Tulsa County– I-44 Corridor from I-244 Junction, East to the Arkansas River
EC-1780

Reconnaissance Data Collection Executive Summary

Reconnaissance data collection was performed for a 2.91-mile section of I-44 in Tulsa County. The project limits begin just east of the I-44/I-244 interchange, extends 2.91 miles east to the Arkansas River, includes 450-750 feet on each side of the existing I-44 centerline with additional area at the Highway 75 interchange, and includes a 1.4-mile segment of Highway 75 with a width of 600 feet. The study footprint consists primarily of commercial and residential development, with most of the residential development occurring at the west end of the study area. The Arkansas River occupies the east end of the study area. Additional undeveloped land occurs within and adjacent to portions of the study area, especially in the south end of the study area along Highway 75.

As described in Section 3, the Riverside Trail and Bales Baseball Complex are two parks located within the study area. The Riverside Trail, which crosses through the study area, is located between the Arkansas River and Riverside Drive at the east end of the study area and was improved with LWCF funds. A portion of Bales Baseball Park, which is located southwest of the I-44/Hwy 75 interchange, occurs within the study area and is owned by the City of Tulsa Parks Department. Correspondence with the Oklahoma Department of Tourism, State Parks confirmed there are no additional Section 6(f) properties within the study area. Richard Lloyd Jones Jr. Airport, a publically owned airfield, is located approximately 2.3 miles southeast of the I-44/Hwy 75 interchange. The Tulsa Sapulpa Union Railroad (TSU; Class III Railroad) crosses through the study area at the west end of the site. Additionally, both the Union Pacific Railroad (UP; Class I Railroad) and the Tulsa Sapulpa Union Railroad (TSU; Class III Railroad) utilize the same line that crosses the study area near the east end of the project location.

There are no known cultural resources within the I-44 Corridor study area with moderate or high potential for NRHP eligibility.

Hazardous materials sites and regulated petroleum storage tanks are located throughout the I-44 Corridor study area. There are 22 hazardous materials sites within or adjacent to the study area and 6 hazardous waste sites outside of, but within the ASTM search radii of, the I-44 Corridor study area. There are 12 storage tank sites within or adjacent to the study area, 3 of which are LUST sites, and 2 storage tank sites within 1/8 mile of the study area. One additional storage tank site containing petroleum products was identified through field reconnaissance. Based on the OCC Oil and Gas Division well database, 14 well sites are located within or immediately adjacent to the study area and 13 well sites are outside of the study area but within a 1/8 mile of the study area.

Potentially jurisdictional natural resources in the study area include portions of 5 watercourses and 6 wetlands. Jurisdictional waters in the study area include the perennial Arkansas River and Mooser Creek. The Arkansas River is an impaired waterbody for *Enterococcus* bacteria,

cadmium, and for turbidity. The Total Maximum Daily Load (TMDL) value for Enterococcus has been established at 35,669 CFU/day for the Arkansas River. Mooser Creek is an impaired waterbody for *Escherichia coli* and for warm water aquatic habitat. In addition, 1 USGS-mapped intermittent stream and 2 field-identified ephemeral to intermittent watercourses, which are potentially jurisdictional, occur within the study area and include unnamed tributaries to Mooser Creek. Garver considers there to be 2 NWI-mapped wetlands that are potentially jurisdictional due to their hydrologic connections to the Arkansas River. Field reconnaissance identified 2 additional wetlands in the study area that are considered potentially jurisdictional due to their hydrologic connections to USGS-mapped streams. Large portions of the study area adjacent to Mooser Creek and the Arkansas River are mapped FEMA floodplains associated with these watercourses and include Floodway and Zone AE of the 1% Annual Chance Flood Hazard. Zone AE floodplains do not allow any rise of the base flood elevation. Threatened and endangered species listed for the study area in Tulsa County include the Interior Least Tern, Piping Plover, Red Knot, American Burying Beetle, and Northern Long-eared Bat. No designated critical habitat for these species is located within the study area. The study area falls within the Upper Arkansas River watershed (a HUC10 watershed), which is within a federally-listed aquatic dependent species watershed for the Interior Least Tern. Additionally, the study area contains the Arkansas River, which is an occupied water body for the Interior Least Tern. The Interior Least Tern and the Bald Eagle were listed by the Oklahoma Natural Heritage Inventory database for occurrences in the vicinity. Suitable habitat for the Bald Eagle and the Interior Least Tern is present in the study area along the Arkansas River.

Section 3
Property Identification Summary
I-44 Corridor from I-244 Junction East to the Arkansas River
Tulsa County JP 32728(04)

3.1 Property Ownership

Property owner information for parcels located within the study area are included in this section.

3.2 Indian and Tribal Ownership

There is no Indian or Tribal Ownership identified within the study area. This information was obtained from property card searches, USGS's The National Map application (http://viewer.nationalmap.gov/viewer/), and the USGS Protected Areas Database (PAD) viewer (http://gis1.usgs.gov/csas/gap/viewer/padus/Map.aspx).

3.3 Federal Properties and Easements

There are no federal properties or easements within the study area. This information was obtained from property card searches, the USGS PAD viewer (http://gis1.usgs.gov/csas/gap/viewer/padus/Map.aspx), the NRCS Stewardship Lands Easement Locations Public Viewer (http://nrcs.maps.arcgis.com/apps/webappviewer/index.html?id=60cb4564f7b4461ca9a61fa224c066ba), and communication with the local NRCS office.

3.4 Wetland Restoration Program (WRP) Sites

There are no WRP sites within the study area. This information was obtained from communication with the local NRCS office and from the NRCS Stewardship Lands Easement Locations Public Viewer (http://nrcs.maps.arcgis.com/apps/webappviewer/index.html?id=60cb4564f7b4461ca9a61fa224c066ba).

3.5 Public Parks and Recreation Areas

According to the National Gap Analysis Program (GAP), Protected Areas Database Viewer (http://gis1.usgs.gov/csas/gap/viewer/padus/Map.aspx), there are no public parks or recreation areas located in the study area. However, according to Eve Atkinson of the Oklahoma Tourism and Recreation Department, there are two trails (Riverside Trails) that run north and south along the Arkansas River at the east end of the study area that were improved with

LWCF funds. Additionally, Bales Baseball Complex (property card #264) is a park located near the center of the study area that is owned by the City of Tulsa Parks Department. Turkey Mountain Park and Schlegel Park are two additional parks in the vicinity of the study area but outside of the study area boundary. Turkey Mountain Park was acquired with funds from the Tulsa River Parks Authority and Schlegel Park with funds from LWCF.

3.6 Wildlife and Waterfowl Refuges

There are no wildlife or waterfowl refuges located within the study area. This information was obtained from the USGS PAD viewer (http://gis1.usgs.gov/csas/gap/viewer/padus/Map.aspx), and the OK Department of Wildlife Conservation.

3.7 Cemeteries

There are no cemeteries within the study area.

3.8 Airports

Richard Lloyd Jones Jr. Airport, a publically owned airfield, is located approximately 2.3 miles southeast of Highway 75 and I-44. This information was obtained from the FAA List of Airport Information and Contact Data (http://www.faa.gov/airports/airport_safety/airportdata_5010/).

3.9 Railroads and Military Properties

The Tulsa Sapulpa Union Railroad (TSU; Class III Railroad) crosses through the study area at the west end of the site. Additionally, both the Union Pacific Railroad (UP; Class I Railroad) and the Tulsa Sapulpa Union Railroad (TSU; Class III Railroad) utilize the same line that crosses the study area near the east end of the project location. This information was obtained from the Oklahoma State Railroad Map.

3.10 Oklahoma Turnpike Authority (OTA) Properties

There are no OTA properties within the study area.

3.11 Demographics

Data from 2014 American Community Survey were investigated to determine the presence of low-income and minority populations in the I-44 study area. Table 1 below summarizes the demographic data. Review of this data suggest that the majority of the study area contains low-income and minority populations in greater concentrations than the state or Tulsa County as a whole. These concentrations are particularly high south of I-44.

Table 1-1: Demographic Data (2014 American Community Survey)

Geography	Population	Income Data		Race Data (%)					
		Median House hold Income	Percent of People with Income Below the Poverty Line (2013)	White	Black or African American	American Indian & Alaska Native	Asian	Other Race	Hispanic (of any race)
Oklahoma	3,818,851	$46,235	16.9	73.3	7.3	7.2	1.9	2.5	9.4
Tulsa County	616,128	$48,926	15.8	71.6	10.2	4.7	2.5	3.4	11.4
Tract 48	4,161	$37,145	22.7	75.5	1.7	8.1	0	3.0	9.0
Tract 49	1,982	$40,950	14.7	65.7	8.7	7.1	0	2.0	12.5
Tract 67.01	3,163	$31,681	34.9	51.4	22.7	8.2	0	6.3	13.1

The figures below illustrate the percentages of low-income and minority populations in the I-44 study area.

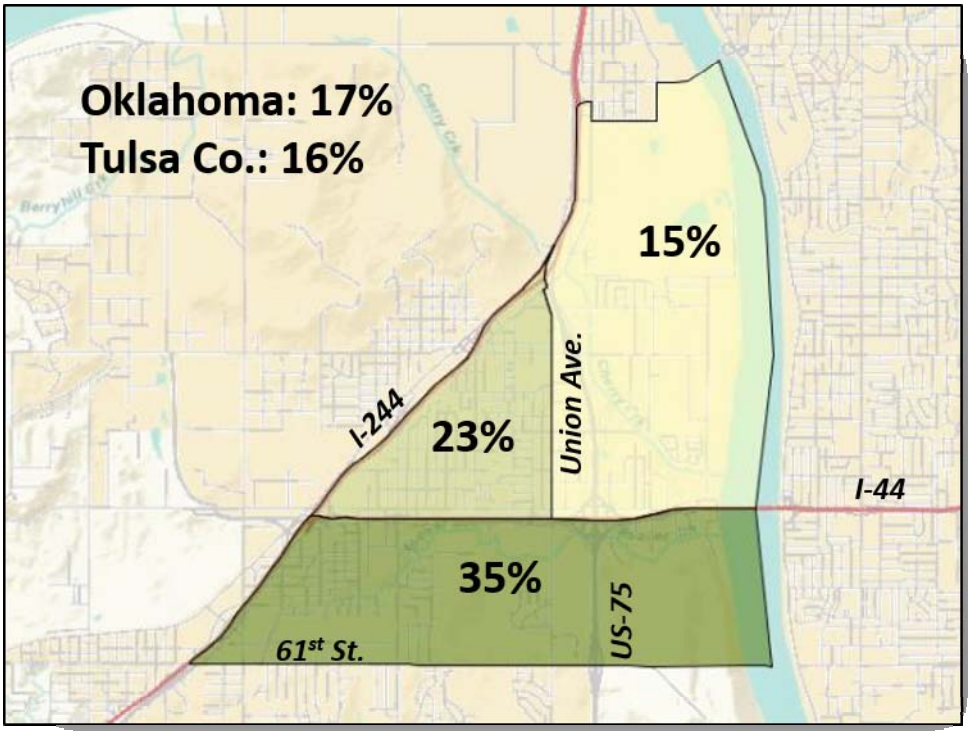

Figure 1: Low-Income Populations

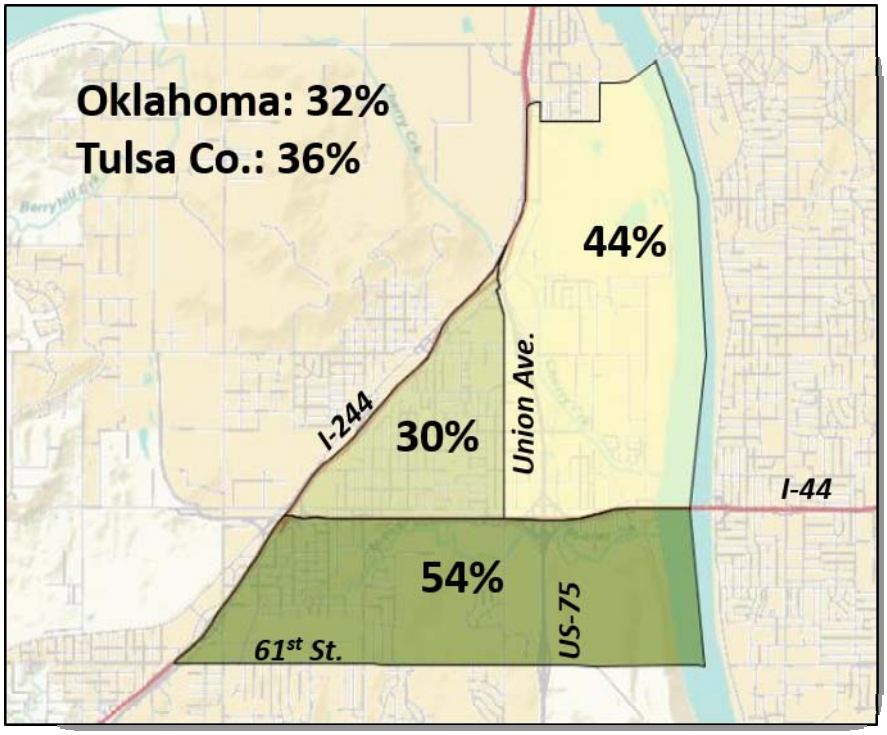

Figure 2: Minority Populations

Subject: RE: Request for Park/Recreation Area Information--I-44 from I-244 Junction east to the Arkansas River in Tulsa County

Categories: Filed by Newforma

Ms. Schmidt,

The following observations are reported below regarding your request. The Riverside Drive Trail and possibly Turkey mountain could be significantly adversely impacted by expansion of transportation structures or restrictive right-of-way policies. Please keep us informed and cooperate with the River Parks Authority and the City of Tulsa to develop mitigation measures.

In the study area at Riverside Drive and I-44: Tulsa River Parks Trail Improvements on Riverside Trail, improved with LWCF funds, 1981 thru 1985, $26,776.00
****
Near, or in study area on the west side of US 75: Bales baseball Complex, 5801 S. Union Avenue. Not acquired with LWCF, but City of Tulsa Parks department.

Near or in study area along US 75: Turkey Mountain Park on the west bank of the Arkansas River, east of Elmwood Ave. and south of West 61st Street South. Project 40-00654, Turkey Mountain Wilderness Park, acquired with Tulsa River Parks $398,070, 1978 to 1983 total 90 acres. Tulsa River Parks Authority should have the exact boundaries. (we don't have the exact boundaries)

Probably NSAI
Near study area: Schlegel Park at 3825 W 53RD PL S, LWCF 40-00371, split between 6 parks, constructed with $225,656.00 by City of Tulsa, during 1973 to 1978. South boundary is 660 feet south of the section line upon which you find I-244

Subject: Request for Park/Recreation Area Information--I-44 from I-244 Junction east to the Arkansas River in Tulsa County

Ms. Atkinson,

We are working on a data reconnaissance project in Tulsa County and collecting information for a 900 to 1,500-foot wide study area centered along I-44 beginning at the I-244 Interchange and extending approximately 2.9 miles east to the Arkansas River. Additionally, the study area encompasses approximately 1.4 miles of Highway 75. The project is located within Township 19N Range 12E in Sections 25-28 and 33-36; and within Township 18N Range 12E in Section 2.

We would appreciate your assistance with the identification of any parks or recreation areas in the vicinity of the project, specifically including any parks receiving LWCF funding assistance. I have attached a PDF showing two general location maps for your reference. Please let me know if you need anything else.

Sincerely,

Cassie Schmidt

Utility and Tradefixture Summary
I-44 Corridor from I-244 Junction East to the Arkansas River
Tulsa County JP 32728(04)

4.1 Utilities

Redfire Engineering, LLC performed the utility investigations. The utility owners identified within the study area are summarized in the tables below.

AT&T	
Type of Utility	Communication Cable
Name and Address of Utility Owner	AT&T 5305 E. 71 St. Tulsa, OK 74136
Name and Phone number of Contact Person	Al Nichols (918) 596-4237 an9488@att.com
Utility Product	Information/Communication
Utility Attributes (if applicable)	Various size Copper and Fiber Optic OH and buried cables
General Location of Utility	ATT has a buried 72 count Fiber line that runs along the north edge of W 51 St. inside the study limits from S 25th W Ave. to the west side of US-75. They have a 9-way duct with 1500 and 900 pair copper and 216, 24, and 12 count fiber lines that tees south of the east/west run line on W-51st St. on the north limits of the study area at the NW corner of W 51st St. and S. Yukon Ave. where it continues south across I-44 to a MH on the south side of W Skelly Dr. to a point located approximately 50' south of the south curb line of W Skelly Dr. They have a buried 600 pair copper and a 72

General Location of Utility (cont'd)	count fiber line crossing of I-44 approximately 780' east of the centerline of I-35 from the east west line on the south side of W Skelly Dr. that crosses to the north side of W 51st St. then parallels the north side of W 51st St. to the west where it turns into S Olympia Ave. and then turns north along the east side S Olympia Ave. where it goes north and runs off the north limits of the study area. They have a buried 900 and 600 pair copper line in a 3.5" conduit that crosses US-75 along the north side of W 49th St. on the north end of the project. They have a buried 200 pair copper and 72 count fiber line that runs east along the south side of W Skelly Dr. from approximately 175' east of S. Olympia Ave. measured along the centerline of W Skelly Dr. to approximately where W Skelly Dr. turns south, changes to the I-44 Access Rd. east of S Houston Ave. They have a 10 duct run with, a 900, 1800 pair copper and a 24 and 216 ct. fiber running along the south side of W Skelly Dr. from the west end of the study limits to the east side of S 33rd W Ave. that continues east as a direct bury 300 pair, and a 9 duct run with a 900, 1500 pair copper and a 12, 24, and 216 ct. fiber from the MH on the SW corner of W 33rd Ave. and W Skelly Dr. to the MH on the south side of the of W Skelly Dr. located approximately 50' south of the south curb line of W Skelly Dr. where they spilt and continue off the study limits on the west side of US-75 and cross I-44 to the north to the NW corner of W 51st St. and S. Yukon Ave. In addition the 10 duct run with, a 900, 1800 pair copper and a 24 and 216 ct. fiber running along the south side of W Skelly Dr. runs north south along the east side of W 33rd St. and crosses under I-44. They have an overhead line 100 pair copper line that crosses US-75 on the north side of W 61st St. at the very south limits of the study area.

General Location of Utility (cont'd)	They have a 6 duct run with a 200 pair copper, 48 and 216 ct. fiber and an airpipe that runs north/south along the east side of Riverside Dr.

ODOT	
Type of Utility	Communication
Name and Address of Utility Owner	ODOT Maintenance Division ITS Fiber Optic Engineering 200 N.E. 21st Street Oklahoma City, OK 73105
Name and Phone number of Contact Person	Jared Schwennesen P.E. (405) 521-4302 Jschwennesen@odot.org
Utility Product	Information
Utility Attributes	Fiber Optic in conduit and an empty ground boxes and conduit
General Location of Utility	ODOT shares fibers with Level 3 communications at the west end of the study area and have their own line existing line going west. They have an existing conduit that runs from a MH under I-44 on the west side of the I-44 access Rd. between S Skelly Dr. and W 51st St. that crosses the I-44 access Rd. to the west and runs north along the inside of the Access Rd. where it turns back to W 51st St. to the SE corner of W 51st St. and S Elwood Ave. where it crosses W 51st St. to the north and dead end on the NW corner of W 51st St. and S Elwood Ave. ODOT has a proposed plan to install a new fiber optic line that runs along the south side of the south I-44 Access Rd. from where it is tied to the Level 3 Communication line going north and west that runs east along the entire length of the project at the west end to the east end of the project. For the most part it will run just north curb line of W Skelly Dr.

General Location of Utility (cont'd)	They are proposing to hang on the RR bridge west of the river and hand on the Arkansas River bridge as well to the east side of Riverside Dr. at the east limit of the study area. They have several existing empty ground boxes along this route but don't know when they will add conduit and fiber between them.

Level 3 Communications	
Type of Utility	Communication Cable
Name and Address of Utility Owner	Level 3 Communications 18 W Archer St Tulsa OK 74103
Name and Phone number of Contact Person	Mark Lane (918) 858-3023 **mark.lane@level3.com**
Utility Product	Information
Utility Attributes	One 60 ct. Fiber Optic cable in HDPE conduit
General Location of Utility	Level 3 communication has a fiber optic line that enters the extreme west limits of the study area approximately 147' s of W 51st St. that crosses under I-44 and parallels approximately 9' behind the west curb line of 38th street where it crosses under I-44 to the south side of W Skelly Dr. where it turns east off the limits of the study area

Office of Management and Enterprise Services (OMES)	
Type of Utility	Communication
Name and Address of Utility Owner	Office of Management and Enterprise Services (OMES) 3115 N. Lincoln Blvd. Oklahoma City, OK 73105
Name and Phone number of Contact Person	Danny Griswold (405) 521-4107 Danny.griswold@omes.ok.gov

Utility Product	Information
Utility Attributes	Fiber Optic cable in Plastic conduit
General Location of Utility	OMES has a fiber optic line at the extreme west limits of the study area that parallels the west side of RR tracks from the south limits to the north limits of the study area just east of 38th St. It crosses under I-44 and parallels behind of the RR tracks approximately 10' west of the tracks.

City of Tulsa Fiber Optic	
Type of Utility	Communication Cable
Name and Address of Utility Owner	City of Tulsa 1273 N. Broadway Tulsa, OK 73034
Name and Phone number of Contact Person	Darren Fritz Manager, Network Services City of Tulsa Information Technology Dept. 175 E. 2nd St. Suite 06-690 (918)-261-9091 dfritz@cityoftulsa.org
Utility Product	Information Technology
Utility Attributes	Various size buried and aerial Fiber Optic lines
General Location of Utility	The City of Tulsa has an aerial 30 count Fiber Optic line underhung on PSO that enters the study area from the north running south along the east side of S 25th W Ave. to the north side of W 51st St, where it turn east and runs off the east limits of the study area to the west side of S Union Ave. to where it turns north to the south side of S 49th W St. where it turns east and enters the study area on the west side of US-75 and crosses US-75 to the east limits of study area on the east side of US-75. A buried 30 count fiber line enters the study area from the north running south along the

General Location of Utility (cont'd)	east side of S Indian Ave. to the north side of W 51st St, where it turns east and parallels the north side of W 51st St. to the west side of S Elwood Ave. where it splits and a 72 count fiber crosses S Elwood Ave. to the east and turns north off the north limits of the study area and an aerial 144 count fiber goes overhead and runs south approximately 170' where it goes underground and splits where one line a 144 count FO with 3- 1-1/2" conduits in a 4" pipe goes underground south across I-44 to a point approximately 340' south of W Skelly Dr. and approximately 100' west of S Elwood Ave. where it goes east and crosses S Elwood Ave. where it splits and goes south off the study limits along the east side of S Elwood Ave. and continues northwesterly to the south side of the City of Tulsa's Administration building north of their Southside Wastewater Treatment plant where it drops to a 24 count and continues more northwesterly to the east side of the River Parks West Trail and turns north and runs north along the east side of the River Parks West Trail to off the north limits of the study area. A second 48 count fiber line from where it splits approximately 170' south of the north side of W 51st St. and the west side of S Elwood Ave. goes southeasterly to the NW corner of the I-44 bridge where it continues east across the Arkansas River underhung on the bridge in a 3" conduit with COX to the west side of River where it turns north and run up the west side of Riverside Dr. north off the north limits of the study area.

COX	
Type of Utility	Communication Cable
Name and Address of Utility Owner	Cox Business 6301 Waterford Blvd., Ste. 200 Oklahoma City, OK 73118
Name and Phone number of Contact Person	Mark Bowling Construction planner III

	(405) 417-4064 mark.bowling@cox.com
Utility Product	Communication Cable
Utility Attributes	Various size aerial coaxial and buried Fiber Optic cables
General Location of Utility	Cox is underhung on where their line runs along the north side of W 51St St. from the west end of the study to where it runs off the study limits on the west side of US-75 Ave. Cox is underhung on PSO where their pole lines run north of W 51st St. between S 33rd W Ave. and S 32nd W Ave., between S 32nd W Ave. and S 31st W Ave., between S 31st W Ave. and S 30th W Ave. between S 30th W Ave. and S 29th W Ave., between S 29th W Ave. and S 28th W Ave. between S 29th W Ave. and S 28th W Ave. between S 28th W Ave. and S 27th W Ave., between S 27th W Ave. and S 26th W Ave., between S 26th W Ave. and S 25th W Ave. and, where they run along the west side of S 25th W Ave. They are underhung on PSO where their line runs along the north edge of the study limits on the south side of W 50th St. from the west side of S 25th W Ave. east to where W 50th St. dead ends into the west side of the Carbondale Assembly of God west parking lot, where they go underground into the bldg. They are underhung on PSO where their line runs along the north edge of the study limits on the south side of W 50th St. from the west side of S Yukon Ave. east to where it runs off the study limits on the west side of US-75 Ave. They are underhung on PSO where their lines tee off their east/west pole line running along the north side of W 51st St. and go south along the west side of S 34th W Ave., between S 34th W Ave. and S 33rd W Ave., between S 33rd W Ave. and S 32nd W Ave., between S 32nd W Ave. and S 31st W Ave., and between S 31st W Ave. and S 30th W Ave.

