, monitoring and closure.

5. Freeboard Requirements

A minimum freeboard of two (2) feet shall be maintained on all flow-through surface impoundments and all surface impoundments that are equipped to transfer process wastewater to a permitted outfall, other permitted surface impoundments, recycle/reuse system or a land application system. However, a minimum freeboard of one (1) foot shall be maintained on all flow-through surface impoundments constructed with a concrete liner in accordance with OAC 252:616-7. Impoundment F02 shall maintain one (1) foot of freeboard.

A minimum freeboard of three (3) feet shall be maintained on all total retention surface impoundments that are not equipped to transfer process wastewater to a permitted outfall, other permitted surface impoundments, recycle/reuse system or a land application system. However, a minimum freeboard of two (2) feet shall be maintained on all total retention surface impoundments constructed with a concrete liner in accordance with OAC 252:616-7. Impoundment T01 shall maintain three (3) feet of freeboard.

6. Depth to Groundwater

Surface impoundments as required by OAC 252:616-7-1(4) are required to be located such that the base of the liner is at least fifteen (15) feet above historic maximum groundwater table. Since the wastewater from the activities covered by this general permit is classified as Class III, this requirement may be waived in accordance with OAC 252:616-7-1(4)(B). However, at no location shall the bottom of a surface impoundment be equal to or below the highest seasonal groundwater elevation. According to the application submitted by the facility, the groundwater in this area is at a depth of approximately 90 feet. Therefore, the separation distance has been met.

SECTION E. TANK SYSTEMS

The use of underground tank systems to manage process wastewater for treatment and/or disposal of process wastewater at concrete batch plants and pre-cast concrete product facilities is authorized by the General Permit, subject to additional requirements as specified below in accordance with OAC 252:616.

1. Authorized Use of Tank Systems (OAC 252:616-9-1)

   The use of tank systems for all wastewater classifications is authorized as follows:

   a. Tank systems without lateral lines can be used for the treatment of Class I, II, III, and V wastewater.

2. Tank System Materials (OAC 252:616-9-2)

   Tank systems may be constructed of concrete, metal, plastic, or fiberglass in accordance with OAC 252:616-9-2.

3. Tank System Requirements (OAC 252:616-9-3)

   Tank systems must be constructed in accordance with OAC 252:616-9-3.

SECTION F. LAND APPLICATION AND BENEFICIAL REUSE OF PROCESS WASTEWATER

Land application of process wastewater for dust suppression and/or reuse of process wastewater for construction or stabilization at concrete batch plants and pre-cast concrete product facilities are authorized by the General Permit, and are subject to the requirements as specified below and in this Authorization, in accordance with OAC 252:616-11.

1. Process wastewater that is reused or land applied for dust suppression must be classified as Class III wastewater in accordance with OAC 252:616-1-2.

2. Process wastewater to be land applied for dust suppression shall be free of a visible sheen of oil or globules of oil or grease.

3. The process wastewater to be land applied for dust suppression shall be visually inspected prior to land application.

4. Process wastewater that is recycled back into the concrete mixture is exempt from monitoring requirements.

5. There shall be no land application of process wastewater for dust suppression in areas where the depth to the maximum seasonal groundwater level is less than two (2) feet in accordance with OAC 252:616-5-1(b)(2)(E).

6. There shall be no land application of process wastewater for dust suppression during periods of precipitation or when soil is saturated or frozen.

7. There shall be no runoff of process wastewater used for dust suppression.

SECTION G. RECYCLABLE CONCRETE MATERIAL AND DISPOSAL OF OTHER SOLIDS

Recyclable concrete material recovered from the scatter pile, impoundments and/or other means may be removed from the facility and may also be used by the applicant at the permitted facility at any time. No records are required.

PART II
OTHER PERMIT CONDITIONS AND REQUIREMENTS

1. This Authorization does not convey any exclusive privileges or authorize any injury to property or invasion of rights or any infringement of federal, state, or local laws or regulations nor does it obviate the requirement to obtain permission from any landowners whose property will be affected by this Authorization.

2. Detergents used for truck washing should be low-phosphate, low-sudsing and biodegradable.

3. Laws and Rules Applicable

   The DEQ Rules, as amended, are applicable to and are incorporated by reference into the Concrete Batch Plant General Permit and any Authorizations under it. The permittee is hereby given notice that this Authorization is in all respects subject to compliance with and actions under any and all applicable and relevant terms, conditions, provisions and requirements and all amendments of the laws of the State of Oklahoma, the Department of Environmental Quality Rules, and Oklahoma's Water Quality Standards. The absence of any express reference within this permit to any particular statutory requirement, rule(s), regulation(s), or standard(s) shall in no respect be deemed or construed to exempt or preclude the application of such requirement, rule(s), regulation(s), or standard(s) to this permit of the permittee. By DEQ approval, grant, and issuance of this Authorization, permittee acknowledges responsibility to obtain correct and current copies of applicable DEQ Rules (as amended), provided, however, that permittee further acknowledges that any and all amendments thereto shall become a part of this Authorization.

APPENDIX

Description of Wastewater Treatment/Disposal Surface Impoundments

Classification OAC 252:616-1-2		Liner Description	Holding Capacity and/or Dimensions OAC 252:616-7-1(6) [b]	Wastewater Destination
ID [a]	Wastewater Description			
F02	Wastewater generated from truck mixer drum washout and stormwater -- Class III	Concrete	59,441 gallons 33' x 59' Sloped to a maximum depth of 8'.	T01
T01	Wastewater generated from truck mixer drum washout and stormwater -- Class III	Limestone Bedrock	~4,300,000 gallons 172' x 200' x 20'	Total Retention and Recycle

[a] Designation T refers to total retention surface impoundment.
Designation F refers to flow-through surface impoundment.

[b] Based on information provided in application. Freeboard requirements in Part I.D.5 must be met.

Location of Surface Impoundments

ID	Legal Location Description	General Location and Description
F01	SW¼, NE¼, NW¼, Section 10, Township 20N, Range 14EIM, Rogers County, Oklahoma	Southeast of office, South of the batch plant
T01	SE¼, NE¼, NW¼, Section 10, Township 20N, Range 14EIM, Rogers County, Oklahoma	South of office, Southwest of the batch plant

Sherwood Construction Company, Inc. dba Greenhill Concrete Product, LLC
Tulsa County, Oklahoma
Facility ID No. I-72002620

NOTICE OF DEFICIENCY

Dear Mr. Ritchie:

Your application for an Oklahoma Department of Environmental Quality (DEQ) permit to discharge wastewater was received by this office on January 8, 2014, and was determined to be complete on February 21, 2014. During the Technical Review of your application, it has been determined that a current analysis of your wastewater in surface impoundments F05 and F06 is needed along with an Affidavit of No Discharge for Outfall 001. If you have an analysis that is less than six months old, you may submit it. Please submit the analysis for the following parameters:

Wastewater

- Alkalinity, total
- Chemical oxygen demand
- Oil and grease, total
- Total suspended solids
- pH

Please submit the requested information by April 17, 2014. The permit application technical review process is hereby suspended pending receipt of the requested information. Please note that additional information may be requested at a later date to clarify, modify, or supplement information already provided in this application. Requests for such additional information will not render your application incomplete.

Thank you for your cooperation. If you have any questions concerning this submittal or DEQ permit procedures, please contact Brandon Tyler at 405-702-8215.

Sincerely,

Carol Paden

Oklahoma Department of Environmental Quality – 707 N. Robinson St., P. O. Box 1677, Oklahoma City, OK 73101-1677

DEQ Form No. 530 E (9-98)

DEPARTMENT OF ENVIRONMENTAL QUALITY

AFFIDAVIT OF NO DISCHARGE – DEQ FORM 530 E (9-98)
INSTRUCTIONAL GUIDE

Please complete the Affidavit by responding to each item. DEQ cannot evaluate the Affidavit until the information requested is provided. If a specific question is not applicable to your facility please indicate by answering "NA" next to the question. Discharge permits and applications will not be discontinued until the Affidavit of No Discharge is considered complete. Any questions concerning the Affidavit may be directed to the Department of Environmental Quality or your local Deq representative. **DO NOT ATTEMPT TO COMPLETE THE AFFIDAVIT BEFORE READING THESE INSTRUCTIONS.**

1. Give the facility name in such a way as to distinguish it from other facilities owned by the same entity. Example : Denton Wastewater Treatment Facility – West.

2. Give the address of the actual facility including the city and zip code.

3. Give the county in which the facility is located as well as the legal description in ¼, ¼, ¼ Section, Township, Range or Longitude – Latitude.

4. Give the name and complete mailing address of the legal entity that owns the facility – city, town, public entity, company name, corporation or an individual.

5. Give the name, title and phone number of the person to contact for information concerning the facility.

6. Give the address where mail, concerning the facility is received.

7. Place an X next to the type of facility requesting a permit.

8. Place an X next to the type of treatment used by the facility.

9. Indicate whether the facility is owned by a public entity or a private individual(s).

10. Indicate whether the facility was originally designed to discharge (with an outfall) or as a total retention facility without an outfall structure.

11. If the facility is permitted at the present time or has applied for a permit, please indicate here and give the NPDES Number assigned by the DEQ and/or EPA.

12. Indicate whether the facility has ever had an outfall structure. If it has, then explain any modifications made in order to change the facility status to total retention.

13. If the facility has been abandoned, indicate here. Indicate whether the abandoned site has a holding pond or lift station for wastewater transferred to another site for treatment. Give the type of treatment used at the receiving facility and the DEQ and/or EPA assigned NPDES number for that facility if appropriate.

The owner/applicant or authorized representative must certify that all information is correct to the best of his/her knowledge and request any permit or application for permit on file (if any) be inactivated. The affidavit must be notarized and verified by your local DEQ representative before being submitted to the DEQ. Please note that the DEQ may require additional information.

01	Treatment of industrial wastewater at an unpermitted facility.
02	Discharge from additional outfalls or construction of additional surface impoundments not included in facility's permit.
04	Failure to orally report all bypasses within twenty-four hours and/or failure to file a written report within five days.
05	Failure to prevent bypasses of treatment units or overflows from surface impoundments.
13	Analyses to determine compliance with NPDES/OPDES permit performed at laboratory not certified by DEQ.
17	Failure to submit noncompliance reports following violations of the facility's NPDES/OPDES permit limits and conditions.
18	Reporting of effluent quality data on SMRs that is inconsistent with laboratory results
20	Failure to adequately measure flow during discharges as required by NPDES/OPDES permit.

ADDITIONAL REMARKS

OKLAHOMA DEPARTMENT OF ENVIRONMENTAL QUALITY
AFFIDAVIT OF NO DISCHARGE

This form applies to the following types of facilities:
1. Wastewater treatment facilities
   a. Total retention by evaporation
   b. Total retention by an approved Land Application Program
2. Water Plants that treat backwash water by re-cycling or evaporation lagoons.
3. Swimming Pools that treat wastewater by evaporation in total retention lagoons.
4. Dairy farm wastewater treatment facilities.
5. Abandoned wastewater facilities.

Permit Writer: Herb Neumann
Date: February 12, 2010

BLUE

SUBJECT: Facility: Greenhill Materials
Location: Section 10, T20N, R14E, Rogers County, OK
Date Received: February 12, 2010

Dear Mr. Curtis:

The Air Quality Division (AQD) has received your Notice of Intent (NOI) to replace a crusher and increase the throughput of the referenced facility currently operating under the General Permit for Nonmetallic Mineral Processing Facilities (GP-NMP), as authorized by Permit No. 2005-012-O. Please note the following language from your current authorization.

III. Equipment Additions/Authorization Modifications

Construction of additional emission units...or operational changes...may be allowed over the life of this Authorization without obtaining an Authorization to Construct so long as facility-wide emissions do not exceed that amount which would cause the facility to be classified as a major source.

Written notification of intent to construct, or to make operational changes... must be provided to DEQ within 7 days of the start of operation. Neither an Authorization to Construct nor a new Authorization to Operate is required for these changes.

The current GP-NMP establishes these conditions in Part 4, Section II (C). Notification of intent is necessary and sufficient to add such equipment or to make such operational changes and no fee is required. Your check is enclosed. Please note that all of the requirements with respect to notification and testing that may be required by NSPS Subpart OOO must be followed.

Thank you for your cooperation. If you have any questions, please refer to the permit number above and contact the permit writer by telephone at (918) 293-1624 or by mail at the DEQ Regional Office, 3105 E. Skelly Drive, Suite 200, Tulsa, OK 74105-6370.

Sincerely,

Herb Neumann

OKLAHOMA DEPARTMENT OF ENVIRONMENTAL QUALITY

SELF REPORTING WASTEWATER BYPASS FORM

(TO BE SUBMITTED WITHIN 5 DAYS OF OCCURRENCE)

Date: June 6, 2014 DEQ Facility ID # S# or I# - OK0045781

Facility Name: GREENHILL CONCRETE, BROKEN ARROW, OK

Report All Bypasses to the DEQ Within 24 hours to: **1-800-256-2365**

Mail Written Report Within 5 Days To: Department of Environmental Quality
Water Quality Division
P.O. Box 1677
Oklahoma City, OK 73101-1677

DEQ notified within 24 hours of Bypass on: Date: 6/6/14

Time: 11:14 a.m.

Type of Bypass: ☐ Pipe ☐ Clarifier / Filter ☒ Lagoon / Basin ☐ Manhole
☐ API Separator ☐ Head Works ☐ Drying Beds ☐ Batch Reactor
☐ Lift Station ☐ Digester ☐ Other (specify) _____

Period of Bypass: From 06 (Month) 04 (Day) 2014 (Year) Unknown ☐ AM ☐ PM (See Inspection by DEQ Report)

To 06 (Month) 06 (Day) 2014 (Year) 2:00 ☐ AM ☒ PM

Strength of Bypass: ☐ Raw ☒ Partially Treated Amount of Bypass: 63,000 gallons (Estimated)

Were fish or other wildlife affected as a result of the bypass? ☐ Yes ☒ No (If Yes, complete DEQ Form 605-001) (See attached)

Type of Samples Taken: ☐ BOD ☐ TSS ☐ O&G ☒ pH ☐ DO ☐ None ☐ Other _____

Geographical Location of Bypass (including Outfall Number or receiving stream if appropriate) Detention Pond FØ6 to Outfall ØØ2

Reason for Bypass: Recent rainfall since 5/25 of 4.72" in addition to watering of aggregate stockpiles.

Steps taken to prevent recurrence: Immediate: Treat facility with acid, getting ph below 9.0 and discharge 16,808 gallons. Long-Term: Installation of stockpile watering system using recycled water from FØ6.

Impact to receiving stream and/or surrounding areas: Minimal: ph sample taken below FØ2 was 8.77

Steps taken to clean up or treat Bypass: None required. Will test facility FØ6 water during the month of June and forward results to DEQ.

The below listed rules are cited in the Oklahoma Administrative Code, Title 252, except when noted. ** These rules are cited in 27A O.S.

SECTIONS	RULES	REQUIREMENT DESCRIPTIONS	ITEM	VIO	DESCRIPTIONS OF DEFICIENCIES
TOTAL RETENTION AND DISCHARGE PERMITS	616-3-1	**Facility is as described in permit**	*01		Adequate Freeboard
	616-3-1	**All discharge outfalls and surface impoundments permitted**	*02		
	616-7-1	Treatment system properly operated and maintained	03		
	606-1-3(b)(3)(W)	**Bypasses or overflows reported**	*04		
	** 2-6-205(A)	**Bypasses or overflows corrected**	*05		
	** 2-6-501	Wastes from treatment structures properly disposed	06		
	** 2-6-501	Waste hauler and disposal site recorded	07		
	616-7-1	Impoundment dikes properly constructed	08		
	616-7-1	Impoundment freeboard is as permitted	09		
	616-7-1	Dikes or liners properly maintained	10		
	616-5-1	Facility and/or impoundment access restricted	11		
	616-5-1	Facility and/or impoundment marked with signs listing facility operator, emergency telephone # and permit #	12		
DISCHARGE PERMITS	606-11-2	**Support laboratory is certified by DEQ** Samples collected by: Superior Env. Compliance (Contract laboratory / Facility) Samples analyzed by: Green Country Lab (Contract laboratory / Facility)	*13		
	606-11-2	Approved analytical procedures and equipment used	14		
	606-1-3(b)(3)(W)	QA/QC records maintained	15		
	606-11-4(b)	SMRs/DMRs for the last three years are on file	16		
	606-1-3(b)(3)(W)	**Noncompliance reports submitted when violations occur**	*17		
	606-11-4	**SMR/DMR data matches laboratory results sheets**	*18		
	606-11-2	Laboratory results sheets have date received, analysis date, time and method used, analyst and results	19		
	606-11-5	**Flow measurement methods adequate**	*20		
	606-11-5	Correct sampling location	21		
	606-11-2	Correct sampling methods used	22		
	606-11-2	Sample holding times not exceeded	23	X	Holding Time For pH exceeded in June 2014. Facility needs to determine method For meeting 15 minute hold time
	606-11-2	Calibration records for instruments and equipment maintained	24		
	606-11-2	Chain of custody documents, date, time, place of sample, sampler, number and type of samples, preservatives used and signatures	25		
	606-5-1	No visible oil sheen (violation of OWQS)	26		
	606-5-1	No visible foam or solids (violation of OWQS)	27		

List effluent treatment/control structures in sequence from source to final outfall or total retention impoundment

Critical items are indicated in bold and by an asterisk (*) in the item column. All critical items marked must be corrected within 14 days or as specified by the inspector. Other violations must be corrected by the next regular inspection or by the date specified.

RE: OPDES Permit Renewal Application, DEQ Permit No. OK0045781
Sherwood Construction Company, Inc., dba Greenhill Concrete Products, Inc.
Tulsa County, Oklahoma
Facility ID No. I-72002620

Dear Ms. Paden:

Enclosed please find the Proof-of-Publication for the first legal notice associated with the above OPDES Permit Renewal Application. Please contact me if you or your staff has any questions.

Sincerely,
SUPERIOR ENVIRONMENTAL COMPLIANCE, INC.

Randal J. Beeson
General Manager

Legal Notice

A Tier II application for a renewal of an OPDES permit to discharge industrial wastewater has been filed with the Department of Environmental Quality (DEQ) by Greenhill Concrete Products, Inc., 1640 S. 101st East Avenue, Tulsa, OK 74128.

The applicant requests a permit to discharge wastewater from its Broken Arrow Concrete Batch Plant, located in the SE/4, NW/4, NE/4, Section 13, T18N, R14 EIM, Tulsa County, Oklahoma, or at 1601 E. Houston Street, Broken Arrow, OK 74012.

The discharge, which will consist of concrete delivery truck washout, will be to an unnamed tributary of Broken Arrow Creek in the SE/4, NW/4, NE/4, Section 13, T18N, R14EIM, Tulsa County, OK. The permit, if issued, would establish effluent limitations on the discharge.

The application may be viewed at the South Broken Arrow Library, 3600 S. Chestnut, Broken Arrow, OK 74011.

After reviewing the application the DEQ will prepare either a draft permit or draft denial. At that time, notice of the prepared draft will be made by the Department and the public will be given the opportunity to review it, submit written comments, or request a public meeting within thirty days.

For additional information, contact the applicant's representative, Mr. Matt Ritchie, at 918-266-6861 or 1640 S. 101st East Avenue, Tulsa, OK 74128, or the Industrial Permitting Unit of the Water Quality Division of the Department's central office, located at 707 N. Robinson, P.O. Box 1677, Oklahoma City, OK 73101-1677, (405) 702-8100.

FORM 1 GENERAL	OKLAHOMA DEQ	OPDES APPLICATION TO DISCHARGE AND/OR TREAT OR DISPOSE OF INDUSTRIAL WASTEWATER OR SLUDGE **GENERAL INFORMATION**

A. TYPE OF PERMIT REQUESTED

NEW		RENEWAL	X	MODIFICATION		CONVERSION FROM GENERAL PERMIT	

B. REGULATED ACTIVITIES

INSTRUCTIONS: ALL applicants MUST fill out FORM 1. Complete items 1 through 5 below to determine which additional forms you need to submit. If you answer "yes" to any questions, you must submit the supplemental form listed after the question in parentheses. If you answer "no" to every question, you do not need to submit an application. You may answer "no" if your activity is covered by a general permit or is otherwise excluded from individual permit requirements (see Section C of the instructions). See Section D of the instructions for definitions of **bold-faced** terms.

SPECIFIC QUESTIONS	YES	NO
1. Is this an existing facility which currently results in a **discharge** of industrial **wastewater** to **waters of the State** and is not eligible for an authorization under a general permit? (FORM 2C)	X	
2. Does this facility use or propose to use **surface impoundments** (pits, ponds or lagoons) and/or **tank systems** to treat or dispose of industrial **wastewater** and/or **land apply** industrial **sludge** or **wastewater**? (FORM 2SI, which replaces FORM 2S)		X
3. Is this a proposed facility which will result in a **discharge** of industrial **wastewater** to **waters of the State**? (FORM 2D)		X
4. Does this facility perform or propose to perform **land application** of industrial **sludge** or **wastewater** (including beneficial use for soil conditioning, crop or vegetative fertilization, erosion control or dust suppression)? (FORM 2L)		X
5. Is this a new or existing **categorical user** or **significant industrial user** in a **non-pretreatment municipality** that will or does discharge industrial **wastewater** to a **public owned treatment works**? (FORM 606-008)		X

C. NAME OF FACILITY

Greenhill Concrete Products, Inc. - Broken Arrow Batch Plant

I. DEQ LANDOWNER NOTIFICATION AFFIDAVIT

1. Does applicant own all land subject to the application:	Yes	X	No	

If yes, proceed to section J. If no, proceed to part 2 of this section.

2. Application(s) for which the applicant does not own all the land subject to the application must notify the owner(s) of leases and/or pipeline right-of-ways that a permit application has been submitted to the DEQ. The basis for this requirement is 27A of the Oklahoma Statutes, § 2-14-103(9), as described in OAC 252:004-7-13(b). DEQ Form 100-810 shall be used for this purpose and is available on the DEQ web page.

J. EXISTING ENVIRONMENTAL PERMITS

1. NPDES	2. UIC	3. RCRA	4. PSD
OK0045781			
5. OTHER (permit number)	(description)	**6. OTHER** (permit number)	(description)

K. MAP

Attach a topographic map (or other map if a topographic map is unavailable) extending one mile beyond the property boundaries. The map must show the outline of the facility, the location of each of its intake and discharge structures; each of its hazardous waste treatment, storage, or disposal facilities; each well where fluids are injected underground; and those wells, springs, other surface water bodies, and drinking water wells listed in public records or otherwise known to the applicant.

L. SIC CODES (4-digit, in order of priority)

1. FIRST		2. SECOND	
(number) 3273	(specify) Concrete batch plant	(number)	(specify)
3. THIRD		**4. FOURTH**	
(number)	(specify)	(number)	(specify)

M. NATURE OF BUSINESS

1. PRODUCTS AND SERVICES

Production of Ready-Mix Concrete

2. PLANT OPERATIONS

a. PROCESS/OPERATION	b. PRODUCT	c. DAILY QUANTITY (units)
Mechanical aggregate blending	Ready-mix concrete	Average of 300 cy/da

3. Date facility began operations:	1982	4. Number of employees at this location:	23
5. Plant normally operates:	8-10 hours per day,	5-6 days per week, in	1 shifts.

N. SOURCES OF WATER SUPPLY AND AMOUNT USED

Identify all sources of facility water by entering the appropriate letter(s) in the boxes below and then providing the appropriate description(s), as indicated in parentheses. List each source on a separate line. If you have more than one source of a given type, indicate this by entering the letter, followed by two digits (e.g., if your water comes from three wells, the sources would be indicated as G01, G02, and G03). For each source, estimate of the average daily use. Continue on additional sheets if needed.

G = GROUNDWATER WELL	(legal description of well location)
S = SURFACE WATER	(name of stream, river, lake, etc., and legal description of intake)
P = PUBLIC WATER SUPPLY	(name of entity from which water is obtained)
W = WASTEWATER TREATMENT PLANT	(name of entity from which water is obtained)
O = OTHER	(source of supply, and legal description if applicable)

1. SOURCE	2. DESCRIPTION	3. AVG. DAILY USE (GPD)
P	City of Broken Arrow municipal water supply	13,375
O	Recycled Wastewater	3,500

O. CERTIFICATION (see instructions)

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and true belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

1. NAME & OFFICIAL TITLE (type or print)	2. SIGNATURE	3. DATE SIGNED
Matt Ritchie, Vice President, Materials		10/15/14

Form 1, Attachment 1
Public Notice and Application Requirements

A public notice is not required for a Tier I permit application. The Oklahoma Uniform Environmental Permitting Act, 27A O.S. §2-14-301 requires that upon filing a Tier II or Tier III application with the Department, the applicant shall publish notice of the filing as legal notice in one newspaper local to the proposed new site or existing facility. For Tier III applications, the publication shall also include notice of a thirty-day opportunity to request, or give the date, time and place for, a process meeting on the permitting process.

According to OAC 252:4-7, the following is required for a Tier I, II, or III application: two (2) copies of Tier I applications must be filed with the DEQ; three (3) copies of Tier II and Tier III applications must be filed with the DEQ and one copy must be placed for public review in the county in which the facility is located. A copy of the application must remain on file at the location of the public review site until issuance of the related permit.

Use the following table as guidance for determining the public notice and application requirements for the facility. Select the category appropriate to the facility and follow the public notice and application requirements. If a public notice is necessary, instructions for completing the public notice are given in the following pages.

Question	Yes / No	Tier I, II, or III	Public Notice Requirements	Applications
Is the facility applying for a renewal of an expiring permit for an industrial, non-discharging impoundment or tank system?		Tier I	None	Three (3) copies of the application must be filed with the DEQ.
Is the facility applying for a renewal of an expiring permit with minor or no change for land application of sludge and/or wastewater?				
Is the facility applying for a new or renewal of an expiring permit for a Categorical or Significant Industrial User in a Non-Pretreatment Municipality to discharge industrial waste to the POTW?				
Is the facility applying for a new discharge permit or renewal of an expiring discharge permit for a minor facility?	X	Tier II	The applicant must publish notice of the filing as legal notice in one newspaper local to the proposed new site or existing facility.	Three (3) copies of the application must be filed with the DEQ and one copy must be placed for public review in the county in which the facility is located.
Is the facility applying for a renewal of an expiring discharge permit for a major facility?				
Is the facility applying for a new permit for an industrial, non-discharging impoundment or tank system?				
Is the facility applying for a new permit or major modification of an existing permit for land application of sludge and/or wastewater?				
Is the facility applying for a new discharge permit for a major facility?		Tier III	The applicant must publish notice of the filing as legal notice in one newspaper local to the proposed new site or existing facility. The publication must also include notice of a thirty-day opportunity to request (or give the date, time, and place for) a process meeting on the permitting process.	Three (3) copies of the application must be filed with the DEQ and one copy must be placed for public review in the county in which the facility is located.

Legal Notice

A Tier II application for a renewal of an OPDES permit to discharge industrial wastewater has been filed with the Department of Environmental Quality (DEQ) by Greenhill Concrete Products, Inc., 1640 S. 101st East Avenue, Tulsa, OK 74128.

The applicant requests a permit to discharge wastewater from its Broken Arrow Concrete Batch Plant, located in the SE/4, NW/4, NE/4, Section 13, T18N, R14 EIM, Tulsa County, Oklahoma, or at 1601 E. Houston Street, Broken Arrow, OK 74012.

The discharge, which will consist of concrete delivery truck washout, will be to an unnamed tributary of Broken Arrow Creek in the SE/4, NW/4, NE/4, Section 13, T18N, R14EIM, Tulsa County, OK. The permit, if issued, would establish effluent limitations on the discharge.

The application may be viewed at the South Broken Arrow Library, 3600 S. Chestnut, Broken Arrow, OK 74011.

After reviewing the application the DEQ will prepare either a draft permit or draft denial. At that time, notice of the prepared draft will be made by the Department and the public will be given the opportunity to review it, submit written comments, or request a public meeting within thirty days.

For additional information, contact the applicant's representative, Mr. Matt Ritchie, at 918-266-6861 or 1640 S. 101st East Avenue, Tulsa, OK 74128, or the Industrial Permitting Unit of the WQater Quality Division of the Department's central office, located at 707 N. Robinson, P.O. Box 1677, Oklahoma City, OK 73101-1677, (405) 702-8100.

FORM 2C DISCHARGE	OKLAHOMA DEQ	OPDES APPLICATION TO DISCHARGE AND/OR DISPOSE OF INDUSTRIAL WASTEWATER OR SLUDGE **EXISTING SOURCES**

A. NAME OF FACILITY

Greenhill Concrete Products, Inc. - Broken Arrow Batch Plant

B. FACILITY CONTACT

1. Name & Title	2. Phone (AC + No.)	3. FAX (AC + No.)	4. E-mail Address
Matt Ritchie, Vice President, Materials	(918) 266-6861	(918) 266-6482	mattr@greenhillconcrete.com

C. OUTFALL LOCATION

1. For each outfall, list the legal description (¼, ¼, ¼, Section, Township, Range) to the nearest 10 acres and the name of the receiving water.

a. Outfall No.	b. Legal Description	c. Receiving Water
002	SE/4, NW/4, NE/4, Section 13, T18N, R14EIM	Unnamed tributary of Broken Arrow Creek

2. For each outfall, list the latitude and longitude.

a. Outfall No.	b. Latitude	c. Longitude
002	36 deg 02' 32.2" N	95 deg 46' 8.8" W

FOR OFFICIAL USE ONLY

OPDES PERMIT NO.	STATE PERMIT NO.	FACILITY ID NO.

D. FLOWS, SOURCES OF POLLUTION, AND TREATMENT TECHNOLOGIES

1. Attach a line drawing showing the water flow through the facility. Indicate sources of intake water, operations contributing wastewater to the effluent, and treatment units labeled to correspond to the more detailed descriptions in Item D-2 below. Construct a water balance on the line drawing by showing average flows between intakes, operations, treatment units, and outfalls. If a water balance cannot be determined (e.g., for certain mining activities), provide a pictorial description of the nature and amount of any sources of water and any collection or treatment measures.
2. For each outfall, provide a description of: (1) all operations contributing wastewater to the effluent, including process wastewater, sanitary wastewater, cooling water, and storm water runoff; (2) the average flow contributed by each operation; and (3) the treatment received by the wastewater. Continue on additional sheets if necessary.

a. Outfall No.	b. Operation(s) Contributing Flow	c. Average Flow (include units)	d. Description of Treatment
002	Runoff from aggregate stockpiles.		Sedimentation, pH adjustment
	Concrete delivery truck barrel washout		Sedimentation, pH adjustment
	Direct precipitation		Sedimentation, pH adjustment
	Yard runoff		Sedimentation, pH adjustment

D. FLOWS, SOURCES OF POLLUTION, AND TREATMENT TECHNOLOGIES (continued)

3. Except for storm runoff, leaks or spills, are any of the discharges described in Items D-1 or 2 intermittent or seasonal?

☐ Yes (complete the following table) ☒ No (go to Item E)

a. Outfall No.	b. Operation(s) Contributing Flow	c. Frequency		d. Flow				
				Flow Rate		Total Volume		
		Days Per Week	Months Per Year	Long Term Average	Maximum Daily	Long Term Average	Maximum Daily	Duration (days)

E. PRODUCTION

1. Does an effluent guideline limitation promulgated by EPA under Section 304 of the Clean Water Act apply to your facility?

☒ Yes (complete Item E-2) ☐ No (go to Item F)

2. Are the limitations in the applicable effluent guideline expressed in terms of production (or other measure of operation)?

☐ Yes (complete Item E-3) ☒ No (go to Item F)

3. If you answered "yes" to Item E-2, list the quantity which represents an actual measurement of your level of production, expressed in the terms and units used in the applicable effluent guideline, and indicate the affected outfalls.

a. Average Daily Production			b. Affected Outfall
(1) Qty Per Day	(2) Units of Measure	(3) Operation, Product, Material, etc.	

F. INTAKE AND EFFLUENT CHARACTERISTICS

1, 2 & 3: See instruction before proceeding – **Complete one set of tables (pages 5 - 12) for each outfall** – Annotate the outfall number in the space provided.

4. Use the space below to list any of the pollutants listed in Table 2C-2 of the instructions, which you know or have reason to believe is discharged or may be discharged from any outfall. For every pollutant you list, briefly describe the reasons you believe it to be present and report any analytical data in your possession.

a. Pollutant	b. Source	c. Outfall No.
None of the pollutants listed in Table 2C-2 are known		
to be in use at this facility.		

G. POTENTIAL DISCHARGES NOT COVERED BY ANALYSIS

Is any pollutant listed in Item F-3 a substance or component of a substance which you currently use or manufacture as an intermediate product, final product or byproduct?

☐ Yes (list all such pollutants below) ☒ No (go to Item H)

a. Pollutant (from Item F-3, pages 6-12)	b. Nature of Use or Occurrence

H. BIOLOGICAL TOXICITY TESTING DATA

Do you have any knowledge or reason to believe that any biological test for acute or chronic toxicity has been made on any of your discharges or on a receiving water in relation to your discharge within the last 3 years?

☐ Yes (identify tests and describe purpose and results below) ☒ No (go to Item I)

a. Date of Test(s)	b. Nature and Purpose of Test(s)	c. Results of Test(s)

I. CERTIFICATION

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and true belief, true, accurate and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

No Results

We have completed the water well search within your area of interest, '13, 18N, 14E' in Oklahoma and no water wells records were found in this area.

This search does not necessarily contain information about all of the water wells within the area of interest. The multi-purpose well completion report database consists of information submitted to the Board for all well data reported by licensed firms since 1982 and monitoring well data reported since 1988. There could be other wells in the area, which are not included in our database. Wells drilled prior to the licensing requirements for well drillers would not necessarily have had a well log submitted to the OWRB. A field survey may need to be conducted to verify the presence or absence of other water wells.
The Oklahoma Water Resources Board does not guarantee the accuracy of the data shown in the well completion records. Data entered into the database are as reported by the well drillers and much of the data have not been field verified for accuracy. If any errors in the records are discovered, please bring them to our attention so that corrections to the database may be made.

NOTES:

Precipitation and evaporation data from 252:616, App. C.

Current permit allows 200,000 gpd discharge from F06.

Water usage figures are average daily figures.

Figure 3

Water Use Line Drawing

October 13, 2014

GREENHILL CONCRETE PRODUCTS, INC.
Broken Arrow Concrete Batch Plant

F01 Through F02 and F04 Through F06 Discharge Impoundment Calculations

A. Precipitation and Evaporation Data:

1. Tulsa County 90th Percentile Precipitation = 49.54 inches/year (4.13'/yr)
2. Tulsa County 90th Percentile Evaporation = 75 inches/year (6.25')

Net Evaporation = 25.64 inches/year

Precipitation:

F01 through F06 surface area = 6,933 sf
Precipitation = (6,933 sf) (4.13'/yr) = (28,633.29 cf) (7.48 gal/cf) = 214,177 gal/yr

Evaporation: = (6,933 sf) (6.25'/yr) = (43,331.25 cf) (7.48 gal/cf) = 324,117.75 gal/yr

B. Truck Washout Volume Calculations:

Given: Average 300 cy/da of production
8.5 cy load/truck
(300 cy/da)/(8.5 cy/load) = 35 trucks/da

Assume: 150 gal/truck for barrel washout (discharge to Pond F01)
100 gal/truck is recycle water from Pond F01
50 gal/truck is fresh water from City of BA
260 da/yr of plant operation

Annual Truck Washout Volume:

V = (35 trucks/da) (150 gal/truck) (260 da/yr)
V = 1,365,000 gpy

Fresh Water Volume = (1,365,000 gpy) (0.333) = 454,545 gpy
Recycle Water Volume = (1,365,000) (0.666) = 909,090 gpy

C. Facility Water Usage:

City of Broken Arrow Municipal Water System:

Given: 30 gal/cy of fresh water
75 gal/truck for offsite washing
50 gal/truck for onsite barrel washing

V = (300 cy/da) (30 gal/cy) + (75 gal/truck) (35 trucks) + (35 trucks) (50 gal/truck for washout)
V = 9,000 gal/da + 2,625 gal/da + 1,750 gal/da
V = 13,375 gal/da

Recycled Wastewater:

Given: 100 gal/truck for onsite barrel washing
V = (35 trucks/da) (100 gal/truck)
V = 3,500 gal/da

NOTICE OF DEFICIENCY

Dear Mr. Ritchie:

Your application for an Oklahoma Department of Environmental Quality (DEQ) permit to discharge wastewater was received by this office on October 20, 2014. As specified in OAC 252:004-7-7 of the DEQ rules, your application has been determined to be incomplete. It is necessary for you to submit the following information before we can begin to prepare your draft permit:

- Application Form 2SI: All applicants seeking a permit for an industrial surface impoundment system must submit a Form 2SI. Form 2SI requests information specifically for surface impoundment systems. Please complete the enclosed Form 2SI and submit it to the Oklahoma Department of Environmental Quality (DEQ).

- Application Form 2C: Form 2C was submitted but missing Item F, Part 1. All applicants seeking a permit to discharge must at least complete Part 1 of this section. Please complete the enclosed Form 2C and submit it to the Oklahoma Department of Environmental Quality (DEQ).

Please submit the requested information by December 12, 2014. The permit application review process is hereby suspended pending receipt of the requested information.

Thank you for your cooperation. If you have any questions concerning this submittal or the permit procedures, please contact Brandon Tyler at (405) 702-8215.

Sincerely,

Brandon Tyler

FORM 2C DISCHARGE	OKLAHOMA DEQ	OPDES APPLICATION TO DISCHARGE AND/OR DISPOSE OF INDUSTRIAL WASTEWATER OR SLUDGE **EXISTING SOURCES**

A. NAME OF FACILITY

Greenhill Concrete Products, Inc. - Broken Arrow Batch Plant

B. FACILITY CONTACT

1. Name & Title	2. Phone (AC + No.)	3. FAX (AC + No.)	4. E-mail Address
Matt Ritchie, Vice President, Materials	(918) 266-6861	(918) 266-6482	mattr@greenhillconcrete.com

C. OUTFALL LOCATION

1. For each outfall, list the legal description (¼, ¼, ¼, Section, Township, Range) to the nearest 10 acres and the name of the receiving water.

a. Outfall No.	b. Legal Description	c. Receiving Water
002	SE/4, NW/4, NE/4, Section 13, T18N, R14EIM	Unnamed tributary of Broken Arrow Creek

2. For each outfall, list the latitude and longitude.

a. Outfall No.	b. Latitude	c. Longitude
002	36 deg 02' 32.2" N	95 deg 46' 8.8" W

FOR OFFICIAL USE ONLY

OPDES PERMIT NO.	STATE PERMIT NO.	FACILITY ID NO.

D. FLOWS, SOURCES OF POLLUTION, AND TREATMENT TECHNOLOGIES (continued)

3. Except for storm runoff, leaks or spills, are any of the discharges described in Items D-1 or 2 intermittent or seasonal?

[X] **Yes** (complete the following table) [ ] **No** (go to Item E)

a. Outfall No.	b. Operation(s) Contributing Flow	c. Frequency		d. Flow				
				Flow Rate		Total Volume		
		Days Per Week	Months Per Year	Long Term Average	Maximum Daily	Long Term Average	Maximum Daily	Duration (days)
002	Direct Precipitation	varies	12	varies	36,000 gpd	214,177 gpy	36,000 gpd	varies
	Concrete delivery truck barrel washout	5-6	12	1,225 gpd	1,750 gpd	454,545 gpy	1,750 gpd	275 da/yr

E. PRODUCTION

1. Does an effluent guideline limitation promulgated by EPA under Section 304 of the Clean Water Act apply to your facility?

[X] **Yes** (complete Item E-2) [ ] **No** (go to Item F)

2. Are the limitations in the applicable effluent guideline expressed in terms of production (or other measure of operation)?

[ ] **Yes** (complete Item E-3) [X] **No** (go to Item F)

3. If you answered "yes" to Item E-2, list the quantity which represents an actual measurement of your level of production, expressed in the terms and units used in the applicable effluent guideline, and indicate the affected outfalls.

a. Average Daily Production			b. Affected Outfall
(1) Qty Per Day	(2) Units of Measure	(3) Operation, Product, Material, etc.	

F. INTAKE AND EFFLUENT CHARACTERISTICS

1, 2 & 3: See instruction before proceeding – **Complete one set of tables (pages 5 - 12) for each outfall** – Annotate the outfall number in the space provided.

4. Use the space below to list any of the pollutants listed in Table 2C-2 of the instructions, which you know or have reason to believe is discharged or may be discharged from any outfall. For every pollutant you list, briefly describe the reasons you believe it to be present and report any analytical data in your possession.

a. Pollutant	b. Source	c. Outfall No.
None of the pollutants listed in Table 2C-2 are known		
to be in use at this facility.

WATER QUALITY DIVISION

D. FLOWS, SOURCES OF POLLUTION, AND TREATMENT TECHNOLOGIES

1. Attach a line drawing showing the water flow through the facility. Indicate sources of intake water, operations contributing wastewater to the effluent, and treatment units labeled to correspond to the more detailed descriptions in Item D-2 below. Construct a water balance on the line drawing by showing average flows between intakes, operations, treatment units, and outfalls. If a water balance cannot be determined (e.g., for certain mining activities), provide a pictorial description of the nature and amount of any sources of water and any collection or treatment measures.

2. For each outfall, provide a description of: (1) all operations contributing wastewater to the effluent, including process wastewater, sanitary wastewater, cooling water, and storm water runoff; (2) the average flow contributed by each operation; and (3) the treatment received by the wastewater. Continue on additional sheets if necessary.

a. Outfall No.	b. Operation(s) Contributing Flow	c. Average Flow (include units)	d. Description of Treatment
002	Direct precipitation	214,177 gpy	pH adjustment
	Concrete delivery truck barrel washout	454,545 gpy	Sedimentation, pH adjustment

G. POTENTIAL DISCHARGES NOT COVERED BY ANALYSIS

Is any pollutant listed in Item F-3 a substance or component of a substance which you currently use or manufacture as an intermediate product, final product or byproduct?

☐ Yes (list all such pollutants below) ☒ No (go to Item H)

a. Pollutant (from Item F-3, pages 6-12)	b. Nature of Use or Occurrence

H. BIOLOGICAL TOXICITY TESTING DATA

Do you have any knowledge or reason to believe that any biological test for acute or chronic toxicity has been made on any of your discharges or on a receiving water in relation to your discharge within the last 3 years?

☐ Yes (identify tests and describe purpose and results below) ☒ No (go to Item I)

a. Date of Test(s)	b. Nature and Purpose of Test(s)	c. Results of Test(s)

PART 2 - Mark "X" in column b(1) for each pollutant you know or have reason to believe is present. Mark "X" in column b(2) for each pollutant you believe to be absent. If you mark column b(1) for any pollutant which is limited either directly, or indirectly but expressly, in an Effluent Limitation Guideline, you must provide the results of at least one analysis for that pollutant. For other pollutants for which you mark column b(1), you must provide quantitative data or an explanation of their presence in your discharge. **Complete one table for each outfall.** See the instructions for additional details and requirements.

PART 3 - If you are a primary industry and this outfall contains process wastewater, refer to Table 2C-1 in the instructions to determine which of the GC/MS organic fractions you are required to test in addition to the toxic metals, cyanide and total phenols. Then mark "X" in column b(1) for the pollutant groups you are required to test. For the remaining pollutants, mark "X" in column b(2) for each pollutant you know or have reason to believe is present. Mark "X" in column b(3) for each pollutant you believe to be absent. **Complete one table for each outfall.** See instructions for additional details and requirements.

Case Narrative

Lab No: 20141324

This report contains the analytical results for the 1 sample(s) received under chain of custody by Outreach Laboratory on 12/10/14 16:32:05. These samples are associated with your project.

The analytical results included in this report meet all applicable quality control procedure requirements except as noted below:

The test results in this report meet all NELAC requirements unless noted below:

This report shall not be reproduced, except in full, without the written approval of Outreach Laboratory.

All radiochemical sample results for solids are reported on a dry weight basis with the exception of tritium, carbon-14 and radon, unless wet weight was requested by the client.

Observations / Nonconformances

Sample(s) was collected in accordance with the client's sampling plan.

Observations / Nonconformances

This report has been amended from the original submitted on 12/19/14. TOC was requested by the customer via phone on 01/02/15. No other changes have been made to this report.

Observations / Nonconformances

The BOD for this project was subcontracted to Green Country Testing and the QC for that analysis accompanies the analytical report on a separate page.

RE: OPDES Permit Modification Application, Permit No. OK0045781
Sherwood Construction Company, Inc. dba Greenhill Concrete Products, LLC,
Tulsa County, Oklahoma
Facility ID No. I-72002620

Dear Mr. Ritchie:

Your application for an Oklahoma Department of Environmental Quality (DEQ) permit to discharge wastewater was received by this office on October 20, 2014. On November 20, 2014, an incomplete letter was sent to you requesting application Form 2SI and Form 2C. The requested items were received on January 16, 2015. As specified in OAC 252:004-7-7 of the DEQ rules, your application has been determined to be administratively complete.

Please note that additional information may be requested at a later date to clarify, modify, or supplement information already provided in this application. Requests for such additional information will not render your application incomplete.

Thank you for your cooperation. If you have any questions concerning this submittal or DEQ permitting procedures, please contact Brandon Tyler at (405) 702-8215.

Sincerely,

Brandon Tyler

RE: OPDES Permit Modification Application, Permit No. OK0045781
Sherwood Construction Company, Inc. dba Greenhill Concrete Products, Inc.,
Tulsa County, Oklahoma
Facility ID No. I-72002620

Dear Mr. Ritchie:

Please find enclosed a copy of the draft permit that the Oklahoma Department of Environmental Quality (DEQ) has developed for your facility. The statement of basis explaining the basis for the permit conditions is also enclosed. These materials are being sent to you as a courtesy for your review prior to publicly noticing the draft permit.

If you have any questions or comments or wish to request a meeting to discuss the terms of the draft permit, please contact Brandon Tyler by email at brandon.tyler@deq.ok.gov or by phone at (405) 702-8215 within 15 days of receiving this letter.

If we do not hear from you within the above time frame, the DEQ will proceed with the issuance process. Thank you for your cooperation.

Sincerely,

Carol Paden

AUTHORIZATION TO DISCHARGE UNDER THE OKLAHOMA POLLUTANT DISCHARGE ELIMINATION SYSTEM

PERMIT NUMBER: OK0045781
ID NUMBER: I-72002620

In compliance with the Oklahoma Pollutant Discharge Elimination System (OPDES) Act, 27A O.S. §2-6-201 *et seq.*, Oklahoma Uniform Environmental Permitting Act, 27A O.S. §2-14-101 *et seq.*, and the rules of the Oklahoma Department of Environmental Quality promulgated thereunder,

Sherwood Construction Company, Inc.
DBA Greenhill Concrete Products, Inc. – Broken Arrow
1640 S. 101st East Ave.
Tulsa, OK 74128

is authorized to discharge from their facility, located in the:

SE¼, NW¼, NE¼, Section 13, Township 18N, Range 14EIM
Tulsa County, Oklahoma
or at 1601 E. Houston Ave., Broken Arrow, OK 74012

to receiving waters identified as: unnamed tributary of Broken Arrow Creek, stream segment 120410, Water Body ID OK120410010200, in Tulsa County, Oklahoma

from: Outfall 002:

Latitude 36° 02' 32.2" N, Longitude 95° 46' 8.8" W (GPS: NAD83)
SE¼, NW¼, NE¼, Section 13, Township 18N, Range 14EIM,
Tulsa County, Oklahoma

in accordance with effluent limitations, monitoring requirements, and other conditions set forth in Parts I, II, and III, hereof.

The above referenced facility is also authorized to retain wastewater in two flow-through surface impoundments (F01, F02, F04, F05 and F06), as described in the Appendix. Surface impoundments shall be maintained in accordance with Parts I, II, and IV, hereof.

Issuance of this permit in no way or in any respect affects the permittee's civil or criminal responsibility regarding disposal and/or discharges of wastewater, except with respect to the permittee's legal responsibility under the OPDES Act and Department Rules.

This permit replaces and/or supersedes OPDES Permit No. OK0045781 that became effective on July 1, 2014 and expires June 30, 2015.

This permit shall become effective on .

This permit and the authorization to operate the disposal system shall expire at midnight, on .

This is to certify that the wastewater discharges set forth in this permit comply with the requirements of Oklahoma's Water Quality Standards, as amended, provided the permittee does not exceed the effluent limitations set forth in this permit.

Issued this _____ day of _____, 2015.

For Oklahoma Department of Environmental Quality,

Carol Paden, P.E., Manager
Industrial Permits Section
Water Quality Division

Shellie Chard-McClary, Director
Water Quality Division

PART I
EFFLUENT LIMITATIONS AND MONITORING REQUIREMENTS

SECTION A. EFFLUENT LIMITATIONS AND MONITORING REQUIREMENTS

Outfall 002

Limitations, Reporting Requirements and Monitoring

During the period beginning the effective date and lasting through the expiration date, the permittee authorized to discharge from Outfall 002. The discharge will consist of process wastewater and associated stormwater runoff from the following three common activities: (1) mix plant area washdown, (2) truck mixer drum washout, and (3) external truck washing.

Such discharge shall be limited and monitored by the permittee as specified below:

Effluent Limitations – Outfall 002

PARAMETERS	DISCHARGE LIMITATIONS			
	MASS LOADING LIMITS (lbs/day unless otherwise specified)		CONCENTRATION LIMITS (mg/L unless otherwise specified)	
	MONTHLY AVERAGE	DAILY MAXIMUM	MONTHLY AVERAGE	DAILY MAXIMUM
Flow STORET: 50050	Report (MGD)	Report (MGD)	--	--
Total Suspended Solid (TSS) STORET: 00530	--	--	Report	40
Oil and Grease STORET: 00552	--	--	Report	15
pH STORET: 00400	N/A	N/A	between 6.5 and 9.0 s.u.	

Monitoring Requirements – Outfall 002

PARAMETERS	MEASUREMENT FREQUENCY *	SAMPLE TYPE
Flow	1/Month	Estimate
Total Suspended Solids	1/Month	Grab
Oil and Grease	1/Month	Grab
pH	1/Month	Grab

* When discharging.

NOTE: See Parts II and III for Additional Requirements.

There shall be no discharge of a visible sheen of oil or globules of oil or grease on or in the water. Oil and grease shall not be present in quantities that adhere to stream banks and coat bottoms of watercourses. Surface waters of the State shall be maintained free from oil and grease and taste and odors.

There shall be no discharge of floating solids or visible foam in other than trace amounts.

The discharge shall not contain chemical, physical, or biological substances in concentrations that are irritating to skin or sense organs or are toxic or cause illness upon ingestion by human beings.

Samples for Outfall 002 taken in compliance with the monitoring requirements specified above shall be taken at the following location:

Outfall 002: At the pipe outlet of surface impoundment F06 and prior to discharging to the unnamed tributary of Broken Arrow Creek located in the SE¼, NW¼, NE¼, Section 13, Township 18N, Range 14EIM, Tulsa County, Oklahoma, or at Latitude 36° 02' 32.2"N, Longitude 95° 46' 8.8"W (GPS: NAD83).

SECTION B. SCHEDULE OF COMPLIANCE

The permittee shall achieve compliance with the effluent limitations specified for discharges in accordance with the following schedule: None.

SECTION C. REPORTING OF MONITORING RESULTS

Monitoring results shall be reported in accordance with the provisions of Part III. E.4 of the permit. Monitoring results obtained during the previous month shall be summarized and reported on the Discharge Monitoring Report (DMR) forms due to the Oklahoma Department of Environmental Quality, Water Quality Division, Wastewater Compliance Tracking Section postmarked or received no later than the 15th day of the following month. If no discharge occurs during the reporting period, DMR forms stating "No Discharge" shall be submitted according to the above schedule.

The first report is due on __.

PART II
OTHER PERMIT REQUIREMENTS

A. REGULATORY NOTICE

The permittee is hereby given notice that this permit is in all respects subject to compliance with and actions under any and all applicable and relevant terms, conditions, provisions and requirements, and any and all amendments of the laws of the state of Oklahoma, the rules of the Oklahoma Department of Environmental Quality, and Oklahoma's Water Quality Standards. The absence of any express reference within this permit of any particular statutory requirement, rule(s), regulation(s), or standard(s) shall in no respect be deemed or construed to exempt or preclude the application of such requirement, rule(s), regulation(s), or standard(s) to this permit or the permittee. By the Director's approval, grant and issuance of this permit, permittee acknowledges receipt of true, correct, and current copies of Oklahoma's Water Quality Standards, and the rules of the Oklahoma Department of Environmental Quality, provided, however, that permittee further acknowledges that any and all amendments thereto shall become part of this permit.

B. REOPENER CLAUSE

This permit may be reopened for modification or revocation and reissuance to require additional monitoring and/or effluent limitations where actual or potential exceedances of state water quality criteria are determined to be the result of the permittee's discharge to the receiving water(s), or a Total Maximum Daily Load is established for the receiving stream(s), or when required as technology. Modification or revocation and reissuance of the permit shall follow regulations listed at 40 CFR 124.5.

C. LABORATORY CERTIFICATION

All laboratory analyses for the parameters specified in this permit must be performed by a laboratory certified by the Oklahoma Department of Environmental Quality for those parameters.

D. ANALYTICAL REQUIREMENTS

Unless otherwise specified in this permit, effluent and/or upstream monitoring shall be conducted according to analytical, apparatus and materials, sample collection, preservation, handling, etc., procedures listed at 40 CFR Part 136 in effect on the effective date of this permit. Appendices A, B, and C to 40 CFR Part 136 are specifically referenced as part of this requirement. Amendments to 40 CFR Part 136 promulgated and incorporated by reference into OAC 252:606 after the effective date of this permit shall supersede these requirements as applicable.

E. SURFACE IMPOUNDMENT REQUIREMENTS

A minimum freeboard of one (1) foot for surface impoundments F01, F02, F04, F05, and F06 shall be maintained.

The permit may be reopened to implement and/or require impoundment modifications, additions, extensions, and/or operational changes; additional monitoring and reporting (including but not necessarily limited to soil sampling); reclassification of wastes; sludge management plans; best management practices; closure plans; remediation and/or remediation plans; monitoring wells and/or subsurface monitoring plans; and/or other appropriate actions.

At such time as surface impoundments F01, F02, F04, F05, and/or F06 are to be permanently taken out of service or at such time as the contents of F01, F02, F04, F05, and/or F06 pose a risk to the environment or waters of the state, the owner or operator of the facility shall follow all closure requirements contained in OAC 252:616-13.

In all other respects, F01, F02, F04, F05, and/or F06 shall be subject to standard conditions for surface impoundment contained in OAC 252:616, Subchapters 5, 7, and 13, including but not limited to requirements for construction, operation, maintenance, monitoring, and closure.

F. LAND APPLICATION

Not Applicable

G. OTHER DISPOSAL METHODS

Solids, sludges, filter backwash, or other pollutants removed in the course of treatment or control of wastewater shall be disposed of in a state approved industrial waste disposal site or to a company for recycling.

If any such industrial wastes are removed from the facility, the permittee shall keep accurate records which include the following information:

a. Name and address of company hauling waste.
b. The type and amount of waste hauled.
c. The final disposal site of waste hauled.

Upon request, the above records shall be made available to the staff of the Department for inspection, review, and copying.

APPENDIX

Description of Wastewater Treatment/Disposal Surface Impoundments (S.I.s)

Classification OAC 252:616-1-2		Liner Requirements OAC 252:616-7-2(b)	Holding Capacity and/or Dimensions OAC 252:616-7-1(6) [b]	Wastewater Destination
S.I. [a]	Wastewater			
F01	Wastewater from the truck washout area and associated storm water runoff Class I	Concrete	59,252 gallons 30' x 102' x 6'	F03 and F06
F02	Wastewater from the truck washout area and associated storm water runoff Class II	Concrete	25,761 gallons 24' x 36' x 6'	F03 and F06
F04	Wastewater from the truck washout area and associated storm water runoff Class I	Concrete	5,350 gallons 11' x 25' x 5.2'	F03 and F06
F05	Wastewater from the truck washout area and associated storm water runoff Class I	Concrete	12,934 gallons 29.2' x 32' x 2.25'	F03 and F06
F06	Wastewater from the truck washout area and associated storm water runoff Class I	Concrete	47,127 gallons 30' x 60' x 3.5'	Outfall 002

[a] Designation F refers to a flow-through surface impoundment.
[b] Based on information provided in application. Freeboard requirements in Part I.D.5 must be met.

Location of Surface Impoundments

S.I.	Legal Location	General Location and Description
F01	SE¼, NW¼, NE¼, Section 13, Township 18N, Range 14 EIM, Tulsa County, Oklahoma	Located southwest corner of the facility and south side of the concrete batch plant
F02	SE¼, NW¼, NE¼, Section 13, Township 18N, Range 14 EIM, Tulsa County, Oklahoma	Located east of the concrete batch plant and approximately 120 feet north of the maintenance building.
F04	SE¼, NW¼, NE¼, Section 13, Township 18N, Range 14 EIM, Tulsa County, Oklahoma	Located approximately 300 feet east of the maintenance building.
F05	SE¼, NW¼, NE¼, Section 13, Township 18N, Range 14 EIM, Tulsa County, Oklahoma	Located approximately 120 feet north of F02.
F06	SE¼, NW¼, NE¼, Section 13, Township 18N, Range 14 EIM, Tulsa County, Oklahoma	Located approximately 50 feet south of F01.

STATEMENT OF BASIS

STATEMENT OF BASIS FOR THE DRAFT AUTHORIZATION TO DISCHARGE TO WATERS OF THE UNITED STATES UNDER THE OKLAHOMA POLLUTANT DISCHARGE ELIMINATION SYSTEM (OPDES).

ODEQ Permit No.:	OK0045781
Facility ID No.:	I-72002620
Applicant:	Sherwood Construction Company, Inc. DBA Greenhill Concrete Products, Inc – Broken Arrow 1640 S. 101st E. Ave. Tulsa, OK 74128
Issuing Office:	Oklahoma Department of Environmental Quality Water Quality Division 707 N. Robinson P.O. Box 1677 Oklahoma City, OK 73101-1677
Prepared By:	Brandon Tyler Industrial Permits Section
Date Prepared:	January 16, 2014
Reviewed by:	Carol Paden, P.E., Manager Industrial Permits Section
Permit Action:	Renewal of a OPDES Discharge Permit

In accordance with 40 CFR 124.8 and 124.56, this fact sheet describes the applicant's facility operation and sets forth the principal facts and the significant factual, legal, methodological, and policy questions considered in preparing the draft permit modification. Also set forth are any calculations or other necessary explanations of the derivation of specific effluent limitations and conditions, including a citation to applicable effluent limitation guidelines or performance standard provisions as required under 40 CFR 122.44. In accordance with 40 CFR 122.44(l), proposed permit limits for reissued permits are based on the more stringent of applicable technology-based limitations, applicable water quality-based limitations, or limitations in the previous permit.

Citations to 40 CFR refer to promulgated regulations listed at Title 40, Code of Federal Regulations. Citations to OAC 252 and OAC 785 refer to promulgated regulations listed at Titles 252 and 785, Oklahoma Administrative Code.

I. PERMITTING BACKGROUND

A. CHRONOLOGY OF PERMITTING ACTIVITIES

The following is a chronology of permitting activities leading up to the renewal of this permit

- 01/16/2015 Complete letter sent to the facility
- 01/13/2015 Response to incomplete letter received
- 11/20/2014 Second incomplete letter sent
- 10/29/2014 Proof of publication received
- 10/27/2014 Incomplete letter sent
- 10/23/2014 Site visit
- 10/20/2014 Receipt of renewal application

B. PROPOSED PERMITTING ACTION

It is proposed that the OPDES Permit No. OK0045781 permit be reissued for a 5-year term in accordance with regulations promulgated at 40 CFR 122.46(a) and OAC 252:606-1-3(b).

II. APPLICANT ACTIVITY

A. DESCRIPTION AND LOCATION OF FACILITY

Greenhill Concrete Products, Inc. (formerly Arrow Concrete Company) is a ready-mix concrete processing facility (SIC 3273) located in the SE¼, NW¼, NE¼ of Section 13, Township 18N, Range 14EIM, Tulsa County Oklahoma.

B. WASTEWATER GENERATION AND TREATMENT

1. Process Wastewater

Based on the permit application, the facility discharges a maximum of 458,000 GPD of treated process wastewater via Outfall 002 to an unnamed tributary of Broken Arrow Creek.

Process wastewater treatment is comprised of settling of solids and pH adjustment in flow-through surface impoundments F01, F02, F04, F05, and F06.

2. Sanitary Wastewater

Based on the permit application, the facility discharges it's sanitary wastewater to the City of Broken Arrow Public Operated Treatment Works (POTW) for treatment.

III. DISCHARGE INFORMATION

A. DISCHARGE LOCATION

The discharge is to an unnamed tributary of Broken Arrow Creek, located in stream segment 120410 of the Middle Arkansas River Basin. Based on the application, the facility has one outfall and is summarized below:

Outfall	Location		Receiving Stream
	Legal Description	Latitude -Longitude	
002	SE¼, NW¼, NE¼ Sect 13, T18N, R14EIM Tulsa Co., Oklahoma	N 36° 02' 32.2" W 95° 46' 8.8" (GPS: NAD83)	Unnamed tributary of Broken Arrow Creek

B. DISCHARGE DESCRIPTION AND CHARACTERISTICS

Outfall 002: The discharge consists of process wastewater from a concrete batch plant.

a. DMR Data (November 2012 – November 2014)

Effluent Flow (MGD)

Outfall	Frequency of Discharge	Type of Measurement	Long Term Avg	High 30-day Avg	Daily Max

Chloride	1	289	---
Sulfate	1	224	---
Oil and Grease	1	30.5	---

[1] ODEQ application data, Form 2C.

IV. RATIONALE FOR DETERMINING DISCHARGE PERMIT LIMITS

The following sections set forth the principal facts and the significant factual, legal, methodological, and policy considered in preparing the draft permit. Also set forth are any calculations or other necessary explanations of the derivation of specific effluent limitations and conditions, including a citation to the applicable effluent limitation guideline or performance standard provisions as required under 40 CFR 122.44, and reasons why they are applicable or an explanation of how the alternative effluent limitations were developed.

In accordance with regulations promulgated at 40 CFR 122.44(l), the draft permit limits are based on the more stringent of technology-based limitations, applicable water quality-based limitations, or the previous permit limits.

A. Technology-Based Effluent Limitations And Conditions

1. General Comments

Regulations promulgated in 40 CFR 122.44(a) and OAC 252:606-5-2(a)(1) require technology-based effluent limitations to be placed in OPDES permits based on effluent limitations guidelines, where applicable, on Best Professional Judgment (BPJ) in the absence of guidelines, or on a combination of the two.

2. Applicable Effluent Limitations Guidelines

Technology-based effluent limitations and conditions have not been promulgated for this industry.

3. Best Professional Judgment of the Permit Drafter

Under authority of the Clean Water Act and State laws, the State has developed this permit on a case specific basis since ELG's have not been developed for this industry. The Daily Maximum and Monthly Average concentrations and applicable loading limitations for these parameters are either Best Practicable Control Technology Current Available (BPT), Best Available Technology Economically Achievable (BAT), or Best Conventional Pollutant Control Technology (BCT) based on BPJ, using previous State and NPDES permits and the facility's past performance as guidance.

BPT, BAT, and BCT effluent limitations for Outfall 002 are shown in the following table.

BPT, BAT, and BCT Effluent Limitations – Outfall 002

Parameters	Monthly Average, mg/l	Daily Maximum., mg/l
Oil and Grease	Report	15
Total Suspended Solids	Report	40

4. Variance Request

No requests for variances from effluent limitations promulgated under 40 CFR have been received.

B. WATER-QUALITY-BASED EFFLUENT LIMITATIONS AND/OR CONDITIONS

1. General Comments

Section 101 of the Clean Water Act (CWA) states that "... it is the national policy that the discharge of toxic pollutants in toxic amounts be prohibited...." A permit containing technology-based permit limitations alone may not adequately protect the quality of a specific receiving stream. Thus, additional water quality-based effluent limitations and/or conditions are considered in the draft permit using narrative and numerical standards contained in the Oklahoma Water Quality Standards (OWQS), as amended (OAC 785:45), and implementation criteria contained in OAC 785:46 and 252:690, promulgated by the Oklahoma Water Resources Board (OWRB) and the Department of Environmental Quality (DEQ), respectively. This is to ensure that no point-source discharge results in instream aquatic toxicity, a violation of applicable narrative or numerical State water quality standards, or aquatic bioaccumulation which threatens human health.

2. Receiving Stream Designated Uses And Antidegradation Provisions

a. Designated Beneficial Uses

Outfall 002 discharges to an unnamed tributary of Broken Arrow Creek (WBID 120410010200) in Segment 120410 of the Middle Arkansas River Basin. As designated in Appendix A of the OWQS, the designated uses of the of the receiving stream in this segment are:

Fish and Wildlife Propagation/Warm Water Aquatic Community (OAC 785:45-5-12);
Agriculture (OAC 785:45-5-13);
Primary Body Contact Recreation (OAC 785:45-5-16);
Aesthetics (OAC 785:45-5-19); and
Fish Consumption (OAC 785:45-5-20).

b. Antidegradation Provisions

The unnamed tributary to Broken Arrow Creek is not designated as an Outstanding Resource Water (ORW), High Quality Water (HQW), or Sensitive Water Supply (SWS) in Appendix A of the OWQS. Neither is it designated in Table 1 of Appendix B of the OWQS as an area of ecological and/or recreational significance or in Table 2 of Appendix B as an area containing federally-listed endangered species.

3. Water Quality Standards Implementation Process

To achieve the objectives stated in Section IV.B.1 above, each pollutant present at measurable levels in the facility's effluent, for which there is one or more applicable numerical water quality criteria, is screened against the applicable criteria to determine whether the pollutant has reasonable potential (RP) to

exceed any of the criteria. The screens are performed in accordance with the OWQS, OWQS implementation criteria in OAC 785:46 and OAC 252:690, and the Continuing Planning Process (CPP) document. In the RP screening process, the 95th percentile effluent concentration, or estimate thereof if the effluent data set is not sufficiently large to determine it directly, is used to compute an instream concentration according to the regulatory mixing zone equations defined in OAC 785:46. The computed instream concentrations are then compared with the applicable criteria to determine whether RP is exhibited. However, after reviewing the application for this facility it was determined that there were no pollutants present at or above the applicable water quality criteria; therefore RP calculations are not needed.

4. Water Quality-Based Requirements By Designated Use

a. Fish and Wildlife Propagation/Warm Water Aquatic Community

(1) Dissolved Oxygen

Pursuant to OAC 785:45-5-12(f)(1)(A), dissolved oxygen (DO) criteria are designed to protect the diverse aquatic communities of Oklahoma. Based on the nature of the wastewater, the wastewater should not contain oxygen demanding substances at levels which would have reasonable potential to violate numerical criteria. Therefore, no permit limit or monitoring requirement is imposed for this criterion.

(2) Temperature

According to OAC 785:45-5-12(f)(2)(A), at no time shall heat be added to any surface water in excess of the amount that will raise the temperature of the receiving water more than 2.8°C at the edge of the mixing zone. Since heat is not added to the wastewater being discharged and discharge should essentially be at ambient temperature, there is no reasonable potential to violate temperature criterion. Therefore, no permit limit or monitoring requirement is imposed for this criterion.

(3) pH

OAC 785:45-5-12(f)(3) states, "the pH values shall be between 6.5 and 9.0 in waters designated for fish and wildlife propagation; unless pH values outside that range are due to natural conditions." Therefore, the draft permit establishes a lower pH limit of 6.5 standard units and an upper limit of 9.0 standard units.

(4) Oil and Grease

According to OAC 785:45-5-12(f)(4), "all waters having the designated beneficial use of any subcategory of Fish and Wildlife Propagation shall be maintained free of oil and grease to prevent a visible sheen of oil or globules of oil or grease on or in the water. Oil and grease shall not be present in quantities that adhere to stream banks and coat bottoms of watercourses or which cause deleterious effects to the biota." A narrative (water quality-based) condition requiring conformance to OAC 785:45-5-12(f)(4) is included in the draft permit. In addition, a daily maximum concentration limit of 15 mg/l for oil and grease will be placed in the draft permit for Outfall 002 to implement the narrative criteria of "no visible sheen".

(5) Biological Criteria

Pursuant to OAC 785:45-5-12(f)(5), aquatic life in all water bodies with the beneficial use designation of Fish and Wildlife Propagation (excluding waters designated "Trout, put-and-take") shall not exhibit degraded conditions. Based on the nature of the wastewater, the treated wastewater is not expected to degrade the diversity, similarity, community structure, species tolerance, trophic structure, dominant species, indices of biotic integrity, indices of well being, or other measures. Therefore, no permit limit or monitoring requirement is imposed for this criterion.

(6) Toxic Substances

In accordance with OAC 785:45-5-12(f)(6)(A), surface waters of the state shall not exhibit acute toxicity and shall not exhibit chronic toxicity outside the chronic regulatory mixing zone. Based on the permit application, the discharge does not contain toxic substances at levels that could result in acute or chronic toxicity to fish or wildlife. Since the facility is a minor discharger, whole effluent toxicity (WET) testing is not required.

(7) Turbidity

OAC 785:45-5-12(f)(7) states that turbidity from other than natural sources shall be restricted so as not to exceed the numeric limit of 50 NTUs for surface waters that have a beneficial use of Warm Water Aquatic Community. The draft permit includes a technology-based limitation for TSS (a daily maximum limit of 40 mg/L) and a water quality-based narrative requirement for suspended solids. It is the BPJ of the permit writer that limitation on TSS should adequately control turbidity in the facility's discharge.

b. Protection of Agriculture Use

Per information provided in the permit application, the discharge does not contain chlorides, sulfates, or total dissolved solids at levels which would require water quality limitation and/or monitoring.

c. Primary Body Contact Recreation

Per information provided in the permit application, the discharge does not contain any sanitary waste. Therefore, coliform bacteria, escherichia coli (E. coli), and/or enterococci are not expected to be present at levels which would require water quality limitation and/or monitoring.

OAC 785:45-5-16(a) states "The discharge shall not contain chemical, physical, or biological substances in concentrations that are irritating to skin or sense organs or are toxic or cause illness upon ingestion by human beings." The draft permit will contain a narrative stating the prohibition of these conditions for Outfall 002.

d. Protection of Aesthetics Use

Aesthetics use is determined in accordance with OAC 785:45-5-19, which states, "the surface waters of the state must be free from floating materials and suspended substances that produce objectionable color and turbidity." A narrative requirement is established in the draft permit to prohibit the discharge of floating solids or visible foam in other than trace amounts. In addition, the technology-based numerical effluent limitations of a 40 mg/L daily maximum for TSS should also help to maintain the narrative water quality criteria for TSS.

e. Fish Consumption

In accordance with OAC 785:45-5-20(a), "surface waters of the state shall be maintained so that toxicity does not inhibit ingestion of fish and shellfish by humans." Per information provided in the permit application, the discharge does not contain pollutants at levels which would require fish consumption water quality limitation and/or monitoring.

C. Effluent Monitoring Requirements

Since it was determined that there were no pollutants present for which RP calculations would be needed, further effluent monitoring is not justified.

D. 303(d) Listing Evaluation

1. Water Quality Assessment and Causes of Impairment

The segment of Broken Arrow Creek which Outfall 002 discharges to is not listed as an impaired water body on Oklahoma's 2012 303(d) list.

2. 303(d) List-Related Permitting Actions

The permit may be reopened for modification or revocation and reissuance to require additional monitoring and/or effluent limitations where actual or potential exceedances of state water quality criteria are determined to be the result of the permittee's discharge(s) to the receiving water(s), a Total Maximum Daily Load is established for the receiving stream(s), new water quality criteria isestablished, or a different technology based guideline is promulgated. Modification or revocation and reissuance of the permit shall follow regulations listed at 40 CFR 124.5.

E. Antidegradation Requirements

As stated in Section V.B, no antidegradation restrictions apply to the segments of a unnamed tributary of Broken Arrow Creek. Implementation of the state's antidegradation policy, as described at OAC 785:46, Subchapter 13, requires no further protection beyond the Tier 1 level (maintenance and protection of designated uses) for these receiving waters.

F. Protection of Endangered and Threatened Species and Critical Habitat

The receiving stream to which the facility discharges is not considered by the U.S. Fish and Wildlife Service (USFWS) to be a sensitive area for endangered or threatened species. Therefore, consultation with the USFWS is not required.

V. NON-DISCHARGE REQUIREMENTS

A. Surface Impoundment

Descriptions of surface impoundments are shown in the table on the following page.

Description of Surface Impoundments (S.I.)

Classification OAC 252:616-1-2		Liner Requirements OAC 252:616-7-2(b)	Holding Capacity and/or Dimensions OAC 252:616-7-1(6)	Wastewater Destination
S.I. (*)	Wastewater			
F01	Wastewater from the truck washout area and associated stormwater runoff - Class I	Concrete	59,252 gallons 30' x 102' x 6'	F03 and F06
F02	Wastewater from the truck washout area and associated stormwater runoff - Class II	Concrete	25,761 gallons 24' x 36' x 6'	F03 and F06
F04	Wastewater from the truck washout area and associated stormwater runoff - Class I	Concrete	5,350 gallons 11' x 25' x 5.2'	F03 and F06
F05	Wastewater from the truck washout area and associated stormwater runoff - Class I	Concrete	12,934 gallons 29.2' x 32' x 2.25'	F03 and F06
F06	Wastewater from the truck washout area and associated stormwater runoff - Class I	Concrete	47,127 gallons 30' x 60' x 3.5'	Outfall 002

(*) Designation F refers to flow-through surface impoundment.

Location of Surface Impoundments

S.I.	Legal Location	General Location and Description
F01	SE¼, NW¼, NE¼, Section 13, Township 18N, Range 14 EIM, Tulsa County, Oklahoma	Located southwest corner of the facility and south side of the concrete batch plant
F02	SE¼, NW¼, NE¼, Section 13, Township 18N, Range 14 EIM, Tulsa County, Oklahoma	Located east of the concrete batch plant and approximately 120 feet north of the maintenance building.
F04	SE¼, NW¼, NE¼, Section 13, Township 18N, Range 14 EIM, Tulsa County, Oklahoma	Located approximately 300 feet east of the maintenance building.
F05	SE¼, NW¼, NE¼, Section 13, Township 18N, Range 14 EIM, Tulsa County, Oklahoma	Located approximately 120 feet north of F02.
F06	SE¼, NW¼, NE¼, Section 13, Township 18N, Range 14 EIM, Tulsa County, Oklahoma	Located approximately 50 feet south of F01.

1. **Wastewater Classification [OAC 252:616-1-2]**

   The wastewater generated from truck washout and associated stormwater runoff at this facility, was tested in a previous permit for classification. Due to high pH, surface impoundments F01, F02, F05, and F06 were classified as Class I wastewater and F02 was determined to be Class II wastewater.

2. **Freeboard Requirements (OAC 252:616-7-1(7))**

   Pursuant to OAC 252:616-7-1(7), a minimum freeboard of one (1) foot shall be maintained for surface impoundments F01, F02, F04, F05, and F06.

3. **Depth to Groundwater (OAC 252:616-7-1(4)(B))**

   Review of the December 7, 2009 engineering report, shows that the minimum groundwater separation from the bottom of surface impoundments F01, F02, F04, F05, and F06 is approximately 2.5 feet. Since surface impoundments F01, F02, F04, F05, and F06 contain concrete liners, it is the Best Professional Judgment of the permit writer that the depth to groundwater requirement of OAC 252:616-7-1(4) is satisfied.

4. **Liner Requirements (OAC 252:616-7-2(b))**

   Surface impoundments F01, F02, F04, F05 and F06 have a concrete liner. Since the wastewater being retained is Class I and Class II, it is BPJ that concrete liners are an appropriate and compatible liner system in accordance with OAC 252:616-7-2(b).

5. **Additional Requirements (OAC 252:616-11 or OAC 252:616-13)**

   The permit may be reopened to implement and/or require impoundment modifications, additions, extensions, and/or operational changes; monitoring and reporting; reclassification of wastes; sludge management plans; best management practices; closure plans; and/or other appropriate actions.

   At such time as surface impoundments F01, F02, F04, F05 and/or F06 to be permanently taken out of service or at such time as the contents of F01, F02, F04, F05 and/or F06 pose a risk to the environment or waters of the State, the owner or operator of the facility shall follow all closure requirements contained in OAC 252:616-11 or OAC 252:616-13.

B. LAND APPLICATION

Not applicable.

VI. DRAFT PERMIT LIMITS AND OTHER REQUIREMENTS

A. EFFLUENT LIMITATIONS

Permit requirements are based on OPDES regulations (40 CFR Parts 122, 124, and 136) and OAC 252:606.

Outfall 002

Parameters	Technology-based		Water Quality-based		Previous Permit		Draft Permit	
	Maximum Daily, mg/l	Monthly Average, mg/l	Maximum Daily, mg/l	Monthly Average, mg/l	Maximum Daily, mg/l	Monthly Average, mg/l	Maximum Daily, mg/l	Monthly Average, mg/l
Flow (MGD)	---	---	---	Report (MGD)	Report (MGD)	Report (MGD)	Report (MGD)	Report (MGD)
Oil and Grease	15	Report	---	---	15	Report	15	Report
Total Suspended Solids (TSS)	---	---	40	Report	40	Report	40	Report
pH	Between 6.0 – 9.0 s.u.		Between 6.5 - 9.0 s.u.		Between 6.5 - 9.0 s.u.		Between 6.5 - 9.0 s.u.	

Parameters	Draft Permit	
	Frequency	Sample Type
Flow	1/Month	Estimated
Oil and Grease	1/Month	Grab
TSS	1/Month	Grab
pH	1/Month	Grab

B. EVALUATION FOR PERFORMANCE-BASED MONITORING FREQUENCY REDUCTIONS

In accordance with OAC 252:690-91, since the permit does not contain any monthly average limits, performance-based monitoring frequency reductions are not applicable.

VII. SUMMARY OF CHANGES FROM PREVIOUS PERMIT

- No changes made from the previous permit.

VIII. ADMINISTRATIVE RECORD

The following sources were used to prepare this permit and constitute a part of the administrative record for this permit:

A. APPLICATIONS

OPDES Industrial Permit Application No. OK0045781 (Forms 1, 2C, and 2SI), received October 20, 2014.

B. CLEAN WATER ACT CITATIONS

Section 301, 303(d), and 402(a)

C. 40 CFR CITATIONS

40 CFR, in particular, Parts 122, 124, 136

D. STATE LAW, STANDARDS, AND RULES AND REGULATIONS

- Oklahoma Pollutant Discharge Elimination System (OPDES) Act, 27A O.S., §2-6-201 et seq.
- OAC 252:606, 616, and 690
- Oklahoma's Water Quality Standards, as amended
- Oklahoma Continuing Planning Process Document (CPP)

E. MISCELLANEOUS

- 2012 303(d) list
- The permit file

IX. CERTIFICATION AND FINAL DETERMINATION

A draft permit and draft public notice will be sent to the District Engineer, Corps of Engineers, Oklahoma Conservation Commission, and to the Regional Director of the U.S. Fish and Wildlife Service upon publication of that notice. If comments are received from these agencies or other State or Federal agencies with jurisdiction over fish, wildlife, or public health, the permit may be denied or additional conditions may be included in accordance with regulations promulgated under 40 CFR 124.59.

The public notice describes the procedures for the formulation of final determinations.

SCOTT A. THOMPSON
Executive Director

OKLAHOMA DEPARTMENT OF ENVIRONMENTAL QUALITY

MARY FALLIN
Governor

RE: OPDES Permit Modification Application, Permit No. OK0045781
Sherwood Construction Company, Inc. dba Greenhill Concrete Products, Inc.,
Tulsa County, Oklahoma
Facility ID No. I-72002620

Dear Mr. Ritchie:

The Oklahoma Department of Environmental Quality (DEQ) has been granted authority to issue permits for the disposal of pollutants in the State of Oklahoma subsequent to Public Notice. In accordance with 27A O.S. § 2-14-302, we are enclosing a draft Notice of Publication that the applicant must review for accuracy and publish in at least one daily or weekly newspaper local to the area affected by the proposed wastewater treatment/disposal facility.

We are also enclosing two copies of the draft permit and statement of basis. One set is for your inspection, and the other set must be placed in the Broken Arrow Library, 300 West Broadway Ave., Broken Arrow, Oklahoma 74012-4407, for viewing by the general public. A copy of the application form you submitted and which was received by the DEQ on October 20, 2014, must also be placed at the above location for viewing by the general public. If you need to obtain a copy of your application, please contact the Central Records Section of the DEQ at (405) 702-1188.

The public comment period will end 30 days after the notice of draft permit is published in a newspaper local to the area where the facility is located or 30 days after DEQ publishes its statewide notice of draft permit, whichever occurs later. All comments and/or requests for a public meeting must be received by this date, unless extended for good cause by the DEQ. If a request for a public meeting has been granted, the applicant will be notified and provided a copy of the request.

PLEASE HAVE THE NEWSPAPER FURNISH THIS OFFICE WITH A CERTIFIED NOTICE OF PUBLICATION. THIS NOTICE MUST BE PUBLISHED WITHIN TEN DAYS OF RECEIPT OF THIS LETTER.

If you have any questions concerning this matter, please contact Brandon Tyler at (405) 702-8215.

Sincerely,

Carol Paden

Carol Paden, P.E., Manager
Industrial Permits Section
Water Quality Division

NOTE TO PUBLISHERS (not part of Notice to be published): Oklahoma Department of Environmental Quality has no responsibility and assumes no responsibility for the cost of publishing this NOTICE BY PUBLICATION.

NOTICE OF ISSUANCE OF DRAFT TIER II PERMIT

POLLUTANT DISCHARGE(S) APPLICATION NO. OK0045781

Notice is hereby given that the Oklahoma Department of Environmental Quality (DEQ), at the address listed below, has processed and issued a draft permit to **Sherwood Construction Company, Inc. DBA Greenhill Concrete Products, Inc. – Broken Arrow, 1601 E. Houston Street, Tulsa, OK 74012** based on a Tier II application filed on the October 20, 2014, for a renewal permit with the DEQ. A final permit, if issued, would allow Greenhill Concrete Product, Inc. - Broken Arrow to discharge industrial wastewater from their facility, Greenhill Concrete Products, Inc. – Broken Arrow, 1601 E. Houston Street, Tulsa, OK 74012, located in SE¼, NW¼, NE¼, Section 13, Township 18N, Range 14EIM, Tulsa County. Greenhill Concrete Product, Inc. - Broken Arrow is a ready-mix concrete processing facility. The proposed discharge(s) consists of effluent from truck washout area and associated stormwater runoff. The discharge(s) will be to an unnamed tributary of Broken Arrow Creek from Outfall 002 located in SE¼, NW¼, NE¼ Section 13, Township 18N, Range 14EIM Tulsa County, Oklahoma at Latitude 36° 02' 32.2" N, Longitude 95° 46' 8.8" W. The facility also proposes to operate five flow-through impoundments.

A copy of the draft permit, statement of basis, application, and other relevant documents may be reviewed at the Offices of the DEQ, Water Quality Division, 707 N. Robinson, Oklahoma City, OK 73102, between the hours of 8:00 a.m. to 4:30 p.m. Monday – Friday. A copy of the draft permit, statement of basis, and application may be reviewed at the Broken Arrow Library, 300 West Broadway Ave., Broken Arrow, Oklahoma 74012-4407, between the hours of 10:00 a.m. and 8:00 p.m., Monday through Thursday, between the hours of 10:00 a.m. and 5:00 p.m., Friday and Saturday, closed Sunday. A copy of the draft permit may be reviewed on the DEQ website at http://www.deq.state.ok.us/mainlinks/publicpermits.html.

Pursuant to 27A O.S. Sec. 2-14-302, persons wishing to make comments concerning the draft permit may do so by sending the comments in writing to the Contact Person for the DEQ, at the address listed below, within 30 days after the date of publication or mailing. Comments should include: (1) name and address of the interested person, (2) the application name to which the request relates, (3) the nature and basis of the interest of the person affected, and (4) a statement of the objection or comment, the basis of the objection or comment, and any requested action by the DEQ.

The contact person for the DEQ, to schedule a date and time to review the application at the offices of the DEQ is:

Tammi L. Johnson
Oklahoma Department of Environmental Quality
P.O. Box 1677
707 N. Robinson, 8th Floor
Oklahoma City, OK 73101-1677
(405) 702-8170 or tammi.l.johnson@deq.ok.gov

The contact person for Greenhill Concrete Products, Inc. - Broken Arrow is:

Matt Ritchie, Vice President, Materials
Sherwood Construction Company, Inc.
DBA Greenhill Concrete Products, Inc. – Broken Arrow Batch Plant
P.O. Box 10
Catoosa, OK 74128
918-266-6861

Pursuant to 27A O.S. Sec. 2-14-302, persons wishing to request a public meeting concerning the draft permit may do so by filing the request in writing to the Contact Person for the DEQ, at the address listed below, within thirty (30) days after the date of publication or mailing. Requests for the public meeting should include: (1) name and address of the interested person, (2) the application name to which the request relates, (3) the nature and basis of the interest of the person affected, and (4) a statement of the objection or comment, the basis of the objection or comment, and any requested action by the DEQ. A copy of the request must also be sent to the applicant, through the contact person listed below. A formal public meeting may be scheduled if there is a significant degree of public interest. Notice of the date, time and place of the public meeting will be given to all parties of record. A request for a public meeting may be combined with a submission of written comments.

If a public meeting is held, oral or written comments will be accepted at the meeting. The DEQ shall, within ninety (90) days of the date the public comment period closes (or longer if extended by the Executive Director of the DEQ), issue responses to all public comments received.

AUTHORIZATION TO DISCHARGE UNDER THE OKLAHOMA POLLUTANT DISCHARGE ELIMINATION SYSTEM

PERMIT NUMBER: OK0045781
ID NUMBER: I-72002620

In compliance with the Oklahoma Pollutant Discharge Elimination System (OPDES) Act, 27A O.S. §2-6-201 *et seq.*, Oklahoma Uniform Environmental Permitting Act, 27A O.S. §2-14-101 *et seq.*, and the rules of the Oklahoma Department of Environmental Quality promulgated thereunder,

Sherwood Construction Company, Inc.
DBA Greenhill Concrete Products, Inc. – Broken Arrow
P.O. box 10
Tulsa, OK 74015

is authorized to discharge from their facility, located in the:

SE¼, NW¼, NE¼, Section 13, Township 18N, Range 14EIM
Tulsa County, Oklahoma
or at 1601 E. Houston Ave., Broken Arrow, OK 74012

to receiving waters identified as: unnamed tributary of Broken Arrow Creek, stream segment 120410, Water Body ID OK120410010200, in Tulsa County, Oklahoma

from: Outfall 002:

Latitude 36° 02' 32.2" N, Longitude 95° 46' 8.8" W (GPS: NAD83)
SE¼, NW¼, NE¼, Section 13, Township 18N, Range 14EIM,
Tulsa County, Oklahoma

in accordance with effluent limitations, monitoring requirements, and other conditions set forth in Parts I, II, and III, hereof.

The above referenced facility is also authorized to retain wastewater in two flow-through surface impoundments (F01, F02, F04, F05 and F06), as described in the Appendix. Surface impoundments shall be maintained in accordance with Parts I, II, and IV, hereof.

Issuance of this permit in no way or in any respect affects the permittee's civil or criminal responsibility regarding disposal and/or discharges of wastewater, except with respect to the permittee's legal responsibility under the OPDES Act and Department Rules.

This permit replaces and/or supersedes OPDES Permit No. OK0045781 that became effective on July 1, 2014 and expires June 30, 2015.

This permit shall become effective on .

This permit and the authorization to operate the disposal system shall expire at midnight, on .

This is to certify that the wastewater discharges set forth in this permit comply with the requirements of Oklahoma's Water Quality Standards, as amended, provided the permittee does not exceed the effluent limitations set forth in this permit.

Issued this _____ day of _____, 2015.

For Oklahoma Department of Environmental Quality,

Carol Paden, P.E., Manager
Industrial Permits Section
Water Quality Division

Shellie Chard-McClary, Director
Water Quality Division

PART I
EFFLUENT LIMITATIONS AND MONITORING REQUIREMENTS

SECTION A. EFFLUENT LIMITATIONS AND MONITORING REQUIREMENTS

Outfall 002

Limitations, Reporting Requirements and Monitoring

During the period beginning the effective date and lasting through the expiration date, the permittee is authorized to discharge from Outfall 002. The discharge will consist of process wastewater and associated stormwater runoff from the following three common activities: (1) mix plant area washdown, (2) truck mixer drum washout, and (3) external truck washing.

Such discharge shall be limited and monitored by the permittee as specified below:

Effluent Limitations – Outfall 002

PARAMETERS	DISCHARGE LIMITATIONS			
	MASS LOADING LIMITS (lbs/day unless otherwise specified)		CONCENTRATION LIMITS (mg/L unless otherwise specified)	
	MONTHLY AVERAGE	DAILY MAXIMUM	MONTHLY AVERAGE	DAILY MAXIMUM
Flow STORET: 50050	Report (MGD)	Report (MGD)	--	--
Total Suspended Solid (TSS) STORET: 00530	--	--	Report	40
Oil and Grease STORET: 00552	--	--	Report	15
pH STORET: 00400	N/A	N/A	between 6.5 and 9.0 s.u.	

Monitoring Requirements – Outfall 002

PARAMETERS	MEASUREMENT FREQUENCY *	SAMPLE TYPE
Flow	1/Month	Estimate
Total Suspended Solids	1/Month	Grab
Oil and Grease	1/Month	Grab
pH	1/Month	Grab

* When discharging.

NOTE: See Parts II and III for Additional Requirements.

There shall be no discharge of a visible sheen of oil or globules of oil or grease on or in the water. Oil and grease shall not be present in quantities that adhere to stream banks and coat bottoms of watercourses. Surface waters of the State shall be maintained free from oil and grease and taste and odors.

There shall be no discharge of floating solids or visible foam in other than trace amounts.

The discharge shall not contain chemical, physical, or biological substances in concentrations that are irritating to skin or sense organs or are toxic or cause illness upon ingestion by human beings.

Samples for Outfall 002 taken in compliance with the monitoring requirements specified above shall be taken at the following location:

Outfall 002: At the pipe outlet of surface impoundment F06 and prior to discharging to the unnamed tributary of Broken Arrow Creek located in the SE¼, NW¼, NE¼, Section 13, Township 18N, Range 14EIM, Tulsa County, Oklahoma, or at Latitude 36° 02' 32.2"N, Longitude 95° 46' 8.8"W (GPS: NAD83).

SECTION B. SCHEDULE OF COMPLIANCE

The permittee shall achieve compliance with the effluent limitations specified for discharges in accordance with the following schedule: None.

SECTION C. REPORTING OF MONITORING RESULTS

Monitoring results shall be reported in accordance with the provisions of Part III. E.4 of the permit. Monitoring results obtained during the previous month shall be summarized and reported on the Discharge Monitoring Report (DMR) forms due to the Oklahoma Department of Environmental Quality, Water Quality Division, Wastewater Compliance Tracking Section postmarked or received no later than the 15th day of the following month. If no discharge occurs during the reporting period, DMR forms stating "No Discharge" shall be submitted according to the above schedule.

The first report is due on __.

PART II
OTHER PERMIT REQUIREMENTS

A. REGULATORY NOTICE

The permittee is hereby given notice that this permit is in all respects subject to compliance with and actions under any and all applicable and relevant terms, conditions, provisions and requirements, and any and all amendments of the laws of the state of Oklahoma, the rules of the Oklahoma Department of Environmental Quality, and Oklahoma's Water Quality Standards. The absence of any express reference within this permit of any particular statutory requirement, rule(s), regulation(s), or standard(s) shall in no respect be deemed or construed to exempt or preclude the application of such requirement, rule(s), regulation(s), or standard(s) to this permit or the permittee. By the Director's approval, grant and issuance of this permit, permittee acknowledges receipt of true, correct, and current copies of Oklahoma's Water Quality Standards, and the rules of the Oklahoma Department of Environmental Quality, provided, however, that permittee further acknowledges that any and all amendments thereto shall become part of this permit.

B. REOPENER CLAUSE

This permit may be reopened for modification or revocation and reissuance to require additional monitoring and/or effluent limitations where actual or potential exceedances of state water quality criteria are determined to be the result of the permittee's discharge to the receiving water(s), or a Total Maximum Daily Load is established for the receiving stream(s), or when required as technology. Modification or revocation and reissuance of the permit shall follow regulations listed at 40 CFR 124.5.

C. LABORATORY CERTIFICATION

All laboratory analyses for the parameters specified in this permit must be performed by a laboratory certified by the Oklahoma Department of Environmental Quality for those parameters.

D. ANALYTICAL REQUIREMENTS

Unless otherwise specified in this permit, effluent and/or upstream monitoring shall be conducted according to analytical, apparatus and materials, sample collection, preservation, handling, etc., procedures listed at 40 CFR Part 136 in effect on the effective date of this permit. Appendices A, B, and C to 40 CFR Part 136 are specifically referenced as part of this requirement. Amendments to 40 CFR Part 136 promulgated and incorporated by reference into OAC 252:606 after the effective date of this permit shall supersede these requirements as applicable.

E. SURFACE IMPOUNDMENT REQUIREMENTS

A minimum freeboard of one (1) foot for surface impoundments F01, F02, F04, F05, and F06 shall be maintained.

The permit may be reopened to implement and/or require impoundment modifications, additions, extensions, and/or operational changes; additional monitoring and reporting (including but not necessarily limited to soil sampling); reclassification of wastes; sludge management plans; best management practices; closure plans; remediation and/or remediation plans; monitoring wells and/or subsurface monitoring plans; and/or other appropriate actions.

At such time as surface impoundments F01, F02, F04, F05, and/or F06 are to be permanently taken out of service or at such time as the contents of F01, F02, F04, F05, and/or F06 pose a risk to the environment or waters of the state, the owner or operator of the facility shall follow all closure requirements contained in OAC 252:616-13.

In all other respects, F01, F02, F04, F05, and/or F06 shall be subject to standard conditions for surface impoundment contained in OAC 252:616, Subchapters 5, 7, and 13, including but not limited to requirements for construction, operation, maintenance, monitoring, and closure.

F. LAND APPLICATION

Not Applicable

G. OTHER DISPOSAL METHODS

Solids, sludges, filter backwash, or other pollutants removed in the course of treatment or control of wastewater shall be disposed in a state approved industrial waste disposal site or to a company for recycling.

If any such industrial wastes are removed from the facility, the permittee shall keep accurate records which include the following information:

a. Name and address of company hauling waste.
b. The type and amount of waste hauled.
c. The final disposal site of waste hauled.

Upon request, the above records shall be made available to the staff of the Department for inspection, review, and copying.

APPENDIX

Description of Wastewater Treatment/Disposal Surface Impoundments (S.I.s)

Classification OAC 252:616-1-2		Liner Requirements OAC 252:616-7-2(b)	Holding Capacity and/or Dimensions OAC 252:616-7-1(6) [b]	Wastewater Destination
S.I. [a]	Wastewater			
F01	Wastewater from the truck washout area and associated storm water runoff Class I	Concrete	59,252 gallons 30' x 102' x 6'	F06
F02	Wastewater from the truck washout area and associated storm water runoff Class II	Concrete	25,761 gallons 24' x 36' x 6'	F06
F04	Wastewater from the truck washout area and associated storm water runoff Class I	Concrete	5,350 gallons 11' x 25' x 5.2'	F06
F05	Wastewater from the truck washout area and associated storm water runoff Class I	Concrete	12,934 gallons 29.2' x 32' x 2.25'	F06
F06	Wastewater from the truck washout area and associated storm water runoff Class I	Concrete	47,127 gallons 30' x 60' x 3.5'	Outfall 002

[a] Designation F refers to a flow-through surface impoundment.
[b] Based on information provided in application. Freeboard requirements in Part I.D.5 must be met.

Location of Surface Impoundments

S.I.	Legal Location	General Location and Description
F01	SE¼, NW¼, NE¼, Section 13, Township 18N, Range 14 EIM, Tulsa County, Oklahoma	Located southwest corner of the facility and south side of the concrete batch plant
F02	SE¼, NW¼, NE¼, Section 13, Township 18N, Range 14 EIM, Tulsa County, Oklahoma	Located east of the concrete batch plant and approximately 120 feet north of the maintenance building.
F04	SE¼, NW¼, NE¼, Section 13, Township 18N, Range 14 EIM, Tulsa County, Oklahoma	Located approximately 300 feet east of the maintenance building.
F05	SE¼, NW¼, NE¼, Section 13, Township 18N, Range 14 EIM, Tulsa County, Oklahoma	Located approximately 120 feet north of F02.
F06	SE¼, NW¼, NE¼, Section 13, Township 18N, Range 14 EIM, Tulsa County, Oklahoma	Located approximately 50 feet south of F01.

STATEMENT OF BASIS

STATEMENT OF BASIS FOR THE DRAFT AUTHORIZATION TO DISCHARGE TO WATERS OF THE UNITED STATES UNDER THE OKLAHOMA POLLUTANT DISCHARGE ELIMINATION SYSTEM (OPDES).

ODEQ Permit No.:	OK0045781
Facility ID No.:	I-72002620
Applicant:	Sherwood Construction Company, Inc. DBA Greenhill Concrete Products, Inc – Broken Arrow 1640 S. 101st E. Ave. Tulsa, OK 74128
Issuing Office:	Oklahoma Department of Environmental Quality Water Quality Division 707 N. Robinson P.O. Box 1677 Oklahoma City, OK 73101-1677
Prepared By:	Brandon Tyler Industrial Permits Section
Date Prepared:	January 16, 2014
Reviewed by:	Carol Paden, P.E., Manager Industrial Permits Section
Permit Action:	Renewal of a OPDES Discharge Permit

In accordance with 40 CFR 124.8 and 124.56, this fact sheet describes the applicant's facility operation and sets forth the principal facts and the significant factual, legal, methodological, and policy questions considered in preparing the draft permit modification. Also set forth are any calculations or other necessary explanations of the derivation of specific effluent limitations and conditions, including a citation to applicable effluent limitation guidelines or performance standard provisions as required under 40 CFR 122.44. In accordance with 40 CFR 122.44(l), proposed permit limits for reissued permits are based on the more stringent of applicable technology-based limitations, applicable water quality-based limitations, or limitations in the previous permit.

Citations to 40 CFR refer to promulgated regulations listed at Title 40, Code of Federal Regulations. Citations to OAC 252 and OAC 785 refer to promulgated regulations listed at Titles 252 and 785, Oklahoma Administrative Code.

I. PERMITTING BACKGROUND

A. CHRONOLOGY OF PERMITTING ACTIVITIES

The following is a chronology of permitting activities leading up to the renewal of this permit

- 02/14/2015 Courtesy draft packet sent to the facility
- 01/16/2015 Complete letter sent to the facility
- 01/13/2015 Response to incomplete letter received
- 11/20/2014 Second incomplete letter sent
- 10/29/2014 Proof of publication received
- 10/27/2014 Incomplete letter sent
- 10/23/2014 Site visit
- 10/20/2014 Receipt of renewal application

B. PROPOSED PERMITTING ACTION

It is proposed that the OPDES Permit No. OK0045781 permit be reissued for a 5-year term in accordance with regulations promulgated at 40 CFR 122.46(a) and OAC 252:606-1-3(b).

II. APPLICANT ACTIVITY

A. DESCRIPTION AND LOCATION OF FACILITY

Greenhill Concrete Products, Inc. (formerly Arrow Concrete Company) is a ready-mix concrete processing facility (SIC 3273) located in the SE¼, NW¼, NE¼ of Section 13, Township 18N, Range 14EIM, Tulsa County Oklahoma.

B. WASTEWATER GENERATION AND TREATMENT

1. Process Wastewater

Based on the permit application, the facility discharges a maximum of 458,000 GPD of treated process wastewater via Outfall 002 to an unnamed tributary of Broken Arrow Creek.

Process wastewater treatment is comprised of settling of solids and pH adjustment in flow-through surface impoundments F01, F02, F04, F05, and F06.

2. Sanitary Wastewater

The facilities sanitary wastewater needs are handled by Port-a-Johns that are routinely serviced.

III. DISCHARGE INFORMATION

A. DISCHARGE LOCATION

The discharge is to an unnamed tributary of Broken Arrow Creek, located in stream segment 120410 of the Middle Arkansas River Basin. Based on the application, the facility has one outfall and is summarized below:

Outfall	Location		Receiving Stream
	Legal Description	Latitude -Longitude	
002	SE¼, NW¼, NE¼ Sect 13, T18N, R14EIM Tulsa Co., Oklahoma	N 36° 02' 32.2" W 95° 46' 8.8" (GPS: NAD83)	Unnamed tributary of Broken Arrow Creek

B. DISCHARGE DESCRIPTION AND CHARACTERISTICS

Outfall 002: The discharge consists of process wastewater from a concrete batch plant.

a. DMR Data (November 2012 – November 2014)

Effluent Flow (MGD)

Outfall	Frequency of Discharge	Type of Measurement	Long Term Avg	High 30-day Avg	Daily Max

IV. RATIONALE FOR DETERMINING DISCHARGE PERMIT LIMITS

The following sections set forth the principal facts and the significant factual, legal, methodological, and policy considered in preparing the draft permit. Also set forth are any calculations or other necessary explanations of the derivation of specific effluent limitations and conditions, including a citation to the applicable effluent limitation guideline or performance standard provisions as required under 40 CFR 122.44, and reasons why they are applicable or an explanation of how the alternative effluent limitations were developed.

In accordance with regulations promulgated at 40 CFR 122.44(l), the draft permit limits are based on the more stringent of technology-based limitations, applicable water quality-based limitations, or the previous permit limits.

A. TECHNOLOGY-BASED EFFLUENT LIMITATIONS AND CONDITIONS

1. General Comments

Regulations promulgated in 40 CFR 122.44(a) and OAC 252:606-5-2(a)(1) require technology-based effluent limitations to be placed in OPDES permits based on effluent limitations guidelines, where applicable, on Best Professional Judgment (BPJ) in the absence of guidelines, or on a combination of the two.

2. Applicable Effluent Limitations Guidelines

Technology-based effluent limitations and conditions have not been promulgated for this industry.

3. Best Professional Judgment of the Permit Drafter

Under authority of the Clean Water Act and State laws, the State has developed this permit on a case specific basis since ELG's have not been developed for this industry. The Daily Maximum and Monthly Average concentrations and applicable loading limitations for these parameters are either Best Practicable Control Technology Current Available (BPT), Best Available Technology Economically Achievable (BAT), or Best Conventional Pollutant Control Technology (BCT) based on BPJ, using previous State and NPDES permits and the facility's past performance as guidance.

BPT, BAT, and BCT effluent limitations for Outfall 002 are shown in the following table.

BPT, BAT, and BCT Effluent Limitations – Outfall 002

Parameters	Monthly Average, mg/l	Daily Maximum., mg/l
Oil and Grease	Report	15
Total Suspended Solids	Report	40

4. Variance Request

No requests for variances from effluent limitations promulgated under 40 CFR have been received.

B. WATER-QUALITY-BASED EFFLUENT LIMITATIONS AND/OR CONDITIONS

1. General Comments

Section 101 of the Clean Water Act (CWA) states that "... it is the national policy that the discharge of toxic pollutants in toxic amounts be prohibited...." A permit containing technology-based permit limitations alone may not adequately protect the quality of a specific receiving stream. Thus, additional water quality-based effluent limitations and/or conditions are considered in the draft permit using narrative and numerical standards contained in the Oklahoma Water Quality Standards (OWQS), as amended (OAC 785:45), and implementation criteria contained in OAC 785:46 and 252:690, promulgated by the Oklahoma Water Resources Board (OWRB) and the Department of Environmental Quality (DEQ), respectively. This is to ensure that no point-source discharge results in instream aquatic toxicity, a violation of applicable narrative or numerical State water quality standards, or aquatic bioaccumulation which threatens human health.

2. Receiving Stream Designated Uses And Antidegradation Provisions

a. Designated Beneficial Uses

Outfall 002 discharges to an unnamed tributary of Broken Arrow Creek (WBID 120410010200) in Segment 120410 of the Middle Arkansas River Basin. As designated in Appendix A of the OWQS, the designated uses of the of the receiving stream in this segment are:

Fish and Wildlife Propagation/Warm Water Aquatic Community (OAC 785:45-5-12);
Agriculture (OAC 785:45-5-13);
Primary Body Contact Recreation (OAC 785:45-5-16);
Aesthetics (OAC 785:45-5-19); and
Fish Consumption (OAC 785:45-5-20).

b. Antidegradation Provisions

The unnamed tributary to Broken Arrow Creek is not designated as an Outstanding Resource Water (ORW), High Quality Water (HQW), or Sensitive Water Supply (SWS) in Appendix A of the OWQS. Neither is it designated in Table 1 of Appendix B of the OWQS as an area of ecological and/or recreational significance or in Table 2 of Appendix B as an area containing federally-listed endangered species.

3. Water Quality Standards Implementation Process

To achieve the objectives stated in Section IV.B.1 above, each pollutant present at measurable levels in the facility's effluent, for which there is one or more applicable numerical water quality criteria, is screened against the applicable criteria to determine whether the pollutant has reasonable potential (RP) to

exceed any of the criteria. The screens are performed in accordance with the OWQS, OWQS implementation criteria in OAC 785:46 and OAC 252:690, and the Continuing Planning Process (CPP) document. In the RP screening process, the 95th percentile effluent concentration, or estimate thereof if the effluent data set is not sufficiently large to determine it directly, is used to compute an instream concentration according to the regulatory mixing zone equations defined in OAC 785:46. The computed instream concentrations are then compared with the applicable criteria to determine whether RP is exhibited. However, after reviewing the application for this facility it was determined that there were no pollutants present at or above the applicable water quality criteria; therefore RP calculations are not needed.

4. Water Quality-Based Requirements By Designated Use

a. Fish and Wildlife Propagation/Warm Water Aquatic Community

(1) Dissolved Oxygen

Pursuant to OAC 785:45-5-12(f)(1)(A), dissolved oxygen (DO) criteria are designed to protect the diverse aquatic communities of Oklahoma. Based on the nature of the wastewater, the wastewater should not contain oxygen demanding substances at levels which would have reasonable potential to violate numerical criteria. Therefore, no permit limit or monitoring requirement is imposed for this criterion.

(2) Temperature

According to OAC 785:45-5-12(f)(2)(A), at no time shall heat be added to any surface water in excess of the amount that will raise the temperature of the receiving water more than 2.8°C at the edge of the mixing zone. Since heat is not added to the wastewater being discharged and discharge should essentially be at ambient temperature, there is no reasonable potential to violate temperature criterion. Therefore, no permit limit or monitoring requirement is imposed for this criterion.

(3) pH

OAC 785:45-5-12(f)(3) states, "the pH values shall be between 6.5 and 9.0 in waters designated for fish and wildlife propagation; unless pH values outside that range are due to natural conditions." Therefore, the draft permit establishes a lower pH limit of 6.5 standard units and an upper limit of 9.0 standard units.

(4) Oil and Grease

According to OAC 785:45-5-12(f)(4), "all waters having the designated beneficial use of any subcategory of Fish and Wildlife Propagation shall be maintained free of oil and grease to prevent a visible sheen of oil or globules of oil or grease on or in the water. Oil and grease shall not be present in quantities that adhere to stream banks and coat bottoms of watercourses or which cause deleterious effects to the biota." A narrative (water quality-based) condition requiring conformance to OAC 785:45-5-12(f)(4) is included in the draft permit. In addition, a daily maximum concentration limit of 15 mg/l for oil and grease will be placed in the draft permit for Outfall 002 to implement the narrative criteria of "no visible sheen".

(5) Biological Criteria

Pursuant to OAC 785:45-5-12(f)(5), aquatic life in all water bodies with the beneficial use designation of Fish and Wildlife Propagation (excluding waters designated "Trout, put-and-take") shall not exhibit degraded conditions. Based on the nature of the wastewater, the treated wastewater is not expected to degrade the diversity, similarity, community structure, species tolerance, trophic structure, dominant species, indices of biotic integrity, indices of well being, or other measures. Therefore, no permit limit or monitoring requirement is imposed for this criterion.

(6) Toxic Substances

In accordance with OAC 785:45-5-12(f)(6)(A), surface waters of the state shall not exhibit acute toxicity and shall not exhibit chronic toxicity outside the chronic regulatory mixing zone. Based on the permit application, the discharge does not contain toxic substances at levels that could result in acute or chronic toxicity to fish or wildlife. Since the facility is a minor discharger, whole effluent toxicity (WET) testing is not required.

(7) Turbidity

OAC 785:45-5-12(f)(7) states that turbidity from other than natural sources shall be restricted so as not to exceed the numeric limit of 50 NTUs for surface waters that have a beneficial use of Warm Water Aquatic Community. The draft permit includes a technology-based limitation for TSS (a daily maximum limit of 40 mg/L) and a water quality-based narrative requirement for suspended solids. It is the BPJ of the permit writer that limitation on TSS should adequately control turbidity in the facility's discharge.

b. Protection of Agriculture Use

Per information provided in the permit application, the discharge does not contain chlorides, sulfates, or total dissolved solids at levels which would require water quality limitation and/or monitoring.

c. Primary Body Contact Recreation

Per information provided in the permit application, the discharge does not contain any sanitary waste. Therefore, coliform bacteria, escherichia coli (E. coli), and/or enterococci are not expected to be present at levels which would require water quality limitation and/or monitoring.

OAC 785:45-5-16(a) states "The discharge shall not contain chemical, physical, or biological substances in concentrations that are irritating to skin or sense organs or are toxic or cause illness upon ingestion by human beings." The draft permit will contain a narrative stating the prohibition of these conditions for Outfall 002.

d. Protection of Aesthetics Use

Aesthetics use is determined in accordance with OAC 785:45-5-19, which states, "the surface waters of the state must be free from floating materials and suspended substances that produce objectionable color and turbidity." A narrative requirement is established in the draft permit to prohibit the discharge of floating solids or visible foam in other than trace amounts. In addition, the technology-based numerical effluent limitations of a 40 mg/L daily maximum for TSS should also help to maintain the narrative water quality criteria for TSS.

e. Fish Consumption

In accordance with OAC 785:45-5-20(a), "surface waters of the state shall be maintained so that toxicity does not inhibit ingestion of fish and shellfish by humans." Per information provided in the permit application, the discharge does not contain pollutants at levels which would require fish consumption water quality limitation and/or monitoring.

C. Effluent Monitoring Requirements

Since it was determined that there were no pollutants present for which RP calculations would be needed, further effluent monitoring is not justified.

D. 303(d) Listing Evaluation

1. Water Quality Assessment and Causes of Impairment

The segment of Broken Arrow Creek which Outfall 002 discharges to is not listed as an impaired water body on Oklahoma's 2012 303(d) list.

2. 303(d) List-Related Permitting Actions

The permit may be reopened for modification or revocation and reissuance to require additional monitoring and/or effluent limitations where actual or potential exceedances of state water quality criteria are determined to be the result of the permittee's discharge(s) to the receiving water(s), a Total Maximum Daily Load is established for the receiving stream(s), new water quality criteria isestablished, or a different technology based guideline is promulgated. Modification or revocation and reissuance of the permit shall follow regulations listed at 40 CFR 124.5.

E. Antidegradation Requirements

As stated in Section V.B, no antidegradation restrictions apply to the segments of a unnamed tributary of Broken Arrow Creek. Implementation of the state's antidegradation policy, as described at OAC 785:46, Subchapter 13, requires no further protection beyond the Tier 1 level (maintenance and protection of designated uses) for these receiving waters.

F. Protection of Endangered and Threatened Species and Critical Habitat

The receiving stream to which the facility discharges is not considered by the U.S. Fish and Wildlife Service (USFWS) to be a sensitive area for endangered or threatened species. Therefore, consultation with the USFWS is not required.

V. NON-DISCHARGE REQUIREMENTS

A. Surface Impoundment

Descriptions of surface impoundments are shown in the table on the following page.

Description of Surface Impoundments (S.I.)

Classification OAC 252:616-1-2		Liner Requirements OAC 252:616-7-2(b)	Holding Capacity and/or Dimensions OAC 252:616-7-1(6)	Wastewater Destination
S.I. (*)	Wastewater			
F01	Wastewater from the truck washout area and associated stormwater runoff - Class I	Concrete	59,252 gallons 30' x 102' x 6'	F03 and F06
F02	Wastewater from the truck washout area and associated stormwater runoff - Class II	Concrete	25,761 gallons 24' x 36' x 6'	F03 and F06
F04	Wastewater from the truck washout area and associated stormwater runoff - Class I	Concrete	5,350 gallons 11' x 25' x 5.2'	F03 and F06
F05	Wastewater from the truck washout area and associated stormwater runoff - Class I	Concrete	12,934 gallons 29.2' x 32' x 2.25'	F03 and F06
F06	Wastewater from the truck washout area and associated stormwater runoff - Class I	Concrete	47,127 gallons 30' x 60' x 3.5'	Outfall 002

(*) Designation F refers to flow-through surface impoundment.

Location of Surface Impoundments

S.I.	Legal Location	General Location and Description
F01	SE¼, NW¼, NE¼, Section 13, Township 18N, Range 14 EIM, Tulsa County, Oklahoma	Located southwest corner of the facility and south side of the concrete batch plant
F02	SE¼, NW¼, NE¼, Section 13, Township 18N, Range 14 EIM, Tulsa County, Oklahoma	Located east of the concrete batch plant and approximately 120 feet north of the maintenance building.
F04	SE¼, NW¼, NE¼, Section 13, Township 18N, Range 14 EIM, Tulsa County, Oklahoma	Located approximately 300 feet east of the maintenance building.
F05	SE¼, NW¼, NE¼, Section 13, Township 18N, Range 14 EIM, Tulsa County, Oklahoma	Located approximately 120 feet north of F02.
F06	SE¼, NW¼, NE¼, Section 13, Township 18N, Range 14 EIM, Tulsa County, Oklahoma	Located approximately 50 feet south of F01.

1. **Wastewater Classification [OAC 252:616-1-2]**

   The wastewater generated from truck washout and associated stormwater runoff at this facility, was tested in a previous permit for classification. Due to high pH, surface impoundments F01, F02, F05, and F06 were classified as Class I wastewater and F02 was determined to be Class II wastewater.

2. **Freeboard Requirements (OAC 252:616-7-1(7))**

   Pursuant to OAC 252:616-7-1(7), a minimum freeboard of one (1) foot shall be maintained for surface impoundments F01, F02, F04, F05, and F06.

3. **Depth to Groundwater (OAC 252:616-7-1(4)(B))**

   Review of the December 7, 2009 engineering report, shows that the minimum groundwater separation from the bottom of surface impoundments F01, F02, F04, F05, and F06 is approximately 2.5 feet. Since surface impoundments F01, F02, F04, F05, and F06 contain concrete liners, it is the Best Professional Judgment of the permit writer that the depth to groundwater requirement of OAC 252:616-7-1(4) is satisfied.

4. **Liner Requirements (OAC 252:616-7-2(b))**

   Surface impoundments F01, F02, F04, F05 and F06 have a concrete liner. Since the wastewater being retained is Class I and Class II, it is BPJ that concrete liners are an appropriate and compatible liner system in accordance with OAC 252:616-7-2(b).

5. **Additional Requirements (OAC 252:616-11 or OAC 252:616-13)**

   The permit may be reopened to implement and/or require impoundment modifications, additions, extensions, and/or operational changes; monitoring and reporting; reclassification of wastes; sludge management plans; best management practices; closure plans; and/or other appropriate actions.

   At such time as surface impoundments F01, F02, F04, F05 and/or F06 to be permanently taken out of service or at such time as the contents of F01, F02, F04, F05 and/or F06 pose a risk to the environment or waters of the State, the owner or operator of the facility shall follow all closure requirements contained in OAC 252:616-11 or OAC 252:616-13.

B. LAND APPLICATION

Not applicable.

VI. DRAFT PERMIT LIMITS AND OTHER REQUIREMENTS

A. EFFLUENT LIMITATIONS

Permit requirements are based on OPDES regulations (40 CFR Parts 122, 124, and 136) and OAC 252:606.

Outfall 002

Parameters	Technology-based		Water Quality-based		Previous Permit		Draft Permit	
	Maximum Daily, mg/l	Monthly Average, mg/l	Maximum Daily, mg/l	Monthly Average, mg/l	Maximum Daily, mg/l	Monthly Average, mg/l	Maximum Daily, mg/l	Monthly Average, mg/l
Flow (MGD)	---	---	---	Report (MGD)	Report (MGD)	Report (MGD)	Report (MGD)	Report (MGD)

Total Suspended Solids (TSS)	---	---	40	Report	40	Report	40	Report
pH	Between 6.0 – 9.0 s.u.		Between 6.5 - 9.0 s.u.		Between 6.5 - 9.0 s.u.		Between 6.5 - 9.0 s.u.	

Parameters	Draft Permit	
	Frequency	Sample Type
Flow	1/Month	Estimated
Oil and Grease	1/Month	Grab
TSS	1/Month	Grab
pH	1/Month	Grab

B. EVALUATION FOR PERFORMANCE-BASED MONITORING FREQUENCY REDUCTIONS

In accordance with OAC 252:690-91, since the permit does not contain any monthly average limits, performance-based monitoring frequency reductions are not applicable.

VII. SUMMARY OF CHANGES FROM PREVIOUS PERMIT

- No changes made from the previous permit.

VIII. ADMINISTRATIVE RECORD

The following sources were used to prepare this permit and constitute a part of the administrative record for this permit:

A. APPLICATIONS

OPDES Industrial Permit Application No. OK0045781 (Forms 1, 2C, and 2SI), received October 20, 2014.

B. CLEAN WATER ACT CITATIONS

Section 301, 303(d), and 402(a)

C. 40 CFR CITATIONS

40 CFR, in particular, Parts 122, 124, 136

D. STATE LAW, STANDARDS, AND RULES AND REGULATIONS

- Oklahoma Pollutant Discharge Elimination System (OPDES) Act, 27A O.S., §2-6-201 et seq.
- OAC 252:606, 616, and 690
- Oklahoma's Water Quality Standards, as amended
- Oklahoma Continuing Planning Process Document (CPP)

E. MISCELLANEOUS

- 2012 303(d) list
- The permit file

IX. CERTIFICATION AND FINAL DETERMINATION

A draft permit and draft public notice will be sent to the District Engineer, Corps of Engineers, Oklahoma Conservation Commission, and to the Regional Director of the U.S. Fish and Wildlife Service upon publication of that notice. If comments are received from these agencies or other State or Federal agencies with jurisdiction over fish, wildlife, or public health, the permit may be denied or additional conditions may be included in accordance with regulations promulgated under 40 CFR 124.59.

The public notice describes the procedures for the formulation of final determinations.

NOTICE OF ISSUANCE OF DRAFT TIER II PERMIT

POLLUTANT DISCHARGE(S) APPLICATION NO. OK0045781

Notice is hereby given that the Oklahoma Department of Environmental Quality (DEQ), at the address listed below, has processed and issued a draft permit to **Sherwood Construction Company, Inc. DBA Greenhill Concrete Products, Inc. – Broken Arrow, 1601 E. Houston Street, Tulsa, OK 74012** based on a Tier II application filed on the October 20, 2014, for a renewal permit with the DEQ. A final permit, if issued, would allow Greenhill Concrete Product, Inc. - Broken Arrow to discharge industrial wastewater from their facility, Greenhill Concrete Products, Inc. – Broken Arrow, 1601 E. Houston Street, Tulsa, OK 74012, located in SE¼, NW¼, NE¼, Section 13, Township 18N, Range 14EIM, Tulsa County. Greenhill Concrete Product, Inc. - Broken Arrow is a ready-mix concrete processing facility. The proposed discharge(s) consists of effluent from truck washout area and associated stormwater runoff. The discharge(s) will be to an unnamed tributary of Broken Arrow Creek from Outfall 002 located in SE¼, NW¼, NE¼ Section 13, Township 18N, Range 14EIM Tulsa County, Oklahoma at Latitude 36° 02' 32.2" N, Longitude 95° 46' 8.8" W. The facility also proposes to operate five flow-through impoundments.

A copy of the draft permit, statement of basis, application, and other relevant documents may be reviewed at the Offices of the DEQ, Water Quality Division, 707 N. Robinson, Oklahoma City, OK 73102, between the hours of 8:00 a.m. to 4:30 p.m. Monday – Friday. A copy of the draft permit, statement of basis, and application may be reviewed at the Broken Arrow Library, 300 West Broadway Ave., Broken Arrow, Oklahoma 74012-4407, between the hours of 10:00 a.m. and 8:00 p.m., Monday through Thursday, between the hours of 10:00 a.m. and 5:00 p.m., Friday and Saturday, closed Sunday. A copy of the draft permit may be reviewed on the DEQ website at http://www.deq.state.ok.us/mainlinks/publicpermits.html.

Pursuant to 27A O.S. Sec. 2-14-302, persons wishing to make comments concerning the draft permit may do so by sending the comments in writing to the Contact Person for the DEQ, at the address listed below, within 30 days after the date of publication or mailing. Comments should include: (1) name and address of the interested person, (2) the application name to which the request relates, (3) the nature and basis of the interest of the person affected, and (4) a statement of the objection or comment, the basis of the objection or comment, and any requested action by the DEQ.

The contact person for the DEQ, to schedule a date and time to review the application at the offices of the DEQ is:

Tammi L. Johnson
Oklahoma Department of Environmental Quality
P.O. Box 1677
707 N. Robinson, 8th Floor
Oklahoma City, OK 73101-1677
(405) 702-8170 or tammi.l.johnson@deq.ok.gov

The contact person for Greenhill Concrete Products, Inc. - Broken Arrow is:

Matt Ritchie, Vice President, Materials
Sherwood Construction Company, Inc.
DBA Greenhill Concrete Products, Inc. – Broken Arrow Batch Plant
P.O. Box 10
Catoosa, OK 74128
918-266-6861

Pursuant to 27A O.S. Sec. 2-14-302, persons wishing to request a public meeting concerning the draft permit may do so by filing the request in writing to the Contact Person for the DEQ, at the address listed below, within thirty (30) days after the date of publication or mailing. Requests for the public meeting should include: (1) name and address of the interested person, (2) the application name to which the request relates, (3) the nature and basis of the interest of the person affected, and (4) a statement of the objection or comment, the basis of the objection or comment, and any requested action by the DEQ. A copy of the request must also be sent to the applicant, through the contact person listed below. A formal public meeting may be scheduled if there is a significant degree of public interest. Notice of the date, time and place of the public meeting will be given to all parties of record. A request for a public meeting may be combined with a submission of written comments.

If a public meeting is held, oral or written comments will be accepted at the meeting. The DEQ shall, within ninety (90) days of the date the public comment period closes (or longer if extended by the Executive Director of the DEQ), issue responses to all public comments received.

NOTICE OF ISSUANCE OF DRAFT TIER II PERMIT

POLLUTANT DISCHARGE(S) APPLICATION NO. OK0045781

Notice is hereby given that the Oklahoma Department of Environmental Quality (DEQ), at the address listed below, has processed and issued a draft permit to **Sherwood Construction Company, Inc. DBA Greenhill Concrete Products, Inc. -Broken Arrow, 1601 E. Houston Street, Tulsa, OK 74012** based on a Tier II application filed on the October 20, 2014, for a renewal permit with the DEQ. A final permit if issued, would allow Greenhill Concrete Product, Inc. - Broken Arrow to discharge industrial wastewater from their facility, Greenhill Concrete Products, Inc. - Broken Arrow, 1601 E. Houston Street, Tulsa, OK 74012, located in SE1/4, NW1/4, NE1/4, Section 13, Township 18N, Range 14EIM, Tulsa County. Greenhill Concrete Product, Inc. - Broken Arrow is a ready-mix concrete processing facility. The proposed discharge(s) consists of effluent from truck washout area and associated stormwater runoff. The discharge(s) will be to an unnamed tributary of Broken Arrow Creek from Outfall 002 located in SE1/4, NW1/4, NE1/4 Section 13, Township 18N, Range 14EIM Tulsa County, Oklahoma at Latitude 36° 02' 32.2" N, Longitude 95° 46' 8.8" W. The facility also proposes to operate five flow- through impoundments.

A copy of the draft permit, statement of basis, application, and other relevant documents may be reviewed at the Offices of the DEQ, Water Quality Division, 707 N. Robinson, Oklahoma City, OK 73102, between the hours of 8:00 a.m. to 4:30 p.m. Monday - Friday. A copy of the draft permit, statement of basis, and application may be reviewed at the Broken Arrow Library, 300 West Broadway Ave., Broken Arrow, Oklahoma 74012-4407, between the hours of 10:00 a.m. and 8:00 p.m., Monday through Thursday, between the hours of 10:00 a.m. and 5:00 p.m., Friday and Saturday, closed Sunday. A copy of the draft permit may be reviewed on the DEQ website at http://www.deq.state.ok.us/ mainlinks/publicpermits.html.

Pursuant to 27A O.S. Sec. 2-14-302, persons wishing to make comments concerning the draft permit may do so by sending the comments in writing to the Contact Person for the DEQ, at the address listed below, within 30 days after the date of publication or mailing. Comments should include: (1) name and address of the interested person, (2) the application name to which the request relates, (3) the nature and basis of the interest of the person affected, and (4) a statement of the objection or comment, the basis of the objection or comment, and any requested action by the DEQ.

The contact person for the DEQ, to schedule a date and time to review the application at the offices of the DEQ is:

Tammi L. Johnson
Oklahoma Department of Environmental Quality
P.O. Box 1677

Application Received: August 10, 1999

Dear Dr. Milliger:

Air Quality has received your construction permit application. It has been given a permit number and assigned to the Regional Office at Tulsa (ROAT) permit writer referenced above. The information supplied thus far appears to be **administratively complete**. The fee assessed for this construction permit application is $1000 and $1000 has been received. Please note that additional information may be required in the future.

DEQ Uniform Permitting Tier rules became effective July 1, 1996, and include certain public participation requirements. This application has been determined to be a Tier I.

Thank you for your cooperation in this matter. If we may be of further service, please contact our office at (918) 461-7400. The DEQ Regional Office at Tulsa is now located at **(new location)** 5051 South 129th East Avenue, Tulsa, OK; **(new mailing address)** P.O. Box 690898, Tulsa, OK, 74169-0898.

Sincerely,

Richard Kienlen for Dave Dimick

ROCK AND AGGREGATE CRUSHERS

1) Source ID Number: _____

2) Company/Source Name: WITTWER, INC

3) Emission Unit Identification: _____

4) Normal Operating Schedule: 1500 hrs/yr

5) Type of Plant: Portable X ; Stationary _____

6) Annual Production: 120,000 tons/yr

7) Will process equipment be used at a site authorized under the General Class II Air Source Emission Air Operating Permit for Crushed and Broken Stone facilities? Yes X ; No _____ If yes, indicate the following:

Piece of Equipment 30142 Jaw Crusher and initial site ID #: _____
Piece of Equipment 130-150 Impact Crusher and initial site ID #: _____
Piece of Equipment 6x20 Screen and initial site ID #: _____

8) Complete the following composition for each crushing plant:

Crushing Operation	Type*	Manufacturer	Year Made	Model No.	Serial No.	Capacity tons/hr	Qty. Used
Grizzly	N/A						
Primary	Jaw	Lippman	?	30142	?	300	1
Secondary	Impact	Universal	1995	130-150	619X248	300	1
Tertiary	N/A						
Recrusher	N/A						
Fines Mill	N/A						
Other							

*Jaw, Cone, Hammermill, etc.

ROCK AND AGGREGATE CRUSHERS
(cont.)

9) Complete the following description of the crushing plant dust control system:

Crushing Operation	Control**
Grizzly	N/A
Primary	High pressure mist nozzles on discharge Conveyor (6)
Secondary	Same as primary, but Twice as many nozzles (12)
Tertiary	N/A
Recrusher	N/A
Fines Mill	N/A
Other	Spray bars on stackers & discharge Conveyors 3 each

** If water spray, indicate number and location of spray nozzles, wetting agent used.

10) List bins, storage, and surge: NO bins, Stockpiles only

11) Does construction, modification, or reconstruction commence after August 31, 1983 for a Nonmetallic Mineral Processing Plant? Yes X ; No _____
If yes, this plant may be subject to NSPS, 40 CFR Part 60, Subpart OOO.

NOTES:

1. Indicate any equipment which is enclosed in the building.

2. If a dust collection system is installed, provide a sketch showing layout of dust collector points and routing of ductwork to dust collector(s).

3. Please include a diagram showing the typical flow rates of rock through the new equipment.

VI. CALCULATING THE CONSTRUCTION PERMIT APPLICATION FEE

[These requirements are found at K.A.R. 28-19-304(b).]

Calculate the construction permit application fee as follows:

Estimated capital cost of the proposed activity for which the application is made, including the total cost of equipment and services to be capitalized.	**Line 1 $**	353,700.00
Multiply by .05% (.0005)	**x**	.0005
Total	**Line 2 $**	176.85
If Line 2 is greater than $4,000, enter $4,000 on Line 3. If Line 2 is less than $100, enter $100 on Line 3. Otherwise, copy Line 2 to Line 3.		
Construction permit application fee.	**Line 3 $**	176.85

K.A.R. 28-19-17 is a complex regulation pertaining to prevention of significant deterioration (PSD). An additional fee of $1,500 will be required if a PSD review is necessary. If you believe the proposed activity in this Notification of Construction or Modification will be subject to the requirements of K.A.R. 28-19-17, contact the Department for further evaluation.

* **For purposes of construction permit or approval applications, the following are not considered modifications:**

1. **Routine maintenance or parts replacement.**
2. **An increase or decrease in operating hours or production rates if:**
   a. **production rate increases do not exceed the originally approved design capacity of the stationary source or emissions unit; and**
   b. **the increased potential-to-emit resulting from the change in operating hours or production rates do not exceed any emission or operating limitations imposed as a permit condition.**

Belt Conveyors

Unit No. or Ident. No.: 90' Stacker ✓
Manufacturer: Nordberg
Model No.: N/A
Serial No.: N/A
Date of Manufacture: N/A
Date of Latest Modification: 5/98
Width: 30"

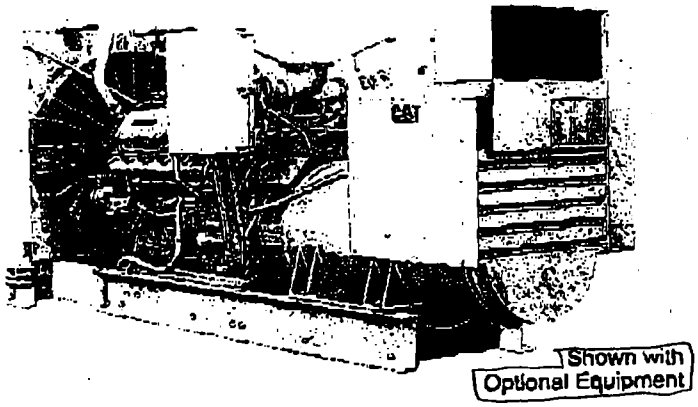
Generator Set

3412
1800 rpm
545 kW 60 Hz

Prime Power



CATERPILLAR® ENGINE SPECIFICATIONS

V-12, 4-Stroke-Cycle, Watercooled Diesel

Bore—mm (in)	137 (5.4)
Stroke—mm (in)	152 (6.0)
Displacement—L (cu in)	27.0 (1,649)
Compression ratio	14.5:1

ISO 9001 CERTIFIED

1687 NOX
97.0 CO
52 HC

FEATURES

CAT® DIESEL GENERATOR SETS
Factory designed, certified prototype tested with torsional analysis. Production tested and delivered to you in a package that is ready to be connected to your fuel and power lines. EPG designer computer sizing available. Supported 100% by your Caterpillar dealer with warranty and parts available. Extended warranty available in some areas. The generator set was designed and manufactured in an ISO 9001 compliant facility. Generator set and components meet or exceed the following specifications:
ABCSM, CMA, AS1359, BS2799, BS4999, BS5000, BS5514, DIN6271, DIN6280, EGSA101P, IEC 34-1, ISO3046/1, ISO8528, JEM1359, NEMA MG-1-22, VDE0530, 89/392/EEC

RELIABLE, FUEL EFFICIENT DIESEL
The compact, four-stroke-cycle diesel engine combines durability with minimum weight while providing dependability and economy. The fuel system operates on a variety of fuels.

CATERPILLAR® SR4B GENERATOR
Single bearing, wye connected, static regulated, brushless, permanent magnet excited generator designed to match the performance and output characteristics of the Caterpillar diesel engine that drives it.

EXCLUSIVE CATERPILLAR VOLTAGE REGULATOR
Three-phase sensing and Volts per Hertz regulation provide precise control, excellent block loading, and constant voltage in the selected operating range.

CATERPILLAR® SR4B GENERATOR

Type	Static regulated, brushless excited
Excitation	Permanent magnet
Construction	Single bearing, close coupled
Three phase	Wye connected
Insulation	Class H with tropicalization and antiabrasion
Terminal box	Drip proof IP 22
Alignment	Pilot shaft
Overspeed capability	150%
Paralleling capability	Standard — with adjustable droop
Voltage regulator	3-phase sensing with Volts-per-Hertz
Voltage regulation	Less than ± 1/2% (steady state) Less than ± 1% (no load to full load)
Voltage gain	Adjustable to compensate for engine speed droop and line loss
Wave form	Less than 5% deviation
TIF	Less than 50
THD	Less than 5%

CATERPILLAR CONTROL PANEL

24 Volt DC Control
Vibration isolated
NEMA 1, IP 22 enclosure
Electrically dead front
Lockable hinged door
Generator instruments meet ANSI C-39-1
Terminal box mounted

Voltages Available
(Consult Price List)

IMAGED AS RECEIVED

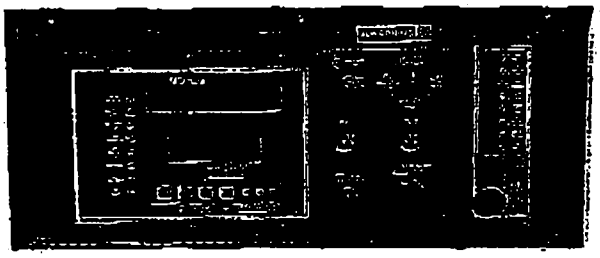
Provision for:
alarm module
alarm module – NFPA 99
alarm module – NFPA 110
Reverse power relay
Starting aid switch
Synchronizing lights

Caterpillar® EMCP II

Electronic Modular Control Panel

The Electronic Modular Control Panel (EMCP II) is a generator-mounted control panel, available on all Caterpillar packaged generator sets. It utilizes an environmentally sealed, solid-state, microprocessor-based module for engine control and AC metering. This new application of mature, high-tech electronics to gen set control and monitoring provides more features, accuracy and reliability than present electro-mechanical and many competitive panel systems.



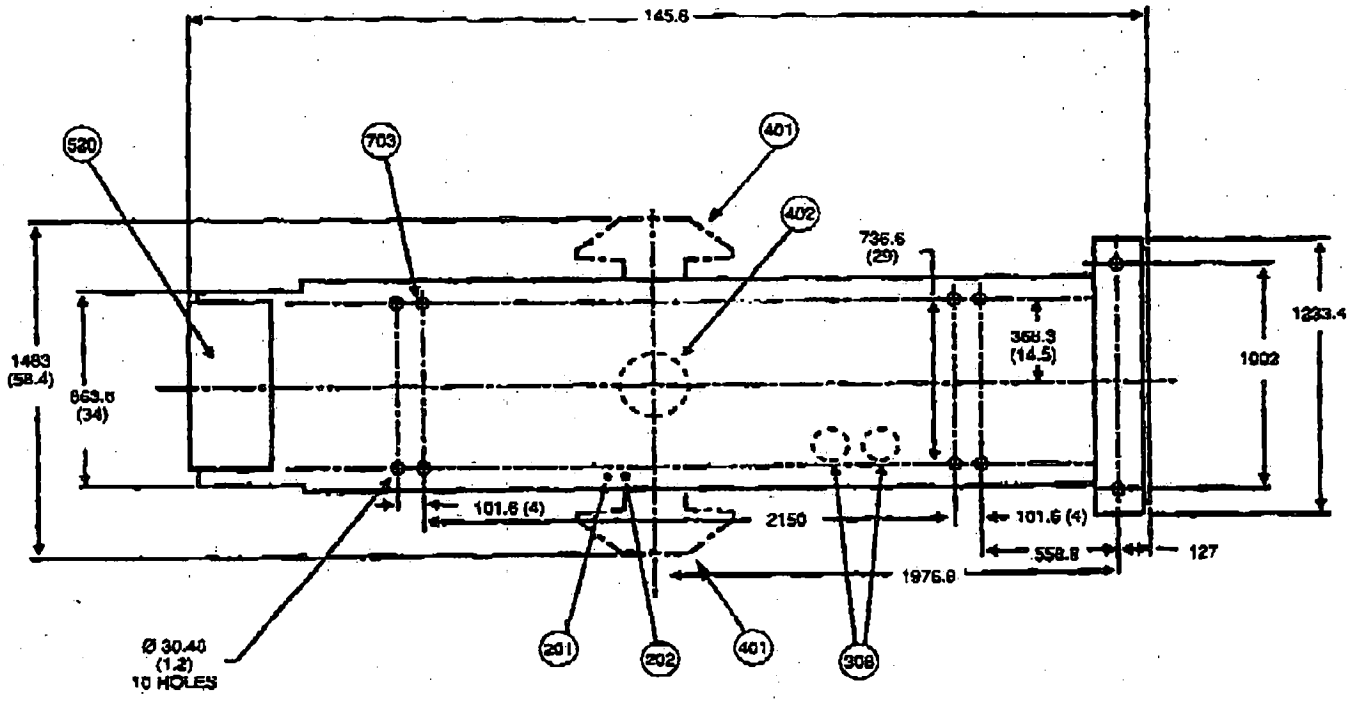
The EMCP II provides these standard control and monitoring features, many of which are options on other panels:

- Automatic/manual start-stop engine control with programmable safety shutdowns and associated flashing LED indicators for low oil pressure, high coolant temperature, overspeed, overcrank and emergency stop
- Cycle cranking–adjustable 1-60 second crank/rest periods
- Cooldown timer–adjustable 0-30 minutes
- Energized to run or shutdown fuel control systems
- LCD digital readout for: Engine oil pressure; coolant temperature; engine rpm; system DC volts; engine running hours; system diagnostic codes; generator AC volts; generator AC amps; and generator frequency
- Engine control switch
- Ammeter-voltmeter phase selector switch
- Emergency stop pushbutton
- Indicator/display test switch
- Voltage adjust potentiometer
- Rugged NEMA 1/IP 22 cabinet.

CATERPILLAR®

3412 GENERATOR SET

PRIME GENERATOR SET PACKAGE



201 Fuel Inlet
202 Excess Fuel Return
308 Oil Filter
401 Air Inlet
402 Exhaust
520 Control and Power Panel
703 Customer Mounting Holes

For overall dimensions see technical data section (page 3).

Note: General configuration not to be used for installation. See general dimension drawings for detail. All dimensions are in mm.

CONDITIONS AND DEFINITIONS

Prime — Output available with varying load for an unlimited time. Prime power in accordance with ISO8528. 10% overload power in accordance with ISO3046/1, AS2789, DIN6271, and BS5514 available on request.

Ratings are based on SAE J1349 standard conditions. These ratings also apply at ISO3046/1, DIN6271, and BS5514 standard conditions.

Fuel rates are based on fuel oil of 35° API (16° C or 60° F) gravity having an LHV of 42 780 kJ/kg (18,390 Btu/lb) when used at 29° C (85° F) and weighing 838.9 g/liter (7.001 lbs/U.S. gal.).

Additional ratings may be available for specific customer requirements. Consult your Caterpillar representative for details.

Materials and specifications are subject to change without notice.

ImpactMaster II at work...stationary or portable,

double or triple curtain, or recycling models...the pay-off is their performance!

Hundreds of Universal ImpactMaster II secondary impact crushers are at work around the world. Owners will testify to their performance with higher rates of production and less maintenance than previously experienced.

The key to the low cost, low maintenance operation of the ImpactMaster II is wear component simplicity. The high chrome alloy iron curtain liners and hammers keep your machine running longer, not down for welding or replacement.

In the ImpactMaster II rotor, hammers and breaking curtains reduce rock by true impact breakage. The result is a clean cubical product. Working in a wide range of materials from hard and abrasive minerals to recycled concrete and asphalt, the ImpactMaster II is an efficient secondary crusher for many applications with more worktime and less downtime.

Consult Crusher Headquarters—your Universal Distributor—or phone or fax Universal Engineering, Division of Pettibone Corporation, 800 First Ave., N.W., Cedar Rapids, IA 52405-3999. Phone 319-365-0441. FAX 319-369-5440.

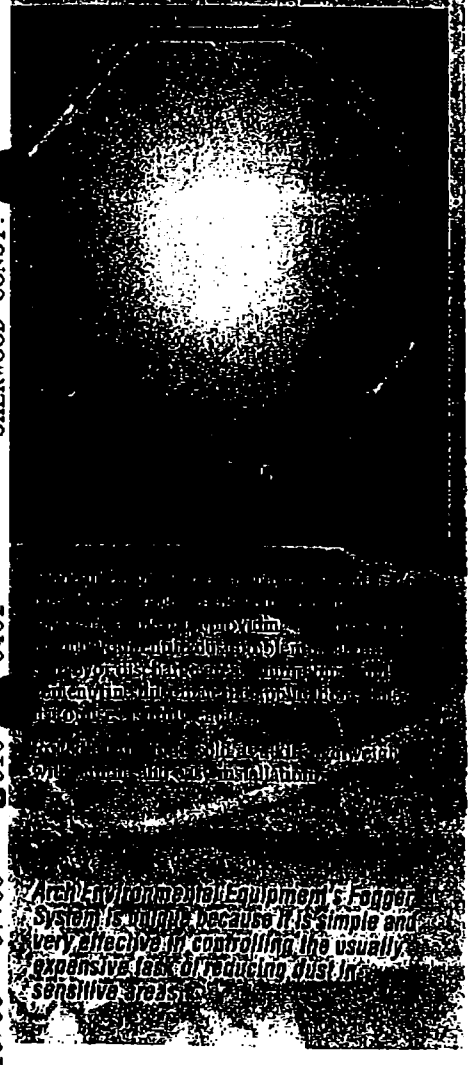
Our most universal model. The Mark 6 can be custom shaped in a straight line, octagon, square, or almost any configuration to fit your needs. Available in kit or custom built.

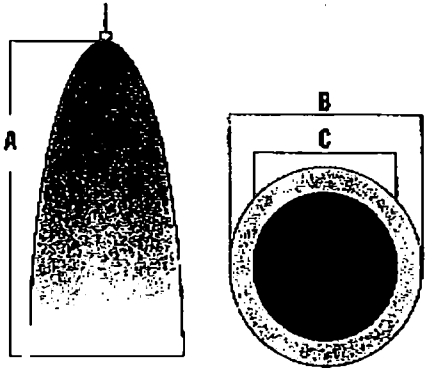


Arch Environmental Equipment's Fogger System is unique because it is simple and very effective in controlling the usually expensive task of reducing dust in sensitive areas.

ROUND SPRAY PATTERN

FOGGER SYSTEMS	Dimension, ft. A	B	C	Gallons per minute
Mark 2	3	5.5	3.5	0.548
Mark 3	4	6.5	4.5	1.020

(#3 Standard tip @ 100 psi.



RECTANGULAR SPRAY PATTERN

FOGGER SYSTEMS	Dimension, ft. A	B	C	Gallons per minute
Mark 4	4	3.5	2.5	0.705

(Spray pattern affected by outside elements - wind)

011
SHERWOOD CONST. 918 266 6482
08/19/99 07:56 918 6482

The original "Dust Fogger", used for limited applications when low water usage is a must. Still a favorite of many in the aggregate/crushing industry. Mark 2 uses only 1/2 gallon per minute at 100 psi.

Low water usage. Wets the dust in the air —not the product!

Comes complete with brass fittings, filter, valve, and quick release nozzles. The Mark 3 uses only 1 gallon per minute at 100 psi.

The Mark 4 is designed to be expanded in a series from one head to another.

Comes complete with brass fittings, filter, valve, and quick release nozzles. The Mark 4 uses only 7/10 gallon per minute at 100 psi or 43 gallons per hour.

Our basic Fogger System illustrated with the Mark 4 fogger head and filter assembly.

- Lightweight, compact.
- Easily installed.
- Excellent filtration systems.
- Produces a finely atomized fog with very uniform distribution.
- Optional equipment: high pressure systems, remote controls, surfactant and antifreeze injection systems.

Booster Pump

Comes completely plumbed with pressure regulating system.

The Pump is available in either 110, 220 or 440 volts.

Mark 6 bars with filter, ball valve, quick connect (top) or Mark 6 bar only (bottom).

These foggers need no soaps, detergents, expensive high pressure pumps or air pressure.

Arch has developed an industry proven surfactant - bonding agent to enhance coal dust agglomeration. This surfactant will also aid in the "stretching of water" by enhancing the bonding of water to dust particulate matter.

Patents pending

EMISSION DATA
QUARRY

Emission factor estimates for stone quarry blasting operations are not presented here because of the sparsity and unreliability of available test data. While a procedure for estimating blastin emissions is presented in Section 11.9, Western Surface Coal Mining, that procedure should not be applied to stone quarries because of dissimilarities in blasting techniques, material blasted, and size o blast areas. Milling of fines is not included in this section as this operation is normally associated with nonconstruction aggregate end uses and will be covered elsewhere when information is adequate. Emission factors for fugitive dust sources, including paved and unpaved roads, materials handling and transfer, and wind erosion of storage piles, can be determined using the predictive emission factor equations presented in AP-42 Section 13.2.

Message:

Following is the emissions data for a Caterpillar 3412 Generator set, serial number 81Z21911 & greater, rated 545 Kw prime.

The emissions data is in two forms, metric - ppm, and english - lb/hr.

Please give me a call if you have any questions or comments.

Ron Taylor

Attached is the exhaust emission data requested. The data was obtained through actual engine tests on an engine of similar configuration to yours. Emission data measurement is consistent with EPA methods described in Cfr 40 Part 86 Sub Part D and Iso 8178-1 for HC, CO, CO2 and NOX. The particulate matter was measured using ISO procedure 8178-1. The fuel used was #2 diesel with 35 deg API and LHV of 42,783 kj/kg (18,390 btu/lb). The data is based on steady state operating conditions with inlet air conditions of 25 deg c (77 deg f), 96 kpa (28.42 in.hg.abs).

The NOX shown is not actually present in the exhaust, it is based on the assumption that all the NO and NO2 in the exhaust is converted to NO2 in the atmosphere. The NOX is reported with a molecular weight equal to NO2 and is corrected for 75 grains/lb engine inlet air humidity.

Re: Air Quality Permit – Operation

Dear Jack:

Please find attached the generator engine information you request. Presently I am waiting for return information concerning the engine powering the "pug mill". Present information indicates that it is a John Deere 4 cylinder, 3.9 liter, 239 cubic inch, turbocharged diesel rated at 95 HP @ 2500 RPM. I will forward the emissions information as soon as I receive it. At the present time we will state that it is of Deminimus Status. I'm still working on the proper forms. Thanks for your help.

Sincerely,

David M. Cooper

INFO CODE 05 - EMISSIONS DATA * * REFERENCE NOTES - NOT TO EXCEED * * * * * * *
EMISSIONS DATA MEASUREMENT IS CONSISTENT WITH THOSE DESCRIBED IN EPA CFR 40 PART 86 SUBPART D AND ISO 8178-1 FOR MEASURING HC, CO, CO2 AND NOX. THESE PROCEDURES ARE VERY SIMILAR TO THE METHODS DESCRIBED IN EPA CFR 40 PART 60 APPENDIX A METHOD 25A FOR HYDROCARBONS, METHOD 10 FOR CO, METHOD 7E FOR NOX.

DATA SHOWN IS BASED ON STEADY STATE ENGINE OPERATING CONDITIONS OF 77 DEG F, 28.42 IN HG AND NUMBER 2 DIESEL FUEL WITH 35 DEG API AND LHV OF 18,390 BTU/LB.

TO PROPERLY APPLY THIS DATA YOU MUST REFER TO PERFORMANCE PARAMETER DM1176 FOR ADDITIONAL INFORMATION, (APPLICATION GEN402, PROGRAM 03).

RE: OPDES Permit Modification Application, Permit No. OK0045781
Sherwood Construction Company, Inc. dba Greenhill Concrete Products, LLC,
Tulsa County, Oklahoma
Facility ID No. I-72002620

Dear Mr. Ritchie:

Your industrial wastewater treatment system Permit is enclosed. The effective date and the expiration date of this Permit appear on the cover page. The permit was publicly noticed on March 25, 2015 (in newspaper), and March 13, 2015 (by DEQ). The DEQ received no comments on the draft permit.

Blank Discharge Monitoring Report (DMR) forms are also enclosed, along with instructions for preparing and submitting them. These blank forms should be used for reporting purposes until such time as you receive your pre-printed DMR forms.

Should you have any questions regarding the final Authorization, please contact the Industrial Permits Section at the letterhead address or telephone (405) 702-8100. Should you have any questions regarding compliance with the conditions of this Authorization, please contact the Industrial Enforcement Section at the same address and phone number.

Sincerely,

Carol Paden

Carol Paden, P.E., Manager
Industrial Permits Section

AUTHORIZATION TO DISCHARGE UNDER THE OKLAHOMA POLLUTANT DISCHARGE ELIMINATION SYSTEM

PERMIT NUMBER: OK0045781
ID NUMBER: I-72002620

In compliance with the Oklahoma Pollutant Discharge Elimination System (OPDES) Act, 27A O.S. §2-6-201 *et seq.*, Oklahoma Uniform Environmental Permitting Act, 27A O.S. §2-14-101 *et seq.*, and the rules of the Oklahoma Department of Environmental Quality promulgated thereunder,

Sherwood Construction Company, Inc.
DBA Greenhill Concrete Products, Inc. – Broken Arrow
P.O. Box 10
Tulsa, OK 74015

is authorized to discharge from their facility, located in the:

SE¼, NW¼, NE¼, Section 13, Township 18N, Range 14EIM
Tulsa County, Oklahoma
or at 1601 E. Houston Ave., Broken Arrow, OK 74012

to receiving waters identified as: unnamed tributary of Broken Arrow Creek, stream segment 120410, Water Body ID OK120410010200, in Tulsa County, Oklahoma

from: Outfall 002:

Latitude 36° 02' 32.2" N, Longitude 95° 46' 8.8" W (GPS: NAD83)
SE¼, NW¼, NE¼, Section 13, Township 18N, Range 14EIM,
Tulsa County, Oklahoma

in accordance with effluent limitations, monitoring requirements, and other conditions set forth in Parts I, II, and III, hereof.

The above referenced facility is also authorized to retain wastewater in two flow-through surface impoundments (F01, F02, F04, F05 and F06), as described in the Appendix. Surface impoundments shall be maintained in accordance with Parts I, II, and IV, hereof.

Issuance of this permit in no way or in any respect affects the permittee's civil or criminal responsibility regarding disposal and/or discharges of wastewater, except with respect to the permittee's legal responsibility under the OPDES Act and Department Rules.

This permit replaces and/or supersedes OPDES Permit No. OK0045781 that became effective on July 1, 2014 and expires June 30, 2015.

This permit shall become effective on May 1, 2015.

This permit and the authorization to operate the disposal system shall expire at midnight, on April 30, 2020.

This is to certify that the wastewater discharges set forth in this permit comply with the requirements of Oklahoma's Water Quality Standards, as amended, provided the permittee does not exceed the effluent limitations set forth in this permit.

Issued this 28th day of April, 2015.

For Oklahoma Department of Environmental Quality,

Carol Paden, P.E., Manager
Industrial Permits Section
Water Quality Division

Shellie Chard-McClary, Director
Water Quality Division

PART I
EFFLUENT LIMITATIONS AND MONITORING REQUIREMENTS

SECTION A. EFFLUENT LIMITATIONS AND MONITORING REQUIREMENTS

Outfall 002

Limitations, Reporting Requirements and Monitoring

During the period beginning the effective date and lasting through the expiration date, the permittee is authorized to discharge from Outfall 002. The discharge will consist of process wastewater and associated stormwater runoff from the following three common activities: (1) mix plant area washdown, (2) truck mixer drum washout, and (3) external truck washing.

Such discharge shall be limited and monitored by the permittee as specified below:

Effluent Limitations – Outfall 002

PARAMETERS	DISCHARGE LIMITATIONS			
	MASS LOADING LIMITS (lbs/day unless otherwise specified)		CONCENTRATION LIMITS (mg/L unless otherwise specified)	
	MONTHLY AVERAGE	DAILY MAXIMUM	MONTHLY AVERAGE	DAILY MAXIMUM
Flow STORET: 50050	Report (MGD)	Report (MGD)	--	--
Total Suspended Solid (TSS) STORET: 00530	--	--	Report	40
Oil and Grease STORET: 00552	--	--	Report	15
pH STORET: 00400	N/A	N/A	between 6.5 and 9.0 s.u.	

Monitoring Requirements – Outfall 002

PARAMETERS	MEASUREMENT FREQUENCY *	SAMPLE TYPE
Flow	1/Month	Estimate
Total Suspended Solids	1/Month	Grab
Oil and Grease	1/Month	Grab
pH	1/Month	Grab

* When discharging.

NOTE: See Parts II and III for Additional Requirements.

There shall be no discharge of a visible sheen of oil or globules of oil or grease on or in the water. Oil and grease shall not be present in quantities that adhere to stream banks and coat bottoms of watercourses. Surface waters of the State shall be maintained free from oil and grease and taste and odors.

There shall be no discharge of floating solids or visible foam in other than trace amounts.

The discharge shall not contain chemical, physical, or biological substances in concentrations that are irritating to skin or sense organs or are toxic or cause illness upon ingestion by human beings.

Samples for Outfall 002 taken in compliance with the monitoring requirements specified above shall be taken at the following location:

Outfall 002: At the pipe outlet of surface impoundment F06 and prior to discharging to the unnamed tributary of Broken Arrow Creek located in the SE¼, NW¼, NE¼, Section 13, Township 18N, Range 14EIM, Tulsa County, Oklahoma, or at Latitude 36° 02' 32.2"N, Longitude 95° 46' 8.8"W (GPS: NAD83).

SECTION B. SCHEDULE OF COMPLIANCE

The permittee shall achieve compliance with the effluent limitations specified for discharges in accordance with the following schedule: None.

SECTION C. REPORTING OF MONITORING RESULTS

Monitoring results shall be reported in accordance with the provisions of Part III. E.4 of the permit. Monitoring results obtained during the previous month shall be summarized and reported on the Discharge Monitoring Report (DMR) forms due to the Oklahoma Department of Environmental Quality, Water Quality Division, Wastewater Compliance Tracking Section postmarked or received no later than the 15th day of the following month. If no discharge occurs during the reporting period, DMR forms stating "No Discharge" shall be submitted according to the above schedule.

The first report is due on June 15th, 2015 .

PART II
OTHER PERMIT REQUIREMENTS

A. REGULATORY NOTICE

The permittee is hereby given notice that this permit is in all respects subject to compliance with and actions under any and all applicable and relevant terms, conditions, provisions and requirements, and any and all amendments of the laws of the state of Oklahoma, the rules of the Oklahoma Department of Environmental Quality, and Oklahoma's Water Quality Standards. The absence of any express reference within this permit of any particular statutory requirement, rule(s), regulation(s), or standard(s) shall in no respect be deemed or construed to exempt or preclude the application of such requirement, rule(s), regulation(s), or standard(s) to this permit or the permittee. By the Director's approval, grant and issuance of this permit, permittee acknowledges receipt of true, correct, and current copies of Oklahoma's Water Quality Standards, and the rules of the Oklahoma Department of Environmental Quality, provided, however, that permittee further acknowledges that any and all amendments thereto shall become part of this permit.

B. REOPENER CLAUSE

This permit may be reopened for modification or revocation and reissuance to require additional monitoring and/or effluent limitations where actual or potential exceedances of state water quality criteria are determined to be the result of the permittee's discharge to the receiving water(s), or a Total Maximum Daily Load is established for the receiving stream(s), or when required as technology. Modification or revocation and reissuance of the permit shall follow regulations listed at 40 CFR 124.5.

C. LABORATORY CERTIFICATION

All laboratory analyses for the parameters specified in this permit must be performed by a laboratory certified by the Oklahoma Department of Environmental Quality for those parameters.

D. ANALYTICAL REQUIREMENTS

Unless otherwise specified in this permit, effluent and/or upstream monitoring shall be conducted according to analytical, apparatus and materials, sample collection, preservation, handling, etc., procedures listed at 40 CFR Part 136 in effect on the effective date of this permit. Appendices A, B, and C to 40 CFR Part 136 are specifically referenced as part of this requirement. Amendments to 40 CFR Part 136 promulgated and incorporated by reference into OAC 252:606 after the effective date of this permit shall supersede these requirements as applicable.

E. SURFACE IMPOUNDMENT REQUIREMENTS

A minimum freeboard of one (1) foot for surface impoundments F01, F02, F04, F05, and F06 shall be maintained.

The permit may be reopened to implement and/or require impoundment modifications, additions, extensions, and/or operational changes; additional monitoring and reporting (including but not necessarily limited to soil sampling); reclassification of wastes; sludge management plans; best management practices; closure plans; remediation and/or remediation plans; monitoring wells and/or subsurface monitoring plans; and/or other appropriate actions.