	They are underhung on PSO where their line tees off their east/west pole line running along the north side of W 51st St. and go south along the west side of S 33rd W Ave.to the last pole on the north side of I-44 where they go underground and cross under I-44 to the first pole on the south side of I-44 where they go overhead underhung on PSO and continue underhung on PSO where they angle across W Skelly Dr. and run south along the east side of W 33rd W Ave. and continue off the south limits of the study area. They have an underground cable that enters at the west limit of the study where it comes off the study limits from the north side to W 51st St. south to the east side of S 38th W Ave. where it runs along 38th Ave. to the south under I-44 and makes a slight angle to the SE side of the RR tracks and W skelly Dr. where it jogs back to the west side of the RR tracks and ends.
General Location of Utility (cont'd)	They cross W 51st St. to the south and are underhung on PSO' secondary lighting circuit that runs along the south side of W 51st St. from approximately 160' east of S 28th W Ave. east to approximately 140' east of S 25th W Ave. where they cross back to the north side of W 51st St. They have an overhead crossing of W 51st St. at the east side of S 29th W Ave. They are underhung on PSO where their line comes from the north limits of the study area runs south along the east side of S Olympia Ave. for approximately 440'. They are underhung on PSO where their line runs along the north side of W 51St St. from the NE corner of S Jackson Ave. and W 51St St. west for approximately 400'. They are underhung on PSO where their pole lines run north of W 51st St. at the back of the lot lines approximately 150' west of S Maybelle Ave., between S Maybelle Ave. and S Lawton Ave., and between S Lawton Ave. and

General Location of Utility (cont'd)	S Jackson Ave. They have an underground cable that goes underground from the NE corner of S Jackson Ave. and W 51St St. runs south Southwesterly and crosses under I-44 to the SW corner of S Lawton and W Skelly Dr. They have 3 underground cables coming from the north along the east side of S Indian Ave. that turns east along the north side of W 51st St. to the east side of S Elwood Ave. where one splits north and runs along the east side of S Elwood Ave. and the other two cross W 51st St. to the south side and continue east along the south side of W 51st St. to where it turns south of S 51st St. under I-44 and continues to loop around the west side of the I-44 Access Rd. under I-44 to the north side of the I-44 river bridge where a conduit attaches to the north side of the river bridge and runs east across the river, where they go underground and cross under Riverside Dr. and turn north along the east side of Riverside Dr. off the study limits. They are underhung on PSO where their line coming from the south limits of the study area along the east side of S 36th W Ave. to the south side of the W Skelly Dr. turns east along the south side of W Skelly Dr. to approximately 110' west side of S 34th W Ave. They are underhung on PSO where their line enters the south limits of the study on the west side of S Olympia Ave. south of W Skelly Dr. where it runs north approximately 70' then angles to the NE across S Olympia Ave. then angles northeasterly to a point approximately 50' south of W Skelly Dr. and 1050' west of S Lawton Ave. measured along the centerline of W Skelly Dr. and continues east along the south side of W Skelly Dr. to a point approximately 33' south of W Skelly Dr. and 340' west of S Lawton Ave. measured along the centerline of W Skelly Dr. where it goes underground and turns south and runs past the south limits of the study area. From where the overhead turns south an underground

General Location of Utility (cont'd)	cable also continues east along the south side of W Skelly Dr. to the west side of S Lawton Ave. where it turns south and runs off the study limits to the south. From the PSO located approximately 820' west measured along the centerline of W Skelly Dr. and 60' south they have an underground cable that runs along the east side of and the serves the closest bldg. to the south and a second underground cable the parallels West Skelly Dr. to the west and turns south and runs along the east side to serve the adjacent bldg. to the west of the afore-mention bldg. They are underhung on PSO where PSO has a line at the north edge of the study limits running east to west along the south side of S 49th W Ave. except they cross US-75 underground between the first two poles either side of US-75.

Sprint	
Type of Utility	Communication Cable
Name and Address of Utility Owner	Sprint 1616 Maryland Rd Irving, TX 75061
Name and Phone number of Contact Person	James B Stuart (972) 791-8556 james.stuart@sprint.com
Utility Product	Information
Utility Attributes	Fiber Optic cables in 1-/4" HDPE
General Location of Utility	Sprint has a fiber optic line at the extreme west limits of the study area that parallels the west side of RR tracks from the south limits to the north limits of the study area just east of 38th St. It crosses under I-44 and parallels behind of the RR tracks approximately 14' west of the tracks.

Windstream Communications	
Type of Utility	Communication Cable
Name and Address of Utility Owner	Windstream Communications 2300 South First place Broken Arrow, OK 74012-7137
Name and Phone number of Contact Person	Roy Varner (918) 451-3406 roy.varner@windstream.com
Utility Product	Information/Communication
Utility Attributes	Various size Copper and Fiber Optic OH and buried cables
General Location of Utility	ATT has a duct running north/south along the east side of W 33rd Ave. that crosses under I-44. Windstream shares some of the fibers in this duct.

PSO Transmission	
Type of Utility	Electric
Name and Address of Utility Owner	Public Service of Oklahoma (PSO) AKA American Electric Power 212 E. 6th Tulsa OK 74119
Name and Phone number of Contact Person	Kip Robinson (918) 599-2447 kerobinson@aep.com
Utility Product	Electric
Utility Attributes (if applicable)	Overhead Transmission Electric lines
General Location of Utility	PSO has two parallel transmission lines crossing of I-44. One is a 138KV double circuit on steel structures approximately 457' east of the RR tracks on the west side of the Arkansas River. The second is single 138KV atop wooden H-frame poles with a second 138KV underhung on the same wooden poles approximately

	516’ east of the RR tracks on the west side of the Arkansas River

PSO Distribution	
Type of Utility	Electric
Name and Address of Utility Owner	Public Service of Oklahoma (PSO) AKA-American Electric Power 5223 S. Garnett Rd. Tulsa, OK 74112
Name and Phone number of Contact Person	Lonny Hicks (918) 250-6211 ldhicks@aep.com
Utility Product	Electric
Utility Attributes (if applicable)	Overhead Distribution Electric lines
General Location of Utility	PSO has an overhead 13.2/7.6 KV OH line that runs along the north side of W 51St St. from the west end of the study to where it runs off the study limits on the west side of US-75 Ave. This line has a double circuit underbuilt on it from approximately 185’ west of S 33rd. Ave. to past where it runs off the study limits on the west side of US-75 Ave. They have an UG secondary service line coming from the west side at the west edge of the study limits that encroaches onto RR r/w for a short distance and an OH secondary service line goes north off the limits of the study area and OH secondary service line is attached from the west side of S 37th W Ave. to approximately 225’ east of S 36th W Ave. with a secondary service lines that tee off the secondary line and run south one along the east side of S 36th W Ave. approximately 250’, and four that tee off this line and cross W 51st St. to the south one at the east end 225’ east of S 36th W Ave., one at 140’, one at 205’ one at 500’, and one at 518’ east of S 37th W Ave. There is a secondary service crossing W 51st St. approximately 60’ east of S 35th W Ave.

General Location of Utility (cont'd)	Secondary service lines are attached and running along the line on the north side of W 51st St. from the east side of S 34th W Ave. approximately 122' west, from the west side of S 32th W Ave. approximately 145' west, from the west side of S 31th W Ave. approximately 140' west and 190' east either direction, from 195' east of S 25th W Ave. approximately 175' east, and from 170' west of S Yukon Ave. for approximately 560' west where it crosses W 51st, St. to the south and goes underground to serve the bldg. to the south. They have secondary service lines along the south side of W 51st St. from S 28th W Ave. east to approximately 135' east of S 25th W Ave. They have a secondary service line that runs north between S 34th W Ave. and S 33rd W Ave. from approximately 75' south of W 51st St. running north to off the study limits to the north. A buried secondary service line runs south of this line to serve the bldgs. to the south. They have an overhead 13.2/7.6 KV OH line that runs along the west side of S 37th W Ave. from the south side of W 51st St. that crosses I-44 to the south and continues south past the south limits of the study area. They have an overhead 13.2/7.6 KV OH line with secondary service that runs along the west side of S 34th W Ave. from the north side of W 51st St. approximately 175' south. A secondary service line continues south approximately 45' south. Secondary service lines tee east and west off this line approximately 175' south of W 51st St. to serve the bldgs. on either side. They have an overhead 13.2/7.6 KV OH double circuit vertical line underbuilt with a horizontal circuit that runs along the west side of S 33rd W Ave. from the north side of W 51st St that crosses I-44 to the north side of W Skelly Dr. where it angles across the intersection of W

General Location of Utility (cont'd)	Skelly Dr. and S 33rd W Ave. to the east side of S 33rd W Ave. where it continues south as a triple horizontal circuit past the south limits of the study area. They have an overhead 13.2/7.6 KV OH line that runs north between S 33rd W Ave. and S 32nd W Ave. from approximately 90' south of the centerline of W 51st St. to off the study limits to the north with secondary service from the south side of W 51st St. with a secondary service line that tees NW at the south end and then continues south to the north side of the north r/w line of I-44 where it tees east and west adjacent to the north r/w line of I-44 to feed the houses adjacent to the north side of I-44. They have an overhead 13.2/7.6 KV OH line that runs north between S 32nd W Ave. and S 31st W Ave. from approximately the north r/w line of I-44 to off the study limits to the north. It has a short secondary service at the south end extending south approximately 25' and two secondary service lines that extend south approximately 125' and southwesterly approximately 95' across W 51st St. They have an overhead 13.2/7.6 KV OH line with secondary service that runs north between S 31st W Ave. and S 30th W Ave. from the north side of W 51st St. to off the study limits to the north. A secondary service line extends south from this line across W 51st St. approximately 245'. They have an overhead 13.2/7.6 KV OH line with secondary service that runs north between S 30th W Ave. and S 29th W Ave. from approximately north side of W 51st St. north to off the study limits to the north. They have OH secondary service line that runs along the south side of S 51st St. Ave. between west side of S 30th W Ave. to approximately 100' west of S 29th W Ave. where a buried secondary service lines extends east to serve the houses to the east and then an OH secondary service crosses W 51st St. to the NE

General Location of Utility (cont'd)	back to the north side of W 51st St. They have a buried secondary service line that goes south of W 51st St. approximately 190' at S 29th W Ave. They have an overhead 13.2/7.6 KV OH line with secondary service that runs north between S 29th W Ave. and S 28th W Ave. from the north side of W 51st St. to off the study limits to the north. They have a double circuit overhead 13.2/7.6 KV OH line with secondary service that runs north between S 28th W Ave. and S 27th W Ave. from the north side of W 51st St. to off the study limits to the north. The secondary service extends across W 51st St. to the south to feed a secondary lighting circuit that runs along the south side of S west 28th W Ave. east to approximately 140' east of S 25th W Ave., a line tees of this line along the west side of S 25th W Ave. to the north side of I-44. They have an overhead 13.2/7.6 KV OH line with secondary service that crosses W 51st St. southeasterly from the west side of S 27th W Ave. the secondary service extends approximately 65' further southeasterly. They have an overhead 13.2/7.6 KV OH line that runs north between S 27th W Ave. and S 26th W Ave. from approximately south side of W 51st St. to off the study limits to the north with secondary service that extends across W 51st St. to the southeast and secondary that extends north off the study limits from approximately 120' north of W 51st St. They have an overhead 13.2/7.6 KV OH line that runs north between S 26th W Ave. and S 25th W Ave. from the north side of W 51st St. to off the study limits to the north with secondary service that extends north off the study limits from approximately 120' north of W 51st St. They have an OH secondary service lines that and cross W 51st St. approximately 35' west

General Location of Utility (cont'd)	and a second 220' west of S 26th W Ave. to the south. They have a secondary service line along the west side of S 25th W Ave. from the south side of W 51st St. south approximately 205' They have an overhead 13.2/7.6 KV OH line with secondary service that runs north along the east of S 25th W Ave. from approximately the north side of W 51st St. to off the study limits to the north. They have an overhead 13.2/7.6 KV OH line with secondary service that runs right along the north edge of the study limits on the south side of W 50th St. from the west side of S 25th W east to where W 50th St. dead ends into the west side of the Carbondale Assembly of God west parking lot. They have an overhead 13.2/7.6 KV OH line with secondary service that runs along the north edge of the study limits on the south side of W 50th St. from the west side of S Yukon Ave. east to where it runs off the study limits on the west side of US-75. They have an overhead 13.2/7.6 KV OH line with secondary service that crosses W 51st St. southwesterly approximately 220' west of S 25th W Ave. They have a secondary service line along the west side of S Yukon Ave. from the north side of W 51st St. to off the study limits to the north. Just inside the north edge of the study limits a secondary service line from the west side of S Yukon Ave. runs east between W 51st St. and W 50th St. to off the study limits to the east. An overhead 13.2/7.6 KV OH line runs east from the east of S Yukon Ave. to off the study limits to the east From the north limits of the study area an overhead 13.2/7.6 KV OH line runs south along the east side of S Olympia Ave. approximately 440' where it turns to a secondary service and continues approximately 140' further south.

General Location of Utility (cont'd)	Secondary service lines off this line cross S Olympia Ave. at angle to the SW approximately 245' and to the west to approximately 545' south of the north edge of the study limits. They have an UG 13.2/7.6 KV line that runs NW from the NE corner of S Jackson Ave. and W 51St St. into the car dealership at this corner They have an overhead 13.2/7.6 KV OH line that runs along the north side of W 51St St. from the NE corner of S Jackson Ave. and W 51St St. west approximately 1,195' Approximately 440' east of S Maybelle Ave. and W 51St St. a secondary service line crosses W 51st St. to the SW to serve the house on the south side of W 51st St. They have an overhead 13.2/7.6 KV OH line with secondary service coming from the north limits of the study to the north side of W 51st running at the back of the lot lines approximately 150' west of S Maybelle Ave. The secondary service turns east along W 51st St approximately 300' They have an overhead 13.2/7.6 KV OH line with secondary service coming from the north limits of the study to the north side of W 51st running in between S Maybelle Ave. and S Lawton Ave. The secondary service turns east along W 51st St approximately 170'. They have an overhead 13.2/7.6 KV OH line with secondary service coming from the north limits of the study to the north side of W 51st running in between S Lawton Ave. and S Jackson Ave. approximately 25' inside the back of the lot lines east of S Lawton Ave. The secondary service splits and turns west to the NE corner of S Jackson Ave. and W 51st St and a secondary service line crosses W 51st St. to the SW then immediately crosses W 51st St. back to the NW. They have an overhead 13.2/7.6 KV OH line with secondary service coming from the north

General Location of Utility (cont'd)	limits of the study to the north side of W 51st St. approximately 110' west of S Elwood Ave. the where the secondary ends and the primary 13.2/7.6 KV OH line continues south across I-44 to the past the south limits of the study area. They have an overhead 13.2/7.6 KV OH line that is attached to the top of a double circuited H- frame PSO Transmission line coming from the north limits of the study area running along the east side of S Elwood Ave. where it continues south across I-44 to past the south limits of the study area. They have an overhead 13.2/7.6 KV OH line with secondary service coming from the south limits of the study area along the east side of S 36th W Ave. to the south side of the W Skelly Dr. that turns east along the south side of W Skelly Dr. to approximately 110' west side of S 34th W Ave. and the secondary continues to the west side of S 34th W Ave. There is an overheard secondary service line that tees of this line to the south approximately 195' east of S 36th W Ave., a underground secondary service line that tees of this line to the south approximately 390' east of S 36th W Ave. and a secondary service line running south of W Skelly Dr. on the west side of S 36th W Ave. An overhead 13.2/7.6 KV OH line running behind the bldgs. along the south side of W Skelly Dr. encroaches into the southern edge of the study area from a point approximately 480' west of S 24th W Ave. west approximately 1200' They have an overhead 13.2/7.6 KV OH line that enters the south limits of the study on the west side of S Olympia Ave. south of W Skelly Dr. where it runs north approximately 70' then angles to the NE across S Olympia Ave. then angles northeasterly to a point approximately 50' south of W Skelly Dr. and 1050' west of S Lawton Ave. measured along the centerline of W Skelly Dr. where it splits and one line angles off to the SE approximately 75' (with a secondary line along the 75') then just the

General Location of Utility (cont'd)	primary turns south and runs off the limits of the study area and the other line continues east along the south side of W Skelly Dr. to a point approximately 33' south of W Skelly Dr. and 340' west of S Lawton Ave. measured along the centerline of W Skelly Dr. where it turns south and runs past the south limits of the study area. Where it turns south there are three secondary lines that serve the bldgs. to the east. There are buried 13.2/7.6 KV OH lines that tee off to the SW approximately 660' and to south at approximately 820' and 1175' west of S Lawton Ave. measured along the centerline of W Skelly Dr. that continue south of the limits of the study area. They have an overhead 13.2/7.6 KV OH line at the north edge of the study limits running east to west along the south side of S 49th W Ave. that crosses US-75. They have an overhead 13.2/7.6 KV OH line with secondary service at the south edge of the study limits running east to west along the north side of S 61st W Ave. that crosses US-75.

Enable Midstream	
Type of Utility	Gas line
Name and Address of Utility Owner	Enable Midstream 109 NW 50th St Oklahoma City, OK 73154
Name and Phone number of Contact Person	Jeffery Stovall (405) 556-2430 jeffery.stovall@enablemidstream.com
Utility Product	HP Gas
Utility Attributes	24" steel
	Enable has a line coming from the southwest which turns northwest and enters the study

General Location of Utility	area on the south approximately 115’ west of the RR tracks on the west side of the Arkansas River. It angles slightly toward the tracks and crosses the I-44 south Access Rd approximately 90’ west of the tracks then angles to approximately 25’ west of and parallels the RR tracks under I-44 where it crosses under I-44 and parallels the RR tracks to the north limits of the study area.

ONG	
Type of Utility	Gas
Name and Address of Utility Owner	Oklahoma Natural Gas 4901 N. Santa Fe Oklahoma City, OK 73118-7911
Name and Phone number of Contact Person	Keith Ward (405) 556-6401 Keith.ward@onegas.com
Utility Product	Natural Gas
Utility Attributes	Polyethylene and Steel
General Location of Utility	**DISTRIBUTION** ONG has a 2” coated steel line running along the north side of W 51st St. from the west end to approximately 375’ west side of S 33rd W Ave. where it crosses W 51st St. then runs along the south side to the west side of S 33rd W Ave. where it runs south and crosses under I-44 along the east side of S 33rd W Ave. to the south side of W Skelly Dr. where is crosses s 33rd W Ave. to the east and continues south along the east side of S 33rd W Ave. They have a 6” bare steel running east along the north side of W 51st St. from the west side S 36th W Ave. to just west of S 33rd W Ave. and a 4.5” bare steel line running east along the north side of W 51st St. from the east side S 33rd W Ave. to the west side of S 30th W Ave. (which is coated steel crossing S 32nd W Ave.).

General Location of Utility (cont'd)	From the west side of S 30th W Ave. where the 4.5" bare steel ends it turns to 4" PE and runs east to the west side of S 25th W Ave. where it continues east as a 2" bare steel line approximately 800' with the last 130' of the 800' being PE. From the west side of S 25th W Ave. it tees south and crosses W 51st St. then turns east and crosses S 25th W Ave. runs south along the what would be an extension of the east side of S 25th W Ave. and continues south where it crosses I-44 and tees into the east/west 2" coated steel line running along the south side of W Skelly Dr. From the east west line running along the north side of W 51 St. There is a 2" PE line running north along the RR Tracks at the west end of the project and between there and S 25th W Ave. there are lines that tee off to the north at each street. They are all 2'' PE lines except S 36th W Ave. is a 3" PE, S 31st St. W Ave. is a 4" bare steel, S 25th W Ave. is a 2" bare steel and S 26th W Ave. and S 28th W Avenues are 2" coated steel. There is a 5" bare steel on the west side of S 36th W Ave., 2" coated steel lines along the west side of S 34th W Ave. and S 31st St. W Ave. that tee off the east/west line running along the north side of W 51st St. and run south across W 51 St. to the north r/w of I-44. A 1-1/4" PE line crosses W 51st St. south along the west side of 32nd W Ave. then crosses 32nd W Ave. to the east side and runs south to the north r/w line of I-44. They have a 2" line running between S 34th W Ave. and what would be S 35th W Ave. along the south side of W Skelly Dr. on the south side of I-44, which turns to bare steel and turns south along the west side of S 34th W Ave. to off the south study limits. They have a 2" coated steel line that runs along the south side of W Skelly Dr. on the south side of I-44 from the extension of S 29th W Ave. east to off the study limits before it turns south on S Union Ave. A 2" coated steel line tees off this line to the south and runs

General Location of Utility (cont'd)	along the west side of S 24th W Ave. to off the south study limits. Where W 51st St. meets the west side of the study limits on the west side of US-75 a 6'' coated steel line runs along the south side of W 51st St. until it meets the west r/w line of US-75 where it runs north and parallel to just outside the west r/w of US-75 to point approximately 875' north of I-44 where it turns east and crosses US-75 to just outside the east r/w line where it turns south and runs parallel to the east r/w line of US-75 to the south side of W 51st St. then turns east and continues east to the west side of S Jackson Ave. A 4-1/2'' coated steel line tees off the afore-mentioned line and runs north behind the houses on the west side of S Maybelle Ave. and 2'' coated steel lines run north off this line behind the houses on the east side of S Maybelle Ave. and S Lawton Ave., and the west side of S Olympia Ave. ONG has a 2'' coated steel line beginning approximately 160' east of US-75 and 1025' south of I-44 that runs north along the east r/w line of US-75 and turns east where it parallels along the south side of W Skelly Dr. to the west side of S Houston Dr. where it turns south off the study limits. There are 2'' PE lines that tee off to the south of this line at the entrance into Green Metal Fabricators and S Lawton Ave. There is a 2'' coated steel line that comes from the north along the east side of S Elwood to the north side of W 51st St. where turns east and it parallels W 51st St. to the east side and continues east to the east side of River Parks West Trail where it turns south and goes under I-44 and connects to a regulator station on the west bank just past the south edge of the I-44 bridge over the Arkansas River. A 2'' coated steel line encroaches into the west limits of the study area approximately 1,350' north of W 61st St. and turns south just

General Location of Utility (cont'd)	outside the west r/w of US-75 for approximately 350'. **ONG TRANSMISSION** ONG has a transmission main encroaches into the west limits of the study area approximately 1,360' north of W 61st St. and turns north just outside the west r/w of US-75 and parallels the west r/w of US-75 to a point approximately 1,115' south of I-44 where it crosses U-75 to the east r/w line where it angles SE off the study limits. It turns back to the NE and enters into the south limits of the study area of I-44 approximately 340' west of S Lawton Ave. measured along the centerline of W Skelly Dr. where it turns east just inside the south I-44 R/w line and continues east to a point approximately 430' east of S Houston Ave. and 75' south of W Skelly Dr. where it turns north and crosses I-44 to a point 200' west of the centerline of S Indian Ave. and 35' north of the centerline of W 51st St. where it tees and runs west just inside the north I-44 r/w line parallel to W 51st St. approximately 440' to a regulator Sta. just west of W Jackson Ave. and runs east just inside the north I-44 r/w line parallel to W 51st St. to the west RR r/w where it turns north off the study limits.

Phillips 66	
Type of Utility	Gas line
Name and Address of Utility Owner	Phillips 66 1384-04 Phillips Building 420 South Keeler Bartlesville, OK 74003-6670
Name and Phone number of Contact Person	Matthew R. Dowdell (918) 977-5143 Matt.R.Dowdell@P66.com
Utility Product	Refined gas (Carries different refined products from time to time)
Utility Attributes	10" steel
	Phillips 66 has a line parallel to the west side

General Location of Utility	of the RR tracks west of the Arkansas River coming from the south that enters the study area on the south approximately 45’ west of the RR tracks on the west side of the River. It continues north parallel to the RR tracks where it crosses under I-44 past the north limits of the study area.