At such time as surface impoundments F01, F02, F04, F05, and/or F06 are to be permanently taken out of service or at such time as the contents of F01, F02, F04, F05, and/or F06 pose a risk to the environment or waters of the state, the owner or operator of the facility shall follow all closure requirements contained in OAC 252:616-13.

In all other respects, F01, F02, F04, F05, and/or F06 shall be subject to standard conditions for surface impoundment contained in OAC 252:616, Subchapters 5, 7, and 13, including but not limited to requirements for construction, operation, maintenance, monitoring, and closure.

F. LAND APPLICATION

Not Applicable

G. OTHER DISPOSAL METHODS

Solids, sludges, filter backwash, or other pollutants removed in the course of treatment or control of wastewater shall be disposed in a state approved industrial waste disposal site or to a company for recycling.

If any such industrial wastes are removed from the facility, the permittee shall keep accurate records which include the following information:

a. Name and address of company hauling waste.
b. The type and amount of waste hauled.
c. The final disposal site of waste hauled.

Upon request, the above records shall be made available to the staff of the Department for inspection, review, and copying.

APPENDIX

Description of Wastewater Treatment/Disposal Surface Impoundments (S.I.s)

Classification OAC 252:616-1-2		Liner Requirements OAC 252:616-7-2(b)	Holding Capacity and/or Dimensions OAC 252:616-7-1(6) [b]	Wastewater Destination
S.I. [a]	Wastewater			
F01	Wastewater from the truck washout area and associated storm water runoff Class I	Concrete	59,252 gallons 30' x 102' x 6'	F06
F02	Wastewater from the truck washout area and associated storm water runoff Class II	Concrete	25,761 gallons 24' x 36' x 6'	F06
F04	Wastewater from the truck washout area and associated storm water runoff Class I	Concrete	5,350 gallons 11' x 25' x 5.2'	F06
F05	Wastewater from the truck washout area and associated storm water runoff Class I	Concrete	12,934 gallons 29.2' x 32' x 2.25'	F06
F06	Wastewater from the truck washout area and associated storm water runoff Class I	Concrete	47,127 gallons 30' x 60' x 3.5'	Outfall 002

[a] Designation F refers to a flow-through surface impoundment.
[b] Based on information provided in application. Freeboard requirements in Part I.D.5 must be met.

Location of Surface Impoundments

S.I.	Legal Location	General Location and Description
F01	SE¼, NW¼, NE¼, Section 13, Township 18N, Range 14 EIM, Tulsa County, Oklahoma	Located southwest corner of the facility and south side of the concrete batch plant
F02	SE¼, NW¼, NE¼, Section 13, Township 18N, Range 14 EIM, Tulsa County, Oklahoma	Located east of the concrete batch plant and approximately 120 feet north of the maintenance building.
F04	SE¼, NW¼, NE¼, Section 13, Township 18N, Range 14 EIM, Tulsa County, Oklahoma	Located approximately 300 feet east of the maintenance building.
F05	SE¼, NW¼, NE¼, Section 13, Township 18N, Range 14 EIM, Tulsa County, Oklahoma	Located approximately 120 feet north of F02.
F06	SE¼, NW¼, NE¼, Section 13, Township 18N, Range 14 EIM, Tulsa County, Oklahoma	Located approximately 50 feet south of F01.

STATEMENT OF BASIS

STATEMENT OF BASIS FOR THE DRAFT AUTHORIZATION TO DISCHARGE TO WATERS OF THE UNITED STATES UNDER THE OKLAHOMA POLLUTANT DISCHARGE ELIMINATION SYSTEM (OPDES).

ODEQ Permit No.:	OK0045781
Facility ID No.:	I-72002620
Applicant:	Sherwood Construction Company, Inc. DBA Greenhill Concrete Products, Inc – Broken Arrow 1640 S. 101st E. Ave. Tulsa, OK 74128
Issuing Office:	Oklahoma Department of Environmental Quality Water Quality Division 707 N. Robinson P.O. Box 1677 Oklahoma City, OK 73101-1677
Prepared By:	Brandon Tyler Industrial Permits Section
Date Prepared:	January 16, 2014
Reviewed by:	Carol Paden, P.E., Manager Industrial Permits Section
Permit Action:	Renewal of a OPDES Discharge Permit

In accordance with 40 CFR 124.8 and 124.56, this fact sheet describes the applicant's facility operation and sets forth the principal facts and the significant factual, legal, methodological, and policy questions considered in preparing the draft permit modification. Also set forth are any calculations or other necessary explanations of the derivation of specific effluent limitations and conditions, including a citation to applicable effluent limitation guidelines or performance standard provisions as required under 40 CFR 122.44. In accordance with 40 CFR 122.44(l), proposed permit limits for reissued permits are based on the more stringent of applicable technology-based limitations, applicable water quality-based limitations, or limitations in the previous permit.

Citations to 40 CFR refer to promulgated regulations listed at Title 40, Code of Federal Regulations. Citations to OAC 252 and OAC 785 refer to promulgated regulations listed at Titles 252 and 785, Oklahoma Administrative Code.

- 10/20/2014 Receipt of renewal application

B. PROPOSED PERMITTING ACTION

It is proposed that the OPDES Permit No. OK0045781 permit be reissued for a 5-year term in accordance with regulations promulgated at 40 CFR 122.46(a) and OAC 252:606-1-3(b).

II. APPLICANT ACTIVITY

A. DESCRIPTION AND LOCATION OF FACILITY

Greenhill Concrete Products, Inc. (formerly Arrow Concrete Company) is a ready-mix concrete processing facility (SIC 3273) located in the SE¼, NW¼, NE¼ of Section 13, Township 18N, Range 14EIM, Tulsa County Oklahoma.

B. WASTEWATER GENERATION AND TREATMENT

1. Process Wastewater

Based on the permit application, the facility discharges a maximum of 458,000 GPD of treated process wastewater via Outfall 002 to an unnamed tributary of Broken Arrow Creek.

Process wastewater treatment is comprised of settling of solids and pH adjustment in flow-through surface impoundments F01, F02, F04, F05, and F06.

2. Sanitary Wastewater

The facilities sanitary wastewater needs are handled by Port-a-Johns that are routinely serviced.

III. DISCHARGE INFORMATION

A. DISCHARGE LOCATION

The discharge is to an unnamed tributary of Broken Arrow Creek, located in stream segment 120410 of the Middle Arkansas River Basin. Based on the application, the facility has one outfall and is summarized below:

Outfall	Location		Receiving Stream
	Legal Description	Latitude -Longitude	
002	SE¼, NW¼, NE¼ Sect 13, T18N, R14EIM Tulsa Co., Oklahoma	N 36° 02' 32.2" W 95° 46' 8.8" (GPS: NAD83)	Unnamed tributary of Broken Arrow Creek

B. DISCHARGE DESCRIPTION AND CHARACTERISTICS

Outfall 002: The discharge consists of process wastewater from a concrete batch plant.

a. DMR Data (November 2012 – November 2014)

Effluent Flow (MGD)

Outfall	Frequency of Discharge	Type of Measurement	Long Term Avg	High 30-day Avg	Daily Max
002	Intermittent	Record	0.0402	0.0599	0.1249

Conventional, Non-Conventional, and Priority Pollutants

Parameters	Mass Loadings (lbs/day unless otherwise specified)		Concentration/Other Units (mg/l unless otherwise specified)	
	Daily Maximum	Long-term Average	Daily Maximum	Long-term Average
Oil & Grease	---	---	30.5	8.76
Total Suspended Solids	---	---	6.6	5.11
pH	Between 6.08 – 11.2 s.u.			

b. ODEQ Application Data

Effluent Flow (MGD)

Outfall	Frequency of Discharge	Type of Measurement	Long Term Avg	High 30-day Avg	Daily Max
002	Continuous	Record	0.0641	0.458	0.458

[1] ODEQ application data, Form 2C.

IV. RATIONALE FOR DETERMINING DISCHARGE PERMIT LIMITS

The following sections set forth the principal facts and the significant factual, legal, methodological, and policy considered in preparing the draft permit. Also set forth are any calculations or other necessary explanations of the derivation of specific effluent limitations and conditions, including a citation to the applicable effluent limitation guideline or performance standard provisions as required under 40 CFR 122.44, and reasons why they are applicable or an explanation of how the alternative effluent limitations were developed.

In accordance with regulations promulgated at 40 CFR 122.44(l), the draft permit limits are based on the more stringent of technology-based limitations, applicable water quality-based limitations, or the previous permit limits.

A. Technology-Based Effluent Limitations And Conditions

1. General Comments

Regulations promulgated in 40 CFR 122.44(a) and OAC 252:606-5-2(a)(1) require technology-based effluent limitations to be placed in OPDES permits based on effluent limitations guidelines, where applicable, on Best Professional Judgment (BPJ) in the absence of guidelines, or on a combination of the two.

2. Applicable Effluent Limitations Guidelines

Technology-based effluent limitations and conditions have not been promulgated for this industry.

3. Best Professional Judgment of the Permit Drafter

Under authority of the Clean Water Act and State laws, the State has developed this permit on a case specific basis since ELG's have not been developed for this industry. The Daily Maximum and Monthly Average concentrations and applicable loading limitations for these parameters are either Best Practicable Control Technology Current Available (BPT), Best Available Technology Economically Achievable (BAT), or Best Conventional Pollutant Control Technology (BCT) based on BPJ, using previous State and NPDES permits and the facility's past performance as guidance.

BPT, BAT, and BCT effluent limitations for Outfall 002 are shown in the following table.

BPT, BAT, and BCT Effluent Limitations – Outfall 002

Parameters	Monthly Average, mg/l	Daily Maximum., mg/l
Oil and Grease	Report	15
Total Suspended Solids	Report	40

4. Variance Request

No requests for variances from effluent limitations promulgated under 40 CFR have been received.

B. WATER-QUALITY-BASED EFFLUENT LIMITATIONS AND/OR CONDITIONS

1. General Comments

Section 101 of the Clean Water Act (CWA) states that "... it is the national policy that the discharge of toxic pollutants in toxic amounts be prohibited...." A permit containing technology-based permit limitations alone may not adequately protect the quality of a specific receiving stream. Thus, additional water quality-based effluent limitations and/or conditions are considered in the draft permit using narrative and numerical standards contained in the Oklahoma Water Quality Standards (OWQS), as amended (OAC 785:45), and implementation criteria contained in OAC 785:46 and 252:690, promulgated by the Oklahoma Water Resources Board (OWRB) and the Department of Environmental Quality (DEQ), respectively. This is to ensure that no point-source discharge results in instream aquatic toxicity, a violation of applicable narrative or numerical State water quality standards, or aquatic bioaccumulation which threatens human health.

2. Receiving Stream Designated Uses And Antidegradation Provisions

a. Designated Beneficial Uses

Outfall 002 discharges to an unnamed tributary of Broken Arrow Creek (WBID 120410010200) in Segment 120410 of the Middle Arkansas River Basin. As designated in Appendix A of the OWQS, the designated uses of the of the receiving stream in this segment are:

Fish and Wildlife Propagation/Warm Water Aquatic Community (OAC 785:45-5-12);
Agriculture (OAC 785:45-5-13);
Primary Body Contact Recreation (OAC 785:45-5-16);
Aesthetics (OAC 785:45-5-19); and
Fish Consumption (OAC 785:45-5-20).

b. Antidegradation Provisions

The unnamed tributary to Broken Arrow Creek is not designated as an Outstanding Resource Water (ORW), High Quality Water (HQW), or Sensitive Water Supply (SWS) in Appendix A of the OWQS. Neither is it designated in Table 1 of Appendix B of the OWQS as an area of ecological and/or recreational significance or in Table 2 of Appendix B as an area containing federally-listed endangered species.

3. Water Quality Standards Implementation Process

To achieve the objectives stated in Section IV.B.1 above, each pollutant present at measurable levels in the facility's effluent, for which there is one or more applicable numerical water quality criteria, is screened against the applicable criteria to determine whether the pollutant has reasonable potential (RP) to

exceed any of the criteria. The screens are performed in accordance with the OWQS, OWQS implementation criteria in OAC 785:46 and OAC 252:690, and the Continuing Planning Process (CPP) document. In the RP screening process, the 95th percentile effluent concentration, or estimate thereof if the effluent data set is not sufficiently large to determine it directly, is used to compute an instream concentration according to the regulatory mixing zone equations defined in OAC 785:46. The computed instream concentrations are then compared with the applicable criteria to determine whether RP is exhibited. However, after reviewing the application for this facility it was determined that there were no pollutants present at or above the applicable water quality criteria; therefore RP calculations are not needed.

4. Water Quality-Based Requirements By Designated Use

a. Fish and Wildlife Propagation/Warm Water Aquatic Community

(1) Dissolved Oxygen

Pursuant to OAC 785:45-5-12(f)(1)(A), dissolved oxygen (DO) criteria are designed to protect the diverse aquatic communities of Oklahoma. Based on the nature of the wastewater, the wastewater should not contain oxygen demanding substances at levels which would have reasonable potential to violate numerical criteria. Therefore, no permit limit or monitoring requirement is imposed for this criterion.

(2) Temperature

According to OAC 785:45-5-12(f)(2)(A), at no time shall heat be added to any surface water in excess of the amount that will raise the temperature of the receiving water more than 2.8°C at the edge of the mixing zone. Since heat is not added to the wastewater being discharged and discharge should essentially be at ambient temperature, there is no reasonable potential to violate temperature criterion. Therefore, no permit limit or monitoring requirement is imposed for this criterion.

(3) pH

OAC 785:45-5-12(f)(3) states, "the pH values shall be between 6.5 and 9.0 in waters designated for fish and wildlife propagation; unless pH values outside that range are due to natural conditions." Therefore, the draft permit establishes a lower pH limit of 6.5 standard units and an upper limit of 9.0 standard units.

(4) Oil and Grease

According to OAC 785:45-5-12(f)(4), "all waters having the designated beneficial use of any subcategory of Fish and Wildlife Propagation shall be maintained free of oil and grease to prevent a visible sheen of oil or globules of oil or grease on or in the water. Oil and grease shall not be present in quantities that adhere to stream banks and coat bottoms of watercourses or which cause deleterious effects to the biota." A narrative (water quality-based) condition requiring conformance to OAC 785:45-5-12(f)(4) is included in the draft permit. In addition, a daily maximum concentration limit of 15 mg/l for oil and grease will be placed in the draft permit for Outfall 002 to implement the narrative criteria of "no visible sheen".

(5) Biological Criteria

Pursuant to OAC 785:45-5-12(f)(5), aquatic life in all water bodies with the beneficial use designation of Fish and Wildlife Propagation (excluding waters designated "Trout, put-and-take") shall not exhibit degraded conditions. Based on the nature of the wastewater, the treated wastewater is not expected to degrade the diversity, similarity, community structure, species tolerance, trophic structure, dominant species, indices of biotic integrity, indices of well being, or other measures. Therefore, no permit limit or monitoring requirement is imposed for this criterion.

(6) Toxic Substances

In accordance with OAC 785:45-5-12(f)(6)(A), surface waters of the state shall not exhibit acute toxicity and shall not exhibit chronic toxicity outside the chronic regulatory mixing zone. Based on the permit application, the discharge does not contain toxic substances at levels that could result in acute or chronic toxicity to fish or wildlife. Since the facility is a minor discharger, whole effluent toxicity (WET) testing is not required.

(7) Turbidity

OAC 785:45-5-12(f)(7) states that turbidity from other than natural sources shall be restricted so as not to exceed the numeric limit of 50 NTUs for surface waters that have a beneficial use of Warm Water Aquatic Community. The draft permit includes a technology-based limitation for TSS (a daily maximum limit of 40 mg/L) and a water quality-based narrative requirement for suspended solids. It is the BPJ of the permit writer that limitation on TSS should adequately control turbidity in the facility's discharge.

b. Protection of Agriculture Use

Per information provided in the permit application, the discharge does not contain chlorides, sulfates, or total dissolved solids at levels which would require water quality limitation and/or monitoring.

c. Primary Body Contact Recreation

Per information provided in the permit application, the discharge does not contain any sanitary waste. Therefore, coliform bacteria, escherichia coli (E. coli), and/or enterococci are not expected to be present at levels which would require water quality limitation and/or monitoring.

OAC 785:45-5-16(a) states "The discharge shall not contain chemical, physical, or biological substances in concentrations that are irritating to skin or sense organs or are toxic or cause illness upon ingestion by human beings." The draft permit will contain a narrative stating the prohibition of these conditions for Outfall 002.

d. Protection of Aesthetics Use

Aesthetics use is determined in accordance with OAC 785:45-5-19, which states, "the surface waters of the state must be free from floating materials and suspended substances that produce objectionable color and turbidity." A narrative requirement is established in the draft permit to prohibit the discharge of floating solids or visible foam in other than trace amounts. In addition, the technology-based numerical effluent limitations of a 40 mg/L daily maximum for TSS should also help to maintain the narrative water quality criteria for TSS.

e. Fish Consumption

In accordance with OAC 785:45-5-20(a), "surface waters of the state shall be maintained so that toxicity does not inhibit ingestion of fish and shellfish by humans." Per information provided in the permit application, the discharge does not contain pollutants at levels which would require fish consumption water quality limitation and/or monitoring.

C. Effluent Monitoring Requirements

Since it was determined that there were no pollutants present for which RP calculations would be needed, further effluent monitoring is not justified.

D. 303(d) Listing Evaluation

1. Water Quality Assessment and Causes of Impairment

The segment of Broken Arrow Creek which Outfall 002 discharges to is not listed as an impaired water body on Oklahoma's 2012 303(d) list.

2. 303(d) List-Related Permitting Actions

The permit may be reopened for modification or revocation and reissuance to require additional monitoring and/or effluent limitations where actual or potential exceedances of state water quality criteria are determined to be the result of the permittee's discharge(s) to the receiving water(s), a Total Maximum Daily Load is established for the receiving stream(s), new water quality criteria isestablished, or a different technology based guideline is promulgated. Modification or revocation and reissuance of the permit shall follow regulations listed at 40 CFR 124.5.

E. Antidegradation Requirements

As stated in Section V.B, no antidegradation restrictions apply to the segments of a unnamed tributary of Broken Arrow Creek. Implementation of the state's antidegradation policy, as described at OAC 785:46, Subchapter 13, requires no further protection beyond the Tier 1 level (maintenance and protection of designated uses) for these receiving waters.

F. Protection of Endangered and Threatened Species and Critical Habitat

The receiving stream to which the facility discharges is not considered by the U.S. Fish and Wildlife Service (USFWS) to be a sensitive area for endangered or threatened species. Therefore, consultation with the USFWS is not required.

V. NON-DISCHARGE REQUIREMENTS

A. Surface Impoundment

Descriptions of surface impoundments are shown in the table on the following page.

Description of Surface Impoundments (S.I.)

Classification OAC 252:616-1-2		Liner Requirements OAC 252:616-7-2(b)	Holding Capacity and/or Dimensions OAC 252:616-7-1(6)	Wastewater Destination
S.I. (*)	Wastewater			
F01	Wastewater from the truck washout area and associated stormwater runoff - Class I	Concrete	59,252 gallons 30' x 102' x 6'	F03 and F06
F02	Wastewater from the truck washout area and associated stormwater runoff - Class II	Concrete	25,761 gallons 24' x 36' x 6'	F03 and F06
F04	Wastewater from the truck washout area and associated stormwater runoff - Class I	Concrete	5,350 gallons 11' x 25' x 5.2'	F03 and F06
F05	Wastewater from the truck washout area and associated stormwater runoff - Class I	Concrete	12,934 gallons 29.2' x 32' x 2.25'	F03 and F06
F06	Wastewater from the truck washout area and associated stormwater runoff - Class I	Concrete	47,127 gallons 30' x 60' x 3.5'	Outfall 002

(*) Designation F refers to flow-through surface impoundment.

Location of Surface Impoundments

S.I.	Legal Location	General Location and Description
F01	SE¼, NW¼, NE¼, Section 13, Township 18N, Range 14 EIM, Tulsa County, Oklahoma	Located southwest corner of the facility and south side of the concrete batch plant
F02	SE¼, NW¼, NE¼, Section 13, Township 18N, Range 14 EIM, Tulsa County, Oklahoma	Located east of the concrete batch plant and approximately 120 feet north of the maintenance building.
F04	SE¼, NW¼, NE¼, Section 13, Township 18N, Range 14 EIM, Tulsa County, Oklahoma	Located approximately 300 feet east of the maintenance building.
F05	SE¼, NW¼, NE¼, Section 13, Township 18N, Range 14 EIM, Tulsa County, Oklahoma	Located approximately 120 feet north of F02.
F06	SE¼, NW¼, NE¼, Section 13, Township 18N, Range 14 EIM, Tulsa County, Oklahoma	Located approximately 50 feet south of F01.

1. **Wastewater Classification [OAC 252:616-1-2]**

The wastewater generated from truck washout and associated stormwater runoff at this facility, was tested in a previous permit for classification. Due to high pH, surface impoundments F01, F02, F05, and F06 were classified as Class I wastewater and F02 was determined to be Class II wastewater.

2. **Freeboard Requirements (OAC 252:616-7-1(7))**

Pursuant to OAC 252:616-7-1(7), a minimum freeboard of one (1) foot shall be maintained for surface impoundments F01, F02, F04, F05, and F06.

3. **Depth to Groundwater (OAC 252:616-7-1(4)(B))**

Review of the December 7, 2009 engineering report, shows that the minimum groundwater separation from the bottom of surface impoundments F01, F02, F04, F05, and F06 is approximately 2.5 feet. Since surface impoundments F01, F02, F04, F05, and F06 contain concrete liners, it is the Best Professional Judgment of the permit writer that the depth to groundwater requirement of OAC 252:616-7-1(4) is satisfied.

4. **Liner Requirements (OAC 252:616-7-2(b))**

Surface impoundments F01, F02, F04, F05 and F06 have a concrete liner. Since the wastewater being retained is Class I and Class II, it is BPJ that concrete liners are an appropriate and compatible liner system in accordance with OAC 252:616-7-2(b).

5. **Additional Requirements (OAC 252:616-11 or OAC 252:616-13)**

The permit may be reopened to implement and/or require impoundment modifications, additions, extensions, and/or operational changes; monitoring and reporting; reclassification of wastes; sludge management plans; best management practices; closure plans; and/or other appropriate actions.

At such time as surface impoundments F01, F02, F04, F05 and/or F06 to be permanently taken out of service or at such time as the contents of F01, F02, F04, F05 and/or F06 pose a risk to the environment or waters of the State, the owner or operator of the facility shall follow all closure requirements contained in OAC 252:616-11 or OAC 252:616-13.

B. Land Application

Not applicable.

VI. DRAFT PERMIT LIMITS AND OTHER REQUIREMENTS

A. EFFLUENT LIMITATIONS

Permit requirements are based on OPDES regulations (40 CFR Parts 122, 124, and 136) and OAC 252:606.

Outfall 002

Parameters	Technology-based		Water Quality-based		Previous Permit		Draft Permit	
	Maximum Daily, mg/l	Monthly Average, mg/l	Maximum Daily, mg/l	Monthly Average, mg/l	Maximum Daily, mg/l	Monthly Average, mg/l	Maximum Daily, mg/l	Monthly Average, mg/l

pH	Between 6.0 – 9.0 s.u.		Between 6.5 - 9.0 s.u.		Between 6.5 - 9.0 s.u.		Between 6.5 - 9.0 s.u.	

Parameters	Draft Permit	
	Frequency	Sample Type
Flow	1/Month	Estimated
Oil and Grease	1/Month	Grab
TSS	1/Month	Grab
pH	1/Month	Grab

B. EVALUATION FOR PERFORMANCE-BASED MONITORING FREQUENCY REDUCTIONS

In accordance with OAC 252:690-91, since the permit does not contain any monthly average limits, performance-based monitoring frequency reductions are not applicable.

VII. SUMMARY OF CHANGES FROM PREVIOUS PERMIT

- No changes made from the previous permit.

VIII. ADMINISTRATIVE RECORD

The following sources were used to prepare this permit and constitute a part of the administrative record for this permit:

A. APPLICATIONS

OPDES Industrial Permit Application No. OK0045781 (Forms 1, 2C, and 2SI), received October 20, 2014.

B. CLEAN WATER ACT CITATIONS

Section 301, 303(d), and 402(a)

C. 40 CFR CITATIONS

40 CFR, in particular, Parts 122, 124, 136

D. STATE LAW, STANDARDS, AND RULES AND REGULATIONS

- Oklahoma Pollutant Discharge Elimination System (OPDES) Act, 27A O.S., §2-6-201 et seq.
- OAC 252:606, 616, and 690
- Oklahoma's Water Quality Standards, as amended
- Oklahoma Continuing Planning Process Document (CPP)

E. MISCELLANEOUS

- 2012 303(d) list
- The permit file

IX. CERTIFICATION AND FINAL DETERMINATION

A draft permit and draft public notice will be sent to the District Engineer, Corps of Engineers, Oklahoma Conservation Commission, and to the Regional Director of the U.S. Fish and Wildlife Service upon publication of that notice. If comments are received from these agencies or other State or Federal agencies with jurisdiction over fish, wildlife, or public health, the permit may be denied or additional conditions may be included in accordance with regulations promulgated under 40 CFR 124.59.

The public notice describes the procedures for the formulation of final determinations.

ITEM NO.	CRITICAL ITEMS
01	Treatment of industrial wastewater at an unpermitted facility.
02	Discharge from additional outfalls or construction of additional surface impoundments not included in facility's permit.
04	Failure to orally report all bypasses within twenty-four hours and/or failure to file a written report within five days.
05	Failure to prevent bypasses of treatment units or overflows from surface impoundments.
13	Analyses to determine compliance with NPDES/OPDES permit performed at laboratory not certified by DEQ.
17	Failure to submit noncompliance reports following violations of the facility's NPDES/OPDES permit limits and conditions.
18	Reporting of effluent quality data on SMRs that is inconsistent with laboratory results
20	Failure to adequately measure flow during discharges as required by NPDES/OPDES permit.

Subject: Authorization to Construct No. **2005-021-C**
Greenhill Materials West Quarry
W/2 SE/4 Section 8, T20N, R14E, Tulsa County, Oklahoma

Dear Mr. Curtis:

Enclosed is the Authorization to Construct the referenced facility. Please note that this Authorization is issued subject to conditions of the Nonmetallic Mineral Processing Facility General Permit, which is attached. These conditions must be carefully followed since they define the limits of the permit and will be confirmed by periodic inspections.

Also note that you are required to annually submit an emission inventory for this facility. An emission inventory must be completed on approved AQD forms and submitted (hardcopy or electronically) by March 1st of every year. Any questions concerning the form or submittal process should be referred to the Emission Inventory Staff at 405-702-4100.

Thank you for your cooperation in this matter. If we may be of further service, please contact our office at (918) 293-1600. Air Quality personnel are located in the DEQ Regional Office at Tulsa, 3105 E. Skelly Drive, Suite 200, Tulsa, OK, 74105.

Sincerely,

Herb Neumann

AUTHORIZATION TO CONSTRUCT

PURSUANT TO THE TERMS OF THE NONMETALLIC MINERAL PROCESSING FACILITY GENERAL PERMIT

Air Quality Division
State of Oklahoma
Department of Environmental Quality
707 North Robinson
P.O. Box 1677
Oklahoma City, Oklahoma 73101-1677

Authorization No.:	2005-021-C
Effective Date:	NOV 2 9 2005
Facility Name:	Greenhill Materials West Quarry **SIC Code:** 1422
Facility Location:	W/2 SE/4 Section 8, T20N, R13E, Tulsa County, OK
Company Name:	Greenhill Materials Co., LC
Mailing Address:	P.O. Box 10, Catoosa, OK, 74015
Contact Person:	John R. Curtis, General Manager (918-266-6861)

This Authorization is issued pursuant to **OAC 252:100-7-15 and 252:100-7-18.**

Authorization is hereby granted the above named entity to construct the emission units, emission points, and other processes listed herein which are located at the above described minor facility (Facility) pursuant to the terms of the Nonmetallic Mineral Processing Facility General Permit as issued by the Oklahoma Department of Environmental Quality, Air Quality Division, on May 9, 2000. The Authorization addresses only those emission sources listed herein and only while located at the Facility.

Chief Engineer, Air Quality Division

Except as otherwise prohibited or limited by the Permit or this Authorization, the permittee is hereby authorized to construct the following emission sources and/or conduct the following activities at the referenced site, described in the application received on October 3, 2005. The Evaluation Memorandum, dated November 29, 2005, explains the derivation of applicable permit requirements and estimates of emissions; however, it does not contain operating limitations or permit requirements. Continuing operation under this permit constitutes acceptance of, and consent to, the conditions contained herein.

I. Emission Units and Numerical Limitations

Emission limitations are hereby established for all regulated pollutants as a facility-wide cap. Emissions from all emission units at the facility shall not equal or exceed major source thresholds, i.e., 100 TPY of any regulated pollutant or 10 TPY of any single HAP or 25 TPY of any combination of HAPs.

Compliance with these emission limitations shall be determined on a monthly rolling basis. The estimate shall be annualized using a monthly average during the first 11 months following issuance of this Authorization. However, any facility with actual emissions of each regulated air pollutant less than 80% of the major source thresholds may make this determination annually. The facility throughput shall be maintained at such a level as to not exceed the annual facility-wide emissions limitations.

II. Monitoring and Recordkeeping Requirements

The permittee shall demonstrate continued compliance with any emission limitations or any operational conditions as specified in the permit (summarized in Table 5 of the Evaluation Memorandum).

III. Equipment Additions/Authorization Modifications

Construction of additional emission units (as provided by the Nonmetallic Mineral Processing Facility General Permit), or operational changes (e.g., changes in tank contents to another organic liquid or increases in throughput), may be allowed over the life of this Authorization without obtaining an Authorization to Construct so long as facility-wide emissions do not exceed that amount which would cause the facility to be classified as a major source.

Written notification of intent to construct, or to make operational changes (e.g., changes in tank contents or increases in throughput), must be provided to DEQ within 7 days of the start of operation. Neither an Authorization to Construct nor a new Authorization to Operate is required for these changes.

Operation of additional emission units authorized under an individual construction permit (e.g., those requiring a site-specific determination) requires issuance of a new Authorization to Operate for the facility (see Part 4, section II.C of the permit). The permittee shall make application for a

new Authorization to Operate within 60 days of commencing operation of such additional emission units.

IV. Previous Permits

None.

V. Equipment List

The inventory listed in Table 1 shows the emission units at the facility.

OKLAHOMA DEPARTMENT OF ENVIRONMENTAL QUALITY
AIR QUALITY DIVISION

MEMORANDUM **November 29, 2005**

TO: DFL Dawson Lasseter, P.E., Chief Engineer, Air Quality

THROUGH: RK Richard Kienlen, P.E., Eng. Mgr. II, New Source Permits Section

THROUGH: Peer review, Judy Cupples

FROM: Herb Neumann
Regional Office at Tulsa

SUBJECT: Evaluation of Permit Application **No. 2005-021-C**
Authorization to Construct a Rock Crushing Plant
Nonmetallic Mineral Processing Facility General Permit
Greenhill Materials West Quarry
W/2 SE/4 Section 8, T20N, R13E, Tulsa County
Driving directions: From the intersection of US 169 and OK 266 (46th Street North) northeast of Tulsa, approximately 1/2 miles east, plant on left (north).

ELIGIBILITY

Greenhill Materials has applied for an authorization to construct a limestone aggregate processing facility (SIC 1422) in an attainment area. The maximum plant process rate is planned to be 600 tons per hour (TPH) or 1,800,000 tons per year (TPY). The facility will consist of two crushers, two screens, a pugmill, 11 conveyors, five radial stackers, a sand screw, and a feed hopper. The facility will use diesel-fired front-end loaders, but all other equipment will use electricity.

The current application under discussion is for an Authorization to Construct under the Nonmetallic Mineral Processing Facility General Permit (GP) that was issued on May 9, 2000, and includes a request to establish a facility-wide emissions cap (< 100 TPY of any criteria pollutant and/or < 10 TPY of any single HAP or < 25 TPY of a combination of HAPs) in order to avoid other applicable requirements, i.e., Part 70 requirements. The applicant is not subject to a compliance schedule.

The facility is designed for the primary purpose of processing nonmetallic minerals. No emission units are proposed for operation at the facility that are not addressed in the Nonmetallic Mineral Processing GP. The facility is eligible for coverage.

EQUIPMENT

The following table shows equipment planned for the facility. Control is supplied in some areas by dust suppression equipment, such as spray bars, while the wash portion of the plant carries wet material, approximating a slurry. The word "wet" is used for all of these, with more detail found in the discussion of emissions. Construction dates for certain items are known and all others are identified with the proposed first operations date.

Table 1: Equipment List

Emission Unit EUG & ID#	Description	Const. Date	Control Equipment	NSPS Subpart

EMISSIONS

Criteria Pollutants

Emissions from the nonmetallic mineral processing equipment are based on the 600 TPH maximum capacity of the plant, considering controls, and using the applicant's proposed annual throughput limit of 1,800,000 tons. Air emissions at the facility result primarily from particulate matter from the crushing/sizing operations. Air emissions are controlled by water suppression and spray bars. Uncontrolled emission factors used by the facility are consistently greater than or equal to those listed in Table 11.19.2-2 of AP-42 (8/04). Additionally, the facility's controlled factors, calculated by multiplying the uncontrolled factors by the various control efficiencies claimed, yield factors consistently equal to or greater than the controlled factors listed in AP-42. If process emissions were not limited to 3,000 hours of operation annually, and assuming equipment to be used in the same proportions as outlined here, the potential to emit (PTE) for this facility would be 9.3 TPY of PM_{10}. Removing water suppression from the crusher plant in addition to allowing continuous operation would bring emissions close to the major source threshold. This facility is well suited for the GP authorization.

Table 2: Emissions from Process Equipment

Emission Point*	Control %	Process rate, TPH	Annual hours	PM_{10} factor, lb/Ton	PM_{10} Emissions	
					Lb/hr	TPY
Crusher plant operations						
Truck unloading	-0-	600	3,000	1.6×10^{-5}	0.010	0.014
F-1 to Cr-1	90	600	3,000	2.9×10^{-3}	0.174	0.261
Cr-1	75	600	3,000	2.4×10^{-3}	0.360	0.540
Cr-1 to C-1	90	600	3,000	2.9×10^{-3}	0.174	0.261
C-1 to C-2	90	600	3,000	2.9×10^{-3}	0.174	0.261

Pugmill operations						
Loader to pugmill	100	550	2,500	2.9×10^{-3}	-0-	-0-
Pugmill to trucks	100	550	2,500	2.9×10^{-3}	-0-	-0-
				Totals	**1.96**	**2.64**

* F-1 means feeder number 1, Cr-2 means crusher number 2, C-3 means conveyor number 3, S-1 means screen number 1, RS-2 means radial stacker number 2, pile means any of several stockpiles, SS-1 means the sand screw, and FH-1 means feed hopper number 1.

There are also emissions of fugitive dust from the haul roads and stockpiles. However, since haul road and stockpile fugitive emissions are not counted towards determining major source status, emission estimates are calculated for these activities only as a memorandum exercise. Fugitive emissions of particulate for vehicle travel were calculated using empirical formula 1a from Section 13.2.2.2 of AP-42 (12/03),

$$E = k(s/12)^a(W/3)^b$$

where,
E = emission factor (lb/VMT, VMT = vehicle miles traveled)
s = percent of silt
W = mean weight (tons)
a, b, k = constants from Table 13.2.2-2.

VMT for haul roads and plant roads is calculated by dividing the total tonnage to be hauled by the average weight for each truck to calculate the number of loads and multiplying the result by the mileage traversed by each load. Multiplying E times the VMT for each activity yields particulate emissions. Note that dividing the VMT for each activity by 3,000 hours of operation yields an estimate of VMT/hr and therefore an estimate of lb/hr of emissions. The following table presents the data and emission results. The facility proposes to finish 1,800,000 TPY of products. The roads are watered, for which AP-42 allows a 70% control factor. The final emission numbers are the only place where this reduction is reflected. Only data related to PM_{10} emissions are used.

Table 3: Fugitives

Datum	Plant roads	Haul roads
k	0.35	0.35
a	0.9	0.9
b	0.45	0.45
s	10	9.6
W	31.75	79.25
E	0.86	1.25
Annual tonnage	1,800,000	1,800,000
Average load	31.75	79.25
Miles per load	0.5	1.5
Annual VMT	43,900	27,480
MPH	10	20
PM_{10} emissions	12.6 lb/hr	11.5 lb/hr
	18.9 TPY	17.2 TPY

Storage pile PM_{10}emissions were calculated using the formula

$$E = 0.0032\ k \times (u/5)^{1.3} \div (M/2)^{1.4},$$

where k = 0.0032 for PM_{10}, u (wind speed) = 10 mph, and M (moisture content) = 10%. Thus, E is 2.75×10^{-3} lb/ton, and for 1.8×10^{6} tons per year, PM_{10} emissions are 2.48 TPY.

Note that the fugitive emissions identified in the following table of total emissions are not used in determining if the facility is major.

Table 4: Facility-wide Total PM_{10} Emissions

Sources	Lb/hr	TPY
Process Equipment	1.96	2.64
Fugitives	24.1	36.1
Storage pile(s)	0.57	2.48
Totals	26.6	41.2

Hazardous Air Pollutants (HAPs)

There are no identifiable HAP emissions.

Other Regulated Pollutants

No other regulated pollutants of concern are emitted from this facility except at negligible levels.

PREVIOUS PERMITS

This is a new facility and no permits have been issued previously.

EMISSION LIMITATIONS

Emission limitations are established in the Authorization to Operate as a facility-wide emissions cap in order to avoid other applicable requirements, i.e., Part 70 requirements. This cap is established at a level to not equal or exceed major source thresholds. Compliance with these emission limitations shall be determined on a monthly rolling basis. The estimate shall be annualized using a monthly average during the first 11 months following issuance of this Authorization. However, any facility with actual emissions of each regulated air pollutant less than 80% of the major source thresholds may make this determination annually.

APPLICABLE REQUIREMENTS AND MONITORING AND RECORDKEEPING REQUIREMENTS

Applicable requirements and monitoring and recordkeeping requirements for all eligible sources were identified and evaluated in development of the Nonmetallic Mineral Processing Facility General Permit. As a summary, and for informational purposes only, Table 5 lists whether or not a particular condition of the permit and any specific monitoring and recordkeeping requirement pertains to a particular emission unit proposed for this site.

PERFORMANCE TESTING

The processing equipment at a nonmetallic minerals processing facility which commences construction or modification after August 31, 1983, is subject to 40 CFR 60, Subpart OOO. Since all of the equipment at this facility will be constructed after the promulgation of this subpart, each is subject to performance testing as required by the subpart. Opacity standards are identified in 40 CFR 60.672 and the testing methods and requirements are described in 40 CFR 60.675. There are no capture systems, so the provisions of §672(a) do not apply. Emissions from belt conveyors are limited to 10% opacity by §672(b). Because there is no capture system, emissions from crushers are limited to 15% opacity by §672(c). Truck dumping is exempt from opacity limits per §672(d). Finally, wet screening and all subsequent operations of saturated materials up to the next crusher, grinding mill, or storage bin shall have no visible emissions (0% opacity) per §672(h).

TIER CLASSIFICATION AND PUBLIC REVIEW

The application associated with this Authorization under the GP is classified as **Tier I**, per OAC 252:2-15-40(c)(1), effective June 15, 2005. Since the Nonmetallic Mineral Processing Facility General Permit has previously undergone public review (notice published on September 30, 1999, in the *Tulsa World* and the *Daily Oklahoman*), no site-specific public review is required. The applicant has submitted an affidavit that they are not seeking a permit for land use or for any operation upon land owned by others without their knowledge. The affidavit certifies that the applicant uses the land by lease.

FEE PAID

The Nonmetallic Mineral Processing Facility General Permit Construction Authorization fee is $400 and applicant submitted the required $400.

SUMMARY

The applicant has demonstrated the ability to meet all the requirements of the Nonmetallic Mineral Processing Facility General Permit issued on May 9, 2000. Ambient air quality standards are not threatened at the site. Issuance of the Authorization to Construct is recommended.

The below listed rules are cited in the Oklahoma Administrative Code, Title 252, except when noted. ** These rules are cited in 27A O.S.

SECTIONS	RULES	REQUIREMENT DESCRIPTIONS	ITEM	VIO
TOTAL RETENTION AND DISCHARGE PERMITS	616-3-1	**Facility is as described in permit**	*01	
	616-3-1	**All discharge outfalls and surface impoundments permitted**	*02	
	616-7-1	Treatment system properly operated and maintained	03	
	606-1-3(b)(3)(W)	**Bypasses or overflows reported**	*04	
	** 2-6-205(A)	**Bypasses or overflows corrected**	*05	
	** 2-6-501	Wastes from treatment structures properly disposed	06	
	** 2-6-501	Waste hauler and disposal site recorded	07	
	616-7-1	Impoundment dikes properly constructed	08	
	616-7-1	Impoundment freeboard is as permitted	09	
	616-7-1	Dikes or liners properly maintained	10	
	616-5-1	Facility and/or impoundment access restricted	11	
	616-5-1	Facility and/or impoundment marked with signs listing facility operator, emergency telephone # and permit #	12	
DISCHARGE PERMITS	606-11-2	**Support laboratory is certified by DEQ** Samples collected by: _____ (Contract laboratory) _____ (Facility) Samples analyzed by: _____ (Contract laboratory) _____ (Facility)	*13	
	606-t1-2	Approved analytical procedures and equipment used	14	
	606-1-3(b)(3)(W)	QA/QC records maintained	15	
	606-t1-4(b)	SMRs/DMRs for the last three years are on file	16	
	606-1-3(b)(3)(W)	**Noncompliance reports submitted when violations occur**	*17	
	606-t1-4	**SMR/DMR data matches laboratory results sheets**	*18	
	606-1t-2	Laboratory results sheets have date received, analysis date, time and method used, analyst and results	19	
	606-tt-5	**Flow measurement methods adequate**	*20	
	606-11-5	Correct sampling location	21	
	606-11-2	Correct sampling methods used	22	
	606-11-2	Sample holding times not exceeded	23	
	606-11-2	Calibration records for instruments and equipment maintained	24	
	606-11-2	Chain of custody documents, date, time, place of sample, sampler, number and type of samples, preservatives used and signatures	25	
	606-5-1	No visible oil sheen (violation of OWQS)	26	
	606-5-1	No visible foam or solids (violation of OWQS)	27	

DESCRIPTIONS OF DEFICIENCIES

Items from previous inspection have been addressed

List effluent treatment/control structures in sequence from source to final outfall or total retention impoundment

Critical items are indicated in bold and by an asterisk (*) in the item column. All critical items marked must be corrected within 14 days or as specified by the inspector. Other violations must be corrected by the next regular inspection or by the date specified.

TYPE CLASS
74 : R Lagoon, Total Retention
74 : L Land Application
74 : D Discharging Lagoon (maj)
74 : D1 Discharging Lagoon (min)

ITEM NO.	CRITICAL ITEMS
01	Treatment of industrial wastewater at an unpermitted facility.
02	Discharge from additional outfalls or construction of additional surface impoundments not included in facility's permit.
04	Failure to orally report all bypasses within twenty-four hours and/or failure to file a written report within five days.
05	Failure to prevent bypasses of treatment units or overflows from surface impoundments.
13	Analyses to determine compliance with NPDES/OPDES permit performed at laboratory not certified by DEQ.
17	Failure to submit noncompliance reports following violations of the facility's NPDES/OPDES permit limits and conditions.
18	Reporting of effluent quality data on SMRs that is inconsistent with laboratory results
20	Failure to adequately measure flow during discharges as required by NPDES/OPDES permit.

Date: 9/7/16

Total number of items marked: 1

Number of critical items marked: 1

ITEM NO.	CRITICAL ITEMS
*01	**Facility permitted: Authorization on file** – A Permit must be obtained that authorizes the discharge of storm water and an NOI must be on file
*02	**SWPPP developed**– Each construction or industrial facility must have a pollution plan developed.
*04	**BMP properly implemented in accordance with SWP3** - Best management practices (sediment control measures, good housekeeping) must be implemented as stated in the SWP3.
*11	**Non-Allowable Discharges Prevented** – Facilities or activities are authorized for the discharges for which the general permit applies. Any discharges that are not compliant with the eligibility conditions of the general permit are not authorized by the general permit. Ineligible discharges must be permitted by an appropriate permit (individual or alternative) to be compliant.
*15	**Final Stabilization completed** – Site must be stabilized to within 70% of the original natural vegetative ground cover. If the original natural vegetative ground cover was 50% then the required vegetative stabilization required is 35% (.50 X .70 = .35); temporary erosion and sediment control measures have been removed or will be removed at an appropriate time to ensure final stabilization is maintained. This requirement is also for the termination of asphalt batch plants (Sector D) and concrete batch plants (Sector E) of the Industrial Storm Water Permit (OKR05).
*16	**Operations have ceased** - Facility is closed and no longer in operation or there is no further construction activity occurring.
*18	**Permitted discharges have ceased** – The facility may be in operation but the authorized activity is no longer in operation (e.g. have changed SIC or NAC code)
	NON-CRITICAL ITEMS
03	SWPPP posted at the construction or facility site or locally available
05	Silt barriers in place, effective and maintained – All barriers described in the SWP3 must maintained and effective in controlling sediment leaving the construction site.
06	Sediment basins (if required) adequate and maintained as required – Sediment basins must be adequate size (3600 cubic feet/acre) and maintained (cleaned out when storage capacity is reduced by 50%). Required if stated in SWP3 or site is greater than 10 acres without site constraints.
07	Inspection of BMPs at required frequency and documented – Owner/operators of construction sites are required to conduct inspections of the sediment control measures every 14 days, maintain records of the inspections and modify the SWPPP as needed. For industrial facilities, the frequency is determined by the SWPPP and is to be completed by qualified personnel. The SWPPP is to be updated within 14 days of the inspection. All results and corrective actions must be documented in the SWPPP.
08	Vegetation established on completed areas – As sections of a project are completed vegetative stabilization is initiated.
09	Offsite tracking of mud and sediment prevented – Offsite tracking of mud and sediment by construction vehicles to be prevented. Areas that have evidence of offsite tracking are to be cleaned.
10	Other control measures implemented – Other control measures as stated in the General Permit must be met to minimize solid material from entering waters of the state. No solid materials, including floatable debris may be discharged. Generation of dust must be minimized. Tracking or blowing of raw, final, or waste materials from areas of no exposure to exposed areas must be minimized.
12	The requirements and procedures for quarterly visual monitoring are applicable to all industrial facilities covered under the general storm water permit, regardless of the facility's sector or SIC code (except those that qualify for No Exposure). The requirements and procedures are found in part 5.1.1 of the general permit and the results must be documented and maintained onsite with the SWPPP.
13	NELM Reports submitted and maintained - Table 1-3 of Part 1.3 of the general permit identifies industrial storm water discharges subject to Numeric Effluent Limitation Monitoring (NELM). Industry specific numerical limitations and compliance monitoring requirements are described in Part 12 of the general permit. The requirements and procedures are found in Part 5.2 and the results must be documented and maintained onsite with the SWPPP, and submitted to the DEQ on a Discharge Monitoring Report (DMR).
14	An Annual Comprehensive Site Compliance Evaluation Report (ACSCER) must be completed by all industrial facilities covered by the general permit. The ACSCER must be filed during the period October 2 to October 1 each year and submitted to DEQ no later than December 1 and maintained with the SWPPP. The requirements for completing the ACSCER are found in Part 4.8 of the general permit.
17	Facility has met the final stabilization requirements under permit OKR10 and may submit a Notice of Termination form (605-003)

Attention: Mr. Herb Neumann

Re: Nonmetallic Mineral Processing Facility General Permit
Sherwood Construction Company, Inc.
Greenhill Materials Co. LLC Quarry
Authorization #2005-012-O

Dear Mr. Neumann:

Pursuant to our conversation of 4/24/07, in addition to requirements contained in the referenced Authorization, this letter and accompanying attachments will serve as written notification of our intent to make operational changes at our Greenhill Materials Quarry.

The Additional Emission Units identified in the first diagram will be situated in our primary production area and will be a part of our daily operation. The Operational Change Units identified in the second diagram will be in the pit area. This is to be a temporary operation used on an intermittent basis.

Should you have any questions upon your review of the submitted information, please give me a call @ 274-6560 or we can meet at your convenience.

Respectfully Submitted,

Rob Simms
Sherwood Construction Co./Greenhill Materials

The following list contains *New Equipment* Greenhill Materials will install in June of 2007. Please note *Figure 1* for the Flow Chart of this equipment. The addition of this equipment will not impact facility annual throughput.

DEQ FORM 605-006 Sept. 5, 2011

OKLAHOMA DEPARTMENT OF ENVIRONMENTAL QUALITY

Oklahoma Department of Environmental Quality
Annual Comprehensive Site Compliance Evaluation Report for Industrial Facilities (ACSCER)

Submission of this Comprehensive Site Compliance Evaluation Report, Part B, provides notice that the party identified in Section I of this form is not required to conduct Benchmark Monitoring for storm water discharges associated with industrial activities under the OPDES program. This Annual Comprehensive Site Compliance Evaluation Report is required for all authorized industrial facilities.

All Requested Information Must Be Provided On This Form (Part A) and the ACSCER Form (Part B).

See Instructions On Page 4 of The Form.

Section I.

OPDES Permit Authorization Number: OK0045781 OKR052614

Section II. Facility Operator Information

Name: Greenhill Concrete Products, Inc. Phone: 918-266-6861

Address: P.O. Box 10

City: Catoosa County: Rogers Zip Code: 740125

Section III. Facility Location

Name: Greenhill Concrete Products, Inc. Phone: 918-739-4812

Address: 1601 E. Houston Street

City: Broken Arrow County: Tulsa Zip Code: 74012

Latitude: 36.04419 Longitude: 95.76987

Section IV. Certification

I certify under penalty of law that I have read and understand the requirements for filing this Comprehensive Site Compliance Evaluation Report, which is to be filed by March 1st of each year beginning in 2012.

This report is also to be retained as part of the SWP3 for at least three (3) years from the date permit coverage expires or is terminated and will be made available to any State or Federal Inspector visiting this facility. All records of actions taken in accordance with 4.10 of this permit as part of the Storm Water Pollution Prevention Plan will be retained for at least three (3) years from the date permit coverage expires or is terminated. I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gathered and evaluated the information submitted. Based upon my inquiry of the person or persons who manage the system, or those persons directly involved in gathering the information, the information submitted is to the best of my knowledge and belief true, accurate, and complete. I am aware there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Annual Comprehensive Site Compliance Evaluation Report - Part B
Page 1.

Reporting Period: 01/01/2014 - 12/31/2014.

✓ How many routine facility inspections did you perform during the reporting period? 3

✓ How many corrective actions (Part 4.2.17.3) to remove the original violation and document these actions according to corrective action deadlines?

Date	Deficiencies	Corrected (Y or N)	Date Corrected
11-7-2014	Ditch seep	Y	11-21-2014
7-22-2014	Housekeeping - trash, etc.	Y	9-30-2014
2-17-2014	Plugged storm drain	Y	3-15-2014

✓ What must you do to correct the deficiencies that remain uncorrected?
NA

✓ Were all BMPs you indicated you would be using in your SWP3 (Part 4.2.8) including good housekeeping practices, actually being implemented at the time of the Annual Comprehensive Site Compliance Evaluation?
Yes ____ No X

✓ If one or more BMPs were not being implemented, were corrective actions taken after the FIRST inspection to find the problem?
Yes X No____ All BMPs were being implemented ____

✓ Was/were the same failure(s) to implement a BMP deficiency(ies) noted in more than one inspection?
Yes ____ No No ____ No deficiencies noted in any inspection ____

✓ Did any of your routine facility inspections find that one or more of your BMPs was not effective in controlling the pollutant source for which it was designed?
Yes ____ No X All BMPs were effective ____

✓ If you found one or more ineffective BMPs, have they all been replaced with an alternative or modified BMP?
Yes ____ No X All BMPs were being effective ____

✓ Is there additional BMPs needed to address any conditions requiring corrective action?
Yes ____ No X

✓ At any time during the reporting period, did you discover any previously unidentified illicit discharges from your facility or previously unidentified pollutants in the existing discharges?
Yes ____ No X

✓ Have all illicit discharges (including any discovered in previous years) been eliminated or permitted?
Yes ____ No____ Permit applied for ____ No known illicit discharges X

✓ Have any significant spills or leaks occurred at your facility during the reporting period?
Yes ____ No X

✓ If any significant spills or leaks occurred, did they result in either a dry weather discharge or an actual discharge of the spilled or leaked material commingled with storm water (as opposed to the spilled material being washed away by storm water?)
Yes ____ No X

Part B. Page 2

✓ If any significant spills or leaks occurred, did they result in more than the minimum amounts of material being discharged in storm water? Base your answer on your knowledge of the material you spilled or that leaked. The minimum amounts could vary with the nature (toxicity, oxygen demand, pH, etc.) of the spilled or leaked material from amounts left after normal "sweeping" type cleanup to the point at which even trace amounts left after cleanup could cause an environmental problem.
Yes _____ No_____ No spills or leaks occurred__X___

✓ Have all known spills or leaks been cleaned up or otherwise prevented from contaminating storm water that would be discharged under the authority of this permit?
Yes _____ No_____ No spills or leaks occurred__X___

✓ How many times did you visually monitor all your storm water discharges at all the facility outfalls during the reporting year, and document the condition of and around the outfalls, including flow dissipation measures to prevent scouring? (Count only those done in accordance with the procedures at Part 5.1 - Quarterly Visual Monitoring)
Yes _____ No_____ Number of Visual Monitoring __3____

✓ Would the results of your visual monitoring indicate that there are pollutants in your storm water discharges that are not adequately controlled by your current BMPs?
Yes _____ No__X__

✓ If the results of your visual monitoring indicated a potential problem, was it due to one or more of the following?
1. New pollutant source (including exposure of previously unexposed material).
2. Failure to implement or maintain an existing BMP.
3. Less than expected performance from a BMP.
4. No BMP was selected to deal with that problem.
X5. N/A (No problems identified)

✓ If your visual monitoring indicated a potential problem, what have you done to resolve the problem?
1. Eliminated exposure or pollutant source.
2. Modified existing BMPs.
3. Added a new BMP.
4. Plan to address problem by end of current reporting year.
5. Nothing planned.
(6) N/A (No problems identified). per matt Ritchie

✓ Did any analysis of any element tested during any previous discharge monitoring period exceed the numeric limitation value?
Yes _____ No_____ NA

✓ If your answer to the previous question was "Yes", please name the element and the test results.

Element	Test Results	Element	Test Results

✓ Is there any required revisions to the SWP3 resulting from the inspection?
Yes _____ No__X__

DEQ FORM 605-006

Oklahoma Department of Environmental Quality
Annual Comprehensive Site Compliance Evaluation Report for Industrial Facilities (ACSCER)

Submission of this Comprehensive Site Compliance Evaluation Report, Part B, provides notice that the party identified in Section I of this form is not required to conduct Benchmark Monitoring for storm water discharges associated with industrial activities under the OPDES program. This Annual Comprehensive Site Compliance Evaluation Report is required for all authorized industrial facilities.

All Requested Information Must Be Provided On This Form (Part A) and the ACSCER Form (Part B).
See Instructions On Page 4 of The Form.

Section I.

OPDES Permit Authorization Number: OKR052301

Section II. Facility Operator Information

Name: Sherwood Construction Company, Inc. Phone: 918-266-6861

Address: P.O. Box 10

City: Catoosa County: Rogers Zip Code: 74015

Section III. Facility Location

Name: Greenhill Materials Company, Inc. Phone: 918-266-6861

Address: 14701 E. Highway 266

City: Owasso County: Rogers Zip Code: 74055

Latitude: 36.234 deg N Longitude: 95.802 deg W

Section IV. Certification

I certify under penalty of law that I have read and understand the requirements for filing this Comprehensive Site Compliance Evaluation Report, which is to be filed by March 1st of each year beginning in 2012.

This report is also to be retained as part of the SWP3 for at least three (3) years from the date permit coverage expires or is terminated and will be made available to any State or Federal Inspector visiting this facility. All records of actions taken in accordance with 4.10 of this permit as part of the Storm Water Pollution Prevention Plan will be retained for at least three (3) years from the date permit coverage expires or is terminated. I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gathered and evaluated the information submitted. Based upon my inquiry of the person or persons who manage the system, or those persons directly involved in gathering the information, the information submitted is to the best of my knowledge and belief true, accurate, and complete. I am aware there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Annual Comprehensive Site Compliance Evaluation Report - Part B
Page 1.

Reporting Period: 1/1/2014 - 12/31/2014.

✓ How many routine facility inspections did you perform during the reporting period? 4

✓ How many corrective actions (Part 4.2.17.3) to remove the original violation and document these actions according to corrective action deadlines?

Date	Deficiencies	Corrected (Y or N)	Date Corrected
1-7-2014	Erosion control - traffic way and	Y	1-7-2014
	runoff corridor		
4-21-2014	Drainage way maintenance	Y	4-21-2014

✓ What must you do to correct the deficiencies that remain uncorrected?
NA

✓ Were all BMPs you indicated you would be using in your SWP3 (Part 4.2.8) including good housekeeping practices, actually being implemented at the time of the Annual Comprehensive Site Compliance Evaluation?
Yes Y No____

✓ If one or more BMPs were not being implemented, were corrective actions taken after the FIRST inspection to find the problem?
Yes _____ No_____ All BMPs were being implemented X

✓ Was/were the same failure(s) to implement a BMP deficiency(ies) noted in more than one inspection?
Yes _____ No X No deficiencies noted in any inspection _____

✓ Did any of your routine facility inspections find that one or more of your BMPs was not effective in controlling the pollutant source for which it was designed?
Yes _____ No_____ All BMPs were effective X

✓ If you found one or more ineffective BMPs, have they all been replaced with an alternative or modified BMP?
Yes _____ No_____ All BMPs were being effective X

✓ Is there additional BMPs needed to address any conditions requiring corrective action?
Yes _____ No X

✓ At any time during the reporting period, did you discover any previously unidentified illicit discharges from your facility or previously unidentified pollutants in the existing discharges?
Yes _____ No X

✓ Have all illicit discharges (including any discovered in previous years) been eliminated or permitted?
Yes_____ No_____ Permit applied for _____ No known illicit discharges X

✓ Have any significant spills or leaks occurred at your facility during the reporting period?
Yes _____ No X

✓ If any significant spills or leaks occurred, did they result in either a dry weather discharge or an actual discharge of the spilled or leaked material commingled with storm water (as opposed to the spilled material being washed away by storm water?)
Yes _____ No X

Part B. Page 2

✓ If any significant spills or leaks occurred, did they result in more than the minimum amounts of material being discharged in storm water? Base your answer on your knowledge of the material you spilled or that leaked. The minimum amounts could vary with the nature (toxicity, oxygen demand, pH, etc.) of the spilled or leaked material from amounts left after normal "sweeping" type cleanup to the point at which even trace amounts left after cleanup could cause an environmental problem.
Yes _____ No_____ No spills or leaks occurred__X___

✓ Have all known spills or leaks been cleaned up or otherwise prevented from contaminating storm water that would be discharged under the authority of this permit?
Yes _____ No_____ No spills or leaks occurred__X___

✓ How many times did you visually monitor all your storm water discharges at all the facility outfalls during the reporting year, and document the condition of and around the outfalls, including flow dissipation measures to prevent scouring? (Count only those done in accordance with the procedures at Part 5.1 - Quarterly Visual Monitoring)
Yes __X___ No_____ Number of Visual Monitoring __4____

✓ Would the results of your visual monitoring indicate that there are pollutants in your storm water discharges that are not adequately controlled by your current BMPs?
Yes _____ No__X__

✓ If the results of your visual monitoring indicated a potential problem, was it due to one or more of the following?
1. New pollutant source (including exposure of previously unexposed material).
2. Failure to implement or maintain an existing BMP.
3. Less than expected performance from a BMP.
4. No BMP was selected to deal with that problem.
5. N/A (No problems identified)

✓ If your visual monitoring indicated a potential problem, what have you done to resolve the problem?
1. Eliminated exposure or pollutant source.
2. Modified existing BMPs.
3. Added a new BMP.
4. Plan to address problem by end of current reporting year.
5. Nothing planned.
6. N/A (No problems identified).

✓ Did any analysis of any element tested during any previous discharge monitoring period exceed the numeric limitation value?
Yes _____ No_____ NA

✓ If your answer to the previous question was "Yes", please name the element and the test results.

Element	Test Results	Element	Test Results

✓ Is there any required revisions to the SWP3 resulting from the inspection?
Yes _____ No__X__

OKR052614
Greenhill Concrete - Broken Arrow, OK Concrete Batch Plant
1601 E. HOUSTON AVE.
Broken Arrow, OK 74012

Dear Sir/Madam:

This is to provide you with notice of an apparent violation of the OKR05 General Permit for Storm Water Discharges from Industrial Facilities.

According to our records, we have not received your Annual Comprehensive Site Compliance Evaluation Report (ACSCER) for the 2014 monitoring year. All active Industrial Facilities must submit their ACSCER report by March 1st every year.

Enclosed is an ACSCER (Form 605-006) to be completed and submitted to our office by July 31, 2015. This report may be faxed to (405) 702-6226, emailed to ecls-stormwaterpermitting@deq.ok.gov or mailed to the address listed on the ACSCER form. If the ACSCER is not submitted in a timely manner, enforcement action will be taken.

If you have any questions or you believe the violation has been cited in error, please contact Janie Bender at (405) 702-6170. Thank you for your assistance.

Sincerely,

Loree Boyanton

Re: Authorization for Storm Water Discharge from Industrial Activity(ies)
Authorization Number: OKR052301

Dear MATT RITCHIE

The new Notice of Intent (NOI) for the facility listed below was received on February 2, 2012 and processed by the Oklahoma Department of Environmental Quality. Enclosed is an authorization allowing you to discharge storm water associated with industrial activities under the terms and conditions in accordance with Oklahoma's OPDES Storm Water General Permit OKR05 for the following site located in Rogers County.

Facility:
GREENHILL MATERIALS COMPANY INC
14701 E 46TH ST N
OWASSO, OK 74055

All applicable fees associated with this authorization have been paid.

Sites that remain active as of July 1, 2012 will be invoiced for the full permit year (July 1, 2012 - June 30, 2013).

If you have any questions regarding this permit or the Storm Water Program, please call Matt Pace of the Environmental Complaints and Local Services Division at (405) 702-6209.

Sincerely,

Matt Pace

Re: Authorization for Storm Water Discharge from Construction or Land Disturbing Activity
Authorization Number OKR100613

Dear John R. Curtis:

The new Notice of Intent (NOI) for the facility listed below was received on February 1, 2029 and processed by the Oklahoma Department of Environmental Quality. Enclosed is an authorization allowing you to discharge storm water associated with construction or land disturbing activities under the terms and conditions in accordance with Oklahoma's OPDES Storm Water General Permit OKR10 for the following site located in Rogers County.

Facility: Greenhill Materials
17401 E 46th Street N
Owasso

All applicable fees associated with this initial authorization have been paid for the current permit period. The annual fee for a General Permit is $150.00. The annual fee covers the permit period July 1 – June 30.

If you have any questions regarding this permit or the Storm Water Program, please call Robert Huber of the Environmental Complaints and Local Services Division at (405) 702-6222.

Sincerely,

Authorization to Discharge Under the OPDES Storm Water Construction General Permit

AUTHORIZATION NO. OKR108311

In compliance with the Oklahoma Pollution Discharge Elimination System (OPDES) Act 27A O. S. §2-6-201, the Rules of the Department of Environmental Quality (DEQ), and in reliance on the certified statements and representations heretofore made in its application,

SHERWOOD CONST CO
PO BOX 10
CATOOSA, OK 74015-

Is authorized to discharge storm water from a construction site located in ROGERS County at:

GREENHILL MATERIALS
14701 E 46TH ST N
OWASSO OKLAHOMA

The receiving body of water is BIRD CREEK
THIS FACILITY DISCHARGES INTO A 303(D) LISTED STREAM.

The OPDES requires permittees to have a Storm Water Pollution Prevention Plan (SWP3) which includes a description of appropriate sediment control measures. These are applicable to your construction site, which is subject to inspection. Proof of this authorization must be available at the construction site.

The Authorization shall become effective APR 18 2008 and will expire at midnight on September 12, 2012.

All terms and conditions of the modified OPDES Storm Water Construction General Permit OKR10, as published on September 13, 2007, shall apply to the recipient of this authorization.

Re: Authorization for Storm Water Discharge from Construction or Land Disturbing Activity
Authorization Number OKR1010683

Dear LARRY C CREEKMORE:

The new Notice of Intent (NOI) for the facility listed below was received or 10/19/2009 and processed by the Oklahoma Department of Environmental Quality. Enclosed is an authorization allowing you to discharge storm water associated with construction or land disturbing activities under the terms and conditions in accordance with Oklahoma's OPDES Storm Water General Permit OKR10 for the following site located in TULSA County.

Facility GREENHILL DISTRIBUTION CENTER II

4243 N GARNETT RD

TULSA, OKLAHOMA

All applicable fees associated with this authorization have been paid.

Sites that remain active as of July 1, 2010 will be invoiced for the full permit year (July 1, 2010 - June 30, 2011).

If you have any questions regarding this permit or the Storm Water Program, please call Matt Johnson of the Environmental Complaints and Local Services Division at (405) 702-6182 .

Sincerely,

Matt Johnson

RE: Storm Water Pollution Prevention Plan
Greenhill Distribution Center II

Dear Mr. Larry Creekmore,

Enclosed is the Notice of Intent (NOI) for the above referenced project received by our office on October 19, 2009. After our review, we have determined that the NOI is incomplete. The area circled on the NOI needs to be completed and initialed to acknowledge the approval. Please review the form for corrections, initial any changes made, and fax it back to me at 405.702.6226, or by mail to the address listed below.

Please note, discharges that occur without an authorization are not in compliance with the general permit for storm water discharges from construction activities, and are in violation of 27A O.S. § 2-6-201.

Failure to respond **within 7 days, October 29, 2009,** will result in possible enforcement. Information not received by the indicated deadlines or non-responsiveness to our request may result in your application being referred for enforcement.

If you have any questions, please feel free to contact me.

Sincerely,

Matthew R. Johnson

RE: Notice of Termination, General Storm Water Permit OKR51574, Greenhill Concrete Products, Inc., 5411 N. 145th E. Avenue, Owasso, OK 74055.

Dear Sir or Madam:

We are submitting the attached Notice of Termination for the above permit on behalf or our client, Greenhill Concrete Products, Inc. Greenhill recently converted its total retention discharge permit to a concrete batch plant general discharge permit (OKG11T212). Since the concrete batch plant general permit includes storm water, Greenhill no longer needs its general storm water discharge permit.

Please contact me (randy.beeson@secompliance.com) or Mr. Matt Ritchie of Greenhill Concrete (mattr@greenhillconcrete.com) if you or your staff has any questions.

Sincerely,

RE: Annual Comprehensive Site Compliance Evaluation Report

OKR052614
Greenhill Concrete - Broken Arrow, OK Concrete Batch Plant
1601 E. HOUSTON AVE.
Broken Arrow, OK 74012

Dear Sir/Madam:

This is to provide you with notice of an apparent violation of the OKR05 General Permit for Storm Water Discharges from Industrial Facilities.

According to our records, we have not received your Annual Comprehensive Site Compliance Evaluation Report (ACSCER) for the 2014 monitoring year. All active Industrial Facilities must submit their ACSCER report by March 1st every year.

Enclosed is an ACSCER (Form 605-006) to be completed and submitted to our office by July 31, 2015. This report may be faxed to (405) 702-6226, emailed to ecls-stormwaterpermitting@deq.ok.gov or mailed to the address listed on the ACSCER form. If the ACSCER is not submitted in a timely manner, enforcement action will be taken.

If you have any questions or you believe the violation has been cited in error, please contact Janie Bender at (405) 702-6170. Thank you for your assistance.

Sincerely,

Loree Boyanton
Programs Manager

Authorization Number: OKR052614

Dear MATT RITCHIE

The new Notice of Intent (NOI) for the facility listed below was received on October 8, 2013 and processed by the Oklahoma Department of Environmental Quality. Enclosed is an authorization allowing you to discharge storm water associated with industrial activities under the terms and conditions in accordance with Oklahoma's OPDES Storm Water General Permit OKR05 for the following site located in Tulsa County.

Facility:

GREENHILL CONCRETE - BROKEN ARROW, OK CONCRETE BATCH PLANT
1601 E. HOUSTON AVE.
BROKEN ARROW, OK 74012

All applicable fees associated with this authorization have been paid.

Sites that remain active as of July 1, 2014 will be invoiced for the full permit year (July 1, 2014 - June 30, 2015).

If you have any questions regarding this permit or the Storm Water Program, please call Matthew Johnson of the Environmental Complaints and Local Services Division at (405) 702-6182.

Sincerely,

Matt Johnson

Instructions - DEQ Notice of Intent (NOI) for Storm Water Discharges Associated with Construction Activity to be Covered Under the OPDES General Permit OKR10

Who Must File A Notice of Intent Form

Under the provisions of the Clean Water Act, as amended, (33 U.S.1251 et.seq.....the Act), Oklahoma Environment Code, Title 27A of the Oklahoma Statues, Secton 2-14-101 et. seq. and the rules OAC 252:004-15, discharge of storm water from construction activities is prohibitied without an Oklahoma Pollutant Discharge Elimiation System Permit. The operator of a constrution site that has such a storm water discharge must submit a NOI to obtain coverage under an OPDES Storm Water General Permit (OKR10). If you have questions about whether you need a permit under the OPDES Storm Water program, or if you need infromation, write to the address listed belorw or telephone the Envrionmental Complaints and Local Services Division, Department of Environmental Quality (DEQ), at (405) 702-6100 and ask for the Storm Water Unit.

Where to File NOI Form

DEQ
Environmental Complaints and Local Services (ECLS)
Storm Water Unit
P.O. Box 1677
Oklahoma City, OK 73101-1677

FAX (405) 702-6223

Note: do not submit SWP3 with the NOI, unless the project is located within outstanding resource waters, or Federal and State sensitive waters and watersheds, or lager site of disturbing 20 acres or more acre land.

Completing The Form

You must type or print, using upper-case letters, in the appropriate areas only. If you have any questions on this form, call DEQ-ECLS at (405) 702-6100 and ask for the Storm Water Unit.

Section I. Facility Owner/Operator Information

Provide the legal name, mailing address, and telephone number of the person, firm, public organization, or any other entitiy that either individually or together meet either of the following two criteria: (1) have operational control over the site specifications (including the ability to make modifications in specifications); and (2) have the day-to-day operational control of those activities at the site necessary to ensure compliance with plan requirements and permit conditions. If you are a Co-Permittee, check the appropriate box. Do not use a colloquial name.

Enter the appropriate letter to indicate the legal status of the operator of the facility: F = Federal; S = State; M = Public (other than Federal or State); P = Private.

Section II. Site Information

Enter the Project's official or legal name and complete street address, including city, county, state, ZIP code, and phone number. If the site lacks a street address, indicate with a general statement the location of the site (e.g., Intersection of State Highways 61 and 34). The application must also provide the latitude and longitude of the facility in degrees, minutes, and seconds to the nearest 15 seconds (45° 7' 24" = 45.1234 decimal latitude) of the approximate center of the site.

The latitude and longitude of your facility can be located on USGS quadrangle maps. The quadrangle maps may be obtained at 1-800-USA MAPS. Longitude and latitude may also be obtained at the Census Bureau Internet site: http://www.census.gov/cgi-bin/gazetteer. Only one location description is needed: address; section, township, and range; or latitude and longitude.

Provide the address and phone number where the SWP3 may be viewed, if different from address previously given. Check appropriate box.

Enter the name of the receiving water body, the closest predominant receiving water body. The Oklahoma 303(d) list can be found online at www.deq.state.ok.us/WQDnew/index.htm or the DEQ GIS Map and Data Viewer

If your facility or site is on Indian Country land, do not complete this form. File your NOI with the EPA using EPA Form 3510-9.

Indicate whether your discharge will be consistent with the conditions and requirements of EPA approved or established TMDLs.

Indicate whether your site is part of the common plan of development or sale.

Enter the estimated area to be disturbed including but not limited to: grubbing, excavation, grading, and utilities and infrastructure installation. Indicate to the nearest acre.

Enter the construction start and estimated completion date using four digits for the year.

Indicate if the proposed construction site or land disturbing activity is within the corridor of a listed sensitive water or watershed, Addendum A of the General Permit and associated with the discharges and requirements to be covered by this permit as follows, Part 1.3.2.E.2:

a The proposed construction site or land disturbing activity is not located within any of the corridors of the Federal or State listed sensitive waters or watersheds, and further investigation is not required.

b The proposed construction site or land disturbing activity is located within a corridor of a Federally or State listed sensitive water or watershed (Addendum A). The SWP3 describes this area in relation to the listed water or watershed and specifies the measures to be employed to protect the endangered or threatened species or their critical habitat.

c Consultation with the USFWS for Federal listed sensitive waters and watersheds or the ODWC for State listed sensitive waters, (see Part 11.) has concluded that the effects on listed species and critical habitat of the applicant's storm water discharges and storm water discharge-related activities, results in either a no jeopardy opinion or a written concurrence by the agency on a finding that the applicant's storm water discharges and storm water discharge-related activities are not likely to adversely affect listed species or critical habitat; or

d The applicant's construction activities are authorized by the appropriate Federal or State agency and that authorization addresses the incidental taking of listed species by the applicant's storm water discharge or storm water discharge-related activities; or

e The applicant's storm water discharges and storm water discharge-related activities were already addressed in another operator's certification of eligibility under Part 1.3.2.E.2 a, b, c, or d that included the applicant's project area. By certifying eligibility under Part 1.3.2.E.2 f, the applicant agrees to comply with applicable measures or controls upon which the other operator's certification under Part 1.3.2.E.2 a, b, c or d was based.

Indicate if the SWP3 is in compliance with all other applicable local sediment and erosion plans.

Section III. Certification

Federal Statutes provide for severe penalties for submitting false information on this application form. Federal regulations require this application to be signed as follows:

For a corporation: by a responsible corporate officer, which means: (i) president, secretary, treasurer, or vice-president of the corporation in charge of a principal business function, or their designee, or any other person who performs similar policy or decision-making functions for the corporation, or (ii) the manager of one or more manufacturing, production, or operating facilities, provided, the manger is authorized to make management decisions which govern the operation of the regulated facility including having the explicit or implicit duty of making major capital investment recommendations, and initiating and directing other comprehensive measures to assure long term environmental compliance with environmental laws and regulations; the manager can ensure that the necessary systems are established or actions taken to gather complete and accurate information for permit application requirements; and where authority to sign had been assigned or delegated to the manager in accordance with corporate procedures.

For a partnership or sole proprietorship: by a general partner of the proprietor, or; For a municipality, state, Federal, or other public agency: by either a principal executive or ranking elected official.

ADDENDUM B –NOTICE OF INTENT

1/31/03 mg 2/25/03 AC See Reverse Side for Instructions

Oklahoma Department of Environmental Quality

DEQ FORM 605-002A
September 13, 2002

Notice of Intent (NOI) for Storm Water Discharges Associated with CONSTRUCTION ACTIVITY on Sites of One to Five Acres and Sites of Five or More Acres Under the OPDES General Permit OKR10

SUBMISSION OF THIS NOTICE OF INTENT CONSTITUTES NOTICE THAT THE PARTY IDENTIFIED IN Part I OF THIS FORM INTENDS TO BE AUTHORIZED BY AN OPDES PERMIT ISSUED FOR STORM WATER DISCHARGES ASSOCIATED WITH CONSTRUCTION ACTIVITY IN THE STATE OF OKLAHOMA. BECOMING A PERMITTEE OBLIGATES SUCH DISCHARGER TO COMPLY WITH THE TERMS AND CONDITIONS OF THE PERMIT. IN ORDER TO OBTAIN AUTHORIZATION, ALL REQUESTED INFORMATION MUST BE PROVIDED ON THIS FORM. SEE INSTRUCTIONS ON BACK OF FORM.

IF YOUR FACILITY OR SITE IS ON INDIAN COUNTRY LAND, FILE YOUR NOI WITH THE EPA, USING EPA FORM 3510-9.

I. Facility Owner/Operator Information (If you are a Co-permittee check this box) ☐

Name: Sherwood Construction Phone: (918) 266-6861

Address: P.O. Box 10 Status of Owner/Operator: P

City: Catoosa State: OK Zip Code: 74015 E-mail Address: darylw@sherwoodoklahoma.com

II. Site Information

Name of the project Greenhill Materials Address: 17401 E 46th Street North

City Owasso County: Rogers ZIP Code:

Telephone No. (918) 274-6560 S-10 T-20N R-14E Location: Latitude: 36° 14' Longitude: 95° 48'

Is the construction site within any of the corridors of the listed sensitive waters or watersheds (Addendum A)? Federal N State N (Yes or No)

Has Storm Water Pollution Prevention Plan (SWP3) been developed? ☒ Yes ☐ No Is SWP3 implemented? ☒ Yes ☐ No

Address of location of SWP3 for viewing: ☐ Address in I. Above. ☒ Address in II. Above. ☐ Other, please specify below.

Address: Phone: ( )

City: Zip Code:

Other Operational OPDES Number: OK0044059 OKSC0114I or NPDES Number:

Name of Receiving Water Body: Unnamed Trib. of Bird Creek

Is the Receiving Water Body on the DEQ 303(d) list? ? ☒ No ☒ Yes Is this facility/site on Indian Country land? ☒ No ☐ Yes (See Instructions)

Indicate the common plan construction size: Between one and five acres _____ Five or More acres X

Estimated area to be disturbed (to nearest acre): 1666

(6 / 1 / 1999) Month / Day / Year — Construction Start Date

(12 / 31 / 2050) Month / Day / Year — Estimated Completion Date

Will construction (land disturbing activities) be conducted for Storm water control? ☐ Yes ☒ No

Is the Storm Water Pollution Prevention Plan in compliance with all Applicable local sediment and erosion plans? ☒ Yes ☐ No ☐ None

ENDANGERED SPECIES

Based on the instructions provided in Part X and Addendum A of the permit, is the proposed construction or land disturbing activity within the corridor of any of the listed sensitive waters or watersheds?

☐ Yes ☒ No

If the answer is yes, please refer to Part X. B. Step 2.

All permit eligibility requirements with regard to protection of endangered species through the indicated Section of Part I.B.3.e.(2) of the permit have been complied with. (check one or more boxes):

(a) ☒ (b) ☐ (c) ☐ (d) ☐ (e) ☐

III. Certification

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage this system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

I understand that continued coverage under this permit is contingent upon maintaining eligibility as provided for in Part I. B.

Name (Please Print): JOHN R CURTIS Date: 24 JAN 03

Signature: John R Curtis Title Manager

For DEQ use only: Assigned Authorization Number: OKR10 0613

Instructions – DEQ Notice of Intent (NOI) for Storm Water Discharges (SWD) Associated with Construction Activity to be Covered Under the OPDES Permit OKR10

Who Must File A Notice Of Intent Form

Under the provisions of the Clean Water Act, as amended, (33 U.S. 1251 et.seq.....the Act), Oklahoma Environmental Code, Title 27A of the Oklahoma Statutes, Section 2-14-101 et. seq. and the rules OAC 252:002-15, discharge of storm water from construction activities is prohibited without an Oklahoma Pollutant Discharge Elimination System Permit. The operator of a construction site that has such a storm water discharge (SWD) must submit a NOI to obtain coverage under an OPDES Storm Water General Permit (OKR10). If you have questions about whether you need a permit under the OPDES Storm Water program, or if you need information, write to the address listed below or telephone the Environmental Complaints and Local Services Division, Department of Environmental Quality (DEQ), at (405) 702-6100 and ask for the Storm Water Unit.

Where to File NOI Form

DEQ
Environmental Complaints and Local Services
Storm Water Unit
P.O. Box 1677
Oklahoma City, OK 73101-1677

FAX (405) 702-6223
Note: do not submit SWP3 with the NOI, unless the project is located within an aquatic resource of concern and the owner/operator has not certified option (c) or (d).

Completing The Form

You must type or print, using upper-case letters, in the appropriate areas only. If you have any questions on this form, call DEQ-ECLS at (405) 702-6100 and ask for the Storm Water Unit.

Section I. Facility Owner/Operator Information
Provide the legal name, mailing address, and telephone number of the person, firm, public organization, or any other entity that either individually or together meet either of the following two criteria: (1) have operational control over the site specifications (including the ability to make modifications in specifications); and (2) have the day-to-day operational control of those activities at the site necessary to ensure compliance with plan requirements and permit conditions. If you are a Co-Permittee, check the appropriate box. Do not use a colloquial name.

Enter the appropriate letter to indicate the legal status of the operator of the facility: F = Federal; S = State; M = Public (other than Federal or State); P = Private.

Section II. Site Information
Enter the Project's official or legal name and complete street address, including city, county, state, ZIP code and phone number. If the site lacks a street address, indicate with a general statement the location of the site (e.g., Intersection of State Highways 61 and 34). The applicant must also provide the latitude and longitude of the facility in degrees, minutes, and seconds to the nearest 15 seconds (45° 7' 24" = 45.1234 decimal latitude) of the approximate center of the site.

The latitude and longitude of your facility can be located on USGS quadrangle maps. The quadrangle maps may be obtained at 1-800-USA MAPS. Longitude and latitude may also be obtained at the Census Bureau Internet site: http://www.census.gov/cgi-bin/gazetteer. Only one location description is needed: address; section, township, and range; or latitude and longitude.

Indicate if the Pollution Prevention Plan (SWP3) has been developed.

Indicate if the SWP3 has been implemented. Refer to Part IV of the General Permit for Information on SWP3s. 'Yes' means the SWP3 is ready to be implemented upon notification of coverage or that the SWP3 is ready to be implemented at the time the NOI form is submitted.

Provide the address and phone number where the SWP3 may be viewed, if different from address previously given. Check appropriate box.
Are other OPDES or NPDES permit numbers assigned to this site?

Enter the name of the receiving water body, the closest predominant receiving water body. The Oklahoma 303(d) list can be found online at www.deq.state.ok.us/WQDnew/index.htm
If your facility or site is on Indian Country land, do not complete this form. File your NOI with the EPA using EPA Form 3510-9.
Indicate the common plan construction site is between 1 and 5 acres or more than 5 acres.
Enter the estimated area to be disturbed including but not limited to: grubbing, excavation, grading, and utilities and infrastructure installation. Indicate to the nearest acre.
Enter ~~the~~ construction start and estimated completion date using four digits for the year.
Indicate if the proposed construction site or land disturbing activity is within the corridor of a listed sensitive water or watershed, Addendum A of the General Permit and associated with the discharges and requirements to be covered by this permit as follows, Part I.B.3.e.(2):

(a) The proposed construction site or land disturbing activity is not located within any of the corridors of the Federal or State listed sensitive waters or watersheds, and further investigation is not required.
(b) The proposed construction site or land disturbing activity is located within a corridor of a Federally or State listed sensitive water or watershed (Addendum A). The SWP3 describes this area in relation to the listed water or watershed and specifies the measures to be employed to protect the endangered or threatened species or their critical habitat.
(c) Consultation with the USFWS for Federal listed sensitive waters and watersheds or the ODWC for State listed sensitive waters, (see Part X.) has concluded that the effects on listed species and critical habitat of the applicant's storm water discharges and storm water discharge-related activities, results in either a no jeopardy opinion or a written concurrence by the agency on a finding that the applicant's storm water discharges and storm water discharge-related activities are not likely to adversely affect listed species or critical habitat; or
(d) The applicant's construction activities are authorized by the appropriate Federal or State agency and that authorization addresses the incidental taking of listed species by the applicant's storm water discharge or storm water discharge-related activities; or
(e) The applicant's storm water discharges and storm water discharge-related activities were already addressed in another operator's certification of eligibility under Part I. B. 3. e. (2) (a), (b), (c), or (d) that included the applicant's project area. By certifying eligibility under Part I. B. 3. e. (2) (f), the applicant agrees to comply with applicable measures or controls upon which the other operator's certification under Part I. B. 3. e. (2) (a), (b), (c) or (d) was based.

Indicate if land-disturbing activities will be conducted for the construction of storm water control.
Indicate if the SWP3 is in compliance with all other applicable local sediment and erosion plans.

Section III. Certification
Federal Statutes provide for severe penalties for submitting false information on this application form. Federal regulations require this application to be signed as follows:
For a corporation: by a responsible corporate officer, which means: (I) president, secretary, treasurer, or vice-president of the corporation in charge of a principal business function, or any other person who performs similar policy or decision making functions, or (ii) the manager of one or more manufacturing, production, or operating facilities employing more than 250 persons or having gross annual sales or expenditures exceeding $25 million (in second-quarter 1980 dollars), if authority to sign had been assigned or delegated to the manager in accordance with corporate procedures.
For a partnership or sole proprietorship: by a general partner of the proprietor, or; For a municipality, state, Federal, or other public facility: by either a principal executive or ranking elected official.

Re: Termination of Storm Water Industrial Discharge Authorization No. OKR051574

Dear Mr. Ritchie:

Your Notice of Termination (NOT) for the industrial facility herein identified was received and processed on March 6, 2014 by the Oklahoma Department of Environmental Quality (DEQ). Your certification confirmed that all storm water discharges associated with industrial activity from this facility, authorized by this OPDES general permit have been eliminated or that you are no longer the owner/operator of this facility. Henceforth, you are no longer required to have authorization to discharge storm water from this industrial site. However, if the facility operation changes resulting in exposure of storm water industrial activity, another authorization under the General Permit will be required prior to such change.

Identification of the industrial site of the land disturbing activity:

Site Location: **GREENHILL CONCRETE PRODUCTS INC**
5411 N 145TH E AVE
OWASSO, OK 74055

Permittees are responsible for payment of applicable permit fees for permits active at the beginning of each permit year (July 1 – June 30).

Should you have questions concerning this termination you may call Matthew Johnson of the Environmental Complaints and Local Services Division at (405) 702-6182 or write to the following address:

Oklahoma Department of Environmental Quality
Environmental Complaints and Local Services
P.O. Box 1677
Oklahoma City, OK 73101-1677

Re: Termination of Storm Water Discharges Associated with Construction Activity Authorization No. OKR1010683

Dear Mr. CREEKMORE:

The Notice of Termination (NOT) for the above-referenced authorization was received and processed by our office on May 3, 2012. Authorization to discharge storm water for GREENHILL DISTRIBUTION CENTER II was signed and terminated on May 5, 2012. Oklahoma DEQ field staff have inspected the site and determined that this is not in compliance with the termination requirements stated in OKR10. The site did not pass inspection because of the following violation(s):

1. The site has ongoing construction and does not qualify for closure.

Discharging any pollutant without a permit or knowingly filing false information on a permit document may be subject to enforcement action. A new NOI must be submitted within 15 days for LARRY C CREEKMORE to remain in compliance.

If you have any questions or feel that there was an error in the inspection, please contact Misty Johnson at 405.702.6205.

Sincerely,

Misty Johnson

DEQ FORM 605-003 Feb 23, 2009	OKLAHOMA DEPARTMENT OF ENVIRONMENTAL QUALITY	NOTICE OF TERMINATION (NOT) FOR STORM WATER DISCHARGES ASSOCIATED WITH INDUSTRIAL OR CONSTRUCTION ACTIVITY UNDER AN OPDES GENERAL PERMIT

Submission of this Notice of Termination constitutes notice that the party identified in Section I of this form is no longer authorized to discharge storm water associated with industrial or construction activities under the OPDES program.

All Requested Information Must Be Provided On This Form. See Instructions On The Back Of Form.

I. Permit Information: OPDES Storm Water General Permit Authorization Number: OKR1010683

Check here if you are no longer the operator of the facility/site: ☑

Check here if the storm water construction or industrial discharge is being terminated: ☐

II. Facility/Site Owner/Operator Information:

Name: Trammel Crow Phone: 312-935-1466

Address: 311 S. Wacker Dr

City: Chicago State: IL. Zip Code: 60606

III. Facility/Site Location:

Name: Greenhill Distribution Center

Address: 4243 North Garnett Rd.

City: Tulsa County: Tulsa Zip Code: 74116

Latitude: _____ Longitude: _____

19N 14E

IV. New Facility/Site Information:

If you are no longer the operator of the facility/site, provide the following information pertaining to the new operator at the facility/site:

Name: Trammel Crow

Address: 311 S. Wacker Dr.

City: Chicago State: IL. Zip Code: 60606

V. Certification

I certify under penalty of law that all storm water discharges associated with industrial/construction activity from the identified facility/site that were authorized by a general permit have been eliminated or that I am no longer the owner or operator of the facility/site. I understand that by submitting this Notice of Termination, I am no longer authorized to discharge storm water associated with industrial or construction activity under this general permit, and that discharging pollutants in storm water associated with industrial or construction activity to waters of the State is unlawful under the Clean Water Act and OAC 252:606-1-3(b)(3)(L) where the discharge is not authorized by an OPDES permit. I also understand that the submittal of this Notice of Termination does not release me as an owner or operator from liability for any violations of this permit or the Clean Water Act.

Re: Termination of Storm Water Construction Discharge Authorization No. OKR1023328

Dear Mr. Ritchie:

Your Notice of Termination (NOT) for the construction site herein identified was received and processed on June 30, 2015 by the Oklahoma Department of Environmental Quality (DEQ). Your certification confirmed that all areas covered under the above authorization have met one or more of the following criteria:

- Final stabilization (see definition Part IX) has been achieved on all portions of the site for which the permittee is responsible (including if applicable, returning agricultural land to its pre-construction agricultural use);
- Another owner/operator has assumed control according to Part VI. G. 2. c. over all areas of the site that have not been finally stabilized and you have documented the date of the transfer of operational control; or
- For residential construction only, temporary stabilization has been completed and the residence has been transferred to the homeowner.

Identification of the construction or site of the land disturbing activity:

Site Location: **MACYS FULFILLMENT CENTER PROJECT**
7920 E 76TH STREET NORTH
OWASSO, OK 74055

Should you have questions concerning this termination you may call Ranee Sugrue of the Environmental Complaints and Local Services Division at (405) 702-6167 or write to the following address:

RE: Name Change Request, OPDES Permit No. OKG95T003, Greenhill Materials, Rogers County, OK.

Dear Mr. Hulinger:

Per our recent e-mail and telephone discussions, Sherwood Construction Co., Inc. is requesting a name change on the Oklahoma Pollutant Discharge Elimination System (OPDES) Permit for the above facility. Sherwood opened the Greenhill Materials East Quarry and Rock Crusher Plant in 2003 and has operated the facility as a subsidiary under the name Greenhill Materials, LC since that time.

As a result of some corporate restructuring, Sherwood is now requesting that the name on the referenced permit be changed to "Sherwood Construction Co., Inc., dba Greenhill Materials".

Please contact me if you or your staff has any questions regarding this request.

Sincerely,
SUPERIOR ENVIRONMENTAL COMPLIANCE, INC.

Re: Air Quality General Construction Permit Notification for Sherwood Construction Co., Inc., dba Greenhill Materials, SH 266, Catoosa, OK 74038; Operating Permit No. 2005-012-O.

Dear Herb:

Per our recent telephone discussions and in accordance with the General Operating Permit noted above, this letter is to notify you that Sherwood Construction Company, Inc. has made several changes at its rock crusher facility located in Greenhill Materials East Quarry. These include the following:

1) Increase in maximum hourly production of the existing main plant from 600 TPH to 1,000 TPH,

2) Addition of a portable crusher plant rated at 350 TPH to handle peak demand,

3) Addition of a 1995 Caterpillar Model 3412 810-HP diesel generator engine to power the portable crusher plant.

I have attached spreadsheets to document facility emissions at Maximum Potential to Emit, based on each plant operating 3,000 hours/year. Sherwood understands that effective May 3, 2013, the diesel generator engine will have to comply with the requirements of NESHAP, Subpart ZZZZ, including:

1) Initial emissions testing for carbon monoxide (CO) and formaldehyde concentrations in the engine exhaust,

2) Submittal of a notification of performance testing to the Oklahoma Department of Environmental Quality (ODEQ) a minimum of 60 days prior to field testing,

3) Compliance with recordkeeping requirements,

4) Submittal of semi-annual compliance reports,

Phone: 918-739-4780|Mobile: 918-695-8840|Fax: 918-739-4799|P.O. Box 1822 Catoosa, OK 74015|
randy.beeson@secompliance.com| www.superiorenviro.com

5) Exclusive use of non-road diesel fuel,

6) Performance of subsequent emissions tests every 8,760 hours of operation or every three years, whichever comes first.

Please contact me if our understanding of the NESAHP, Subpart ZZZZ compliance requirements is in error or if you or your staff has any questions regarding the attached spreadsheets.

Sincerely,
SUPERIOR ENVIRONMENTAL COMPLIANCE, INC.

RE: Name Change Request, OPDES Permit No. OKG95T003, Greenhill Materials, Rogers County, OK.

Dear Mr. Hulinger:

This is to notify you that Sherwood Construction Co., Inc. is requesting a name change on the Oklahoma Pollutant Discharge Elimination System (OPDES) Permit for the above facility. Sherwood opened the Greenhill Materials East Quarry and Rock Crusher Plant in 2003 and has operated the facility as a subsidiary under the name Greenhill Materials, LC since that time.

As a result of some corporate restructuring, Sherwood is now requesting that the name on the referenced permit be changed to "Sherwood Construction Co., Inc., dba Greenhill Materials". We have previously provided you with backup documentation of this name change through our consultant, Superior Environmental Compliance, Inc.

Please contact me if you or your staff has any questions regarding this request.

Sincerely,

David Sherwood
CEO .

Re: OPDES Permit No. OKG95T003
Greenhill Materials East, Catoosa, Rogers County, Oklahoma
Facility ID Number I-66001690

Dear Mr. Sherwood:

On June 11, 2012, the DEQ received your letter requesting that the referenced facility name be changed to Sherwood Construction dba Greenhill Materials. As detailed in the letter, Sherwood Construction opened the Greenhill Materials East Quarry and Rock Crusher Plant in 2003 and has operated the facility as a subsidiary under the name Greenhill Materials, LC. No substantial changes have been made to facilities, equipment, operations, personnel or wastewater treatment processes. Certificates of Authority authorizing Sherwood Construction and Greenhill Materials to transact business in the State of Oklahoma were active according to the information available on the website of the Oklahoma Secretary of State.

The DEQ has concluded that all requirements for a change of name on the referenced permit have been satisfied. Therefore, OPDES Permit Authorization OKG95T003 is to be held by Sherwood Construction Co. dba Greenhill Materials, Inc. effective June 14, 2012. The modified first page of the permit is enclosed showing the new company/facility name and date of the name change. Please replace the first page of the permit with the enclosed revised page.

Should you have any questions regarding the permit transfer, please contact the Industrial Permits Section at the letterhead address or telephone (405) 702-8100.

Sincerely,

Carol Paden

OKLAHOMA DEPARTMENT OF ENVIRONMENTAL QUALITY
AUTHORIZATION FOR DISCHARGE AND/OR DISPOSAL
UNDER GENERAL PERMIT NO. OKG 950000

AUTHORIZATION NO.: OKG95T003
FACILITY ID NO.: I-66001690

In compliance with Title 27A O.S. §2-6-201 *et seq.* (the OPDES Act), as amended, the Rules of the Department of Environmental Quality promulgated thereunder, and in reliance on the certified statements and representations heretofore made in its application,

Sherwood Construction Co., dba Greenhill Materials, Inc.
(formerly Greenhill Materials East)
P.O. Box 10
Catoosa, Oklahoma 74015

is hereby authorized to treat and dispose of wastewater from the washing and sorting of rock, sand and/or gravel (SIC Codes 1422, 1423 and 1442), and associated storm water runoff from their facility located at:

SW¼, Section 2 and SE¼ and E½, SW¼, Section 3 and N½ and N½, N½, S½, Section 10 and NW¼, and N½, NE¼ and N½, S½, NE¼, Section 11, Township 20N, Range 14 EIM Rogers County, Oklahoma

The above-referenced facility is also authorized to retain wastewater in three flow-through impoundments (F01, F02, and F03) and one (1) total retention surface impoundment (T01), as described in the Appendix. Wastewater descriptions and classifications are also contained in the Appendix. Surface impoundments shall be maintained in accordance with conditions set forth in General Permit No. OKG95, and in Parts I, II, III and the Appendix hereof.

Issuance of this Authorization in no way or in any respect affects the permittee's civil or criminal responsibility regarding disposal of wastewater, except with respect to the permittee's legal responsibility under the OPDES Act and DEQ Rules.

This Authorization is non-transferable and is granted summarily by and at the discretion of the Executive Director in accordance with applicable DEQ Rules and provisions of the above-referenced Permit.

This Authorization replaces and/or supersedes DEQ Permit No.OKG95T003 that became effective on April 1, 2006.

This Authorization shall become effective on June 14, 2012.

This Authorization shall expire at midnight, on February 3, 2013.

This is to certify that the proposed wastewater discharges set forth in this Authorization meet the requirements of the Oklahoma Water Quality Standards, as amended, and the DEQ Rules.

Issued this 14th day of June, 2012.

Re: Application for Renewal of General Permit Authorization OKG95
Sherwood Construction Co. - dba Greenhill Materials, Inc., Rogers County
Permit No: OKG95T003
Facility ID: I-66001690

Dear Environmental Manager:

The above referenced general permit expired on 1/1/2013. The Oklahoma Department of Environmental Quality (ODEQ) requests that you submit a General Permit Authorization application in order to renew your rock, sand, and gravel quarry authorization. An application form is enclosed for your convenience. It should be filled out completely, signed, and returned to this office no later than 1/1/2013.

In accordance with OAC 252:616-3-3 of the DEQ rules, effective July 1, 2011 an application fee is due when submitting an application for a permit authorization. The application fee is non-refundable and is due when an application is filed with the DEQ. A summary is enclosed describing your application fee. Please detach and return the bottom half with your payment.

If this facility is no longer in existence or in use, please contact us regarding a closure plan for the existing permit. If you have already completed and submitted an application please notify us as soon as possible. Thank you very much for your cooperation.

If you have questions regarding this matter, please contact Micheal Jordan at (405) 702-8213.

Sincerely,

Carol Paden

NOTICE OF DEFICIENCY FOR NON-PAYMENT OF APPLICATION FEE

Dear Mr. Ritchie:

Your application for an Oklahoma Department of Environmental Quality (DEQ) permit was received by this office on 12/20/2012. In accordance with OAC 252:616-3-3 of the DEQ rules, effective July 1, 2011 an application fee is due when submitting an application for a permit. The application fee is non-refundable and is due when an application is filed with the DEQ. As of this date, we have not received your payment for the application fee. A summary is enclosed describing your application fee. Please detach and return the bottom half with your payment.

Please submit the requested payment by 1/10/2013. The permit application review process is hereby suspended pending receipt of your payment. Once your application fee has been paid, we will continue the administrative review process.

Thank you for your cooperation. If you have any questions concerning this submittal or methods of payment, please contact Alisha A. Barham at (405) 702-8206.

Re: Renewal of General Permit Authorization OKG95
Sherwood Construction Co.-Greenhill Materials Limestone Quarry, Rogers County
Permit No: OKG95T003
Facility ID: I-66001690

Mr. Ritchie:

This letter is to inform you that the Oklahoma Department of Environmental Quality (ODEQ) has prepared a draft General Permit renewal for all Rock, Sand, and Gravel Quarries. This draft will be publicly noticed by the ODEQ. After the public notice process, the ODEQ will issue the new general permit.

Because the General Permit has not yet been renewed, the ODEQ has elected to place all applications on hold until the permit renewal process has been completed. The terms and conditions of your existing OPDES permit will remain in effect until you are issued a new authorization. If you have any questions regarding this matter please contact Marc Hullinger at (405) 702-8203. Thank you for your cooperation.

Sincerely,

DEQ LANDOWNER NOTIFICATION AFFIDAVIT

Tier I, II, or III permit applications in which the applicant does not own all the land subject to the application must notify the owner(s) of leases and/or pipeline right-of-ways. The basis for this requirement is Title 27A of the Oklahoma Statutes, § 2-14-103(9), as described in OAC 252:004-7-13(b).

Please note that you MUST fill out and return this affidavit even if you don't have to give any landowner notice.

A	NOTICE TO THE LANDOWNER(S) IS NOT REQUIRED because: (check one)		
	My application does not involve any land.		My application involves only land owned by me (or applicant business).

OR

B	NOTICE TO THE LANDOWNER(S) IS REQUIRED because the land is owned by someone other than myself or the applicant business AND I HAVE NOTIFIED the following (check one):		
	Landowner(s)		Lessor or Administrator or Executor of the land
METHOD OF DELIVERY (check one):			
X	Actual notice, for which I have a signed and dated receipt		
	Service by Sheriff or private process server, for which I have an affidavit		
	Service by certified mail, restricted delivery, for which I have a signed return receipt		
	Legal publication, for which I have an affidavit of publication from the newspaper, because the landowners could not be located through due diligence

LANDOWNER AFFIDAVIT CERTIFICATION				
I, as the applicant or an authorized representative of the applicant, hereby certify that notice to the landowner(s) about the permit application for the facility described below was provided per Option A or B above.				
Company Name	Sherwood Construction Co., Inc. dba Greenhill Materials, Inc.	Facility Name	Greenhill Materials Quarry	
Facility Address or Legal Description.	14701 E. Highway 266, Owasso, OK 74055			
Responsible Official (signature)			Date Signed	12/14/12
Responsible Official (typed)	Matt Ritchie	Title	Materials Manager	

If the landowner notice applies to your application (Option B Above) you can send the following form to them as your notice:

NOTICE TO LANDOWNER OF FILING

Dear Landowner: (Name) Mr. Hank Harbaugh,

(Applicant name) Sherwood Const. Co., Inc., dba Greenhill Materials, Inc has filed a permit application with the Oklahoma Department of Environmental Quality for (Name) Greenhill Materials Quarry facility.

This application involves the land owned by you located at:

Address or Legal Description: 14701 E. Highway 266, Owasso, OK 74055

Signed: _____ Date: _____

FORM 606-OKG95	OKLAHOMA DEQ	APPLICATION FOR THE AUTHORIZATION UNDER GENERAL PERMIT OKG950000 TO DISCHARGE AND/OR DISPOSE OF INDUSTRIAL WASTEWATER AT **ROCK, SAND AND GRAVEL QUARRIES & STONE CUTTING FACILITIES**

A. NAME AND ADDRESS OF FACILITY

1. FACILITY NAME	2. FACILITY ADDRESS
Greenhill Materials Limestone Quarry	14701 E. Highway 266, Owasso, OK 74055

B. FACILITY CONTACT

1. NAME & TITLE	2. PHONE (area code & number)
Matt Ritchie, Materials Manager	918-266-6482

C. MAP

Include a topographic map that will show the locations of all of the following items which are or will be present: outfalls, surface impoundments, septic tank systems, storage facilities, containment devices, monitoring wells, and any water wells within one-half (½) mile of any surface impoundment or septic tank system.

D. SOURCES OF WATER SUPPLY AND AMOUNT USED

Identify all sources of facility water by entering the appropriate letter(s) in the boxes below and then providing the appropriate description(s), as indicated in parentheses. List each source on a separate line. If you have more than one source of a given type, indicate this by entering the letter, followed by two digits (e.g., if your water comes from three wells, the sources would be indicated as G01, G02 and G03). For each source, estimate of the average daily use. Continue on additional sheets if needed.

G = GROUNDWATER WELL	(legal description of well location)
S = SURFACE WATER	(name of stream, river, lake, etc., and legal description of intake)
P = PUBLIC WATER SUPPLY	(name of entity from which water is obtained)
W = WASTEWATER TREATMENT PLANT	(name of entity from which water is obtained)
O = OTHER	(source of supply, and legal description if applicable)

1. SOURCE	2. DESCRIPTION	3. AVG. DAILY USE (GPD)
S	Water recycled from onsite total retention ponds with permitted emergency withdrawal from Bird Creek and an additional pond to the northeast.	960,000
P	Water purchased from the City of Tulsa	10,000

E. INVENTORY OF CHEMICALS AND RAW MATERIALS

List all chemical compounds and raw materials in containers of 55 gallons or more, used in plant operations and stored outside a building (e.g., solvents, cleaning compounds, water treatment chemicals). Describe the storage location and the purpose for which each chemical is used. Continue on additional sheets if needed.

10,000-gallon diesel fuel AST - west side of property - used to fuel mobile mine equipment.
Lubricating oils and greases - maximum of 25 drums - west side of property - used for lubricating mobile equipment and fixed crusher plant equipment.
Stockpiled aggregate materials at various points around the crusher plant.

RECEIVED
DEC 20 2012
WATER QUALITY DIVISION

FOR DEQ USE ONLY

OPDES PERMIT NO.	STATE PERMIT NO.	STATE ID NO.

F. LOCATION

For each industrial surface impoundment and/or septic tank system, provide the ID number, legal description, and indicate if the impoundment or septic tank is located in the 100 year flood plain. If the impoundment(s) or tank(s) have previously been permitted, use the ID number(s) contained in the previous permit. If the impoundment(s) or tanks(s) have not previously been permitted, ID numbers should be assigned using the appropriate letter followed by two digits (e.g., if you have three flow-through impoundments; their ID numbers would be F01, F02 and F03). Each type of impoundment and/or septic tank system should be numbered separately (e.g., if you have one flow-through and one total retention impoundment, their ID numbers would be F01 and T01, rather than F01 and T02). Use the same numbers throughout this form. Continue on additional sheets if needed.

F = FLOW-THROUGH SURFACE IMPOUNDMENT
T = TOTAL RETENTION SURFACE IMPOUNDMENT
S = SEPTIC TANK SYSTEM WITHOUT LATERAL LINES
Z = SEPTIC TANK SYSTEM WITH LATERAL LINES

1. ID NO.	2. LEGAL DESCRIPTION (¼, ¼, ¼, Section, Township, Range)	3. FLOOD PLAIN (yes or no)
F01	NE/4, NW/4, SE/4, Section 10, T20N, R14E	Yes
F02	NE/4, NW/4, SE/4, Section 10, T20, R14E	Yes
F03	NE/4, NW/4, SE/4, Section 10, T20N, R14E	Yes
T01	NW/4, NW/4, SE/4, Section 10, T20N, R14E	Yes
Z01	NE/4, NE/4, SW/4, Section 10, T20N, R14E	Yes

G. FLOWS, SOURCES OF WASTE, AND TREATMENT

1. Attach a line drawing showing the flow of wastes or wastewaters through the facility unit processes. Indicate sources of intake water, chemicals, raw materials, and other sources of wastes. Label all unit processes or operations that contribute wastes or wastewater, including production areas, waste treatment units, and sources of blowdown or backwash. Indicate disposal pathways of the wastes and wastewaters, including evaporation, recycle, discharge, solid waste storage, septic tanks, impoundments, land application, landfill or other pathways. Provide a water balance (measured or estimated) on the line drawing that shows average flows between sources, unit processes and disposal pathways.

2. For each impoundment and/or septic tank system, provide a description of: (1) All operations and other sources of pollution which contribute waste to the impoundment or tank, including but not limited to process wastes, sanitary wastes, cooling water and stormwater; and (2) The average, maximum and minimum flows contributed by each operation or other source of pollution. Continue on additional sheets if needed.

a. ID NO.	b. OPERATION(S)/SOURCE(S)	c. DAILY FLOW (GPD)		
		(1) AVERAGE	(2) MAXIMUM	(3) MINIMUM
F01	Storm water runoff, flows from crusher plant and haul roads	989,635	1,000,000	100,000
F02	Flow from F01	989,635	1,000,000	100,000
F03	Flow from F02	989,635	1,000,000	100,000
T01	Flow from F03	989,635	1,000,000	100,000
Z01	Sanitary flow from employee restrooms	250	350	200

3. List all wastes which are or will be cootained in the surface impoundment(s) and/or septic tank system(s) (e.g., lubricants, additives, bactericides; detergents, softeners) and their sources. Include all wastes which have the potential to be contained in the impoundment(s) or tank(s) due to spills, bypasses, or unit failures (e.g., raw materials, oils and greases, solvents or product). Also indicate whether you possess any chemical analysis of the wastes. Continue on additional sheets if needed.

a. ID NO.	b. WASTE/POLLUTANT	c. SOURCE	d. WASTEWATER ANALYTICAL DATA
F01, F02, F03	Particulates, sediment	Haul roads, stockpiles, crusher plant	Yes - Limited Data - Attached
T01	Particulates	Haul roads, stockpiles via F01, F02	No
Z01	BOD5	Employee restrooms	No

4. For each impoundment and/or septic tank, list the actual or engineering estimate of the volume of sludge generated annually. Indicate whether the sludge will be periodically removed from the impoundment or tank (give frequency of removal) or will accumulate in the impoundment or tank as a site of final disposal. Also indicate whether you possess analytical data on the sludge generated in each impoundment. Continue on separate sheets if necessary.

a. ID NO.	b. FREQUENCY OF REMOVAL/FINAL DISPOSAL SITE	c. SLUDGE ANALYTICAL DATA	d. VOLUME
F01	Weekly. Bermed area east of quarry*	No	~1,200 tons/week of sediment is removed from Ponds F01, F02 F03.
F02	Weekly. Bermed area east of quarry*	No	
F03	Weekly. Bermed area east of quarry*	No	
T01	Sediment is seldom, if ever, removed from this pond.	No	
	*After air drying, this material is sold as general fill		

5. Describe the treatment purpose of each cell, impoundment, or tank (e.g., settling, aeration, evaporation, or final disposal). List any chemicals and equipment used for each treatment method. Also list the treatment operation parameters (inlet concentration, goal concentration, and detention time) for each impoundment or tank. Continue on additional sheets if necessary.

a. ID NO.	b. TREATMENT				
	(1) DESCRIPTION	(2) CHEMICALS/ EQUIPMENT	(3) INLET CONC. (units)	(4) GOAL CONC. (units)	(5) DETENTION TIME (units)
F01	Primary settling pond - particulates	None	7.1% - 30 TPH	NA	0.51 day
F02	Secondary settling pond - particulates	None	0.71% - 3 TPH	NA	0.15 day
F03	Tertiary settling pond - particulates	None	0.28% - 1.2 TPH	NA	0.93 day
T01	Total retention pond	None	0.071 - 0.3 TPH	NA	6.08 days

H. OUTFALL LOCATION

1. For each outfall, list the legal description (¼, ¼, ¼, Section, Township, Range) to the nearest 10 acres and the name of the receiving water.

a. Outfall No.	b. Legal Description	c. Receiving Water
NA	There are no outfalls associated with this operation. Water is recycled from Pond T01 to the crusher plant for dust suppression and for production of manufactured sand.	

2. For each outfall, list the latitude and longitude:

a. Outfall No.	b. Latitude	c. Longitude
NA	There are no outfalls associated with this operation.	

I. IMPOUNDMENT INFORMATION

1. For each impoundment, attach plans sufficient to define the following design parameters: (1) Length and width at top and bottom; (2) Total depth; (3) Designed minimum and maximum freeboard; (4) Interior and exterior side-slopes (ratio of horizontal to vertical distances); and (5) Inlet and outlet structures.
2. For each impoundment, list the holding capacity in gallons (assuming a minimum freeboard) and the dimensions in feet. The following abbreviations are used in the table to indicate the various impoundment dimensions.

BW = BOTTOM WIDTH BL= BOTTOM LENGTH TW= TOP WIDTH TL = TOP LENGTH	D = DEPTH F = MINIMUM FREEBOARD MF = MAXIMUM FREEBOARD	IS = INTERIOR SIDE-SLOPE RATIO (Horiz:Vert) ES = EXTERIOR SIDE-SLOPE RATIO (Horiz:Vert)

a. ID NO.	b. HOLDING CAPACITY (gallons)	c. DIMENSIONS								
		(1) BW (ft)	(2) BL (ft)	(3) TW (ft)	(4) TL (ft)	(5) D (ft)	(6) F (ft)	(7) MF (ft)	(8) IS (ratio)	(9) ES (ratio)
F01		0	66	54	126	10	3	4	3:1	NA
F02		0	0	33	42	12	3	4	3:1	NA
F03		0	116	58	176	12	3	4	3:1	NA
T01		70	144	172	246	17	3	4	3:1	NA

3. In the table below, list the type of liner material (e.g., native soil, compacted clay, flexible membrane, composite, soil/bentonite, concrete, or alternative) to be installed or currently in use. Definitive information and justification is required for alternative liner systems. List the thickness (in inches, feet, or mils; as appropriate) and permeability rate (in inches/hour) or hydraulic conductivity (in centimeters/second), as appropriate, of each liner as proposed or as built. Also list the type of soil (series name and USDA texture) underlying the impoundment. Continue on additional sheets if necessary.

a. ID NO.	b. LINER TYPE	c. THICKNESS (inches)	d. HYDRAULIC CONDUCTIVITY (PERMEABILITY) (cm/sec or in/hr, as appropriate)	e. SOIL TYPE	
				(1) SERIES NAME	(2) USDA TEXTURE
F01	Native soil	80+	0.6 to 2.0 in/hr	Verdigris clay loam, 0-1%	clay loam
F02	Native soil	80+	0.6 to 2.0 in/hr	Verdigris clay loam, 0-1%	clay loam
F03	Native soil	80+	0.6 to 2.0 in/hr	Verdigris clay loam, 0-1%	clay loam
T01	Native soil	80+	0.6 to 2.0 in/hr	Verdigris clay loam, 0-1%	clay loam
Z01	Native soil	80+	0.6 to 2.0 in/hr	Verdigris clay loam, 0-1%	clay loam

4. Briefly describe the rationale used to select the proposed or currently used liner systems. Include the date of construction, along with a discussion of the physical and chemical properties of liner materials which are indicative of the waste/liner compatibility an the liner's effectiveness as a physical barrier between the waste and groundwater. References can be made to similar facilities, related research, or trade organization guidelines. Continue on additional sheets if necessary.

Sediment pond system was constructed prior to placing this facility in operation in 2003. Wastewater is Class 3 and is recycled for onsite use. Given the fine texture of the native soils and wastewater classification, these ponds are considered adequate for their purpose.

J. GROUNDWATER INFORMATION

For each surface impoundment and/or land application site, list the depth to groundwater, the direction of groundwater flow, and the legal description of each well used to determine groundwater information. Continue on additional sheets if necessary.

1. ID NO.	2. DEPTH TO WATER (feet)	3. DIRECTION OF FLOW	4. LEGAL DESCRIPTION OF WELL
NA			OWRB records indicate no water supply wells within 1/2 mile of these impoundments (See attached)

K. WELL INFORMATION

1. For each monitoring well or water well within ½ mile of any impoundment and/or septic tank system, list in the table below the total depth, depth of completion, elevation, static water level and legal description of well. Continue on additional sheets if necessary.
2. For each well, attach the well log or drillers log, if available. If no water wells are found within ½ mile, attach a copy of the OWRB letter indicating no wells were found in their records search.

a. ID NO.	b. TOTAL DEPTH	c. DEPTH OF COMPLETION	d. ELEVATION	e. STATIC WATER LEVEL	f. LEGAL DESCRIPTION OF WELL
NA					

L. DEQ LANDOWNER NOTIFICATION AFFIDAVIT

1. Does applicant own all land subject to the application:	Yes		No	X

If yes, proceed to section M. If no, proceed to part 2 of this section.

2. Application(s) for which the applicant does not own all the land subject to the application must notify the owner(s) of leases and/or pipeline right-of-ways that a permit application has been submitted to the DEQ. The basis for this requirement is OAC 252:004-7-13(b). DEQ Form 100-810 shall be used for this purpose and is available on the DEQ web page.

M. CERTIFICATION (see instructions)

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and true belief, true, accurate and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Help & Search Results Key

This search does not necessarily contain information about all of the water wells within the area of interest. The multi-purpose well completion report database consists of information submitted to the Board for all well data reported by licensed firms since 1982 and monitoring well data reported since 1988. There could be other wells in the area, which are not included in our database. Wells drilled prior to the licensing requirements for well drillers would not necessarily have had a well log submitted to the OWRB. A field survey may need to be conducted to verify the presence or absence of other water wells.

The Oklahoma Water Resources Board does not guarantee the accuracy of the data shown in the well completion records. Data entered into the database are as reported by the well drillers and much of the data have not been field verified for accuracy. If any errors in the records are discovered, please bring them to our attention so that corrections to the database may be made.

Sample	Net Weight	% Solids	TPH
Weight 1	1,036	5.50	22.9
Weight 2	1,028	4.30	17.8
Weight 3	1,052	7.90	33.4
Weight 4	1,072	10.70	46.1
Average	1,047	7.10	29.90

Sieve Size	Weight of Material Retained	Approx. TPH
50	2	0.73
100	8	2.93
200	22	8.04
270	6	2.19
minus 270	104	16.10

Bayne Mineral Systems Slurry Measurements

Slurry to Pond	
Flow Rate (GPM)	1,617
Tons/Hour Material	29.90
Slurry % Solids	7.1%
Slurry SG	1.046

Notes:
Above information is from field test
Flow from screw is 1,617 GPM resulting in 29.9 TPH to pond
Sand is in spec and where Customer wants it
Majority of fines is not useable in sand product
Sample taken to be sent to McLanahan for lab test

Soil Map

The soil map section includes the soil map for the defined area of interest, a list of soil map units on the map and extent of each map unit, and cartographic symbols displayed on the map. Also presented are various metadata about data used to produce the map, and a description of each soil map unit.

MAP INFORMATION

Map Scale: 1:22,600 if printed on A size (8.5" × 11") sheet.

The soil surveys that comprise your AOI were mapped at 1:24,000.

Please rely on the bar scale on each map sheet for accurate map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL: http://websoilsurvey.nrcs.usda.gov
Coordinate System: UTM Zone 15N NAD83

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Rogers County, Oklahoma
Survey Area Data: Version 7, Dec 30, 2009

Date(s) aerial images were photographed: 7/15/2003

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Map Unit Legend

Rogers County, Oklahoma (OK131)			
Map Unit Symbol	**Map Unit Name**	**Acres in AOI**	**Percent of AOI**
CmB	Claremore silt loam, 0 to 3 percent slopes	565.1	24.2%
DbC	Dennis-Bates complex, 3 to 5 percent slopes	18.6	0.8%
NaB	Catoosa silt loam, 1 to 3 percent slopes	293.8	12.6%
Os	Osage clay, 0 to 1 percent slopes, occasionally flooded	345.3	14.8%

Map Unit Descriptions

The map units delineated on the detailed soil maps in a soil survey represent the soils or miscellaneous areas in the survey area. The map unit descriptions, along with the maps, can be used to determine the composition and properties of a unit.

A map unit delineation on a soil map represents an area dominated by one or more major kinds of soil or miscellaneous areas. A map unit is identified and named according to the taxonomic classification of the dominant soils. Within a taxonomic class there are precisely defined limits for the properties of the soils. On the landscape, however, the soils are natural phenomena, and they have the characteristic variability of all natural phenomena. Thus, the range of some observed properties may extend beyond the limits defined for a taxonomic class. Areas of soils of a single taxonomic class rarely, if ever, can be mapped without including areas of other taxonomic classes. Consequently, every map unit is made up of the soils or miscellaneous areas for which it is named and some minor components that belong to taxonomic classes other than those of the major soils.

Most minor soils have properties similar to those of the dominant soil or soils in the map unit, and thus they do not affect use and management. These are called noncontrasting, or similar, components. They may or may not be mentioned in a particular map unit description. Other minor components, however, have properties and behavioral characteristics divergent enough to affect use or to require different management. These are called contrasting, or dissimilar, components. They generally are in small areas and could not be mapped separately because of the scale used. Some small areas of strongly contrasting soils or miscellaneous areas are identified by a special symbol on the maps. If included in the database for a given area, the

contrasting minor components are identified in the map unit descriptions along with some characteristics of each. A few areas of minor components may not have been observed, and consequently they are not mentioned in the descriptions, especially where the pattern was so complex that it was impractical to make enough observations to identify all the soils and miscellaneous areas on the landscape.

The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The objective of mapping is not to delineate pure taxonomic classes but rather to separate the landscape into landforms or landform segments that have similar use and management requirements. The delineation of such segments on the map provides sufficient information for the development of resource plans. If intensive use of small areas is planned, however, onsite investigation is needed to define and locate the soils and miscellaneous areas.

An identifying symbol precedes the map unit name in the map unit descriptions. Each description includes general facts about the unit and gives important soil properties and qualities.

Soils that have profiles that are almost alike make up a *soil series*. Except for differences in texture of the surface layer, all the soils of a series have major horizons that are similar in composition, thickness, and arrangement.

Soils of one series can differ in texture of the surface layer, slope, stoniness, salinity, degree of erosion, and other characteristics that affect their use. On the basis of such differences, a soil series is divided into *soil phases*. Most of the areas shown on the detailed soil maps are phases of soil series. The name of a soil phase commonly indicates a feature that affects use or management. For example, Alpha silt loam, 0 to 2 percent slopes, is a phase of the Alpha series.

Some map units are made up of two or more major soils or miscellaneous areas. These map units are complexes, associations, or undifferentiated groups.

A *complex* consists of two or more soils or miscellaneous areas in such an intricate pattern or in such small areas that they cannot be shown separately on the maps. The pattern and proportion of the soils or miscellaneous areas are somewhat similar in all areas. Alpha-Beta complex, 0 to 6 percent slopes, is an example.

An *association* is made up of two or more geographically associated soils or miscellaneous areas that are shown as one unit on the maps. Because of present or anticipated uses of the map units in the survey area, it was not considered practical or necessary to map the soils or miscellaneous areas separately. The pattern and relative proportion of the soils or miscellaneous areas are somewhat similar. Alpha-Beta association, 0 to 2 percent slopes, is an example.

An *undifferentiated group* is made up of two or more soils or miscellaneous areas that could be mapped individually but are mapped as one unit because similar interpretations can be made for use and management. The pattern and proportion of the soils or miscellaneous areas in a mapped area are not uniform. An area can be made up of only one of the major soils or miscellaneous areas, or it can be made up of all of them. Alpha and Beta soils, 0 to 2 percent slopes, is an example.

Some surveys include *miscellaneous areas*. Such areas have little or no soil material and support little or no vegetation. Rock outcrop is an example.

Rogers County, Oklahoma

CmB—Claremore silt loam, 0 to 3 percent slopes

Map Unit Setting

Elevation: 500 to 1,500 feet
Mean annual precipitation: 33 to 45 inches
Mean annual air temperature: 57 to 64 degrees F
Frost-free period: 190 to 225 days

Map Unit Composition

Claremore and similar soils: 85 percent
Minor components: 15 percent

Description of Claremore

Setting

Landform: Interfluves
Landform position (two-dimensional): Summit
Landform position (three-dimensional): Interfluve
Parent material: Loamy residuum weathered from limestone

Properties and qualities

Slope: 0 to 3 percent
Depth to restrictive feature: 10 to 22 inches to lithic bedrock
Drainage class: Well drained
Capacity of the most limiting layer to transmit water (Ksat): Low to moderately low (0.00 to 0.06 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: None
Frequency of ponding: None
Available water capacity: Low (about 4.0 inches)

Interpretive groups

Land capability (nonirrigated): 3s
Ecological site: Loamy prairie (Northeast) PE 62-80 (R112XY059OK)

Typical profile

0 to 10 inches: Silt loam
10 to 16 inches: Silty clay loam
16 to 19 inches: Silty clay loam
19 to 24 inches: Bedrock

Minor Components

Shidler

Percent of map unit: 5 percent
Landform: Hillslopes on hills
Landform position (two-dimensional): Backslope
Down-slope shape: Convex
Across-slope shape: Convex
Ecological site: Very shallow (Eastern) PE 62-80 (R112XY098OK)

Catoosa

Percent of map unit: 5 percent
Landform: Hillslopes on hills

Landform position (two-dimensional): Shoulder
Down-slope shape: Convex
Across-slope shape: Convex
Ecological site: Loamy prairie (Northeast) PE 62-80 (R112XY059OK)

Apperson

Percent of map unit: 5 percent
Landform: Hillslopes on hills
Landform position (two-dimensional): Shoulder
Down-slope shape: Convex
Across-slope shape: Convex
Ecological site: Claypan prairie PE 62-80 (R112XY010OK)

DbC—Dennis-Bates complex, 3 to 5 percent slopes

Map Unit Setting

Elevation: 500 to 1,360 feet
Mean annual precipitation: 35 to 46 inches
Mean annual air temperature: 57 to 65 degrees F
Frost-free period: 170 to 235 days

Map Unit Composition

Dennis and similar soils: 50 percent
Bates and similar soils: 40 percent
Minor components: 10 percent

Description of Dennis

Setting

Landform: Hillslopes
Landform position (two-dimensional): Backslope
Landform position (three-dimensional): Side slope
Down-slope shape: Convex
Across-slope shape: Convex
Parent material: Clayey residuum weathered from shale

Properties and qualities

Slope: 3 to 5 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Somewhat poorly drained
Capacity of the most limiting layer to transmit water (Ksat): Moderately low to moderately high (0.06 to 0.20 in/hr)
Depth to water table: About 12 to 30 inches
Frequency of flooding: None
Frequency of ponding: None
Available water capacity: High (about 11.0 inches)

Interpretive groups

Land capability (nonirrigated): 3e
Ecological site: Loamy prairie (Northeast) PE 62-80 (R112XY059OK)

Typical profile

0 to 14 inches: Silt loam
14 to 18 inches: Loam
18 to 34 inches: Clay loam
34 to 62 inches: Clay

Description of Bates

Setting

Landform: Hillslopes
Landform position (two-dimensional): Backslope
Landform position (three-dimensional): Side slope
Down-slope shape: Convex
Across-slope shape: Convex
Parent material: Loamy residuum weathered from sandstone and shale

Properties and qualities

Slope: 3 to 5 percent
Depth to restrictive feature: 20 to 40 inches to paralithic bedrock
Drainage class: Well drained
Capacity of the most limiting layer to transmit water (Ksat): Moderately high (0.20 to 0.60 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: None
Frequency of ponding: None
Available water capacity: Moderate (about 6.7 inches)

Interpretive groups

Land capability (nonirrigated): 3e
Ecological site: Loamy prairie (Northeast) PE 62-80 (R112XY059OK)

Typical profile

0 to 16 inches: Loam
16 to 30 inches: Clay loam
30 to 36 inches: Gravelly clay loam
36 to 40 inches: Bedrock

Minor Components

Collinsville

Percent of map unit: 5 percent
Landform: Hillslopes on hills
Landform position (two-dimensional): Backslope
Down-slope shape: Convex
Across-slope shape: Convex
Ecological site: Shallow prairie (Central) PE 62-80 (R112XY083OK)

Parsons

Percent of map unit: 5 percent
Landform: Paleoterraces
Landform position (three-dimensional): Tread
Down-slope shape: Linear
Across-slope shape: Convex
Ecological site: Claypan prairie PE 62-80 (R112XY010OK)

NaB—Catoosa silt loam, 1 to 3 percent slopes

Map Unit Setting

Elevation: 500 to 1,200 feet
Mean annual precipitation: 33 to 45 inches
Mean annual air temperature: 57 to 64 degrees F
Frost-free period: 190 to 225 days

Map Unit Composition

Catoosa and similar soils: 85 percent
Minor components: 15 percent

Description of Catoosa

Setting

Landform: Interfluves
Landform position (two-dimensional): Summit
Landform position (three-dimensional): Interfluve
Down-slope shape: Convex
Across-slope shape: Convex
Parent material: Silty residuum weathered from limestone

Properties and qualities

Slope: 1 to 3 percent
Depth to restrictive feature: 20 to 40 inches to lithic bedrock
Drainage class: Well drained
Capacity of the most limiting layer to transmit water (Ksat): Very low to low (0.00 to 0.00 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: None
Frequency of ponding: None
Available water capacity: Moderate (about 7.3 inches)

Interpretive groups

Land capability (nonirrigated): 3e
Ecological site: Loamy prairie (Northeast) PE 62-80 (R112XY059OK)

Typical profile

0 to 14 inches: Silt loam
14 to 38 inches: Silty clay loam
38 to 60 inches: Bedrock

Minor Components

Claremore

Percent of map unit: 8 percent
Landform: Hillslopes on hills
Landform position (two-dimensional): Shoulder
Down-slope shape: Convex

Across-slope shape: Convex
Ecological site: Loamy prairie (Northeast) PE 62-80 (R112XY059OK)

Apperson
Percent of map unit: 7 percent
Landform: Hillslopes on hills
Landform position (two-dimensional): Shoulder
Down-slope shape: Convex
Across-slope shape: Convex
Ecological site: Claypan prairie PE 62-80 (R112XY010OK)

Os—Osage clay, 0 to 1 percent slopes, occasionally flooded

Map Unit Setting
Elevation: 500 to 1,000 feet
Mean annual precipitation: 37 to 47 inches
Mean annual air temperature: 55 to 64 degrees F
Frost-free period: 190 to 230 days

Map Unit Composition
Osage and similar soils: 90 percent
Minor components: 10 percent

Description of Osage

Setting
Landform: Flood-plain steps
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Clayey alluvium

Properties and qualities
Slope: 0 to 1 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Poorly drained
Capacity of the most limiting layer to transmit water (Ksat): Low to moderately low (0.00 to 0.06 in/hr)
Depth to water table: About 0 to 12 inches
Frequency of flooding: Occasional
Frequency of ponding: None
Available water capacity: Moderate (about 9.0 inches)

Interpretive groups
Land capability (nonirrigated): 5w
Ecological site: Heavy bottomland PE 62-80 (R112XY045OK)

Typical profile
0 to 22 inches: Clay
22 to 60 inches: Clay

Minor Components

Verdigris

Percent of map unit: 10 percent
Landform: Flood plains
Down-slope shape: Linear
Across-slope shape: Linear
Ecological site: Loamy bottomland PE 62-80 (R112XY050OK)

Rs—Hector-Endsaw complex, 20 to 35 percent slopes

Map Unit Setting

Elevation: 400 to 2,400 feet
Mean annual precipitation: 22 to 50 inches
Mean annual air temperature: 57 to 64 degrees F
Frost-free period: 175 to 240 days

Map Unit Composition

Hector and similar soils: 55 percent
Endsaw and similar soils: 40 percent
Minor components: 5 percent

Description of Hector

Setting

Landform: Mountain slopes
Landform position (three-dimensional): Mountainflank
Down-slope shape: Convex
Across-slope shape: Convex
Parent material: Loamy residuum weathered from sandstone

Properties and qualities

Slope: 20 to 35 percent
Depth to restrictive feature: 10 to 20 inches to lithic bedrock
Drainage class: Well drained
Capacity of the most limiting layer to transmit water (Ksat): Very low to moderately high (0.00 to 0.20 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: None
Frequency of ponding: None
Available water capacity: Very low (about 1.7 inches)

Interpretive groups

Land capability (nonirrigated): 7e
Ecological site: Savannah breaks PE 72-74 (R118AY079OK)

Typical profile

0 to 6 inches: Stony fine sandy loam
6 to 15 inches: Gravelly fine sandy loam
15 to 25 inches: Bedrock

Description of Endsaw

Setting

Landform: Hillslopes on hills
Landform position (two-dimensional): Backslope
Down-slope shape: Convex
Across-slope shape: Convex
Parent material: Loamy colluvium and/or clayey residuum weathered from shale

Properties and qualities

Slope: 20 to 35 percent
Depth to restrictive feature: 40 to 60 inches to paralithic bedrock
Drainage class: Moderately well drained
Capacity of the most limiting layer to transmit water (Ksat): Low to moderately low (0.00 to 0.06 in/hr)
Depth to water table: About 24 to 36 inches
Frequency of flooding: None
Frequency of ponding: None
Available water capacity: Low (about 5.5 inches)

Interpretive groups

Land capability (nonirrigated): 7e
Ecological site: Savannah breaks PE 72-74 (R118AY079OK)

Typical profile

0 to 8 inches: Stony fine sandy loam
8 to 42 inches: Gravelly silty clay
42 to 60 inches: Bedrock

Minor Components

Rock outcrop

Percent of map unit: 5 percent
Landform: Hillslopes on hills
Down-slope shape: Convex
Across-slope shape: Convex

So—Shidler stony silty clay loam, 3 to 20 percent slopes

Map Unit Setting

Elevation: 500 to 1,500 feet
Mean annual precipitation: 33 to 45 inches
Mean annual air temperature: 57 to 64 degrees F
Frost-free period: 190 to 225 days

Map Unit Composition

Shidler and similar soils: 90 percent
Minor components: 10 percent

Description of Shidler

Setting

Landform: Hillslopes
Landform position (two-dimensional): Backslope
Landform position (three-dimensional): Side slope
Down-slope shape: Convex
Across-slope shape: Convex
Parent material: Loamy residuum weathered from cherty limestone

Properties and qualities

Slope: 3 to 20 percent
Depth to restrictive feature: 4 to 20 inches to lithic bedrock
Drainage class: Well drained
Capacity of the most limiting layer to transmit water (Ksat): Very low to low (0.00 to 0.00 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: None
Frequency of ponding: None
Available water capacity: Very low (about 1.2 inches)

Interpretive groups

Land capability (nonirrigated): 7s
Ecological site: Very shallow (Eastern) PE 62-80 (R112XY098OK)

Typical profile

SuB—Apperson and Summit soils, 1 to 3 percent slopes

Map Unit Setting

Elevation: 500 to 1,500 feet
Mean annual precipitation: 28 to 47 inches
Mean annual air temperature: 57 to 65 degrees F
Frost-free period: 190 to 230 days

Map Unit Composition

Apperson and similar soils: 55 percent
Summit and similar soils: 40 percent
Minor components: 5 percent

Description of Apperson

Setting

Landform: Interfluves
Landform position (two-dimensional): Summit
Landform position (three-dimensional): Interfluve
Down-slope shape: Convex
Across-slope shape: Convex
Parent material: Calcareous clayey residuum weathered from limestone

Properties and qualities

Slope: 1 to 3 percent
Depth to restrictive feature: 40 to 60 inches to lithic bedrock
Drainage class: Somewhat poorly drained
Capacity of the most limiting layer to transmit water (Ksat): Very low to low (0.00 to 0.00 in/hr)
Depth to water table: About 18 to 24 inches
Frequency of flooding: None
Frequency of ponding: None
Calcium carbonate, maximum content: 2 percent
Available water capacity: Moderate (about 7.5 inches)

Interpretive groups

Land capability (nonirrigated): 3e
Ecological site: Claypan prairie PE 62-80 (R112XY010OK)

Typical profile

0 to 14 inches: Silty clay loam
14 to 22 inches: Silty clay
22 to 36 inches: Silty clay
36 to 47 inches: Silty clay
47 to 60 inches: Bedrock

Description of Summit

Setting

Landform: Interfluves

Landform position (two-dimensional): Summit
Landform position (three-dimensional): Interfluve
Down-slope shape: Convex
Across-slope shape: Convex
Parent material: Clayey colluvium and/or residuum weathered from shale

Properties and qualities

Slope: 1 to 3 percent
Depth to restrictive feature: 40 to 60 inches to lithic bedrock
Drainage class: Somewhat poorly drained
Capacity of the most limiting layer to transmit water (Ksat): Moderately low to moderately high (0.06 to 0.20 in/hr)
Depth to water table: About 18 to 24 inches
Frequency of flooding: None
Frequency of ponding: None
Calcium carbonate, maximum content: 2 percent
Available water capacity: Moderate (about 7.8 inches)

Interpretive groups

Land capability (nonirrigated): 2e
Ecological site: Claypan prairie PE 62-80 (R112XY010OK)

Typical profile

0 to 7 inches: Silty clay loam
7 to 13 inches: Silty clay loam
13 to 21 inches: Clay
21 to 89 inches: Clay
89 to 116 inches: Clay

Minor Components

Ve—Verdigris clay loam, 0 to 1 percent slopes, occasionally flooded

Map Unit Setting

Elevation: 500 to 1,000 feet
Mean annual precipitation: 37 to 47 inches
Mean annual air temperature: 55 to 64 degrees F
Frost-free period: 190 to 230 days

Map Unit Composition

Verdigris and similar soils: 90 percent
Minor components: 10 percent

Description of Verdigris

Setting

Landform: Flood-plain steps
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Silty alluvium

Properties and qualities

Slope: 0 to 1 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Well drained
Capacity of the most limiting layer to transmit water (Ksat): Moderately high to high (0.60 to 2.00 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: Occasional
Frequency of ponding: None
Available water capacity: High (about 11.6 inches)

Interpretive groups

Land capability (nonirrigated): 2w
Ecological site: Loamy bottomland PE 62-80 (R112XY050OK)

Typical profile

0 to 16 inches: Clay loam
16 to 80 inches: Silty clay loam

Minor Components

Osage

Percent of map unit: 10 percent
Landform: Flood plains
Down-slope shape: Linear
Across-slope shape: Linear
Ecological site: Heavy bottomland PE 62-80 (R112XY045OK)

Vf—Verdigris silty clay loam, 0 to 2 percent slopes, frequently flooded

Map Unit Setting

Elevation: 500 to 1,000 feet
Mean annual precipitation: 38 to 47 inches
Mean annual air temperature: 57 to 64 degrees F
Frost-free period: 190 to 230 days

Map Unit Composition

Verdigris and similar soils: 100 percent

Description of Verdigris

Setting

Landform: Flood plains
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Silty alluvium

Properties and qualities

Slope: 0 to 2 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Well drained
Capacity of the most limiting layer to transmit water (Ksat): Moderately high to high (0.60 to 2.00 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: Frequent
Frequency of ponding: None
Available water capacity: High (about 12.0 inches)

Interpretive groups

Land capability (nonirrigated): 5w
Ecological site: Loamy bottomland PE 62-80 (R112XY050OK)

Typical profile

0 to 17 inches: Silty clay loam
17 to 80 inches: Silty clay loam

W—Water

Map Unit Setting

Elevation: 250 to 4,000 feet
Mean annual precipitation: 22 to 48 inches
Mean annual air temperature: 57 to 64 degrees F
Frost-free period: 190 to 240 days

Map Unit Composition
Water: 100 percent

Description of Water

Interpretive groups
Land capability (nonirrigated): 8

Typical profile
0 to 80 inches: Water

ITEM NO.	CRITICAL ITEMS
01	Treatment of industrial wastewater at an unpermitted facility.
02	Discharge from additional outfalls or construction of additional surface impoundments not included in facility's permit.
04	Failure to orally report all bypasses within twenty-four hours and/or failure to file a written report within five days.
05	Failure to prevent bypasses of treatment units or overflows from surface impoundments.
13	Analyses to determine compliance with NPDES/OPDES permit performed at laboratory not certified by DEQ.
17	Failure to submit noncompliance reports following violations of the facility's NPDES/OPDES permit limits and conditions.
18	Reporting of effluent quality data on SMRs that is inconsistent with laboratory results
20	Failure to adequately measure flow during discharges as required by NPDES/OPDES permit.

RE: OPDES Permit Application (new), Permit No. OK0100277
Sherwood Construction Co. Inc. dba Greenhill Materials, Rogers County, Oklahoma
Facility ID No. I-66001690

NOTICE OF DEFICIENCY

Dear Mr. Ritchie:

Your application for an Oklahoma Department of Environmental Quality (DEQ) permit to discharge wastewater was received by this office on April 4, 2013. As specified in OAC 252:004-7-7 of the DEQ rules, your application has been determined to be incomplete. It is necessary for you to submit the proof of public notice of your application to this office before the permit application can be processed.

State law effective July 1, 1993, requires all permit applicants to publish in local newspapers a public notice of their application for permit to discharge. The instructions (Attachment 1 of application Form 1) provide more details of this public notice requirement.

Please submit the requested information by June 7, 2013. The permit application review process is hereby suspended pending receipt of the requested information.

Thank you for your cooperation. If you have any questions concerning this submittal or the permit procedures, please contact me at (405)702-8203.

Sincerely,

Marc Hullinger

RE: ODEQ Permit No. OKG95T003
Greenhill Materials Limestone Quarry, Rogers County, Oklahoma
Facility ID No. I-66001690

Dear Mr. Ritchie:

Your application for an Oklahoma Department of Environmental Quality (DEQ) waste disposal permit was received by this office on December 20, 2012. As specified in OAC 252:004-7-7 of the DEQ rules, your application has been reviewed and determined to be administratively complete.

Please note that additional information may be requested at a later date to clarify, modify, or supplement information already provided in this application. Requests for such additional information will not render your application incomplete.

Thank you for your cooperation. Should you have any questions concerning this submittal or the permitting procedures, please contact me at (405) 702-8203.

Sincerely,

Marc Hullinger, P.E.

Air Quality Division, Dept. of Environmental Quality, PO Box 1677, OKC, OK 73101-1677, (405)702-4100

COMPANY NAME: SHERWOOD CONSTRCTN CO INC — **COMPANY ID: 1739**

FACILITY NAME: GREENHILL MATL — **FACILITY ID: 3421**

Sequence	Emission Unit ID	Emission Unit Name
6	22524	Screen S-1

Notes	Unit Type	Status	Latitude	Longitude
	Screen	Operating	36.228190	-95.805780

Emission Release Point ID: 23006 — **Name: Screen S-1** — **Type: Fugitive** — **Status: Operating**

Parameters

Gas Exit Vel. (ft/s)	Height (ft)	Diameter (ft)	Temp (F)	Flow Rate (acfm)
0	0	0	0	0

Fugitive Release Point Parameters

Fugitive area(sqft)	Fugitive Ht. (ft)
1306800	10

Process Data

Process ID: 121376 **SCC:** 30502014 — **Is Process Data Confidential?** N

Process Description: Industrial Processes, Mineral Products, Stone Quarrying - Processing (See also 305320), Shaker Screens

Process Material: Limestone

Material I/O: Used (Input)

Process (Throughput) Rates

Units: Tons

Maximum Hourly	Typical Daily	Actual Annual
750	5000	**1320225**

Combustion Processes

Fuel Heat Input Design Capacity: 0 NOT APPLICABLE

Fuel Data (combustion processes only)

			Sulfur(Wt%)	Ash (Wt%)
Fuel Heat Content	0	N/A	0	0

Actual Hours/Year: 1818

Typical Operating Periods (when process is operational)

Hours/Day 10 — Days/Week 6 — Weeks/Year 50

Seasonal Operating Fractions

Spring 0.25 — Summer 0.25 — Fall 0.25 — Winter 0.25

Emissions from this Process

Pollutant: * PM-10 (All Particulate Matter <10 microns)

CAS Number:

Calculation Method: AP-42 Factors

EmissionFactor: 0.0315 Pounds (**Numerator Units**) / Tons (**Denominator Units**)

Reference:

Factor Includes Control Efficiency?

RE: DEQ Application No. OKG95T003
Greenhill Materials Limestone Quarry, Rogers County, Oklahoma
Facility ID No. I-66001690

Dear Mr. Ritchie:

Your Authorization to treat and dispose of wastewater under OPDES General Permit No. OKG95T is enclosed. The effective date and the expiration date of this Authorization appears on the cover page.

Should you have any questions regarding the Authorization, please contact the Industrial Permits Section at the letterhead address or telephone (405) 702-8100. Should you have any questions regarding compliance with the conditions of this Authorization, please contact the Industrial Enforcement Section at the same address and phone number.

Sincerely,

Carol Paden

Carol Paden, P.E., Manager
Industrial Permits Section
Water Quality Division

MH/ab DM/SLT/AR

Enclosure

OKLAHOMA DEPARTMENT OF ENVIRONMENTAL QUALITY
AUTHORIZATION FOR DISCHARGE AND/OR DISPOSAL
UNDER GENERAL PERMIT NO. OKG950000

AUTHORIZATION NO.: OKG95T003
FACILITY ID NO.: I -66001690

In compliance with Title 27A O.S. §2-6-201 *et seq.* (the OPDES Act), as amended, the Rules of the Department of Environmental Quality promulgated thereunder, and in reliance on the certified statements and representations heretofore made in its application,

Sherwood Construction dba Greenhill Materials
Greenhill Materials Limestone Quarry
P.O. Box 10
Catoosa, OK 74015-0010

is hereby authorized to treat and dispose of wastewater from the washing and sorting of rock, sand, and/or gravel (SIC Codes 1422, 1423, and 1442) and associated stormwater runoff from their facility located at:

N½, NW¼, SE¼, Section 10, Township 20N, Range 14EIM and
NE¼, NE¼, Section 10 Township 20N, Range 14EIM and
S½, NW¼, Section 11, Township 20N, Range 14EIM
or at 14701 E. Highway 266, Owasso, OK 74055

The above-referenced facility is also authorized to retain wastewater in three flow-through impoundments (F01 through F03) and one total-retention surface impoundments (T01), as described in the Appendix. Wastewater descriptions and classifications are also contained in the Appendix. Surface impoundments shall be maintained in accordance with conditions set forth in General Permit No. OKG95, and in Parts I, II, III, and the Appendix hereof.

Issuance of this Authorization in no way or in any respect affects the permittee's civil or criminal responsibility regarding disposal of wastewater, except with respect to the permittee's legal responsibility under the OPDES Act and DEQ Rules.

This Authorization is non-transferable and is granted summarily by and at the discretion of the Executive Director in accordance with applicable DEQ Rules and provisions of the above-referenced Permit.

This Authorization replaces and/or supersedes DEQ Authorization No. OKG95T003 that became effective on June 14, 2012.

This Authorization shall become effective on June 20, 2013.

This Authorization shall expire at midnight, on May 31, 2018.

This is to certify that the proposed wastewater discharges set forth in this Authorization meet the requirements of the Oklahoma Water Quality Standards, as amended, and the DEQ Rules.

Issued this 20th day of June, 2013.

Carol Paden

Carol Paden, P.E., Manager
Industrial Permits Section
Water Quality Division

PART I
EFFLUENT LIMITATIONS, MONITORING AND OTHER REQUIREMENTS

A. Effluent Limitations and Monitoring Requirements

None.

B. Schedule of Compliance

The permittee shall achieve compliance with the effluent limitations specified for discharges in accordance with the following schedule: None.

C. Surface Impoundments

The use of surface impoundments for treatment and/or disposal of wastewater at Rock, Sand and Gravel Quarries is authorized by this General Permit, subject to additional State requirements as specified below and in this Authorization, in accordance with OAC 252:616.

1. Construction Requirements

Impoundments shall be constructed and maintained in accordance with OAC 252:616-7-1.

2. Wastewater Classification

The wastewater generated from routine operations of rock, sand, and gravel quarries and stone cutting facilities is classified as Class III wastewater in accordance with OAC 252:616-1-2.

3. Liner Requirements

Liner materials and construction shall be in compliance with requirements of OAC 252:616-7-1(9) and OAC 252:616-7-2 through OAC 252:616-7-7.

4. Other Specific Requirements

a. Wastewater contained in surface impoundments may be recycled for use in dust suppression, stockpile watering, wash water, or cooling water.

b. At such time as surface impoundments are to be permanently taken out of service or at such time as the contents of surface impoundments pose a risk to the environment or waters of the State, the owner or operator of the facility shall follow all closure requirements contained in OAC 252:616-13.

c. In all other respects, surface impoundments shall be subject to standard conditions for surface impoundments contained in OAC 252:616, Subchapters 5, 7, and 13, including but not limited to requirements for construction, operation, maintenance, monitoring, and closure.

d. The permit may be reopened to implement and/or require impoundment modifications, additions, extensions, and/or operational changes; additional monitoring and reporting (including but not necessarily limited to soil sampling); reclassification of wastes; sludge management plans; best management practices; closure plans; remediation and/or remediation plans; monitoring wells and/or subsurface monitoring plans; and/or other appropriate actions.

5. **Freeboard Requirements (OAC 252:616-7-1(7))**

   A minimum freeboard of three (3) feet shall be maintained for all surface impoundments.

6. **Depth to Groundwater (OAC 252:616-7-1(4))**

   Surface impoundments as required by OAC 252:616-7-1(4) are required to be located such that the base of the liner is at least fifteen (15) feet above historic maximum groundwater table. Since the wastewater from the activities covered by this general permit is classified as Class III, this requirement may be waived in accordance with OAC 252:616-7-1(4)(B).

D. Tank Systems

The use of underground tank systems to manage process wastewater for treatment and/or disposal of process wastewater is authorized by this permit, subject to additional State requirements as specified below and in the Authorization, in accordance with OAC 252:616-9.

1. **Authorized Use of Tank Systems (OAC 252:616-9-1)**

   The use of tank systems for all wastewater classifications is authorized as follows:

   a. Tank systems without lateral lines can be used for the treatment of Class I, II, III, and V wastewater.

   b. Tank systems with lateral lines are subject to the Underground Injection Control permitting process.

2. **Tank System Materials (OAC 252:616-9-2)**

   Tank systems may be constructed of concrete, metal, plastic, or fiberglass in accordance with OAC 252:616-9-2.

3. **Tank System Requirements (OAC 252:616-9-3)**

   Tank systems must be constructed in accordance with OAC 252:616-9-3.

E. Land Application and Beneficial Reuse of Wastewater

Land application of process wastewater for dust suppression or stockpile watering and/or reuse of process wastewater for rock washing or cooling water is authorized by this permit, and is subject to the requirements as specified below and in the Authorization, in accordance with OAC 252:616-11.

1. Process wastewater that is reused or land applied for dust suppression must be classified as Class III wastewater in accordance with OAC 252:616-1-2.

2. Process wastewater to be land applied for dust suppression shall be free of visible sheen of oil or globules of oil or grease.

3. The process wastewater to be land applied for dust suppression shall be visually inspected prior to land application.

4. Process wastewater that is recycled is exempt from monitoring requirements.

5. There shall be no land application of process wastewater for dust suppression in areas where the depth to the maximum seasonal groundwater level is less than two (2) feet in accordance with OAC 252:616-5-1(b)(5).

6. There shall be no land application of process wastewater for dust suppression during periods of precipitation or when soil is saturated or frozen.

7. There shall be no runoff of process wastewater used for dust suppression.

F. Disposal of Other Solids

Solids, sludges, or other pollutants other than recyclable material, removed in the course of treatment or control of wastewater shall be disposed of in a State-approved industrial waste disposal site or to a company for recycling. If any such industrial wastes are removed from the facility, the permittee shall keep accurate records that include the following information:

1. Name and address of company hauling waste.
2. The type and amount of waste hauled.
3. The final disposal site of waste hauled.

Upon request, the above records shall be made available to the DEQ's staff for review. These records shall be kept for a minimum of three (3) years.

PART II
OTHER PERMIT CONDITIONS AND REQUIREMENTS

A. Regulatory Notice

The permittee is hereby given notice that this permit is in all respects subject to compliance with and actions under any and all applicable and relevant terms, conditions, provisions and requirements and any and all amendments of the laws of the state of Oklahoma, the rules of the Oklahoma Department of Environmental Quality, and Oklahoma's Water Quality Standards. The absence of any express reference within this permit of any particular statutory requirement, rule(s), regulation(s), or standard(s) shall in no respect be deemed or construed to exempt or preclude the application of such requirement, rule(s), regulation(s), or standard(s) to this permit or the permittee. By the Director's approval, grant and issuance of this permit, permittee acknowledges receipt of true, correct and current copies of Oklahoma's Water Quality Standards, and the rules of the Oklahoma Department of Environmental Quality, provided, however, that permittee further acknowledges that any and all amendments thereto shall become part of this permit.

B. Reopener Clause

The permit may be reopened to implement and/or require impoundment and/or tank system modifications, additions, extensions, and/or operational changes; monitoring and reporting; reclassification of wastes; sludge management plans; best management practices; closure plans; and/or other appropriate actions.

C. Individual permits

1. Any permittee authorized by this permit may request to be excluded from the coverage of this general permit by applying for an individual permit. The permittee shall submit the appropriate OPDES application forms together with the reasons supporting the request to the Water Quality Division.

2. When an individual OPDES permit is issued to a permittee otherwise subject to this general permit, the applicability of this permit to that owner or permittee is automatically terminated on the effective date of the individual permit.

3. As described in the General Provisions of this permit, a rock, sand, or gravel quarry excluded from coverage under this general permit solely because it already has an individual permit may request that the individual permit be revoked, and that the quarry covered by this general permit. Upon revocation of the individual permit, this general permit shall apply to the quarry.

D. Laws and Rules Applicable

The DEQ Rules, as amended, are applicable to and are incorporated by reference into this permit and any Authorizations issued under it. The permittee is hereby given notice that this permit is in all respects subject to compliance with and actions under any and all applicable and relevant terms, conditions, provisions and requirements and all amendments of the laws of the State of Oklahoma, the Department of Environmental Quality Rules, and Oklahoma's Water Quality Standards. The absence of any express reference within this permit to any particular statutory requirement, rule(s), regulation(s), or standard(s) shall in no respect be deemed or construed to exempt or preclude the application of such requirement, rule(s), regulation(s), or standard(s) to this permit of the permittee. By DEQ approval, grant, and issuance of this permit, permittee acknowledges responsibility to obtain correct and current copies of applicable DEQ Rules (as amended), provided, however, that permittee further acknowledges that any and all amendments thereto shall become a part of this permit.

E. Definitions

1. The term "active quarry area" means the area, on or beneath land, used or disturbed in activity related to the extraction, removal or recovery of rock, sand or gravel from its natural deposit(s).

2. The term "stormwater runoff from the active quarry" as described in 40 CFR 122.26(b)(14) means the discharge from any conveyance which is used for collecting and conveying storm water and which is directly related to manufacturing, processing, or raw material storage areas at an industrial plant. This paragraph of the rule also states "...For the categories of industries identified in paragraph (b)(14)(xi) of this section, the term includes only stormwater discharges from all the areas that are listed previously where material handling equipment, or activities, raw materials, intermediate products, final products, waste materials, by-products, or industrial machinery are exposed to storm water. For the purposes of this paragraph, material handling activities include the storage, loading and unloading, transportation, or conveyance of any raw material, intermediate product, finished product, by-product or waste product."

APPENDIX

Description of Wastewater Treatment/Disposal Surface Impoundments

Wastewater Classification OAC 252:616-1-2		Liner Type	Holding Capacity or Dimensions OAC 252:616-7-1(6) [b]	Wastewater Destination
ID [a]	Wastewater Description			
F01	Storm water and wastewater from the washing and sorting of rock, sand and/or gravel Class III	Native Soil	0.8 million gallons ~ 54' x 126' x 10'deep	F02
F02	Storm water and wastewater from the washing and sorting of rock, sand and/or gravel Class III	Native Soil	0.4 million gallons ~ 33' x 42' x 12' deep	F03
F03	Storm water and wastewater from the washing and sorting of rock, sand and/or gravel Class III	Native Soil	2.5 million gallons ~ 58' x 176' x 12' deep	T01
T01	Storm water and wastewater from the washing and sorting of rock, sand and/or gravel Class III	Native Soil	24,235,200 gallons ~ 172' x 246' x 17' deep	Total Retention

[a] Designation F refers to flow-through surface impoundment.
Designation T refers to total retention surface impoundment.
[b] Based on information provided in application. Freeboard requirements in Part I.C.5 must be met.

Location of Surface Impoundments

ID	Legal Location Description	General Location and Description
F01	SE¼, SW¼, NW¼, Section 10, Township 20N, Range 14EIM, Rogers County, Oklahoma	Approximately 100 yards east of the office building.
F02	SE¼, SW¼, NW¼, Section 10, Township 20N, Range 14EIM, Rogers County, Oklahoma	Approximately 200 yards northeast of the office building.
F03	NE¼, SW¼, NW¼, Section 10, Township 20N, Range 14EIM, Rogers County, Oklahoma	Approximately 300 yards east of the office building.
T01	SW¼, SW¼, NE¼, Section 10, Township 20N, Range 14EIM, Rogers County, Oklahoma	Approximately ¼ mile east of the office building.

RE: OPDES Permit Application, Permit No. OK0100277
Sherwood Construction Co. Inc. dba Greenhill Materials, Rogers County, Oklahoma
Facility ID No. I-66001690

Dear Mr. Curtis:

Your application for a new Oklahoma Department of Environmental Quality (DEQ) permit to discharge wastewater was received by this office on April 4, 2013. On May 24, 2013, an incomplete letter was sent to you requesting the proof of publication for the public notice of application requirement. The proof of publication was received on June 6, 2013. As specified in OAC 252:004-7-7 of the DEQ rules, your application has been determined to be administratively complete.

Please note that additional information may be requested at a later date to clarify, modify, or supplement information already provided in this application. Requests for such additional information will not render your application incomplete.

Thank you for your cooperation. If you have any questions concerning this submittal or DEQ permitting procedures, please contact me at (405)702-8203.

Sincerely,

Marc Hullinger, P.E.

RE: OPDES Permit Application, Permit No.OK0100277
Sherwood Construction Co.Inc. dba Greenhill Materials Rogers County, Oklahoma
Facility ID No. I-66001690

NOTICE OF DEFICIENCY

Dear Mr. Curtis:

Your application for an Oklahoma Department of Environmental Quality (DEQ) permit to discharge wastewater was received by this office on April 4, 2013 and was determined to be complete on July 23, 2013.

On October 2, 2013 the DEQ received an email from your consultant Randy Beeson saying that Greenhill Materials is considering the use of a cyclone to remove the sediment generated by the quarry ponds and that Greenhill Material staff need additional time to evaluate the technology. Mr. Beeson stated that if the cyclone is installed at the Greenhill Materials quarry, it will generate relatively dry sediment that can be hauled by truck and that Sherwood Construction Co. Inc. dba Greenhill Materials would withdraw the application for the referenced permit.

In consideration of the request of your consultant, the permit application technical review process is hereby suspended until December 3, 2013.

If you have any questions concerning this submittal or DEQ permit procedures, please contact me at (405)702-8203.