ONEOK NGP	
Type of Utility	Gas Line
Name and Address of Utility Owner	ONEOK Gas Transportation Real Estate Services 2738 M&K Lane El Reno, Oklahoma 73036
Name and Phone number of Contact Person	Timothy Mikles (405) 433-1041 tmikles@oneok.com
Utility Product	Gas
Utility Attributes	20” and 12’ steel
General Location of Utility	ONEOK NGP owns a high pressure gas line coming from the south that enters the study area approximately 400’ east of US-75 on the north side of west 61st St that parallels the northbound on ramp to US-75 from W 61st St. to a point approximately 250’ east of the centerline of US-75 and 640’ north of the south limits of the study area where it turns north and runs parallel to the east side of US-75 north approximately 800’ where it angles off the east limits of the study at an approximate 45° angle. It re-enters the south side of the study area along I-44 approximately 1,620’ east of US-75 and continues north to a point approximately 20’ south of the south curb line of W Skelly Dr. where it turns east and parallels along the south side of W Skelly Dr. to a point approximately 240’ west of S Houston Ave. and 80’ south of W Skelly Dr. where it turns north and crosses to the north perpendicular to I-44 to a point 3’ west of the west curb line

General Location of Utility (cont'd)	of S Indian Ave. and 40' north of the north curb line of W 51st St. where it angles east across S. Indian Ave. to a point 3' east of the east curb line of S Indian Ave. and 80' north of the north curb line of the W 51st St. where it continues east just outside the north r/w line parallel along north side of the north W 51st St approximately 675' to a point on the RR r/w where it turns north off the north limits of the study area.

Enbridge Energy	
Type of Utility	Oil
Name and Address of Utility Owner	Enbridge Energy 2101 S. Linwood Ave Cushing, OK 74023
Name and Phone number of Contact Person	Ben Johnson 918-223-2054 Benjamin.Johnson@enbridge.com
Utility Product	Crude Oil (currently inactive)
Utility Attributes	10" steel
General Location of Utility	Enbridge Energy has an 10" line coming from South that enters the study area approximately 700' east of the centerline of US-75 and runs north approximately 950' where it turns approximately 45° to the NW runs approximately 160' parallel to W Skelly Dr. where it turns north and crosses I-44 approximately 840' west of US-75, where it turns northeasterly and follows just inside the north I-44 r/w line to a point approximately 155' west of US-75 and 1105' north of I-44 where it crosses US-75 to the east r/w of US-75 then jogs slightly NE approximately 60' then turns north to the north side of W 49th St. where it angles back to just outside the east r/w line of US-75 and continues north until it angles off the north limits of the study area.

City of Tulsa Water	
Type of Utility	Water Line
Name and Address of Utility Owner	City of Tulsa 2317 S. Jackson Ave. Suite N215 Tulsa, OK 74107
Name and Phone number of Contact Person	Chad Stall Engineering Graphics Coordinator (918)-596-2595 cstall@cityoftulsa.org
Utility Product	Water
Utility Attributes	Various types and size water lines
General Location of Utility	City of Tulsa has a main waterline that enters the west end of the study area coming from the south side of W 51st St. on the east side of S 38th W Ave. to the west RR r/w where it turns SW and parallels the west edge of the RR r/w along the east side of S 38th W Ave. under I-44 to a line running along the south side of W Skelly Dr. They have a main line that enters the west end of the study area coming from the west that runs east along the south side of W 51st St. to the west side of S 31st W Ave. where it jogs to the north side of W 51st and continues east to the east end of the study limits approximately 320' east of S Yukon Ave. Main lines tee off the east/west line along the south side of W 51st St. W 51st St. line to the north and run off the study limits to the north on the west side of S Yukon Ave., the west and east side of S 25th W Ave. the west sides of S 26th W Ave., S 27th W Ave., S 29th W Ave. S 33rd W Ave., S 34th W Ave. S 35th W Ave., S 36th W Ave. and the east sides of S 28th W Ave., S 30th W Ave., S 31st W Ave., S 32nd W Ave. Main lines tee off east/west line along W 51st St. line to the south, and run south to the north r/w line of I-44 on the west sides of S 31st W Ave., and S 37th W Ave. and the east

General Location of Utility (cont'd)	sides of S 25th W Ave., S 32nd W Ave., S 34th W Ave., and S 36th W Ave. A main line runs south from the north side of W 51st St. on the west side of S 25th W Ave. and continues south across I-44 to off the south limits of the study area. A main line runs south from the south side of W 51st St. on the east side of S 33rd W Ave. continues south under I-44 to a line running along the south side of W Skelly Dr. They have a main line runs along south side of W 49st St. that enters the study area on the west side of U-75 and crosses US-75 to the east to past the east limits of the study area. A main line tees off the east/west line along the south side W 49st St. and runs south along the east side of S Olympia Ave. then crosses under S Olympia Ave. where it turn east into W 51st St. and runs east along the south side of W 51st St. to the west side of S Lawton Ave. A main line coming from a line running along the south side of W Skelly Dr. that crosses I-44 to the north approximately 200' east of US-75 to the north side of W 51st St. where it turns east and runs approximately 5' north of the curb line of 51st St. to the west side of S Indian Ave. where it jogs north to just outside the north r/w of I-44 and runs east parallel to the north r/w of I 44 to the west side of the I-44 Access Rd where it turns south of W 51st St. under I-44 and continues to loop around the west side of the I-44 Access Rd. where it turn west into W Skelly Dr. and continues west to S Elwood Dr. where it jogs south to just outside the south r/w line of I-44 south of W Skelly Dr. where it parallels the south r/w line of I-44 to the west to the beginning where it started on the south side of I-44 and crossed I-44 approximately 200' east of US-75. From the south side W Skelly Dr. where it crosses I-44 it continues west to just inside the south r/w line of I-44 to the west side of W Olympia Ave. where it turns south and runs off the south limits of the study area.

General Location of Utility (cont'd)	A main line that enters the west end of the study area coming from the west that runs east just behind the south curb line along the south side of W Skelly Dr. to approximately 600' east of S 24th W Ave, where it angles out to the edge of the south r/w line of I-44 until it runs off the east limit of the study area on the west side of US-75. Approximately 200' of this line jogs out onto private property (private lot) from approximately 825' west of S 24th W Ave. east. Main lines tee off east/west line along W Skelly Dr. to the south, and run south to off the south limits of the study area on the east sides of S 37th W Ave. and S 34th W Ave.

City of Tulsa Sanitary Sewer	
Type of Utility	Sewer Line
Name and Address of Utility Owner	City of Tulsa 2317 S. Jackson Ave. Suite N215 Tulsa, OK 74107
Name and Phone number of Contact Person	Chad Stall Engineering Graphics Coordinator (918)-596-2595 cstall@cityoftulsa.org
Utility Product	Wastewater
Utility Attributes (if applicable)	Various type and size sewer lines
General Location of Utility	City of Tulsa has a SS main that enters the west end of the study area coming from the south side of W 51st St. on the west side of S 38th W Ave. to the west RR r/w where it turns SW and parallels the west edge of the RR r/w along the east side of S 38th W Ave. under I-44 to the north side of W Skelly Dr. where it crosses perpendicular to W Skelly Dr. to a line running along the south side of W Skelly Dr. City of Tulsa has a SS main that runs along north side of W 51st St. from the west limits of

General Location of Utility (cont'd)	the study are to a line between S 38th W Ave. and S 37th W Ave. that runs north off the study limits. From where it turns north it angles back to the SW to the east side of S 37th W Ave. on the south side of W 51st St. where it turns south approximately 150'. City of Tulsa has a SS main that runs along south side of W 51st St. from the east side of S 37th W Ave. to approximately 225' east of S 34th W Ave. where it turns north an crosses W 51st St. to a main running along the north side of W 51st St. Main lines tee off the east/west line along the south side W 51st St. line to the north and run down the center of S 36th W Ave. to off the study limits to the north and south along the west side of S 36th W Ave. to the south to the north r/w line of I-44. They have a main that runs from the north study limits south down the west side of the pavement of S 35th W Ave. to south side of W 51st St. A main line tees off the east/west line along the south side W 51st St. and runs south along the west side of S 34th W Ave. to the north r/w line of I-44. They have a main running along the north side of W 51st St. from the east side of S 34th W Ave. east to approximately 170' east of S 33rd W Ave. where it turns north and runs off the north study limits. A line tees off this line and runs north along the west side of S 33rd W Ave. off the north study limits. They have mains that enter from the north limit of the study area that run down to the north side of the first lots north of W 51st St. in between S 28th W Ave. and S 29th W Ave., in between S 29th W Ave. and S 30th W Ave. and, in between S 31st W Ave. and S 32nd W Ave. They have a main that runs south down from the north limits of the study area in between S 30th W Ave. and S 31st W Ave. that crosses W

General Location of Utility (cont'd)	51st. and continues south to the first lot north of the north I-44 north r/w line. They have a main running along the south side of W 51st St. from approximately 80' east of S 29th W Ave. east to the west side of S 28th W Ave. where it crosses to the north side of W 51st St. and turns east and runs east along the north side of W 51st St. approximately 210' east of S 26th W Ave. Mains tee off this line to the north and run off the north study limits in between S 27th W Ave. and S 28th W Ave., in between S 27th W Ave. and S 26th W Ave. and, in between S 26st W Ave. and S 25th W Ave. The line between S 27th W Ave. and S 26th W Ave. also tees off this line to the south to the north r/w line of I-44 where it splits and one main runs east approximately 680' along the edge of the I-44 north r/w line, and the other angles across I-44 to a point approximately 900' west of S 24th W Ave. and 32' south of W Skelly Dr. measured along the centerline of Skelly Dr. where it jogs east southeasterly approximately 70' then turns south to a line running east/west along the south limits of the study area that enters the study area from approximately 1350' east of S 33rd W Ave. and runs east along the north side of the creek at the south edge of limits of the study area approximately 1330' where the creek turns south and it splits and two mains run south off the south limits of the study area on either side of the creek. There is a main that enters from the north edge of the study area that runs south along the west edge of S Olympia Dr. until it turns east and turns into W 51st St. and then continues east along the north side of W 51st St. to the west side of S Jackson Ave. At the back of the lots east of S Lawton Ave. where it turns north off the study limits. Mains tee off this line and run north off the study limits at the back of the lots west of S Maybelle Ave. and in between S Maybelle Ave. and S Lawton Ave. At the back of the lots west of S Maybelle Ave. a main turns south and runs to the north r/w line of I-44 where it tees and runs north approximately 200' east just outside the north

General Location of Utility (cont'd)	r/w line of I-44 and west approximately 205' east just inside the north r/w line of I-44. From where it turns west inside the north r/w line of I-44 approximately 75' west it tees south and crosses I-44 to a point just on the north side of W Skelly Dr. where it turns west and runs along the west side of W Skelly Dr. approximately 160' and turns south and runs off the south limits of the study area. They have a main that enters the north side of the study area on the west side of the Arkansas River that runs under I-44 approximately 65' east of the I-44 Access Rd. (between W 51ST St. and W Skelly Dr.) under I-44 to a point approximately 290' south of I-44 where is angles southwest to a point approximately 365 ' south of W Skelly Dr. and approximately 80' west of S Elwood Ave. where it splits and one line jogs NW to a point approximately 320 ' south of W Skelly Dr. and approximately 140' west of S Elwood Ave. where it runs east perpendicular to S Elwood Dr. off the limits of the study area and just past where this line jogged NW another line runs southeasterly along the edge of the east side RR r/w off the limits of the study area. At the east end of the project on the west side of the river they have a main the enters the north limits of the study area approximately 195' west of S Riverside Dr. where it runs south jogs around the outfall structure dumping into the river from the east then runs south along the west side of S Riverside Dr. under I-44 to a point approximately 320 ' south of I-44 and approximately 140' west of S Riverside Dr. where a line tees off and crosses S Riverside Dr. to off the study limits to the east and it continues south southwesterly off the study limits to the south. They have a main that enters the west limits of the study area on the west side of US-75 and approximately 650' south of I-44 where it runs east and follows along to the south edge of W Skelly Dr. where it goes under the US-75 to the east limits of the study area.

4.2 Tradefixture (Billboard) Ownership

I-44 is regulated by the ODOT Outdoor Advertising Branch. There are 14 registered signs within the I-44 Corridor study area, 1 unregistered sign within the I-44 Corridor study area, 3 registered signs immediately adjacent to the study area, and 4 registered signs in the nearby vicinity of the study area. Of those 14 registered signs within the study area, 3 signs (SFN #804304, SFN #804303, and SFN #804217) are grandfathered signs that cannot be relocated back onto remaining property and would need to be acquired if affected by the project. These 3 signs are located within the study area and are north of I-44 and east of Hwy 75. See the information in this section.

ODOT CULTURAL RESOURCES PROGRAM
PROJECT RECONNAISSANCE REVIEW

County:	Tulsa	**Job Piece Number:**	32728(04)
Project No:	Not Assigned	**Date of Field Reconnaissance:**	**Not Conducted: File Review Only**
Preparer:	Mike McKay	**Report Date:**	October 12, 2016

Project Description: Modifications to I-44 / SH-66 from the I-240 junction east to Riverside Drive to include modifications to the US-75 interchange and US-75 between 47th St. to the north and 61st St. south in Tulsa, OK.

Definition of Recon Area: Eccentrically shaped recon area that is approximately three miles long following I-44 / SH-66, extending 500 feet north and 350 feet south of existing I-44 midline between I-240 and the US-75 junction. The study area expands to approximately 1600 feet north and 1400 feet south of existing midline through 3000 feet of the US-75 interchange before contracting back to approximately 400 feet north and 600 feet south of existing midline between the US-75 interchange and the Arkansas River before finally contracting to 400 feet on both sides of existing centerline crossing the river to Riverside Drive. The recon area includes approximately 1.4 miles of US-75, extending 2300 feet north and 5000 feet south of the I-44 interchange. At the I-44 interchange, the recon area extends 1600 feet west and 1300 feet east of existing US-75 midline, contracting to 200 feet west and 400 feet east of existing US-75 midline continuing north and south of the interchange.

1. File Review - the preparer completed a desktop review of the following files:

☒ State Archaeological Site Files at the Oklahoma Archeological Survey (OAS)
USGS Quadrangle(s): Sapulpa North (1956; PR 1983); Jenks (1952; PR 1982)

☒ The State Historic Preservation Office's (SHPO) National Register of Historic Places (NRHP) list and Determination of Eligibility (DOE) list

☒ Consulted with ODOT Director of Tribal Coordination

☒ Thematic or other inventory-based Oklahoma Historic Resource Reviews (listed below):

- ODOT National Bridge Inventory (NBI): http://ok.maps.arcgis.com/apps/Viewer/index.html?appid=7eafa553157b4637a9e2ef9655067f3b
- November 2012 Advisory Council on Historic Preservation (ACHP) Program Comment Concerning Post-1945 Concrete and Steel Bridges: http://www.odotculturalresources.info/post-1945-bridges.html
- March 2005 Federal Highway Administration (FHWA) Exemption Regarding Historic Preservation Review Process for Effects to the Interstate Highway System: http://www.environment.fhwa.dot.gov/histpres/highways.asp
- Oklahoma Landmarks Inventory (OLI): http://www.ocgi.okstate.edu/shpo/
- Oklahoma Route 66 Historic Resources Survey: 1926 - 1970 (2002)
- Railroads of Oklahoma: June 6, 1870 - April 1, 1978

☒ Photographic and Mapped Resources (listed below):

- General Land Office (GLO) survey maps (1898)
- USGS Hominy 30' topographic map (1912; 1915)
- USGS Claremore 30' topographic map (1914; 1916)
- General Highway Map (GHM) of Tulsa County (1941, 1964, 1969, 1979)
- U.S. Geological Survey (USGS) / U.S. Department of Agriculture (USDA) Soil Conservation Service (SCS) aerial photographs (1943, 1958, 1964)
- Sanborn Fire Insurance maps (1894 - 1939): http://sanborn.umi.com/

- Google Earth Applications (1991 - 2016)

---

2. Results of File Review - based on the file review, the preparer identified the following 45-year-old or older properties or conditions documented as existing within the reconnaissance area:

A. ***Bridge(s) in Reconnaissance Area:***

X There are bridges identified within reconnaissance area

ODOT No.	NBI No.	Const. Date	Bridge Type	NRHP Status
7278 0025NX	19471	1978	Steel Stringer	Not NRHP eligible
7278 0025SX	19479	1978	Steel Stringer	Not NRHP eligible
7278 0060NX	12814	1952	Concrete Frame	Exempt from Further Review
7278 0060SX	12815	1952	Concrete Frame	Exempt from Further Review
7278 0161X	12830	1952	Concrete Frame	Exempt from Further Review
72N3930E0640003	17865	1970	Concrete Slab	Program Comment
72N3930E0640001	27500	2002	Concrete Culvert	Not NRHP eligible
7218 1020EX	18267	1972	Steel Stringer	Not NRHP eligible
7218 1020EX	18268	1972	Steel Stringer	Not NRHP eligible
7278 0189WX	15839	1963	Concrete Slab	Exempt from Further Review
7278 0190EX	15840	1963	Concrete Slab	Exempt from Further Review
7278 0184SXR	15843	1963	Steel Stringer	Exempt from Further Review
7218 0982WX	15832	1963	Steel Stringer	Program Comment
7218 0982EX	15831	1963	Steel Stringer	Program Comment
7218 0982XR	15838	1963	Steel Stringer	Exempt from Further Review
72N3934E0640001	11970	1950	Concrete Culvert	Program Comment
7218 0903X	16564	1965	Concrete Slab	Program Comment
7278 0253NXF	15755	1963	Concrete Slab	Program Comment
7278 0253NX	20294	1982	Concrete Slab	Not NRHP eligible
7278 0253SX	12827	1952	Concrete Slab	Exempt from Further Review
7278 0253SXR	15769	1963	Concrete Slab	Exempt from Further Review
7278 0253SXF	15763	1963	Concrete Slab	Program Comment

72N3940E0640002	19674	1980	Concrete Culvert	Not NRHP eligible
7278 0269SX	20326	1982	Prestressed Concrete Beam	Not NRHP eligible
7278 0269NX	20580	1983	Prestressed Concrete Beam	Not NRHP eligible
RR Bridge	None	Unknown	Wood Trestle	Not Assessed

Comments: According to the dates provided by the NBI data, many of these bridges (NBI #18267, 18268, 19471, 19479, 19674, 20294, 20326, 20580, & 27500) are of too recent construction to be eligible for NRHP consideration and will not require documenting and review under Section 106 of the National Historic Preservation Act (NHPA).

In accordance with the November 2012 ACHP Program Comment Concerning Post-1945 Concrete and Steel Bridges, seven of these bridges (NBI #11970, 15755, 15763, 15831, 15832, 16564, & 17865) are of a design type that is considered to be exempt from documenting.

In accordance with the March 2005 ACHP Section 106 Exemption regarding effects to the Interstate Highway System, many of these bridges (NBI #12814, 12815, 12827, 12830, 15769, 15839, 15840, 15843, & 15838) do not require documenting and review.

A railway bridge crossing Mooser Creek has been incorporated into the eastern end of the recon corridor. The railway is currently active. Unfortunately, the railway bridge has no NBI data to impart information concerning its construction type or date of construction. Based upon old topographic maps and aerial imagery, this railway was constructed on its current footprint between 1901 and 1914. Aerial imagery as far back as 1943 indicates that the crossing has always used a wood trestle, however; it is unlikely that the same wood trestle would have been in operation at the current location without having been replaced or significantly rehabilitated. In this regard and since railway structures rarely exhibit historically significant characteristics or associations, this railway bridge is considered to have low potential for NRHP eligibility. Should a cultural resources survey be warranted at a later date, efforts should be made to identify the date of construction for this bridge if additional resources are available, but it is likely that this structure would be subject to documenting and review under Section 106 of the National Historic Preservation Act (NHPA) if included within a proposed cultural resources study area or project Area of Potential Effect (APE). This should not hinder project development or delay project delivery.

B. ***SHPO NRHP/DOE listed Properties in Reconnaissance Area:***

X There are no previously listed NRHP or DOE properties located within the reconnaissance area

Comments: There are no documented historic properties located within the study area based upon review of NRHP and NRHP-eligible properties or thematic surveys collected within SHPO databases.

C. ***Archaeological Sites in Reconnaissance Area as mapped at the OAS:***

X There are no sites mapped within the reconnaissance area

Comments: There are no mapped archaeological sites located within the study area based upon review of the OAS site files.

3. Based on the file review, the preparer identified the potential for the following 45-year-old or older properties or conditions to exist within the reconnaissance area:

X The preparer identified the potential presence of the following 45 year old or older properties in the reconnaissance area

Source:	☐	GLO map	☒	OAS map	☒	Aerial photograph	☒ Other
Property Type:	☐	Prehistoric site	☐	19th Century site	☒	20th century site	☐ Other

Comments: Through comparison with old reference maps and aerial imagery (see above), there may be 45-year-old or older buildings associated with numerous homesteads, homestead complexes, and commercial establishments located throughout the recon corridor. Were these buildings to be included within the proposed cultural resources study area or project APE, they will require documenting and review pursuant to Section 106 of the NHPA. This should not hinder project development or delay project delivery.

4. Based on the file review, the preparer identified the following cultural resources surveys or studies previously conducted within the reconnaissance area:

X Prior survey(s) conducted within the reconnaissance area was/were identified during the archival file review and are presented below

Comments: ODOT cultural resources survey JP 29693(04) concerning the proposed replacement of I-44 bridges NBI #12814 and 12815 was conducted by ODOT-CRP in 2015. At that time, both bridges were considered to be exempt from documenting in accordance with the March 2005 ACHP Section 106 Exemption regarding effects to the Interstate Highway System. The approximately 4400 foot long study area was eccentrically shaped extending between 180 and 285 feet on both sides of the existing I-44 / SH-66 midline. The study area adhered to existing R/W throughout. No cultural resources were recorded within the current recon corridor as part of that survey. According to NBI data and recent aerial imagery, neither bridge has yet been replaced or rehabilitated.

5. Reconnaissance or windshield survey

X The preparer did not complete a windshield review of the reconnaissance area

A. ***Properties in the Reconnaissance Area that appear to be 45 Years Old or Older:***

X The preparer observed the following 45-year-old or older properties in the reconnaissance area

#	Property Type	Description	Location within reconnaissance area
265	Building	Houses, secondary structures or commercial buildings associated with 254 locations.	Both sides of I-44 / SH-66 and US-75 throughout.

Comments: The majority of these buildings were depicted on the 1952 topographic map or noted on the 1958 USDA-SCS aerial imagery. At least four homes may have been extant as early as 1943 according to aerial imagery. At least 27 additional buildings were observed on the 1964 aerial imagery and 21 more were not seen on aerial imagery but were only depicted on the 1973 topographic map. Corroborative observations of these buildings were conducted through the use of Google Earth aerial imagery dated March of 2015 and

Google Earth Streetview imagery from June of 2016. All of these buildings are considered to have low potential for inclusion in the NRHP. Were they to be included within the proposed cultural resources study area or project APE, they will be subject to documenting and SHPO review pursuant to Section 106 of the NHPA. This should not hinder project development or delay project delivery.

B. ***Possible Archaeological Sites Observed:***

X The preparer did not observe potential archaeological sites in the reconnaissance area

Comments: Based only upon comparisons with the old reference maps and aerial imagery (see above), there may be at least ten 45-year-old or older archaeological sites residual to mid- through late-20th century suburban homesteads or commercial complexes located within the recon corridor boundaries. Although no surface artifacts or features were observed in association with these possible sites using Google Earth aerial imagery dated March of 2015 or Google Earth Streetview imagery from June of 2016, their former positions have been represented on attached recon maps for clarity of location. All of the possible sites reviewed as part of this recon are considered to have "Low Potential" for NRHP eligibility due to the limited amount of data that these site types typically contain. The level of disturbance of these sites is unknown, however; should these sites be encountered during cultural resources evaluations and found to contain archaeological features such as cisterns, wells, or foundations, deed research will be necessary to determine whether they are significant for their association with individuals important to the history of Oklahoma. Archaeological sites, especially of this nature and regardless of their NRHP eligibility, rarely hinder project development or delay project delivery.