Sincerely,

Marc Hullinger

RE: Industrial Minor Permit Application
Sherwood Construction Co.Inc. dba Greenhill Materials Rogers County, Oklahoma
Permit No. OK0100277
Facility ID No. I-66001690

Dear Mr. Curtis:

Your application for an Oklahoma Department of Environmental Quality (DEQ) permit to treat and dispose of wastewater was received by this office on April 4, 2013, and was determined to be complete on July 23, 2013.

On December 9, 2013 the DEQ received an email from your consultant Randy Beeson saying that Greenhill Materials installed a cyclone to remove the sediment generated by the quarry ponds and to formally withdraw your application. As specified in OAC 252:004-7-14 of the DEQ rules, your application has been withdrawn.

Should you again propose to treat and dispose of industrial wastewater or to discharge any pollutant to the waters of the States from this facility, you will need to file a new application at least 180 days in advance of the proposed disposal and/or discharge. Any permit issued as a result of such application will contain conditions and limitations consistent with the situation, and the law and regulations in effect at the time of issuance of a new permit.

Thank you for your cooperation. If you have any questions concerning this submittal or DEQ permitting procedures, please contact Brandon Tyler at (405)702-8215.

Sincerely,

Carol Paden

Subject: Greenhill Materials OPDES Discharge Permit

Marc,

In mid-September Sherwood Construction notified you that it wanted to suspend review of the OPDES discharge permit application submitted earlier this year for the proposed sediment storage area on the east side of its Greenhill Materials Quarry. Sherwood has now installed a cyclone between the sand screw and its total retention ponds in order to trap and dewater sediment in the pond inflow. The dewatered sediment can now be transported by haul truck to the fill area and placed for future site development. Thus, we are formally requesting that this permit application be withdrawn at this time. Please contact me if you have any questions regarding this request. Thank you.

Engineering Report Form

for

Water Distribution Systems and Ground Water Wells

The City of Tulsa proposes the construction of a waterline extension(s), ground water well(s), pumping facility, chlorination facility, and/or water storage facility in the manner indicated by the information contained herein and by the plans, profiles, specifications, and other data attached hereto. The plans and specifications have been approved and signed by the proper city officials or owner and an application for a permit properly executed by the Mayor, Chairman of the Board or owner accompanies this report.

I. General Information

1. Name of Facility: City of Tulsa
2. PWSID Number: 1021307
3. Legal Description: ___ /4, SW /4, NW /4, of Section 17, T- 20 - N, R - 14 - E, I. M. / C. M., Tulsa County
4. Source of Water Supply: City of Tulsa
   a. Surface _____, Ground _____, or Purchase _____
   b. Community X or Non-Community _____
5. Population Served by System: 30
6. Type of Service Area (Rural waterline extension, Municipal, Mobile Home Park, Camp Grounds, School, Etc.) : Municipal
7. Number of Service Connections (System): 2
8. Technical specifications for the proposed waterline extension, booster pump(s), and water well(s) are provided? Yes (X) ; No ( ), if No, the most current City Ordinances or Standards are referred to: Yes (X); No ( ). If Yes, the Ordinances/Standards are included or on file with the Construction Permit Unit, Water Quality Division, Oklahoma Department of Environmental Quality.

WLEX0072140164
Tulsa Metropolitan Utility Authority - Tulsa County
WATER CONST. PERMIT FILE: FACILITY # S-20409

9. The area of the proposed development: 20 . If area of development is 1 acre or more, has the developer/builder obtained a DEQ Storm Water Construction Permit? Yes (X); No ( ). Developers/builders are required to obtain a DEQ Storm Water Construction Permit for a construction site that will disturb one (1) acre or more in accordance with OPDES, 27A O.S. 2-6-201 et siq.

II. Waterline Extension Technical Information

A. Municipal Waterline Extensions

1. The proposed waterline system is designed to maintain a minimum pressure of 25 psi at all points under all conditions of flow? Yes (X) : No ( )
2. Hydraulic analysis based on flow demands and pressure requirements is used to size all water mains? Yes (X); No ( ).
3. Hydraulic analysis is provided (hydraulic analysis is required for the review process)? Yes ( ); No (X).
4. Number of service connections to be served by this waterline after the construction is complete: 2 .
5. A minimum waterline size of six (6) inches in residential areas and eight (8) inches in high value districts are proposed? Yes (X); No ( ).
6. The normal static pressure throughout the area to be served will range from _____ to 118 psi.
7. The normal dynamic pressure throughout the area to be served will range from _____ to 111 psi.
8. Flushing hydrants that discharge above the ground surface are provided for dead-end lines? Yes ( ); No ( ). N/A no dead end lines in project
9. Positive closing valves are located so that a single break in the line will require no more than 500 linear feet of line to be disconnected in high value districts and 1,320 linear feet in other areas? Yes (X); No ( ).
10. Hydrants are provided at each intersection and at intermediate points so spacing does not exceed 600 feet? Yes (X); No ( ).
11. Hydrants should have one (1) 4 ½ inch pumper outlet, not less than two (2) 2 ½ inch hose outlets.
12. Hydrants, with 4 ½ inch pumper outlets are to be connected to mains smaller than 6 inches? Yes ( ); No (X). If Yes, explain _____
13. Drains from hydrant barrels do not connect to any sanitary sewer or storm drain? Yes (X); No ( ).
14. Air relief valves are provided at high points? Yes (X); No ( ).
15. In large mains, blow offs are provided at low points? Yes ( ); No ( ) N/A
16. Are there any cross connections between the public water supply and any sanitary sewer or storm drain? Yes ( ); No (X).

B. Rural Waterline Extensions

1. The proposed waterline system is designed to maintain a minimum pressure of 25 psi at all points under all conditions of flow? Yes ( ) : No ( )
2. Hydraulic analysis based on flow demands and pressure requirements is used to size all water mains? Yes ( ); No ( ).
3. Hydraulic analysis is provided (hydraulic analysis is required for the review process)? Yes ( ); No ( ).
4. Number of service connections to be served by this waterline after the construction is complete: _____.
5. The normal static pressure throughout the area to be served will range from _____ to _____ psi.
6. The normal dynamic pressure throughout the area to be served will range from _____ to _____ psi.
7. Flushing hydrants that discharge above the ground surface are provided for dead-end lines? Yes ( ); No ( ).
8. Valves are located at no more than two (2) mile intervals? Yes ( ); No ( ).
9. Air relief valves are located at high points in the distribution system? Yes ( ); No ( ).
10. Are there any cross connections between the public water supply and any sanitary sewer or storm drain? Yes ( ); No ( ).

C. Installation of Waterlines (To Be Completed For All Municipal and Rural Waterline Extensions)

1. Specifications:
   a.

Pipe material	Applicable Standard	Class	Pressure Rating
Cast Iron			
Ductile Iron	AWWA C151	50	350
PVC			
HDPE			
Other			

   b. Minimum Depth of Cover (30 inches minimum): 36"
   c. Pressure and Leakage Testing in accordance with AWWA C-601? Yes (X); No ( ).
   d. Disinfection Procedures in accordance with AWWA C-651? Yes (X); No ( ).
   e. Reaction blocking is provided at all bends, tees, and hydrants? Yes (X); NO ( ).
   f. Installation of waterlines meets AWWA and Oklahoma DEQ construction standards? Yes (X); No ( ).
2. Does this water line project involve construction along any state or federal highway? Yes ( ); No (X). If yes, has the Oklahoma Department of Transportation (ODOT) been notified, and, do the plans show the location of all affected utilities on file with ODOT? Yes ( ); No ( ).
3. Minimum horizontal separation between water and sewer lines is 10 feet? Yes (X); No ( ). If no, please indicated minimum possible horizontal separation:_____(If 10 feet of separation is not possible, the water line must be constructed in a separate trench and the sewer line designed, constructed, and tested as water line pipe in accordance with OAC 252:656-5-4[c]).
4. Minimum horizontal separation between plastic water lines and gasoline storage tanks (including appurtenances) is at least 50 feet? Yes (X); No ( ). If no, cast iron must be used for water line pipe and in no case be closer than 10 feet to any part of the storage tank system.
5. Minimum horizontal separation between water and all parts of septic tanks and absorption fields, or other sewage treatment and disposal system is 15 feet? Yes (X); No ( ).

6. Minimum horizontal separation distance between waterlines existing or future storm sewers, raw water, oil and gas (includes natural gas), and buried electric lines is 10 feet? Yes (X); No ( ). If no, the minimum horizontal separation for storm sewer lines is _____ feet, raw waterlines is _____ feet, oil & gas lines is _____ feet, and buried electric lines is _____ feet.
7. Where waterlines and sewer lines intersect the minimum vertical separation (edge to edge) is 24" inches.
8. Hydrants or other flushing devices capable of flow velocities of at least 2 feet per second in the waterline are installed at all dead-ends? Yes ( ); No ( ). N/A no dead in lines in project
9. Proposed waterline extension involves surface water crossings? Yes ( ); No (X).
   If Yes, above water crossings ( ) or under water crossing ( ). Width of crossing _____ ft.
   If above water crossing:
   a. waterline is adequately supported and anchored? Yes ( ); No ( ),
   b. waterline is adequately protected from damage and freezing? Yes ( ); No ( ),
   c. expansion joints are provided at each end of the crossing? Yes ( ); No ( ), and
   d. waterline is easily accessible for repair? Yes ( ); No ( ).
   If under water crossing is greater than 15 feet:
   a. minimum cover provided is _____ feet,
   b. waterline has flexible watertight joints? Yes ( ); No ( ),
   c. valves are provided at both ends of the water crossing? Yes ( ); No ( ),
   d. the valve closest to the water source is in a manhole? Yes ( ); No ( ), and
   e. permanent sampling taps are provided on each side of the valve within the manhole? Yes ( ); No ( ).
10. Waterlines proposed:

Line Segment	Diameter (inches)	Length	Material
1	8"	880	DIP

11. Onsite inspection of the proposed waterline construction will be inspected by:
    Engineering Firm? Yes ( ); No ( ),
    Owner? Yes (X); No ( ), or
    Other (please specify)? _____

III. Ground Water Wells

1. **General information:**
   a. A completed "Checklist for Well Head Protection" is required for all new well construction. A completed "Checklist for Well Head Protection" is included in the plan documents. Yes ( ); No ( ).
   b. Number of wells _____
   c. Capacity of well(s): (# 1) _____, (# 2) _____, (# 3) _____, (# 4) _____
   d. Well depth(s) (# 1) _____, (# 2) _____, (# 3) _____, (# 4) _____

e. Legal Description:

Well # 1 ___ /4, ___ /4, ___ /4, of Section _____, T- ___ - ___, R - ___ - ___,
I. M. / C. M., _____ County
Well # 2 ___ /4, ___ /4, ___ /4, of Section _____, T- ___ - ___, R - ___ - ___,
I. M. / C. M., _____ County
Well # 3 ___ /4, ___ /4, ___ /4, of Section _____, T- ___ - ___, R - ___ - ___,
I. M. / C. M., _____ County

f. Type of Well (dug, driven, or drilled): _____
g. Name and Characteristics of Aquifer: _____
_____
_____
h. One Hundred Year Flood Elevation: _____
i. Water Well Elevation of Wells: (#1)_____(#2) _____(#3)_____

2. General Water Well Construction
   a. Well Casing:
      1. Type of well casing: _____
      2. Diameter of well casing: _____
      3. Thickness of well casing: _____
      4. Depth of well casing: _____
      5. Well casing extends a minimum of 12 inches above the pump house floor and 18 inches above the final ground surface? Yes ( ); No ( ).
      6. The top of the well casing is sealed with a sanitary well seal to properly protect against the entrance of contamination into the well? Yes ( ); No ( ).
   b. Surface Casing:
      1. Type of surface casing: _____
      2. Diameter of surface casing: _____
      3. Thickness of surface casing: _____
      4. Depth of surface casing: _____
      5. Surface casing extends a minimum of 12 inches above the pump house floor and 18 inches above the final ground surface? Yes ( ); No ( ).
   c. Type, depth, and thickness of grout: _____
   d. Type and length of screen: _____
   e. The water well is location at the highest point on the premises? Yes ( ); No ( ).
   f. The pump house floor is located at least two (2) feet above the 100 year flood elevation? Yes ( ); No ( ).
   g. Well(s) is provided with a means to measure the water level(s) periodically? Yes ( ); No ( ).
   h. Well(s) has provisions for venting the well casing to the atmosphere? Yes ( ); No ( ).
   i. The discharge piping is equipped with the following:
      1. Check valve? Yes ( ); No ( ),
      2. Shut-off valve? Yes ( ); No ( ),
      3. Pressure gage? Yes ( ); No ( ),
      4. Flow meter? Yes ( ); No ( ), and
      5. A smooth nosed sampling tap located on the upstream side of the shut-off valve and at a point where positive pressure is maintained? Yes ( ); No ( ).
   j. All exposed piping, valves, and appurtenances are protected against physical damage and freezing? Yes ( ); No ( ).
3. Well development is included as a part of the specifications and meets the requirements of OAC 252:626-7-4 (a)? Yes ( ); No ( ).
4. Disinfection of the well and ground water is specified and meets the requirements of OAC 252:626-7-4 (d) & (e)? Yes ( ); No ( ).

5. Chlorination facilities required for all ground water systems are proposed? Yes ( ); No ( ). If Yes:
    1. Type of chlorinator: _____
    2. Proposed chlorination facility meets the requirements of OAC 252:626-11 and OAC 252:626-11-4? Yes ( ); No ( ).
6. Water Well Pumps:
    a. Type of pumps proposed: _____
    b. Type of pump motor: _____
    c. Pump capacity: _____ gpm
    d. Operating head: _____ feet
    e. Voltage: _____
    f. Auxiliary power source is provided? Yes ( ); No ( ). If No, explain: _____

IV. Disinfection Facilities

1. Daily flow of water to be treated: _____ gpd.
2. A flow meter is provided in order to measure water flow to determine chemical application rate? Yes ( ); No ( ).
3. Disinfection chemicals specified: _____
4. Type of chlorinator specified: _____
5. Maximum feed range: _____ Minimum feed range: _____
6. Capacity of chlorinator can meet chlorine demands at maximum flow? Yes ( ); No ( ).
7. Provisions are provided for measuring the quantities of chemicals used? Yes ( ); No ( ).
8. Standby equipment is provided? Yes ( ); No ( ).
9. A minimum of 30 minutes contact time is provided for ground water? Yes ( ); No ( ).
10. Residual chlorine of 0.2 mg/l at distant points is provided for? Yes ( ); No ( ).
11. Chlorine residual test equipment is provided? Yes ( ); No ( ).
12. Use of chlorine gas is proposed? Yes ( ); No ( ), If Yes:
    a. A separate room is provided? Yes ( ); No ( ),
    b. A shatter resistant, clear glass inspection window is installed in an exterior door or interior wall to permit the chlorinator to be viewed without entering the room is provided? Yes ( ); No ( ),
    c. The chlorine room is constructed in such a manner that all openings between the chlorine room and the remainder of the plant are sealed? Yes ( ); No ( ),
    d. Scales are provided for weighing cylinders? Yes ( ); No ( ),
    e. The chlorine room is equipped with a ventilating fan with a capacity which provides one complete air change per minute in the room? Yes ( ); No ( ),
    f. Exhaust fans take suction near the floor? Yes ( ); No ( ),
    g. Switches for fans and lights are located outside of the room, at the entrance, with a signal light indicating when the fan is in operation? Yes ( ); No ( ),
    h. A heater is provided which has the capability of heating the chlorine room to 60 °F? Yes ( ); No ( ), and
    i. Chlorine gas lines that extend beyond the chlorine gas room are feed under vacuum? Yes ( ); No ( ).

V. Pumping Facilities

A. Pump Stations

1. One hundred year flood elevation: _____.
2. Site is accessible at all times, regardless of floods? Yes ( ); No ( ).
3. Site will be graded so as to lead surface drainage away from the station so water will not enter or pool against the building? Yes ( ); No ( ).
4. Building has outward-opening doors of adequate size? Yes ( ); No ( ).
5. All floors slope 0.3 inch per foot to a suitable drain? Yes ( ); No ( ).
6. All construction shall be in accordance with state and local safety, building, electrical, plumbing, and sanitary codes? Yes ( ); No ( ).
7. Provisions are provided for adequate heating? Yes ( ); No ( ).
8. Pump house is adequately lighted throughout and all electrical work conforms with requirements of National Electrical Code and the American Insurance Association? Yes ( ); No ( ).
9. A means of bypassing the pumping station is provided? Yes ( ); No ( ).
10. Pumping station is equipped with a flow meter? Yes ( ); No ( ).
11. Controls provide for proper alternation of the pumps? Yes ( ); No ( ).
12. Booster pumps are equipped and controlled so that:
    a. they will not produce negative pressure in their suction lines? Yes ( ); No ( ),
    b. the intake pressure will be at least 20 psi when the pump is in normal operation? Yes ( ); No ( ),
    c. the pump will automatically cutoff if the pressure in the suction line falls below 10 psi? Yes ( ); No ( ).
13. Provisions are made for stand-by emergency power in the event of a power failure? Yes ( ); No ( ). If no explain _____
    _____
    _____

B. Pumps

1. Type of pump(s): _____.
2. At least two pumps are provided? Yes ( ); No ( ).
3. With one pump out of service, the remaining pump(s) is(are) capable of providing the maximum daily pumping demand of the system? Yes ( ); No ( ).
4. A check valve of the non-slam type is located at each pump casing? Yes ( ); No ( ).
5. A positive closing valve is located on the discharge line after the check valve? Yes ( ); No ( ).
6. Piping is protected against freezing? Yes ( ); No ( ).
7. Shut-off valves are provided on the suction line to each pump? Yes ( ); No ( ).
8. Each pump has a standard pressure gage on its discharge line? Yes ( ); No ( ).
9. Each pump has a compound pressure gage on its suction line? Yes ( ); No ( ).
10. Each pump is provided with smooth nosed sampling cocks on the suction and discharge lines? Yes ( ); No ( ).

VI. Water Storage Facilities

1. Water storage tank is located near centers of high demand? Yes ( ); No ( ).
2. One hundred year flood plain elevation: _____.

3. Type of storage tank(s): _____.
4. Hydraulic analysis is included? Yes ( ); No ( ),
5. The normal static pressure in the receiving line is _____.
6. The normal dynamic pressure in the receiving line is _____.
7. Base elevation: _____.
8. Low water level elevation: _____.
9. Low water level elevation of any other water storage facilities on the distribution system: _____, _____, _____, _____.
10. High water level elevation: _____.
11. High water level elevation of any other water storage facilities on the distribution system: _____, _____, _____, _____.
12. Level controls are provided? Yes ( ); No ( ), If No explain: _____
_____
13. A vent is provided? Yes ( ); No ( ).
14. Tank is equipped with an overflow which is brought down to an elevation between 12 and 24 inches above the ground surface? Yes ( ); No ( ).
15. Separate inlet and outlet lines that provide for positive circulation are provided? Yes ( ); No ( ), If no explain: _____
16. The inlet line terminates at a point between 30% and 50 % of the tank height? Yes ( ); No ( ).
17. A means of bypassing the tank is provided? Yes ( ); No ( ).
18. Convenient access to the interior of the tank for cleaning and maintenance is provided? Yes ( ); No ( ).
19. Type of paint used: _____; Manufacturer _____.
20. Paint proposed is listed by the National Sanitation Foundation as meeting the ANSI/NSF standards for contact with potable water? Yes ( ); No ( ).
21. Disinfection in accordance with AWWA C-652 is provided? Yes ( ); No ( ).
22. Fencing is provided for protection from trespass? Yes ( ); No ( ).

Professional Engineer's Certification:

I certify that, to the best of my knowledge, all the information provided in this engineering report form is correct and no significant information necessary for a proper evaluation of the project has been omitted:

Signature of Professional Engineer: _____ Date: _____
Name of Professional Engineer: Robert L. Day, P.E.
State of Oklahoma Professional Engineer No: 12532
Phone No: (918) 877-6000

252:616-1-3. Engineer Required

Pursuant to 59 O.S., § 475.2 and a ruling by the Oklahoma State Board of Registration for Professional Engineers and Land Surveyors, the design and closure activities required by this chapter constitute the practice of engineering and thus, require the seal and signature of an engineer registered to practice in the State of Oklahoma.

SUBCHAPTER 3. PERMIT PROCEDURES

Section
252:616-3-1. Requirement to obtain a permit
252:616-3-2. Duration of permit and renewal
252:616-3-3. Fees
252:616-3-4. Applications

252:616-3-1. Requirement to obtain a permit

(a) Permits are required for the construction, installation, modification, operation and closure of any industrial wastewater system and are processed according to the Uniform Permitting Act, Title 27A § 2-14-101, and the Tier classifications listed in OAC 252:4-7. This Chapter contains the standards to be met. Industrial wastewater system requirements under this Chapter may be issued as components of discharge permits issued under OAC 252:606.

(b) Instream sand and gravel facilities using hydraulic dredging that have applied for a Section 404 permit pursuant to the Clean Water Act and other sand and gravel facilities that completely operate outside the wetted perimeter of a water body may seek coverage under only the DEQ's Multi-Sector General Permit for Industrial Activities, unless the sand and gravel operation:

(1) has a point source discharge of process water to waters of the state, in which case a discharge permit, pursuant to OAC 252:606, is also required, or

(2) utilizes surface impoundment(s) that store wastewater from processes other than the washing of sand and/or gravel, in which case a surface impoundment permit, pursuant to the requirements of this Chapter, is also required.

252:616-3-2. Duration of permit and renewal

Industrial wastewater treatment permits issued pursuant to this Chapter shall be for a term of no more than five years and may be renewed upon receipt of proper and timely application according to criteria and provisions of this Chapter and applicable law. An application for renewal of an existing permit shall be filed at least 180 days prior to the expiration date of the existing permit. If a proper and complete application for renewal is filed, the existing permit shall continue in effect unless otherwise terminated, modified, suspended or revoked and reissued.

252:616-3-3. Fees

(a) **Application fees.** Application fees for new industrial wastewater system permits or to renew existing industrial wastewater system permits are non-refundable and are set forth below:

(1) Class I - $300.00
(2) Class II - $200.00
(3) Class III and authorizations under a general permit - $100.00 1051-4609
(4) Class V - $300.00

(b) **Annual fees.** Permit holders shall submit payment to DEQ for annual fees upon receipt of an invoice from DEQ. Payments for annual fees received by DEQ shall be applied to the twelve-month period following the due date of the initial invoice issued by DEQ, but not past the expiration of the permit. Failure to pay an annual fee may result in suspension or termination of the permit. The annual fees are set forth below.

(1) **Industrial tank systems.** The annual fees for industrial tank systems are as follows:
(A) Class I or II - $970.00
(B) Class III - $330.00

Summary

Greenhill Concrete Products, Inc. was recently awarded a contract to provide approximately 56,000 cubic yards of concrete for construction of the new Macy's Warehouse in Owasso, Oklahoma. Greenhill owns a Cemco Model 220 Portable Concrete Batch Plant that has been in service as a backup plant for Greenhill's stationary batch plant located at 5407 N. 145th East Avenue in Owasso. This plant has been included in the Owasso facility's OKG11 total retention discharge permit.

With the relocation of the Cemco plant to leased property adjacent to the Macy's project site at 7920 E. 76th Street North in Owasso, Greenhill Concrete is seeking a General Discharge Permit under OKG11MT for a washout pit at this location. Dimensions of the proposed washout pit (See Attachment 2) are 16' x 16' x 8'. Given the short cycle distance associated with this project, truck washout will only be required at the end of the work day or when the truck is temporarily removed from service during the day. Pit water may be used for onsite dust suppression. The property drains southward to an unnamed tributary of Ranch Creek, a first-order tributary of Bird Creek.

The plant will be activated on or about May 26, 2014 and concrete work should be completed on or about September 15, 2014. Maximum daily concrete production during this period will be 1,000 cubic yards. Plant water will be obtained from a 12-inch diameter Tulsa County water line located adjacent to East 76th Street North.

In addition to the concrete plant, the facility will include three pneumatic cement trailers or "pigs", a chiller, a batch trailer, a power generation unit, a frac tank, a frontend loader and six mixer trucks.

At the conclusion of the project, the Cemco plant will either be relocated to Greenhill's fixed plant site and the General Portable Concrete Batch Plant discharge permit terminated or it will be moved to another project site. In either event, the closure plan included in Attachment 4 will be implemented for this project site.

FORM 616-G11MT	OKLAHOMA DEQ	APPLICATION FOR AUTHORIZATION UNDER GENERAL PERMIT NO. OKG11MT MOBILE CONCRETE BATCH PLANTS

A. TYPE OF AUTHORIZATION REQUESTED (Applies to all applicants)

NEW		RENEWAL							
	X								

B. MANUFACTURER, MAKE, MODEL, AND SERIAL NUMBER OF MOBILE BATCH PLANT (Applies to all applicants, provide this same information each time this plant is moved to a new location)

Cemco Model 220, SN-11420502

C. FACILITY CONTACT (Applies to all applicants)

1. NAME & TITLE	2. PHONE (area code & number)
Kenny Henderson, Production Manager	918-513-1987

D. FACILITY MAILING ADDRESS (Applies to all applicants)

1. STREET OR P.O. BOX	2. TELEFAX (area code & number)	
P.O. Box 10	918-266-6482	
3. CITY OR TOWN	**4. STATE**	**5. ZIP CODE**
Catoosa	OK	74015

E. TEMPORARY JOB SITE LOCATION (applies to all applicants)

1. STREET, ROUTE NO., OR OTHER SPECIFIC IDENTIFIER	2. COUNTY	
Macy's Warehouse Project, 7920 E. 76th St. North	Tulsa	
3. CITY OR TOWN	**4. STATE**	**5. ZIP CODE**
Owasso	OK	74055

6. LEGAL DESCRIPTION (¼, ¼, ¼, Section, Township, Range)

NW/4, SW/4, NE/4, and NE/4, SE/4, NW/4, Section 35, T21N, R13E, Tulsa County

F. OPERATOR INFORMATION (Applies to all applicants)

1. NAME	2. Is the operator also the owner?			
Greenhill Concrete Products, Inc.	YES	X	NO	

3. STATUS OF OPERATOR (enter appropriate letter in box; if "Other," specify)			4. PHONE (area code & number)
F = FEDERAL S = STATE P = PRIVATE	M = PUBLIC (other than federal or state) O = OTHER (specify)	P (specify)	918-266-6861

5. STREET OR P.O. BOX	6. TELEFAX (area code & number)
P.O. Box 10	918-266-6482

7. CITY OR TOWN	8. STATE	9. ZIP CODE	G. Is facility located on Indian land?			
Catoosa	OK	74015	YES		NO	X

H. PLANT DESCRIPTION (Applies to all applicants)

1. Attach a list that provides a description of all equipment that is part of the mobile concrete batch plant to receive a permit.

I. SIC CODES (4-digit, in order of priority) (Applies only if the facility has activities in addition to concrete batching)

1. FIRST		2. SECOND	
(number) 3273	(specify) Mobile Concrete Batch Plant	(number)	(specify)

J. STORMWATER PERMITTING (Applies to all applicants)

Does the temporary job site facility have a stormwater multi-sector general permit?	YES		NO	X	PERMIT NO.	Will file NOI and Pollution Prevention Plan prior to beginning plant operation on 5/26/2014.

RECEIVED
APR 25 2014
WATER QUALITY DIVISION
Date Stamp

FOR OFFICIAL USE ONLY

AUTHORIZATION NO.	FACILITY ID NO.
OKG11MT____	I- ENGINEER: _____

K. NATURE OF BUSINESS (Applies to all applicants)

1. PRODUCTS AND SERVICES

Production of ready-mix concrete for new Macy's Warehouse Facility.

2. FACILITY OPERATIONS

a. Process/Operation	b. Product	c. Daily Quantity (units)
Batch mixing of cement, fly ash, aggregates, appropriate additives to comply with project concrete specifications	Ready-mix concrete	500-1,000 cy

d. Briefly describe any practices to be used for recycling/reuse of wastewater (concrete make-up water, wash water, reuse for construction/stabilization, land application for dust suppression, etc.)

Water generated by truck washing at the washout pit will be used for onsite dust suppression. Because of the short cycle times, truck washout will only occur at the end of the day or when the truck is removed from daily service.

e. Briefly describe facility housekeeping practices. Indicate whether mix plant area housekeeping uses dry clean-up or water washdown. If water washdown is used, indicate whether and how washdown water is segregated from mix plant area stormwater.

Normally dry methods will be used for mix plant area clean-up. If water washdown is used, the water will be diverted to the washout pit. The onsite frontend loader will be used to police aggregate stockpiles.

L. SOURCES OF WATER SUPPLY AND AMOUNT USED (Applies to all applicants)

Identify all sources of facility water by entering the appropriate letter(s) in the boxes below and then providing the appropriate description(s), as indicated in parentheses. List each source on a separate line. If you have more than one source of a given type, indicate this by entering the letter, followed by two digits (e.g., if your water comes from three wells, the sources would be indicated as G01, G02, and G03). For each source, estimate of the average daily use. Continue on additional sheets if needed.

G = GROUNDWATER WELL (legal description of well location)
S = SURFACE WATER (name of stream, river, lake, etc., and legal description of intake)
P = PUBLIC WATER SUPPLY (name of entity from which water is obtained)
W = WASTEWATER TREATMENT PLANT (name of entity from which water is obtained)
O = OTHER (source of supply, and legal description if applicable)

1. SOURCE	2. DESCRIPTION	3. AVG. DAILY USE (GPD)
P	Tulsa County	21,000 GPD average

M. INVENTORY OF CHEMICALS AND RAW MATERIALS (Applies to all applicants)

1. List all chemical compounds and raw materials in containers of 55 gallons or more, used in plant operations and stored outside a building (e.g., solvents, cleaning compounds, water treatment chemicals). Describe the storage location and the purpose for which each chemical is used. Continue on additional sheets if needed.

Air Entraining Admixture - 1,000-gallon polyethylene tank in control trailer.
Water Reducing Admixture - 1,000-gallon polyethylene tank in control trailer.
Aggregates in stockpiles and fly ash and cement in an AST and pneumatic trailers.

2. Attach Material Safety Data Sheets (MSDS) for any additives, detergents, spray oils, or treatment chemicals used.

N. CLOSURE PLAN

Part I, Section B (7) of the general permit requires that a closure plan that will be utilized at each temporary job site be submitted as part of the initial application submittal. The plan must receive DEQ approval before being implemented.

O. OTHER DISPOSAL METHODS (Applies to all applicants)

Briefly describe any other methods of waste disposal used by your facility that have not been previously covered. Examples include disposal wells, tank systems (with or without leach fields), aboveground or underground storage tanks, and waste hauling. Include information on the nature and volume of wastes disposed of by each of these other methods. Continue on additional sheets if necessary.

Sanitary requirements will be met through use of onsite Port-a-Potties that will be serviced on a regular basis by the rental company.

P. FACILITY LOCATION WHERE PLANT WILL BE LOCATED WHEN NOT AT A JOB SITE (Applies to all applicants)

1. STREET, ROUTE NO., OR OTHER SPECIFIC IDENTIFIER

5411 N. 145th East Avenue

2. CITY OR TOWN

Owasso

3. LEGAL DESCRIPTION (¼, ¼, ¼, Section, Township, Range)

NW/4, Section 10, Township 20 North, Range 14 East, Rogers County

Q. DEQ LANDOWNER NOTIFICATION AFFIDAVIT (Applies to all applicants)

1. Does applicant own all land subject to the application:	Yes		No	X

If yes, proceed to section R. If no, proceed to part 2 of this section.

2. Application(s) for which the applicant does not own all the land subject to the application must notify the owner(s) of leases and/or pipeline right-of-ways that a permit application has been submitted to the DEQ. The basis for this requirement is Title 27A of the Oklahoma Statutes, § 2-14-103(9), as described in OAC 252:004-7-13(c). DEQ Form 100-810 shall be used for this purpose and is available on the DEQ web page.

R. CERTIFICATION (Applies to all applicants)

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and true belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

1. NAME & OFFICIAL TITLE (type or print)	2. SIGNATURE	3. DATE SIGNED
Matt Ritchie, Materials Manager		4/21/14

DEQ LANDOWNER NOTIFICATION AFFIDAVIT

Tier I, II or III permit applicants must provide notice to the landowner(s). The basis for this requirement is Title 27A of the Oklahoma Statutes, Supplement 1996, § 2-14-103(9), as described in OAC 252:4-7-13 (b).

Please note that you MUST fill out and return this affidavit even if you don't have to give any landowner notice.

A	NOTICE TO THE LANDOWNER(S) IS NOT REQUIRED because: (check one)
	My application does not involve any land.
	My application involves only land owned by me (or applicant business).
X	I have a current lease given to accomplish the permitted purpose.
	I have a current easement given to accomplish the permitted purpose.

OR

B	NOTICE TO THE LANDOWNER(S) IS REQUIRED because the land is owned by someone other than myself or the applicant business AND I HAVE NOTIFIED the following (check one):		
	Landowner(s)	X	Lessor or Administrator or Executor of the land
METHOD OF DELIVERY (check one):			
	Actual notice, for which I have a signed and dated receipt		
	Service by Sheriff or private process server, for which I have an affidavit		
	Service by certified mail, restricted delivery, for which I have a signed return receipt		
	Legal publication, for which I have an affidavit of publication from the newspaper, because the landowners could not be located through due diligence		

LANDOWNER AFFIDAVIT CERTIFICATION			
I, as the applicant or an authorized representative of the applicant, hereby certify that I own the real property, have a current lease or easement which is given to accomplish the permitted purpose (per Option A above), or have provided legal notice to the landowner(s) (per Option B above) about the permit application for the facility described below.			
Company Name	Greenhill Concrete Products, Inc.	Facility Name	Greenhill Cemco Concrete Batch Plant
Facility Address or Legal Description.	7920 E. 76th Street North, Owasso, OK 74055		
Responsible Official (signature)		Date Signed	4/21/14
Responsible Official (typed)	Matt Ritchie	Title	Materials Manager

If the landowner notice applies to your application (Option B above) you can send the following form to them as your notice:

NOTICE TO LANDOWNER OF FILING

Dear Landowner: (Name) _____

(Applicant name) _____ has filed a permit application with the Oklahoma Department of Environmental Quality for (Facility Name) _____ facility.

This application involves the land owned by you located at:

Address or Legal Description: _____

1. PRODUCT AND COMPANY INFORMATION

Company	:	**BASF Corporation** 23700 Chagrin Blvd BEACHWOOD, OH 44122
Telephone	:	216-839-7500
Emergency telephone number	:	(800) 424-9300 (703) 527-3887 (Outside Continental US)
Product name	:	MB-AE™ 90
MSDS ID No.	:	10059
TSCA Inventory	:	All components of this product are included, or are exempt from inclusion, in the EPA Toxic Substances Control Act (TSCA) Chemical Substance Inventory.
Canadian DSL	:	All components of this product are included, or are exempt from inclusion, in the Canadian Domestic Substance List (DSL).

2. HAZARDOUS INGREDIENTS

Does not contain hazardous chemicals as defined by 29 CFR 1910.1200 and WHMIS.

3. HAZARDS IDENTIFICATION

HMIS® Rating	HEALTH	FLAMMABILITY	PHYSICAL HAZARD
	1	0	0

WHMIS Class	:	D2B
Primary Routes of Entry	:	Inhalation Eye contact Skin contact

Effects of Overexposure

Inhalation	:	Can cause slight irritation.
Skin	:	Can cause slight irritation.
Eyes	:	Can cause slight irritation.
Ingestion	:	Can cause slight irritation.
Chronic exposure	:	No known information available.

4. FIRST AID MEASURES

Eye contact	:	Flush eyes with water, lifting upper and lower lids occasionally for 15 minutes. Seek medical attention.
Skin contact	:	Remove contaminated clothing. Wash thoroughly with soap and water. If irritation persists seek medical attention. Wash contaminated clothing before reuse.
Ingestion	:	Do not induce vomiting without medical advice. If conscious, drink plenty of water. If a person feels unwell or symptoms of skin irritation appear, consult a physician. If a person vomits, place him/her in the recovery position. Never give anything by mouth to an unconscious person.
Inhalation	:	Remove victim from exposure. If difficulty with breathing, administer oxygen. If breathing has stopped administer artificial respiration, preferably mouth-to-mouth. Seek immediate medical attention.

5. FIRE-FIGHTING MEASURES

Flash point	:	not applicable
Autoignition temperature	:	not applicable
Lower explosion limit	:	not applicable
Upper explosion limit	:	not applicable
Suitable extinguishing media	:	Use extinguishing agent suitable for type of surrounding fire.
Fire and Explosion Hazards	:	Containers can build up pressure if exposed to heat (fire). Cool closed containers exposed to fire with water spray.
Special Fire-fighting Procedures	:	As in any fire, wear pressure demand self-contained breathing apparatus (NIOSH approved or equivalent) and full protective gear.

6. ACCIDENTAL RELEASE MEASURES

Methods for cleaning up	:	Wear appropriate protective equipment (refer to section 8). Take action to eliminate source of leak; prevent from entry into open streams or sewers; contain spill by diking; vacuum up liquid or use absorbent media; remove to storage for disposal and rinse residual stain with water.

7. HANDLING AND STORAGE

Handling	:	Keep out of reach of children. For personal protection see section 8.
Storage	:	Keep tightly closed.

8. EXPOSURE CONTROLS / PERSONAL PROTECTION

Eye protection	:	Wear as appropriate: safety glasses with side-shields goggles face-shield
Hand protection	:	Wear as appropriate: impervious gloves
Body Protection	:	Wear as appropriate: impervious clothing preventive skin protection
Respiratory protection	:	In case of insufficient ventilation wear suitable respiratory equipment. When workers are facing concentrations above the exposure limit they must use NIOSH approved respirators.
Hygienic Practices	:	Avoid contact with skin, eyes and clothing. Ensure adequate ventilation, especially in confined areas. Wash hands before breaks and at the end of workday. When using, do not eat, drink or smoke. Handle in accordance with good industrial hygiene and safety practice.
Engineering Controls	:	Local exhaust ventilation can be necessary to control any air contaminants to within their TLVs during the use of this product.

9. PHYSICAL AND CHEMICAL PROPERTIES

Color	:	dark brown
Physical State	:	liquid
Odor	:	none
pH	:	10.3 - 11.5
Odor Threshold	:	no data available
Vapor Pressure	:	no data available
Vapor Density	:	Heavier than air
Boiling point/range	:	212 °F (100 °C)
Freeze Point	:	32 °F (0 °C)
Water solubility	:	completely soluble
Specific Gravity	:	1.012 - 1.020
Viscosity	:	no data available
Evaporation rate	:	no data available
Partition coefficient (n-octanol/water)	:	no data available
VOC Concentration as applied	:	0 g/l

(less water and exempt solvents)

10. STABILITY AND REACTIVITY

Stability	:	Stable under recommended storage conditions.
Conditions to avoid	:	Prolonged exposure to high temperatures
Materials to avoid	:	strong acids metals
Hazardous decomposition products	:	Hydrogen in contact with aluminum or zinc. Oxides of carbon nitrogen oxides (NOx)
Hazardous polymerization	:	Will not occur under normal conditions.

11. TOXICOLOGICAL INFORMATION

Acute inhalation toxicity

Product	Type	Value	Species	Exposure time
	LC50	no data available		

Acute oral toxicity

Product	Type	Value	Species
	LD50 (Oral)	no data available	

Acute dermal toxicity

Product	Type	Value	Species
	LD50 (Dermal)	no data available	

12. ECOLOGICAL INFORMATION

Ecotoxicological Information : There is no data available for this product.

13. DISPOSAL CONSIDERATIONS

Recommendations: Use excess product in an alternate beneficial application. Handle disposal of waste material in manner which complies with local, state, province and federal regulation.

14. TRANSPORT INFORMATION

DOT	: Proper shipping name	Not regulated
IATA	: Proper shipping name	Not regulated

15. REGULATORY INFORMATION

SARA 311/312 (RTK)
This product has been reviewed according to the EPA 'Hazard Categories' promulgated under Sections 311 and 312 of the Superfund Amendments and Reauthorization Act of 1986 (SARA Title III) and is considered, under applicable definitions, to meet the following categories:

IMMEDIATE (ACUTE) HEALTH HAZARD

SARA 313
This product contains the following substances subject to the reporting requirements of Section 313 of Title III of the Superfund Amendments and Reauthorization Act of 1986 and 40 CFR Part 372:

This product contains no chemicals subject to the SARA 313 supplier notification requirements.

CERCLA
CERCLA section 103(a) specifically requires the person in charge of a vessel or facility to report immediately to the National Response Center (NRC) a release of a hazardous substance whose amount equals or exceeds the assigned RQ. The following hazardous substances are contained in this product.

RQ	CAS No.	Chemical Name

No CERCLA chemicals exist in this product above reportable concentrations.

TSCA Section 12(b) Export Notification
This product contains the following chemical substances subject to the reporting requirements of TSCA 12(b) if exported from the United States:

CAS No.	Chemical Name

There are no TSCA 12(b) Chemicals in this product.

California Proposition 65
The chemical(s) noted below and contained in this product, are known to the state of California to cause cancer, birth defects or other reproductive harm. Unless otherwise specified in Section 2 of this MSDS, these chemicals are present at < 0.1%:

CAS No.	Chemical Name

MSDS ID No.	:	10052
TSCA Inventory	:	All components of this product are included, or are exempt from inclusion, in the EPA Toxic Substances Control Act (TSCA) Chemical Substance Inventory.
Canadian DSL	:	All components of this product are included, or are exempt from inclusion, in the Canadian Domestic Substance List (DSL).

2. HAZARDOUS INGREDIENTS

Chemical	CAS No.	TLV	STEL	PEL	CEIL	Weight %
SODIUM NITRATE	7631-99-4		N.E.	N.E.	N.E.	10.00 - 30.00 %
SODIUM THIOCYANATE	540-72-7	N.E.	N.E.	N.E.	N.E.	3.00 - 7.00 %
ETHYLENEDIAMINE	107-15-3	10 ppm	N.E.	10 ppm	N.E.	1.00 - 5.00 %

3. HAZARDS IDENTIFICATION

HMIS® Rating	HEALTH	FLAMMABILITY	PHYSICAL HAZARD
	2	0	0

WHMIS Class : D2B

Primary Routes of Entry : Eye contact
Skin contact

Effects of Overexposure

Inhalation : No hazard anticipated in normal industrial use.

Skin : Repeated or prolonged exposure may cause skin irritation and dermatitis, due to degreasing properties of the product.

Eyes : Can cause slight to moderate transient irritation, redness, tearing and blurred vision.

Ingestion : Can cause slight irritation.

Chronic exposure : No known information available.

Carcinogenicity

	ACGIH	IARC	NTP	OSHA
SODIUM NITRATE	N.E.	N.E.	N.E.	N.E.
SODIUM THIOCYANATE	N.E.	N.E.	N.E.	N.E.
ETHYLENEDIAMINE	Not classifiable as a human carcinogen.	N.E.	N.E.	N.E.

4. FIRST AID MEASURES

Eye contact : Flush eyes with water, lifting upper and lower lids occasionally for 15 minutes. Seek medical attention.

Skin contact : Remove contaminated clothing. Wash thoroughly with soap and water. If irritation persists seek medical attention. Wash contaminated clothing before reuse.

Ingestion : Do not induce vomiting without medical advice. If conscious, drink plenty of water. If a person feels unwell or symptoms of skin irritation appear, consult a physician. If a person vomits, place him/her in the recovery position. Never give anything by mouth to an unconscious person.

Inhalation : Remove victim from exposure. If difficulty with breathing, administer oxygen. If breathing has stopped administer artificial respiration, preferably mouth-to-mouth. Seek immediate medical attention.

5. FIRE-FIGHTING MEASURES

Flash point : does not flash

Autoignition temperature : not applicable

Lower explosion limit : not applicable

Upper explosion limit : not applicable

Suitable extinguishing media : Use extinguishing agent suitable for type of surrounding fire.

Fire and Explosion Hazards : Containers can build up pressure if exposed to heat (fire). Cool closed containers exposed to fire with water spray.

Special Fire-fighting Procedures : As in any fire, wear pressure demand self-contained breathing apparatus (NIOSH approved or equivalent) and full protective gear.

6. ACCIDENTAL RELEASE MEASURES

Methods for cleaning up : Wear appropriate protective equipment (refer to section 8). Take action to eliminate source of leak; prevent from entry into open streams or sewers; contain spill by diking; vacuum up liquid or use absorbent media; remove to storage for disposal and rinse residual stain with water.

7. HANDLING AND STORAGE

Handling : Keep out of reach of children. For personal protection see section 8.

Storage : Keep tightly closed.

8. EXPOSURE CONTROLS / PERSONAL PROTECTION

Eye protection	:	Wear as appropriate: safety glasses with side-shields goggles face-shield
Hand protection	:	Wear as appropriate: impervious gloves
Body Protection	:	Wear as appropriate: impervious clothing preventive skin protection
Respiratory protection	:	In case of insufficient ventilation wear suitable respiratory equipment. When workers are facing concentrations above the exposure limit they must use NIOSH approved respirators.
Hygienic Practices	:	Avoid contact with skin, eyes and clothing. Ensure adequate ventilation, especially in confined areas. Wash hands before breaks and at the end of workday. When using, do not eat, drink or smoke. Handle in accordance with good industrial hygiene and safety practice.
Engineering Controls	:	Local exhaust ventilation can be necessary to control any air contaminants to within their TLVs during the use of this product.

9. PHYSICAL AND CHEMICAL PROPERTIES

Color	:	dark brown
Physical State	:	liquid
Odor	:	musty
pH	:	Approx.8
Odor Threshold	:	no data available
Vapor Pressure	:	no data available
Vapor Density	:	Heavier than air
Boiling point/range	:	212 °F (100 °C)
Freeze Point	:	32 °F (0 °C)
Water solubility	:	completely soluble
Specific Gravity	:	1.27
Viscosity	:	no data available
Evaporation rate	:	no data available
Partition coefficient (n-octanol/water)	:	no data available

VOC Concentration as applied (less water and exempt solvents)	:	0 g/l

10. STABILITY AND REACTIVITY

Stability	:	Stable under recommended storage conditions.
Conditions to avoid	:	Prolonged exposure to high temperatures
Materials to avoid	:	strong acids and oxidizing agents
Hazardous decomposition products	:	Oxides of carbon. Oxides of sulfur nitrogen oxides (NOx)
Hazardous polymerization	:	Will not occur under normal conditions.

11. TOXICOLOGICAL INFORMATION

12. ECOLOGICAL INFORMATION

Ecotoxicological Information : There is no data available for this product.

13. DISPOSAL CONSIDERATIONS

Recommendations: Use excess product in an alternate beneficial application. Handle disposal of waste material in manner which complies with local, state, province and federal regulation.

14. TRANSPORT INFORMATION

DOT	: Proper shipping name	Not regulated
IATA	: Proper shipping name	Not regulated

15. REGULATORY INFORMATION

SARA 311/312 (RTK)
This product has been reviewed according to the EPA 'Hazard Categories' promulgated under Sections 311 and 312 of the Superfund Amendments and Reauthorization Act of 1986 (SARA Title III) and is considered, under applicable definitions, to meet the following categories:

IMMEDIATE (ACUTE) HEALTH HAZARD

SARA 313
This product contains the following substances subject to the reporting requirements of Section 313 of Title III of the Superfund Amendments and Reauthorization Act of 1986 and 40 CFR Part 372:

Weight %	CAS No.	Chemical Name
10.00 - 30.00 %	7631-99-4	SODIUM NITRATE

CERCLA
CERCLA section 103(a) specifically requires the person in charge of a vessel or facility to report immediately to the National Response Center (NRC) a release of a hazardous substance whose amount equals or exceeds the assigned RQ. The following hazardous substances are contained in this product.

RQ	CAS No.	Chemical Name
5,000 lbs	107-15-3	ETHYLENEDIAMINE

No CERCLA chemicals exist in this product above reportable concentrations.

TSCA Section 12(b) Export Notification
This product contains the following chemical substances subject to the reporting requirements of TSCA 12(b) if exported from the United States:

CAS No.	Chemical Name

There are no TSCA 12(b) Chemicals in this product.

California Proposition 65
The chemical(s) noted below and contained in this product, are known to the state of California to cause cancer, birth defects or other reproductive harm. Unless otherwise specified in Section 2 of this MSDS, these chemicals are present at < 0.1%:

CAS No.	Chemical Name

16. OTHER INFORMATION

Legend	:	N.E. - Not Established TLV - Threshold Limit Value STEL - Short Term Exposure Limit PEL - Permissible Exposure Limit CEIL - Ceiling
Prepared By	:	Environment, Health and Safety Department

This information is furnished without warranty, representation, or license of any kind, except that this information is accurate to the best of the manufacturer's knowledge, or is obtained from sources believed by the manufacturer to be accurate and is not intended to be all inclusive. No warranty is expressed or implied regarding the accuracy of this information or the results to be obtained from its use thereof. The manufacturer assumes no responsibility for injuries proximately caused by use of the Material if reasonable safety procedures are not followed as stipulated in this Data Sheet. Additionally, the manufacturer assumes no responsibility for injuries proximately caused by abnormal use of the Material even if reasonable safety procedures are followed. Buyer assumes the risk in its use of the Material.

Attachment C:

Closure Plan

616-G11MT Supplemental Information - Section N
CLOSURE PLAN - Mobile Concrete Batch Plant
*** REVISED 11/23/11 ***
RexCon Model S-RM, Serial # 2185
For Use on ODOT Project

BACKGROUND:

The activity associated with these projects Includes removal of existing pavements, surface grading, and concrete paving on HWY 7 in Comanche County Oklahoma. Sherwood Construction, the prime contractor on the project, will self-perform the majority of the work, including the production of concrete for the pavement. Sherwood leased the land located at the Northeast Quarter of Section 3, T-1-N, R-10-W in Comanche County Oklahoma (Attachment A).

ROUTINE TREATMENT AND REMOVAL:

The batch plant site has been surfaced with asphalt millings. The millings provide a stable platform on which to travel and minimize the tracking of soil material off site. They also virtually eliminate the potential for erosion of onsite runoff. Slit fences will be installed along the perimeter of the surfaced area as an added precaution to capture any sediment resulting from site runoff. For control of wastewater generated from mixing plant and truck clean-out, a temporary impoundment will be constructed in accordance with permit guidelines (Attachment D). The solid materials (sand, rock, cement) collected in the impoundment area are "nonpollute" In nature and will not require special treatment. They will be disposed in a landfill suited for that type of material or may be spread over the surfaced area to provide additional aggregate thickness and/or stability. Accumulated water in the impoundment area will be pumped into a water truck and used to water the onsite plant area to help alleviate the dust control problem, but only after being checked for pollutants (oil/ grease sheen or globules) by one of the onsite response members before it is pumped from the impoundment. The inspection log shall record this inspection and the estimated quantity of water removed from the impoundment. Any abnormal notice in the impoundment will require that treatment or corrective action be taken immediately. Treatment for chemicals or oils on the water's surface will be accomplished by either pumping off the surface residue or by use of an absorption buoy system. In either case it would be per EPA approved methods and disposed per EPA requirements.

MONITORING:

The storm water runoff control devices and impoundment criteria will be monitored and modified as conditions require. All concrete additives stored in the onsite trailer will be monitored to insure proper storage and handling. The impoundment area will also be monitored to insure no chemicals or oils have contaminated the standing water. Periodic monitoring of the impoundment area will be recorded on a log sheet and kept at the plant site at all times. Monitoring will be done weekly and recorded in an inspection log, with the exception that after a heavy rain. After each of those events an inspection shall be made and recorded. This report will be made available to the DEQ upon request.

CLOSURE:

Upon completion of batch plant operations, the site will be restored to a condition equivalent to that prior to occupation. Restoration will include removal of wastewater and sediment/sludge from the impoundment area and eradication of the impoundment.

Wastewater-similar to monitoring, active treatment and removal as stated above, the wastewater will be visually inspected for non-concrete related pollutants prior to its removal from the impoundment. Any wastewater remaining after natural evaporation occurring prior to closure will be pumped out and used for dust suppression at the site.

Sludge - Depending on the solidity of the sediment/sludge remaining in the impoundment upon removal of the waste water, the material will be removed and either taken to a landfill, a recycling location, or left on site in a manner acceptable to the Oklahoma D.O.T. -if the later is an allowable option.

Backfill- Once all the water, solid materials and the liner have been removed from the impoundment area, the area will be filled. If dikes were used to construct the Impoundment, they will be removed or leveled to restore the area to its prior drainage patterns. If an excavation was used, the pit will be filled with the materials originally removed. If there were significant strata differences within the excavation's limits, the excavated material will be replaced in an order to restore the continuity of the layers. The replaced material will be co-mingled with the in-situ material and will be compacted to a similar density. Once the grading is finished in this area, the area will be revegetated or resurfaced to its original condition.

DISPOSAL:

It is not anticipated that a disposal site will be required for this site since all the materials used In the process of making ready mix concrete are non-hazardous materials. If for some reason a disposal site is required, we will notify the DEQ immediately of this change and will revise this plan to reflect this change.

CERTIFICATE OF CLOSURE:

An affidavit of closure will be submitted within 10 days after closure of all temporary impoundments.

ATTACHMENT 4

Closure Plan

616-G11MT Supplemental Information - Section N
CLOSURE PLAN - Mobile Concrete Batch Plant
*** REVISED 4/18/14 ***
Cemco Model 220; S/N 11420502

BACKGROUND:

The activity associated with this project is producing the concrete required for the Macy's Fulfillment Center in Owasso, OK for Lithko Construction. Greenhill Concrete has an agreement to use the land for the plant with Owasso Land Trust.

ROUTINE TREATMENT AND REMOVAL:

The batch plant site has been surfaced with asphalt millings and/or crushed limestone. The millings/limestone provides a stable platform on which to travel and minimize the tracking of soil material off site. They also virtually eliminate the potential for erosion of onsite runoff. Slit fences will be installed along the perimeter of the millings surfaced area as an added precaution to capture any sediment resulting from site runoff. For control of wastewater generated from mixing plant and truck clean-out, a temporary impoundment will be constructed in accordance with permit guidelines. The solid materials (sand, rock, cement) collected in the impoundment area are "nonpollute" in nature and will not require special treatment. They will be disposed in a landfill suited for that type of material or may be spread over the surfaced area to provide additional aggregate thickness and/or stability. Accumulated water in the impoundment area will be pumped into a water truck and used to water the onsite plant area to help alleviate the fugitive dust control problem, but only after being checked for pollutants (oil/ grease sheen or globules) by one of the onsite response members before it is pumped from the impoundment. The inspection log shall record this inspection and the estimated quantity of water removed from the impoundment. Any abnormal conditions noticed in the impoundment will require that treatment or corrective action be taken immediately. Treatment for chemicals or oils on the water's surface will be accomplished by either pumping off the surface sheen or by use of an absorption buoy system. In either case it would be per EPA approved methods and disposed per EPA requirements.

MONITORING:

The storm water runoff control devices and impoundment criteria will be monitored and modified as conditions require. All concrete additives stored in the onsite trailer will be monitored to insure proper storage and handling. The impoundment area will also be visually monitored to insure no chemicals or oils have contaminated the standing water. Periodic monitoring of the impoundment area will be recorded on a log sheet and kept at the plant site at all times. Monitoring will be done weekly and recorded in an inspection log, with the exception that after a heavy rain (minimum of .5"), an inspection shall be made and recorded. This inspection report will be made available to the DEQ upon request.

CLOSURE:

Upon completion of batch plant operations, the site will be restored to a condition equivalent to that prior to occupation, with the exception of the base material used for stability that the owner has requested that we leave on site. Restoration will include removal of wastewater and sediment/sludge from the impoundment area and eradication of the impoundment.

Wastewater-similar to monitoring, active treatment and removal as stated above, the wastewater will be visually inspected for non-concrete related pollutants prior to its removal from the impoundment. Any wastewater remaining after natural evaporation and prior to closure will be pumped out and used for dust suppression at the site.

Sludge - Depending on the solidity of the sediment/sludge remaining in the impoundment upon removal of the waste water, the material will be removed and either taken to a landfill, a recycling location, or left on site in a manner acceptable to the Oklahoma D.O.T. -if the latter is an allowable option.

Backfill- Once all the water, solid materials and the liner have been removed from the impoundment area, the area will be filled. If dikes were used to construct the Impoundment, they will be removed or leveled to restore the area to its prior drainage patterns. If an excavation was used, the pit will be filled with the materials originally removed. If there were significant strata differences within the excavation's limits, the excavated material will be replaced in an order to restore the continuity of the layers. The replaced material will be co-mingled with the in-situ material and will be compacted to a similar density. Once the grading is finished in this area, the area will be revegetated or resurfaced to its original condition.

DISPOSAL:

It is not anticipated that a disposal site will be required for this site, with the exception of any sediment left in the impoundment, since all the materials used in the process of making ready mix concrete are non-hazardous materials. If for some reason a disposal site is required, we will notify the DEQ immediately of this change and will revise this plan to reflect this change.

CERTIFICATE OF CLOSURE:

An affidavit of closure will be submitted within 10 days after closure of all temporary impoundments.

Re: DEQ Application No. OKG11MT87
Greenhill Concrete Products, Inc., Rogers County, Oklahoma
Facility ID No. I-66001860

Dear Mr. Henderson:

Your application for an Oklahoma Department of Environmental Quality (DEQ) permit to treat and dispose of wastewater was received by this office on April 25, 2014. As specified in OAC 252:004-7-7 of the DEQ rules, your application has been determined to be complete.

Your Authorization to treat and dispose of wastewater under OPDES General Permit No. OKG11MT is enclosed. The effective date and the expiration date of this Authorization appears on the cover page.

Should you have any questions regarding the Authorization, please contact the Industrial Permits Section at the letterhead address or telephone (405) 702-8100. Should you have any questions regarding compliance with the conditions of this Authorization, please contact the Industrial Enforcement Section at the same address and phone number.

Sincerely,

Carol Paden

Carol Paden, P.E., Manager
Industrial Permits Section
Water Quality Division

OKLAHOMA DEPARTMENT OF ENVIRONMENTAL QUALITY
AUTHORIZATION FOR DISCHARGE AND/OR DISPOSAL
UNDER GENERAL PERMIT NO. OKG11MT

AUTHORIZATION NO.: OKG11MT87
FACILITY ID NO.: I-66001860

In compliance with the Oklahoma Pollutant Discharge Elimination System (OPDES) Act, 27A O.S. §2-6-201 *et seq.*, Oklahoma Uniform Environmental Permitting Act, 27A O.S. §2-14-101 *et seq.*, and the rules of the Oklahoma Department of Environmental Quality (DEQ) promulgated thereunder,

Greenhill Concrete Products, Inc.
P.O. Box 10
Catoosa, OK 74015

is hereby authorized to operate a mobile concrete batch plant identified as a Cemco Model 220 Batch Plant Serial No. 11420502 and to treat and dispose of industrial wastewater in temporary total retention surface impoundment(s) and to land apply wastewater for dust suppression only.

The wastewater consists of process wastewater and contaminated stormwater runoff associated with the following three common activities: (1) mix plant area washdown (if dry brush cleanup methods are not utilized); (2) truck mixer drum washout; and (3) external truck wash and oil spray down, and is classified as Class III wastewater in accordance with OAC 252:616-1-2.

Discharge of wastewater contained in the authorized surface impoundment(s) to the waters of the state is specifically prohibited. Stormwater discharges not associated with concrete mix plant area washdown, truck mixer drum washout, and external truck wash and oil spray-down will be authorized under the OPDES Stormwater Multi-Sector General Permit.

The facility shall be maintained in accordance with all conditions and provisions set forth in the General Permit No. OKG11MT, and in Parts I, II, and III, hereof.

Issuance of this Authorization in no way or in any respect affects the permittee's civil or criminal responsibility regarding disposal of wastewater, except with respect to the permittee's legal responsibility under the OPDES Act and the DEQ Rules.

This Authorization is non-transferable and is granted summarily by and at the discretion of the Executive Director in accordance with applicable DEQ Rules and provisions of the above-referenced Permit.

This is a new Authorization.

This Authorization shall become effective on May 5, 2014.

This Authorization shall expire at midnight, on June 7, 2017.

Issued this 5th day of May, 2014.

Carol Paden

Carol Paden, P.E. Manager
Industrial Permits Section
Water Quality Division

PART I
EFFLUENT LIMITATIONS AND OTHER REQUIREMENTS

SECTION A. EFFLUENT LIMITATIONS AND MONITORING REQUIREMENTS

Not applicable. Discharge of wastewater contained in the authorized surface impoundment(s) to the waters of the state is specifically prohibited.

SECTION B. SURFACE IMPOUNDMENTS

The use of surface impoundments for treatment and/or disposal of wastewater at mobile concrete batch plants is authorized, subject to additional State requirements as specified below and in General Permit No. OKG11MT, in accordance with OAC 252:616.

1. Wastewater Classification

The wastewater generated from routine operations of mobile concrete batch plants is classified as Class III wastewater in accordance with OAC 252:616-1-2.

2. Construction Requirements

All surface impoundments shall be constructed and maintained in accordance with OAC 252:616-7-1. In addition, the following conditions shall also apply:

a. Inner and outer dike or berm slopes shall not exceed 1 vertical to 2 horizontal (1:2) on all temporary total retention surface impoundments when the temporary job site will be utilized for less than 180 days.

b. Inner and outer dike or berm slopes shall not exceed 1 vertical to 3 horizontal (1:3) on all temporary total retention surface impoundments when the temporary job site will be utilized for greater than 180 days.

Because the berm height will be low it is not necessary to construct berms with flat tops in order to inspect the berms for erosion.

3. Depth to Groundwater

In accordance with OAC 252:616-7-1(4), the bottom of any surface impoundment shall be a minimum of 15 feet above the historic maximum groundwater table. This requirement is waived based on BPJ and the fact that the wastewater is classified as Class III. At no time, shall the bottom of any surface impoundment be built in groundwater.

4. Liner Requirements

A native soil liner may be used for temporary surface impoundments. Liner materials and construction shall be in compliance with requirements of OAC 252:616-7-1(8) and (9) and OAC 252:616-7-2 and 7-3. Concrete liners are allowed at mobile concrete batch plants. However, a concrete liner must be constructed in compliance with requirements of OAC 252:616-7-1(9) and OAC 252:616-7-7.

5. Freeboard Requirements

A minimum freeboard of one (1) foot shall be maintained on all temporary total retention surface impoundments when the temporary job site will be utilized for less than 180 days. If the water level reaches the one (1) foot freeboard level, another impoundment must be constructed and used for any additional wastewater generated at the site.

A minimum freeboard of three (3) feet shall be maintained on all temporary total retention surface impoundments when the temporary job site will be utilized for greater than 180 days. If the water level reaches the three (3) foot freeboard level, another impoundment must be constructed and used for any additional wastewater generated at the site.

6. Other Specific Requirements

a. Wastewater contained in surface impoundments may be recycled for use in concrete make-up or wash water.

b. There shall not be any visible sheen of oil at any time in the surface impoundment(s).

c. Surface impoundments shall not be located in flood ways. If any surface impoundment(s) is located in a flood plain, the permittee shall ensure that the crest elevation of dikes/berms must be at least one foot above the 100-year flood elevation in accordance with OAC 252:616-5-1.

d. The permittee shall restrict access to industrial wastewater systems sites by fences, secured gates, or other reasonable means in accordance with OAC 252:616-5-1(c). The permittee shall also post a sign listing the name of the operator, an emergency phone number, and the DEQ permit number.

SECTION C. LAND APPLICATION AND BENEFICIAL REUSE OF WASTEWATER

Land application of wastewater for dust suppression only at mobile concrete batch plants is authorized, subject to additional State requirements as specified below, in accordance with OAC 252:616-11. The wastewater covered under this Authorization is classified as Class III wastewater in accordance with OAC 252:616-1-2.

a. The wastewater to be land applied shall be free of visible sheen of oil or globules of oil or grease and shall have a pH between 6.5 s.u. and 9.0 s.u.

b. The wastewater to be land applied for dust suppression shall be visually inspected prior to land application. An inspection log shall be maintained at the site and made available to DEQ upon request.

c. There shall be no land application of wastewater in areas where the depth to the maximum seasonal groundwater level is less than two (2) feet in accordance with OAC 252:616-5-1(b)(E).

d. There shall be no land application of wastewater during periods of precipitation or when soil is saturated or frozen.

e. There shall be no runoff of wastewater from the land application sites.

f. The permittee shall keep a log book which records the time and date, the source and the volume of wastewater used, and the area which was dust suppressed. This log book shall be maintained at the site and made available to the DEQ upon request.

The process wastewater that is reused back into the concrete mixture is exempt from monitoring requirements.

SECTION D. RECYCLABLE CONCRETE MATERIAL AND DISPOSAL OF OTHER SOLIDS

Recyclable concrete material recovered from the scatter pile, impoundments and/or other means may be removed from the facility and may also be used by the applicant at the permitted facility at any time. No records are required.

SECTION E. CLOSURE REQUIREMENTS

The permittee shall close all surface impoundment(s) at a temporary job site in accordance with the approved *Closure Plan* within *fifteen (15) days* of moving/relocating of the batch plant at a new job site or temporary location.

Within *ten (10) days* after closure of all temporary impoundments the permittee shall submit a *Certification of Closure* to the DEQ that all impoundments were closed in accordance with their approved *Closure Plan*.

SECTION F. RELOCATION NOTIFICATION

The permittee shall notify the DEQ within *seven (7) days* each time the mobile concrete batch plant is moved to a new location.

The notification document shall include a completed **Form 616-G11MTR** for the new job site.

SECTION G. ACKNOWLEDGEMENT

Within *seven (7) days* after receipt of Form 616-G11MTR, the DEQ will provide a written statement acknowledging receipt of the notification.

PART II
OTHER PERMIT CONDITIONS AND REQUIREMENTS

A. This permit does not convey any exclusive privileges or authorize any injury to property or invasion of rights or any infringement of Federal, State, or local laws or regulations nor does it obviate the requirement to obtain permission from any landowners whose property will be affected by this Permit.

B. Individual Permits

a. Any permittee authorized by this Permit may request to be excluded from the coverage of this General Permit by applying for an individual permit or another type of General Permit if applicable. The permittee shall submit the appropriate OPDES application forms together with the reasons supporting the request to the Water Quality Division of the DEQ.

b. The owner/operator of a mobile concrete batch plant permit that wishes to discharge wastewater at a temporary job site must obtain an individual discharge permit. The permittee shall submit the appropriate OPDES application forms together with the reasons supporting the request to the Water Quality Division of the DEQ.

c. When an individual OPDES permit is issued to a permittee otherwise subject to this General Permit, the applicability of this Permit to that owner or permittee is automatically terminated on the effective date of the individual permit.

d. A mobile concrete batch plant excluded from coverage under this General Permit solely because it already has an individual wastewater disposal permit may request that its individual permit be converted to this General Permit. Upon conversion from the individual permit, this General Permit shall apply and the individual permit will be terminated.

C. Laws and Rules Applicable

The DEQ Rules, as amended, are applicable to and are incorporated by reference into this permit and any Authorizations under it. The permittee is hereby given notice that this permit is in all respects subject to compliance with and actions under any and all applicable and relevant terms, conditions, provisions and requirements and all amendments of the laws of the State of Oklahoma and the Department of Environmental Quality Rules. The absence of any express reference within this permit to any particular statutory requirement, rule(s), or regulation(s), shall in no respect be deemed or construed to exempt or preclude the application of such requirement, rule(s), or regulation(s), to this permit. By DEQ approval, grant, and issuance of this permit, permittee acknowledges responsibility to obtain correct and current copies of applicable DEQ Rules (as amended), provided, however, that permittee further acknowledges that any and all amendments thereto shall become a part of this permit.

RE: Construction Permit Application
Greenhill Materials/Sherwood Construction, Inc.
Operating Permit No. 99-034-O.

Dear Ms. Jeffries:

Attached please find a construction permit application submitted by Enercon Services, Inc. on behalf of our client, Greenhill Materials/Sherwood Construction, Inc. for a quarry and rock crusher facility located in Section 10, Township 20 North, Range 14 East, Rogers County, Oklahoma. This facility has been in operation since 2002 and the accompanying permit application documents equipment changes that have been made at the facility.

Included with this application are an updated Process Flow Diagram and updated Maximum Potential to Emit calculations.

Please contact me (Rbeeson@enercon.com) or Mr. Daryl Worley, Office Engineer (darylw@sherwoodoklahoma.com) if you or your staff have any questions regarding this application.

Sincerely,

ENERCON SERVICES, INC.

Randal J. Beeson
Senior Project Manager

DEQ LANDOWNER NOTIFICATION AFFIDAVIT

Tier I, II, or III permit applicants must provide notice to the landowner(s). The basis for this requirement is Title 27A of the Oklahoma Statutes, Supplement 1996, § 2-14-103(9), as described in OAC 252:4-7-13 (b).

Please note that you MUST fill out and return this affidavit even if you don't have to give any landowner notice.

A	NOTICE TO THE LANDOWNER(S) IS NOT REQUIRED because: (check one)
	My application does not involve any land.
	My application involves only land owned by me (or applicant business).
X	I have a current lease given to accomplish the permitted purpose.
	I have a current easement given to accomplish the permitted purpose.

OR

B	NOTICE TO THE LANDOWNER(S) IS REQUIRED because the land is owned by someone other than myself or the applicant business AND I HAVE NOTIFIED the following (check one):		
	Landowner(s)	X	Lessor or Administrator or Executor of the land
METHOD OF DELIVERY (check one):			
X	Actual notice, for which I have a signed and dated receipt		
	Service by Sheriff or private process server, for which I have an affidavit		
	Service by certified mail, restricted delivery, for which I have a signed return receipt		
	Legal publication, for which I have an affidavit of publication from the newspaper, because the landowners could not be located through due diligence		

LANDOWNER AFFIDAVIT CERTIFICATION					
I, as the applicant or an authorized representative of the applicant, hereby certify that I own the real property, have a current lease or easement which is given to accomplish the permitted purpose (per Option A above), or have provided legal notice to the landowner(s) (per Option B above) about the permit application for the facility described below.					
Company Name		Facility Name			
Facility Address or Legal Description					
Responsible Official (signature)				Date Signed	
Responsible Official (typed)		Title			

If the landowner notice applies to your application (Option B above) you can send the following form to them as your notice:

NOTICE TO LANDOWNER OF FILING

Dear Landowner: (Name) Estate of John T. Oxley

(Applicant name) Greenhill Materials has filed a permit application with the Oklahoma Department of Environmental Quality for (Facility Name) Greenhill Materials Rock Crushing Facility facility.

This application involves the land owned by you located at:

Address or Legal Description: Section 10, T20N, R14E, Rogers County, OK

Signed: _____ Date: 12 May 05

ESTATE OF
JOHN T. OXLEY
WILLIAMS CENTER TOWER I
SUITE 1305
ONE WEST THIRD STREET
TULSA, OKLAHOMA 74103-3523

August 9, 1999

John R. Curtis
Sherwood Construction Co.
P.O. Box 10
Catoosa, OK 74015

Re: Greenhill Materials
Quarry rock processing area
Section 10, T20N, R14E
Rogers County, Oklahoma

Dear John:

The owners understand that rock crushing, rock screening, and rock manipulation operations are scheduled to be performed on the referenced property.

Very truly yours,

R. H. Harbaugh, Jr.
Attorney for the Owners

RHH:kp

AIR QUALITY DIVISION
CLASSIFICATION OF AIR QUALITY APPLICATIONS

This form can be used to make a preliminary determination of the Tier classification. For air quality permits, Tier I basically includes minor sources and most synthetic minors. Tier II covers major sources, and Tier III covers new major sources requiring PSD review. Note that if your application involves land and you do not own all of the land that is the subject of your application, you must notify the owners. Even you do not have to give landowner notice, all Tier I, II, or III applicants must fill out and return a landowner affidavit (DEQ Form #100-810). In addition, note that all Tier II and III applications require public notice of the application in one newspaper local to the site or facility as soon after the filing date as possible. Other public participation requirements, such as notice of draft and proposed permit, and notice of public meeting may also be required. Contact our office for more information on these requirements.

OAC 252:2-15-40. Air quality applications - Tier I

__(1) New construction, operating and relocation permit for a minor source.
__(2) Modification of a construction permit for a minor source that will remain minor after the modification.
__(3) Modification of an operating permit that will not change the source's classification from minor to major.
__(4) Extension of expiration date of a construction permit.
__(5) Renewal of an operating permit for a minor source.
__(6) New construction permit for an existing major facility for any facility change considered minor under OAC 252:100-8-7(e)(1).
__(7) New operating permit that is based on a construction permit that was processed under Tier II or III, 252:100-8-8 and has conditions which do not differ from the construction permit's operating conditions in any way considered significant under OAC 252:100-8-7(e)(2)(A).
__(8) Modification of any operating permit condition that is based on the operating conditions of a construction permit that was processed under Tier II and Tier III, OAC 252:100-8-8 and does not differ from those construction permit conditions in any way considered significant under OAC 252:100-8-7(e)(2)(A).
_X_(9) A construction or operating permit modification that is minor under OAC 252:100-8-7(e)(1)(A).
__(10) Extension of expiration date of a major facility's construction permit with no or minor modifications.
__(11) New, modified and renewed individual authorizations under general operating permits for which a schedule of compliance is not required by OAC 252:100-8-5(d)(8)(C)(iii).
__(12) Burn approvals.
__(13) Plant-wide emission plan approval under OAC 252:100-37-25(b) or OAC 252:100-39-46(j).
__(14) Administrative amendments of all air quality permits and other authorizations.
__(15) Alternative emissions reduction authorizations.

OAC 252:2-15-41. Air quality applications - Tier II

__(1) A minor source seeking a permit for a facility modification that when completed would turn it into a major facility.
__(2) New construction permit for a new major facility not classified under Tier III.
__(3) New construction permit for an existing major facility for any facility change considered significant under OAC 252:100-8-7(e)(2)(A) and which is not classified under Tier III.
__(4) New operating permit for a major facility that did not have an underlying construction permit processed under Tier II or Tier III, and OAC 252:100-8-8.
__(5) New operating permit with one or more conditions that differ form the underlying Tier II or Tier III construction permit's operating conditions in a way considered significant under OAC 252:100-8-7(e)(2)(A).
__(6) New acid rain permit that is independent of a Title V permit application.
__(7) New temporary source permit under OAC 252:100-8-6(e).
__(8) Significant modifications, as described in OAC 252:100-8-7(e)(2)(A), of an operating permit that is not based on an underlying construction permit processed under Tier II or Tier III, and OAC 52:100-8-8.
__(9) Modification of an operating permit when the conditions proposed for modification differ from the underlying construction permit's operating conditions is an way considered significant under OAC 252:100-8-7(e)(2)(A).
__(10) A construction permit modification considered significant under OAC 252:100-8-7(e)(2)(A) and which is not classified under Tier III.
__(11) Renewals of operating permits for major facilities.
__(12) New, modified and renewed general operating permits.
__(13) Individual authorizations under any general operating permit for which a schedule of compliance is required by OAC 252:100-8-5(d)(8)(C)(iii).

OAC 252:2-15-42. Air quality applications - Tier III

(a) **New major stationary sources.** A construction permit for any new major stationary source listed in this subsection requires a Tier III application. For purposes of this section, "Major stationary source" means:

(1) Any of the following sources of air pollutants which emits, or has the PTE, 100 TPY or more of any pollutant subject to regulation:

__(A) carbon black plants (furnace process)	__(J) hydrofluoric, sulfuric or nitric acid plants	__(R) portland cement plants
__(B) charcoal production plants	__(K) iron and steel mill plants	__(S) primary aluminum ore reduction plants
__(C) chemical process plants	__(L) kraft pulp mills	__(T) primary copper smelters
__(D) coal cleaning plants (with thermal dryers)	__(M) lime plants	__(U) primary lead smelters
__(E) coke oven batteries	__(N) incinerators, except where used exclusively as air pollution control devices	__(V) primary zinc smelters
__(F) fossil-fuel boilers (or combustion thereof), totaling more than 250 million BTU/hr heat input	__(O) petroleum refineries	__(W) secondary metal production plants
__(G) fossil fuel-fired steam electric plants of more than 250 million BTU/hr heat input	__(P) petroleum storage and transfer units with total storage capacity exceeding 300,000 barrels	__(X) sintering plants
__(H) fuel conversion plants	__(Q) phosphate rock processing plant	__(Y) sulfur recovery plants
__(I) glass fiber processing plants		__(Z) taconite ore processing plants

__(2) Any other source not specified in paragraph (1) of this definition which emits, or has the PTE, 250 TPY or more of any pollutant subject to regulation.

__(b) **Existing incinerators.** An application for any change in emissions or potential to emit, or any change in any permit condition, that would have caused an incinerator to be defined as a major stationary source when originally permitted shall require a Tier III application.

Oklahoma Dept. of Environmental Quality

Information Needed

1. **Description of the process or operation.**

   (a) **Descriptions of nonmetallic mineral processing plants should include a listing of each crusher, grinding mill, screening, operation, bucket elevator, belt conveyor, bagging operation, storage bin, and enclosed truck or railcar loading station. For each piece of equipment, provide a serial number (if available) and/or a plant identification number, the date of manufacture and/or date of purchase (if purchased prior to August 21, 1933), and the size (the rated capacity in tons per hour of each crusher, grinding mill, bucket elevator, bagging operation, or enclosed truck or railcar loading station; the total surface area of the top screen of each screening operation; the width of each conveyor belt; and the rated capacity in tons of each storage bin).**

   Since originally constructing this facility in 2002, Greenhill Materials has made several changes to improve plant operating efficiency. These changes include:

   1. Replacement of the original jaw crusher with an impact crusher.
   2. Replacement of a 6'x20' triple deck screen with a 6'x16' single deck screen.
   3. Addition of a sand screw to produce manufactured sand.
   4. Addition of a rail loadout facility comprised of a feed hopper and two additional conveyors.
   5. Elimination of two diesel generator engines and a 10,000-gallon diesel fuel aboveground storage tank (AST). All equipment is now electrically operated.
   6. Addition of an 8,000-gallon diesel fuel AST for fueling mobile equipment.
   7. Replacement of the diesel powered Kolberg Model 52 pug mill with a new electrically operated Pugmill Systems, Inc. Model 750LS pug mill.
   8. Addition of 5 conveyors (current total of 13 conveyors) and three radial stackers (current total of 5 radial stackers) at the plant.

   In addition to the above changes, Greenhill Materials is requesting approval to increase maximum crusher plant production to 600 tons per hour (TPH) from the current 300 TPH. The Company is also requesting approval to increase annual hours of operation for the crusher plant from 2,500 to 3,000. This will increase maximum annual aggregate production from the current 750,000 TPY to 1,800,000 TPY. An updated process flow diagram is included as Attachment A (Figure 1) of this application. At the same time, Greenhill Materials requests that the new pugmill be permitted for a maximum production of 550 TPH for a maximum of 2,500 hours/year.