---

6. Additional Comments: The four-lane divided interstate roadway included within the recon corridor was constructed between 1952 and 1958. Although designated US-66 in 1959, it is not considered to be a part of the Historic Route 66 State Scenic Byway.

Section 8
Hazardous Waste/LUAST Sites Summary
I-44 Corridor from I-244 Junction East to the Arkansas River
Tulsa County JP 32728(04)

8.1 Hazardous Waste Sites

A search of federal and state, local databases of hazardous waste sites was performed by GeoSearch. Hazardous waste sites, which are differentiated from sites containing petroleum storage tanks, are those that generate/store hazardous materials or are recorded in other environmental databases. A one-mile buffer around the study area was included. According to the GeoSearch report, there are 22 hazardous waste sites within or adjacent to the I-44 Corridor study area and 6 hazardous waste sites outside of, but within the ASTM search radii of, the I-44 Corridor study area (Table 1). None of these sites are considered a potential risk to the project. Some sites are listed within multiple databases. The full GeoSearch report, which supplies database acronyms, is contained within the electronic version of this report.

The hazardous materials sites displayed on the composite maps provided in Section 1 are the confirmed locations based on GeoSearch data and field reconnaissance. Several sites (GeoSearch Map ID #14, #17, #27, #28, #31, and #33) could not be located during the field visit. Thus, the precise locations of these sites are uncertain and are based on address and/or location data supplied by GeoSearch. No additional sites were identified through field reconnaissance.

Table 1: Listed Hazardous Materials Sites within the I-44 Corridor Study Area and Surrounding Sites within ASTM E1527-00 Search Radii

Distance from Study Area	Database Name	Site Name & Address	Geo-Search Map ID

***** Site location could not be field verified; site location on composite maps is based on GeoSearch information.

8.2 Storage Tanks and Oil Well Sites

A search of AST (aboveground storage tank), UST (underground storage tank), and LUST/LAST (leaking UST or leaking AST) databases was performed by GeoSearch. A 1/8 mile buffer around the study area was included. According to the GeoSearch report, there are 13 storage tank sites within or adjacent to the study area, 3 of which are LUST sites (Table 2), and 2 storage tank sites within 1/8 mile of the study area. LUST sites (GeoSearch Map IDs #1, #2, and #3) have a potential for underground contamination of the area; however, available records indicated the LUST cases have been closed and are no longer of concern to ODEQ. The full GeoSearch report is contained within the electronic version of this report.

The storage tank sites displayed on the composite maps provided in Section 1 are the confirmed locations based on GeoSearch data and field reconnaissance. Two sites (GeoSearch Map IDs #10 and #32) could not be located during the field visit. Thus, the precise location of these sites are uncertain and are based on address and/or location data supplied by GeoSearch.

Table 2: Listed AST, UST, and LUST/LAST Sites within I-44 Corridor Study Area or within 1/8 Mile of Study Area

Distance from Study Area	Tank Type	Tank Number	Site Name & Address	Geo-Search Map ID
Within Study Area	LUST (suspicion of release; closed case status) & UST	5 (removed)	Momentum Chevrolet 707 W. 51st Street, Tulsa, OK 74107	1
Within Study Area	LUST (confirmed release; closed case status) & UST	4 (2 removed & 2 currently in use)	Excel Mart 5150 S. 33rd West Avenue, Tulsa, OK 74107	2

Distance from Study Area	Tank Type	Tank Number	Site Name & Address	Geo-Search Map ID
Within Study Area	LUST (confirmed release; closed case status) & UST	3 (removed)	Former Citgo Quick Mart 5102 S. Union Avenue, Tulsa, OK 74107	3
Within Study Area	UST	1 (removed)	Green Metal Fabricators 906 W. Skelly Drive Tulsa, OK 74107	5
Within Study Area	UST	1 (removed)	United Steel Erectors, Inc. 820 W. Skelly Drive, Tulsa, OK 74107	6
Within Study Area	AST UST	2 (permanently out of use) 9 (removed)	Pepsi Bottling Groups / Bottling Group LLC / Pepsi Beverages Company – Tulsa 510 W. Skelly Drive Tulsa, OK 74107	7
Within Study Area	UST	3 (permanently out of use)	Alvin Dundee / Retail Buildings, Inc. 5048 S. 33rd W. Avenue, Tulsa, OK 74107	8
Within Study Area	UST	3 (removed)	Kirkpatrick's Texaco 2940 W. Skelly Drive, Tulsa, OK 74107	9
Within Study Area	UST	3 (removed)	Hill's APCO 4999 S. Union Avenue, Tulsa, OK	10*
Within Study Area	UST	3 (tank closed in place)	Becco Contractors, Inc. 1130 W. Skelly Drive, Tulsa, OK 74107	11
Within Study Area	UST	3 (removed)	QuikTrip Store #9 1617 W. 51st Street, Tulsa, OK 74107	12
Within Study Area	UST	4 (currently in use)	QuikTrip Store #9 4966 S. Union Avenue, Tulsa, OK 74107	12
Within Study Area	UST	2 (tank closed in place)	Thomas C. Monahan, Inc. 912 W. Skelly Drive, Tulsa, OK 74107	13
Within 1/8 Mile of Study Area	UST	1 (permanently out of use)	Dowell's Lube & Oil Patch 4806 S. Union Avenue, Tulsa, OK 74107	30
Within 1/8 Mile of Study Area	UST	1 (removed)	Degen Pipe & Supply Company 5000 Southwest Boulevard, Tulsa, OK 74107	32*

* Site location could not be field verified; site location on composite maps is based on GeoSearch information.

GeoSearch ID #12 (QuikTrip Store #9) is listed twice in Table 2 as the facility has been recently relocated. The site at 1617 W. 51st Street no longer functions as a gasoline station. The new QuikTrip facility, which is currently operational, is located northeast of the W 51st Street/S Union Avenue intersection). While Becco Contractors, Inc (GeoSearch ID #11) no longer has active USTs onsite, field reconnaissance identified what appeared to be a 1,000-gallon AST on the property.

Based on a review of the Oklahoma Corporation Commission (OCC) Petroleum Storage Tank Division files, there are no additional UST sites located within 1/8 mile of the study area beyond those that were reported by GeoSearch.

One additional storage tank site containing petroleum products was identified through field reconnaissance and is listed and described below in Table 3. This site is also displayed on the composite maps provided in Section 1.

Table 3: Additional Discovered AST Sites within I-44 Corridor Study Area

Distance from Study Area	Tank Type/Description	Site Name	Geo-Search Map ID
Within Study Area	2 ASTs appearing to be in new condition with secondary containment	Ellsworth Trucking LLC 2500 W. Skelly Drive, Tulsa, OK 74107	N/A

The OCC Oil and Gas Division well database was consulted to estimate the number of oil and gas wells within the study area. According to the OCC database, 14 well sites are located within or immediately adjacent to the study area and 13 well sites are outside of the study area but within a 1/8 mile of the study area. Multiple wells are present at some of the sites. Of the 14 well sites within the study area, 9 wells have an active status and 5 have a "drilled and plugged" status. Refer to the OCC Oil and Gas Division map included in this section.

8.3 Current and Abandoned Coal Mines

According to information provided by Oklahoma Conservation Commission Abandoned Mine Land (OCC-AML) Division, the study area is within the Commercial Coal Belt of the Northeast Oklahoma Shelf and Tulsa County contains Abandoned Mine Land. However, no current or abandoned coal mines are within the study area. This information was obtained from historic and present topographical maps, communication with Oklahoma

Department of Mines Geologist (Darrell Shults), and the Oklahoma Conservation Commission Abandoned Mine Land (OCC-AML) Division.

Oklahoma Corporation Commission

Disclaimer

This report was designed by GeoSearch to meet or exceed the records search requirements of the All Appropriate Inquiries Rule (40 CFR §312.26) and the current version of the ASTM International E1527, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process or, if applicable, the custom requirements requested by the entity that ordered this report. The records and databases of records used to compile this report were collected from various federal,state and local governmental entities. It is the goal of GeoSearch to meet or exceed the 40 CFR §312.26 and E1527 requirements for updating records by using the best available technology. GeoSearch contacts the appropriate governmental entities on a recurring basis. Depending on the frequency with which a record source or database of records is updated by the governmental entity, the data used to prepare this report may be updated monthly, quarterly, semi-annually, or annually.

The information provided in this report was obtained from a variety of public sources. GeoSearch cannot ensure and makes no warranty or representation as to the accuracy, reliability, quality, errors occurring from data conversion or the customer's interpretation of this report. This report was made by GeoSearch for exclusive use by its clients only. Therefore, this report may not contain sufficient information for other purposes or parties. GeoSearch and its partners, employees, officers And independent contractors cannot be held liable For actual, incidental, consequential, special or exemplary damages suffered by a customer resulting directly or indirectly from any information provided by GeoSearch.

Target Property Summary

Target Property Information

I-44 Corridor
Tulsa, Oklahoma 74107

Coordinates
Area centroid (-96.008130, 36.0882369)
635 feet above sea level

USGS Quadrangle
Sapulpa North, OK
Jenks, OK

Geographic Coverage Information

County/Parish: Tulsa (OK) , Creek (OK)
ZipCode(s):
Tulsa OK: 74105, 74107, 74132, 74136

Radon
* Target property is located in Radon Zone 3.
Zone 3 areas have a predicted average indoor radon screening level less than 2 pCi/L (picocuries per liter).

Elevation Summary

Elevations are collected from the USGS 3D Elevation Program 1/3 arc-second (approximately 10 meters) layer hosted at the NGTOC. .

Target Property Elevation: 635 ft.

*NOTE: Standard environmental records are displayed in **bold**.*

FEDERAL FACILITY: **NOT A FEDERAL FACILITY**

NPL: **NOT ON THE NPL**

NON NPL STATUS: **NFRAP-SITE DOES NOT QUALIFY FOR THE NPL BASED ON EXISTING INFORMATION**

Below information was gathered from the prior NFRAP update completed in 10/2013 update:

ACTION	START DATE	COMPLETION DATE	RESPONSIBILITY
PA - PRELIMINARY ASSESSMENT	**12/10/1990**	**12/10/1990**	**EPA FUND**
DS - DISCOVERY	**NOT REPORTED**	**4/12/1990**	**EPA IN-HOUSE**
VS - ARCHIVE SITE	**NOT REPORTED**	**12/10/1990**	**EPA IN-HOUSE**

ACTION DESCRIPTIONS

PA - (PRELIMINARY ASSESSMENT) - COLLECTION OF DIVERSE EXISTING INFORMATION ABOUT THE SOURCE AND NATURE OF THE SITE HAZARD. IT IS EPA POLICY TO COMPLETE THE PRELIMINARY ASSESSMENT WITHIN ONE YEAR OF SITE DISCOVERY.

DS - (DISCOVERY) - THE PROCESS BY WHICH A POTENTIAL HAZARDOUS WASTE SITE IS BROUGHT TO THE ATTENTION OF THE EPA. THE PROCESS CAN OCCUR THROUGH THE USE OF SEVERAL MECHANISMS SUCH AS A PHONE CALL OR REFERRAL BY ANOTHER GOVERNMENT AGENCY.

VS - (ARCHIVE SITE) - THE DECISION IS MADE THAT NO FURTHER ACTIVITY IS PLANNED AT THE SITE.

AIRSAFS Aerometric Information Retrieval System / Air Facility Subsystem

VERSION DATE: 10/20/14

The United States Environmental Protection Agency (EPA) modified the Aerometric Information Retrieval System (AIRS) to a database that exclusively tracks the compliance of stationary sources of air pollution with EPA regulations: the Air Facility Subsystem (AFS). Since this change in 2001, the management of the AIRS/AFS database was assigned to EPA's Office of Enforcement and Compliance Assurance.

BRS Biennial Reporting System

VERSION DATE: 12/31/11

The United States Environmental Protection Agency (EPA), in cooperation with the States, biennially collects information regarding the generation, management, and final disposition of hazardous wastes regulated under the Resource Conservation and Recovery Act of 1976 (RCRA), as amended. The Biennial Report captures detailed data on the generation of hazardous waste from large quantity generators and data on waste management practices from treatment, storage and disposal facilities. Currently, the EPA states that data collected between 1991 and 1997 was originally a part of the defunct Biennial Reporting System and is now incorporated into the RCRAInfo data system.

CDL Clandestine Drug Laboratory Locations

VERSION DATE: 07/01/16

The U.S. Department of Justice ("the Department") provides this information as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments. The Department does not establish, implement, enforce, or certify compliance with clean-up or remediation standards for contaminated sites; the public should contact a state or local health department or environmental protection agency for that information.

DOCKETS EPA Docket Data

VERSION DATE: 12/22/05

The United States Environmental Protection Agency Docket data lists Civil Case Defendants, filing dates as far back as 1971, laws broken including section, violations that occurred, pollutants involved, penalties assessed and superfund awards by facility and location. Please refer to ICIS database as source of current data.

EC Federal Engineering Institutional Control Sites

VERSION DATE: 08/03/15

This database includes site locations where Engineering and/or Institutional Controls have been identified as part

of a selected remedy for the site as defined by United States Environmental Protection Agency official remedy decision documents. A site listing does not indicate that the institutional and engineering controls are currently in place nor will be in place once the remedy is complete; it only indicates that the decision to include either of them in the remedy is documented as of the completed date of the document. Institutional controls are actions, such as legal controls, that help minimize the potential for human exposure to contamination by ensuring appropriate land or resource use. Engineering controls include caps, barriers, or other device engineering to prevent access, exposure, or continued migration of contamination.

ERNSOK Emergency Response Notification System

VERSION DATE: 02/21/16

This National Response Center database contains data on reported releases of oil, chemical, radiological, biological, and/or etiological discharges into the environment anywhere in the United States and its territories. The data comes from spill reports made to the U.S. Environmental Protection Agency, U.S. Coast Guard, the National Response Center and/or the U.S. Department of Transportation.

FRSOK Facility Registry System

VERSION DATE: 02/03/16

The United States Environmental Protection Agency's Office of Environmental Information (OEI) developed the Facility Registry System (FRS) as the centrally managed database that identifies facilities, sites or places subject to environmental regulations or of environmental interest. The Facility Registry System replaced the Facility Index System or FINDS database.

HMIRSR06 Hazardous Materials Incident Reporting System

VERSION DATE: 11/08/15

The HMIRS database contains unintentional hazardous materials release information reported to the U.S. Department of Transportation located in EPA Region 6. This region includes the following states: Arkansas, Louisiana, New Mexico, Oklahoma, and Texas.

ICIS Integrated Compliance Information System (formerly DOCKETS)

VERSION DATE: 12/06/15

ICIS is a case activity tracking and management system for civil, judicial, and administrative federal Environmental Protection Agency enforcement cases. ICIS contains information on federal administrative and federal judicial cases under the following environmental statutes: the Clean Air Act, the Clean Water Act, the Resource Conservation and Recovery Act, the Emergency Planning and Community Right-to-Know Act - Section 313, the Toxic Substances Control Act, the Federal Insecticide, Fungicide, and Rodenticide Act, the Comprehensive Environmental Response, Compensation, and Liability Act, the Safe Drinking Water Act, and the Marine Protection, Research, and Sanctuaries Act.

ICISNPDES Integrated Compliance Information System National Pollutant Discharge Elimination System

VERSION DATE: 12/20/15

In 2006, the Integrated Compliance Information System (ICIS) - National Pollutant Discharge Elimination System (NPDES) became the NPDES national system of record for select states, tribes and territories. ICIS-NPDES is an information management system maintained by the United States Environmental Protection Agency's Office of Compliance to track permit compliance and enforcement status of facilities regulated by the NPDES under the Clean Water Act. ICIS-NPDES is designed to support the NPDES program at the state, regional, and national levels.

LUCIS Land Use Control Information System

VERSION DATE: 09/01/06

The LUCIS database is maintained by the U.S. Navy and contains information for former Base Realignment and Closure (BRAC) properties across the United States.

MLTS Material Licensing Tracking System

VERSION DATE: 02/12/16

MLTS is a list of approximately 8,100 sites which have or use radioactive materials subject to the United States Nuclear Regulatory Commission (NRC) licensing requirements.

NPDESR06 National Pollutant Discharge Elimination System

VERSION DATE: 04/01/07

Information in this database is extracted from the Water Permit Compliance System (PCS) database which is used by United States Environmental Protection Agency to track surface water permits issued under the Clean Water Act. This database includes permitted facilities located in EPA Region 6. This region includes the following states: Arkansas, Louisiana, New Mexico, Oklahoma, and Texas. The NPDES database was collected from December 2002 until April 2007. Refer to the PCS and/or ICIS-NPDES database as source of current data.

PADS PCB Activity Database System

VERSION DATE: 07/01/14

The PCB Activity Database System (PADS) is used by the United States Environmental Protection Agency to monitor the activities of polychlorinated biphenyls (PCB) handlers.

PCSR06 Permit Compliance System

VERSION DATE: 08/01/12

The Permit Compliance System is used in tracking enforcement status and permit compliance of facilities controlled by the National Pollutant Discharge Elimination System (NPDES) under the Clean Water Act and is maintained by the United States Environmental Protection Agency's Office of Compliance. PCS is designed to support the NPDES program at the state, regional, and national levels. This database includes permitted facilities located in EPA Region 6. This region includes the following states: Arkansas, Louisiana, New Mexico, Oklahoma, and Texas. PCS has been modernized, and no longer exists. National Pollutant Discharge Elimination System (ICIS-NPDES) data can now be found in Integrated Compliance Information System (ICIS).

RCRASC RCRA Sites with Controls

VERSION DATE: 02/23/16

This list of Resource Conservation and Recovery Act sites with institutional controls in place is provided by the U.S. Environmental Protection Agency.

SFLIENS CERCLIS Liens

VERSION DATE: 06/08/12

A Federal CERCLA ("Superfund") lien can exist by operation of law at any site or property at which United States Environmental Protection Agency has spent Superfund monies. These monies are spent to investigate and address releases and threatened releases of contamination. CERCLIS provides information as to the identity of these sites and properties. This database contains those CERCLIS sites where the Lien on Property action is complete.

SSTS Section Seven Tracking System

VERSION DATE: 12/08/14

The United States Environmental Protection Agency tracks information on pesticide establishments through the Section Seven Tracking System (SSTS). SSTS records the registration of new establishments and records pesticide production at each establishment. The Federal Insecticide, Fungicide and Rodenticide Act (FIFRA) requires that production of pesticides or devices be conducted in a registered pesticide-producing or device-producing establishment. ("Production" includes formulation, packaging, repackaging, and relabeling.)

TRI Toxics Release Inventory

VERSION DATE: 12/31/14

The Toxics Release Inventory, provided by the United States Environmental Protection Agency, includes data on toxic chemical releases and waste management activities from certain industries as well as federal and tribal facilities. This inventory contains information about the types and amounts of toxic chemicals that are released each year to the air, water, and land as well as information on the quantities of toxic chemicals sent to other facilities for further waste management.

TSCA Toxic Substance Control Act Inventory

VERSION DATE: 12/31/06

The Toxic Substances Control Act (TSCA) was enacted in 1976 to ensure that chemicals manufactured, imported, processed, or distributed in commerce, or used or disposed of in the United States do not pose any unreasonable risks to human health or the environment. TSCA section 8(b) provides the United States Environmental Protection Agency authority to "compile, keep current, and publish a list of each chemical substance that is manufactured or processed in the United States." This TSCA Chemical Substance Inventory contains non-confidential information on the production amount of toxic chemicals from each manufacturer and importer site.

NLRRCRAG No Longer Regulated RCRA Generator Facilities

VERSION DATE: 07/12/16

This database includes RCRA Generator facilities that are no longer regulated by the United States Environmental Protection Agency or do not meet other RCRA reporting requirements. This listing includes facilities that formerly generated hazardous waste.
Large Quantity Generators: Generate 1,000 kg or more of hazardous waste during any calendar month; or Generate more than 1 kg of acutely hazardous waste during any calendar month; or Generate more than 100 kg of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, or acutely hazardous waste during any calendar month; or Generate 1 kg or less of acutely hazardous waste during any calendar month, and accumulate more than 1kg of acutely hazardous waste at any time; or Generate 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste during any calendar month, and accumulated more than 100 kg of that material at any time.
Small Quantity Generators: Generate more than 100 and less than 1000 kilograms of hazardous waste during any calendar month and accumulate less than 6000 kg of hazardous waste at any time; or Generate 100 kg or less of hazardous waste during any calendar month, and accumulate more than 1000 kg of hazardous waste at any time.
Conditionally Exempt Small Quantity Generators: Generate 100 kilograms or less of hazardous waste per calendar month, and accumulate 1000 kg or less of hazardous waste at any time; or Generate one kilogram or less of acutely hazardous waste per calendar month, and accumulate at any time: 1 kg or less of acutely hazardous waste; or 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, or acutely hazardous waste; or Generate 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, or acutely hazardous waste during any calendar month, and accumulate at any time: 1 kg or less of acutely hazardous waste; or 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste.

RCRAGR06 Resource Conservation & Recovery Act - Generator

VERSION DATE: 07/12/16

This database includes sites listed as generators of hazardous waste (large, small, and exempt) in the RCRAInfo

system. The United States Environmental Protection Agency defines RCRAInfo as the comprehensive information system which provides access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). This database includes sites located in EPA Region 6. This region includes the following states: Arkansas, Louisiana, New Mexico, Oklahoma, and Texas.
Large Quantity Generators: Generate 1,000 kg or more of hazardous waste during any calendar month; or Generate more than 1 kg of acutely hazardous waste during any calendar month; or Generate more than 100 kg of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, or acutely hazardous waste during any calendar month; or Generate 1 kg or less of acutely hazardous waste during any calendar month, and accumulate more than 1kg of acutely hazardous waste at any time; or Generate 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste during any calendar month, and accumulated more than 100 kg of that material at any time.
Small Quantity Generators: Generate more than 100 and less than 1000 kilograms of hazardous waste during any calendar month and accumulate less than 6000 kg of hazardous waste at any time; or Generate 100 kg or less of hazardous waste during any calendar month, and accumulate more than 1000 kg of hazardous waste at any time.
Conditionally Exempt Small Quantity Generators: Generate 100 kilograms or less of hazardous waste per calendar month, and accumulate 1000 kg or less of hazardous waste at any time; or Generate one kilogram or less of acutely hazardous waste per calendar month, and accumulate at any time: 1 kg or less of acutely hazardous waste; or 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, or acutely hazardous waste; or Generate 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, or acutely hazardous waste during any calendar month, and accumulate at any time: 1 kg or less of acutely hazardous waste; or 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste.

RCRANGR06 Resource Conservation & Recovery Act - Non-Generator

VERSION DATE: 07/12/16

This database identifies RCRAInfo system sites that only handle hazardous waste, such as transporters, without generating any amount hazardous waste. The United States Environmental Protection Agency defines RCRAInfo as the comprehensive information system which provides access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). This database includes sites located in EPA Region 6. This region includes the following states: Arkansas, Louisiana, New Mexico, Oklahoma, and Texas.

HISTPST Historical Gas Stations

VERSION DATE: NR

This historic directory of service stations is provided by the Cities Service Company. The directory includes

Cities Service filling stations that were located throughout the United States in 1930.

MSHA Mine Safety and Health Administration Master Index File

VERSION DATE: 08/05/16

The Mine dataset lists all Coal and Metal/Non-Metal mines under MSHA's jurisdiction since 1/1/1970. It includes such information as the current status of each mine (Active, Abandoned, NonProducing, etc.), the current owner and operating company, commodity codes and physical attributes of the mine. Mine ID is the unique key for this data. This information is provided by the United States Department of Labor - Mine Safety and Health Administration (MSHA).

BF Brownfields Management System

VERSION DATE: 07/15/16

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. The United States Environmental Protection Agency maintains this database to track activities in the various brown field grant programs including grantee assessment, site cleanup and site redevelopment. This database included tribal brownfield sites.

DNPL Delisted National Priorities List

VERSION DATE: 03/07/16

This database includes sites from the United States Environmental Protection Agency's Final National Priorities List (NPL) where remedies have proven to be satisfactory or sites where the original analyses were inaccurate, and the site is no longer appropriate for inclusion on the NPL, and final publication in the Federal Register has occurred.