   (b) **Descriptions of onshore natural gas processing plants subject to NSPS 40 CFR 60, Subpart KKK, synthetic organic chemicals manufacturing plants subject to NSPS 40 CFR 60, Subpart VV, and petroleum refineries subject to NSPS 40 GFR 60, Subpart GGG shall list each piece of equipment subject to the relevant subpart. The description should contain sufficient detail to demonstrate that the equipment complies with applicable NSPS requirements and/or exemptions.**

   Not applicable to this application.

2. **Include a process flow diagram. This should be a simplified diagram, identifying each operation or process.**

   Show amounts at each process step or stage of manufacture of all raw materials, intermediate products, by-products and finished products.

   Show amount of all other material entering or leaving the process including air or gas streams.

See Appendix B of this application for maximum process rates at various points in the crusher plant operation.

3. **The applicant must list and identify all expected air emissions, including toxic and hazardous substances. This information is a vital part of the application. Give the amount of these individual emission rates in pounds per hour and tons per year. Specify and explain the basis used for this estimate, and include that supporting data. Key emissions to process flow diagram by number or other identification means.**

   The only air emissions generated from this operation are particulates (both PM and PM10) and volatile organic compounds (VOCs) from working and breathing losses generated by the 8,000-gallon diesel fuel AST.

4. **Give maximum process weight in pounds per hour and basis for calculating or establishing this hourly rate. (If necessary, a definition of process weight is given in OAC 252:100-1-2. For nonmetallic mineral processing plants provide the maximum process weight in pounds per hour for each piece of equipment including each conveyor belt, and the plant capacity (the cumulative rated capacity of all initial crushers that are part of the plant).**

   The maximum capacity of the crusher operation will be 600 TPH (1.2 million PPH). Maximum hourly process rates for the various units downstream from the primary crusher are shown in TPH on the Process Flow Diagram in Attachment A.

5. **Hours of operation per day, days per week and weeks per year. (Operating permit will be limited to this number of total hours of operation per year.) Where differences exist between operations, specify each rate.**

   Greenhill Materials is requesting a maximum 3,000 hours of operation annually for the crusher plant and 2,500 hours of annual operation for the pug mill.

6. **Describe the raw materials used in process. Give their principal use or function when it is not self-explanatory.**

   Raw materials used in the process include broken limestone rock, water (dust suppression and for control of moisture level in aggregate products) and diesel fuel (mobile equipment). The rock crusher and wash plant operations produce various grades of aggregate used in the construction industry. A maximum of 1,500 tons per week of production is loaded into rail cars and shipped to a construction materials operation in Oklahoma City. Remaining production is for local markets and is transported from the facility by truck.

7. **If process is cyclical instead of continuous, give length of cycle and time between cycles.**

   Plant operation is continuous, however, production of individual products may be cyclical, depending on market demand.

8. **Does process involve use of potentially hazardous air contaminants and toxic materials? If so, and emission rate exceeds specified de minimis rate, determine MAAC and provide documentation to determine off property line maximum ground level concentration.**

   Process does not involve use of any hazardous air pollutants (HAPs) or toxic air contaminants (TACs).

9. **For any combustion units provide the information requested in Instruction No. 4, Items 2, 3, 4 and 7.**

   Not applicable to this operation.

10. **For any hydrocarbon storage tanks provide the information requested in Instruction No. 3.**

See Instruction No. 3.

11. **Include a plot plan showing location of manufacturing processes and location of outlets for airborne emissions. Key all flows and discharge outlets to the process flow diagram by number or other identification means.**

See Attachment A.

12. **Include an area plot plan showing location of the establishment; property lines, and the surrounding area residences, other types of structures and roadways.**

See Attachment A (Figure 2).

13. **Fugitive Dust Control**

Specify the procedures to be used to minimize air pollution from operations not involving process emissions in which particulates are likely to be wind-borne, including the following items:

(a) Service roads and parking areas.

Mine roads and haul roads will be watered periodically during dry days for dust control.

(b) Stockpiles or storage area.

Aggregate materials are stockpiled in a damp to wet condition.

(c) Loading and unloading materials.

Aggregate materials loaded into haul trucks or the feed hopper for the rail loadout are generally in a damp to wet condition.

(d) Transportation of dusty material by truck.

Haul trucks are required to tarp their loads prior to entering Highway 266.

(e) Any other enterprise which involves a substance likely to be scattered by the wind or susceptible to being airborne.

Not applicable.

14. **Emission Point Data**

Not applicable. All emissions are fugitive.

(a) Height above grade.
(b) Stack inside diameter at discharge, or point where emissions are discharged if no stack will exist.
(c) Stack gas volume, velocity, temperature.
(d) Mass emission rates, lbs./hr.
(e) Distance to surrounding obstructions and give their heights and plan view dimensions.

(f) **Facility property line locations.**

15. **Specify whether stack sampling ports are being included in the construction, and identify which stacks.**

There are no stacks associated with this operation.

16. **Air Pollution Control Equipment**

The only air pollution control equipment associated with this operation is water sprays at the primary crusher (CR-1), the inlet side of Conveyor C-4 and on the secondary crusher (CR-2). In addition, the pug mill is a wet operation with water added at a rate of 50 GPM.

The following information is needed on the control equipment included in the installation.

(a) **Key the equipment to. process flow diagram by number or other identification means.**
(b) **Type (cyclone, wet collector, fabric filter, electrostatic precipitator, incineration, absorption, other).**
(c) **Air contaminant(s) to be controlled.**
(d) **Particle size range and composition, for particulates.**
(e) **Particle size efficiency curve, for a particulate collector.**
(f) **Guarantee efficiency of collector with the suppliers performance guarantee conditions if performance is not achieved.**
(g) **Provide the following information on these collectors:**

Wet Collector

Flow rate and type of solution, gallons per minute.
Description of mist eliminator system to be used.

Electrostatic Precipitator

Type of precipitator.
Number of stages.
Rapping system used.

Incineration

Type of unit described.
Fuel used, with hourly and annual consumption.

For installations involving more than hydrocarbon storage tanks, the completion of additional instructions is also necessary (Instruction 1 for general process operations, and Instruction 4 for fuel burning equipment).

Information needed

1. **Storage Tank information:**

(a) **Applicant must fill out a complete table for each tank with capacity of 400 gallons or more. Attach relevant documents (such as, TANKS program output etc.).**

See Attachment B.

STORAGE TANKS									
Tank ID #	AST-1	Construction Date		Submerged Fill Pipe Provided?		x	Yes		No
Tank Height (ft)	21			Tank Diameter (ft)			8		
Tank Capacity (gallons)	8,000 gallons			Tank Color			White		
Maximum Throughput (gallons/year)	251,000			Vapor Pressure (psia)			0.012		
Design Type	Fixed Cone Roof	Floating Internal Roof		Floating External Roof	X	Others (Specify)	Horizontal w/ fixed ends		
Type of Liquid Stored	Condensate*	Methanol		Crude Oils	X	Other (Specify)	Diesel Fuel		

*Note: "Slop Oil" tanks are assumed to be condensate

(b) Subject to NSPS 40 CFR 60, Subpart K, Ka, Kb?

Not applicable to this application.

(c) Minimum and maximum temperatures at which material will be stored.

Product will be stored at ambient temperature.

(d) Description of venting valve system, including where vented to.

Not applicable.

(e) Description of vapor control system, if other than submerged fill pipe.

Submerged fill pipe.

2. Loading Facility Information (if applicable):

(a) **Type of facilities.**

Diesel fuel AST for mining equipment.

(b) **Sources to be loaded from facility.**

Mobile mining equipment will be refueled from this tank.

(c) **Type of vapor control and recovery system.**

Submerged fill pipe.

(d) **Efficiency of vapor control and recovery system.**

See Attached Tanks 3.1 data in Appendix B.

(e) **Loading rate in gallons per day and gallons per year**

Maximum annual fuel usage is estimated at 251,000 gpy at 1.8 million tons/year of production.

(f) **Control method utilized on vapor recovery system and control efficiency.**

Submerged fill pipe.

Listing of New Equipment

*Assumes 60% Control with Outer Surface of Stockpile in Dry Condition and Interior Moist

Given:

3000 hrs/yr of operation (57.7 hrs/wk)
600 TPH = maximum production

Weekly prod = (600 TPH)(57.7 hr/wk)
= 34,620 TPW

Minimum of 1,300 tons/week goes out rail

34,620 tons/wk − 1,300 tons/wk = 33,320 tons/wk out by truck

(52 wk/yr)(33,320 tons/wk) = 1,732,640 tons/yr " " "

From 8/9/99 Application,

Variable	Plant Loads	Haul Loads
k (Dimensionless)	0.5	0.5
s (% Silt)	11	9.6
S (MPH)	10	20
W (T - empty & full)	$\bar{X}$ = 31.75	$\bar{X}$ = 79.25
w (no. of wheels)	$\bar{X}$ = 14	$\bar{X}$ = 6
P (days of 0.01" precip)	95	95
Average annual tons	1,800,000	2,500,000*
VMT (Vehicle Miles Traveled)	1,800,000/20.5 = 87,805 loads 87,805 x 0.5mi = 43,903 mi	2,500,000/65.5 = 38,170 loads 38,170 x 1.5 mi = 57,252 mi

* Assumes 700K TPY Expansion

$= (2.37 \times 10^{-3})(0.681)$
$= 1.61 \times 10^{-3} \#/\text{T}$
$\Sigma = (1{,}800{,}000 \text{ TPy})(1.61 \times 10^{-3} \#/\text{T})$
$= 1.45 \text{ TPy}$

Greenhill Materials Diesel Fuel Usage MB

1. Facility used 65,000 gal of diesel fuel in 2004 to produce 466,187 tons of crushed rock

2. Maximum Annual Production = 1.8 mm tpy.

3. 1,800,000 TPY / 466,187 TPY = 3.86

(3.86)(65,000 gpy) = 251,000 gpy of fuel (Maximum)

3.0 SOURCE OPERATION

3.1 PROCESS DESCRIPTION

Trucks feed raw materials to a main crusher. The resulting crushed materials are transported on a conveyor system to other processes and storage piles. The entire process is wetted by use of a continuous misting system.

4.0 SAMPLING AND ANALYTICAL PROCEDURES

4.1 TEST METHODS

The emission tests on the crusher and conveyor equipment at the Greenhill Materials Plant was performed following EPA methods described by the Code of Federal Regulations, Title 40, Part 60, Appendix A. Table 4.1 below outlines the specific method performed on March 14-16, 2005.

TABLE 4.1
SUMMARY OF SAMPLING METHODS

Pollutant or Parameter	Sampling Method	Analysis Method
Opacity	EPA Method 9	Visual Observation

The sampling and analysis procedure used during these tests conforms in principle with the methods outlined in the Code of Federal Regulations (CFR), Title 40, Part 60, Appendix A, Method 9. Figure 4.1 depicts the sample points used for the opacity tests. A visual sample was taken at 15 second intervals for a period of 60 minutes at each emission point. All readings were then recorded on a field data sheet. Data records can be found in Appendix A and C of this report.

MEMORANDUM **July 12, 2005**

TO: DFL Dawson Lasseter, P.E., Chief Engineer, Air Quality

THROUGH: RK Richard Kienlen, P.E., Eng. Mgr. II, New Source Permits Section

THROUGH: Peer review, Judy Cupples

FROM: Herb Neumann
Regional Office at Tulsa

FACID#3421

SUBJECT: Evaluation of Permit Application **No. 2005-012-O**
Authorization to Operate a Rock Crushing Plant
Nonmetallic Mineral Processing Facility General Permit
Sherwood Construction Company, Inc., Greenhill Materials
Section 10, T20N, R14E, Rogers County
Driving directions: From the intersection of 193rd E. Avenue and OK 266 near the Port of Catoosa, approximately 2.1 miles west, turn right at entrance to plant.

ELIGIBILITY

Greenhill Materials has applied for an authorization to operate a modified limestone aggregate processing facility (SIC 1422) in an attainment area. The maximum plant process rate is 600 tons per hour (TPH) or 1,800,000 tons per year (TPY). The facility consists of two crushers, two screens, a pugmill, 13 conveyors, five radial stackers, a sand screw, a feed hopper, and a rail loadout facility. The facility uses diesel-fired front-end loaders and stores diesel in an 8,000-gallon tank, but all other equipment uses electricity. New equipment listed above and being added under this authorization includes a secondary screen, a sand screw, five conveyors, three radial stackers, and a rail loadout facility (one hopper and two conveyors). A diesel pugmill has been replaced by an electric pugmill, an 8,000-gallon AST replaces a 10,000-gallon AST for diesel storage, and a 600 TPH impact crusher replaces a 300 TPH jaw crusher.

The current application under discussion here is for an Authorization to Operate under the Nonmetallic Mineral Processing Facility General Permit (GP) that was issued on May 9, 2000, includes a request to establish a facility-wide emissions cap (< 100 TPY of any criteria pollutant and/or < 10 TPY of any single HAP or < 25 TPY of a combination of HAPs) in order to avoid other applicable requirements, i.e., Part 70 requirements. The applicant is not subject to a compliance schedule.

The facility is designed for the primary purpose of processing nonmetallic minerals. No emission units are proposed for operation at the facility that are not addressed in the Nonmetallic Mineral Processing GP. The facility is eligible for coverage.

EQUIPMENT

The following table shows equipment at the facility. Control is supplied in some areas by dust suppression equipment, such as spray bars, while the wash portion of the plant carries wet material, approximating a slurry. The word "wet" is used for all of these, with more detail found in the discussion of emissions.

Table 1: Equipment List

Emission Unit EUG & ID#	Description	Const. Date	Control Equipment	NSPS Subpart
1-Unload01	Truck unloading	1994	None	-

EMISSIONS

Criteria Pollutants

Emissions from the nonmetallic mineral processing equipment are based on the 600 TPH maximum capacity of the plant, considering controls, and using the applicant's proposed annual throughput limit of 1,800,000 tons. Air emissions at the facility result primarily from particulate matter from the crushing/sizing operations. Air emissions are controlled by water suppression and spray bars. Uncontrolled emission factors used by the facility are consistently greater than or equal to those listed in Table 11.19.2-2 of AP-42 (8/04). Additionally, the facility's controlled factors, calculated by multiplying the uncontrolled factors by the various control efficiencies claimed, yield factors consistently equal to or greater than the controlled factors listed in AP-42. If process emissions were not limited to 3,000 hours of operation annually, and assuming equipment to be used in the same proportions as outlined here, the potential to emit (PTE) for this facility would be 9.3 TPY of PM_{10}. Removing water suppression from the crusher plant in addition to allowing continuous operation would bring emissions close to the major source threshold. This facility is well suited for the GP authorization.

Table 2: Emissions from Process Equipment

Emission Point*	Control %	Process rate, TPH	Annual hours	PM_{10} factor, lb/T	PM_{10} Emissions	
					Lb/hr	TPY
Crusher plant operations						
Truck unloading	-0-	600	3,000	1.6×10^{-5}	0.010	0.014
F-1 to Cr-1	90	600	3,000	2.9×10^{-3}	0.174	0.261

				Totals	**3.813**	**3.198**

* F-1 means feeder number 1, Cr-2 means crusher number 2, C-3 means conveyor number 3, S-1 means screen number 1, RS-2 means radial stacker number 2, pile means any of several stockpiles, SS-1 means the sand screw, and FH-1 means feed hopper number 1.

VOC emissions from the 8,000-gallon diesel tank are minimal, due to the low vapor pressure of diesel. The facility used EPA-approved Tanks 3.1 to calculate VOC emissions of 7.12 lbs/yr, assuming annual throughput of 251,200 gallons.

There are also emissions of fugitive dust from the haul roads and stockpiles. However, since haul road and stockpile fugitive emissions are not counted towards determining major source status, emission estimates are calculated for these activities only as a memorandum exercise. Fugitive emissions of particulate were calculated as performed in the original permit for this facility, using empirical formula 1a from Section 13.2.2.2 of AP-42 (12/03),

$$E = k(s/12)^a(W/3)^b, \text{ where}$$

E = emission factor (lb/VMT, VMT = vehicle miles traveled)
s = percent of silt
W = mean weight (tons)
a, b, k = constants from Table 13.2.2-2.

VMT for haul roads and plant roads is calculated by dividing the total tonnage to be hauled by the average weight for each truck to calculate the number of loads and multiplying the result by the mileage traversed by each load. Multiplying E times the VMT for each activity yields particulate emissions. Note that dividing the VMT for each activity by 3,000 hours of operation yields an estimate of VMT/hr and therefore an estimate of lb/hr of emissions. The following table presents the data and emission results. Although the facility proposes to finish 1,800,000 TPY of products, total haul road tonnage represents an additional 700,000 TPY of riprap that will not be crushed or finished. The roads are watered, for which AP-42 allows a 70% control factor. The final emission numbers are the only place where this reduction is reflected. Only data related to PM_{10} emissions are used.

Table 3: Fugitives

Datum	Plant roads	Haul roads
k	1.5	1.5
a	0.9	0.9
b	0.45	0.45
s	11	9.6
W	31.75	79.25
E	4.01	5.35
Annual tonnage	1,800,000	2,500,000
Average load	20.5	65.5
Miles per load	0.5	1.5
Annual VMT	43,902	57,252
MPH	14.6	19.1
PM_{10} emissions	17.6 lb/hr	30.6 lb/hr
	26.4 TPY	45.9 TPY

Note that the fugitive emissions identified in the following table of total emissions are not used in determining if the facility is major.

Table 4: Facility-wide Total Emissions

Sources	VOC		PM_{10}	
	Lb/hr	TPY	Lb/hr	TPY
Process Equipment	-0-	-0-	3.81	3.20
Tanks	0.01	0.01	-0-	-0-
Fugitives	-0-	-0-	48.2	72.3
Totals	0.01	0.01	52.0	75.5

Hazardous Air Pollutants (HAPs)

There are no identifiable HAP emissions.

Other Regulated Pollutants

No other regulated pollutants of concern are emitted from this facility except at negligible levels.

PREVIOUS PERMITS

This facility has been operating under individual source Permit No. 99-034-O, issued February 8, 2002. Modifications in equipment and operations are reflected in this new authorization under the Nonmetallic Mineral Processing General Permit.

EMISSIONS LIMITATIONS

Emissions limitations are established in the Authorization to Operate as a facility-wide emissions cap in order to avoid other applicable requirements, i.e., Part 70 requirements. This cap is established at a level to not equal or exceed major source thresholds. Compliance with these emission limitations shall be determined on a monthly rolling basis. The estimate shall be annualized using a monthly average during the first 11 months following issuance of this Authorization. However, any facility with actual emissions of each regulated air pollutant less than 80% of the major source thresholds may make this determination annually.

APPLICABLE REQUIREMENTS AND MONITORING AND RECORDKEEPING REQUIREMENTS

Applicable requirements and monitoring and recordkeeping requirements for all eligible sources were identified and evaluated in development of the Nonmetallic Mineral Processing Facility General Permit. As a summary, and for informational purposes only, Table 5 lists whether or not a particular condition of the permit and any specific monitoring and recordkeeping requirement pertains to a particular emission unit proposed for this site.

INSPECTION

Herb Neumann, DEQ Regional Office at Tulsa permit writer, performed an initial operating permit inspection on June 23, 2005. Daryl Worley, Office Manager for Sherwood, and Randal Beeson, Enercon consultant for Sherwood, were present, with Mr. Worley providing a walk-through of the facility. Most of the necessary information had been supplied in advance of the physical inspection, although Subpart OOO opacity testing results were requested at this meeting and were supplied the next day. All equipment was found to be as described in the application.

PERFORMANCE TESTING

The processing equipment at a nonmetallic minerals processing facility which commenced construction or modification after August 31, 1983, is subject to 40 CFR 60, Subpart OOO. Since all of the equipment at this facility was constructed after the promulgation of this subpart, each was subject to performance testing as required by the subpart. Opacity standards are identified in 40 CFR 60.672 and the testing methods and requirements are described in 40 CFR 60.675.

There are no capture systems, so the provisions of §672(a) do not apply. Emissions from belt conveyors are limited to 10% opacity by §672(b). Because there is no capture system, emissions from crushers are limited to 15% opacity by §672(c). Truck dumping is exempt from opacity limits per §672(d). Finally, wet screening and all subsequent operations of saturated materials up to the next crusher, grinding mill, or storage bin shall have no visible emissions (0% opacity) per §672(h). Air Hygiene International performed opacity monitoring for the crushers and for all transfer points on March 14–16, 2005. All conveyor transfer points, including the radial stackers, had zero emissions (0% opacity). The primary crusher had average opacity of 0.71%, with a maximum six-minute reading of 1.60%. The secondary crusher had average opacity of 2.00%, with a maximum six-minute reading of 3.94%. This test demonstrated initial compliance with all applicable standards.

TIER CLASSIFICATION AND PUBLIC REVIEW

The application associated with this Authorization under the GP is classified as **Tier I**, per OAC 252:2-15-40(c)(1), effective June 15, 2005. Since the Nonmetallic Mineral Processing Facility General Permit has previously undergone public review (notice published on September 30, 1999, in the *Tulsa World* and the *Daily Oklahoman*), no site-specific public review is required. The applicant has submitted an affidavit that they are not seeking a permit for land use or for any operation upon land owned by others without their knowledge. The affidavit certifies that the applicant uses the land by lease.

FEES PAID

The Nonmetallic Mineral Processing Facility General Permit Construction Authorization fee is $400 and the Operating Authorization fee is $150. Applicant submitted $1,000 and a refund of the $450 overpayment will be processed upon issuance of the Authorization.

SUMMARY

The applicant has met all the requirements of the Nonmetallic Mineral Processing Facility General Permit issued on May 9, 2000. Ambient air quality standards are not threatened at the site. Issuance of the Authorization to Operate is recommended.

Table 5: SUMMARY OF MONITORING & RECORDKEEPING REQUIREMENTS

Emission Unit (EU) and (ID)	Applicable Condition	Description	Monitoring and Recordkeeping	Currently Subject?	Comments
Emissions Limitations	Part 2/I/A	Facility-wide Emissions Cap	Annual emissions record	Y	Applicable to all EUGs.
	Part 2/I/B	NSPS Opacity Limits	Per NSPS Subpart OOO	Y	Applicable to EUG1.
	Part 2/I/C	Hourly PM Limits	Not applicable at this time[1]	N	
	Part 2/I/D	Engine Conc. Limits	Not applicable at this time[1]	N	
Nonmetallic Mineral Processing Equipment (EUG1)	Part 2/II/A	Operating Records	Daily & cum. annual hours of operations and throughput, control technology used	Y	
	Part 2/II/B	NSPS OOO	Per NSPS Subpart OOO	Y	
	Part 2/II/C	Added Equipment	Written notification to the agency Records of performance tests	Y	
	Part 2/II/D	Existing Source	Submit copy of any report submitted to EPA per 40 CFR 60.7	Y	
Storage Tanks (EUG2)	Part 2/III/A	SC 37/39	Permanent Submerged Fill Pipe (400 gal. or more)	Y	
	Part 2/III/B	Emission Limits	Records of contents, throughput, and other items.	Y	
	Part 2/III/C	NSPS Kb	NA	N	
Facility-wide	Part 2/V/A	Equipment Inventory	Maintain Equipment Inventory Notify AQD of equipment change	Y	
	Part 2/V/B	Recordkeeping	Emissions record	Y	
	Part 2/V/C	Open Burning	Per OAC 252:100-13	Y	No open burning at this time
	Part 2/V/D	Opacity Monitoring[1]	Quarterly Method 22 or Method 9 Maintain record per 40 CFR Part 60, Appendix A	N	Applicable to Non-NSPS equipment
	Part 2/V/E	Dust Complaints	Maintain a complaint log	Y	
	Part 2/V/F	Dust Suppression	Test Method Records	Y	
Appendix A	A/A - B	Control Devices	No recordkeeping required	N	
	A/C - D	Dust Suppression	Wet suppression system maintenance log	Y	
	A/E – F	Baghouses/Scrubbers	Not applicable at this time[1]	N	
	A/G	Catalytic Converters	Not applicable at this time[1]	N	
	A/H	Recordkeeping	Per Part 4 of the permit	Y	

[1] Monitoring and Recordkeeping are not currently required for these emission units. Could become applicable in future if emissions exceed 80% of the major source threshold (due to increasing equipment capacity, or adding larger engines, or adding large storage tanks with higher throughput), or if adding Non-NSPS equipment.

Subject: Authorization to Operate No. **2005-012-O**
Greenhill Materials
Section 10, T20N, R14E, Rogers County, Oklahoma

Dear Mr. Curtis:

Enclosed is the Authorization to Operate for the referenced facility. Please note that this Authorization is issued subject to conditions of the Nonmetallic Mineral Processing Facility General Permit, which is attached. These conditions must be carefully followed since they define the limits of the permit and will be confirmed by periodic inspections.

Also note that you are required to annually submit an emissions inventory for this facility. An emissions inventory must be completed on approved AQD forms and submitted (hardcopy or electronically) by March 1st of every year. Any questions concerning the form or submittal process should be referred to the Emissions Inventory Staff at 405-702-4100.

Thank you for your cooperation in this matter. If we may be of further service, please contact our office at (918) 293-1600. Air Quality personnel are located in the DEQ Regional Office at Tulsa, 3105 E. Skelly Drive, Suite 200, Tulsa, OK, 74105.

Sincerely,

Herb Neumann

AUTHORIZATION TO OPERATE

PURSUANT TO THE TERMS OF THE NONMETALLIC MINERAL PROCESSING FACILITY GENERAL PERMIT

Air Quality Division
State of Oklahoma
Department of Environmental Quality
707 North Robinson
P.O. Box 1677
Oklahoma City, Oklahoma 73101-1677

Authorization No.: 2005-012-O

Effective Date: JUL 12 2005

Facility Name: Greenhill Materials **SIC Code:** 1422

Facility Location: Section 10, T20N, R14E, Rogers County, OK

Company Name: Sherwood Construction Company, Inc.

Mailing Address: P.O. Box 10, Catoosa, OK, 74015

Contact Person: John R. Curtis, Manager (918-266-6861)

This Authorization is issued pursuant to **OAC 252:100-7-15 and 252:100-7-18.**

Authorization is hereby granted the above named entity to operate the emission units, emission points, and other processes listed herein which are located at the above described minor facility (Facility) pursuant to the terms of the Nonmetallic Mineral Processing Facility General Permit as issued by the Oklahoma Department of Environmental Quality, Air Quality Division, on May 9, 2000. The Authorization addresses only those emission sources listed herein and only while located at the Facility.

Chief Engineer, Air Quality Division

Except as otherwise prohibited or limited by the Permit or this Authorization, the permittee is hereby authorized to construct the following emissions sources and/or conduct the following activities at the referenced site, described in the application received on June 2, 2005. The Evaluation Memorandum, dated July 12, 2005, explains the derivation of applicable permit requirements and estimates of emissions; however, it does not contain operating limitations or permit requirements. Continuing operation under this permit constitutes acceptance of, and consent to, the conditions contained herein.

I. Emission Units and Numerical Limitations

Emission limitations are hereby established for all regulated pollutants as a facility-wide cap. Emissions from all emission units at the facility shall not equal or exceed major source thresholds, i.e., 100 TPY of any regulated pollutant or 10 TPY of any single HAP or 25 TPY of any combination of HAPs.

Compliance with these emission limitations shall be determined on a monthly rolling basis. The estimate shall be annualized using a monthly average during the first 11 months following issuance of this Authorization. However, any facility with actual emissions of each regulated air pollutant less than 80% of the major source thresholds may make this determination annually. The facility throughput shall be maintained at such a level as to not exceed the annual facility-wide emissions limitations.

II. Monitoring and Recordkeeping Requirements

The permittee shall demonstrate continued compliance with any emission limitations or any operational conditions as specified in the permit (summarized in Table 5 of the Evaluation Memorandum).

III. Equipment Additions/Authorization Modifications

Construction of additional emission units (as provided by the Nonmetallic Mineral Processing Facility General Permit), or operational changes (e.g., changes in tank contents to another organic liquid or increases in throughput), may be allowed over the life of this Authorization without obtaining an Authorization to Construct so long as facility-wide emissions do not exceed that amount which would cause the facility to be classified as a major source.

Written notification of intent to construct, or to make operational changes (e.g., changes in tank contents or increases in throughput), must be provided to DEQ within 7 days of the start of operation. Neither an Authorization to Construct nor a new Authorization to Operate is required for these changes.

Operation of additional emission units authorized under an individual construction permit (e.g., those requiring a site-specific determination) requires issuance of a new Authorization to Operate for the facility (see Part 4, section II.C of the permit). The permittee shall make application for a

new Authorization to Operate within 60 days of commencing operation of such additional emission units.

IV. Previous Permits

The facility has been operating under Permit No. 99-034-O, which is an individual source minor permit. Construction of certain equipment at this location was completed before this permit was issued. Conditions to meet and document compliance with all applicable requirements that would have been required by issuance of a construction permit have been addressed in development of this Authorization to Operate. Thus, issuance of this Authorization to Operate will satisfy the outstanding requirement to obtain a construction permit for the facility.

V. Equipment List

The inventory listed in Table A shows the emission units at the facility.

Table A Emission Units

Emission Unit EUG & ID#	Description	Const. Date	NSPS Subpart

707 NORTH ROBINSON, P. O. BOX 1677
OKLAHOMA CITY, OKLAHOMA 73101-1677

In compliance with the provisions of the Oklahoma Clean Air Act, as amended (Oklahoma Statutes title 27A, §§ 2-5-101 to -118 (Supp. 1998)), and rules promulgated thereunder, operators of nonmetallic mineral processing facilities, as described under Part 1, Section II, are hereby granted permission to construct/operate such facilities as specified in an Authorization to Construct/Operate (hereinafter referred to as an "Authorization") issued under this general permit by the Department of Environmental Quality (DEQ). Parts 1 through 4 and Appendix A of this permit specify emissions limitations and standards that constitute applicable requirements, including state-only requirements, and include operational requirements and limitations necessary to assure compliance with all applicable requirements.

The owner or operator of a nonmetallic mineral processing facility may request that the facility be granted an Authorization to Construct/Operate in accordance with this general permit by submitting to the Air Quality Division (AQD) a complete set of General Permit Application Forms for Nonmetallic Mineral Processing Facilities. Eligible facilities may apply for coverage under this permit at any time during the permit term. No source, or part thereof, is authorized to construct/operate pursuant to the terms of this general permit unless an Authorization has been issued for that source.

This permit shall become effective on May 9, 2000.

Signed and issued this 9th day of May, 2000.

_____ Eddie Terrill, Director, Air Quality Division

APPENDIX A
Control Devices 19

PART 1 - REQUIREMENTS FOR GENERAL PERMITS

This permit is issued for the nonmetallic mineral processing facility source category to establish (A) terms and conditions to implement applicable requirements, including state-only requirements, (B) terms and conditions to implement applicable requirements, including state-only requirements for specified categories of changes to those permitted sources, (C) terms and conditions for new requirements that apply to sources with existing permits, and (D) federally-enforceable caps on emissions. The permit is issued after finding that there are several permittees, permit applicants, or potential permit applicants who have the same or substantially similar operations, emissions, activities, or facilities; the permittees, permit applicants, or potential permit applicants emit the same types of regulated air pollutants; the operations, emissions, activities, or facilities are subject to the same or similar standards, limitations, and operating requirements; and the operations, emissions, activities, or facilities are subject to the same or similar monitoring requirements.

SECTION I. AUTHORITY

This permit is developed in accordance with the provisions of OAC 252:100-7-15 and 100-7-18.

SECTION II. ELIGIBILITY

A. This permit is limited to air pollutant emitting sources located at facilities that

1. are designed and operated for the primary purpose of crushing, screening, transferring, and other miscellaneous processing of nonmetallic minerals. Nonmetallic mineral means any of the following minerals or any mixture (including recycled materials) of which the majority is any of the following:

   a. Crushed and broken stone, including limestone, dolomite, granite, traprock, sandstone, quartz, quartzite, marl, marble, shale, oil shale, and shell.
   b. Sand and gravel.
   c. Clay including kaolin, fireclay, bentonite, Fuller's earth, ball clay, and common clay.
   d. Rock salt.
   e. Gypsum.
   f. Sodium compounds, including sodium carbonate, sodium chloride, and sodium sulfate.
   g. Pumice.
   h. Gilsonite.
   i. Talc and pyrophyllite.
   j. Boron, including borax, kernite, and colemanite.
   k. Barite.
   l. Flourospar.
   m. Feldspar.
   n. Diatomite.
   o. Perlite.
   p. Vermiculite.

q. Mica.
r. Kyanite, including andalusite, sillimanite, topaz, and dumortierite.

Nonmetallic minerals do not include coals of any type.

B. The following types of facilities are generally eligible for coverage under this permit:

1. Facilities with existing state construction and/or operating permits.

2. Facilities existing prior to the effective date of any applicable standard that would have created specific quantifiable and enforceable emission rates.

C. The following facilities are not eligible for this permit:

1. Facilities for which material facts were misrepresented or omitted from the application and the applicant knew or should have known of such misrepresentation or omission.

2. Facilities with emissions units subject to:

a. NSPS requirements under 40 CFR Part 60, other than those addressed by Subpart A, Subpart Kb, and Subpart OOO, or
b. NESHAP requirements under 40 CFR Part 61, or
c. NESHAP requirements under 40 CFR Part 63,

unless such requirements are specifically incorporated into the Authorization to Construct/Operate issued under this permit as provided for under Part 4, Section V of this permit.

3. Facilities with emissions units that are affected sources subject to:

a. OAC 252:100-8 (Permits for Part 70 Sources)
b. OAC 252:100-15 (Motor Vehicle Pollution Control Devices).
c. OAC 252:100-17 (Incinerators).
d. OAC 252:100-21 (Wood-burning Equipment).
e. OAC 252:100-23 (Cotton Gins).
f. OAC 252:100-24 (Grain, Feed, or Seed Operations).
g. OAC 252:100-33 (Control of Emissions of Nitrogen Oxides).
h. OAC 252:100-35 (Control of Emissions of Carbon Monoxide).
i. 40 CFR Part 59 (Consumer/Commercial Products)
j. 40 CFR Part 82, Subpart A, B, & C (Stratospheric Ozone).

4. Facilities with emission units subject to 40 CFR Part 264 emission standards (Standards for Owners and Operators of Hazardous Waste Treatment, Storage, and Disposal Facilities).

D. The following facilities are not eligible to obtain an Authorization to Construct under this permit, but may be eligible for coverage under an Authorization to Operate if they obtain an individual construction permit and all relevant requirements and limitations in that permit are incorporated into the Authorization to Operate:

1. Facilities that are located in an area that is federally designated as non-attainment.

2. Facilities that request an Alternative Emissions Reduction Authorization under OAC 252:100-11.

3. Facilities seeking to construct or modify emission units that are not exempted from Part 5 ("Toxic Air Contaminants") of OAC 252:100-41, as specified in OAC 252:100-41-43.

4. Facilities that store VOCs with a vapor pressure greater than 1.5 psia in storage tanks built after July 1, 1972, with a capacity greater than 151 m^3 (40,000 gallons), or with a capacity greater than 400 gallons which are not equipped with a submerged fill.

5. Facilities located in Tulsa County which store gasoline or other VOCs (with vapor pressure greater than 1.5 psia) in storage tanks with a capacity greater than 2,000 gallons.

E. Facilities owned or operated by an applicant that has not paid all monies owed to the DEQ or is not in substantial compliance with the Environmental Quality Code, rules of the Board and the terms of any existing DEQ permits and orders are not eligible for this permit. The DEQ may impose specific conditions on the applicant to assure compliance and/or a separate schedule that the DEQ considers necessary to achieve required compliance. [OAC 252:002-15-30(d)(2)]

F. DEQ reserves the right to refuse issuance of an authorization to an applicant even though the facility meets the above eligibility criteria. In such a case, DEQ will provide in writing to the facility an explanation providing the reason(s) for the decision.

PART 2 - SPECIFIC CONDITIONS

Facilities shall be designed, constructed, and operated to meet the following terms and conditions, and any other applicable requirements specified in this permit, the facility's Authorization to Construct and/or Authorization to Operate, and any other requirements specified by rule or statute.

SECTION I. Points of Emissions and Limitations for Each Point [OAC 252:100-7-15 and 7-18]:

A. Facility-Wide Emissions Cap and Emissions Limitations

Emissions limitations shall be established in each Authorization issued under this permit as a facility-wide emissions cap. Such limitations shall be established, in tons per year (TPY), for any pollutant subject to regulation, as the potential to emit from the facility.

However, in no case shall such emissions limitations exceed that level which would cause the facility to be classified as a major source. Nor shall the permittee cause or allow the emission of any regulated air pollutant in such a concentration as to cause or contribute to a violation of ambient air quality standards or other applicable requirements.

Compliance with these emissions limitations shall be determined on a monthly rolling basis. The estimate shall be annualized using a monthly average during the first 11 months following issuance of an Authorization. However, any facility with actual emissions of each regulated air pollutant less than 80% of the major source thresholds may make this determination annually. Emissions shall be calculated using the latest approved version of AP-42 "Compilation of Air Pollution Emission Factors" or as otherwise specified in an Authorization.

The facility throughput shall be maintained at such a level so as to not exceed the annual facility-wide emissions limitations.

B. Nonmetallic Mineral Processing Equipment Subject to NSPS Subpart OOO

In addition to the facility-wide emissions cap established in Section I.A, the permittee shall comply with all applicable emissions limitations set forth in 40 CFR Part 60 Subpart OOO - Standards of Performance for Nonmetallic Mineral Processing Plants, for all nonmetallic mineral processing equipment constructed or operated under this permit that commenced construction or modification after August 31, 1983.

C. Hourly PM Limits

In addition to the facility-wide emissions cap established in Section I.A, the permittee shall comply with any applicable emissions limitations set forth in the Authorization to assure compliance with OAC 252:100-27 for all emission points associated with each emissions unit constructed or operated under this permit. Such emissions limitations

shall be established for any emission point if the potential to emit exceeds 80% of the allowable rate given in Appendix G of OAC 252:100. For each emission point subject to such emissions limitations the permittee shall calculate and keep records of the hourly rate of emissions, in lbs/hr. The hourly rate of emissions shall be calculated as the daily throughput divided by the hours of operation for that day.

D. Concentration Limitations for Engines

In addition to the facility-wide emissions cap established in Section I.A, the permittee shall comply with any applicable emissions limitations set forth in the Authorization for all engines constructed or operated under this permit. Such limitations shall be established for each engine if actual emissions of the entire facility equals or exceeds 80% of the major source thresholds for NO_x or CO or for any engine with a catalytic converter. The permittee shall conduct testing of each engine subject to emissions limitations and calculate ppm values for NO_x and CO using the following equations.

$$\text{Stack Flow (SCFH)} = \frac{\text{stack flow, ACFM} * 60\ \text{min / hr} * 528^\circ\text{R}}{(460 + \text{stack temp,}^\circ\text{F})}$$

$$\text{Moisture Content} = \frac{2 * \text{fuel usage (SCFH)}}{\text{stack flow (SCFH)}}$$

$$\text{ppm NOx} = \frac{\text{NOx emissions (lb / hr)} * 380\ \text{SCF / lb - mole}}{\text{stack SCFH} * 30\ \text{lb / lb - mole} * (1 - \text{moisture content})} \times 10^6$$

$$\text{ppm CO} = \frac{\text{CO emissions (lb / hr)} * 380\ \text{SCF / lb - mole}}{\text{stack SCFH} * 28\ \text{lb / lb - mole} * (1 - \text{moisture content})} \times 10^6$$

1. For each engine subject to emissions limitations the permittee shall conduct, at least once per calendar quarter, tests of NO_x and CO concentrations in exhaust gases. Testing is required for any engine which runs for more than 220 hours during that calendar quarter. Testing shall be conducted when operating under representative conditions for that period using portable engine analyzers or an equivalent method approved by Air Quality.

   a. Three test runs shall be conducted at 90% or greater of the full load as stated in the Authorization, if possible. Exceptions to this full load testing must be documented.
   b. For each test, the following engine operating parameters shall be monitored (or calculated by an accepted method) and clearly described in the sampling report: air-fuel ratio, exhaust O_2 content, percent water in the exhaust, stack temperature, engine speed, and horsepower.
   c. After a correlation is established between the load and the concentration of a pollutant, the periodic testing may consist of only testing the pollutant

concentration. Exhaust flow rates at the time of correlation (by 40 CFR Part 60 – Method 19, by manufacturer's correlation, or during initial testing) may be used to calculate the emission rates for later tests.

SECTION II. Nonmetallic Mineral Processing Equipment

The following specific conditions apply to nonmetallic mineral processing equipment:

A. The permittee shall keep the following records of operations for any nonmetallic mineral processing equipment operated under this permit. [OAC 252:100-27-2 (c)].

1. Hours of operation (daily and cumulative annual) of each piece of processing equipment, or the operation as a whole. If hours of operation are kept for the whole operation, the hours shall be based on whenever any piece of mineral processing equipment is operating at the site, i.e., startup and shutdown of the facility.
2. Throughput (daily and annual). The daily throughput shall be calculated by measuring or estimating either the weight or volume of the average size truckload or loader bucket and counting the number of truckloads or bucket loads per day. The cumulative annual throughput shall be calculated as the sum of the daily throughputs over the last calendar year.
3. Type of control technology used, if any.

B. The permittee shall comply with all applicable requirements set forth in 40 CFR Part 60 Subpart OOO - Standards of Performance for Nonmetallic Mineral Processing Plants. Subpart OOO applies to affected facilities that commenced construction or modification after August 31, 1983.

C. If a facility is added to the site which is subject to NSPS, written notification of the actual date of initial startup shall be sent to the Executive Director within 7 days of such date. If the added equipment has not undergone performance testing as required under 40 CFR §60.8, the notification shall include a date and time that such testing will be conducted.

D. Facilities seeking an Authorization for an existing source (constructed prior to the effective date of this permit) shall include a copy of any reports previously submitted to EPA under 40 CFR §60.7 with their application for the Authorization. Such copies are not required if they have previously been submitted to AQD and the application lists the dates of submission.

SECTION III. Storage Tanks

The following specific conditions apply to storage tanks:

A. Volatile Organic Compound (VOC) storage tanks built after July 1, 1972, and with a capacity of 400 gallons or more storing a liquid with a vapor pressure of 1.5 psia or greater under actual conditions shall be equipped with a permanent submerged fill.
[OAC 252:100-37-15(b) and 252:100-39-41(b)]

B. The permittee shall maintain an operational record for all storage tanks located at the facility. The record shall include the tank identification number, tank or vessel capacity (gallons), name of the material stored, vapor pressure (in psia), and purchase records.

C. The permittee shall comply with all applicable requirements set forth in 40 CFR Part 60, Subpart Kb - Standards of Performance for Volatile Organic Liquid Storage Tank(s), constructed or operated under this permit. Subpart Kb applies to certain VOC storage vessels for which construction, reconstruction, or modification commenced after July 23, 1984.

SECTION IV. Internal Combustion Engines

The following specific conditions apply to IC Engines:

A. IC engines and all associated control technology installed under this permit shall be constructed, operated, and maintained according to manufacturers' specifications, except as otherwise required by this permit, the facility's Authorization to Construct/Operate, or applicable rules or statutes. Control technology shall be constructed, operated, monitored, and maintained as specified under this paragraph and in accordance with Appendix A.

B. The permittee shall conduct, within 7 days of start-up, a test of NOx and CO concentrations in exhaust gases from any engine subject to emissions limitations in Section I.D. of this permit. Testing shall be conducted when operating under representative conditions using a portable engine analyzer or other equivalent method approved by Air Quality. Initial and continued emissions testing for all engines shall be conducted in accordance with Section I.D. of this permit. A copy of the initial test shall be provided to AQD within 30 days of start-up of each such engine. Said copy shall include the engine make and model, horsepower rating, fuel usage, stack flow (ACFM), stack temperature (°F), stack height (feet), stack diameter (inches), and pollutant emissions rates (g/hp-hr, lbs/hr, and TPY) at maximum rated horsepower for the altitude/location.

C. The permittee shall monitor and record start and stop times, measured to the nearest hourly period, of any engine operated under this permit. In addition, the permittee shall record the monthly hours of operation.

D. IC engines operated under this permit shall be fueled only with pipeline-quality natural gas or diesel with less than 4,000 ppm sulfur content. Certification by an applicant in the application for an Authorization to Operate that pipeline-quality natural gas is used at the

facility to fuel such equipment shall be sufficient to document compliance with this requirement. [OAC 252:100-31]

For IC engines fueled by diesel, the permittee shall provide with the application a fuel composition analysis that shows total sulfur content. Thereafter, the permittee shall perform a fuel composition analysis that shows total sulfur content once per load received and shall maintain records of the required fuel composition analysis. A one-time certification of sulfur content of a grade of fuel, with subsequent receipts stating the fuel grade delivered from the supplier, is sufficient to document compliance with this requirement. A new certification shall be obtained from each new supplier.

E. The permittee shall at all times operate and maintain all IC engines and associated emissions control systems in a manner that will minimize emissions of VOCs and will achieve compliance with the conditions of this permit and any Authorization issued to the permittee hereunder. Among other things, such operation shall assure that the equipment is not overloaded, that it is properly cleaned and maintained, and that temperature and available air are sufficient to provide essentially complete combustion.

The permittee shall keep operation and maintenance records for each engine subject to emissions limitations in Section I.D. of this permit. Such records shall at a minimum include the work performed, the date on which it was performed, and the increase, if any, in emissions as a result. [OAC 252:100-37-36]

SECTION V. Facility-wide Requirements

The following specific conditions apply **facility-wide.**

A. The permittee shall maintain records of all changes to facility equipment (i.e., addition, removal, or replacement) subject to this permit. The records shall include the equipment description, equipment serial or identification number, date of the change, description of the change, NSPS applicability, annualized potential emissions for each emission source, and the annualized potential emissions for the facility. A copy of this record shall be provided with the notification required by Part 4, Section II.C. of this permit. If equipment is being added subject to NSPS which has not undergone the initial compliance demonstration as required by 40 CFR 60.8, the notification shall include a date and time for such required demonstration. [OAC 252:100-6-31]

B. The permittee shall maintain records of emissions and any compliance demonstrations required by this permit. An emissions record shall describe calculated emissions of regulated air pollutants from all emissions units. This record shall include the emissions unit identification number, control method used, and other operating parameters as specified in specific conditions for each particular emissions unit. A copy of the records or a summary including sample calculations shall be submitted with the application for an Authorization to Operate under this permit.

C. Open burning of refuse and other combustible material is prohibited except as authorized in the specific examples and under the conditions listed in OAC 252:100-13, Prohibition of Open Burning. [OAC 252:100-13]

D. The permittee shall conduct quarterly visual observations of emissions, in accordance with 40 CFR Part 60, Appendix A, Method 22, from all emissions units not subject to an opacity limit promulgated under NSPS OOO. In no case shall the observation period for Method 22 be less than one minute in duration. If visible emissions exceed one minute in duration for any observation period and such emissions are not the result of a malfunction, then the permittee shall take immediate corrective actions to reduce the opacity. Following implementation of corrective actions, a Method 22 will be conducted to determine if the corrective actions were successful. If visible emissions are still observed following implementation of corrective actions, then the permittee shall conduct, within 24 hours, a visual observation of emissions in accordance with 40 CFR Part 60, Appendix A, Method 9. When four consecutive quarterly Method 22 or Method 9 observations show no visible emissions or no emissions of a shade or density greater than twenty (20) percent equivalent opacity, respectively, the frequency may be reduced to semi-annual visual observations using Method 22 testing, as above. Likewise, when the following two consecutive semi-annual tests show compliance, the testing frequency may be reduced to annual testing. Upon any showing of non-compliance, the testing frequency shall revert to quarterly.

If a Method 9 observation exceeds 20% opacity, the permittee shall conduct a minimum of seven additional observations continuing through the next operational day, not to exceed 24-hours. The Method 9 observations shall be conducted at a frequency of at least two per any one-hour period, performed at least once every quarter of the operational day. If any additional Method 9 observation exceeds twenty (20) percent opacity and such emissions are not the result of a malfunction, then the permittee shall conduct monthly visual observations of emissions in accordance with 40 CFR Part 60, Appendix A, Method 9. When four consecutive quarterly Method 9 observations show no emissions of a shade or density greater than twenty (20) percent equivalent opacity, the permittee may revert to quarterly visual observations using Method 22 testing as above.

If more than one six-minute Method 9 observation exceeds 20% opacity in any consecutive 60 minutes, or more than three six-minute Method 9 observations in any consecutive 24 hours exceed 20% opacity, or any six-minute Method 9 observation exceeds 60% opacity, the permittee shall report such observation(s) as a deviation, in accordance with Part 4, Section III of this permit.

E. The permittee shall implement reasonable precautions or measures to minimize fugitive dust emissions from the handling, transporting or disposition of any substance or material which is likely to be scattered by the air or wind or is susceptible to being air-borne or wind-borne. In addition, the permittee shall not cause or permit the discharge of any visible fugitive dust emissions beyond the permittee's property line in such a manner as to

damage or to interfere with the use of adjacent properties, or to cause or contribute to the violation of ambient air quality standards. [OAC 252:100-27 & 29]

The permittee shall either respond, within 48 hours, to any written or oral concern expressed by a citizen (complaint) that alleges site-specific pollution from the release of fugitive dust from any facility authorized under this permit, or refer the complaint to DEQ for response and investigation within one working day. Such response shall include conducting an investigation to determine the cause and action necessary to resolve the complaint, including any needed corrective action. Any referral to DEQ shall be made orally, and in writing to the DEQ central office with a written copy to the appropriate DEQ district office. The permittee shall keep the following records to document resolution of complaints. [OAC 252:100-29]

1. Date, time, name, address, and phone number of person reporting complaint.
2. Date, time, and nature of incident/discovery.
3. Date, time, and DEQ contact person.
4. Person assigned to investigate complaint.
5. Results of investigations to determine the cause of the complaint.
6. Date and nature of action taken (including corrective action taken, if any) to resolve the complaint.

F. Emissions units, and control devices associated with any emission units constructed under this permit, shall comply with all applicable requirements of OAC 252:100-45 - Monitoring of Emissions, and Appendix A of this permit.

The permittee shall install, use, and maintain such monitoring equipment as specified in Appendix A of this permit, except as otherwise specified elsewhere in this permit or the facility's Authorization to Construct/Operate, or applicable rules or statutes.

The permittee shall document that all testing is conducted using methods specified in 40 CFR Parts 51, 60, 61, 63, or 75, as applicable, or as otherwise specified in this permit or the Authorization to Construct/Operate. A copy of these records shall be retained with the records containing the facility's test results.

Part 3 – Schedule of Compliance

Any facility reporting non-compliance in an application for Authorization under this permit must submit with such application a schedule of compliance for emissions units or stationary sources that are not in compliance with all applicable requirements.

A. This schedule shall include a schedule of remedial measures, including an enforceable sequence of actions with milestones, leading to compliance with any applicable requirements for which the emissions unit or stationary source is not in compliance.

B. This compliance schedule shall correspond to and be at least as stringent as that contained in any judicial consent decree or administrative order to which the emissions unit or stationary source is subject.

D. Any such schedule of compliance shall be supplemental to, and shall not sanction non-compliance with, the applicable requirements on which it is based.

E. The approvable schedule of compliance may be incorporated into an Authorization if such is issued to the facility.

F. The permittee of a facility that is operating subject to a schedule of compliance shall submit to AQD progress reports at least semi-annually. The progress reports shall contain dates for achieving the activities, milestones or compliance required in the schedule of compliance and the dates when such activities, milestones or compliance was achieved. The progress reports shall also contain an explanation of why any dates in the schedule of compliance were not or will not be met, and any preventive or corrective measures adopted.

Part 4 – Standard Conditions

SECTION I. DUTY TO COMPLY

The permittee shall comply with all conditions of this permit and any Authorizations issued hereunder. This permit does not relieve the holder of the obligation to comply with other applicable federal, state, or local statutes, regulations, rules, or ordinances. Any permit non-compliance shall constitute a violation of the Oklahoma Clean Air Act and shall be grounds for enforcement action, for revocation of the approval to operate under the terms of this general permit or for denial of an application to operate under the terms of this general permit.

[OAC 252:100-7-15 and 7-18]

SECTION II. FACILITY MODIFICATIONS AND MODIFICATION OF AUTHORIZATIONS TO CONSTRUCT/OPERATE UNDER THE TERMS OF THE GENERAL PERMIT

A. An Authorization shall be corrected if any applicable emission limitation or standard is found to be absent or is found to be in error. Correction of an Authorization shall not change the Effective Date of the Authorization.

B. The permittee shall obtain an individual construction permit for any modification that would cause an existing facility to no longer be classified as a minor facility.

C. The permittee shall obtain an individual construction permit for any modification described under Part 1, Section II.D. of this permit. All other facility modifications may be constructed without an Authorization to Construct, or individual construction permit, provided that the permittee notifies the DEQ in writing of the intent to construct and operate within 7 days of the start of operation.

D. The permittee shall apply for a new Authorization to Operate within 60 days of commencing operation of any modified facility authorized under an individual construction permit, or Authorization to Construct issued under this permit, except for a de minimis facility.

[OAC 252:100-7-15(a)]

D. The permittee shall apply for either a new Authorization to Operate or a relocation permit to relocate any portable source authorized under this permit. [OAC 252:100-7-17]

E. An Authorization to Construct issued under this permit will terminate and become null and void if the construction is not commenced within 18 months of the issuance date, or if work is suspended for more than 18 months after it has commenced. [OAC 252:100-7-15(f)]

SECTION III. REPORTING OF DEVIATIONS FROM PERMIT TERMS

A. Deviations from the requirements of this permit shall be reported to the Air Quality Division as follows:

1. Deviations which result in emissions exceeding those allowed in this permit or the Authorization shall be reported pursuant to OAC 252:100-9, Excess Emission and Malfunction Reporting Requirements. Requirements of OAC 252:100-9 include prompt notification to AQD and prompt commencement of repairs to correct the condition of excess emissions.

B. Oral notifications may be made to the air quality representative of the DEQ central office. Written notifications shall be made to the DEQ central office with a copy to the appropriate DEQ district office.

SECTION IV. MONITORING, RECORDKEEPING & REPORTING

A. The permittee shall keep records as specified in this permit and any authorization issued under this permit. These records, including monitoring data and support information, shall be retained on site or at a nearby field office for a period of at least two years unless a longer period is specified by an applicable rule or statute. Support information includes all original strip-chart recordings for continuous monitoring instrumentation and copies of all reports required by this permit or the Authorization. Where appropriate and if requested by the applicant, the Authorization will specify which records may be maintained in computerized form.

[OAC 252:100-7-15 and 7-18]

B. Any owner or operator subject to the provisions of NSPS shall maintain records of the occurrence and duration of any start-up or shutdown of the process containing such affected facilities, and shall record malfunctions in the operation of an affected facility or any malfunction of the air pollution control equipment.

[40 CFR §60.7 (b)]

C. Any owner or operator subject to the provisions of NSPS shall maintain a file of all measurements and other information required by this subpart recorded in a permanent file suitable for inspection. This file shall be retained for at least two years following the date of such measurements, maintenance, and records. [40 CFR §60.7 (d)]

D. All testing must be conducted by methods approved by the Executive Director under the direction of qualified personnel. All tests shall be made and the results calculated in accordance with test procedures described or referenced in the permit and approved by Air Quality. [OAC 252:100-43]

E. The permittee shall document that all testing is conducted using methods specified in 40 CFR Parts 51 (SIP), 60 (NSPS), 61 (NESHAP), 63 (MACT), or 75 (CEM), as applicable, or as

otherwise specified in this permit or the Authorization to Construct/Operate. A copy of these records shall be retained with facility's testing records. [OAC 252:100-45]

F. If the permittee monitors any pollutant more frequently than required by this permit, the results of this monitoring shall be included in the calculations used for determining compliance with the conditions of this permit.

G. The permittee shall submit to AQD a copy of all reports submitted to EPA as required by 40 CFR Part 60, 61, and 63, for all equipment constructed or operated under this permit subject to such standards. [OAC 252:100-41-15]

SECTION V. REQUIREMENTS THAT BECOME APPLICABLE DURING THE PERMIT TERM

Any Authorization issued under this permit after the effective date of any new or modified requirements or standards that are applicable to any units located at the facility, may incorporate such requirements or standards, which shall supersede any corresponding requirements of this permit which are less stringent than the newer requirements or standards.
[OAC 252:100-7-15(a) and 7-18]

SECTION VI. ANNUAL EMISSIONS INVENTORY AND FEE PAYMENT

A. The permittee shall file with the AQD an annual emission inventory and shall pay annual fees based on emissions inventories or allowable emissions. [OAC 252:100-5]

B. The permittee shall use best available data to calculate emissions for inventory purposes. If emission factors provided by the permittee in the application were used to establish the emission limits of the permit, then the same factors may be used to calculate actual emissions for the inventory. [OAC 252:100-5-2.1(d)]

SECTION VII. SEVERABILITY

The provisions of this permit are severable, and if any provision of this permit or the application of any provision of this permit to any circumstance is held invalid, the application of such provision to other circumstances and the remainder of this permit shall not be affected thereby.

SECTION VIII. PROPERTY RIGHTS

A. This permit does not convey any property rights of any sort or any exclusive privilege.

B. This permit shall not be considered in any manner affecting the title of the premises upon which the equipment is located and does not release the permittee from any liability for

damage to persons or property caused by or resulting from the maintenance or operation of the equipment for which the permit is issued.

SECTION IX. DUTY TO PROVIDE INFORMATION

A. The permittee shall furnish to the DEQ upon receipt of a written request and within sixty (60) days of the request, unless the DEQ specifies another time period, any information that the DEQ may request to determine whether cause exists for modifying, reopening, or revoking and reissuing or terminating the permit or to determine compliance with the permit or the Authorization. [27A O.S. Supp. 1999, § 2-5-105(18)]

B. The permittee may make a claim of confidentiality for any information or records submitted pursuant to 27A O.S. Supp. 1999, § 2-5-105(18). Confidential information shall be clearly labeled as such and shall be separable from the main body of the document such as in an attachment.

C. Notification to the AQD of the sale or transfer of ownership of this facility is required and shall be made in writing within 10 days after such date.

[OAC 252:100-7-2(e)]

SECTION X. DUTY TO SUPPLEMENT

The permittee, upon becoming aware that any relevant facts were omitted or incorrect information was submitted in any information submittal, shall promptly submit such supplementary facts or corrected information. [OAC 252:100-6-50]

SECTION XI. REOPENING, MODIFICATION AND REVOCATION

A. This permit may be modified, revoked, reopened and reissued, or terminated for cause. The filing of a request by the permittee for a permit or an Authorization modification, revocation and reissuance, or termination, or of a notification of planned changes or anticipated noncompliance does not stay any permit condition. [27A O.S. Supp. 1999, § 2-5-112(B)(1)]

B. The permitting authority will reopen and revise or revoke this permit as necessary to remedy deficiencies if the DEQ or the EPA determines that this permit contains a material mistake or that the permit must be revised or revoked to assure compliance with the applicable requirements. [27A O.S. Supp. 1999, § 2-5-112(B)(3)]

C. If "grandfathered" status is claimed and granted for any equipment covered by this permit, it shall only apply under the following circumstances:

1. It only applies to that specific item by serial number or some other permanent identification.

2. Grandfathered status is lost if the item is significantly modified or, if it is a portable source, it is relocated outside of the boundaries of the facility without a relocation permit.

SECTION XII. INSPECTION AND ENTRY

Upon presentation of credentials and other documents as may be required by law, the permittee shall allow authorized officials of the DEQ to perform the following (subject to the permittee's right to seek confidential treatment pursuant to 27A O.S. Supp. 1999, § 2-5-105 (18) for confidential information submitted to or obtained by the DEQ under this section):

A. enter upon the permittee's premises during reasonable/normal working hours where a source is located or emissions-related activity is conducted, or where records must be kept under the conditions of the permit or the Authorization;

B. have access to and copy, at reasonable times, any records that must be kept under the conditions of the permit or the Authorization;

C. inspect, at reasonable times and using reasonable safety practices, any facilities, equipment (including monitoring and air pollution control equipment), practices, or operations regulated or required under the permit or the Authorization; and

D. sample or monitor at reasonable times substances or parameters for the purpose of assuring compliance with the permit or the Authorization.

[27A O.S. Supp. 1999, § 2-5-105]

SECTION XIII. DE MINIMIS FACILITIES

The permittee is hereby authorized to operate emissions sources and/or conduct activities that are listed on the "De Minimis Facilities" list in OAC 252:100, Appendix H.

SECTION XIV. GENERAL PROVISIONS UNDER NSPS AND NESHAPS

The permittee shall comply with all applicable requirements of the corresponding General Provisions, as set forth in 40 CFR Part 60 Subpart A, 40 CFR Part 61 Subpart A, and 40 CFR Part 63 Subpart A, for all equipment constructed or operated under this permit subject to NSPS or NESHAPs.

[OAC 252:100-41-15]

APPENDIX A

CONSTRUCTION, OPERATION, MAINTENANCE AND MONITORING REQUIREMENTS FOR CONTROL DEVICES

A. All control devices shall be constructed, operated, and maintained according to manufacturers' specifications, except as otherwise required by this permit, the facility's Authorization to Construct/Operate, or applicable rules or statutes.

B. If parametric monitoring is conducted in lieu of direct emissions monitoring, the permittee shall demonstrate in the application for an Authorization to Operate that the operating range for such parameters, as recommended by manufacturers' specifications, assures compliance with applicable emissions limitations and other applicable requirements.

C. Fugitive road dust shall be controlled as needed to maintain compliance with Part II – Section V.F. standards by applying water and/or chemical spray to the road.

D. Water/chemical spray dust suppression systems on nonmetallic minerals processing equipment and transfer points must be operated on either a continuous or intermittent basis, depending on whether processed materials contain sufficient moisture such that operation of the plant does not cause a violation of applicable limitations.

Water/chemical spray dust suppression systems necessary to comply with emissions limitations shall be maintained in good operating condition at all times regardless of whether the system is in use at the time. At a minimum, the water pump, pipe system, spray nozzles, and any gauges (e.g., water pressure) shall be inspected weekly. The permittee must maintain records of the description and the date of repairs on the water spray system.

E. Authorizations issued under this permit may specify that baghouses shall be operated continuously, or periodically as necessary to meet emissions limitations, when processing equipment is in operation and maintained according to manufacturer's specifications. At least once per month, the permittee shall inspect the baghouse cleaning system, dust removal system, and fan, and perform maintenance as needed. At least annually, or during each outage period that is longer in duration than 1 week, the permittee shall conduct a thorough baghouse inspection, including the filter bags, baghouse structure, expansion joints, turning vanes, and dampers, and conduct a review of all inspection and maintenance logs. Maintenance shall be performed as needed. The permittee shall monitor any operational parameters specified by the manufacturer as necessary to assure adequate operation of the baghouse. The permittee shall maintain logs of all visible emissions observations, baghouse inspections, operational parameters measured, and maintenance performed.

F. Authorizations issued under this permit may specify that wet scrubbers shall be operated continuously, or periodically as necessary to meet emissions limitations, when processing

equipment is in operation. At least once per day, the permittee shall monitor and record the pressure drop across the scrubber on a differential pressure gauge. At least once per day the permittee shall monitor the flow rate of the scrubbing solution using a continuous flow meter, and record the flow rate of the scrubbing solution and make-up water. Maintenance shall be performed as needed, e.g., a significant increase or decrease in pressure drop or scrubbing solution flowrate indicates a problem. The permittee shall maintain a log of all pressure drop and flow rate measurements and maintenance performed.

G. Authorizations issued under this permit may specify that catalytic converters on IC engines shall be operated as necessary to meet emissions limitations and maintained according to manufacturer's specifications.

H. All records shall be maintained in accordance with Part 4 of this permit, except as otherwise required by this permit, the facility's Authorization to Construct/Operate, or applicable rules or statutes.

Mr. Herb Neumann
Oklahoma Department of Environmental Quality
Regional Office at Tulsa
3105 E. Skelly, Suite 200
Tulsa, OK 74105

RE: Expansion of Greenhill Materials, LC Crusher Facility
Operating Permit No. 2005-012-O.

Dear Mr. Neumann:

Enclosed please find a Notice of Intent that we are submitting for an expansion of Greenhill Materials, LC's crusher facility. This expansion will include replacement of the primary crusher and an increase in hourly production capacity.

Also enclosed is a check in the amount of $400 for the application fee.

Please feel free to contact me at 266-6861 if you have any questions.

Sincerely,

John R. Curtis
Manager

NOTICE OF INTENT TO CONSTRUCT
MINOR SOURCE NMPF-GP

Complete this form for construction of a proposed (new) facility. Coverage under the general permit is effective upon receipt of this form by the AQD along with all the items listed in the Application Checklist provided in the instructions. The instructions describe acceptable documentation of receipt of the NOI.

Notification under any applicable NSPS and NESHAP should also be submitted according to the schedules specified in the corresponding Federal rules.

Company Name	Sherwood Construction, Inc.
Facility Name	Greenhill Materials, LC

Estimated Date of Construction	Start:	March 1, 2010	Completion:	August 1, 2010

Is Confidential Information Included?		Yes	X	No

Fees Submitted	$400	Check #	11434	Date	2/9/2010

List all current air quality permits or authorizations for the facility, if any.
2005-012-O

Notice Of Intent Certification			
This application, including all attacbments, bas been submitted as required by OAC 252:100-7-15(c). I understand that I am responsible for assuring construction and operation of tbe above facility in accordance witb tbis application, the terms of the general permit for this source category, and OAC 252:100. I certify, based on information and belief formed after reasonable inquiry, the statements and information in tbe document are true, accurate, and complete.

DEQ LANDOWNER NOTIFICATION AFFIDAVIT

Tier I, II, or III permit applicants must provide notice to the landowner(s). The basis for this requirement is Title 27A of the Oklahoma Statutes, Supplement 1996, § 2-14-103(9), as described in OAC 252:4-7-13 (b).

Please note that you MUST fill out and return this affidavit even if you don't have to give any landowner notice.

A	NOTICE TO THE LANDOWNER(S) IS NOT REQUIRED because: (check one)
	My application does not involve any land.
	My application involves only land owned by me (or applicant business).
X	I have a current lease given to accomplish the permitted purpose.
	I have a current easement given to accomplish the permitted purpose.

OR

B	NOTICE TO THE LANDOWNER(S) IS REQUIRED because the land is owned by someone other than myself or the applicant business AND I HAVE NOTIFIED the following (check one):		
	Landowner(s)	X	Lessor or Administrator or Executor of the land
METHOD OF DELIVERY (check one):			
	Actual notice, for which I have a signed and dated receipt		
	Service by Sheriff or private process server, for which I have an affidavit		
	Service by certified mail, restricted delivery, for which I have a signed return receipt		
	Legal publication, for which I have an affidavit of publication from the newspaper, because the landowners could not be located through due diligence		

LANDOWNER AFFIDAVIT CERTIFICATION			
Company Name	Sherwood Construction, Inc.	Facility Name	Greenhill Materials, LC
Facility Address or Legal Description	Section 10, T20N, R14E, Rogers County		
Responsible Official (signature)		Date Signed	February 9, 2010
Responsible Official (typed)	John R. Curtis	Title	Manager

If the landowner notice applies to your application (Option B above) you can send the following form to them as your notice:

NOTICE TO LANDOWNER OF FILING

RE: Greenhill Concrete Mobile Batch Plant Site Closure
Cemco Model 220, SN: 11420502

Ms. Paden,

This letter is to certify that the temporary impoundment constructed for the above referenced facility located at Macy's Fulfillment Center, 7920 East 76th Street North, Owasso, OK was closed in accordance with the closure plan submitted under Section N of 616-G11MT. Excess materials (rock, sand and concrete) were removed and the site has been smoothed and left in a condition satisfactory to the owner.

If you have any questions or require more information, please contact me at your convenience.

Respectfully,
Phil Rush for

RE: Facility ID No. I-66001860
Cemco Model #220 Portable Batch Plant

Carol,

Attached is DEQ Form 616-G11 MTR with supporting documentation, providing notification that we will be relocating the portable concrete plant referenced above. The plant will be erected at 1500 28th Avenue SW, Norman, OK 73072 between February 19 and February 28, 2015 on ODOT right-of-way to provide concrete for the ODOT project at I-35 and Highway 9 and Lindsey Ave interchanges. We estimate this project to be complete in approximately March of 2017.

Please do not hesitate to contact me should you require any additional information of have any questions.

Respectfully,

Matt Ritchie/PE

FORM 616-11MTR	OKLAHOMA DEQ	RELOCATION FOR MOBILE CONCRETE BATCH PLANTS THAT HAVE AUTHORIZATION UNDER GENERAL PERMIT NO. OKG11MT

A. EQUIPMENT IDENTIFICATION (Applies to all applicants)

1. Permit Number	OKG11MT87	2. Equipment Serial Number	Cemco Model #220 SN - 11420502

B. FACILITY CONTACT (Applies to all applicants)

1. NAME & TITLE	2. PHONE (area code & number)
Matt Ritchie, Vice President - Materials	918-266-6861

C. FACILITY MAILING ADDRESS (Applies to all applicants)

1. STREET OR P.O. BOX	2. TELEFAX (area code & number)	
1640 S. 101st E. Ave	918-266-6482	
3. CITY OR TOWN	**4. STATE**	**5. ZIP CODE**
Tulsa	OK	74128

D. TEMPORARY JOB SITE LOCATION (applies to all applicants)

1. STREET, ROUTE NO. OR OTHER SPECIFIC IDENTIFIER	2. COUNTY	
1500 28th Avenue SW	Cleveland	
3. CITY OR TOWN	**4. STATE**	**5. ZIP CODE**
Norman	OK	73072

6. LEGAL DESCRIPTION (¼, ¼, ¼, Section, Township, Range)

E. SIC CODES (4-digit, in order of priority) (Applies only if the facility has activities in addition to concrete batching)

1. FIRST		2. SECOND	
(number) 3273	(specify) Mobile Concrete Batch Plant	(number)	(specify)

F. STORMWATER PERMITTING (Applies to all applicants)

Does the temporary job site facility have a stormwater multi-sector general permit?	YES		NO	x	PERMIT NO.	

G. SOURCES OF WATER SUPPLY AND AMOUNT USED (Applies to all applicants)

Identify all sources of facility water by entering the appropriate letter(s) in the boxes below and then providing the appropriate description(s), as indicated in parentheses. List each source on a separate line. If you have more than one source of a given type, indicate this by entering the letter, followed by two digits (e.g., if your water comes from three wells, the sources would be indicated as G01, G02 and G03). For each source, estimate of the average daily use. Continue on additional sheets if needed.

G = GROUNDWATER WELL
S = SURFACE WATER
P = PUBLIC WATER SUPPLY
W = WASTEWATER TREATMENT PLANT
O = OTHER

(legal description of well location)
(name of stream, river, lake, etc., and legal description of intake)
(name of entity from which water is obtained)
(name of entity from which water is obtained)
(source of supply, and legal description if applicable)

OKG11MT____	I- ENGINEER: _____	Date Stamp

H. INVENTORY OF CHEMICALS AND RAW MATERIALS (Applies to all applicants)

1. List all chemical compounds and raw materials in containers of 55 gallons or more, used in plant operations and stored outside a building (e.g., solvents, cleaning compounds, water treatment chemicals). Describe the storage location and the purpose for which each chemical is used. Continue on additional sheets if needed.

Air Entraining Admixture - 1000 Gallon poly tank in trailer
Water Reducing Admixture - 1000 Gallon poly tank in trailer

2. Attach Material Safety Data Sheets (MSDS) for any additives, detergents, spray oils or treatment chemicals used that you have not previously submitted.

I. DEQ LANDOWNER NOTIFICATION AFFIDAVIT (Applies to all applicants)

1. Does applicant own all land subject to the application:	Yes		No	x

If yes, proceed to section J. If no, proceed to part 2 of this section.

2. Application(s) for which the applicant does not own all the land subject to the application must certify by affidavit that they (1) have a current lease or easement which is given to accomplish the permitted purpose or (2) have provided legal notice to the landowner. The basis for this requirement is Title 27A of the Oklahoma Statutes, § 2-14-103(9), as described in OAC 252:004-7-13(c). DEQ Form 100-810 may be used for this purpose and is available on the DEQ web page.

J. CERTIFICATION (Applies to all applicants)

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and true belief, true, accurate and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Cemco

OKLAHOMA DEPARTMENT OF ENVIRONMENTAL QUALITY
AUTHORIZATION FOR DISCHARGE AND/OR DISPOSAL
UNDER GENERAL PERMIT NO. OKG11MT

AUTHORIZATION NO.: OKG11MT87
FACILITY ID NO.: I-66001860

In compliance with the Oklahoma Pollutant Discharge Elimination System (OPDES) Act, 27A O.S. §2-6-201 *et seq.*, Oklahoma Uniform Environmental Permitting Act, 27A O.S. §2-14-101 *et seq.*, and the rules of the Oklahoma Department of Environmental Quality (DEQ) promulgated thereunder,

Greenhill Concrete Products, Inc.
P.O. Box 10
Catoosa, OK 74015

is hereby authorized to operate a mobile concrete batch plant identified as a Cemco Model 220 Batch Plant Serial No. 11420502 and to treat and dispose of industrial wastewater in temporary total retention surface impoundment(s) and to land apply wastewater for dust suppression only.

The wastewater consists of process wastewater and contaminated stormwater runoff associated with the following three common activities: (1) mix plant area washdown (if dry brush cleanup methods are not utilized); (2) truck mixer drum washout; and (3) external truck wash and oil spray down, and is classified as Class III wastewater in accordance with OAC 252:616-1-2.

Discharge of wastewater contained in the authorized surface impoundment(s) to the waters of the state is specifically prohibited. Stormwater discharges not associated with concrete mix plant area washdown, truck mixer drum washout, and external truck wash and oil spray-down will be authorized under the OPDES Stormwater Multi-Sector General Permit.

The facility shall be maintained in accordance with all conditions and provisions set forth in the General Permit No. OKG11MT, and in Parts I, II, and III, hereof.

Issuance of this Authorization in no way or in any respect affects the permittee's civil or criminal responsibility regarding disposal of wastewater, except with respect to the permittee's legal responsibility under the OPDES Act and the DEQ Rules.

This Authorization is non-transferable and is granted summarily by and at the discretion of the Executive Director in accordance with applicable DEQ Rules and provisions of the above-referenced Permit.

This is a new Authorization.

This Authorization shall become effective on May 5, 2014.

SN: 11420502

This Authorization shall expire at midnight, on June 7, 2017.

Issued this 5th day of May, 2014.

Avoid contact with the skin, eyes and clothing.
Wash thoroughly after handling.

State of matter: liquid
Colour: dark brown
Odour: odourless

Potential health effects

Primary routes of exposure:
Routes of entry for solids and liquids include eye and skin contact, ingestion and inhalation. Routes of entry for gases include inhalation and eye contact. Skin contact may be a route of entry for liquified gases.

Acute toxicity:
Ingestion may cause gastrointestinal disturbances. The product has not been tested. The statement has been derived from the properties of the individual components.

Irritation / corrosion:
May cause slight irritation to the eyes. May cause slight irritation to the skin. May cause slight irritation to the respiratory tract. The product has not been tested. The statement has been derived from substances/products of a similar structure or composition.

Chronic toxicity:

Carcinogenicity: The chemical structure does not suggest a specific alert for such an effect.

Reproductive toxicity: The chemical structure does not suggest a specific alert for such an effect. The product has not been tested. The statement has been derived from the properties of the individual components.

Teratogenicity: The chemical structure does not suggest a specific alert for such an effect. The product has not been tested. The statement has been derived from the properties of the individual components.

Genotoxicity: The chemical structure does not suggest a specific alert for such an effect. The product has not been tested. The statement has been derived from the properties of the individual components.

Potential environmental effects

Aquatic toxicity:
At the present state of knowledge, no negative ecological effects are expected. There is a high probability that the product is not acutely harmful to aquatic organisms. The product has not been tested. The statement has been derived from substances/products of a similar structure or composition.

Bioaccumulation / bioconcentration:
Discharge into the environment must be avoided.

3. Composition / Information on Ingredients

This product is not regarded as hazardous under current OSHA Hazard Communication standard; CFR 29 Part 1910.1200.

4. First-Aid Measures

General advice:
First aid personnel should pay attention to their own safety. Remove contaminated clothing.

If inhaled:
If difficulties occur after vapour/aerosol has been inhaled, remove to fresh air and seek medical attention.

If on skin:
After contact with skin, wash immediately with plenty of water and soap. If irritation develops, seek medical attention.

If in eyes:
Wash affected eyes for at least 15 minutes under running water with eyelids held open, consult an eye specialist.

If swallowed:
Rinse mouth immediately and then drink plenty of water, seek medical attention. Do not induce vomiting unless told to by a poison control center or doctor.

Note to physician
Treatment: Treat according to symptoms (decontamination, vital functions), no known specific antidote.

5. Fire-Fighting Measures

Flash point:	not applicable
Autoignition:	not applicable
Lower explosion limit:	not applicable

Suitable extinguishing media:
foam, water spray, dry powder, carbon dioxide

Unsuitable extinguishing media for safety reasons:
water jet

Hazards during fire-fighting:
carbon monoxide, carbon dioxide, harmful vapours, nitrogen oxides, fumes/smoke, carbon black

Protective equipment for fire-fighting:
Firefighters should be equipped with self-contained breathing apparatus and turn-out gear.

6. Accidental release measures

Personal precautions:
Use personal protective clothing. Do not breathe vapour/aerosol/spray mists. Sources of ignition should be kept well clear. Handle in accordance with good building materials hygiene and safety practice.

Environmental precautions:
Contain contaminated water/firefighting water. Do not discharge into drains/surface waters/groundwater.

Cleanup:
For small amounts: Pick up with inert absorbent material (e.g. sand, earth etc.). Dispose of contaminated material as prescribed.
For large amounts: Pump off product.

7. Handling and Storage

Handling

General advice:
Avoid aerosol formation. Avoid inhalation of mists/vapours. Avoid skin contact. No special measures necessary provided product is used correctly.

Protection against fire and explosion:
No special precautions necessary.

Storage

General advice:
Keep only in the original container in a cool, dry, well-ventilated place away from ignition sources, heat or flame. Store protected against freezing. Protect from direct sunlight.

Temperature tolerance
Protect from temperatures below: 0 °C
The packed product must be protected from temperatures below the indicated one.
Protect from temperatures below: 32 °F
The packed product must be protected from temperatures below the indicated one.

8. Exposure Controls and Personal Protection

Components with workplace control parameters

rosin

ACGIH	; Included in the regulation, but with no data values - See the regulation for further details ; Exposure by all routes should be carefully controlled to levels as low as possible.

Personal protective equipment

Respiratory protection:
Wear respiratory protection if ventilation is inadequate. Wear a NIOSH-certified (or equivalent) respirator as necessary.

Hand protection:
Chemical resistant protective gloves

Eye protection:
Safety glasses with side-shields.

Body protection:
Body protection must be chosen based on level of activity and exposure.