NLRRCRAT No Longer Regulated RCRA Non-CORRACTS TSD Facilities

VERSION DATE: 07/12/16

This database includes RCRA Non-Corrective Action TSD facilities that are no longer regulated by the United States Environmental Protection Agency or do not meet other RCRA reporting requirements. This listing includes facilities that formerly treated, stored or disposed of hazardous waste.

ODI Open Dump Inventory

VERSION DATE: 06/01/85

The open dump inventory was published by the United States Environmental Protection Agency. An "open dump" is defined as a facility or site where solid waste is disposed of which is not a sanitary landfill which meets the criteria promulgated under section 4004 of the Solid Waste Disposal Act (42 U.S.C. 6944) and which is not a

facility for disposal of hazardous waste. This inventory has not been updated since June 1985.

RCRAT Resource Conservation & Recovery Act - Non-CORRACTS Treatment, Storage & Disposal Facilities

VERSION DATE: 07/12/16

This database includes Non-Corrective Action sites listed as treatment, storage and/or disposal facilities of hazardous waste in the RCRAInfo system. The United States Environmental Protection Agency defines RCRAInfo as the comprehensive information system which provides access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS).

SEMS Superfund Enterprise Management System

VERSION DATE: 03/07/16

The U.S. Environmental Protections Agency's (EPA) Office of Solid Waste and Emergency Response, Office of Superfund Remediation and Technology Innovation (OSRTI), has implemented The Superfund Enterprise Management System (SEMS), formerly known as CERCLIS (Comprehensive Environmental Response, Compensation and Liability Information System) to track and report on clean-up and enforcement activities taking place at Superfund sites. SEMS represents a joint development and ongoing collaboration between Superfund's Remedial, Removal, Federal Facilities, Enforcement and Emergency Response programs.

SEMSARCH Superfund Enterprise Management System Archived Site Inventory

VERSION DATE: 03/16/16

The Superfund Enterprise Management System Archive listing (SEMS-ARCHIVE) has replaced the CERCLIS NFRAP reporting system in 2015. This listing reflect sites that have been assessed and no further remediation is planned and is of no further interest under the Superfund program.

DOD Department of Defense Sites

VERSION DATE: 06/21/10

This information originates from the National Atlas of the United States Federal Lands data, which includes lands owned or administered by the Federal government. Army DOD, Army Corps of Engineers DOD, Air Force DOD, Navy DOD and Marine DOD areas of 640 acres or more are included.

FUDS Formerly Used Defense Sites

VERSION DATE: 06/01/15

The Formerly Used Defense Sites (FUDS) inventory includes properties previously owned by or leased to the United States and under Secretary of Defense Jurisdiction, as well as Munitions Response Areas (MRAs). The remediation of these properties is the responsibility of the Department of Defense. This data is provided by the

U.S. Army Corps of Engineers (USACE), the boundaries/polygon data are based on preliminary findings and not all properties currently have polygon data available. DISCLAIMER: This data represents the results of data collection/processing for a specific USACE activity and is in no way to be considered comprehensive or to be used in any legal or official capacity as presented on this site. While the USACE has made a reasonable effort to insure the accuracy of the maps and associated data, it should be explicitly noted that USACE makes no warranty, representation or guaranty, either expressed or implied, as to the content, sequence, accuracy, timeliness or completeness of any of the data provided herein. For additional information on Formerly Used Defense Sites please contact the USACE Public Affairs Office at (202) 528-4285.

NLRRCRAC No Longer Regulated RCRA Corrective Action Facilities

VERSION DATE: 07/12/16

This database includes RCRA Corrective Action facilities that are no longer regulated by the United States Environmental Protection Agency or do not meet other RCRA reporting requirements.

NPL National Priorities List

VERSION DATE: 03/07/16

This database includes United States Environmental Protection Agency (EPA) National Priorities List sites that fall under the EPA's Superfund program, established to fund the cleanup of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action.

PNPL Proposed National Priorities List

VERSION DATE: 03/07/16

This database contains sites proposed to be included on the National Priorities List (NPL) in the Federal Register. The United States Environmental Protection Agency investigates these sites to determine if they may present long-term threats to public health or the environment.

RCRAC Resource Conservation & Recovery Act - Corrective Action Facilities

VERSION DATE: 07/12/16

This database includes all hazardous waste sites with ongoing corrective action activity and where corrective action is statutorily required to be address but have not had corrective action imposed in the RCRAInfo system. The Corrective Action Program requires owners or operators of RCRA facilities (or treatment, storage, and disposal facilities) to investigate and cleanup contamination in order to protect human health and the environment. The United States Environmental Protection Agency defines RCRAInfo as the comprehensive information system which provides access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS).

RCRASUBC Resource Conservation & Recovery Act - Subject to Corrective Action Facilities

VERSION DATE: 07/12/16

This database includes hazardous waste sites which are potentially subject to corrective action regardless of whether they have correction action underway, plus any sites showing a corrective action event of RFI or beyond in the RCRAInfo system. Sites conducting corrective action under analogous state authorities are also included. The United States Environmental Protection Agency defines RCRAInfo as the comprehensive information system which provides access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS).

RODS Record of Decision System

VERSION DATE: 07/01/13

These decision documents maintained by the United States Environmental Protection Agency describe the chosen remedy for NPL (Superfund) site remediation. They also include site history, site description, site characteristics, community participation, enforcement activities, past and present activities, contaminated media, the contaminants present, and scope and role of response action.

Environmental Records Definitions - STATE (OK)

AIRS Listing of Permitted AIRS Facilities

VERSION DATE: 04/21/16

The Air Quality Division of the Oklahoma Department of Environmental Quality maintains this listing of operating AIRS permitted facilities.

IC Sites with Institutional Controls

VERSION DATE: 07/06/16

Institutional controls (IC) are administrative and/or legal measures in place to safeguard the public and the environment from potential contamination. In certain circumstances, local zoning or ordinances can serve as an IC. The Oklahoma Department of Environmental Quality (DEQ) has a mandatory recordable notice (deed notice) statute in its Environmental Quality Code (27A Oklahoma Statutes § 2-7-123). This database includes all DEQ Brownfields, Voluntary Cleanup, SCAP, and Superfund sites, along with sites from the Oklahoma Corporation Commission's July 2010 Brownfields list, that have had institutional controls placed on the property.

TIERII Tier II Hazardous Substance Inventory Reports

VERSION DATE: 07/06/16

The Oklahoma Department of Environmental Quality maintains this listing of Tier II facilities which store hazardous chemicals or materials on-site. The OSHA Hazard Communication Standard defines hazardous chemicals as any substance for which a facility must maintain a Material Safety Data Sheet (MSDS).

DCR Registered Dry Cleaning Facilities

VERSION DATE: 07/26/16

This listing of registered dry cleaners is maintained by the Oklahoma Department of Environmental Quality.

UAST Underground and Aboveground Storage Tanks

VERSION DATE: 06/30/16

This database includes a listing of registered underground and aboveground storage tanks and is maintained by the Oklahoma Corporation Commission.

BF OKDEQ Brownfield Properties

VERSION DATE: 07/06/16

As defined by the Oklahoma Department of Environmental Quality, this program provides a means for private parties and government entities to voluntarily investigate and if warranted, clean up properties that may be contaminated with hazardous wastes. The formal Brownfields Program provides specific state liability relief and protects the property from federal Superfund actions. This listing contains both completed Brownfield properties

and those which may complete the Brownfields Program within the next year.

BFPR OCC Brownfields Public Record

VERSION DATE: 04/07/16

Any facility or real property where normal use, reuse, expansion or redevelopment is hindered by pollution or suspected pollution of a substance or substances released by activities regulated by Oklahoma Corporation Commission (oil and gas exploration and production, pipelines, and petroleum storage tanks) qualifies as a Brownfield. This listing includes properties currently enrolled in the OCC Brownfield Program, as well as proposed brownfield properties as of April 2008.

LUAST Leaking Underground and Aboveground Storage Tanks

VERSION DATE: 06/30/16

This database includes registered leaking underground and aboveground storage tanks and is maintained by the Oklahoma Corporation Commission.

SWF Solid Waste Facilities

VERSION DATE: 06/30/16

This database is maintained by the Land Protection Division of the Oklahoma Department of Environmental Quality and contains solid waste disposal sites including storage units, transfer facilities, recycling units and treatment units.

VCP Voluntary Cleanup Program Sites

VERSION DATE: 07/07/16

The Oklahoma Department of Environmental Quality's Land Protection Division provides this list of sites in the Voluntary Cleanup Program (VCP). The VCP program provides a means for private parties and government entities to voluntarily investigate and if warranted, clean up properties that may be contaminated with hazardous wastes.

SF Superfund Listing

VERSION DATE: 06/25/15

The Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (CERCLA), otherwise referred to as Superfund, is a federal program used to cleanup our nation’s uncontrolled hazardous waste sites. Oklahoma Department of Environmental Quality works with EPA to address these sites in Oklahoma.

Environmental Records Definitions - TRIBAL

USTR06 Underground Storage Tanks On Tribal Lands

VERSION DATE: 06/16/16

This database, provided by the United States Environmental Protection Agency (EPA), contains underground storage tanks on Tribal lands located in EPA Region 6. This region includes the following states: Arkansas, Louisiana, New Mexico, Oklahoma, and Texas.

LUSTR06 Leaking Underground Storage Tanks On Tribal Lands

VERSION DATE: 04/15/16

This database, provided by the United States Environmental Protection Agency (EPA), contains leaking underground storage tanks on Tribal lands located in EPA Region 6. This region includes the following states: Arkansas, Louisiana, New Mexico, Oklahoma, and Texas.

ODINDIAN Open Dump Inventory on Tribal Lands

VERSION DATE: 11/08/06

This Indian Health Service database contains information about facilities and sites on tribal lands where solid waste is disposed of, which are not sanitary landfills or hazardous waste disposal facilities, and which meet the criteria promulgated under section 4004 of the Solid Waste Disposal Act (42 U.S.C. 6944).

INDIANRES Indian Reservations

VERSION DATE: 01/01/00

The Department of Interior and Bureau of Indian Affairs maintains this database that includes American Indian Reservations, off-reservation trust lands, public domain allotments, Alaska Native Regional Corporations and Recognized State Reservations.

Reference: Petroleum storage tank closure for Momentum Chevrolet, 707 W 51st Str, Tulsa, OK; Facility ID #72-10839

Dear Registered Tank Owner,

We received a Underground Storage Tank Closure Report from CRA & Associates to report tank removal and sampling results at the above referenced location. Closure was completed September 4, 2012 for (1) 10,000 gallon and (4) 450 gallon steel tanks and associated piping.

Based on soil sampling results, the OCC believes that there is no contamination of concern at this site at this time. The subject tanks and associated piping are hereby considered permanently closed in accordance with OCC regulations. Should future environmental problems occur, which the OCC determines may be related to this site, additional investigation and corrective action may be required in accordance with State Law. If you have any questions regarding this matter, please contact me at (405) 522-4810.

Sincerely yours,

Terri L. Roberts
Environmental Compliance Analyst

INSTRUCTIONS

Form must be signed at bottom of UST Page 3 or AST Page 3. Please type or print in ink. This form must be completed for each location containing petroleum storage tanks. If more than five (5) tanks are owned at this location, photocopy the following sheets, and staple continuation sheets to the form.

GENERAL INFORMATION

In 1998 the Legislature combined statutory provisions on underground storage tanks and aboveground storage tanks so that our laws now refer simply to petroleum storage tanks, giving responsibility for their regulation to the Petroleum Storage Tank Division of the Corporation Commission. The forms for the registration of petroleum storage tanks have been revised to have three parts. The first is this page with general information. The second is for listing underground storage tanks and the third for listing aboveground storage tanks. All underground petroleum storage tanks over 110 gallons must be registered except for residential and non-commercial agricultural tanks of less than 1,100 gallons. Owners of aboveground tanks that must be registered are: airports, marinas, retail facilities (service stations) and emergency generators at hospitals, water treatment and sewer treatment plants with a capacity of 110 gallons or more; fleet and commercial facilities and bulk plants of any capacity.

RE: UST Closure Report, Momentum Chevrolet, 707 West 51st Street, Tulsa, Tulsa County, Oklahoma 74107
Facility ID: 72-10839
Conf. # PAC-0002702

Dear Mr. Poynter,

Please find the following description of activities and observations for the above referenced site (Site) regarding underground storage tank (UST) closure completed on September 4, 2012. Loren Alcorn (Alcorn) was the onsite licensed UST remover. Mike Dale of Conestoga-Rovers & Associates (CRA) was the licensed UST consultant. The UST Closure activities were performed in compliance with Oklahoma Corporation Commission Rules and Regulations OAC 165:25-3-60. The Site is located on the west side of Momentum Chevrolet's service center building in Tulsa, Oklahoma. A site vicinity map is included as ***Figure 1***. The OCC Closure Report form and UST Registration form are included with this narrative report.

The Site had one currently active UST basin containing one 10,000-gallon steel UST. There was also one small UST basin containing four 450-gallon UST's that were previously closed in place and registered as such with OCC. One fueling dispenser was associated with the active tank and was located adjacent to and above the tankhold. The UST contained unleaded gasoline. A site map is presented as ***Figure 2*** showing the UST system layout.

Prior to removing the UST's, all fluids were removed from the tank. The tank was made inert with dry ice and oxygen levels in the tank was determined to be below explosive limits prior to excavation activities with a 4-gas meter.

The backfill material (sand-gravel) was excavated from around each tank prior to removal for offsite demolition. The backfill was placed on plastic sheeting next to the tank hold and stockpiled until the analytical results were received and approval for reuse was obtained from OCC Regulatory. Water in the tank pit water was minimal and none was recovered for sampling. Composite samples were collected from the backfill material for chemical analysis.

ANALYTICAL RESULTS

A total of 2 confirmation closure samples were collected. One sample was collected in the native soil beneath the UST fill port at a depth of approximately 13 feet bgs. One down-gradient side-wall sample, determined to be the north wall, was collected at a depth of 6 feet bgs. The product line was over the backfill of the tank hold so no native soil sample from the dispenser was available.

The soil samples were field screened with a Photovac® 20-20 Pro photoionization detector (PID) prior to sample collection to detect the presence of volatile organic compounds (VOC's). The PID was calibrated with 100 ppm isobutylene gas the day of its use. The soil samples were shipped to Test America Laboratories in Nashville, Tennessee for detailed chemical analysis. The soil samples were analyzed for the presence of benzene, toluene, ethylbenzene, xylenes (BTEX), and total petroleum hydrocarbons (TPH) – gasoline range organics (GRO).

Soil samples results for all were below the laboratory method detection limits for BTEX and TPH(GRO) in the down-gradient soil sample M-UWT-DGW-01. Floor sample M-UST-01 detected toluene at a concentration of 0.00214 milligrams per kilogram (mg/kg). All other chemicals of concern (CoC's) were below laboratory method detection limits. A sample location map is presented as ***Figure 3*** and a summary of the CoCs for native soil is presented as ***Table 1***. The analytical results are located in the ***Laboratory Report*** section.

BACKFILL SAMPLING

A total of approximately 200 cubic yards of backfill was removed from the UST tank hold. A total of four (4) composite backfill samples were collected for detail chemical analysis. The backfill composite samples were also shipped to Test America Laboratories in Nashville, Tennessee and analyzed for the presence of BTEX, and TPH(GRO). Composite backfill sample results were sent to OCC regulatory PEA, Jim Crawford on September 10, 2012. Mr. Crawford gave his approval to reuse the backfill by email response on September 10, 2012. No elevated chemical concentrations were observed in the analytical results from the backfill. A summary of the CoCs for backfill is presented as ***Table 2***.

The UST was visually inspected for evidence of a leak or crack but none were observed. The UST was removed from the Site and transported offsite for destruction. A certificate of destruction is included in the ***Certification and Correspondence*** section of this report. The vent lines and product piping was removed and disposed. The backfill was removed from the Site and transported to a landfill. Fresh fill was imported to the Site the excavation was brought to grade. Site photographs documenting the UST closure activities are included with this report in the ***Photographs*** section.

type?

The completed UST Registration form changing this fuel system to permanently out of service is included along with the UST Closure Report form.

Jody
As noted in my email to Michael Dale, the soil is well below action levels so it can be removed from the site and used as you see fit. It does not have to be placed back into the tank pit, I just assumed that would be the procedure based on the email from Michael. If you have any additional questions, please give me a call.

Jim, we have to remove the soil and install a soil that is suitable for compaction. We will take the soil to a dump site but not a landfill.

Hello Jim,

Please find the attached analytical results for backfill from a tank closure at Momentum Chevrolet. The work was completed last Wednesday, Sept. 5, 2012. None of the analytical results for BTEX or TPH(GRO) exceed the OCC action levels. The owner is requesting an approval email to reuse the backfill. Thank-you

Michael,

Attached, please find the analytical results of the soil samples you collected from the UST basin at the Momentum Chevrolet Dealership on Tuesday. Based on the concentrations I'm assuming the stockpile can go off as clean?

Thanks,
Nathan

Re: Permanent closure of Underground Storage Tank(s) Conf. # PAC-0002702

Facility #7210839

Scheduled Closure Date 9/4/2012

Dear Sir/Madam,

Thank you for the recent call to schedule the sampling and removal of underground storage tank(s) at the following location:

Riverside Chevrolet, Inc.
707 W 51ST ST SOUTH
Tulsa, OK 74107

Please follow this list of procedures for tank closures:

1. Schedule tank system removal and closure and soil sampling with the Commission's Petroleum Storage Tank Division 14 days in advance.
2. Ensure a safe work area according to federal, state, and local regulations.
   a. Clean, make inert and purge tanks properly in accordance with accepted industry standards, such as the American Petroleum Institute (API) Recommended Practice 1604, Closure of Underground Petroleum Storage Tanks.
   b. Observe proper venting of tanks during excavation and removal.
   c. Test tanks for an acceptable Lower Explosive Limit (LEL) of 10 percent prior to removal, and properly cap and vent them for transport.
   d. An OCC-licensed UST Remover must be onsite during all removal activities, beginning with break-out of concrete.
3. Perform sampling protocol for tanks and piping.
   a. A Commission-licensed Remediation Consultant must supervise the sampling.
   b. Soil and groundwater samples must be sent for testing to a DEQ-certified laboratory.
   ion rules.
   c. Collect soil samples in native soil 1 to 3 feet below tanks (fill-end), the down-gradient wall, beneath dispensers, and every 20 feet of metal or fiberglass product line.
4. Properly dispose of tanks, excavated soil and water.
5. Submit a written report including a summary of all site activities, table of sample depths and results, lab report and chain of custody, site sketch with all sample locations, waste (disposal, treatment or reuse) documentation, certificate of destruction for tanks, photographic evidence, and a copy of this letter to the OCC within 45 days.
6. Sample excavated backfill from tanks and lines to determine if it can or cannot be returned to the pits and/or trenches.
   a.

IMAGED 10/19/2012

Sample backfill as follows: take 1 composite sample (made up 10 grab samples) every 50 yd3. Samples must be analyzed at a certified lab. After reviewing the sampling results, the Technical Department will determine if the backfill can be returned to the pits and/or trenches.

Substantial penalties for failure to provide 48 hours' notice of schedule changes or failure to submit the tank removal report within 45 days may be assessed. If you need to reschedule, please contact the Petroleum Storage Tank Division.

Sincerely,

Terin Morris

COOLER RECEIPT F(

Cooler Received/Opened On 9/5/2012@ 8:20

1. Tracking # 4440 (last 4 digits, FedEx)

Courier: Fedex IR Gun ID 17610176

2. Temperature of rep. sample or temp blank when opened: 1.9 *Degrees Celsius*

3. If Item #2 temperature is 0°C or less, was the representative sample or temp blank frozen? YES NO (NA)

4. Were custody seals on outside of cooler? (YES)...NO...NA

If yes, how many and where: 1 Front

5. Were the seals Intact, signed, and dated correctly? (YES)...NO...NA

6. Were custody papers Inside cooler? (YES)...NO...NA

I certify that I opened the cooler and answered questions 1-6 (intial) JH

7. Were custody seals on containers: YES (NO) and Intact YES...NO...(NA)

Were these signed and dated correctly? YES...NO...(NA)

8. Packing mat'l used? (Bubblewrap) Plastic bag Peanuts Vermiculite Foam Insert Paper Other None

9. Cooling process: (Ice) Ice-pack Ice (direct contact) Dry ice Other None

10. Did all containers arrive in good condition (unbroken)? (YES)..NO...NA

11. Were all container labels complete (#, date, signed, pres., etc)? (YES)..NO...NA

12. Did all container labels and tags agree with custody papers? (YES)..NO...NA

13a. Were VOA vials received? (YES)..NO...NA

b. Was there any observable headspace present in any VOA vial? YES..(NO)..NA - Soils

14. Was there a Trip Blank in this cooler? YES...NO...(NA) If multiple coolers, sequence # N/A

I certify that I unloaded the cooler and answered questions 7-14 (intial) EF

15a. On pres'd bottles, did pH test strips suggest preservation reached the correct pH level? YES..NO..(NA)

b. Did the bottle labels indicate that the correct preservatives were used (YES)...NO...NA

16. Was residual chlorine present? YES...NO...(NA)

I certify that I checked for chlorine and pH as per SOP and answered questions 15-16 (intial) EF

17. Were custody papers properly filled out (Ink, signed, etc)? (YES)..NO...NA

18. Did you sign the custody papers in the appropriate place? (YES)..NO...NA

19. Were correct containers used for the analysis requested? (YES)...NO...NA

20. Was sufficient amount of sample sent in each container? (YES)..NO...NA

I certify that I entered this project into LIMS and answered questions 17-20 (intial) EF

I certify that I attached a label with the unique LIMS number to each container (Intial) EF

21. Were there Non-Conformance Issues at login? YES.(NO) Was a PIPE generated? YES..(NO).#_____

BIS = Broken in shipment

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Final Closure Report

PSTD Reviewer Philip Hudnall Approve [X] Deny [ ] Date 5-4-07

1. CASE NUMBER SOR-3163 Submitted to (PSTD P.E.A.): Philip Hudnall
   FACILITY NUMBER 72-10839 To Fulfill Purchase Order: WP-011966

2. Facility Name Riverside Chevrolet
   Contact Person/Phone No. Jim Finley / (918) 447-7309
   Street Address, City, County 707 West 51 St , Tulsa, OK , Tulsa

3. Owner/Operator Riverside Chevrolet
   Contact Person/Phone No. Jim Finley (918) 447-7309
   Address, City, State, Zip 707 West 51 St., Tulsa, OK 74105

4. I certify that all work has been done in a good and workmanlike fashion according to workplan/purchase order approved by the Petroleum Storage Tank Division.

   Remediation Consultant's Signature Louise P. Cope Date 04/02/07
   PSTD License Number: 150 Date: 04/02/07
   Remediation Consultant and Firm Down-To-Earth Environmental Services
   Phone Numbers: Voice: (405) 262-6909 Fax: (405) 262-6909 Pager/Cell: (405) 262-4668
   E-Mail Address: dcope8 @cox.net

   Consulting Firm Principal Signature Louise P. Cope

5. List the wells that were:
   Overdrilled & cement grouted:

   Pulled & plugged: MW-01 SeePhotos

   Casing cement grouted in place (Attach OWRB Variance):

   Other (Describe):

   Not found (Describe efforts to find and possibly what might have happened to the well): Not Applicable

6. Has all decommissioned material (soil, water, casing, monuments, pads, etc), soil piles and visqueen been removed and properly disposed? If not, attach an explination.

   Yes[ ] No[X] one (1) drum of soil is awaiting disposal pending scheduling of removal per Approved Purchase Order WP-012207

7. Attach the Oklahoma Water Resources Board's (OWRB) Multi-Purpose Completion Report – Monitoring Wells. Well identification, plugging data and driller's certification must be completed.

8. Briefly describe the decommissioning of all surface equipment.
   No equipment

9. Briefly describe the decommissioning of all pipe runs/trenches.
   No Applicable

2007 MAY -2 PM 4:27

IMAGED 5/30/2007

11. Were all utilities for installed remediation system properly disconnected and service discontinued? If not, attach an explanation.
Yes☐ No☐ N/A ☒

11. Were all state and local agencies properly notified regarding the termination of any permits they had issued? If not, attach an explanation. Yes☐ No☐ N/A ☒

12. List the name and phone number of the current property owner if different from the responsible party.
Same entity

List the name(s) and phone number(s) of all off-site property owners where monitoring wells and/or remediation equipment were decommissioned.
Not Applicable

13. List any monitoring wells, remediation equipment or soil piles that the current property owner wants to retain. OWRB OAC Rule 785:35-11-2(a) states "Monitoring wells...shall be plugged...within three days after completion of use...". Unless there is some other monitoring use for a monitoring well PSTD insists that all such wells be decommissioned.
None

If there is anything listed as no above, the current property owner and tank owner/operator (eligible party- EP) must sign below that they understand that work performed after the date of closure of this case will not be reimbursed by the Indemnity Fund. They must also understand that they are responsible for any associated liability and decommissioning of any monitoring wells according to the rules and regulations of the OWRB. If the EP of any adjacent case wants to retain any item listed above, they may sign on the EP line and list the appropriate case number.

SUSPICION OF RELEASE REPORT

PSTD Reviewer Phillip Hudnall Approve [X] Deny [ ] Date 12-8-06

1. TRACKING NUMBER: **SOR-3163** Submitted to (PSTD P.E.A.): **Phillip Hudnall**
   FACILITY NUMBER: **72-10839** To Fulfill Purchase Order: **Pending (Conf. # 03782)**

2. Facility Name **Riverside Chevrolet**
   Contact Person/Phone No. / **Mr. Jim Finley, Service Manager. / (918) 447-7309**
   Street Address, City, Zip, County **707 West 51 Street, Tulsa, Tulsa Co., OK 74105**

3. Owner/Operator's Signature Jim Finley Date 11/2/06
   By signing above the Owner/Operator affirms that all of the information in this report is true and correct to the best of his/her knowledge.
   Owner/Operator **Riverside Chevrolet**
   Contact Person/Phone No. **Mr. Jim Finley, Service Manager / (918) 447-7309**
   Address, City, State, Zip **707 West 51 Street, Tulsa, OK 74105**

4. Remediation Consultant's Signature Denise Cope Date 12/04/06
   Remediation Consultant/Firm **Denise P. Cope Down-To-Earth Environmental Services**
   Phone Numbers: Voice:**(405) 262-6909** Fax:**(405) 262-6909** Cell:**(405) 262-4668**

   E-Mail Address: **d.p.cope@netzero.net**
   PSTD License Number: **150** Expiration Date: **12/31/07**

5. Describe the event(s) that caused the suspicion of a release. **Soil sample during product line closure and upgrade.**

6. Was a test performed on any parts of the system (tanks, piping, etc.) . **Yes** No If yes, please describe the test and attach a copy of any records for these tests. **Line Test**

7. Did the Petroleum Storage Tank Division (PSTD) require a site check? If so, please attach a copy of the approved purchase order that describe the scope of work. **Yes**

8. What were the results of the investigation? **MW-01 was installed to depth of 15' in gravelly coarse sand. Vapor emissions from core were very low. Faint hydrocarbon odor was detected from borehole prior to development. No sheen or free-phase product were observed in soils or groundwater.**

9. Did the analysis report chemicals of concern above action levels? **Yes** No
   If yes, go to the INITIAL ABATEMENT AND RESPONSE REPORT
   Consultant does not believe further investigation is required. All three soil samples analyzed Below Detection Limits for BTEX and TPH-GRO; the groundwater sample analyzed a minimal 0.013 mg/L for Benzene and 3 mg/L for TPH-GRO. This is a commercial area, paved parking and I-44 freeway is immediately downgradient to South. No residences downgradient for 0.5 mile

10. If above action levels was this reported to the OCC/PSTD within 24 hours. **Yes**

Well or Boring Installation Report

PSTD Reviewer Phillip Hudnall Approve [X] Deny [ ]
Date 12-8-06

1. CASE NUMBER **SOR-3163** Submitted to: **Phillip Hudnall**
   FACILITY NUMBER **72-10839** To Fulfill Purchase Order: **T N 23414**

2. Facility Name **Riverside Chevrolet**
   Contact Person **Mr. James Finley, Service Mgr.** /Phone No. **(918) 447-7309**
   Street Address **707 West 51 Street, Tulsa, Tulsa County, OK 74105**

3. Owner/Operator **Riverside Chevrolet**
   Contact Person **Mr. James Finley, Service Mgr.** /Phone No. **(918) 447-7309**
   Address **707 West 51 Street, Tulsa, Tulsa County, OK 74105**

4. I certify that all work has been done in a good and workmanlike fashion according to
5. work plan / purchase order approved by the Petroleum Storage Tank Division.

   Remediation Consultant's Verification Signature Denise D. Cope
   Date 11-16-06
   PSTD License Number: **150** Expiration Date: **12/31/07**
   Remediation Consultant and Firm **Down-To-Earth Environmental Services**
   Phone Numbers: Voice: **(405) 262-6909** Fax: **262-6909** Cell: **(405) 262-4668**
   E-Mail Address: **d.p.cope@netzero.net**
   Consulting Firm Principal Signature Denise D. Cope

5. **Attach a copy of the approved scope of work.**

6. How much waste material (soil, rock, groundwater, decon. water, etc.) was generated during drilling operations? **Two drums of soil and one drum of purged fluids plus decon water remain on site pending application for disposal through submission of Purchase Order.** Thoroughly describe the disposition of those wastes. **As of date of monitoring well report compilation, three (3) drums still remain on site.** Does drum label information include contents, contact information and a date? **Yes, see photos that accompany this report, where drums exhibit appropriate labeling.** How many drums were left on site and how full is each drum? **Two (2) drums of soil (1.67 full) and one (1) drum of fluids (48-50 gallons full) remain on site**. What is the diameter of the boring(s)? **The wells were drilled with large diameter augers (11 inches) due to coarseness of sand and tendency to bind up the smaller-diameter augers.**

7. Thoroughly describe the development procedure for groundwater monitoring wells. How long was the well surged? Describe well's rate of recovery and monitor water parameters (pH, Temperature, Conductivity) until stabilized (less than 10% variance). Complete well development data table. **Groundwater was encountered around –8 feet originally, and recovered to –6.77 feet following hand surging (see photo) and rig development (photo). Well parameters were monitored with a Hanna Instruments pH/EC/TDS meter and Keck Dual Phase Interface Probe.**

IMAGED 12/27/2006

8. Describe any unexpected conditions or situations that may lead to a change order. **None**

9. Attach maps showing the newly installed boring(s) or well(s) along with any pre-existing borings and wells. Include a contoured groundwater map, if appropriate, and contoured plume maps for benzene and any other requested pollutants. Be sure to include all soil boring logs, monitoring well construction logs and OWRB well completion reports.

10. Attach all soil boring/monitoring well survey data (identify benchmark used).

Attached is our analytical report for the samples received for your project. Below is a list of your individual sample descriptions with our corresponding laboratory number. We also have enclosed a copy of the Chain of Custody that was received with your samples and a form documenting the condition of your samples upon arrival. Please note any unused portion of the samples may be discarded upon expiration of the EPA holding time for the analysis performed or after 30 days from the above report date, unless you have requested otherwise.

ERMI Environmental Laboratories certifies that all results contained in this report were produced in accordance with the requirements of the National Environmental Laboratory Accreditation Program (NELAP) unless otherwise noted. The results presented apply to the samples analyzed in accordance with the chain-of-custody document(s) furnished with the samples. This report is intended for the sole use of the customer for whom the work was performed and must be reproduced, without modification, in its entirety.

RE: Git-N-Go #27
5150 S. 33 W. Ave.
Tulsa, OK
OCC Case #064-499, Facility #72-00596

Dear Mr. Smith:

On January 6, 1992 the new Category Clean Up Levels went into affect. After reviewing the above pollution case it appears your site is placed in a Category II. Based on your data the highest soil/groundwater contamination at this site is below the maximum contaminate levels allowed in the environment under this Category.

Therefore, closure of this case is approved under OAC 165:25-3-77 (Former Rule 13.07 + 13.09) Oklahoma Corporation Commission UST Rules and Regulations.

However, please be advised that should any contamination be discovered in the future it will have to be properly remediated according to the Rules and Regulations of the UST program.

If you have any questions, please contact me at 405/521-3107.

Sincerely,

Randy Minyen CPG #1424
Oil and Gas Specialist

CASE # 064-499
FACILITY# 7200596
RE: GIT N GO #27 RULE 13.07

C.A.P.

Dear Mr. Minyen

After reviewing the site, I made the decision to remediate the contaminated soil to a outside land fill. I used the State Soil and Groundwater Remediation Index to rate the site. At this time I have rated the site as Category II, and are using the guide lines for that category. We did not have a spill or leak at this site, so I fell that the contamination is due to year of overfills and pump maintenance problems. This site did have the new spill contamination man hole in place at the time the tanks were removed. We had 2 - 8,000 gallon steel tanks at this site which were installed in 1974. During the construction on this site, we also found soil contaminated round the south gasoline island.

A. Tank Hole (Item C on the Soil Removal Plan)

On April 29, 1992 we pulled two 8-000 gallons tanks from the above site called Git N Go #27. During the tank removal we found soil contamination in the south wall of the tank hole. Because of the large amount of rain water that runs into the hole the south wall fall in back about two feet. After we received the test results back from Lab One and found them to be above the action levels. I then went to the west end of the south wall and retested. Went that test came back above the action level, we dug back two more feet. At point retest the south wall again and found the native soil to be below the action levels. Because the backfill soil in tank hole is contaminated we made the decision to permit with the Oklahoma Health Department and move the soil to the Okmulgee land fill. This will clean out the tank hole and permit us to get the new storage tanks installed.
Approximate cost: $4,969.47

B. The Island Hole (Item A,B,D on the Soil Removal Plan)

When we pulled out the old islands and took down the canopy we found some contamination around the south gasoline island. Because the area was in the middle of the new canopy footers I elected to dig out the contamination soil and stock pile it on plastic in the back of the store. We dug four test areas with a backhoe to get a feel for the amount of contamination we might have. We found that the contamination stopped about a foot above the sand stone ledge that run along the front of the store and covered a area of 77.25 cubic yards of soil. At this point we tested all the walls and the floor of the hole to make sure that we had all the contaminated soil removed. To save money I had the backhoe dig down to the ground water in the same hole to get a water sample. After I got the test back we found that the north wall of the hole was still above the action levels. I then removed the dirt in area D on the plan. I retested the north wall and got a good sample. I had the contractors back fill the hole and regrade the front area.
Approximate cost: $4,301.30.

C.A.P.

At this point I feel that the site has been cleanup to the levels of a Category II site and I would like to close both the tank hole and island area.

THE COST OF THIS PROJECT IS APPROXIMATELY: 10,000.00

Sincerely Yours,

David L. Smith

CASE #064-449
FACILITY # 7200596
RE: GIT N GO #27 RULE 13.03

DEAR Mr. Minyen

A1. When the tanks were pulled and transported off site they were empty and filled with dry ice. No release accrued during the tank removal.

A2. I personally was on site during the tank removal along with your inspector from the Oklahoma Corporation Commission. There was no mitigation.

A3. No, the soil contamination was around the fills and sub pumps and was found when the concrete was taken up.

A4. Yes, the south wall of the tank hole was remedied back four feet. The tank hole back fill was placed back in the hole for storage till permits could be got from the Oklahoma Health Department. The contaminated soil from around the south fuel island was removed and stored to the rear of the property, see soil removal plan. We have file with the Oklahoma Health Department to move the soil to the Okmulgee Landfill. I have inclosed my paper work to the Oklahoma Health Department.

A5. The store has not had any reported releases. See Page 1

A6. Yes, we found no Free Product in the tank hole area or in the fuel island area.

Thanks for all help with this project and if there is any missing information that you require please call me at 918 252-0508

Sincerely Yours

David L. Smith

RE: CONTRACT AT GIT N GO #27

DEAR LOREN:

As per our conversation on Friday May 8, 1992, I am writing you to confirm your written bid for this project. As of this date Arkansas Valley Petroleum is authorizing your company to proceed with getting permits through the Oklahoma Health Department for Git N Go Store #27. Under this contract your company will permit, load and haul all contaminated soils to the Okmulgee land fill. It is also understood that all prices list below will be based on 277.83 Cubic Yards. Arkansas Valley Petroleum will provide all soil testing through Lab One as needed by the land fill. As per our conversation, this project needs to be completed by May 18, 1992.

BID AS FOLLOWS:

A.	Okmulgee Land Fill Cost:	8.50 CY	2,361.56
B.	Transportation (Load & Manifest)	8.65 CY	2,403.23
C.	Excavate soil from Tank Hole	2.15 CY	400.00
D.	Administrative Cost (Permitting)	1.80 CY	500.00
Total:		21.10 CY	5,664.79

It needs to be understood by all parties that Arkansas Valley Petroleum will not exceed this bid without prior approval from myself.

Loran, Arkansas Valley Petroleum would like to thank you for your down to earth bids on this project, and I would like to thank your company for the speed at which they have moved on this project. As I told you, I will be in Oklahoma City on Wednesday May 13, 1992 and would like to pickup the permits from the Health Department at that time. If you run into any problems with getting this permits please call at once it is very important that we stay on top of this project. Also please confirm the permits with

the Health Department to pump the water into the storm drain. I have inclosed a site plan with the site legal and a Soil Removal Plan along with all are test results. Again thanks for all the help. If you need any thing else please call my office at 918 252-0508 or my pager at 624-7906.

Sincerely Yours,

David L. Smith

RE: Approved Final Closure Letter for the site located at:

B&M Oil Co.
5102 S. Union Ave.
Tulsa, Oklahoma

Dear Mr. Beavers:

Based upon the review of the Oklahoma Risk-Based Corrective Action Report, this case is closed. If in the future, levels of chemicals of concern are discovered that exceed those determined appropriate for this site, the case may be reopened. A copy of this letter is being sent to your environmental consultant.

If you have any questions, please discuss them with your consultant or call me at (405) 522-6173, between 8:00 a.m. and 4:30 p.m., Monday through Friday. Please reference the appropriate OCC Facility Number and Case Number on all correspondence.

Enclosed you will find a copy of a "Final Claim Confirmation" letter. This letter is to be submitted to the Indemnity Fund with the last claim for this case. Once this letter has been received by the Oklahoma Corporation Commission, Petroleum Storage Tank Division, the Accounting Department will review the case for any potential refund of your deductible. Please note; no other claims can be submitted for payment after this letter has been received on this confirmed case.

Sincerely,

Phillip Hudnall/nb

RE: Final Site Closure, B & M Oil Company, Former Citgo Quick Mart, 5102 S. Union Avenue, Tulsa, Oklahoma, OCC Case #064-3062, Facility ID #72-03757

Dear Mr. Hudnall,

Please find the attached Final Site Closure Report. Conestoga-Rovers & Associates (CRA) has completed the activities associated with final site closure at the above referenced site for its client, B & M Oil Company. CRA completed the well abandonment of four Tier 1/1A groundwater monitoring wells on April 3, 2008. The Oklahoma Water Resources Board (OWRB) drillers plugging report, site map and photographs are included in this report.

Two drums of waste were generated during the plugging activities. The waste drums were disposed at an EPA approved landfill. Waste manifests are included with this report as an attachment.

If you have questions or need additional information, please contact me at 918-828-2424.

Sincerely,
Conestoga-Rovers & Associates

Letter of Authorization

This letter is being submitted to reflect and document that the Generator listed below has granted full and complete authorization, for Michael Dale (an) employee(s) Conestoga-Rovers & Associates (CRA), to sign all waste documents on behalf of Generator. This document hereby authorizes CRA, to function in the capacity of "generator" (as that term is defined in state and federal rules and regulations) with regard to proper waste classification, representation, shipment and disposal and to otherwise act as Generator's agent to characterize, ship, dispose and otherwise represent all waste streams in accordance with all local, state and federal rules and regulations. Such authorization includes but is not limited to execution of the following types of waste-related documents:

(individuals name(s) or all)

(agent)

(agent)

- Waste Characterization Data (WCD) Forms/Waste Profiles
- Waste Manifests – Uniform Hazardous Waste Manifests and Non-Hazardous Manifests
- Process Knowledge Forms or Letters
- Waste Profile Amendment Request Forms
- WCD/Profile Recertification Forms
- Land Ban Forms
- One Time Waste Shipment Forms/Authorizations

CRA company is required to provide Generator with copies of all documents executed in accordance with this authorization.

(agent)

This authorization will expire on 12/31/08 or when written notice is provided by the generator revoking this authorization.

(Expiration date)

B and M Oil
Attn: Jim Beavers
PO Box 9309
Tulsa, OK 74157

Reference: Permanent Closure of (1) 6,000 gallon and (2) 10,000 gallon Underground Storage Tanks
Location: Former Citgo Quik Mart 5102 S Union, Tulsa, OK
Facility ID: 7203757; 064-3062

Dear Sir,

Conestoga-Rovers and Assoc. submitted a tank closure report to the OCC on March 3, 2006. The report indicates the above-referenced tanks were permanently removed from the ground on January 26, 2006.

While this letter acknowledges receipt and sufficiency of your tank closure information, a Suspicion of Release (SOR) or Notice of Release (NOR) exists at this facility.

The Petroleum Storage Tank Technical Department has responsibility for determining the actions to be taken and the closure of that case.

If you have any questions regarding this matter, please contact me at (405) 521-6397.

Sincerely,

Miranda Lenocker

INSTRUCTIONS

Form must be signed at bottom of UST Page 3 or AST Page 3. Please type or print in ink. This form must be completed for each location containing petroleum storage tanks. If more than five (5) tanks are owned at this location, photocopy the following sheets, and staple continuation sheets to the form.

GENERAL INFORMATION

In 1998 the Legislature combined statutory provisions on underground storage tanks and aboveground storage tanks so that our laws now refer simply to petroleum storage tanks, giving responsibility for their regulation to the Petroleum Storage Tank Division of the Corporation Commission. The forms for the registration of petroleum storage tanks have been revised to have three parts. The first is this page with general information. The second is for listing underground storage tanks and the third for listing aboveground storage tanks. All underground petroleum storage tanks over 110 gallons must be registered except for residential and non-commercial agricultural tanks of less than 1,100 gallons. Owners of aboveground tanks that must be registered are: airports, marinas, retail facilities (service stations) and emergency generators at hospitals, water treatment and sewer treatment plants with a capacity of 110 gallons or more; fleet and commercial facilities and bulk plants of any capacity.

Jim Thorpe Building, Room 238
Oklahoma City, OK 73152-2000

RE: UST Removal, Former Citgo Quick Mart, 5102 S. Union Ave., Tulsa, Oklahoma
OCC Confirmation Number: 03600, Facility ID: 72-03757

Dear Ms. Roberts,

Please find the following description of the site activities and observations for the above referenced UST closure completed on January 25th and 26th, 2006.

Conestoga-Rovers & Associates (CRA) notified the Oklahoma Corporation Commission (OCC) 14 days prior to the planned UST closure activities. A request was made to "Call Okie" for lines to be located 48-hours prior to the excavation and the OCC Regulatory was notified 48-hours prior to the excavation. Saw-cuts were made along the perimeter of the UST basin and piping runs. The licensed UST removal crew (Four D Energy, Chelsea, Oklahoma) began breaking concrete over the tankhold on Monday, January 25, 2006. Operations took two days to complete.

The facility summary indicated two 10,000 gallon and one 6,000 gallon USTs located on the property. The tanks were all cylindrical steel tanks with fiberglass reinforced insulation. All three tanks had been used to store unleaded gasoline. Pressurized air was blown through the fiberglass reinforced plastic product lines back to the UST's prior to removal to evacuate residual fuel. All liquids were removed from the tanks prior to the oxygen evacuation with dry ice. Oxygen levels were determined below explosive limits with an LEL meter prior to excavation. Backfill from the UST basin was placed on plastic sheeting. Approximately 350 cubic yards of backfill was removed from the tankhold. Since the tankhold was smaller than originally measured, only seven composite samples were collected from the old backfill. The samples were hand delivered to Green Country Labs of Tulsa, Oklahoma for BTEX and TPH(GRO) analysis. The UST backfill worksheet is included in the attachments.

A soil sample was collected in the native soil beneath each UST in the area below each fill port. One sidewall sample was collected from the down-gradient south wall. One soil sample was also collected beneath each of the pump dispensers to satisfy the one-per 20-foot rule. A total of seven soil samples were collected and submitted to the lab for detailed chemical analysis. UST basin water was not collected because the tankhold was dry.

All three UST's appeared in good condition. No holes or leaks were visible. No free product was observed in either the UST basin or piping runs, however, a strong hydrocarbon odor was noticed beneath pump dispenser pad PL-4 in the native soil. The tanks were loaded onto flatbed trucks and taken off-site for destruction and disposal. The electrical conduits from the former site facility to the UST basin

Equal

REGISTERED COMPANY FOR
ISO 9001
ENGINEERING DESIGN

IMAGED 7/18/2006

CONESTOGA-ROVERS & ASSOCIATES

were cut off and filled with foam sealant to prevent potential vapors from entering the building. The fiberglass reinforced plastic product lines were removed from the piping runs.

CRA received the backfill analytical results indicating no presence of excessive chemicals of concern. The backfill results were faxed to Phil Hudnall, PSTD Analyst, OCC. Mr. Hudnall gave approval to place the old backfill material back in the basin via e-mail. The old backfill was placed in the tankhold and fresh 1 ½ -inch aggregate rock was placed on top to make up for the displaced UST's. Fresh "crush & run" rock was compacted to 95% in two, one-foot lifts on Thursday, January 26, 2006.

Analytical results for the closure sampling indicate that one of the UST basin closure sample was above OCC action levels. The sample collected beneath UST-3 had a benzene concentrations of 3.71 mg/kg. One sample collected near former pump dispenser PL-4 had a benzene concentration of 12.3 mg/kg. Benzene was also detected in samples collected from the piping run at FL-1, FL-2, FL-3, FL-5 and FL-7, however, the analytical detection limits were higher than the OCC action levels. Therefore, it is unknown whether these concentration actually exceed the OCC action levels. Toluene exceeded the action levels in the piping trench collected at FL-4 at a concentration of 562 mg/kg. Ethylbenzene was detected at a concentration of 17.9 mg/kg and 131 mg/kg from samples collected along the piping trench at FL-4 and UST-3, respectively. Xylenes were detected at a concentration of 707 mg/kg in soil samples collected at FL-4.

Total petroleum hydrocarbons (TPH) gasoline range organics (GRO) was detected in soil samples collected from UST-3, DGW-1, along the product piping runs at FL-1, FL-2, FL-3, FL-4, FL-5 and FL-7 at concentrations of 1,450 mg/kg, 64.2 mg/kg, 443 mg/kg, 86.7 mg/kg, 423 mg/kg, 6,490 mg/kg, 403 mg/kg, and 81.9 mg/kg, respectively. A site map is included as Figure 1 and a spreadsheet of the chemical analysis as Table 1. A release report was faxed to Dave Poulsen (OCC) on Friday, February 10, 2006.