General safety and hygiene measures:
In order to prevent contamination while handling, closed working clothes and working gloves should be used. Handle in accordance with good building materials hygiene and safety practice. When using, do not eat, drink or smoke. Hands and/or face should be washed before breaks and at the end of the shift. At the end of the shift the skin should be cleaned and skin-care agents applied. Gloves must be inspected regularly and prior to each use. Replace if necessary (e.g. pinhole leaks).

9. Physical and Chemical Properties

Form:	liquid	
Odour:	odourless	
Colour:	dark brown	
pH value:	10.3 - 11.5	(25 °C)
Boiling point:	100 °C	
Vapour pressure:		No data available.
Density:	1.012 - 1.020 g/cm3	(20 °C)
Relative density:	1.012 - 1.020	
Bulk density:		not applicable
Vapour density:		Heavier than air.
Partitioning coefficient n-octanol/water (log Pow):		No data available.
Viscosity, dynamic:		No data available.
Solubility in water:		soluble
Other Information:	If necessary, information on other physical and chemical parameters is indicated in this section.	

10. Stability and Reactivity

Conditions to avoid:
See MSDS section 7 - Handling and storage.

Substances to avoid:
strong acids, strong bases, strong oxidizing agents

Hazardous reactions:
The product is stable if stored and handled as prescribed/indicated.

Decomposition products:
carbon oxides, nitrogen oxides

Thermal decomposition:
No decomposition if stored and handled as prescribed/indicated.

Oxidizing properties:

Based on its structural properties the product is not classified as oxidizing.

11. Toxicological information

Other Information:

Based on our experience and the information available, no adverse health effects are expected if handled as recommended with suitable precautions for designated uses. The product has not been tested. The statements on toxicology have been derived from products of a similar structure and composition.

12. Ecological Information

Degradability / Persistence
Biological / Abiological Degradation

Evaluation: Inherently biodegradable.
The insoluble fraction can be removed by mechanical means in suitable waste water treatment plants.

Other adverse effects:

Ecological data are not available. Do not allow to enter soil, waterways or waste water channels.

13. Disposal considerations

Waste disposal of substance:
Do not discharge into drains/surface waters/groundwater. Dispose of in a licensed facility.

Container disposal:
Contaminated packaging should be emptied as far as possible; then it can be passed on for recycling after being thoroughly cleaned.

14. Transport Information

Land transport
USDOT

Not classified as a dangerous good under transport regulations

Sea transport
IMDG

Not classified as a dangerous good under transport regulations

Air transport
IATA/ICAO

Not classified as a dangerous good under transport regulations

15. Regulatory Information

Federal Regulations

Registration status:
Chemical TSCA, US released / listed

OSHA hazard category: Chronic target organ effects reported;

EPCRA 311/312 (Hazard categories): Acute;

CERCLA RQ	CAS Number	Chemical name
1000 LBS	1310-58-3; 1310-73-2	Potassium hydroxide; Sodium Hydroxide
100 LBS	7664-41-7	ammonia

State regulations

CA Prop. 65:
THIS PRODUCT CONTAINS A CHEMICAL(S) KNOWN TO THE STATE OF CALIFORNIA TO CAUSE CANCER AND BIRTH DEFECTS OR OTHER REPRODUCTIVE HARM.

16. Other Information

NFPA Hazard codes:
Health : 1 Fire: 0 Reactivity: 0 Special:

HMIS III rating
Health: 1 Flammability: 0 Physical hazard: 0

NFPA and HMIS use a numbering scale ranging from 0 to 4 to indicate the degree of hazard. A value of zero means that the substance possesses essentially no hazard; a rating of four indicates extreme danger. Although similar, the two rating systems are intended for different purposes, and use different criteria. The NFPA system was developed to provide an on-the-spot alert to the hazards of a material, and their severity, to emergency responders. The HMIS system was designed to communicate workplace hazard information to employees who handle hazardous chemicals.

We support worldwide Responsible Care® initiatives. We value the health and safety of our employees, customers, suppliers and neighbors, and the protection of the environment. Our commitment to Responsible Care is integral to conducting our business and operating our facilities in a safe and environmentally responsible fashion, supporting our customers and suppliers in ensuring the safe and environmentally sound handling of our products, and minimizing the impact of our operations on society and the environment during production, storage, transport, use and disposal of our products.

POLYHEED® 997

Mid-Range Water-Reducing Admixture

Description

PolyHeed 997 admixture is a patented multi-component, non-chloride, mid-range water-reducing admixture. PolyHeed 997 admixture meets ASTM C 494/C 494M requirements for Type A, water-reducing, and Type F, high-range water-reducing, admixtures.

Applications

Recommended for use in:

- Conventionally placed concrete mixes containing a wide range of cements, slag cement, Class C and F fly ashes, silica fume and aggregates
- Reinforced, precast, prestressed, lightweight or normal weight concrete and pumped concrete
- Residential/commercial flatwork and formed surfaces
- Rheodynamic® Self-Consolidating Concrete
- 4x4™ Concrete
- Pervious Concrete

Features

- True mid-range water reduction (5-15%) and excellent performance across a wide concrete slump range, especially the difficult slump range of 5-8 in. (125-200 mm)
- Superior workability, pumpability and finishability qualities even in concrete mixes containing low amounts of cementitious materials
- Compressive and flexural strength performance increased at all ages
- Strength performance comparable to chloride-bearing, water-reducing admixtures at all ages
- Superior finishing characteristics for residential/commercial flatwork and formed surfaces

Benefits

- Significantly reduced placement and finishing time resulting in lower in-place concrete costs
- Improved concrete durability to damage from freezing and thawing
- Increased service life of concrete structures

Performance Characteristics

Mixture Data: 500 lb/yd^3 (295 kg/m^3) of Type I cement; slump, 6-7 in. (150-180 mm); 5-6% air; concrete temperature 70 °F (21 °C); ambient temperature, 70 °F (21 ° C).

Setting Time Performance[1]

Mixture	Initial Set h:min	Difference h:min
Plain	6:01	–
PolyHeed 997 admixture @		
5 fl oz/cwt (325 mL/100 kg)	6:22	+0:21
10 fl oz/cwt (650 mL/100 kg)	6:57	+0:56
15 fl oz/cwt (980 mL/100 kg)	7:31	+1:30

Compressive Strength Performance

Mixture	7-Day psi	7-Day MPa	7-Day %	28-Day psi	28-Day MPa	28-Day %
Plain	2360	16.3	100	3320	22.9	100
PolyHeed 997 admixture @						
5 fl oz/cwt (325 mL/100 kg)	3060	21.1	129	3930	27.1	118
10 fl oz/cwt (650 mL/100 kg)	3740	25.8	158	4610	31.8	136
15 fl oz/cwt (980 mL/100 kg)	4620	31.9	196	5460	37.7	165

[1]*Note: The data shown are based on controlled laboratory tests. Reasonable variations from the results shown here may be experienced as a result of differences in concrete making materials and jobsite conditions.*

Master Builders

Product Data: POLYHEED® 997

Guidelines for Use

Dosage: PolyHeed 997 admixture has a recommended dosage range of 3-15 fl oz /cwt (195-980 mL/100 kg) of cementitious material for most concrete mixes.

As the dosage of PolyHeed 997 admixture increases to 15 fl oz/cwt (980 mL/100 kg) of cementitious materials, normal concrete setting characteristics are maintained and early and ultimate compressive strengths increase.

BASF Construction Chemicals does not recommend the use of dosages outside the recommended range without trial testing. Consult your local BASF Construction Chemicals sales representative for assistance in determining the dosage for optimum performance.

Product Notes

Corrosivity – Non-Chloride, Non-Corrosive: PolyHeed 997 admixture will neither initiate nor promote corrosion of reinforcing or prestressing steel embedded in concrete, or of galvanized steel floor and roof systems. PolyHeed 997 admixture does not contain intentionally added calcium chloride or other chloride-based ingredients.

Compatibility: PolyHeed 997 admixture may be used in combination with any BASF Construction Chemicals admixtures. When used in conjunction with other admixtures, each admixture must be dispensed separately into the concrete mixture.

Storage and Handling

Storage Temperature: If PolyHeed 997 admixture freezes, thaw at 35 °F (2 °C) or above and completely reconstitute by mild mechanical agitation. ***Do not use pressurized air for agitation.***

Shelf Life: PolyHeed 997 admixture has a minimum shelf life of 18 months. Depending on storage conditions, the shelf life may be greater than stated. Please contact your BASF Construction Chemicals representative regarding suitability for use and dosage recommendations if the shelf life of PolyHeed 997 admixture has been exceeded.

Packaging

PolyHeed 997 admixture is supplied in 55 gal (208 L) drums, 275 gal (1040 L) totes and by bulk delivery.

Safety Data Sheet

MasterGlenium 7500 also GLENIUM 7500

1. Product and Company Identification

Company
BASF CORPORATION
100 Park Avenue
Florham Park, NJ 07932, USA

24 Hour Emergency Response Information
CHEMTREC: 1-800-424-9300
BASF HOTLINE: 1-800-832-HELP (4357)

Chemical family: Solution based on: polycarboxylate ether, in water

2. Hazards Identification

Emergency overview

WARNING:
Irritating to eyes and skin.
Keep container tightly closed.
Avoid ingestion.
Avoid contact with the skin, eyes and clothing.
Wash thoroughly after handling.

State of matter: liquid
Colour: brown
Odour: slight odour

Potential health effects

Primary routes of exposure:
Routes of entry for solids and liquids include eye and skin contact, ingestion and inhalation. Routes of entry for gases include inhalation and eye contact. Skin contact may be a route of entry for liquified gases.

Acute toxicity:
Ingestion may cause gastrointestinal disturbances. The product has not been tested. The statement has been derived from substances/products of a similar structure or composition.

Irritation / corrosion:
Irritating to eyes and skin.

Chronic toxicity:

Carcinogenicity: The chemical structure does not suggest a specific alert for such an effect.

Reproductive toxicity: The chemical structure does not suggest a specific alert for such an effect.

Teratogenicity: The chemical structure does not suggest a specific alert for such an effect.

Genotoxicity: The chemical structure does not suggest a specific alert for such an effect.

Potential environmental effects

Aquatic toxicity:
There is a high probability that the product is not acutely harmful to aquatic organisms.

Degradation / environmental fate:
Not readily biodegradable (by OECD criteria).

3. Composition / Information on Ingredients

CAS Number	Content (W/W)	Chemical name
64-19-7	1.0 - 5.0 %	Acetic acid

4. First-Aid Measures

General advice:
First aid personnel should pay attention to their own safety. Remove contaminated clothing.

If inhaled:
If difficulties occur after vapour/aerosol has been inhaled, remove to fresh air and seek medical attention.

If on skin:
After contact with skin, wash immediately with plenty of water and soap. If irritation develops, seek medical attention.

If in eyes:
Wash affected eyes for at least 15 minutes under running water with eyelids held open, consult an eye specialist.

If swallowed:
Rinse mouth immediately and then drink plenty of water, seek medical attention. Do not induce vomiting unless told to by a poison control center or doctor.

Note to physician
Treatment: Treat according to symptoms (decontamination, vital functions), no known specific antidote.

5. Fire-Fighting Measures

Flash point: 93.34 °C

Suitable extinguishing media:
foam, water spray, dry powder, carbon dioxide

Unsuitable extinguishing media for safety reasons:
water jet

Hazards during fire-fighting:
carbon monoxide, carbon dioxide, harmful vapours, nitrogen oxides, fumes/smoke, carbon black

Protective equipment for fire-fighting:
Firefighters should be equipped with self-contained breathing apparatus and turn-out gear.

6. Accidental release measures

Personal precautions:
Use personal protective clothing. Do not breathe vapour/aerosol/spray mists. Sources of ignition should be kept well clear. Handle in accordance with good building materials hygiene and safety practice.

Environmental precautions:
Contain contaminated water/firefighting water. Do not discharge into drains/surface waters/groundwater.

Cleanup:
For small amounts: Pick up with inert absorbent material (e.g. clay or diatomaceous earth). Place absorbed material in the same container as the spilled substance/product for disposal.

7. Handling and Storage

Handling

General advice:
Avoid aerosol formation. Avoid inhalation of mists/vapours. Avoid skin contact. No special measures necessary provided product is used correctly.

Protection against fire and explosion:
No special precautions necessary.

Storage

General advice:
Keep only in the original container in a cool, dry, well-ventilated place away from ignition sources, heat or flame. Store protected against freezing. Protect from direct sunlight.

Temperature tolerance
Protect from temperatures below: 5 °C
The packed product must be protected from temperatures below the indicated one.

8. Exposure Controls and Personal Protection

Components with occupational exposure limits

Acetic acid	OSHA	PEL 10 ppm 25 mg/m3 ;
	ACGIH	TWA value 10 ppm ; STEL value 15 ppm ;

Personal protective equipment

Respiratory protection:
Wear respiratory protection if ventilation is inadequate. Wear a NIOSH-certified (or equivalent) respirator as necessary.

Hand protection:
Chemical resistant protective gloves

Eye protection:
Safety glasses with side-shields.

Body protection:
Body protection must be chosen based on level of activity and exposure.

General safety and hygiene measures:
In order to prevent contamination while handling, closed working clothes and working gloves should be used. Handle in accordance with good building materials hygiene and safety practice. When using, do not eat, drink or smoke. Hands and/or face should be washed before breaks and at the end of the shift. At the end of the shift

the skin should be cleaned and skin-care agents applied. Gloves must be inspected regularly and prior to each use. Replace if necessary (e.g. pinhole leaks).

9. Physical and Chemical Properties

Form:	liquid	
Odour:	slight odour	
Colour:	brown	
pH value:	approx. 4.6	(22 °C)
Density:	1.05 g/cm3	(20 °C)
Vapour density:		not applicable
Partitioning coefficient n-octanol/water (log Pow):		not applicable
Solubility in water:		The product has not been tested.
Other Information:	If necessary, information on other physical and chemical parameters is indicated in this section.	

10. Stability and Reactivity

Conditions to avoid:
See MSDS section 7 - Handling and storage.

Substances to avoid:
strong acids, strong bases, strong oxidizing agents

Hazardous reactions:
The product is stable if stored and handled as prescribed/indicated.

Decomposition products:
No hazardous decomposition products if stored and handled as prescribed/indicated.

Thermal decomposition:
No decomposition if stored and handled as prescribed/indicated.

Oxidizing properties:
Based on its structural properties the product is not classified as oxidizing.

11. Toxicological information

Acute toxicity

Information on: Acetic acid
Assessment of acute toxicity:
The toxicity of the product is based on its corrosivity.
Of low toxicity after single ingestion. Of moderate toxicity after short-term skin contact. Of moderate toxicity after short-term inhalation.

Irritation / corrosion

Information on: Acetic acid
Assessment of irritating effects:
Highly corrosive! Damages skin and eyes.

Genetic toxicity

Experimental/calculated data:

Ames-test Mutagenicity tests revealed no genotoxic potential.

Other Information:

On the basis of the product's composition, no acute general toxic effects are to be expected. The product has not been tested. The statement has been derived from substances/products of a similar structure or composition.

12. Ecological Information

Bioaccumulation

No data available concerning bioaccumulation.

Other adverse effects:

There is a high probability that the product is not acutely harmful to aquatic organisms. Do not discharge product into the environment without control. The product has not been tested. The statement has been derived from substances/products of a similar structure or composition.

13. Disposal considerations

Waste disposal of substance:
Do not discharge into drains/surface waters/groundwater. Dispose of in a licensed facility.

Container disposal:
Contaminated packaging should be emptied as far as possible; then it can be passed on for recycling after being thoroughly cleaned.

14. Transport Information

Land transport

CAS Number	Content (W/W)	Chemical name
10124-37-5	>= 25.0 - < 75.0 %	calcium nitrate
540-72-7	>= 5.0 - < 15.0 %	sodium thiocyanate

4. First-Aid Measures

Description of first aid measures

General advice:
Remove contaminated clothing.

If inhaled:
Keep patient calm, remove to fresh air, seek medical attention. Immediately administer a corticosteroid from a controlled/metered dose inhaler.

If on skin:
Immediately wash thoroughly with plenty of water, apply sterile dressings, consult a skin specialist.

If in eyes:
Immediately wash affected eyes for at least 15 minutes under running water with eyelids held open, consult an eye specialist.

If swallowed:
Immediately rinse mouth and then drink 200-300 ml of water, seek medical attention.

Most important symptoms and effects, both acute and delayed

Symptoms: The most important known symptoms and effects are described in the labelling (see section 2) and/or in section 11.
Hazards: No applicable information available.

Indication of any immediate medical attention and special treatment needed

Note to physician
Treatment: Treat according to symptoms (decontamination, vital functions), no known specific antidote.

5. Fire-Fighting Measures

Extinguishing media

Suitable extinguishing media:
foam, water spray, dry powder, carbon dioxide

Unsuitable extinguishing media for safety reasons:
water jet

Special hazards arising from the substance or mixture

Hazards during fire-fighting:
carbon dioxide, carbon monoxide, harmful vapours, nitrogen oxides, fumes/smoke, carbon black

Advice for fire-fighters

Protective equipment for fire-fighting:
Wear a self-contained breathing apparatus.

Further information:
The degree of risk is governed by the burning substance and the fire conditions. If exposed to fire, keep containers cool by spraying with water. Collect contaminated extinguishing water separately, do not allow to reach sewage or effluent systems. Contaminated extinguishing water must be disposed of in accordance with official regulations.

6. Accidental release measures

Personal precautions, protective equipment and emergency procedures
Do not breathe vapour/aerosol/spray mists. Wear eye/face protection. If exposed to high vapour concentration, leave area immediately. Use personal protective clothing. Handle in accordance with good building materials hygiene and safety practice.

Environmental precautions
Contain contaminated water/firefighting water. Do not discharge into drains/surface waters/groundwater.

Methods and material for containment and cleaning up
For small amounts: Pick up with inert absorbent material (e.g. sand, earth etc.). Dispose of contaminated material as prescribed.
For large amounts: Pump off product.

7. Handling and Storage

Precautions for safe handling
Avoid aerosol formation. Avoid inhalation of mists/vapours. Avoid skin contact. No special measures necessary provided product is used correctly.

Conditions for safe storage, including any incompatibilities
No applicable information available.

Suitable materials for containers: High density polyethylene (HDPE)

Further information on storage conditions: Keep only in the original container in a cool, dry, well-ventilated place away from ignition sources, heat or flame. Protect from direct sunlight.
Protect from temperatures below: -25 °C
Protect from temperatures below: -13 °F

8. Exposure Controls/Personal Protection

Advice on system design:
No applicable information available.

Personal protective equipment

Respiratory protection:
No applicable information available.

Hand protection:
Wear chemical resistant protective gloves., Manufacturer's directions for use should be observed because of great diversity of types.

Eye protection:
Safety glasses with side-shields.

Body protection:
Impermeable protective clothing

General safety and hygiene measures:
Do not inhale gases/vapours/aerosols. Avoid contact with the skin, eyes and clothing. Avoid exposure - obtain special instructions before use. Handle in accordance with good building materials hygiene and safety practice. Wearing of closed work clothing is recommended. When using, do not eat, drink or smoke. Hands and/or face should be washed before breaks and at the end of the shift. At the end of the shift the skin should be cleaned and skin-care agents applied. Gloves must be inspected regularly and prior to each use. Replace if necessary (e.g. pinhole leaks).

9. Physical and Chemical Properties

Form:	liquid	
Odour:	odourless	
Odour threshold:		No applicable information available.
Colour:	dark brown	
pH value:	approx. 6.5	
Melting temperature:	approx. 0 °C	Information applies to the solvent.
boiling temperature:	approx. 100 °C	
Sublimation point:		No applicable information available.
Flash point:		Non-flammable.
Flammability:	not flammable	
Upper explosion limit:		No applicable information available.
Vapour pressure:		No applicable information available.
Density:	approx. 1.399 g/cm3	(20 °C)
Relative density:		No applicable information available.
Vapour density:		Heavier than air.
Thermal decomposition:	No applicable information available.	
Viscosity, dynamic:		No applicable information available.
Viscosity, kinematic:		No applicable information available.
Solubility in water:		(20 °C) soluble
Miscibility with water:		(20 °C) miscible in all proportions
Solubility (quantitative):		No applicable information available.
Solubility (qualitative):	No applicable information available.	
Evaporation rate:		No applicable information available.
Other Information:	If necessary, information on other physical and chemical parameters is indicated in this section.	

10. Stability and Reactivity

Reactivity
No hazardous reactions if stored and handled as prescribed/indicated.

Corrosion to metals:
Corrosive effects to metal are not anticipated.

Chemical stability
The product is stable if stored and handled as prescribed/indicated.

Possibility of hazardous reactions
The product is stable if stored and handled as prescribed/indicated.

Conditions to avoid
See MSDS section 7 - Handling and storage.

Incompatible materials
No applicable information available.

Hazardous decomposition products

Decomposition products:
No applicable information available.

Thermal decomposition:
No applicable information available.

11. Toxicological information

Primary routes of exposure

Routes of entry for solids and liquids are ingestion and inhalation, but may include eye or skin contact. Routes of entry for gases include inhalation and eye contact. Skin contact may be a route of entry for liquefied gases.

Acute Toxicity/Effects

Acute toxicity
Assessment of acute toxicity: Of moderate toxicity after single ingestion.

Oral
Type of value: ATE
Value: 1,323 mg/kg

Inhalation
No applicable information available.

Dermal
No applicable information available.

Assessment other acute effects
No applicable information available.

Irritation / corrosion
Assessment of irritating effects: May cause severe damage to the eyes.

Chronic Toxicity/Effects

Repeated dose toxicity
Assessment of repeated dose toxicity: No applicable information available.

Genetic toxicity
Assessment of mutagenicity: No applicable information available.

Reproductive toxicity
Assessment of reproduction toxicity: No applicable information available.

Other Information

The product has not been tested. The statement has been derived from the properties of the individual components.

Symptoms of Exposure

The most important known symptoms and effects are described in the labelling (see section 2) and/or in section 11.

12. Ecological Information

No applicable information available.

13. Disposal considerations

Waste disposal of substance:
Dispose of in accordance with national, state and local regulations. Residues should be disposed of in the same manner as the substance/product. Do not discharge into drains/surface waters/groundwater.

Container disposal:
Contaminated packaging should be emptied as far as possible; then it can be passed on for recycling after being thoroughly cleaned.

14. Transport Information

Land transport
USDOT

Not classified as a dangerous good under transport regulations

Sea transport
IMDG

Not classified as a dangerous good under transport regulations

Air transport
IATA/ICAO

Not classified as a dangerous good under transport regulations

15. Regulatory Information

Federal Regulations

Registration status:
Chemical TSCA, US released / listed

EPCRA 311/312 (Hazard categories): Acute;

CERCLA RQ	CAS Number	Chemical name
100 LBS	111-42-2	2,2'-iminodiethanol

State regulations

State RTK	CAS Number	Chemical name
NJ	10124-37-5	calcium nitrate

CA Prop. 65:
THIS PRODUCT CONTAINS A CHEMICAL(S) KNOWN TO THE STATE OF CALIFORNIA TO CAUSE CANCER AND BIRTH DEFECTS OR OTHER REPRODUCTIVE HARM.

NFPA Hazard codes:
Health : 2 Fire: 0 Reactivity: 0 Special:

HMIS III rating
Health: 2 Flammability: 0 Physical hazard: 0

616-G11MT Supplemental Information - Section N
CLOSURE PLAN - Mobile Concrete Batch Plant
*** REVISED 2.16.15 ***
Cemco Model #220 Portable Batch Plant
For Use on ODOT Project

BACKGROUND:

The activity associated with this project includes the reconstruction of the I-35 and State Highway 9 and Lindsey Avenue interchanges in Norman, OK. Sherwood Construction plans to move this portable batch plant to ODOT right of way located at 1500 28th Avenue SW, Norman, OK 73072 to provide concrete for the duration of the project, which is expected to be completed in March of 2017.

ROUTINE TREATMENT AND REMOVAL:

The batch plant site has been surfaced with crushed stone and millings. The crushed stone provides a stable platform on which to travel and minimize the tracking of soil material off site. It also virtually eliminates the potential for erosion of onsite runoff. Silt fences will be installed along the perimeter of the surfaced area as an added precaution to capture any sediment resulting from site runoff. For control of wastewater generated from mixing plant and truck clean-out, a temporary impoundment will be constructed in accordance with permit guidelines. The solid materials (sand, rock, cement) collected in the impoundment area are "nonpollute" in nature and will not require special treatment. They will be disposed in a landfill suited for that type of material or may be spread over the surfaced area to provide additional aggregate thickness and/or stability. Accumulated water in the impoundment area will be pumped into a water truck and used to water the onsite plant area to help alleviate the fugitive dust control problem, but only after being checked for pollutants (oil/ grease sheen or globules) by one of the onsite response members before it is pumped from the impoundment. The inspection log shall record this inspection and the estimated quantity of water removed from the impoundment. Any abnormal conditions noticed in the impoundment will require that treatment or corrective action be taken immediately. Treatment for chemicals or oils on the water's surface will be accomplished by either pumping off the surface sheen or by use of an absorption buoy system. In either case it would be per EPA approved methods and disposed per EPA requirements.

MONITORING:

The storm water runoff control devices and impoundment criteria will be monitored and modified as conditions require. All concrete additives stored in the onsite trailer will be monitored to insure proper storage and handling. The impoundment area will also be visually monitored to insure no chemicals or oils have contaminated the standing water. Periodic monitoring of the impoundment area will be recorded on a log sheet and kept at the plant site at all times. Monitoring will be done weekly and recorded in an inspection log, with the exception that after a heavy rain (minimum of .5"), an inspection shall be made and recorded. This inspection report will be made available to the DEQ upon request.

CLOSURE:

Upon completion of batch plant operations, the site will be restored to a condition equivalent to that prior to occupation. Restoration will include removal of wastewater and sediment/sludge from the impoundment area and eradication of the impoundment.

Wastewater-similar to monitoring, active treatment and removal as stated above, the wastewater will be visually inspected for non-concrete related pollutants prior to its removal from the impoundment. Any wastewater remaining after natural evaporation and prior to closure will be pumped out and used for dust suppression at the site.

Sludge - Depending on the solidity of the sediment/sludge remaining in the impoundment upon removal of the waste water, the material will be removed and either taken to a landfill, a recycling location, or left on site in a manner acceptable to the Oklahoma D.O.T. -if the latter is an allowable option.

Backfill- Once all the water, solid materials and the liner have been removed from the impoundment area, the area will be filled. If dikes were used to construct the Impoundment, they will be removed or leveled to restore the area to its prior drainage patterns. If an excavation was used, the pit will be filled with the materials originally removed. If there were significant strata differences within the excavation's limits, the excavated material will be replaced in an order to restore the continuity of the layers. The replaced material will be co-mingled with the in-situ material and will be compacted to a similar density. Once the grading is finished in this area, the area will be revegetated or resurfaced to its original condition.

DISPOSAL:

It is not anticipated that a disposal site will be required for this site, with the exception of any sediment left in the impoundment, since all the materials used in the process of making ready mix concrete are non-hazardous materials. If for some reason a disposal site is required, we will notify the DEQ immediately of this change and will revise this plan to reflect this change.

CERTIFICATE OF CLOSURE:

An affidavit of closure will be submitted within 10 days after closure of all temporary impoundments.

FACT SHEET

FOR THE GENERAL WASTEWATER DISPOSAL PERMIT FOR MOBILE CONCRETE BATCH PLANTS TO OPERATE AT TEMPORARY JOB SITES AND TO CONSTRUCT TEMPORARY TOTAL RETENTION INDUSTRIAL WASTEWATER SURFACE IMPOUNDMENTS; AND/OR TO LAND APPLY INDUSTRIAL WASTEWATER FOR PURPOSES OF DUST SUPPRESSION.

DEQ Permit No.:	OKG11MT
Applicant:	Operators of Mobile Concrete Batch Plants in Oklahoma
Prepared and Issued By:	Industrial Permits Section Water Quality Division Department of Environmental Quality P. O. Box 1677 707 N. Robinson Ave. Oklahoma City, OK 73101-1677
Permit Action:	Renewal of a general permit to operate a mobile concrete batch plant and to construct temporary total retention surface impoundments and/or land application of wastewater

I. SCOPE OF PERMIT

The activities regulated by this General Permit Number OKG11MT (Permit) are the following activities at mobile concrete batch plants (SIC Code No. 3273): (1) operate the plant at temporary job sites, (2) construct and operate temporary industrial wastewater total retention surface impoundments; and/or (3) land application of industrial wastewater for dust suppression. This Permit will regulate any combination of the above-listed wastewater disposal/treatment options. Because of the short time that a mobile concrete batch plant will be located at a temporary job site, the DEQ has determined that the use of total retention surface impoundments is appropriate. If an Owner/Operator wishes to discharge industrial wastewater at a temporary job site it will be necessary to obtain an individual discharge permit.

Existing mobile concrete batch plants that are not currently permitted by the DEQ through individual wastewater disposal permits shall apply for coverage under this Permit within 90 days of the effective date of this Permit. New mobile concrete batch plants shall obtain a Permit prior to commencing any of the activities regulated by this Permit.

- Wastewater regulated by this Permit includes process wastewater and stormwater runoff associated with the following three common activities: (1) mix plant operation and clean-up (if dry brush cleanup methods are not utilized), (2) truck mixer drum washout and (3) external truck wash and oil spray down. Stormwater discharges that are not associated with these activities and are not commingled with the stormwater associated with these activities are not covered by this permit.

- Surface impoundments regulated by this Permit are any temporary total retention surface impoundments constructed at any mobile concrete batch plant temporary job site that contains wastewater associated with the activities described above.

- Land application of wastewater regulated by this Permit is the land application of wastewater associated with the activities described above. Land application shall be for dust suppression only, as described herein.

This permit does not specify the disposal/treatment method(s) that the permittee must use. If temporary total retention surface impoundments and/or land application are used for wastewater treatment and/or disposal, the surface impoundments and/or land application shall be regulated by this Permit in accordance with DEQ Rules OAC 252:616. This permit shall have a five (5) year term. All Authorizations issued under the General Permit shall expire on the expiration date of the General Permit.

II. APPLICANT ACTIVITY

The following three common activities are the sources of wastewater at mobile concrete batch plants: (1) mix plant operations and clean-up, (2) truck mixer drum washout and (3) external truck wash and oil spray down.

The function of the mix plant is to combine gravel, crushed stone and sand (together known as aggregate), cement, water and admixtures to form fresh concrete. Typically, aggregate is received in bulk quantities by rail or truck. It is stored outside until it is conveyed to distribution bins for feeding into the mix plant.

There are two types of plants, central mix plants and transit mix plants. The central mix plant combines and mixes all ingredients, then loads the fresh concrete in the mixer drum on the truck or into a haul truck. The transit mix plant combines the dry ingredients and then loads the dry ingredients and water into the mixer drum on the truck where the final mixing occurs. A mobile concrete batch plant can perform both types of operations. Wastewater is generated from wash water and associated stormwater runoff from the mix plant (if dry brush cleanup methods are not utilized), truck mixer drum washout and/or ready-mix truck exteriors.

The function of the mixer drum washout activity is to rinse residual concrete from the inside of the truck's mixer drum or haul truck to prevent it from setting up in the drum. Wastewater is generated from the mixer drum washout activity and associated stormwater.

The function of the external truck wash is to clean external surfaces of the ready-mix trucks. Wastewater is generated from the washing activity and associated stormwater.

Mobile concrete batch plants shall utilize one or more of the following options to manage wastewater generated at temporary job sites; offsite wash facilities, temporary total retention surface impoundments, approved recycling methods, land application for dust suppression, and/or stockpile watering.

III. WASTEWATER CHARACTERISTICS

Wastewater characteristics for mobile concrete batch plants are based upon the potential pollutants generated from mix plant washdown, mixer drum washout and external truck washing.

All mobile concrete batch plants handle and store nonmetallic minerals. The minerals are often stored outdoors until they are utilized in the industrial processes. Handling, storage and use of these minerals in the industrial processes results in the potential for their presence in process wastewaters and associated stormwater, resulting in potential for high Total Suspended Solids (TSS) levels if the wastewater is left untreated. In addition, since many of the minerals processed are calcareous, such as limestone, the presence of these minerals can elevate the pH of the wastewater. Wastewater from mix plant washdown and associated stormwater has the potential to contain suspended solids from spilled cement and sand solids, and fugitive dust resulting from mix plant operation. The washdown water prevents the concrete from setting up and fouling the process area and drains, thus producing a wastewater high in suspended solids. Due to contact with these materials, the wastewater may also display elevated pH levels. Oil and grease is also a potential pollutant of concern due to the operation in the mix plant area of mix plant equipment and trucks that require oil in their operation and maintenance.

Wastewater from mixer drum washout and associated stormwater has the potential to contain suspended solids, since the washout water comes from thinning the concrete left in the drums at the end of the work day to prevent it from setting up in the mixer drum. Thinning this mixture results in a wastewater high in cement and sand solids that are not bound together. Due to contact with these materials, the wastewater may also display elevated pH levels. Oil and grease is also a potential pollutant of concern due to the presence of residual oil on the trucks and associated mechanisms of the truck. Wastewater from external truck washing and associated stormwater has the potential to contain suspended solids and elevated pH levels from concrete dust and road grime. Oil and grease is also a potential pollutant of concern due to the presence of residual oil on the trucks.

Based on the description of the processes at mobile concrete batch plants, the pollutants of concern are TSS, small amounts of Oil and Grease, and pH. Therefore, in accordance with OAC 252:616-1-2, the wastewater generated from mobile concrete batch plants is considered class III wastewater. Wastewater includes water generated from the above mentioned activities and any stormwater that comes into contact with these activities. Once the stormwater comes into contact with wastewater, it will be considered and treated as wastewater. Also, any stormwater that falls into the temporary surface impoundments will be considered and treated as wastewater.

IV. SURFACE IMPOUNDMENTS

The use of temporary surface impoundments for treatment and/or disposal of wastewater at mobile concrete batch plants is authorized, subject to additional State requirements as specified below and in General Permit No. OKG11MT, in accordance with OAC 252:616.

A. Engineer Required

In accordance with OAC 252:616-1-3, "Pursuant to 59 O.S., § 475.2 and a ruling by the Oklahoma State Board of Registration for Professional Engineers and Land Surveyors, the design and closure activities required by this chapter constitute the practice of engineering and thus, require the seal and signature of an engineer registered to practice in the State of Oklahoma." It is the Best Professional Judgement (BPJ) of the permit writer that the requirements of the general permit do not constitue the practice of engineering based on temporary status, class III wastewater, liner requirements, recycle/reuse of wastewater, use of wastewater for on-site dust suppression, and the closure plan requirements stated in the general permit.

B. Wastewater Classification

The wastewater generated from routine operations of mobile concrete batch plants is classified as Class III wastewater in accordance with OAC 252:616-1-2.

C. Construction Requirements

Impoundments shall be constructed and maintained in accordance with OAC 252:616-7-1. Since the impoundment(s) to be constructed are temporary, the DEQ has concluded that this rule can be interpreted to allow dikes to be constructed with 1:2 (1 vertical to 2 horizontal) slopes for job sites where the impoundment will be used for less than 180 days. For those sites that the impoundments will be used for greater than 180 days, a 1:3 slope must be used.

Because the dyke height will be low the DEQ has also concluded that it is not necessary to construct dikes with flat tops in order to inspect the dykes for erosion.

D. Liner Requirements

An excavated soil liner may be used for temporary total retention surface impoundments. Liner materials and construction shall be in compliance with requirements of OAC 252:616-7-1(8) and (9) and OAC 252:616-7-2 and 7-3.

E. Other Specific Requirements

Wastewater contained in total retention surface impoundments may be recycled for use in concrete make-up or wash water.

F. Freeboard Requirements (OAC 252:616-7-1(7)

Since the impoundment(s) to be constructed are temporary, the DEQ has concluded that this rule can be interpreted to allow impoundments to be operated with a minimum freeboard of one (1) foot on all temporary total retention surface impoundments when the temporary job site will be utilized for less than 180 days. If the water level reaches the 1 foot freeboard requirement, another impoundment must be constructed.

In addition a minimum freeboard of three () feet shall be maintained on all temporary total retention surface impoundments when the temporary job site will be utilized for greater than 180 days. If the water level reaches the 3 foot freeboard requirement, another impoundment must be constructed.

V. LAND APPLICATION AND BENEFICIAL REUSE OF WASTEWATER

Land application of wastewater for dust suppression only at mobile concrete batch plants is authorized, subject to additional State requirements as specified below and in General Permit OKG11MT, in accordance with OAC 252:616-11.

The wastewater covered under this authorization is classified as Class III wastewater in accordance with OAC 252:616-1-2. To maintain this classification, the wastewater to be land applied shall be free of visible sheen of oil or globules of oil or grease. The wastewater to be land applied shall be visually inspected prior to land application. An inspection log shall be maintained at the site and made available to DEQ upon request. Wastewater recycled into the concrete mixture is exempt from monitoring requirements.

There shall be no land application of wastewater during periods of precipitation or when soil is saturated or frozen.

There shall be no runoff of wastewater from the land application sites.

VI. RECYCLABLE CONCRETE MATERIAL AND DISPOSAL OF OTHER SOLIDS

Recyclable concrete material recovered from the scatter pile, impoundments and/or other means may be removed from the facility, provided that an accurate record is kept which includes the following: name and address of company or individual receiving the material, date material was received, and approximate location where material will be recycled.

Recyclable concrete material may be used by the permittee, at the job site, at any time. No records are required.

Solids, sludges, filter backwash, or other pollutants other than recyclable concrete material, removed in the course of treatment or control of wastewater shall be disposed of in a State-approved waste disposal site or to a company for recycling.

If any such industrial wastes are removed from the facility, the permittee shall keep accurate records that include the following information:

a. Name and address of company hauling waste;
b. The type and amount of waste hauled; and
c. The final disposal site of waste hauled.

Upon request, the above records shall be made available to the DEQ's staff for review.

VII. CLOSURE REQUIREMENTS

Each owner/operator of a mobile concrete batch plant requesting to be authorized pursuant to the terms and conditions of this General permit shall submit and receive approval of a Closure Plan (Plan) that describes a generic methodology that will be used for the closure of impoundment(s) at each temporary job site. The Plan shall be submitted and receive DEQ approval prior to the issuance of an Authorization. Submittal of the Plan may be concurrent with the submittal of the initial Authorization application. This Plan is intended to meet the requirements of OAC 252:616-13-3. If the closure plan contains the following information, it is BPJ of the permit writer that a professional engineer is not required to design the closure plan.

The Plan shall include at a minimum the following information:

a. Background:

Describe the activity that took place at the site during the life of the impoundment.

b. Proposed closure activities:

(1) Wastewater: The following options are available for any wastewater remaining in the impoundment at the time of closure:

- allowed to evaporate
- pumped out and disposed of at a POTW
- used in industrial process
- used for dust suppresion onsite

(2) Sludge: The following options are available for any sludge remaining in the impoundment at the time of closure:

- removed and taken to landfill
- removed and taken to a company for recycling
- leave in place

c. Backfill

Include a discussion of the material to be used as backfill, sampling used to determine the characteristics of the backfill material, and the method of placement to be employed.

d. Disposal

Describe the disposal method and or recycle/reuse of any material associated with the impoundment, i.e piping, liner material, etc.

e. Certification of Closure

Within ten (10) days after closure of all temporary impoundments, the owner/operator of the mobile cement batch plant shall submit an affidavit of closure to the DEQ certifying that all impoundments were closed in accordance with the requirements of OAC 252:616-13 and the approved Plan.

VIII. RELOCATION NOTIFICATION

The permittee shall notify the DEQ within seven (7) days each time the mobile concrete batch plant is moved to a new location. The notification shall state the name and location of the site where the mobile concrete batch plant is to be located, an estimate on how long the plant is expected to be at the site and if impoundments will be used at the site. If impoundments will be utilized at the new location, the notification document shall include a completed Form 616-G11MTR for the new job site.

IX. ACKNOWLEDGEMENT

Within seven (7) days after receipt of a relocation notification, the DEQ will provide a written statement acknowledging receipt of the notification.

X. ADMINISTRATIVE RECORD

The following sources were used to prepare this Permit and constitute a part of the administrative record for this Permit:

A. DEQ RECORDS

- General Permit and fact sheet for mobile concrete batch plants (OKG11MT)

B. FEDERAL WATER POLLUTION CONTROL ACT (CLEAN WATER ACT), 33 U.S.C. 1251 et.seq.

- Section 301 and 402(a)

C. FEDERAL RULES AND REGULATIONS

- 40 CFR, in particular, Parts 122, 124, 136

D. STATE LAW, STANDARDS, AND RULES AND REGULATIONS

- Oklahoma Pollutant Discharge Elimination System (OPDES) Act, 27A O.S. Supp., §2-6-201, et.seq
- OAC 252:606, OAC 252:616

DEQ LANDOWNER NOTIFICATION AFFIDAVIT

Tier I, II, or III permit applications in which the applicant does not own all the land subject to the application must notify the owner(s) of leases and/or pipeline right-of-ways. The basis for this requirement is Title 27A of the Oklahoma Statutes, § 2-14-103(9), as described in OAC 252:004-7-13(b).

Please note that you MUST fill out and return this affidavit even if you don't have to give any landowner notice.

A	NOTICE TO THE LANDOWNER(S) IS NOT REQUIRED because: (check one)		
	My application does not involve any land.		My application involves only land owned by me (or applicant business).

OR

B	NOTICE TO THE LANDOWNER(S) IS REQUIRED because the land is owned by someone other than myself or the applicant business AND I HAVE NOTIFIED the following (check one):		
XX	Landowner(s)		Lessor or Administrator or Executor of the land
METHOD OF DELIVERY (check one):			
XX	Actual notice, for which I have a signed and dated receipt		
	Service by Sheriff or private process server, for which I have an affidavit		
	Service by certified mail, restricted delivery, for which I have a signed return receipt		
	Legal publication, for which I have an affidavit of publication from the newspaper, because the landowners could not be located through due diligence		
MY RIGHT TO USE THIS LAND is by:			

	Lease		Easement	XX	Other, Specify	ODOT Right of Way

LANDOWNER AFFIDAVIT CERTIFICATION			
I, as the applicant or an authorized representative of the applicant, hereby certify that notice to the landowner(s) about the permit application for the facility described below was provided per Option A or B above.			
Company Name	Sherwood Construction	Facility Name	Cemco Model #220; Facility ID: I-66001860
Facility Address or Legal Description.	1500 28th Avenue SW, Norman, OK 73072		
Responsible Official (signature)		Date Signed	7/16/15
Responsible Official (typed)	Matt Ritchie	Title	Vice President - Materials

If the landowner notice applies to your application (Option B Above) you can send the following form to them as your notice:

NOTICE TO LANDOWNER OF FILING

Dear Landowner: (Name)_____

(Applicant name) Sherwood Construction Co. has filed a permit application with the Oklahoma Department of Environmental Quality for (Name) Cemco Model #220; Mobile Batch Plant facility.

This application involves the land owned by you located at:

Address or Legal Description: 1500 28th Avenue SW, Norman, OK 73072

Signed:_____ Date:_____

Oklahoma Department of Transportation

Purcell Residency
23404 SH 74
Purcell, Oklahoma 73080

Office: (405)527-5569

February 18, 2015

Mr. Kevin Krause
Sherwood Construction Co.

REF: NHPPIY-0035-2(176)(304) – Portable Concrete Batch Plant

Mr. Krause:

This letter is to confirm that notice has been given to ODOT of the Portable Concrete Batch Plant that is proposed to be installed at 1500 28th Ave. SW in Norman. Installation of this plant on ODOT property is approved with the following contingencies:

- All Federal and Oklahoma environmental laws/requirements are met through the duration of the project
- Any debris produced by the plant are removed periodically and at the completion of the project
- The right of way is returned to its original state at the completion of the project
- Access is maintained to the Salt/Sand Storage Building through the majority of the project duration

If you would like to discuss this issue further please feel free to contact us.

Respectfully,

Lucas Reed

Catoosa, OK 74015

RE: Relocation of General Permit Authorization No. OKG11MT87
Greenhill Concrete Products, Inc.
Rogers County to Cleveland County, Oklahoma
Facility ID No. I-66001860

Dear Mr. Ritchie:

Your Certification of Closure and relocation form was received by the Oklahoma Department of Environmental Quality (DEQ) on February 23, 2015. The DEQ has reviewed your Certification of Closure and accepts the certification. The DEQ acknowledges the relocation of this mobile plant to 1500 28th Avenue Southwest, Norman, OK 73072. Upon future relocation of this mobile plant, Greenhill Concrete Products, Inc. must submit the relocation form 616-G11MTR within seven (7) days of relocation.

Thank you for your cooperation. If you have any questions concerning this submittal or the authorization, please contact Brandon Tyler at (405) 702-8215.

Sincerely,

Brandon Tyler

RE: Air Quality Permit Application for Sherwood Construction Co., Inc. to construct a limestone quarry and crushed aggregate plant in Rogers County, Oklahoma

Dear Mr. Fly:

Enclosed please find 3 copies of a minor source permit application for a limestone quarry and rock crushing facility for Sherwood Construction Co., Inc. located in Southwest Rogers County, Oklahoma. The following items are inclosed as part of each application:

(1) ODEQ Form #100-884
(2) ODEQ Form #100-110
(3) ODEQ Form #100-810
(4) Facility Process Flow Diagram
(5) Facility Process Plant Plan
(6) Vicinity (Location) Map
(7) Instructions No: 1, 3, and 4
* (8) A check in the amount of $1000.00 made out to the ODEQ-Air Quality Division for the air permit application fee

If you have any questions or need any additional information regarding this permit application, please feel free to call me at (918)266-6861.

Sincerely,
SHERWOOD CONSTRUCTION CO., INC.

Larry E. Milliger, Ph.D., CHMM, REM

INTRODUCTION
This package contains the State of Oklahoma Air Quality Permit Application for a Minor Source. Please read all the directions carefully before you fill it out. Answer all questions by checking the appropriate box or filling in a response. Original signature from a responsible official is required on Form 884. Please note that delays in processing your application may occur if an incomplete application is submitted. It is the applicant's responsibility to submit a complete application well in advance of anticipated commencement of construction, start up dates, or the effective date of operating permit program requirements to allow sufficient time for proper application review and permit issuance.

BACKGROUND
Oklahoma operates a dual air quality permit system under Oklahoma Administrative Code (OAC) 252:100. A *construction permit* is to be obtained prior to the commencement of construction, installation or modification of any source which will increase the amount of air contaminant emissions by more than the de minimis levels given in OAC 252:100-7-2. After construction is completed, application for an *operating permit* must be submitted within 180 days after start up. If you are uncertain whether a permit is required, a request for an applicability determination may be submitted to DEQ and a written determination will be made based on the data submitted. An applicability determination can also be performed to determine whether a facility is a major or minor source.

DEFINITIONS
Criteria Pollutant: Oxides of Nitrogen (NOx), Sulfur Dioxide (SO_2), Lead (Pb), Ozone (O_3, i.e., regulated as non-methane hydrocarbon or NMHC as a precursor to O_3), Particulate Matter less than 10 microns (PM_{10}), Carbon Monoxide (CO).

Minor Source: A source that has the potential to emit less than 100 tons/year of a criteria pollutant, less than 10 tons/year of any single hazardous air pollutant, and less than 25 tons/year total hazardous air pollutants in the aggregate. These sources are classified as Tier I sources and follow the simplest type of application process.

Synthetic Minor Source: A source which has the potential under maximum operating conditions to emit at the Major Source level but which has a permit which restricts emissions to the minor source level. Such restrictions may include any of the following: hours of operation, emission control devices, and throughput. Applications for minor source permits are classified as either Tier I or Tier II, depending on several factors.

Major Source: A source that has the potential to emit more than 100 tons/year for criteria pollutants, 25 tons/year of hazardous air pollutants, or 10 tons/year of any single hazardous air pollutant. Additionally, a Major Source will not have permit requirements which restrict all actual criteria pollutant and hazardous air pollutant emissions to less than these levels. These sources are complex in their potential impact and are subject to the Tier II or Tier III application process.

TIER DETERMINATION
DEQ's "Uniform Permitting" system, under OAC 252:002, categorizes applications as Tier I, II, or III, depending on their complexity and the amount of public interest. The main effect of a Tier classification is the amount of public review given the application. For Air Quality permits, Tier I basically includes minor sources and most synthetic minor sources. Tier II covers major sources, and Tier III covers only very large sources such as those requiring PSD review. **This packet is designed (only) to meet the application requirements for most Rock Crushing Facilities and Sand & Gravel Operations which are minor sources or synthetic minor sources and qualify as Tier I applications.** Other facilities, including those with emission units not covered in this application packet and those that need emissions modeling assistance, should contact Air Quality for information or additional forms and/or worksheets.

PERMIT FEES
Applicants must attach a check or money order (no cash will be accepted) payable to the DEQ Air Quality Division in accordance with the following schedule. Please reference the facility name (or existing permit or application number) on the check.

Emissions	Construction Fee	Operating Fee	Relocation Fee
0 to 39.99 TPY	$1000	$500	$100
40 to 99.99 TPY	$1500	$500	$100
Modifications: (no emissions increase)	$500	$200	—
Uncertain	$250 Applicability Determination Fee (applied toward permit fee if required)		

APPLICATION MUST INCLUDE:
1. DEQ Form # 100-884 (General Facility Information Form)
2. DEQ Form # 100-110 (Emission Units information for each unit on site)
3. DEQ Form # 100-810 (Landowner Affidavit)

SUBMIT 3 COPIES OF COMPLETED APPLICATON TO:
DEPARTMENT OF ENVIRONMENTAL QUALITY
FINANCIAL & HUMAN RESOURCES MANAGEMENT
P.O. BOX 2036

5. Facility Plot Plan & Process Flow Diagram

Instruction No. 1 provides information required for installations involving process operations. Seventeen (17) information items are required to comply with Instruction No. 1.

1. Description of the process or operation.
   This facility is a limestone crushing operation. Forms developed by the Oklahoma Department of Environmental Quality, Air-Quality Division, and revised August 5, 1997, accompany this application, and describe the process or operation. The ODEQ forms are titled:

   MINOR SOURCE AIR QUALITY PERMIT APPLICATION
   for a
   ROCK CRUSHING FACILITY
   or a
   SAND & GRAVEL OPERATION

   In addition, the enclosed Figure 1 is a flow chart of the proposed limestone aggregate processing plant showing equipment, particulate emission points and emission controls.

2. Include a process flow diagram identifying each operation or process.
   See Figure 1, enclosed.

3. The applicant must list and identify all expected air emissions, including toxic and hazardous substances.
   This information is provided in the enclosed ODEQ forms revised August 5, 1997, and titled:

   MINOR SOURCE AIR QUALITY PERMIT APPLICATION
   for a
   ROCK CRUSHING FACILITY
   or a
   SAND & GRAVEL OPERATION

   Emissions are keyed to equipment numbers shown on the process flow diagram, Figure 1.

4. For major sources.....
   Not Applicable.

5. Give maximum process weight in pounds per hour and basis for calculating or establishing this hourly rate. For nonmetallic mineral processing plants provide the maximum process weight in pounds per hour for each piece of equipment including each conveyor belt, and the plant capacity (the cumulative rated capacity of all initial crushers that are part of the plant).

This information is provided in the enclosed ODEQ forms revised August 5, 1997, and titled:

MINOR SOURCE AIR QUALITY PERMIT APPLICATION
for a
ROCK CRUSHING FACILITY
or a
SAND & GRAVEL OPERATION

The ODEQ forms provide process rates in tons per hour. The plant capacity, as determined by the maximum rated capacity of the initial crusher is 300 tons per hour.

6. Hours of operation per day, days per week, and weeks per year.
The normal hours of operation are:
10 hours per day;
5 days per week;
50 weeks per year; and
not to exceed a total of 2500 operating hours per year.
Any temporary modifications to the normal hours or days of operation will not result in an exceedance of the maximum of 2500 operation hours per year.

7. Describe the raw materials used in the process.
Limestone rock is the raw material used in the process.

8. If the process is cyclical instead of continuous, give length of cycle and time between cycles.
The process is not cyclical.

9. Does process involve use of potentially hazardous air contaminants and toxic materials?
The process does not involve the use of potentially hazardous air contaminants or toxic materials.

10. For any combustion units provide the information requested in Instruction No. 4, Items 2, 3, 4, and 7.
See attached Instruction No. 4.

11. For any hydrocarbon storage tanks provide the information requested in Instruction No. 3.
See attached Instruction No. 3.

12. Include a plot plan showing location of manufacturing processes and location of outlets for airborne emissions. Key all flows and discharge outlets to the process flow diagram by number or other identification means.
See attached Figures 1 and 2.

13. Include an area plot plan showing location of the establishment, property lines, and the surrounding area residences, other types of structures and roadways.
See attached Map 1.

14. Fugitive Dust Control. Specify the procedures to be used to minimize air pollution from operations not involving process emissions in which particulates are likely to be wind-borne, including the following items:
    (a) Service roads and parking areas.
    (b) Stockpiles and storage areas.
    (c) Loading and unloading materials.
    (d) Transportation of dusty material by truck.
    (e) Any other enterprise which involves a substance likely to be scattered by wind or susceptible to being airborne.

    All fugitive emissions will be controlled by using water on an as-needed basis. A water truck will water haul roads as needed. Stockpiles and loading operations will not require watering due to the washing and water spray dust control used in the limestone crushing, screening, and washing process. Dust control will not be applied to the limestone boulders transported by truck to the rock-crushing facility. Truck unloading will involve water spray dust control at the point of entry onto the grizzly (see Figure 1).

15. Emission Point Data
    Not applicable. No stacks are present.

16. Specify whether stack sampling ports are being included in the construction, and identify which stacks.
    Not applicable. No stacks or stack sampling ports are being included in the construction.

17 Air Pollution Control Equipment
    No air pollution control equipment is utilized, other than water to control particulates.

EMISSION UNITS - ROCK CRUSHING & SAND FACILITIES

MINOR SOURCE EQUIPMENT DESCRIPTION

In the table below, please list all emission units, (e.g., hoppers, crushers, grinders, screens, stockpiles, organic liquid storage tanks, and other miscellaneous equipment) located at the facility. For each unit, give an unique identifier (e.g. facility numbering system or emissions inventory ID#), number of operation hours per year, the equipment installation date (actual or projected), and the date the equipment was manufactured or modified. In the last column, indicate whether the unit is a subject of the requested permit action (Construction or Operating Permit, or Modification of an existing permit).

EMISSION UNITS (Equipment)		Operating Hours Per Year	Manufacture or Modify Date	Installation Date	Unit Subject of this Permit Action?	
ID #	Description				Yes	No
01A	Primary (Jaw) Crusher	2000	1994	10/15/99	X	
02B	36" X 40' Discharge Belt	2000	1994	10/15/99	X	
03C	54" X 30' Feeder Belt	2000	1994	10/15/99	X	
04D	Vibratory Feeder	2000	1994	10/15/99	X	
05E	Secondary (Impact) Crusher	2000	1994	10/15/99	X	
06F	54" x 40' Discharge Belt	2000	1994	10/15/99	X	
07G	Three Deck Screen	2000	1994	10/15/99	X	
08H	42" x 40' Return Belt	2000	1994	10/15/99	X	
09I	30" x 60' Return Belt	2000	1994	10/15/99	X	
10J	30" x 10' Screen Discharge	2000	1994	10/15/99	X	
11K	36" x 20' belt	2000	1994	10/15/99	X	
12L	30" x 90' Radial Stacker	2000	1994	10/15/99	X	
13M	36" x 40' Belt	2000	1994	10/15/99	X	
14N	30" x 100' Radial Stacker	2000	1994	10/15/99	X	
15O	36" x 20' Underscreen Belt	2000	1994	10/15/99	X	
	(SEE ATTACHED CONTINUATION LIST)					

Please provide the following information for each piece of equipment which is subject of the requested permit action. Data submitted for construction permits should be a best estimate. The values may be modified following construction and/or subsequent testing. This information is necessary to determine the emissions. Indicate crusher type according to product size, as used in AP-42, (1/95), Section 11.19.2: primary (3 to 12 inches), secondary (1 to 4 inches), or tertiary (3/16th to 1 inch). Likewise, indicate for each screen whether it serves as a fines screen or "other." Provide the requested information for each transfer point, including truck unloading, if applicable.

EMISSION POINTS - CRUSHERS/GRINDERS		Process Rate	Controls		Emission Factor (lb/ton)	
ID#	Crusher Type	(TPH)	Type	Efficiency	Controlled	Uncontrolled
01A	Primary(Jaw)Crusher with Grizzley Feeder	250	Water Spray	80%	0.00059	.00295

Controls:	X	Submerged Fill Pipe		Vapor Recovery System	Other (Specify):

DEQ LANDOWNER NOTIFICATION AFFIDAVIT

Tier I, II, or III permit applications in which the applicant does not own all the land subject to the application must notify the owner(s). The basis for this requirement is Title 27A of the Oklahoma Statutes, Supplement 1996, § 2-14-103(9), as described in OAC 252:002-15-30(b)(3).

Please note that you MUST fill out and return this affidavit even if you don't have to give any landowner notice.

A	NOTICE TO THE LANDOWNER(S) IS NOT REQUIRED because: (check one)		
	My application does not involve any land		My application involves only land owned by me (or applicant business)

OR

B	NOTICE TO THE LANDOWNER(S) IS REQUIRED because the land is owned by someone other than myself or the applicant business AND I HAVE NOTIFIED the following (check one):		
	Landowner(s)	X	Lessor or Administrator or Executor of the land

METHOD OF DELIVERY (check one):

	Actual notice, for which I have a signed and dated receipt
	Service by Sheriff or private process server, for which I have an affidavit
X	Service by certified mail, restricted delivery, for which I have a signed return receipt
	Legal publication, for which I have an affidavit of publication from the newspaper, because the landowners could not be located through due diligence

MY RIGHT TO USE THIS LAND IS by:

X Lease ___ Easement ___ Other, Specify:

LANDOWNER AFFIDAVIT CERTIFICATION

I, as the applicant or an authorized representative of the applicant, hereby certify that notice to the landowner(s) about the permit application for the facility described below was provided per Option A or B above.

Company Name	Sherwood Construction	Facility Name	Greenhill Materials
Facility Address or Legal Description	NE/4, SE/4, Section 10, T20N, R14E, Rogers County		
Responsible Official (signature)	John R Curtis	Date Signed	10 Aug 99
Responsible Official (typed)	John R. Curtis	Title	President

If the landowner notice applies to your application (Option B above) you can send the following form to them as your notice:

NOTICE TO LANDOWNER OF FILING

Dear Landowner: (Name) John T. Oxley Estate, Suite 1300, Williams Center Tower I, 1 West 3rd Street, Tulsa, OK 74103

(Applicant name) Sherwood Construction has filed a permit application with the Oklahoma Department of Environmental Quality for (Name) Greenhill Materials facility.

This application involves the land owned by you located at:

Address or Legal Description: NE/4, SE/4, Section 10, T20N, R14E, Rogers County

Signed: _____ Date: _____

ESTATE OF
JOHN T. OXLEY

Re: Greenhill Materials
Quarry rock processing area
Section 10, T20N, R14E
Rogers County, Oklahoma

Dear John:

The owners understand that rock crushing, rock screening, and rock manipulation operations are scheduled to be performed on the referenced property.

Very truly yours,

R. H. Harbaugh, Jr.
Attorney for the Owners

RHH:kp

MIDWEST ENVIRONMENTAL SERVICES, INC.
INSTRUCTION NO. 1
AIR EMISSIONS WORKSHEET FOR UNPAVED ROADS
AP-42 (9/85) 11.2.1

Sherwood Construction Co., Inc.
Greenhill Materials – Limestone Quarry and Rock Crushing Facility
Sections 2, 3, 10 and 11, T20N, R14E
Rogers County, Oklahoma

$E = K(5.9) \times (s/12) \times (S/30) \times (W/3)^{0.7} \times (w/4)^{0.5} \times [(365-P)/365]$
E = pounds of particulates per vehicle mile traveled where:

E = Emission Factor	Calculated Result
k = Particle Size Multiplier	From 11.2.1
s = Silt Content of Road Surface Material (%)	From 11.2.1
S = Mean Vehicle Speed (MPH)	Per Operator
W = Mean Vehicle Weight (Tons)	Per Operator
w = Mean No. of Wheels	Per Operator
P = Number of Days with at Least 0.01 in. of Precipitation Per Year	From 11.2.1

This calculation is performed for
(1) Plant roads (estimated 0.5 mile maximum)
(2) Haul roads (estimated 1.5 mile maximum)

The plant roads will be traveled by customers picking up crushed aggregate products in either 10 wheel dump trucks or 18 wheel truck/end-dump trailers.

The haul roads will be traveled primarily by large off-road haul trucks hauling between the mine and the crusher located at Anchor Stone Co.

Truck Type	Empty Weight	Ave. Loaded Weight	# of Wheels
10-wheel Dump Truck	36,000lbs(18Tons)	78,000lbs(39Tons)	10
18-wheel Truck/Dump Trailer	50,000lbs(25Tons)	90,000lbs(45Tons)	18
Off Road Haul Truck	93,000lbs(46.5Tons)	224,000lbs(112Tons) (Maximum)	6

VARIABLE	PLANT ROADS (0.5 Miles)	HAUL ROADS (1.5 Miles)
k (Dimensionless Factor)	0.5	0.5
s (% Silt)	11	9.6
S (MPH)	10	20
W (Tons)Emty & Full	31.75(Ave)	79.25(Ave)
w (No. of Wheels)	14(Ave)	6(Ave)
P (Days of 0.01 in.)	95	95
Average Annual Tons	500,000	1,500,000
VMT (Vehicle Miles Traveled)	500,000/20.5=24,390 loads	1,500,000/65.5 = 22,900 loads
	24,390 x 0.5m = 12,195 Miles	22,900 x 1.5 m = 34,350 Miles

* This is calculated by dividing average annual tons by average load (tons) and multiplying this result by road length (miles).

E (For Haul Roads) = pounds of particulates per vehicle mile traveled = 14.03 lbs

E (For Plant Roads) = pounds of particulates per vehicle mile traveled = 6.42 lbs

TOTAL-E (Plant Roads) = 6.42 x 12,195= 39 Tons

TOTAL-E (Haul Roads) = 14.03 x 34,350 = 241 Tons

Total Annual Emissions using water spray for dust control (90% efficiency)

<u>From Plant Roads</u>
39 Tons x 0.1 = 3.9 Tons

<u>From Haul Roads</u>
241 Tons x 0.1 = 24.1 Tons

Total annual controlled dust emissions from vehicular traffic on both haul roads and plant roads = 28 Tons/yr.

Instruction No. 3 provides information required for installations involving the storage and handling of organic materials. Four (4) information items are required to comply with Instruction No. 3.

1. Specify the geographical location of the installation.
   The Sherwood Construction Co., Inc. Greenhill Materials Limestone Quarry and Rock Crushing Facility is located in parts of sections 2, 3, 10 and 11, Township 20 North, Range 14 East, Rogers County, Oklahoma. The limestone aggregate processing plant that is the subject of this permit application is located at the far south end of the mining area, about 2 miles west of the west entrance to the Port of Catoosa, and north of highway 266. (See figure 3)

2. Storage tanks – 40,000 gallons or greater capacity.
   Not applicable.

3. Storage tanks – 250 to 40,000 gallons capacity.

   The following information applies to two identical aboveground storage tanks at the facility:

(a) Description of materials to be stored in tank.	Diesel
(b) Vapor pressure of material to be stored.	0.012
(c) Tank capacity.	10,000 gallons
(d) Tank dimensions, diameter, height, and color.	9' diameter,30' length, White
(e) Discharge depth and diameter of the submerged Fill pipe.	5' depth, 3" diameter
(f) Description of vapor control procedures.	None other than submerged fill pipe
(g) Tank throughput in gallons per year.	20,000 gallons (maximum)

4. Loading facilities.
   Not applicable

Instruction No. 4 provides information required for installations involving fuel-burning equipment. Nine (9) information items are required to comply with Instruction No. 4.

1. Description of the operation and the proposed fuel-burning equipment.
   The proposed fuel-burning equipment consists of a 545 KW Model 3412 Catepillar Generator Set powered by a 1649 Cu. inch water-cooled (v-12) four stroke, diesel engine. This unit provides power to run the Greenhill Materials Limestone Crushing Facility.

2. Maximum, rated, and normal heat input capacities of the equipment in Btu per hour.
   Maximum Heat Input = 1.09 Million BTU/Hr.
   Rated Heat Input = 0.87 Million BTU/Hr.
   Normal Heat Input = 0.76 Million BTU/Hr.

3. Fuel(s) used, sulfur content in fuel average and maximum, heat content (average) as fired.
   Fuel used - No. 2 Diesel
   Sulfur Content - 0.4%
   Average Heat Content - 137,000 BTU/Gal.

4. Fuel consumption capacity at maximum, rated, and normal firing in gallons per hour for oil.
   At Maximum Heat Input = 8.0 Gallons/Hr.
   At Rated Heat Input = 6.4 Gallons/Hr.
   At Normal Heat Input = 5.5 Gallons/Hr.

5. Hours of operation per day, days per week, and weeks per year.
   Hours of Operation - 10 Hours/Day
   (Normal) - 5 Days/Week
   -50 Weeks/Year
   -OR-
   (Maximum) - 2,500 Hours/Year

6. Expected air Emissions in pounds per million Btu, pounds per hour, and tons per year. Source of Emission Factors: AP-42, Table 3.3-1 (10/96).

	EMISSION FACTORS		FUEL BURNED	EMISSIONS
POLLUTANT	LB/MMBTU	LB/1,000 GAL	10^3GAL/YEAR	TONS/YEAR
NO_X	4.41	604.2	16.0	4.8
CO	0.95	130.1	16.0	1.04
SO_X	0.29	39.7	16.0	0.32
PM-10	0.31	42.1	16.0	0.34
TOC (Total)	0.36	50.7	16.0	0.41

7. If unit has a rated heat input of 50 million Btu per hour or greater.....
   Not Applicable.

8. Specify monitoring equipment to be installed.
   None.

9. Include the following items of information as specified and listed in Instruction No. 1:

Item 11. Facility Plot Plan	See Figure 2
Item 12. Area Plot Plan	See Map 1
Item 13. Fugitive Dust Control	See Figure 1
Item 14. Stack Data	Not Applicable
Item 15. Stack Sampling Facilities	Not Applicable
Item 16. Waste Material Handling	Not Applicable
Item 17. Air Pollution Control Equipment	Not Applicable

Re: Evaluation of Applicability Determination No. **99-034-C**
Greenhill Materials
Rogers County Limestone Quarry and Rock Crusher

Dear Mr. Milliger:

Enclosed is the permit authorizing construction of the referenced facility. Please note that this permit is issued subject to certain standard and specific conditions, which are attached. An application for a minor source-construction permit, along with the appropriate application fee, must be filed within 60 days following completion of construction.

Thank you for your cooperation in this matter. If I may be of further service, or you have any questions about this permit, please call me at (918) 461-7421.

Sincerely,

Jack Fly

SUBJECT: Evaluation of Permit Application No. **99-034-C**
Greenhill Materials
Rogers County Quarry and Portable Rock Crushing Plant
Catoosa, Rogers County
Driving Directions: 2.1 miles west from intersection of Tulsa 193rd Ave east, and state highway 266 (Port of Catoosa Road)

INTRODUCTION

The applicant has applied for a construction permit for a quarrying and limestone crushing operation (SIC 1422). This facility provides crushed limestone for the construction, road-building, and agricultural industries. Crushing and screening accomplish reduction of the extracted rock to finished marketable sizes. Even though the rock-crushing machine is capable of being highway portable, Greenhill does not have any immediate plans to relocate the crusher.

The rock to be crushed and screened will be trucked to the crushing location from the contiguous Rogers County Quarry (operated under this permit by Greenhill Materials). The rock crusher consists of a hopper/primary crusher, secondary crusher, screen, twelve conveyors, two radial stackers, and a 545 kW electrical generator set powered by a 820-bhp diesel engine. The generator furnishes power to drive each motor driving each piece of equipment i.e., crushers, conveyors, etc.

PROCESS DESCRIPTION

The quarried, stockpiled rock will be transferred from the raw material piles to the hopper by front-end loader. The hopper feeds the primary jaw crusher at the maximum rate of 300 TPH. Conveyors B, C, and D take the crushed rock from the primary crusher to the secondary crusher (all conveyors are in-line conveyors in that they all transport the same amount of rock in series, continuously). Conveyor F takes 300 TPH to the screen. 50 TPH is screen "fall through" which goes to the radial shaker (the device that stock piles the crushed rock by size) via conveyors O, M, and N. There are two additional rock streams from the screen i.e., conveyors J, K, and L take 200

TPH to the "base rock" pile, and the other stream of 50 TPH goes back to the secondary crusher (needs further crushing) via conveyors H and I. These operations produce 300 TPH of stockpiled crushed rock. The front-end loaders will then load the delivery trucks from the product piles.

The rock crusher is designed to be "road portable" i.e., specific width and length after break down. In order for the crusher unit to meet the operational and road requirements an unusual number of conveyors are necessary.

The facility will operate an estimated 2,500 hours/year, and produce an estimated 750,000 TPY of crushed limestone.

The fuel for the diesel engine will be stored in a 10,000 gallon, bottom fill tank located on-site.

EMISSIONS

The rock quarrying and crushing operations cause air emissions from the quarrying of rock, truck travel dust, erosion of raw and finished rock stockpiles, rock processing (crushing, screening, and conveying), and the products of combustion from the diesel engine. Emission quantities and calculations follow in the order mentioned above

Quarrying

The emissions from the operations necessary to get the rock out of the earth are considered negligible, or there are no reliable emissions factors to estimate their quantity (AP42, 1/95, Chapter 11.19.2).

Truck Travel, Stockpile Erosion, and Other

Trucks haul uncrushed rock from the quarry to the crusher site, and then export the finished crushed rock. Fugitive dust from truck traffic is calculated from AP-42 (9/98), Section 13.2.2, p.3. The truck road/miles emission factor equation is $E = [k(s/12)^a (W/3)^b]/(M/0.2)^c$ in tons of particulate per vehicle miles. All factors except the truck weight were obtained from the AP-42 document. The truck weight is from the Greenhill application data.

Parameter	Unit	Parameter Values	
		PM_{10}	TSP
E	Calculated Emission Factor (lb/VMT)	3.59	14.82
k	Empirical constant	2.6	10
s	Silt factor	9.0	9.0
W	Mean truck weight, loaded (ton)	80	80
M	Road surface moisture content	2.5	5.0
a	Empirical constant	0.8	0.8
b	Empirical constant	0.4	0.5
c	Empirical constant	0.3	0.4

Other fugitive dust emissions include particulate emissions from continuous drop operations of material to the stockpile from the radial stacker or batch drop operations of material to dump trucks

from the front-end loader, and wind erosion of stockpiles. Estimates of particulate emissions from batch drop/continuous operations are based on the emission factors of AP-42 (1/95), Section 13.2.4.3, Eqn. (1). Fugitive emissions from stockpiles due to wind erosion are based on the emission factor in AP-42 (9/91), Table 8.19.1-1 and that there are 230 "active" (workdays), 53 "inactive" (days of no activity and without precipitation) and 82 days of rain per year (National Weather Service's mean number of days of precipitation for the Tulsa area). Quantities are shown below.

PM_{10} Emissions Calculations for All Fugitive Sources

Process	Emission Factor	Parameters	Emissions	
			lb/hr	TPY
Loading : Track-hoe loader to feeder Piling: Radial stacker to product pile Loading: Loader to truck	0.007 lbs./ton/transfer	2.7×10^5 TPY x 3 transfers	9.0	11.25
Truck traffic (1):	PM_{10} factor 3.59lb/mile TSP factor 14.82 lb/mile	46,545 miles	20.05 PM_{10} 82.8 TSP	25.06 PM_{10} 103.59 TSP
Wind erosion of product and raw material stockpiles	6.3 lbs./acre/day (active) +	0.10 acres active	0.60	0.76
	1.7 lbs./acre/day (inactive)	1.0 inactive	1.7	2.13
		Total PM_{10} Fugitives→	31.35	39.2

(1) Road dust is calculated using 70% efficient water control

Rock Crushing

The rock processing machinery will use a dust suppression system (spray bar). The emissions from the crushing and conveying operations were determined using the manufacturer's efficiency rating of 90% and the emission factors from AP-42 (1/95) Table 11.19.2-2.

Rock Crushing Process, PM10 Emissions

Equipment/ Activity	Manufactured Date	Process Rate		Emission Factor (lbs/ton)	Control Efficiency	Emissions	
		TPH	TPY			lbs/hr	TPY
Feeder	1994	300	750,000	0.000016	0%	0.005	.006
Jaw Crusher	1994	300	750,000	0.00240	80%	0.14	0.18
Impact Crush.	1994	300	750,000	0.00240	80%	0.14	0.18
Screen	1994	300	750,000	0.015	90%	0.45	0.56
12 Conveyors	1994	300	750,000	0.0014	80%	5.04	6.36
Radial Stacker	1994	150	375,000	0.0014	90%	0.21	0.26
Radial stacker	1999	150	375,000	0.0014	90%	0.21	0.26
					Totals→	6.195	7.806

Engine Emissions

Diesel Combustion Emissions

Caterpillar Diesel Engine	bhp	Uncontrolled Emissions									
		NO_x		VOC		CO		SO_2		PM_{10}	
		lb/hr	TPY	lb/hr	TPY	lb/hr	TPY	lb/hr	TPY	lb/hr	TPY
3412	820	13.6	17.0	0.13	0.16	0.48	0.60	2.73	3.41	5.52	6.9

Emissions are based on 2,500 hours per year, 730 brake horsepower burning 40 gallons per hour of diesel fuel @ 138,000 BTU/gal. NO_x, CO and VOC emissions are based on Caterpillar data. PM is based on AP-42 (10/96), Table 3.3-1. The SO_2 emissions are based on the the diesel fuel containing a maximum of 0.6%w Sulfur.

Estimated engine emissions are based on continuous operations using Caterpillar's data (7.5 g/hp-hr NO_x, 0.3 g/hp-hr CO, 0.1 g/hp-hr THC). Brake-specific fuel consumption for the Caterpillar 3412 engine has been listed at 6,732 BTU/hp-hr for a fuel consumption of 40 gallons per hour. Emissions from the engine are discharged through a stack 8 inches in diameter, 10.0 feet above grade, at a rate of 4,588 ACFM at 878 °F. Moisture content of stack gases has been estimated at 10% while delivering rated power. Dry-basis pollutant concentrations are calculated for the engine at1,692 ppm NO_x, 96 ppm CO, and 53 ppm NMHC expressed as propane at rated power.

There will be a 10,000-gallon diesel storage tank at the plant that fuels the diesel engine. Due to the very low vapor pressure of diesel, VOC emissions from this tank are considered negligible.

Facility-wide Total Emissions

Source Type	NO_x		VOC		CO		SO_2		PM_{10}	
	lb/hr	TPY	lb/hr	TPY	lb/hr	TPY	lb/hr	TPY	lb/hr	TPY
Process Equipment	---	---	---	---	---	---	---	---	6.20	7.81
Fugitive (1)	---	---	---	---	---	---	---	---	31.35	39.20
Diesel Engine	13.6	17.0	0.13	0.16	0.48	0.60	2.73	3.41	5.52	6.9
Totals →	**13.6**	**17.0**	**0.13**	**0.16**	**0.48**	**0.60**	**2.73**	**3.41**	**43.07**	**53.91**

(1) Fugitives include road travel, loading/unloading,and stockpile erosion

FEDERAL REGULATIONS

PSD 40 CFR Part 52 [Not Applicable]

Final total emissions are less than the threshold of 250 TPY of any single pollutant and the facility is not one of the 26 specific industries with a threshold of 100 TPY.

NSPS, 40 CFR Part 60 [Not Applicable]

Subpart Kb applies to storage vessels constructed or modified after July 23, 1984, with a capacity of 10,567 gallons or more. As proposed, the diesel storage tank will have a capacity of 10,000 gallons. Therefore, this Subpart is not applicable.

NSPS, 40 CFR Part 60 [Applicable]

Subpart OOO (Non-Metallic Minerals Processing Plants) applies to non-metallic minerals processing operations if either (1) they are in a fixed location and have a capacity greater than 25 TPH, or (2) they are portable and have a capacity of 150 TPH or more. The following facilities at a non-metallic minerals processing plant that commenced construction, reconstruction, or modification after August 31, 1983, are affected by Subpart OOO: each crusher, grinding mill, bucket elevator, screening operation, belt conveyor, bagging operation, storage bin, and enclosed truck or railcar loading station. Excluded from the list of affected facilities are truck dumping and transfer points from belt conveyors to stockpiles. Subpart OOO specifies the following standards for fugitive emissions of particulate matter: no fugitive emissions discharge from any crusher greater than 15% opacity nor any discharge from any other affected facility greater than 10%. The capacity of this portable plant is given in the application as 300 TPH through the crusher and all but one conveyor and 300 TPH for the screen. Therefore, this facility is subject to Subpart OOO. The following pieces of equipment are specifically subject to Subpart OOO:

Equipment	Date of Manufacture	Capacity/ Throughput (TPH)	Opacity Limits
Hopper loading	1994	300	10 %
Primary crusher	1994	300	15 %
Secondary crusher	1994	300	15%
Screen	1994	300	10 %
Belt Conveyor(1)	1994	300	10 %
Radial Stackers	1994	300	10 %

(1) There are 12 conveyors, this is the maximum amount transported by any one of them.

NESHAP, 40 CFR Part 61 [Not Applicable]

There will be no emissions of the pollutants subject to regulation under 40 CFR 61 except benzene from the diesel storage tank. Subpart J affects process streams, which contain more than 10% benzene by weight. Benzene is present only in much lesser amounts in diesel.

NESHAP, 40 CFR Part 63 [Not Applicable]

There are no promulgated MACT standards which affect this facility. There is, however, a proposed standard, "Stationary Internal Combustion Engines," due in November, 2000, which may affect the diesel engine.

40 CFR Part 68

Chemical Accident Prevention Provisions [Not Applicable]

This facility does not process or store more than the threshold quantity of any regulated substance (Section 112r of the Clean Air Act 1990 Amendments). More information on this federal program is available on the web page: *www.epa.gov/ceppo*

OKLAHOMA AIR POLLUTION CONTROL RULES

OAC 252:100-1 (General Provisions) [Applicable]
Subchapter 1 includes definitions but there are no regulatory requirements.

OAC 252:100-3 (Air Quality Standards and Increments) [Applicable]
Primary Standards are in Appendix E and Secondary Standards are in Appendix F of the Air Pollution Control Rules. At this time, all of Oklahoma is in attainment of these standards.

OAC 252:100-4 (New Source Performance Standards) [OOO Applicable]
Federal regulations in 40 CFR Part 60 are incorporated by reference as they exist on July 1, 1997, except for the following: Subpart A (Sections 60.4, 60.9, 60.10, and 60.16), Subpart B, Subpart C, Subpart Ca, Subpart Cb, Subpart Cc, Subpart Cd, Subpart AAA, and Appendix G.