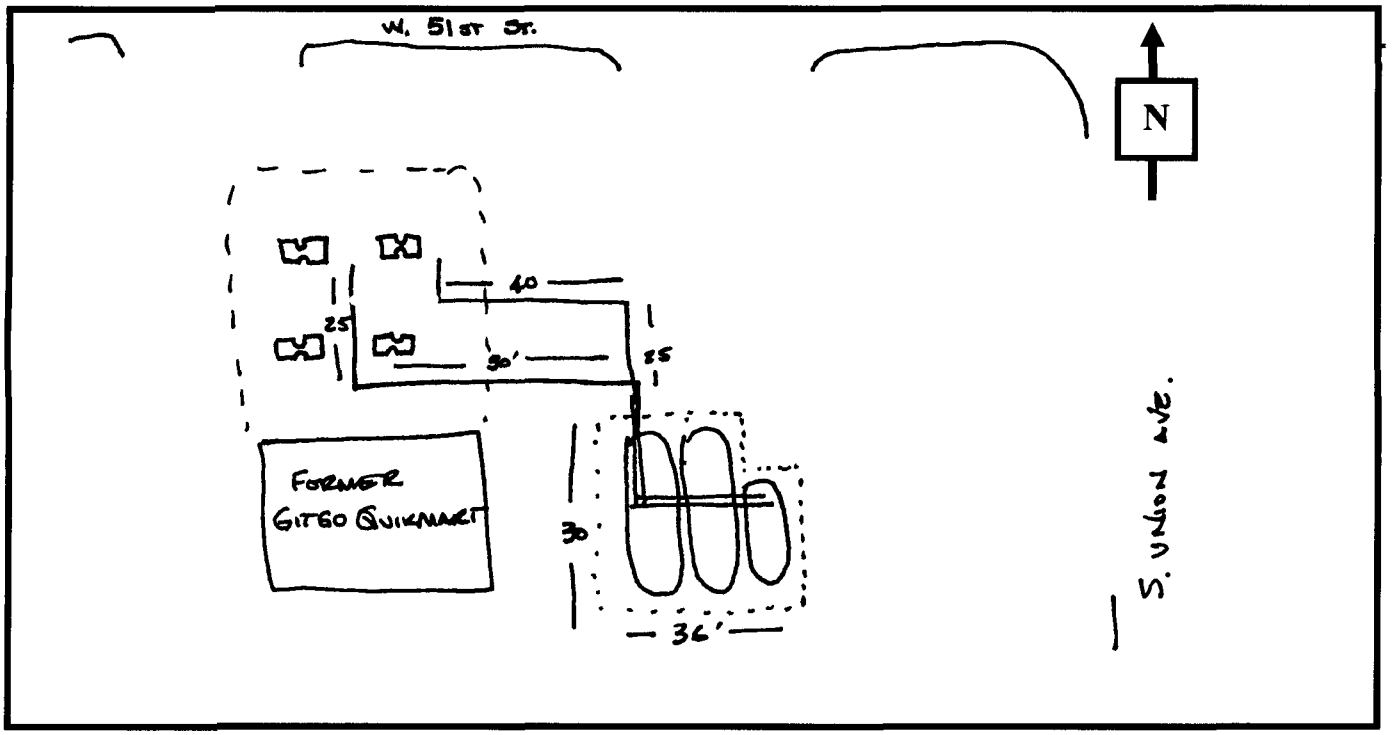
BACKFILL WORKSHEET



In the space above sketch the location of site structures, tank pit(s), product lines, known utilities and excavation area(s). Show receptor locations described below. Label pit dimensions, tank sizes and line length. All dimensions must be tape-measured.

Provide the following:

A. Sample lab results and chain of custody.

B. List obviously impacted or potentially impacted (i.e. down gradient water well) receptors.

C. Describe the tank pit wall lithology.

D. Recommendation as to disposition of the backfill.

Recommendation: ☒ Approved ☐ Denied

Approved Action

☐ Haul off backfill and submit Purchase Order for disposal. ☐ Replace backfill in tank / line excavation.

SITE: Former Citgo Quick-Mart
ADDRESS: 5102 S. Union Ave.
CITY, STATE: Tulsa, OK
FACILITY ID: 72-03757
UST CLOSURE CONF. NO.: 03600

Dear Mr. Poulsen,

I am reporting a release of fuel on behalf of B & M Oil Company in association with UST Closure activities at the above referenced site. On January 25th and 26th, CRA was the on-site UST consultant for tank closure. Confirmation closure sample were collected in the native soil beneath each of the three USTs and the down-gradient sidewall. Sample were also collected in native soil every 20 feet of the product piping trenches. A total of 11 closure samples were collected. A map of the site is attached with this report.

Analytical results indicate concentrations of benzene exceeding the OCC action levels beneath UST #3 and northeast dispenser, FL-4 at concentrations of 3.71 mg/kg and 12.3 mg/kg, respectively. Benzene may have also exceeded the action levels in samples collected from FL-1, FL-2 and FL-3 as the minimum analytical detection limits were above the OCC action levels.

Ethylbenzene exceeded the action levels in soil samples from UST-1 and FL-4 at concentrations of 17.9 mg/kg and 131 mg/kg, respectively. Total Petroleum Hydrocarbons-gasoline range organics (TPH-GRO) exceeded the action levels in soil samples collected from UST-1, DGW-1, FL-1, FL-2, FL-3, FL-4, FL-5 and FL-7 at concentrations of 1,450 mg/kg, 64.2 mg/kg, 443 mg/kg, 86.7 mg/kg, 423 mg/kg, 6,490 mg/kg, 403 mg/kg and 81.9 mg/kg, respectively. The anlytical data and chain of custody are attached. An analytical summary is also attached.

The source of the release is unknown. CRA is currently having the tank owner check his compliance and inventory records. Please contact me with any questions as CRA awaits your reply.

Reference: Permanent closure of (1) 2,000 gallon Underground Storage Tank(s)
Location: Green Metal Fabricators, 906 W. Skelly Dr., Tulsa, OK
Facility #: 72-14107

Dear Sir,

Enviro-Tec America submitted a complete tank closure report to the OCC on March 18, 2008. The report indicates the above-referenced tanks were permanently removed from the ground on February 28, 2008.

After review of the data submitted, the OCC believes the levels of the chemicals of concern in the soil and groundwater at this site pose no harm to human health, safety, or the environment. The subject tanks are hereby considered permanently closed in accordance with OCC regulations. Should future environmental problems occur, which the OCC determines may be related to this site; additional investigation and corrective action may be required in accordance with State Law.

If you have any questions regarding this matter, please contact me at (405) 521-2488.

Sincerely yours,

Gerald Haney
Environmental Compliance Analyst

UNDERGROUND STORAGE TANK CLOSURE REPORT

FACILITY # 72-14107

Green Metal Fabricators
906 W. Skelly Drive
Tulsa, Ok 74107

INTRODUCTION

Enviro-Tec America was contracted by Admire Construction to document removal and closure of one registered underground storage tank (UST), at the Green Metal Fabricator facility located at 906 W. Skelly Drive, (south side of I-44) Tulsa, Oklahoma. On February 28, 2008, one (1) 2,000-gallon gasoline UST was removed from the above referenced facility. Enviro-Tec America notified Ms. Susan Adlamini of the Oklahoma Corporation Commission (OCC) of the planned tank removal. Confirmation number for the removal is #04232. A copy of the scheduling is included as Appendix A included with this reporting. Soil backfill, down gradient wall (S) and 5' below the fill end of the 2,000-gallon UST samples were collected as required for the UST closure.

DESCRIPTION OF THE UST SYSTEM

The UST system at the Green Metal Fabricators facility consisted of one 2,000-gallon gasoline, one dispenser that was located directly over the tank. No/limited piping was run from the UST to the dispenser. The dispenser/piping was removed. The location of the tank pit is shown on figure 1 included. Figure 1 is a site map of the Green Metal Fabricators facility showing the location of the 2,000-gallon UST removed from the location. Currently, no other tanks are known to be located or are registered onsite other than the 2,000-gallon UST removed.

NATIVE SOIL SAMPLING

One (1) 2,000-gallon UST last contained gasoline. Enviro-Tec America conducted the soil sampling for the closure of the UST. Enviro-Tec America collected a native soil sample from the down-gradient wall (south) and from 5' below the fill end of the tank. The sample locations are labeled and shown on Figure 1 included. The backfill was sampled and the sample results are included with this report. The backfill sample was non-detect for all hydrocarbon concentrations analyzed. Additionally, the native down gradient wall sample (south) and a sample from 5' below the 2,000-gallon UST were non-detect for all parameters tested. Enviro-Tec spoke with Mr. Phillip Hudnall OCC hydrologist for Tulsa County and it is was determined to place the back-fill back in the tank pit. All native samples were below OAC 165:25-3-65 action levels.

The OCC Fuel Inspector for this area of the state was not present for the UST removal and/or native soil sampling. The native and backfill samples retrieved from the tank pit were sent to Green

IMAGED 5/13/2008

Country Testing of Tulsa for analyses. All backfill/native soil hydrocarbon concentrations retrieved and analyzed were below OAC 165:25-3-65 action levels for native soil at the site.

The laboratory analytical results for the native and backfill soil samples are included in Appendix B. The chain of custody forms for the native soil samples is included in Appendix C.

UST CLOSURE

On February 28, 2008, (1) 2,000-gallon gasoline UST and associated limited piping and dispenser were removed by Admire Construction from the Green Metal Fabricators facility. Enviro-Tec America conducted the backfill/native soil sampling (2/28/08) and reporting for the tank removal. The certificate of destruction is included as Appendix D for the removed tank.

SUMMARY

February 28, 2008 one (1) 2,000-gallon gasoline UST was removed from the facility. Backfill and native soil samples were collected by Enviro-Tec America on 2/28/08and the results of that sampling are included. All backfill and native soil hydrocarbon concentrations collected and analyzed from the Green Metal Fabricators facility were below the OAC 165:25-3-65 action levels for soil. All product piping was removed along with the dispenser.

The OCC Site Assessment Summary for Tank System Closure form, summarizing the information about the soil sampling and closure of the UST's at the facility, is included at the beginning of the report. The Notification for Underground Storage Tanks - Form 7530-1 documenting the change in Status of the UST's at the facility is included in Appendix E. Photos taken during the removal are included as Appendix F.

WARRANTY

The field observations and analytical results reported herein are considered sufficient in detail and scope to form a reasonable basis for a general tank closure at this site. The environmental methods have been developed to provide the client with information regarding apparent existing environmental conditions relating to the subject property and are necessarily limited to the conditions observed at the time of the project. The report is also limited to the information available at the time that it was prepared. In the event additional information is provided to Enviro-Tec America following issuance of the report, it will be forwarded to the client in the form received for evaluation by the client. There is a possibility that conditions may exist which were not apparent during this project. Enviro-Tec America believes that the information provided during this project is reliable. However, Enviro-Tec America cannot warrant or guarantee that the information provided by others is complete or accurate.

RE: Green Metal Fabricaters

Dear Scott Dixon:

Green Country Testing, Inc. received 3 samples on 2/28/2008 for the analyses presented in the following report.

In accordance with your instructions, Green Country Testing conducted the analysis shown on the following pages on samples submitted by your company. The results related only to the items tested. Unless otherwise noted, all analysis was conducted using EPA approved methodologies. Test reports meet all the NELAC requirements. All relevant sampling information is on the attached chain-of-custody form. The initials SUB as the analyst designate any testing sub-contracted by Green Country Testing.

Certifications/Accreditation: OK - 7604
AR - ADEQ
KS - E-10232
LA - 4002

A scope of Certified/Accredited parameters is available upon request. If you have any questions regarding these tests results, please feel free to call.

Sincerely,

Approved By: _____

Re: Facility # 7214107
Confirmation #04232

Dear Scott:

Thank you for your recent call to schedule the closure of underground storage tank(s) beginning 2/28/08 at the following location:

Green Metal Fabricators
906 W. Skelly Drive
Tulsa, OK

Please follow this list of procedures for tank closures:

1. Schedule tank system removal and closure and soil sampling with the Commission's Pctroleum Storage Tank Division 14 days in advance.

2. Ensure a safe work area according to federal, state, and local regulations.

    a. Clean, make inert and purge tanks properly in accordance with accepted industry standards, such as the American Petroleum Institute (API) Recommended Practice 1604, Closure of Underground Petroleum Storage Tanks.

    b. Observe proper venting of tanks during excavation and removal.

    c. Test tanks for an acceptable Lower Explosive Limit (LEL) of 10 percent prior to removal, and properly cap and vent them for transport.

    d. An OCC-licensed UST Remover must be onsite during all removal activities, beginning with break-out of concrete.

IMAGED 5/13/2008

3. Perform sampling protocol for tanks and piping.

    a. A Commission-licensed Remediation Consultant must supervise the sampling.

    b. Soil and groundwater samples must be sent for testing to a DEQ-certified laboratory.

    c. Collect soil samples in native soil 1 to 3 feet below tanks (fill-end), the down-gradient wall, beneath dispensers, and every 20 feet of metal or fiberglass product line.

4. Properly dispose of tanks, excavated soil and water.

5. Submit a written report including a summary of all site activities, table of sample depths and results, lab report and chain of custody, site sketch with all sample locations, waste (disposal, treatment or reuse) documentation, certificate of destruction for tanks, photographic evidence, and a copy of this letter to the OCC within 45 days.

6. Sample excavated backfill from tanks and lines to determine if it can or cannot be returned to the pits and/or trenches.

    a. Sample backfill as follows: take 1 composite sample (made up 10 grab samples) every 50 yd^3. Samples must be analyzed at a certified lab. After reviewing the sampling results, the Technical Department will determine if the backfill can be returned to the pits and/or trenches.

Substantial penalties for failure to provide 48 hours' notice of schedule changes or failure to submit the tank removal report within 45 days may be assessed. If you need to reschedule, please contact me at (405) 522-1433.

Sincerely,

Susan Adlamini
Project Records Analyst

Mr. Clifford Kirkpatrick
22651 East 78th Street
Broken Arrow, Oklahoma 74041

Reference: Petroleum Storage Tank Amended Notification Form for Permanent Tank Closure of three underground storage tanks (USTs) [one 500- and two 8,000-gallon] located at Kirkpatrick Texaco, 2940 West Skelly Drive, Tulsa, Oklahoma.
Facility Number: **7212470**

Dear Mr. Kirkpatrick:

Thank you for providing your amended UST notification form (Form 7530-1) and supporting information documenting the permanent closure of your USTs at the above-referenced facility to the Oklahoma Corporation Commission (OCC).

Based on the information you have provided regarding site conditions, the OCC believes that there is no contamination of concern at this site at this time. The subject tanks are hereby considered permanently closed in accordance with OCC UST regulations. Should future environmental problems occur, which the OCC determines are related to this site, additional investigation and corrective action may be required in accordance with State Law.

If you have any questions regarding this matter, please contact me at (405) 522-1424.

Sincerely yours,

Jean Heinecke

CLOSURE REPORT
FOR

PERMANENTLY CLOSED UNDERGROUND - ABOVEGROUND STORAGE TANKS

PLEASE SUBMIT THIS COMPLETED FORM ALONG WITH ATTACHMENTS WITHIN 45 DAYS OF THE SCHEDULED CLOSURE.

1. Facility Identification Number. 7212470

2. Facility Location Name and Address.
KIRKPATRICK TEXACO
2940 W. SKELLY DR.
TULSA, OK

3. Owner's Name and Address.
CLIFFORD KIRKPATRICK
22651 E. 78 St.
BROKEN ARROW, OK 74041

4. Date Work Accomplished. 3-25-99

5. Number and size of tanks remaining at this facility. NONE

6. Number and size of tanks removed. 2-8000 & 1-500

(a) Condition of removed tanks. Are there any holes present?
Good No Holes

(b) Describe the disposal and/or disposition of the tank(s).
OWNER DISPOSED OF TANKS

(c) If tank system consisted of pressure piping, were samples taken at least every 40 feet? SAMPLED TANK PIT ONLY

(d) Was excavated soil removed from the site? NO

(e) If so, was a permit obtained for its removal? _____

7. Number and size of tanks filled with inert material. NONE

8. Estimated date tanks were last used. Dec. 22, 1998

9. Assess the site for potential contamination by:
   (a) testing the soil or groundwater; or
   (b) using an external leak detection method such as monitoring wells.
   (c) Were field screening instruments used? Yes
   (d) If so, what was the type and model number? GAS Tech

NOTE: If soil or ground water samples are used for a site assessment, the person taking the samples must be under the supervision of or be a certified UST Consultant.

10. Certified UST Consultant responsible for the sampling.
    I certify the samples were taken at locations where contamination had most likely occurred.

TANK REMOVAL AND CLOSURE

CLIFF KIRKPATRICK
2940 W. SKELLY DRIVE
TULSA, OKLAHOMA

FACILITY # 7212470

On March 25,1999 Whisler Construction Company assisted Mr. Kirpatrick and the All Steel Building Co. in the removal of two 8,000 gallon and one 500 gallon underground storage tanks. Whisler also assisted the Oklahoma Corporation Commission in the collecting of the soil samples for monitor well confirmation. The two 8,000 gallon tanks contained UL gasoline, the 500 gallon tank contained waste oil. All of these tanks were in good condition with no holes present.

Monitor well readings dating from January 12,1998 thru December 22,1998 were used along with soil sampling by the Oklahoma Corporation Commission.

Please send Mr. Kirpatrick a letter of closure.

RE: Facility #7212470
CONFIRMATION # 01916

Dear Sir:

Thank you for your recent call to schedule closure of underground storage tank (s) 3-25-99 am located at:

Cliff Kirkpatrick
2940 W Skelly Dr
Tulsa, OK

Following is a summary of procedures to follow for tank closures:

1. Schedule removal/closure/soil samples with the Oklahoma Corporation Commission, UST Program 48 hours in advance of removal or sampling.
2. Assure safe work area according to federal, state, and local regulations.
3. Perform sampling protocol for tank(s) and piping.
   A. Sampling must be supervised by an OCC Certified UST Consultant.
   B. Send soil sample for testing to a DEQ certified laboratory.
4. Properly dispose of tank(s), excavated soil and water.
5. **Submit written report, copy of this letter and site sketches to the OCC within 45 days of closure.**

NOTE: Complete and return attached documents, which includes 7530-1& closure report. Please retain a copy of all documents for your files.

Rule 165:25-3-65 allows for substantial fines for failure to provide 48 hours notice to schedule changes; so if you need to reschedule please contact this office at 405-521-6720. If you have questions or need further assistance please feel free to call me.

Sincerely,

Mary Grimm
Petroleum Storage Tank Division

Reference: Facility #7204339, Removal and Closure Report for 1-8,000 gal, 1-6,000 gal and 1-500 gal underground storage tanks located at Hill's APCO, 4999 South Union, Tulsa, Oklahoma.

Dear Sir:

The Oklahoma Corporation Commission is in receipt of your report covering the removal and closure of 1-8,000 gallon, 1-6,000 gallon and 1-500 gallon UST's at the referenced site between June 3 and June 5, 1998. A review of the soil testing reports dated **June 15, 1998,** indicates the facility does not exceed the action levels established by the Oklahoma Corporation Commission. The subject tanks are hereby considered closed within the standards prescribed by the Oklahoma Corporation Commission. Please be advised, however, that any future contamination found may require remediation.

Thank you for your cooperation and assistance to protect the waters of Oklahoma for future generations. If you have any questions, please call (405) -521-3505.

Sincerely,

Removal of USTs from 4993 S. Union

Dear Mr. Hanson:

We removed the tanks from this site on June 3, 1998. We sampled as shown on the enclosed map. I was concerned and resampled into the native soil on June 4, 1998. The results herein are the analysis of that sample.

I sent this by Federal Express to expedite the closure. Thanks for your help.

Respectfully yours,

William Redmond

CLOSURE REPORT
FOR
PERMANENTLY CLOSED UNDERGROUND STORAGE TANKS

PLEASE SUBMIT THIS COMPLETED FORM ALONG WITH ATTACHMENTS WITHIN 45 DAYS OF THE SCHEDULED CLOSURE.

1. Facility Identification Number. 7204339

2. Facility Location Name and Address.
Hill's APCO
4999 S. Union
Tulsa, OK 74107

3. Owner's Name and Address.
Mark & Diane Hill
4129 S.W. Boulevard
Tulsa, OK 74107

4. Date Work Accomplished. 6/3/98 - 6/5/98

5. Number and size of tanks remaining at this facility.
0

6. Number and size of tanks removed. 3

(a) Condition of removed tanks. Are there any holes present?
Good - No holes

(b) Describe the disposal and/or disposition of the tank(s).
Recycled for Scrap

(c) If tank system consisted of pressure piping, were samples taken at least every 40 feet? Yes

(d) Was excavated soil removed from the site? No

(e) If so, was a permit obtained for its removal? NA

7. Number and size of tanks filled with inert material. NA

8. Estimated date tanks were last used. 5/28/98

9. Assess the site for potential contamination by:
   (a) testing the soil or groundwater; or

   (b) using an external leak detection method such as monitoring wells.

   (c) Were field screening instruments used? Yes

   (d) If so, what was the type and model number? Flame Ionization Detector- Detecto PaK III

NOTE: If soil or ground water samples are used for a site assessment, the person taking the samples must be under the supervision of or be a certified UST Consultant.

10. Certified UST Consultant responsible for the sampling.
    I certify the samples were taken at locations where contamination had most likely occurred.

INSTRUCTIONS

Please type or print in ink. This form must be completed for each location containing underground storage tanks. If more than four (4) tanks are owned at this location, photocopy the following sheets, and staple continuation sheets to the form.

General Information

Notification is required by Federal and State Law for all underground tanks that have been used to store regulated substances since January 1, 1974, that are in the ground as of May 8, 1985, or that are brought into use after May 8, 1986.

Penalties: Any owner who knowingly fails to notify or submits false information shall be subject to a civil penalty not to exceed $10,000 for each tank for which notification is not given or for which false information is submitted.

Reference: Petroleum storage tank closure at Former QuikTrip Store # 9C, 4966 South Union, Tulsa, OK; Facility ID # 72-06116

Dear Registered Tank Owner,

We received an Underground Tank Closure Report on October 2, 2012 from Conestoga-Rovers & Associates for closure of (3) 12,000 gallon fiberglass reinforced plastic underground storage tanks and associated piping removed on August 23, 2012 at the above referenced location.

Based on soil sampling results, the OCC believes that there is no contamination of concern at this site at this time. The subject tanks and associated piping are hereby considered permanently closed in accordance with OCC regulations. Should future environmental problems occur, which the OCC determines may be related to this site, additional investigation and corrective action may be required in accordance with State Law. If you have any questions regarding this matter, please contact me at (405) 521-6397.

Sincerely yours,

Ted Lowery
Environmental Compliance Analyst

INSTRUCTIONS

Form must be signed at bottom of UST Page 3 or AST Page 3. Please type or print in ink. This form must be completed for each location containing petroleum storage tanks. If more than five (5) tanks are owned at this location, photocopy the following sheets, and staple continuation sheets to the form.

GENERAL INFORMATION

In 1998 the Legislature combined statutory provisions on underground storage tanks and aboveground storage tanks so that our laws now refer simply to petroleum storage tanks, giving responsibility for their regulation to the Petroleum Storage Tank Division of the Corporation Commission. The forms for the registration of petroleum storage tanks have been revised to have three parts. The first is this page with general information. The second is for listing underground storage tanks and the third for listing aboveground storage tanks. Underground petroleum storage tanks over 110 gallons must be registered, except for residential and non-commercial agricultural tanks of less than 1,100 gallons. Aboveground petroleum storage tanks over 110 gallons must be registered, except for farm and ranch tanks or tanks at fleet and commercial facilities with less than 2,100 gallons individual storage capacity.

RE: UST Closure Report, Former QuikTrip Retail Store #9C
4966 South Union, Tulsa, Oklahoma 74107
Facility ID: 72-06116

Dear Mr. Poynter:

Please find the following description of activities and observations regarding the underground storage tank (UST) closure completed at the referenced address (Site) on August 23, 2012. Vernon Ashworth of Conestoga-Rovers & Associates (CRA) was the on-Site licensed UST consultant and remover (#38). The UST Closure activities were performed in compliance with Oklahoma Corporation Commission (OCC) Rules and Regulations OAC 165:25-3-60. The Site is located on the northwest corner at the intersection of South Union and West 51st Street, Tulsa, Oklahoma. A Site Location Map, showing topographic features in the vicinity of the Site, is included as Figure 1. A recent aerial photograph is included as Figure 2. Site Details are included as Figure 3. Soil sample locations are shown on Figure 4. Site photographs documenting the UST closure activities are also included with this report.

The Site UST system consisted of three, 12,000-gallon fiberglass-reinforced plastic USTs and associated copper product lines. The UST basin/tank pit was located along the west side of a north-south row of four pump island dispensers. Two of these dispensers (Dispenser #3 and Dispenser #4) were located within the east edge of the UST basin. The locations of the UST basin and pump island dispensers are shown on Figure 3 and Figure 4.

Prior to removing the USTs, the product lines were blown back to the USTs prior to removal to evacuate residual fuel. All fluids were removed from the tanks prior to the excavation. The fluids recovered were placed in 55-gallon drums and subsequently disposed at a landfill (Note: A copy of the waste manifest for the drums is included in the attached "Correspondence and Certifications" section). The tanks were made inert using a Venturi air blower system. A 4-gas meter was utilized to ensure the oxygen level in the tanks were below the lower explosive limits (LEL) prior to UST removal activities.

After removing the concrete, backfill material (pea-gravel) was excavated from around each tank and placed on plastic sheeting adjacent to the UST basin. Composite samples were collected from the backfill

Equal
Employment Opportunity
Employer

IMAGED 10/11/2012

material before returning it to the tank pit (after removal of the USTs). The three USTs were removed from the basin and placed on the ground. The USTs were visually inspected for evidence of holes, but none were observed (other than several accidental holes in one tank during excavation and removal). The fiberglass tanks were destroyed on Site and the debris was placed in a roll-off box for subsequent disposal at a landfill. A Certificate of Destruction is included in the "Certification and Correspondence" section of this report. The copper product lines were pulled from the dispensers leading to the UST basin. The copper piping was removed from the Site and transported to a recycling facility.