OAC 252:100-5 (Registration, Emission Inventory, and Annual Fees)] [Applicable]
The owner or operator of any facility that is a source of air emissions shall submit a complete emission inventory annually on forms obtained from the Air Quality Division

OAC 252:100-6 (Permitting) [Applicable]
This Subchapter contains definitions, types of permits, and processing requirements pertaining to the Uniform Permitting Rules, OAC 252:2.

OAC 252: 100-7 (Permits for Minor Facilities) [Applicable]
This site meets the conditions for a minor permit because there is no emission of any regulated pollutant of 100 TPY or more. As such, BACT consideration, modeling, and public review are not required

OAC 252:100-8 (Permits for Part 70 Sources) [Not Applicable]
In addition to the permitting criteria under Subchapter 7, a source may require permitting under this Subchapter if it has emissions of HAPs in excess of 10 TPY for any one HAP or in excess of 25 TPY for any combination of HAPs. The facility has no HAP emissions and is not subject to this rule.

OAC 252:100-9 (Excess Emission and Malfunction Reporting) [Applicable]
This Subchapter requires an owner or operator of a regulated facility to report all excess emissions from an air pollution source caused by malfunction, shutdown, start-up, or regularly scheduled maintenance that is in violation of the applicable air pollution control rule.
Standard conditions in the permit assure compliance with this requirement.

OAC 252:100-13 (Prohibition of Open Burning) [Applicable]
This Subchapter states that no person shall cause, suffer, allow, or permit open burning of refuse and other combustible material except as may be allowed in compliance with OAC 252:100-13-7. Section 100-13-7 permits open burning as specified in the paragraphs set forth if no public nuisance is or will be created and if the burning is not prohibited by, and is conducted in compliance with, other applicable laws and the ordinances, rules, and orders of governmental

entities having jurisdiction, including air pollution control ordinances, rules, and orders. Specific condition 8 allows open burning only by separate approval of the Air Quality Division.

OAC 252:100-19 (Particulate Matter From Fuel-burning Equipment) [Applicable]
Subchapter 19 specifies a PM emission limit of 0.6 lb/MMBTU for fuel-burning equipment for the size of this facility/diesel engine (5.50 MMBTUH). The PM from this engine at rated power is 0.29 lb/MMBTU, which is in compliance.

OAC 252:100-25 (Visible Emissions and Particulates) [Applicable]
This Subchapter states that no person shall allow the discharge of any fumes, aerosol, mist, gas, smoke, vapor, particulate matter, or any combination thereof exhibiting greater than 20% opacity except for short term occurrences, which consist of not more than one six-minute (6) period in any consecutive 60 minutes, not to exceed three such periods in any consecutive 24-hour period. In neither case shall the average of any six-minute (6) period exceed 60% opacity. NSPS Subpart OOO is more restrictive and takes precedence over all process equipment except belt conveyors which have maximum capacities less than 300 TPH.

OAC 252:100-27 (Particulate Matter from Industrial Processes) [Applicable]
This Subchapter applies to any process, operation, or activity except fuel-burning equipment. The regulation specifies an emission limitation of 58.2 lb/hr of particulate matter based on the proposed process weight rate of 300 TPH. The emissions rate of this facility is 20.89 lb/hr, which is in compliance.

OAC 252:100-29 (Fugitive Dust) [Applicable]
This Subchapter prohibits the handling, transportation, or disposition of any substance or material which is likely to be scattered by the air or wind, or is susceptible to being wind-borne, that would be classified as air pollution, without taking reasonable precautions or measures to minimize atmospheric pollution. Subchapter 29 further prohibits discharge of visible fugitive dust beyond the property line on which the emissions originated in such a manner as to damage or interfere with the use of adjacent properties, or cause air quality standards to be exceeded, or to interfere with the maintenance of air quality standards.

OAC 252:100-31 (Sulfur Compounds) [Applicable]
Subchapter 31 prohibits discharge into the atmosphere of SO_2 in excess of 0.8 lb per million BTU of heat input from fuel-burning equipment using liquid fuels. This engine is calculated to exhaust 0.50 lb/MMBTU of SO_2 at rated power burning 40 GPH (containing a maximum of 0.6%w S) at 138,000 BTU/gal. The facility is in compliance.

OAC 252:100-37 (Volatile Organic Compounds) [Applicable]
This Subchapter affects volatile organic compound (VOC) storage tanks with a capacity between 400 and 40,000 gallons storing a liquid with a vapor pressure of 1.5 psia or more. Since only diesel (vapor pressure < 0.01 psia) is to be stored at this facility, the diesel storage tank is not subject to this Subchapter.
Part 7 requires fuel-burning and refuse-burning equipment to be operated to minimize emissions of VOC. The diesel engine is subject to this requirement.

OAC 252:100-41 (Hazardous and Toxic Air Contaminants) [Not Applicable]
No toxic emissions above de minimis levels are expected.

OAC 252:100-43 (Specific Sampling and Testing Methods) [Applicable]
Part 1 specifies that all required testing must be conducted by methods approved by the Executive Director under the direction of qualified personnel.
All required tests shall be made and the results calculated in accordance with test procedures described or referenced in the permit and approved by Air Quality.
Part 3 specifies specific methods to be used to determine leakage from gasoline trucks and associated vapor control systems.
This facility does not include gasoline tank truck loading facilities.

In summary of Oklahoma OAC Rules, the following are not applicable to this facility:

OAC 252:100-11	Alternative Emissions Reduction	not requested
OAC 252:100-15	Mobile Sources	not in source category
OAC 252:100-17	Incinerators	not type of emission unit
OAC 252:100-21	PM from Wood waste Burning	not type of emission unit
OAC 252:100-23	Cotton Gins	not type of emission unit
OAC 252:100-24	Grain Elevators	not in source category
OAC 252:100-33	Nitrogen Oxides	exempted by size
OAC 252:100-35	Carbon Monoxide	not in source category
OAC 252:100-37	Part 5 - Control of Organic Solvents	exempted by size
OAC 252:100-39	Nonattainment Areas	not in area category
OAC 252:100-41	Part 3 - NESHAP	not in source category
OAC 252:100-43	Part 3 - Specific Methods	not in source category

TIER CLASSIFICATION AND PUBLIC REVIEW

This application has been classified as Tier I based on the application data received for a minor source construction permit. The applicant has submitted an affidavit that they are not seeking a permit for land use or for any operation upon land owned by others without their knowledge. The affidavit certifies that the applicant has provided legal notice to those that do own the property. The status of all permit actions is available to the public in the Air Quality section of the DEQ Web Page at *www.deq.state.ok.us.*

INSPECTION

A site inspection will be conducted prior to issuing an operating permit. The inspection will confirm construction permit Specific Conditions, review test results, and check that required records are being maintained.

FEES PAID

Construction and operating permit fees totaling $1500 have been paid.

SUMMARY

The source has demonstrated the ability to comply with the requirements of the applicable air pollution control rules and regulations. Ambient air quality standards are not threatened at the site. There are no active Compliance or Enforcement Air Quality issues concerning this facility. Issuance of the construction permit is recommended.

PERMIT TO CONSTRUCT
AIR POLLUTION CONTROL FACILITY
SPECIFIC CONDITIONS

Greenhill Materials
Quarry and Rock Crusher

Permit No. 99-034-C

The permittee is authorized to construct in conformity with the specifications submitted to Air Quality on August 10, 1999. The Evaluation Memorandum, dated October 4, 1999, explains the derivation of applicable permit requirements and estimates of emissions; however, it does not contain operating limitations or permit requirements. Commencing construction and operations under this permit constitutes acceptance of, and consent to, the conditions contained herein:

1. Points of emission and emission limitations:

Equipment Activity	Emissions		NSPS Applicable
	lb/hr	TPY	Yes/No
Feeder	0.005	.006	Y
Jaw Crusher	0.14	0.18	Y
Impact Crusher	0.14	0.18	Y
Screen	0.45	0.56	Y
12 Conveyors	5.04	6.36	Y
Radial Stacker	0.21	0.26	Y
Radial Stacker	0.21	0.26	Y
Fugitives	31.35	39.20	N

Equip.	Caterpillar	bhp	Uncontrolled Emissions									
			NO_x		VOC		CO		SO_2		PM_{10}	
			lb/hr	TPY	lb/hr	TPY	lb/hr	TPY	lb/hr	TPY	lb/hr	TPY
ENG	3412	820	13.6	17.0	0.13	0.16	0.48	0.60	2.73	3.41	5.52	6.9

2. Upon issuance of an operating permit, the permittee shall be authorized to operate this facility with process limitations of 2,500 hours/year at a process weight rate up to but not to exceed 300 TPH (daily"working day" average), and 750,000 TPY.

3. Equipment/activities listed in Specific Condition #1 subject to NSPS Subpart OOO shall comply with the following opacity standards:

Hopper loading:	10 %
Primary crusher:	15 %
Second crusher:	15%
Screen:	10 %
Belt Conveyors:	10 %
Radial Stackers:	10 %

4. The permittee shall conduct opacity testing by Reference Method 9 for the primary crusher, each screen, and each transfer point of the conveyors (all as near as practical to equipment design capacity) within 180 days after initial startup, and submit the test report to Air Quality as part of the operating permit application.

5. The Caterpillar 3412 engine shall only use diesel fuel with a maximum sulfur content of 0.6%w.

6. Reasonable precautions shall be taken to minimize fugitive dust emissions from loading and unloading operations, roads, and stockpiles. These precautions shall include, but not be limited to:

a) Use of water or chemicals on roads, stockpiles, and materials during transfer operations.
b) Application of other coatings or coverings to substances susceptible to becoming air-borne or wind-borne.
c) Covering or wetting material in trucks.
d) Planting and maintaining vegetation coverings or windbreaks.
e) Locate stockpiles as to provide minimum exposure to high winds and avoid open spaces in line with neighboring homes and businesses.
f) All crusher spray bars should be fully operational when crusher is operating

7. The permittee may relocate any portable sources covered under this permit by obtaining a relocation permit in accordance with OAC 252:100-7-17 prior to relocating the portable source to another site. Relocating of such a source without a relocation permit shall void this operating permit for that source and subject the new facility to stationary source permit requirements.

8. Open burning may be allowed at this facility only by separate approval of the AQD, and only when performed in accordance with OAC 252:100-13.

9. An engine serial number or other acceptable form of permanent (non-removable) identification shall be on the engine.

10. At least once per calendar quarter, the permittee shall conduct tests of NO_x and CO concentrations in the exhaust gases from the engine. Testing is required for any engine which runs for more than 220 hours during that calendar quarter. Testing shall be conducted using portable engine analyzers or an equivalent method approved by Air Quality. When four consecutive quarterly tests show the engine to be in compliance with the emissions limitations shown in the permit, then the testing frequency may be reduced to semi-annual testing. Likewise, when any following two consecutive semi-annual tests show compliance, the testing frequency may be reduced to annual testing. Upon any showing of non-compliance with emissions limitation, the testing frequency shall revert to quarterly. Reduced testing frequency does not apply to engines with catalytic converters.

11. Replacement (including temporary periods of up to six months for maintenance, etc.) of the internal combustion engine(s) shown in this permit with an engine(s) of lesser or equal emissions of each pollutant is authorized under the following conditions:

a. The permittee shall notify AQD in writing not later than 7 days in advance of the startup of replacement engines/turbines. Said notice shall identify the equipment removed and shall include the new engine/turbine make, model, and horsepower; date of the change, and any change in emissions.

b. Emissions limitations on a ppm basis shall be calculated as follows:

$$\text{Stack Flow (SCFH)} = \frac{\text{ACFM} * 60 \text{ min/hr} * 528 \text{ °R}}{(460 + \text{stack temp, °F})}$$

Moisture Content = 10%

$$NO_x \text{ ppm} = \frac{NO_x \text{ emissions (lb/hr)} * 380 \text{ SCF/lb-mole}}{30 \text{ lb/lb-mole} * \text{stack flow(SCFH)} * (1 - \text{moisture content})} * 10^6$$

$$\text{CO ppm} = \frac{\text{CO emissions (lb/hr)} * 380 \text{ SCF/lb-mole}}{28 \text{ lb/lb-mole} * \text{stack flow(SCFH)} * (1 - \text{moisture content})} * 10^6$$

c. Quarterly emissions tests for the replacement engine shall be conducted to confirm continued compliance with NO_x and CO concentration limitations. Quarterly testing, recordkeeping, and excess emission reporting procedures shall be the same for the replacement engine as for the original engine. A copy of the first quarter testing shall be provided to AQD within 30 days of start-up of each replacement engine. The test report shall include the engine/turbine fuel usage, stack flow (ACFM), stack temperature (°F), stack height (feet), stack diameter (inches), and pollutant emission rates (g/hp-hr, lb/hr, and TPY) at maximum rated horsepower for the altitude/location.

12. When periodic testing of engine exhausts shows concentrations in excess of those shown below and in excess of the lb/hr limits in Specific Condition Number 1, the owner or operator shall comply with the provisions of OAC 252:100-9.

Engine	NO_x ppm	CO ppm
Caterpillar Model G3412	1,692	96

13. The permittee shall keep records of operations as listed below. These records shall be retained on location or at a local field office for a period of at least two years following dates of recording, and shall be made available to regulatory personnel upon request.

(a) Throughput of the crusher (daily and cumulative annual).
(b) Hours of operation (daily and cumulative annual)
(c) Certification of sulfur content for each fuel delivery.
(d) Daily use of water used for PM control.
(e) Periodic engine testing for NO_x and CO.

Air Quality Division
State of Oklahoma
Department of Environmental Quality
Attn: Mr. Jack Fly
5051-A South 129th E. Ave.
Tulsa, OK

Dear Mr. Fly:

Please find attached the Landowner Notification Affidavit, Form 884 Permit Application and a check for $500.00 as we apply for an operational status air quality permit.

The only changes from the construction permit application is the replacement of the 1994 Jaw Crusher with a 2001 Impact Crusher at the primary and the elimination of the Caterpillar Diesel powered generator. The need for the generator was eliminated due to the installation of AEP/PSO supplied electricity.

I thank you for your assistance in this matter. If you have any questions or advice, please feel free to call me. Thank you.

Sincerely,
Greenhill Materials

David M. Cooper

DEQ LANDOWNER NOTIFICATION AFFIDAVIT

Tier I, II, or III permit applications in which the applicant does not own all the land subject to the application must notify the owner(s). The basis for this requirement is Title 27A of the Oklahoma Statutes, Supplement 1996, § 2-14-103(9), as described in OAC 252:002-15-30(b)(3).

Please note that you MUST fill out and return this affidavit even if you don't have to give any landowner notice.

A	NOTICE TO THE LANDOWNER(S) IS NOT REQUIRED because: (check one)		
	My application does not involve any land		My application involves only land owned by me (or applicant business)

OR

B	NOTICE TO THE LANDOWNER(S) IS REQUIRED because the land is owned by someone other than myself or the applicant business AND I HAVE NOTIFIED the following (check one):		
	Landowner(s)	X	Lessor or Administrator or Executor of the land
METHOD OF DELIVERY (check one):			
X	Actual notice, for which I have a signed and dated receipt		
	Service by Sheriff or private process server, for which I have an affidavit		
	Service by certified mail, restricted delivery, for which I have a signed return receipt		
	Legal publication, for which I have an affidavit of publication from the newspaper, because the landowners could not be located through due diligence		
MY RIGHT TO USE THIS LAND is by:			
X	Lease		Easement		Other, Specify	

LANDOWNER AFFIDAVIT CERTIFICATION			
I, as the applicant or an authorized representative of the applicant, hereby certify that notice to the landowner(s) about the permit application for the facility described below was provided per Option A or B above.

Driving Directions: North on Hwy No. 169 to 46 St North, East on 46 St for about 2 miles to RR Tracks then hard left and there you are.

INTRODUCTION

The applicant has applied for an operating permit for a quarrying and limestone crushing operation (SIC 1422). This new facility was built on construction permit 99-034-C. The facility was built as described in the construction permit except: (1) the rock crusher's electric motor driver is powered by purchased power in place of the diesel engine driven generator, and (2) a pug mixer was installed which was not on the construction permit. The diesel engine driven electric generator is no longer part of the rock crusher and will either be removed or put to another use under a permit modification. The pug mixer is included in this operating permit.

This facility provides crushed limestone for the construction, road-building, and agricultural industries. Crushing and screening prepare the quarried rock to specified sizes. Even though the rock-crushing machine is capable of being highway portable, GHM does not have any immediate plans to relocate the crusher.

EQUIPMENT

The rock crusher consists of a hopper/primary crusher, secondary crusher, screen, twelve conveyors, and two radial stackers. All moving parts of the crusher are driven by electric motors which requires a total power consumption of 545 kW.

Rock Crusher
MFG.: Kolberg
Model: 3850
S/N 403073-403074
Max Rate: 5500 TPH

The portable pug mixer is driven by a 95 hp John Deere diesel engine. The unit consists of one hopper, one conveyor, and a mixer.

Pug Mixer
MFG.: PorTec
Model: Kolberg Model 52
S/N 002-52-93
Max Rate: 300 TPH

PROCESS DESCRIPTION

This facility does rock quarrying from virgin earth, rock crushing/sizing, pug mixing, and the necessary rock transporting. The quarried rock is trucked from the blasting area to the crusher area and stockpiled.

The stockpiled quarried rock is dumped into the crusher hopper using a diesel-powered front-end loader. The hopper feeds the primary jaw crusher at the maximum rate of 300 TPH. Conveyors B, C, and D take the crushed rock from the primary crusher to the secondary crusher (all conveyors are in-line conveyors in that they all transport the same amount of rock in series, continuously). Conveyor F takes 300 TPH to the screen. 50 TPH is screen "fall through" which goes to the radial shaker (the device that stock piles the crushed rock by size) via conveyors O, M, and N. There are two additional rock streams from the screen i.e., conveyors J, K, and L take 200 TPH to the "base rock" pile, and the other stream of 50 TPH goes back to the secondary crusher (needs further crushing) via conveyors H and I. These operations produce 300 TPH of stockpiled crushed rock. The front-end loaders will then load the delivery trucks from the desired sized rock piles.

On customer demand, some of the crushed rock is run through the pug mixer. The portable Pug Mixer is nothing more than a diesel engine driven mixing operation where crushed rock is dumped into a hopper by a front-end loader. The rock is then conveyed to the mixer which contains the required amount of water. The purpose for this operation is to meet customer moisture specifications.

The rock crusher is designed to be "road portable" i.e., specific width and length after break down. In order for the crusher unit to meet the operational and road requirements an unusual number of conveyors are necessary.

The facility operates an estimated 2,500 hours/year, and produce an estimated 750,000 TPY of crushed limestone. The pug mixer will process an estimated 500,000 TPY of the previously crushed rock.

The fuel for the diesel engines is stored in a 10,000 gallon, bottom fill tank located on-site.

EMISSIONS

The facility emissions are particles from blasting; wind driven particles from roads during rock transportation and from rock piles; rock crushing (which includes conveying within the crusher, screening, and stock piling); and pug mixer operations. Some other emissions are the products of combustion from the diesel engine which drives the pug mixer. The analysis of the facility emission is contained in the following paragraphs.

Quarrying

The emissions from the operations necessary to get the rock out of the earth are considered negligible or there are no reliable emissions factors to estimate their quantity (AP42, 1/95, Chapter 11.19.2).

Truck Travel, Stockpile Erosion, and Other

Trucks haul uncrushed rock from the quarry to the crusher site and then export the finished crushed rock. Fugitive dust from truck traffic is calculated from AP-42 (9/98), Section 13.2.2, p.3. The truck road/miles emission factor equation is $E = [k(s/12)^a (W/3)^b]/(M/0.2)^c$ in tons of particulate per vehicle miles. All factors except the truck weight were obtained from the AP-42 document. The truck weight is from the Greenhill application data.

Parameter	Unit	Parameter Values	
		PM_{10}	TSP
E	Calculated Emission Factor (lb/VMT)	3.59	14.82
k	Empirical constant	2.6	10
s	Silt factor	9.0	9.0
W	Mean truck weight, loaded (ton)	80	80
M	Road surface moisture content	2.5	5.0
a	Empirical constant	0.8	0.8
b	Empirical constant	0.4	0.5
c	Empirical constant	0.3	0.4

Other fugitive dust emissions include particulate emissions from continuous drop operations of material to the stockpile from the radial stacker or batch drop operations of material to dump trucks from the front-end loader, and wind erosion of stockpiles. Estimates of particulate emissions from batch drop/continuous operations are based on the emission factors of AP-42 (1/95), Section 13.2.4.3, Eqn. (1). Fugitive emissions from stockpiles due to wind erosion are based on the emission factor in AP-42 (9/91), Table 8.19.1-1 and that there are 230 "active" (workdays), 53 "inactive" (days of no activity and without precipitation) and 82 days of rain per year (National Weather Service's mean number of days of precipitation for the Tulsa area). Quantities are shown following.

PM_{10} Emissions Calculations for Quarry Fugitive Sources[2]

Process	Emission Factor	Parameters	Emissions lb/hr	Emissions TPY
Loading: Track-hoe loader to feeder	PM_{10} factor 0.007 lbs./ton/transfer	2.7×10^5 TPY x 3 transfers	9.0	11.25
Piling: Radial stacker to product pile				
Loading: Loader to truck

Wind erosion of product and raw material stockpiles	6.3 lbs./acre/day (active) + 1.7 lbs./acre/day (inactive)	0.10 acres active 1.0 inactive	0.60 1.7	0.76 2.13
		Total PM_{10} Fugitives→	31.35	39.2

(1) Road dust is calculated using 70% efficient water control. (2) Does not include pug mixer or rock crusher emissions.

Rock Crushing

The rock processing machinery uses a dust suppression system (spray bar). The emissions from the crushing and conveying operations were determined using the manufacturer's efficiency rating of 90% and the emission factors from AP-42 (1/95) Table 11.19.2-2.

Rock Crushing Process, PM_{10} Emissions

Equipment/ Activity	Manufactured Date	Process Rate TPH	Process Rate TPY	Emission Factor (lbs/ton)	Control Efficiency	Emissions lbs/hr	Emissions TPY
Feeder	1994	300	750,000	0.000016	0%	0.005	.006
Jaw Crusher	1994	300	750,000	0.00240	80%	0.14	0.18
Impact Crush.	1994	300	750,000	0.00240	80%	0.14	0.18
Screen	1994	300	750,000	0.015	90%	0.45	0.56
12 Conveyors	1994	300	750,000	0.0014	80%	5.04	6.36
Radial Stacker	1994	150	375,000	0.0014	90%	0.21	0.26
Radial stacker	1999	150	375,000	0.0014	90%	0.21	0.26
					Totals→	6.195	7.806

Pug Mixer

Pug Mixer, PM_{10} Emissions[1]

Equipment/ Activity	Manufactured Date	Process Rate		Emission Factor (lbs/ton)	Control Efficiency	Emissions	
		TPH	TPY			lbs/hr	TPY
Feeder	1994	300	550,000	0.000016	0%	0.005	0.004
1 Conveyors	1994	300	750,000	0.0014	80%	0.42	0.53
Totals						0.425	0.534

(1) Excluding PM10 from the Pug Mixer engine.

Engine Emissions

The engine emissions are based on 2,500 hours per year, 95 brake horsepower burning 4.7 gallons per hour of diesel fuel @ 138,000 BTU/gal. NO_x, CO, and VOC emissions are based on engine manufacturer data. PM_{10} is based on AP-42 (10/96), Table 3.3-1. The SO_2 emissions are based on the diesel fuel containing a maximum of 0.6%w Sulfur.

The emission factors for the John Deere 95 hp diesel engine are (7.5 g/hp-hr NO_x, 0.3 g/hp-hr CO, 0.1 g/hp-hr THC). Brake-specific fuel consumption for the J.Deere 4039T engine has been listed at 6,732 BTU/hp-hr for a fuel consumption of 4.7 gallons per hour.

There is a 10,000-gallon diesel storage tank at the plant that fuels the diesel engine. Due to the very low vapor pressure of diesel, VOC emissions from this tank are considered negligible.

The following table shows the results of the emissions calculations.

Diesel Combustion Emissions

Diesel Engine Data	bhp	Uncontrolled Emissions									
		NO_x		VOC		CO		SO_2		PM_{10}	
		lb/hr	TPY	lb/hr	TPY	lb/hr	TPY	lb/hr	TPY	lb/hr	TPY
J.Deere/4039T(E-2)	95	1.58	1.97	0.02	0.02	0.06	0.07	0.32	0.40	0.64	0.80
Totals		1.58	1.97	0/02	0.02	0.06	0.07	0.32	0.40	0.64	0.80

Facility-wide Total Emissions

Source Type	NO_x		VOC		CO		SO_2		PM_{10}	
	lb/hr	TPY	lb/hr	TPY	lb/hr	TPY	lb/hr	TPY	lb/hr	TPY
Process Equipment	---	---	---	---	---	---	---	---	6.20	7.81
Fugitive[1]	---	---	---	---	---	---	---	---	31.35	39.20
Diesel Engines	1.58	1.97	0.02	0.02	0.06	0.07	0.32	0.40	0.64	0.80
Totals →	**1.58**	**1.97**	**0.02**	**0.02**	**0.06**	**0.07**	**0.32**	**0.40**	**38.19**	**47.81**

(1) Fugitives include road travel, loading/unloading, and stockpile erosion

FEDERAL REGULATIONS

PSD 40 CFR Part 52 [Not Applicable]

PSD does not apply. Final total emissions are less than the threshold of 250 TPY of any single regulated pollutant and the facility is not one of the 26 specific industries with a threshold of 100 TPY.

NSPS, 40 CFR Part 60 [Not Applicable]

Subpart Kb applies to storage vessels constructed or modified after July 23, 1984, with a capacity of 10,567 gallons or more. As proposed, the diesel storage tank will have a capacity of 10,000 gallons. Therefore, this Subpart is not applicable.

Subpart OOO (Non-Metallic Minerals Processing Plants) applies to non-metallic minerals processing operations if either (1) they are in a fixed location and have a capacity greater than 25 TPH, or (2) they are portable and have a capacity of 150 TPH or more. The following facilities at a non-metallic minerals processing plant that commenced construction, reconstruction, or modification after August 31, 1983, are affected by Subpart OOO: each crusher, grinding mill, bucket elevator, screening operation, belt conveyor, bagging operation, storage bin, and enclosed truck or railcar loading station. Excluded from the list of affected facilities are truck dumping and transfer points from belt conveyors to stockpiles. Parts of the crusher and the pug mixer are subject to this Subpart and shown in the following table. Subpart OOO specifies the following standards for fugitive emissions of particulate matter: no fugitive emissions discharge from any crusher greater than 15% opacity nor any discharge from any other affected facility greater than 10%. The capacity of this portable plant is given in the application as 300 TPH through the crusher and all but one conveyor and 300 TPH for the screen. Therefore, this facility is subject to Subpart OOO. The following pieces of equipment are specifically subject to Subpart OOO:

Equipment	Date of Manufacture	Capacity/ Throughput (TPH)	Affected Equipment	Opacity Limits
Hopper loading	1994	300	C, P	10 %
Primary crusher	1994	300	C	15 %
Secondary crusher	1994	300	C	15%
Screen	1994	300	C	10 %
Belt Conveyor(1)	1994	300	C, P	10 %
Radial Stackers	1994	300	C	10 %

(1) There are 12 conveyors, this is the maximum amount transported by any one of them.

NESHAP, 40 CFR 61 [Not Applicable]

There are no emissions of any of the pollutants subject to 40 CFR 61 (asbestos, benzene, beryllium, coke oven emissions, inorganic arsenic, mercury, radionuclides, and vinyl chloride).

NESHAP, 40 CFR Part 63 [Not Applicable]

There are no promulgated MACT standards which affect this facility. There is, however, a proposed standard, "Stationary Internal Combustion Engines," due in May, 2002, which may affect the diesel engine. DEQ reserves the right to re-open this permit if GHM becomes an affected facility.

Chemical Accident Prevention Provisions, 40 CFR 68 [Not Applicable]
This facility does not process or store more than the threshold quantity of any regulated substance (Section 112r of the Clean Air Act 1990 Amendments). More information on this federal program is available on the web page: www.epa.gov/ceppo

OKLAHOMA AIR POLLUTION CONTROL RULES

OAC 252:100-1 (General Provisions) [Applicable]
Subchapter 1 includes definitions but there are no regulatory requirements.

OAC 252:100-3 (Air Quality Standards and Increments) [Applicable]
Primary Standards are in Appendix E and Secondary Standards are in Appendix F of the Air Pollution Control Rules. At this time, all of Oklahoma is in attainment of these standards.

OAC 252:100-4 (New Source Performance Standards) [**Not** Applicable]
Federal regulations in 40 CFR Part 60 are incorporated by reference as they exist on July 1, 2000, except for the following: Subpart A (Sections 60.4, 60.9, 60.10, and 60.16), Subpart B, Subpart C, Subpart Ca, Subpart Cb, Subpart Cc, Subpart Cd, Subpart Ce, Subpart AAA, and Appendix G.

OAC 252:100-5 (Registration, Emission Inventory, and Annual Fees)] [Applicable]
The owner or operator of any facility that is a source of air emissions shall submit a complete emission inventory annually on forms obtained from the Air Quality Division

OAC 252: 100-7 (Permits for Minor Facilities) [Applicable]
This site meets the conditions for a minor permit because there is no emission of any regulated pollutant of 100 TPY or more. As such, BACT consideration, modeling, and public review are not required

OAC 252:100-8 (Permits for Part 70 Sources) [Not Applicable]
In addition to the permitting criteria under Subchapter 7, a source may require permitting under this Subchapter if it has emissions of HAPs in excess of 10 TPY for any one HAP or in excess of 25 TPY for any combination of HAPs. The facility has no HAP emissions and is not subject to this rule.

OAC 252:100-9 (Excess Emission Reporting Requirements) [Applicable]
In the event of any release which results in excess emissions, the owner or operator of such facility shall notify the Air Quality Division as soon as practical during normal office hours and no later than **4:30 pm** the next working day following the malfunction or release. Further written notice containing specific details of the incident shall be submitted within ten (10) business days.

OAC 252:100-13 (Open Burning) [Applicable]
Open burning of refuse and other combustible material is prohibited except as authorized in the specific examples and under the conditions listed in this Subchapter.

OAC 252:100-19 (Particulate Matter) [Applicable]
19-4 specifies a PM emission limit of 0.6 lb/MMBTU for fuel-burning equipment. AP-42 specifies an emission factor of 0.29 lb PM_{10}/MMBTU for diesel engines. The engine is in compliance.
19-12 applies to any process, operation, or activity except fuel-burning equipment. The regulation specifies an emission limitation of 58.2 lb/hr of particulate matter based on the proposed process weight rate of 300 TPH. The emissions rate for this entire facility is 20.89 lb/hr, therefore, each piece of processing equipment is in compliance.

OAC 252:100-25 (Visible Emissions and Particulates) [Applicable]
This Subchapter states that no person shall allow the discharge of any fumes, aerosol, mist, gas, smoke, vapor, particulate matter, or any combination thereof exhibiting greater than 20% opacity except for short term occurrences, which consist of not more than one six-minute (6) period in any consecutive 60 minutes, not to exceed three such periods in any consecutive 24-hour period. In neither case shall the average of any six-minute (6) period exceed 60% opacity. NSPS Subpart OOO is more restrictive and takes precedence over all process equipment except belt conveyors which have maximum capacities less than 300 TPH.

OAC 252:100-29 (Fugitive Dust) [Applicable]
No person shall cause or permit the discharge of any visible fugitive dust emissions beyond the property line on which the emissions originate in such a manner as to damage or to interfere with the use of adjacent properties, or cause air quality standards to be exceeded, or interfere with the maintenance of air quality standards. Under normal operating conditions, this facility will not cause a problem in this area; therefore it is not necessary to require specific precautions to be taken.

OAC 252:100-31 (Sulfur Compounds) [Applicable]
Subchapter 31 prohibits discharge into the atmosphere of SO_2 in excess of 0.8 lb per million BTU of heat input from fuel-burning equipment using liquid fuels. The engine burns fuel containing a maximum of 0.6%w S. AP-42 has an emission factor for SO_2 of 0.31 lb/MMBTU of SO_2 at rated power. The engine is in compliance.

OAC 252:100-37 (Volatile Organic Compounds) [Applicable]
This Subchapter affects volatile organic compound (VOC) storage tanks with a capacity between 400 and 40,000 gallons storing a liquid with a vapor pressure of 1.5 psia or more. Since only diesel (vapor pressure < 0.01 psia) is to be stored at this facility, the diesel storage tank is not subject to this Subchapter.
Part 7 requires fuel-burning and refuse-burning equipment to be operated to minimize emissions of VOC. The diesel engine is subject to this requirement.

OAC 252:100-41 (Hazardous and Toxic Air Contaminants) [Not Applicable]
No toxic emissions above de minimis levels are expected.

OAC 252:100-43 (Specific Sampling and Testing Methods) [Applicable]
Part 1 specifies that all required testing must be conducted by methods approved by the Executive Director under the direction of qualified personnel. All required tests shall be made and the results calculated in accordance with test procedures described or referenced in the permit and approved by Air Quality.
Part 3 specifies specific methods to be used to determine leakage from gasoline trucks and associated vapor control systems.
This facility does not include gasoline tank truck loading facilities.

OAC 252:100-45 (Monitoring of Emissions) [Applicable]
Records and reports as Air Quality shall prescribe on air contaminants or fuel shall be recorded, compiled, and submitted as specified in the permit.

In summary of Oklahoma OAC Rules, the following are not applicable to this facility:

OAC 252:100-11	Alternative Emissions Reduction	not requested
OAC 252:100-15	Mobile Sources	not in source category
OAC 252:100-17	Incinerators	not type of emission unit
OAC 252:100-23	Cotton Gins	not type of emission unit
OAC 252:100-24	Grain Elevators	not in source category
OAC 252:100-33	Nitrogen Oxides	exempted by size
OAC 252:100-35	Carbon Monoxide	not in source category
OAC 252:100-37	Part 5 - Control of Organic Solvents	exempted by size
OAC 252:100-39	Nonattainment Areas	not in area category
OAC 252:100-41	Part 3 - NESHAP	not in source category
OAC 252:100-43	Part 3 - Specific Methods	not in source category

TIER CLASSIFICATION AND PUBLIC REVIEW

This application has been classified as Tier I based on the application data received for a minor source-operating permit.

The applicant has submitted an affidavit that they are not seeking a permit for land use or for any operation upon land owned by others without their knowledge. The affidavit certifies that the applicant has provided legal notice to those that do own the property. The status of all permit actions is available to the public in the Air Quality section of the DEQ Web Page at www.deq.state.ok.us.

INSPECTION

On December 12, 2001, the site inspection was conducted prior to issuing an operating permit. The inspection confirms the facility was built as described in the preceding INTRODUCTION section of this memorandum; however no testing as required by NSPS OOO or OAC Rules concerning engine emissions was done. The equipment must be tested while running at least 90% of the maximum rate that it will be used. The testing was not done before the end of the 2001 construction season. This required testing will be deferred until the beginning of the year 2002 construction season. The Specific Conditions of this permit sets forth the details of this testing.

TESTING

The testing required by NSPS OOO and OAC 252:100-19 will be performed during year 2002 construction period described in Operating Permit, Specific Condition No.s 4 and 12.

FEES PAID

Construction and operating permit fees totaling $1500 have been paid.

SUMMARY

The source has demonstrated compliance with the requirements of the applicable air pollution control rules and regulations. Ambient air quality standards are not threatened at the site. There are no active Compliance or Enforcement Air Quality issues concerning this facility. Issuance of the operating permit is recommended.

PERMIT TO OPERATE
AIR POLLUTION CONTROL FACILITY
SPECIFIC CONDITIONS

Greenhill Materials **Permit No. 99-034-O**
Quarry and Rock Crusher

The permittee is authorized to operate in conformity with the specifications submitted to Air Quality on December 6, 2001. The Evaluation Memorandum, dated February 8, 2002, explains the derivation of applicable permit requirements and estimates of emissions; however, it does not contain operating limitations or permit requirements. Continuing operations under this permit constitutes acceptance of, and consent to, the conditions contained herein:

1. Points of emission and emission limitations:

Equipment Activity[1]	Emissions		NSPS Applicable
	lb/hr	TPY	Yes/No
Feeder	0.005	0.006	Y
Jaw Crusher	0.14	0.18	Y
Impact Crusher	0.14	0.18	Y
Screen	0.45	0.56	Y
13 Conveyors	5.47	6.89	Y
Radial Stacker	0.21	0.26	Y
Radial Stacker	0.21	0.26	Y
Fugitives	31.35	39.20	N

(1) This includes the rock crusher and the pug mixer.

Diesel Engine Data	Bhp	Uncontrolled Emissions									
		NO_x		VOC		CO		SO_2		PM_{10}	
		lb/hr	TPY	lb/hr	TPY	lb/hr	TPY	lb/hr	TPY	lb/hr	TPY
J.Deere/ 4039T	95	1.58	1.97	0.02	0.02	0.06	0.07	0.32	0.40	0.64	0.80

2. The permittee is authorized to operate the rock crusher at process weight rates up to but not to exceed 300 TPH ("working day" average) and 750,000 TPY.

3 The permittee is authorized to operate the pug mixer at process weight rates up to but not to exceed 300 TPH ("working day" average) and 500,000 TPY.

4. The permittee shall be authorized to operate this facility continuously (24 hours per day, every day of the year).

5. Equipment/activities listed in Specific Condition #1 subject to NSPS Subpart OOO shall comply with the following opacity standards:

Hopper loading:	10 %
Primary crusher:	15 %
Second crusher:	15%
Screen:	10 %
Belt Conveyors:	10 %
Radial Stackers:	10 %

6. The permittee shall notify the Agency in writing 5 working days before beginning the 2002 construction season. The permittee shall conduct opacity testing by Reference Method 9 for the primary crusher, pug mixer, each screen, and each transfer point of the conveyors (all as near as practical to equipment design capacity). This testing shall be finalized within 30 days after the beginning of the year 2002 construction season. The testing results shall be submitted to Air Quality within 10 working days after the required testing is completed as part of conditions of this operating permit.

7. The diesel engine shall only use diesel fuel with a maximum sulfur content of 0.6%w.

8. Reasonable precautions shall be taken to minimize fugitive dust emissions from loading and unloading operations, roads, and stockpiles. These precautions shall include, but not be limited to:

a) Use of water or chemicals on roads, stockpiles, and materials during transfer operations.
b) Application of other coatings or coverings to substances susceptible to becoming air-borne or wind-borne.
c) Covering or wetting material in trucks.
d) Planting and maintaining vegetation coverings or windbreaks.
e) Locate stockpiles as to provide minimum exposure to high winds and avoid open spaces in line with neighboring homes and businesses.
f) All crusher spray bars should be fully operational when crusher is operating

9. The permittee may relocate any portable sources covered under this permit by obtaining a relocation permit in accordance with OAC 252:100-7-17 prior to relocating the portable source to another site. Relocating of such a source without a relocation permit shall void this operating permit for that source and subject the new facility to stationary source permit requirements.

10. An engine serial number or other acceptable form of permanent (non-removable) identification shall be on the engine.

11. Replacement (including temporary periods of up to six months for maintenance, etc.) of the internal combustion engine shown in this permit with an engine of lesser or equal emissions of each pollutant is authorized under the following conditions:

a. The permittee shall notify AQD in writing not later than 7 days in advance of the startup of replacement engines/turbines. Said notice shall identify the equipment removed and shall include the new engine/turbine make, model, and horsepower; date of the change, and any change in emissions.

b. The emissions limitations on any replacement engine shall not exceed the PPH rates of NOx and CO shown in SC 6.

12. The permittee shall keep records of operations as listed below. These records shall be retained on location or at a local field office for a period of at least two years following dates of recording, and shall be made available to regulatory personnel upon request.

(a) Throughput of the crusher (daily and 12 rolling).
(b) Throughput of the pug mixer (daily and 12 rolling).
(c) Hours of operation (daily and 12 rolling)
(d) Certification of sulfur content for each fuel delivery.
(e) Daily use of water used for PM control.

RE: Proposed New Rock Crusher, Air Permit 99-34-C

Dear Larry,

I received your March 23, 2000 letter and location data requesting to shift the location of the proposed rock crusher 2500 feet to the West.

After reviewing permit 99-034-C and the new location data it is my opinion that the proposed new location is approved. This shift in the location of the new rock crusher will not require a significant change in the permit. The driving directions on my copy of the permit have been revised to reflect the new location.

Sincerely,

Jack Fly
Permit Writer

RE: Request to relocate permitted rock crusher plant (Permit No. 99-034-C)

Dear Mr. Fly:

We have decided to change the proposed location for our rock crusher and haul road. The attached mine permit revision request letter provides the reasoning behind the crusher relocation.

Enclosed you will find an aerial photo-based location map which shows both the old (proposed) and new (proposed) locations. The crusher pad construction and crusher installation has not yet been done at the old proposed location.

Will our current air quality permit (NO. 99-034-C) apply to the NEW crusher location? All equipment and process data will remain the same as before. The only change will be relocation of the crusher facilities and access road to a point 2500 to 3000 feet west of the previously proposed location. As before, the crusher will be located within a natural ravine leading to the Bird Creek flood plain.

Will we receive an ODEQ letter approving the relocation of facilities under permit NO.99-034-C?

Please feel free to contact me at (918)645-3244 if you have questions or need additional data.

Sincerely yours,
SHEWOOD CONSTRUCTION CO. INC.

March 23, 2000

Oklahoma Department of Mines
4040 North Lincoln Blvd., Suite 107
Oklahoma City, OK 73105
ATT: Doug Schooley – Manager, Non-Coal

RE: Request for revision of Permit No. L.E. 1745, Greenhill Materials Quarry

Dear Mr. Schooley:

In accordance with discussions held during our meeting on March 13, 2000, we are requesting revision of our permit to allow us to move the ingress/haul road to our crushing facilities, and the crushing facilities themselves, to a new area approximately 2500 – 3000 feet west of the originally proposed location(s).

Moving the previously-proposed haul road and crusher facility to their new location(s) will allow us to utilize an existing easement and access road to highway 266 which crosses the City of Tulsa water supply pipeline corridor. This existing city-approved access road was built across the city water lines by ODOT when highway 266 was originally constructed.

Construction of the approved access road required the construction of steel-reinforced, concrete bridging structures over each of the pipelines (specified by the city engineering department) to protect the pipelines from damage created by traffic on the access road.

The City of Tulsa has given us verbal approval to cross their pipeline corridor at the new (pre-existing) access road location.

Enclosed you will please find one original and two copies of each of the following permit revision pages:

1) Revised site map for entire permit area showing new bonded permit area (Phase I), new crusher location, new haul/access road location, new blast monitoring station locations and new sedimentation pond location.
2) Revised Phase I site map showing the above-listed items.
3) Revised Phase III site map showing the above-listed items.
4) Revised site location map (aerial photo-based).
5) Revised "permit acreage covered by bond" page.
6) Revised "permit term justification" page.
7) Revised section location maps for sections 10 and 11.

8) Revised blasting plan.

In addition, you will find enclosed the signed original of a bond increase rider, which will raise our posted bond from $83,200.00 (166.4 acres) up to $122,500.00 (245 acres).

We hope this submittal package will allow you to issue the permit revisions as requested. Please feel free to contact me at (918)645-3244 should you have any additional questions.

Sincerely yours,
SHEWOOD CONSTRUCTION CO. INC.

APPLICATION FOR PERMIT TO OPERATE (RELOCATE)

(Submit in Duplicate)

The Sherwood Construction Co. of Oklahoma, Inc. proposes to change the location of their Burner portable plant, model number and type Air Curtain Destructor #834-10 presently located at N/A
(Geographical Location)
to the new location at SE¼ Sect27 T20N R12E (1700 N. OSAGE)
(Geographical Location)
and operate at that location from 5/12/86 (Date) to 6/15/86 (Date)
and as required by appropriate regulations, hereby makes appliation to Tulsa City-County Health Department for approval to change location.

This is to certify that the plant was permitted per Permit to Construct Number T83-28 issued by Tulsa City County Health Department
(Agency Issuing Permit)
and that the plant is operational and meets all applicable regulations. This also is to certify that the proposed site has all necessary utilities such that the control equipment shall be operated so that all emission limitations, including visible emissions, are met.

DATE: December 19, 1990 **PERMIT NUMBER:** T90-133

SHERWOOD CONSTRUCTION COMPANY OF OK, INC., having complied with the requirements of the law, is hereby granted permission to relocate and operate an open pit incinerator at to North of 106th Street South and Elgin (NW 1/4 of the SE 1/4 of square mile 2582), Tulsa, Oklahoma.

TOTAL ESTIMATED EMISSIONS: 12.9 TPY TSP
23.5 TPY CO
1.0 TPY VOC

SHERWOOD CONSTRUCTION COMPNAY OF OK, INC., MUST COMPLY WITH THE FOLLOWING CITY-COUNTY AND STATE RULES, REGULATIONS AND/OR ORDINANCES, THE STANDARD PROVISIONS ON THE BACK OF THIS PERMIT AND THE ATTACHED SPECIAL CONDITIONS:

The City of Tulsa Clean Air Code, Title 17, Chapter 7, Sections 707 and 712, County of Tulsa Clean Air Rules and Regulations, Under Authority of Title 63, Oklahoma Statues, Sections 209 and 214 and the Oklahoma Clean Air Act, Regulations 1.4 and 2.1.

SEE ATTACHED SHEET FOR SPECIAL CONDITIONS

THIS PERMIT IS ISSUED UNDER THE AUTHORITY DELEGATED TO THE TULSA CITY-COUNTY HEALTH DEPARTMENT BY THE OKLAHOMA STATE DEPARTMENT OF HEALTH, THE ADMINISTRATOR OF THE ENVIRONMENTAL PROTECTION AGENCY AND SECTIONS 214 AND 712 OF THE CITY-COUNTY AIR POLLUTION REGULATIONS.

William Sandt DATE 12/20/90
Manager, Air Quality Control

Jack E. Walker DATE 12/20/90
Chief, Environmental Services

STANDARD PROVISIONS

1. This permit is void (18) eighteen months after date of issue unless construction of this project has begun on or prior to that date, or if the work involved in the construction is suspended for 18 months or more.

2. The Air Quality Control Section shall be notified at least 30 days prior to the first day of operation of this facility. The recipient of this permit shall apply for a permit to operate within 60 days following the first day of operation.

3. If any statement or representation in the application or supplemental information is found to be incorrect, this permit may be revoked and the permittee thereupon waives all rights thereunder. However, the application may be amended and a supplemental written permit issued.

4. There shall be no deviation from the approved plans and specifications unless revised plans are submitted to the Air Quality Control Section and a revised permit issued.

5. During or after the construction or the installation of the equipment for which this permit was issued, the Tulsa City-County Health Department shall have the right and authority to inspect such work and operation.

6. This permit shall not be construed to affect the title of the premises upon which the equipment is to be located, nor does it release the permittee from any liability for damage to persons or property caused by, or resulting from the installation, maintenance or operation of the proposed equipment, this permit does not release the permittee from compliance with other applicable statutes of the State of Oklahoma, or with applicable local laws, regulations or ordinances.

7. This permit is subject to periodic review and change as deemed necessary to fulfill the intent and purposes of the Oklahoma Clean Air Act, and City-County rules and regulations.

8. The Air Quality Control Section of the Tulsa City-County Health Department shall be kept informed on occurrences which may affect the eventual performance of the facility or that will unduly delay the progress of the project.

9. This permit incorporates by reference supplemental data and information submitted by the applicant and further incorporates calculated data established in the Air Quality Analysis.

10. The special permit condition incorporated in this permit shall remain in effect throughout the operating life of the permitted source except as specifically voided by a new or revised permit.

11. Any testing or monitoring required, including test stands or test equipment, shall be provided at the applicant's expense.

12. The applicant shall submit reports as required and maintain records necessary to ascertain continued compliance. Such records shall be available upon request of the Air Quality Control Section.

13. THIS PERMIT IS NOT TRANSFERABLE TO ANOTHER PERSON OR RELOCATION.

TO: Air Quality Staff

FROM: Roger Randolph

SUBJECT: Open Pit Incinerator Emission Factors

DATE: March 10, 1988

The following emission factors are to be used in calculating emissions from open pit incinerators:

2.9	Particulates	0.0034 tons of emissions per 1 ton of brush burned.
23.5	Carbon Monoxide	0.028 tons of emissions per one ton of brush burned.
1.0	Hydrocarbons	0.0012 tons of emissions per one ton of brush burned.

These estimates are based on 80% of emissions if brush was open burned using AP-42 factors.

7 tons per hour of operation JJC

15 day * 8 hour = 120 hours operation

840 tons burned

APPROVED

TULSA CITY-COUNTY HEALTH DEPARTMENT

BY Roger D. Randolph

J. M. Van Sandt DATE 5/2/91
Manager, Air Quality Control

Ray Bishop DATE 5/02/91
Chief, Environmental Services

STANDARD PROVISIONS

1. If any statement or presentation in the application is found to be incorrect, this permit may be revoked and the permittee thereupon waives all rights thereunder. However, the application may be amended and a supplemental written permit issued by the department.

2. Any modification of operating procedures from those used during the final testing of equipment which effects emissions of air contaminants, without notification of the Air Quality Control Section, shall be grounds for revocation.

3. Any agent of the Tulsa City-County Health Department shall have the right and authority to inspect, at reasonable times, the source(s) for which this permit is issued.

4. This permit shall not be construed to affect the title of the premises upon which the equipment is located, nor does it release the permittee from any liability for damage to persons or property caused by or resulting from the maintenance or operation of the equipment for which this permit is issued. This permit does not release the permittee from compliance with other applicable rules, regulations and statutes of Oklahoma or with applicable local laws, rules, regulations or ordinances.

5. This permit is subject to periodic review, change, or additional fees necessary to fulfill the intent and purposes of the Oklahoma Clean Air Act and City and County rules and regulations.

6. In complying with the provisions of Regulation 1.5 Oklahoma Clean Air Act or the City-County Air Pollution regulations, the person in charge of the facility shall:

   a. Immediately notify the Director whenever an air pollution emergency exists.

   b. Immediately notify Air Quality Control in event of a malfunction of any emission source, air pollution control equipment or related facility which may cause the emission of air contaminants in violation of these ordinances or permit limitations.

   c. Submit written reports of the above events to or request variances in accordance with the above cited regulations from the Air Quality Control Section.

7. This permit incorporates, by reference, correspondence and information submitted by the applicant and incorporates the requirements established in the permit to construct.

8. THIS PERMIT IS NOT TRANSFERABLE TO ANOTHER PERSON OR RELOCATION.

SPECIAL CONDITIONS

Sherwood Construction Company of Oklahoma, Incorporated
T91-045

A. Apply for Permit to Operate and/or Permit to Relocate for each pit used for burning of brush.

B. Permanent location for air curtain burner is not allowed.

C. Changes in air curtain burner, i.e. blower, plenum or engine, may require a new construction permit.

D. The appropriate Fire Department approval is required for each permit.

E. Burning is allowed only when the wind is no more than fifteen (15) miles per hour or less.

F. The length of the pit can only be equal to the length of the plenum which directs air across the pit.

G. The width must not exceed eight (8) feet and the depth must be between twelve (12) and fifteen (15) feet. Both ends of the pit must be closed.

H. Complaints regarding operation may be cause for revocation of this permit.

I. Compliance to be determined by inspection.

J. Notify this office one day before operation begins.

PERMIT TO OPERATE

AIR QUALITY CONTROL SECTION
POLLUTION CONTROL DIVISION
TULSA CITY-COUNTY HEALTH DEPT.
4616 EAST 15th STREET
TULSA, OK 74112

ENTERED

DATE: July 30, 1993 PERMIT NUMBER: 93-063

SHERWOOD CONSTRUCTION, having complied with the requirements of the law, is hereby granted permission to operate, in an approved manner, an open-pit incinerator located at 51st and Garnett on the Northwest corner, Tulsa, Oklahoma.

ESTIMATED EMISSIONS:	POUNDS/HOUR	TONS/YEAR
Particulate:	46.6	2.8
Sulfur Dioxide:	N/A	N/A
Nitrogen Oxide:	N/A	N/A
Carbon Monoxide:	392	23.52
Volatile Organic Compounds:	16.8	1.0
Air Toxics:	N/A	N/A

COMPLIANCE DETERMINATION:

1. Inspection of operation.

THE STANDARD PROVISIONS ARE LISTED ON THE BACK OF THIS PERMIT.

THE APPLICABLE REGULATIONS AND SPECIAL CONDITIONS ARE ATTACHED.

THIS PERMIT IS ISSUED UNDER THE AUTHORITY DELEGATED TO THE TULSA CITY-COUNTY HEALTH DEPARTMENT BY THE OKLAHOMA STATE DEPARTMENT OF HEALTH, THE ADMINISTRATOR OF THE ENVIRONMENTAL PROTECTION AGENCY AND SECTION 712 OF THE CITY-COUNTY AIR POLLUTION CODES.

Ray Bishop DATE 7/30/93
Manager, Air Quality Control

Jack Walling DATE 08-02-93
Chief, Environmental Health Services

STANDARD PROVISIONS

1. If any statement or presentation in the application is found to be incorrect, this permit may be revoked and the permittee thereupon waives all rights thereunder. However, the application may be amended and a supplemental written permit issued by the department.

2. Any modification of operating procedures from those used during the final testing of equipment which effects emissions of air contaminants, without notification of the Air Quality Control Section, shall be grounds for revocation.

3. Any agent of the Tulsa City-County Health Department shall have the right and authority to inspect, at reasonable times, the source(s) for which this permit is issued.

4. This permit shall not be construed to affect the title of the premises upon which the equipment is located, nor does it release the permittee from any liability for damage to persons or property caused by or resulting from the maintenance or operation of the equipment for which this permit is issued. This permit does not release the permittee from compliance with other applicable rules, regulations and statutes of Oklahoma or with applicable local laws, rules, regulations or ordinances.

5. This permit is subject to periodic review, change, or additional fees necessary to fulfill the intent and purposes of the Oklahoma Clean Air Act and City and County rules and regulations.

6. In complying with the provisions of Regulation 1.5 Oklahoma Clean Air Act or the City-County Air Pollution regulations, the person in charge of the facility shall:

   a. Immediately notify the Director whenever an air pollution emergency exists.

   b. Immediately notify Air Quality Control in event of a malfunction of any emission source, air pollution control equipment or related facility which may cause the emission of air contaminants in violation of these ordinances or permit limitations.

   c. Submit written reports of the above events to or request variances in accordance with the above cited regulations from the Air Quality Control Section.

7. This permit incorporates, by reference, correspondence and information submitted by the applicant and incorporates the requirements established in the permit to construct.

8. THIS PERMIT IS NOT TRANSFERABLE TO ANOTHER PERSON OR RELOCATION.

THE FOLLOWING FEDERAL, STATE, CITY-COUNTY RULES, REGULATIONS AND/OR CODES, AND SPECIAL CONDITIONS ARE APPLICABLE.

REGULATIONS:

Environmental Protection Agency, Code of Federal, Regulations:

Title(s)

N/A

Oklahoma Clean Air Act, Oklahoma Administrative Code, Title 310, Chapter 200, Air Pollution Control Rules,

Subchapter(s):

7 - Permits
13- Prohibition of Open Burning, Section 7

City of Tulsa Clean Air Code Title 17, Chapter 7,

Section(s):

707- Control of Open Burning
712- Permit to Construct and Operate Required

County of Tulsa Clean Air Code,

Section(s):

707- Control of Open Burning
712- Permit to Construct and Operate Required

SPECIAL CONDITIONS:

1. Apply for Permit to Operate and/or Permit to Relocate for each pit used for burning of brush.

2. Permanent location for air curtain burner is not allowed.

3. Changes in air curtain burner, i.e., blower, plenum or engine, may require a new construction permit.

4. The appropriate Fire Department approval is required for each permit.

5. Burning is allowed only when the wind is no more than fifteen (15) miles per hour or less.

6. The length of the pit can only be equal to the length of the plenum which directs air across the pit.

7. The width must not exceed eight (8) feet and the depth must be between twelve (12) and fifteen (15) feet. Both ends of the pit must be closed.

8. Complaints regarding operation may be cause for revocation of this permit.

9. Compliance to be determined by inspection.

10. **Notify his office one day prior to operation beginning.**

11. Permit expires 180 days from date of issuance.

PERMIT TO OPERATE "COPY"

AIR QUALITY CONTROL SECTION
POLLUTION CONTROL DIVISION
TULSA CITY-COUNTY HEALTH DEPT.
4616 EAST 15th STREET
TULSA, OK 74112

Date *June 25*, 19*86* Permit No. *T86-40*

The *Sherwood Construction*, having complied with the requirements of the law, is hereby granted permission to:

relocate and operate an air curtain destructor (834-10) in a correct manner at 2500 North Osage Drive, Tulsa, Oklahoma.

TOTAL ALLOWABLE EMISSIONS: 15.4 TPY TSP

SHERWOOD CONSTRUCTION COMPANY WILL COMPLY WITH THE FOLLOWING RULES, REGULATIONS AND ORDINANCES: Section 209 C-6 and Oklahoma Clean Air Act, Regulation 2.1.

subject to the Standard Provisions appearing on the back of this permit and the following or attached special conditions:

A) Fire Department notification is required.

B) Burning is to take place only during favorable wind conditions.

C) Width of the pit is not to exceed eight (8) feet.

This permit issued under authority, delegated to the Tulsa City-County Health Department by the Oklahoma State Department of Health, the Administrator of the Environmental Protection Agency and Section 214 of the City-County Air Pollution Regulations.

Roger D. Randolph Supervisor, Air Quality Control

John Myers Copeland Chief, Pollution Control Division

STANDARD PROVISIONS

1. If any statement or presentation in the application is found to be incorrect, this permit may be revoked and the permittee thereupon waives all rights thereunder. However, the application may be amended and a supplemental written permit issued by the department.

2. Any modification of operating procedures from those used during the final testing of equipment which effects emissions of air contaminants, without notification of the Air Quality Control Section, shall be grounds for revocation.

3. Any agent of the Tulsa City-County Health Department shall have the right and authority to inspect, at reasonable times, the source(s) for which this permit is issued.

4. This permit shall not be construed to affect the title of the premises upon which the equipment is located, nor does it release the permittee from any liability for damage to persons or property caused by or resulting from the maintenance or operation of the equipment for which this permit is issued. This permit does not release the permittee from compliance with other applicable rules, regulations and statutes of Oklahoma or with applicable local laws, rules, regulations or ordinances.

5. This permit is subject to periodic review, change, or additional fees necessary to fulfill the intent and purposes of the Oklahoma Clean Air Act and City and County rules and regulations.

6. In complying with the provisions of Regulation 1.5 Oklahoma Clean Air Act or the City-County Air Pollution regulations, the person in charge of the facility shall:

   a. Immediately notify the Director whenever an air pollution emergency exists.

   b. Immediately notify Air Quality Control in event of a malfunction of any emission source, air pollution control equipment or related facility which may cause the emission of air contaminants in violation of these ordinances or permit limitations.

   c. Submit written reports of the above events to or request variances in accordance with the above cited regulations from the Air Quality Control Section.

7. This permit incorporates, by reference, correspondence and information submitted by the applicant and incorporates the requirements established in the permit to construct.

8. THIS PERMIT IS NOT TRANSFERABLE TO ANOTHER PERSON OR RELOCATION.

Mr. Harry Howard
Sherwood construction Company
Post Office Box 974
Catoosa, Oklahoma 74015

RE: Dust Complaints - 11th Street Bridge Repair

Dear Mr. Howard:

As a result of the dust complaints the Tulsa City-County Health Department received in the past few weeks, we have met with you several times. The summary below defines the problem points and the changes your have made.

1. Vacuum truck operation was the most visible source of dust. Your addition of the water into the suction nozzle has eliminated most of the dust from this source.

2. The sweeper was a minor source and your slowing the sweeper speed will make this operation acceptable.

3. The addition of a bag on the mixer exhaust eliminated 95% of the dust emitted and is satisfactory.

4. The mixer continues to be somewhat of a problem, your final solution of submerging the exhaust hose in a barrel of water with canvas over the top of the water drum should minimize the problem. The storage (silo) truck manufacturer probably produces dust control equipment for the storage (silo) truck. We asked that you consider purchasing this type of equipment as soon as possible.

5. The sandblasting operations is a problem which does not appear to have a good solution. The moveable barriers you use appear to be somewhat effective. The important thing is for you to continue as you have in the past, to sandblast only when the wind is in the right direction. While this operation remains in violation, we are issuing a temporary administrative variance in

order that you can maintain the high product standards necessary for this job.

Harry, we appreciate the way you have cooperated with us in trying to minimize this dust problem. Your solutions have been excellent and accomplished in a minimum amount of time.

Sincerely,

J. H. Van Sandt

STANDARD PROVISIONS

1. If any statement or presentation in the application is found to be incorrect, this permit may be revoked and the permittee thereupon waives all rights thereunder. However, the application may be amended and a supplemental written permit issued by the department.

2. Any modification of operating procedures from those used during the final testing of equipment which effects emissions of air contaminants, without notification of the Air Quality Control Section, shall be grounds for revocation.

3. Any agent of the Tulsa City-County Health Department shall have the right and authority to inspect, at reasonable times, the source(s) for which this permit is issued.

4. This permit shall not be construed to affect the title of the premises upon which the equipment is located, nor does it release the permittee from any liability for damage to persons or property caused by or resulting from the maintenance or operation of the equipment for which this permit is issued. This permit does not release the permittee from compliance with other applicable rules, regulations and statutes of Oklahoma or with applicable local laws, rules, regulations or ordinances.

5. This permit is subject to periodic review, change, or additional fees necessary to fulfill the intent and purposes of the Oklahoma Clean Air Act and City and County rules and regulations.

6. In complying with the provisions of Regulation 1.5 Oklahoma Clean Air Act or the City-County Air Pollution regulations, the person in charge of the facility shall:

   a. Immediately notify the Director whenever an air pollution emergency exists.

   b. Immediately notify Air Quality Control in event of a malfunction of any emission source, air pollution control equipment or related facility which may cause the emission of air contaminants in violation of these ordinances or permit limitations.

   c. Submit written reports of the above events to or request variances in accordance with the above cited regulations from the Air Quality Control Section.

7. This permit incorporates, by reference, correspondence and information submitted by the applicant and incorporates the requirements established in the permit to construct.

8. THIS PERMIT IS NOT TRANSFERABLE TO ANOTHER PERSON OR RELOCATION.

HAVE YOU DONE THE FOLLOWING?

[✓] 1. Specify, in permits, which Federal and State Regulations apply, when Regulations are used to limit emissions.

[✓] 2. Specify, in permits, the method to determine compliance and the date by which compliance will be demonstrated on all major sources and on minor sources, as appropriate.

[✓] 3. Comply with the EPA guidelines for modeling and interpretations, in accordance with the Oklahoma PSD SIP, including determinations of applicability, interpretation/use of air quality models and monitoring methods.

[✓] 4. Ensure that applicants subject to Oklahoma Regulation 1.4.4 submit, in the permit application, an analysis of BACT, taking into account energy, environmental, costs and economic impacts of alternative control systems, for each pollutant emitted in significant quantities and for each applicable emission point.

[✓] 5. Document and verify the methodology used to ensure that the proposed emissions will not violate the NAAQS and the applicable PSD increments, as appropriate. (Modeling in some cases.)

[✓] 6. Comply with public participation requirements of Oklahoma Regulation 1.4 and be fully responsive to comments and testimony.

Special Conditions

A. The appropriate fire dept. approval is required.
B. Burning is allowed only when the wind is no more than fifteen (15) miles per hour.
C. The length of the pit can only be equal to the length of the plenum which directs air across the pit.
D. The width of the pit must not exceed eight (8) feet, and the depth must be between twelve (12) and fifteen (15) feet.
E. Complaints regarding the operation may be cause for revocation of this Permit.
F. Compliance to be determined by inspection.

HAVE YOU DONE THE FOLLOWING?

[ ] 1. Specify, in permits, which Federal and State Regulations apply, when Regulations are used to limit emissions.

[ ] 2. Specify, in permits, the method to determine compliance and the date by which compliance will be demonstrated on all major sources and on minor sources, as appropriate.

[ ] 3. Comply with the EPA guidelines for modeling and interpretations, in accordance with the Oklahoma PSD SIP, including determinations of applicability, interpretation/use of air quality models and monitoring methods.

[ ] 4. Ensure that applicants subject to Oklahoma Regulation 1.4.4 submit, in the permit application, an analysis of BACT, taking into account energy, environmental, costs and economic impacts of alternative control systems, for each pollutant emitted in significant quantities and for each applicable emission point.

[ ] 5. Document and verify the methodology used to ensure that the proposed emissions will not violate the NAAQS and the applicable PSD increments, as appropriate. (Modeling in some cases.)

[ ] 6. Comply with public participation requirements of Oklahoma Regulation 1.4 and be fully responsive to comments and testimony.

Dear Sir:

Please find the enclosed application for burning within the City of Tulsa limits. The application is for pit burning and an air curtain destructor. The material being burned is cleared timber for Oklahoma Department of Transportation Project MAF 521(500) Mingo Valley Expressway from 71st to 91st Street South. All applicable safety standards and local ordinances for this type of burning will be strictly adhered to.

Respectfully,

RE: Air Quality Permit at Proposed Limestone Mine in Tulsa County

Dear Mr. Neuman:

Greenhill Materials Co. LC located at 4716 N 193rd East Ave., Catoosa, OK 74015 is applying for a permit to construct a limestone Rock Crushing Facility. The site is located in the W/2, SE/4 Section 8, Township 20 North, Range 14 East, Tulsa County, Oklahoma.

Please find enclosed our application We have also enclosed a check for ~~$1,500.00~~ 400 GP for this application.

Sincerely,

Daryl Worley

INTRODUCTION

This package contains the State of Oklahoma Air Quality Permit Application for a Minor Source. Please read all the directions carefully before you fill it out. Answer all questions by checking the appropriate box or filling in a response. Original signature from a responsible official is required on Form 884. Please note that delays in processing your application may occur if an incomplete application is submitted. It is the applicant's responsibility to submit a complete application well in advance of anticipated commencement of construction, start up dates, or the effective date of operating permit program requirements to allow sufficient time for proper application review and permit issuance.

BACKGROUND

Oklahoma operates a dual air quality permit system under Oklahoma Administrative Code (OAC) 252:100. A *construction permit* is to be obtained prior to the commencement of construction, installation or modification of any source which will increase the amount of air contaminant emissions by more than the de minimis levels given in OAC 252:100-7-2. After construction is completed, application for an *operating permit* must be submitted within 60 days after start up. If you are uncertain whether a permit is required, a request for an applicability determination may be submitted to DEQ and a written determination will be made based on the data submitted. An applicability determination can also be performed to determine whether a facility is a major or minor source.

DEFINITIONS

Criteria Pollutant: Oxides of Nitrogen (NOx), Sulfur Dioxide (SO_2), Lead (Pb), Ozone (O_3, i.e., regulated as non-methane hydrocarbon or NMHC as a precursor to O_3), Particulate Matter less than 10 microns (PM_{10}), Carbon Monoxide (CO).

Minor Source: A source that has the potential to emit less than 100 tons/year of a criteria pollutant, less than 10 tons/year of any single hazardous air pollutant, and less than 25 tons/year total hazardous air pollutants in the aggregate. These sources are classified as Tier 1 sources and follow the simplest type of application process.

Synthetic Minor Source: A source which has the potential under maximum operating conditions to emit at the Major Source level but which has a permit which restricts emissions to the minor source level. Such restrictions may include any of the following: hours of operation, emission control devices, and throughput. Applications for minor source permits are classified as either Tier 1 or Tier II, depending on several factors.

Major Source: A source that has the potential to emit more than 100 tons/year for criteria pollutants, 25 tons/year of hazardous air pollutants, or 10 tons/year of any single hazardous air pollutant. Additionally, a Major Source will not have permit requirements which restrict all actual criteria pollutant and hazardous air pollutant emissions to less than these levels. These sources are complex in their potential impact and are subject to the Tier II or Tier III application process.

TIER DETERMINATION

DEQ's "Uniform Permitting" system, under OAC 252:002, categorizes applications as Tier I, II, or III, depending on their complexity and the amount of public interest. The main effect of a Tier classification is the amount of public review given the application. For Air Quality permits, Tier I basically includes minor sources and most synthetic minor sources. Tier II covers major sources, and Tier III covers only very large sources such as those requiring PSD review. **This packet is designed (only) to meet the application requirements for most Rock Crushing Facilities and Sand & Gravel Operations which are minor sources or synthetic minor sources and qualify as Tier I applications. Other facilities, including those with emission units not covered in this application packet and those that need emissions modeling assistance, should contact Air Quality for information or additional forms and/or worksheets.**

PERMIT FEES

Applicants must attach a check or money order (no cash will be accepted) payable to the DEQ Air Quality Division in accordance with the following schedule. Please reference the facility name (or existing permit or application number) on the check.

Emissions	Construction Fee	Operating Fee	Relocation Fee
0 to 39.99 TPY	$1000	$500	$100
40 to 99.99 TPY	$1500	$500	$100
Modifications: (no emissions increase)	$500	$200	—
Uncertain	$250 Applicability Determination Fee (applied toward permit fee if required)		

APPLICATION MUST INCLUDE:

1. DEQ Form # 100-884 (General Facility Information Form)
2. DEQ Form # 100-110 (Emission Units information for each unit on site)
3. DEQ Form # 100-810 (Landowner Affidavit)

SUBMIT 3 COPIES OF COMPLETED APPLICATON TO:

DEQ LANDOWNER NOTIFICATION AFFIDAVIT

Tier I, II, or III permit applicants must provide notice to the landowner(s). The basis for this requirement is Title 27A of the Oklahoma Statutes, Supplement 1996, § 2-14-103(9), as described in OAC 252:4-7-13 (b).

Please note that you MUST fill out and return this affidavit even if you don't have to give any landowner notice.

A	NOTICE TO THE LANDOWNER(S) IS NOT REQUIRED because: (check one)
	My application does not involve any land.
	My application involves only land owned by me (or applicant business).
X	I have a current lease given to accomplish the permitted purpose.
	I have a current easement given to accomplish the permitted purpose.

OR

B	NOTICE TO THE LANDOWNER(S) IS REQUIRED because the land is owned by someone other than myself or the applicant business AND I HAVE NOTIFIED the following (check one):		
	Landowner(s)	X	Lessor or Administrator or Executor of the land
METHOD OF DELIVERY (check one):			
X	Actual notice, for which I have a signed and dated receipt		
	Service by Sheriff or private process server, for which I have an affidavit		
	Service by certified mail, restricted delivery, for which I have a signed return receipt		
	Legal publication, for which I have an affidavit of publication from the newspaper, because the landowners could not be located through due diligence		

LANDOWNER AFFIDAVIT CERTIFICATION					
I, as the applicant or an authorized representative of the applicant, hereby certify that I own the real property, have a current lease or easement which is given to accomplish the permitted purpose (per Option A above), or have provided legal notice to the landowner(s) (per Option B above) about the permit application for the facility described below.					
Company Name	Greenhill Materials, LC		Facility Name	Greenhill West Quarry	
Facility Address or Legal Description.	W/2, SE/4 Section 8, Twp 20 North, Rge 14 East, Tulsa County, OK				
Responsible Official (signature)	John Curtis			Date Signed	30 Sept 05
Responsible Official (typed)	John Curtis		Title	General Manager	

If the landowner notice applies to your application (Option B above) you can send the following form to them as your notice:

RE: Section 8 – Nearby Structures

Dear Mr. Harbaugh:
:

Greenhill Materials Co. LC located at 4716 N 193rd East Ave., Catoosa, OK 74015 is in the process of applying for an Oklahoma Department of Mines Permit. The permit is required to operate the limestone quarry to be operated on property owned by your client. The site is located in the W/2, SE/4 Section 8, Township 20 North, Range 14 East, Tulsa County, Oklahoma.

Your signature below will indicate that the owner is aware all structures located within 1000' of the permit area may be affected by the mining, and are in concurrence with the application.

Sincerely,

John Curtis
Greenhill Materials Co. LC

I, R.H. Harbaugh, Jr., am the manager of the above described property.

R. H. Harbaugh, Jr. 9/20/05 Date

EMISSION UNITS - ROCK CRUSHING & SAND FACILITIES

MINOR SOURCE EQUIPMENT DESCRIPTION

In the table below, please list all emission units, (e.g., hoppers, crushers, grinders, screens, stockpiles, organic liquid storage tanks, and other miscellaneous equipment) located at the facility. For each unit, give an unique identifier (e.g. facility numbering system or emissions inventory ID#), number of operation hours per year, the equipment installation date (actual or projected), and the date the equipment was manufactured or modified. In the last column, indicate whether the unit is a subject of the requested permit action (Construction or Operating Permit, or Modification of an existing permit).

EMISSION UNITS (Equipment)		Operating Hours	Manufacture or Modify	Installation Date	Unit Subject of this Permit Action?	
ID #	Description	Per Year	Date		Yes	No
CR-1	Impact Crusher	3000	2001	Mar 2006	X	
S-1	6X16 Screen	3000	2003	Mar 2006	X	
CR-2	Secondary Impact Crusher	3000	2001	Mar 2006	X	
S-2	8X20 Screen	3000	2001	Mar 2006	X	
SS-1	Sand Screw	3000	2005	Mar 2006	X	
PM-1	Pugmill	2500	2005	Mar 2006	X	
C-n	Conveyors	3000	Uknown	Mar 2006	X	

Please provide the following information for each piece of equipment which is subject of the requested permit action. Data submitted for construction permits should be a best estimate. The values may be modified following construction and/or subsequent testing. This information is necessary to determine the emissions. Indicate crusher type according to product size, as used in AP-42, (1/95), Section 11.19.2: primary (3 to 12 inches), secondary (1 to 4 inches), or tertiary (3/16th to 1 inch). Likewise, indicate for each screen whether it serves as a fines screen or "other." Provide the requested information for each transfer point, including truck unloading, if applicable.

EMISSION POINTS – CRUSHERS/GRINDERS		Process Rate	Controls		Emission Factor (lb/ton)	
ID#	Crusher Type	(TPH)	Type	Efficiency	Controlled	Uncontrolled

2014 AIR EMISSIONS INVENTORY
TURN-AROUND DOCUMENT

Air Quality Division, Dept. of Environmental Quality, PO Box 1677, OKC, OK 73101-1677, (405)702-4100

COMPANY NAME: SHERWOOD CONSTRCTN CO INC — **COMPANY ID: 1739**

FACILITY NAME: GREENHILL MATL — **FACILITY ID: 3421**

Company Mailing Address	STREET: 1640 S 101ST E AVE		
	CITY: TULSA	STATE: OK	ZIP: 74128
Facility Physical Address	STREET: 2 MI W ON HWY 266		
	CITY: CATOOSA	STATE: OK	ZIP: 74015

Status:	Active
NAICS:	212312
SIC:	1422
TRI:	

Issued Permit:	Date Issued;
2005-012-O	2005-07-12

Responsible Official

Name:	JOHN CURTIS
Phone:	(918) 266-6861
Fax:	(918) 266-6482
Email:	johnc@sherwoodoklahoma.com

Notes from DEQ to Facility

Entered amended 2013 inventory to correct PM2.5 and PM10 emissions.

Notes from Facility to DEQ

Facility Contact

Name:	ROB SIMMS
Phone:	(918) 266-6861
Fax:	(918) 266-6482
Email:	robs@sherwoodoklahoma.com

Facility Location: Legal Description

County:	Rogers		
Sec Loc:		Section:	10
Town:	20N	Range:	14E

Geographic Coordinates

Latitude:	36.22576
Longitude:	-95.8074

2014 AIR EMISSIONS INVENTORY
TURN-AROUND DOCUMENT

Air Quality Division, Dept. of Environmental Quality, PO Box 1677, OKC, OK 73101-1677, (405)702-4100

COMPANY NAME: SHERWOOD CONSTRCTN CO INC — **COMPANY ID: 1739**

FACILITY NAME: GREENHILL MATL — **FACILITY ID: 3421**

Sequence	Emission Unit ID	Emission Unit Name
1	22519	Feeder F-1 to Crusher CR-1

Notes	Unit Type	Status	Latitude	Longitude
	Transfer Point	Operating	36.228190	-95.805780

Emission Release Point ID: 23001 — **Name: Feeder F-1 to Crusher CR-1** — **Type: Fugitive** — **Status: Operating**

Parameters

Gas Exit Vel. (ft/s)	Height (ft)	Diameter (ft)	Temp (F)	Flow Rate (acfm)
0	0	0	0	0

Fugitive Release Point Parameters

Fugitive area(sqft)	Fugitive Ht. (ft)
1306800	10

Process Data

Process ID: 121371 **SCC:** 30502006 — **Is Process Data Confidential?** N

Process Description: Industrial Processes, Mineral Products, Stone Quarrying - Processing (See also 305320), Miscellaneous Operations: Screen/Convey/Handling

Process Material: Limestone

Material I/O: Used (Input)

Process (Throughput) Rates

Units: Tons

Maximum Hourly	Typical Daily	Actual Annual
885	6000	**1439211**

Combustion Processes

Fuel Heat Input Design Capacity: 0 NOT APPLICABLE

Fuel Data (combustion processes only)

		Sulfur(Wt%)	Ash (Wt%)
Fuel Heat Content	0 N/A	0	0

Actual Hours/Year: 1915

Typical Operating Periods (when process is operational)

Hours/Day 8 — **Days/Week** 5 — **Weeks/Year** 52

Seasonal Operating Fractions

Spring 0.25 — **Summer** 0.25 — **Fall** 0.25 — **Winter** 0.25

Emissions from this Process

Pollutant: * *PM-10 (All Particulate Matter <10 microns)* — **CAS Number:**

Calculation Method: Permit Factors — **EmissionFactor:** 0.0029 — Factor Includes Control Efficiency? — **Reference:**

Pounds — **Numerator Units** / Tons — **Denominator Units**

Trace — (<0.001 tons)

Total Actual Emissions: **0.1990** **Tons**

Capture efficiency (%): 100 — **Primary Control Device:** Dust Suppression — **Primary Efficiency (%):** 90 — **Secondary Control Device:** * Uncontrolled — **Secondary Efficiency (%):** 0

Excess Emissions: 0 **Tons** — **Amount allowed:** 0.2610 **Tons/Year**

Pollutant: * *PM-2.5 (All Particulate Matter <2.5 microns)* — **CAS Number:**

Calculation Method: AP-42 Factors — **EmissionFactor:** 0.000013 — Factor Includes Control Efficiency? — **Reference:**

Pounds — **Numerator Units** / Tons — **Denominator Units**

Trace — (<0.001 tons)

Total Actual Emissions: **0.0090** **Tons**

Capture efficiency (%): 100 — **Primary Control Device:** Dust Suppression — **Primary Efficiency (%):** 90 — **Secondary Control Device:** * Uncontrolled — **Secondary Efficiency (%):** 0

Excess Emissions: 0 **Tons** — **Amount allowed:** 0 **Tons/Year**