SOIL SAMPLING AND ANALYTICAL RESULTS

A total of 13 confirmation closure soil samples were collected and submitted to the laboratory for analysis. One sample was collected in the native soil beneath each UST fill port at a depth of approximately 12 feet below ground surface (bgs). One down-gradient side-wall sample, determined to be the east wall, was collected at a depth of approximately 5 feet bgs. One tank pit water sample was also collected. One soil sample was collected in the native soil beneath each of the four dispensers (except dispensers #3 and #4, which were within the backfill material of the tank pit) at a depth of approximately 4 feet bgs. Soil samples were collected beneath the piping trench leading from Dispenser #1 and Dispenser #2 every 20 feet and at pipe connections at a depth of approximately 3 feet bgs (Note: The piping to Dispensers #3 and #4 were located within the tank pit). No piping elbows were observed along the copper piping – the piping was gradually curved leading from dispensers #1 and #2. Soil sample locations are shown on Figure 3.

All native soil samples were field screened with a Multi-Rae 3000® photoionization detector (PID) prior to sample collection to detect for the potential presence of volatile organic compounds (VOCs). The PID was calibrated with 100 parts per million (ppm) isobutylene gas prior to its use. No PID readings were detected above 9 ppm. The soil samples were shipped to Test America in Nashville, Tennessee for analysis of the following parameters: benzene, toluene, ethylbenzene, xylenes (BTEX) and total petroleum hydrocarbons – gasoline range organics (TPH-GRO).

Soil samples results for all closure soil samples were either below analytical detection limits or below the OCC action levels. A summary of the analytical results for the confirmation soil samples is presented as Table 1. The tank pit water sample results were below the OCC action levels for groundwater. A summary of the analytical results for the tank pit water sample is presented as Table 2.

IMAGED 10/11/2012

CONESTOGA-ROVERS
& ASSOCIATES

BACKFILL SAMPLING AND ANALYTICAL RESULTS

A total of approximately 450 cubic yards of backfill was removed from the tank hold. Twelve (12) composite samples were collected from the backfill for detail chemical analysis. The backfill samples were shipped with the confirmation soil samples to Test America in Nashville, Tennessee and analyzed for BTEX and TPH-GRO. The analytical results indicated no elevated concentrations of these parameters from the backfill samples. A summary of the analytical results for the backfill samples are presented as Table 3.

If you have questions concerning the activities and descriptions in this report, please contact me at 918-828-2424 or email at vashworth@CRAworld.com .

Sincerely,
CONESTOGA-ROVERS & ASSOCIATES

PHOTO 56: View of a skid loader spreading out the backfill. Note a crerw member apraying water on the material to assist in compaction.

PHOTO 57: View of the skid loader with a compactor attachment compacting the pea gravel. A geotechnical subcontractor took compaction readings after each 6-inch lift.

PHOTO 58: View south, of the former excavation areas after backfilling and compaction. New concrete is to be laid over these areas.

PHOTO 59: View north of the areas shown in Photo 58.

PHOTO 60: View of the roll-off box that is to be transported to the landfill.

COOLER RECEIPT FORM

490-4940 Chain of

Cooler Received/Opened On 8/24/2012 @ 0820

1. Tracking # 2803 (last 4 digits, FedEx)

Courier: FedEx IR Gun ID 14740456

2. Temperature of rep. sample or temp blank when opened: 0.7 Degrees Celsius

3. If Item #2 temperature is 0°C or less, was the representative sample or temp blank frozen? YES NO...NA

4. Were custody seals on outside of cooler? YES...NO...NA

If yes, how many and where: 1 Front

5. Were the seals intact, signed, and dated correctly? YES...NO...NA

6. Were custody papers inside cooler? YES...NO...NA

I certify that I opened the cooler and answered questions 1-6 (intial) ET

7. Were custody seals on containers: YES NO and Intact YES...NO...NA

Were these signed and dated correctly? YES...NO...NA

8. Packing mat'l used? Bubblewrap Plastic bag Peanuts Vermiculite Foam Insert Paper Other None

9. Cooling process: Ice Ice-pack Ice (direct contact) Dry ice Other None

10. Did all containers arrive in good condition (unbroken)? YES...NO...NA

11. Were all container labels complete (#, date, signed, pres., etc)? YES...NO...NA

12. Did all container labels and tags agree with custody papers? YES...NO...NA

13a. Were VOA vials received? YES...NO...NA

b. Was there any observable headspace present in any VOA vial? YES...NO...NA

14. Was there a Trip Blank in this cooler? YES...NO...NA If multiple coolers, sequence # NA

I certify that I unloaded the cooler and answered questions 7-14 (intial) PM

15a. On pres'd bottles, did pH test strips suggest preservation reached the correct pH level? YES..NO..NA

b. Did the bottle labels indicate that the correct preservatives were used YES...NO...NA

16. Was residual chlorine present? YES...NO...NA

I certify that I checked for chlorine and pH as per SOP and answered questions 15-16 (intial) M

17. Were custody papers properly filled out (ink, signed, etc)? YES...NO...NA

18. Did you sign the custody papers in the appropriate place? YES...NO...NA

19. Were correct containers used for the analysis requested? YES...NO...NA

20. Was sufficient amount of sample sent in each container? YES...NO...NA

I certify that I entered this project into LIMS and answered questions 17-20 (intial) M

I certify that I attached a label with the unique LIMS number to each container (intial) M

21. Were there Non-Conformance Issues at login? YES...NO Was a PIPE generated? YES...NO...#_____

BIS = Broken in shipment

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True

DEQ FORM 605-006 Sept. 5, 2011

OKLAHOMA DEPARTMENT OF ENVIRONMENTAL QUALITY

Oklahoma Department of Environmental Quality Annual Comprehensive Site Compliance Evaluation Report for Industrial Facilities (ACSCER)

Submission of this Comprehensive Site Compliance Evaluation Report, Part B, provides notice that the party identified in Section I of this form is not required to conduct Benchmark Monitoring for storm water discharges associated with industrial activities under the OPDES program. This Annual Comprehensive Site Compliance Evaluation Report is required for all authorized industrial facilities.

All Requested Information Must Be Provided On This Form (Part A) and the ACSCER Form (Part B).

See Instructions On Page 4 of The Form.

Section I.

OPDES Permit Authorization Number: OKR051569

Section II. Facility Operator Information

Name: PEPSI BEVERAGES Company) 918-445-8066

Address: 510 W. Skelly Dr

Annual Comprehensive Site Compliance Evaluation Report - Part B
Page 1.

Reporting Period: 2014.

✓ How many routine facility inspections did you perform during the reporting period? 12

✓ How many corrective actions (Part 4.2.17.3) to remove the original violation and document these actions according to corrective action deadlines?

Date	Deficiencies	Corrected (Y or N)	Date Corrected
None			

✓ What must you do to correct the deficiencies that remain uncorrected?
N/A

✓ Were all BMPs you indicated you would be using in your SWP3 (Part 4.2.8) including good housekeeping practices, actually being implemented at the time of the Annual Comprehensive Site Compliance Evaluation?
Yes ✓ No____

✓ If one or more BMPs were not being implemented, were corrective actions taken after the FIRST inspection to find the problem?
Yes ____ No____ All BMPs were being implemented ✓

✓ Was/were the same failure(s) to implement a BMP deficiency(ies) noted in more than one inspection?
Yes ____ No____ No deficiencies noted in any inspection ✓

✓ Did any of your routine facility inspections find that one or more of your BMPs was not effective in controlling the pollutant source for which it was designed?
Yes ____ No____ All BMPs were effective ✓

✓ If you found one or more ineffective BMPs, have they all been replaced with an alternative or modified BMP?
Yes ____ No____ All BMPs were being effective ✓

✓ Is there additional BMPs needed to address any conditions requiring corrective action?
Yes ____ No ✓

✓ At any time during the reporting period, did you discover any previously unidentified illicit discharges from your facility or previously unidentified pollutants in the existing discharges?
Yes ____ No ✓

✓ Have all illicit discharges (including any discovered in previous years) been eliminated or permitted?
Yes ____ No____ Permit applied for ____ No known illicit discharges ✓

✓ Have any significant spills or leaks occurred at your facility during the reporting period?
Yes ____ No ✓

✓ If any significant spills or leaks occurred, did they result in either a dry weather discharge or an actual discharge of the spilled or leaked material commingled with storm water (as opposed to the spilled material being washed away by storm water?)
Yes ____ No ✓ No Spills

Part B. Page 2

✓ If any significant spills or leaks occurred, did they result in more than the minimum amounts of material being discharged in storm water? Base your answer on your knowledge of the material you spilled or that leaked. The minimum amounts could vary with the nature (toxicity, oxygen demand, pH, etc.) of the spilled or leaked material from amounts left after normal "sweeping" type cleanup to the point at which even trace amounts left after cleanup could cause an environmental problem.
Yes ____ No____ No spills or leaks occurred ✓

✓ Have all known spills or leaks been cleaned up or otherwise prevented from contaminating storm water that would be discharged under the authority of this permit?
Yes ____ No____ No spills or leaks occurred ✓

✓ How many times did you visually monitor all your storm water discharges at all the facility outfalls during the reporting year, and document the condition of and around the outfalls, including flow dissipation measures to prevent scouring? (Count only those done in accordance with the procedures at Part 5.1 - Quarterly Visual Monitoring)
Yes ✓ No____ Number of Visual Monitoring 4

✓ Would the results of your visual monitoring indicate that there are pollutants in your storm water discharges that are not adequately controlled by your current BMPs?
Yes ____ No ✓

✓ If the results of your visual monitoring indicated a potential problem, was it due to one or more of the following?
1. New pollutant source (including exposure of previously unexposed material).
2. Failure to implement or maintain an existing BMP.
3. Less than expected performance from a BMP.
4. No BMP was selected to deal with that problem.
5. N/A (No problems identified)

✓ If your visual monitoring indicated a potential problem, what have you done to resolve the problem?
1. Eliminated exposure or pollutant source.
2. Modified existing BMPs.
3. Added a new BMP.
4. Plan to address problem by end of current reporting year.
5. Nothing planned.
6. N/A (No problems identified)

✓ Did any analysis of any element tested during any previous discharge monitoring period exceed the numeric limitation value?
Yes ____ No ✓

✓ If your answer to the previous question was "Yes", please name the element and the test results.

Element	Test Results	Element	Test Results

✓ Is there any required revisions to the SWP3 resulting from the inspection?
Yes ____ No ✓

See Page 4 for Instructions

June 15, 2012

KEVIN KELSEY
PEPSI BEVERAGES COMPANY
510 WEST SKELLY DR
TULSA, OK 74107

Re: Authorization for Storm Water Discharge from Industrial Activity(ies)
Authorization Number: OKR051569

Dear Mr. Kelsey:

The new Notice of Intent (NOI) for the facility listed below was received on September 29, 2011 and processed by the Oklahoma Department of Environmental Quality. Enclosed is an authorization allowing you to discharge storm water associated with industrial activities under the terms and conditions in accordance with Oklahoma's OPDES Storm Water General Permit OKR05 for the following site located in Tulsa County.

Facility:
PEPSI BEVERAGES COMPANY
510 WEST SKELLY DR
TULSA, OK 74107

All applicable fees associated with this authorization have been paid.

Sites that remain active as of July 1, 2012 will be invoiced for the full permit year (July 1, 2012 - June 30, 2013).

If you have any questions regarding this permit or the Storm Water Program, please call Amber McIntyre of the Environmental Complaints and Local Services Division at (405)702-6167.

Sincerely,

Amber McIntyre
Environmental Program Specialist
Environmental Complaints and Local Services

Enclosures

c: Tulsa DEQ Office

Oklahoma Department of Environmental Quality
Authorization to Discharge Under the OPDES Storm Water Industrial General Permit OKR05

AUTHORIZATION NO. **OKR051569**

In compliance with the Oklahoma Pollution Discharge Elimination System (OPDES) Act 27A O.S. §2-6-201, the Rules of the Department of Environmental Quality (DEQ), and in reliance on the certified statements and representations heretofore made in its application,

Pepsi Beverages Company

510 West Skelly Dr

Tulsa, OK 74107

Is authorized to discharge storm water from an industrial site located in Tulsa County at

Pepsi Beverages Company

510 West Skelly Dr

Tulsa, OK 74107

The receiving body of water is Mosser Creek.

This facility discharges into a 303(d) listed stream.

This facility discharges into an Aquatic Resource of Concern.

The OPDES requires permittees to have a Storm Water Pollution Plan (SWP3) which includes a description of appropriate control measures. These are applicable to your industrial site, which is subject to inspection. Proof of this authorization must be available at the facility.
The Authorization shall become effective **December 23, 2011** and will expire at midnight September 4, 2016.

All terms and conditions of the modified OPDES Storm Water Industrial General Permit OKR05, as published on September 5, 2011, shall apply to the recipient of this authorization.

1.0 Introduction

The Storm Water Pollution Prevention Plan (SWPPP) or the Pepsi Bottling Group-Tulsa facility was prepared by Ambiotec Environmental Consultants, Inc. (AEC) on behalf of the Pepsi Bottling Group-Tulsa in partial fulfillment of the Oklahoma Department of Environmental Quality's (DEQ) Oklahoma Pollutant Discharge Elimination System (OPDES) requirements for storm water discharges associated with industrial activity.

1.1 Regulatory Background

The U.S. Environmental Protection Agency (EPA) has emphasized pollutant reduction in discharges of industrial wastewater and municipal sewage through the implementation of the National Pollutant Discharge Elimination System (NPDES) program. Traditionally, storm water was assumed to pose no significant environmental risk to surface water bodies or to groundwater. Many past environmental studies, however, including the Nationwide Urban Runoff Program (NURP), have suggested that storm water discharges from industrial facilities introduce a variety of pollutants into surface waters such as lakes, streams and oceans. In response, the U.S. EPA promulgated regulations which established a Baseline Industrial General Permit for storm water discharges associated with industrial activities. In 1995, EPA implemented the Multi-Sector General Permit (MSGP) which replaced the Baseline Industrial General Permit. Most industrial facilities previously regulated under the baseline permit were required to seek storm water permit coverage under the MSGP.

On September 29, 2000, the NPDES federal MSGP permit expired. The Oklahoma DEQ issued the Oklahoma Pollutant Discharge Elimination System (OPDES) general permit on October 2, 2000 to allow continued authorization for these same discharges. The Notice of Intent (NOI) for the facility was received by the ODEQ on April 1, 2002, and the Authorization for Storm Water Discharge from an Industrial Facility No. OKGP01542 was issued on April 15, 2002. The facility is authorized to discharge storm water under the terms and conditions of the OPDES Multi-Sector Industrial Permit according to O.A.C. 252.605-1-5(B)(3)(1). The permit is effective through October 2, 2005 and will be renewed by Pepsi Bottling Group – Tulsa. In a letter dated September 25, 2005, the DEQ communicated that a new permit was under review by the EPA, and would not be approved before expiration of the old permit. The letter communicated that Pepsi should continue to operate under the old permit until the new was approved by the EPA.

1.2 Facility Eligibility

The Pepsi Bottling Group-Tulsa facility (PBG-Tulsa) was covered by the federal MSGP under Sector U (relating to Food and Kindred Products) which includes SIC Codes 20 and 21. The facility has an SIC Code of 2086, which is included in the Beverages category of Sector U. The facility bottles flavored beverages for distribution to satellite warehouse facilities. All facilities which were covered by the federal MSGP are also required under the OPDES General Permit to prepare and implement a storm water pollution prevention plan (SWPPP).

Aquatic Resources of Concern

In addition to the standard permit requirements, PBG-Tulsa is subject to special [redacted]S requirements relating to the State identified Aquatic Resources of Concern ([redacted]RC). These requirements are designed to provide additional protection to endangered and threatened species, and critical habitat in the State. PBG-Tulsa is subject to these requirements due to the location of the facility within the Arkansas River watershed, a designated Aquatic Resource of Concern. The ARC requirements are presented in Attachment 7, and implementation of facility practices in relation to the requirements is described in Section 6.4 of the SWPPP.

1.3 SWPPP Background

The plan requires the implementation of site-specific storm water controls that are tailored to the features, activities and priorities of each site. The flexibility of site-specific plans assures that facilities have the opportunity to identify cost effective storm water pollution prevention controls that are appropriate for the processes, functions, location and pollutant sources of the facility.

The SWPPP focuses on two major objectives: 1) To identify sources of pollution potentially affecting the quality of storm water discharges associated with industrial activity at the facility; and 2) to identify and implement practices to minimize and control pollutants in storm water discharges associated with industrial activity at the site.

The SWPPP requirements are intended to facilitate the process of evaluating potential pollution sources at the site, and to facilitate the selection and implementation of appropriate measures designed to prevent or control the discharge of pollutants in storm water runoff. The process involves the following steps: 1) Formation of a team of qualified plant personnel who will be responsible for implementing and maintaining the plan; 2) assessment of potential storm water pollution sources; 3) selection and implementation of appropriate management practices and controls; and 4) periodic evaluation of the ability of the plan to address storm water pollution prevention and to comply with the terms and conditions of the general permit.

2.0 Compliance Plan

Under the federal Multi-Sector General Permit (MSGP), the PBG-Tulsa facility was classified under the Beverages subsector of Sector U (relating to Food and Kindred Products Facilities). Its Standard Industrial Classification (SIC) Code is 2086. Under the OPDES program, the facility will continue to perform storm water pollution prevention activities as it was regulated under the federal NPDES program.

The PBG-Tulsa facility took the following steps to meet compliance with the provisions of the OPDES General Permit:

1) File a Permit Application

Upon completion of the SWPPP, PBG-Tulsa filed the required Notice of Intent (NOI) for this facility with the DEQ. The Notice of Intent (NOI) for the facility was received by the ODEQ on April 1, 2002, and the Authorization for Storm Water Discharge from an Industrial Facility No. OKGP01542 was issued on April 15, 2002. The facility is authorized to discharge storm water under the terms and conditions of the OPDES Multi-Sector Industrial Permit according to O.A.C. 252.605-1-5(B)(3)(1). In a letter dated September 25, 2005, the DEQ communicated that a new permit was under review by the EPA, and would not be approved before expiration of the old permit. The letter communicated that Pepsi should continue to operate under the old permit until the new was approved by the EPA.

2) Develop the Storm Water Pollution Prevention Plan

A comprehensive compliance inspection of the facility was performed by AEC on November 15, 2001 to develop the SWPPP and ensure compliance with the OPDES. The SWPPP is kept on-site and will be available for review by DEQ and local regulatory personnel as necessary.

3) Implement the Storm Water Pollution Prevention Plan

PBG-Tulsa will implement the plan and the proposed best management practices (BMPs) discussed in Section 6.0 of the plan.

4) Comply with Step 2 of Exhibit 1 of the OPDES

Since the PBG-Tulsa facility is located in an Aquatic Resource of Concern area, the facility will comply with Step 2 of Exhibit 1 relating to Storm Water Control

Measures to Protect Endangered and Threatened Species.

5) Perform Quarterly Visual Storm Water Monitoring

PBG-Tulsa currently performs quarterly monitoring for the visual observation and documentation of storm water color, odor, clarity, floating solids, settled solids, suspended solids, foam, oil sheen and any other obvious indicators of storm water pollution. Copies of this monitoring is on file in the office of the Production Manager.

6) Perform a Comprehensive Site Compliance Evaluation Annually

After implementation of the SWPPP, an inspection of the facility will be performed at least once per year to assure compliance with the storm water regulations and to assure consistency with the SWPPP. PBG-Tulsa will update the SWPPP, if necessary, when any significant changes at the facility could affect the quality of storm water discharges from the facility. These changes may include new facility additions, changes in materials usage, or changes in procedures that relate to the handling, processing, storage or disposal of either raw materials or finished products. A copy of the annual inspection form is included as Form 6.3.

3.0 Facility Description

The PBG-Tulsa facility is located in the western portion of Tulsa, Oklahoma and encompasses approximately 45 acres of land which is bounded to the north by Interstate 44; to the east by undeveloped land and a railroad; to the south by Mooser Creek, and to the west by a commercial facility. The Arkansas River is located approximately a quarter mile to the east of the facility. Approximately 90%-95% of the property is covered by buildings and/or pavement. Figure 1 presents a map of the PBG-Tulsa site. Major features of the facility include:

- Plant administrative offices
- Interior production areas
- Loading/unloading docks
- Fleet maintenance and vending machine refurbishing building
- Waste management areas
- Can crushing area
- Fleet fueling station with two 10,000-gallon underground diesel storage tanks
- Aboveground liquid nitrogen, carbon dioxide and ammonia tanks
- Aboveground corn syrup (fructose) tank

The majority of activities at the facility are performed in covered areas and are not exposed to storm water. A discussion of activities performed outdoors is presented in Section 3.1.

In general, facility operations involve the bottling of Pepsi products and the maintenance of fleet trucks and vending machines. Basic production operations include: receiving raw materials; storage and handling of raw materials within the facility building; production and bottling activities; storage of products; and loading of products for shipping off-site. Fleet maintenance activities include engine repairs/maintenance and truck washing. Vending machine activities include FREON reclamation, compressor repairs and general maintenance.

The hours of operation at the facility are: 24 hours per day, 7 days per week (excluding major holidays).

3.1 Activities Conducted Outdoors

Activities which are performed outdoors may potentially lead to the increase of contaminant loads to storm water discharged from the site. Outdoor activities at the PBG-Tulsa facility include:

- unloading of raw materials (e.g., flavoring concentrates) from trucks, and loading of product materials (e.g., bottled beverages) to trucks. Unloading and loading activities are performed without exposure to storm water at the facility. Loading docks at the site are equipped with exterior awnings and seals which secure the trucks to the docks during loading/unloading operations.

- can crushing activities (partially covered).

- rodent trapping using live-capture traps which contain no rodenticides. This activity is performed by an outside contractor on a weekly basis.

- routine maintenance of vegetated areas.

- storage of liquid nitrogen, ammonia and carbon dioxide in aboveground tanks. Any releases of these materials, however, would not affect storm water since exposure to air would either evaporate or freeze the materials before coming into contact with storm water. Hose connections are used at the aboveground and underground storage tanks.

- storage of corn syrup (fructose) in a 20,000-gallon vertical aboveground tank. Hose connections are used at the aboveground and underground storage tanks. Spill containment exists for this tank.

- storage of petroleum in underground tanks, including two 10,000-gallon diesel tanks.

- storage of miscellaneous vending machines and parts (e.g., compressors, refrigeration decks).

- management of waste in roll-off containers with paper/cardboard waste, scrap metal, vehicle parts, aluminum cans.

Maintenance of equipment and machinery typically occurs at indoor locations of the facility on an as-needed basis. Vending machine refurbishing activities are performed indoors ~~and include reclamation of FREON.~~ Fleet maintenance is also performed indoors at the maintenance building. Minor amounts of oils, greases and solvents relating to equipment maintenance are stored at a location within the facility building.

3.2 Inventory of Exposed Materials

The compilation of an inventory of exposed materials used at the facility is the initial step in determining which materials may potentially affect storm water.

Primary materials stored outdoors include: residual product material from crushed cans, diesel fuel, liquid nitrogen, ammonia and carbon dioxide. Other process liquid materials also include flavoring concentrations and syrups, but are not likely to be exposed to storm water.

3.3 Site Drainage and Existing Storm Water Controls

Site drainage at the PBG-Tulsa facility is characterized by a natural decrease in gradient towards Mooser Creek to the south of the site. Because of this gradient, all storm water is discharged from the site in sheet flows which are directed toward seven (7) outfalls. One underground pipe exists to convey storm water to the outfalls. Each of the outfalls would potentially be affected by any outdoor activities at the property. Figure 1 presents a map of the facility and the outfall locations.

3.4 Inventory of Past Spills and Leaks

According to the OPDES Permit, facilities subject to the permit must include in the SWPPP a summary of significant spills or leaks which have occurred at the permitted facility within the five years prior to the implementation of the plan. No significant spills in excess of reportable quantities have occurred in the past five years.

3.5 Historical Storm Water Sampling Data

No historical storm water data has been compiled for this facility.

4.0 Potential Pollutant Sources

A visual inspection of the facility was performed on November 15, 2001 by Dana Cooper, Safety & Security Specialist; Lee Thompson, CES, of Crisis Event Management Services (CEMS); and Marc Haws, P.G., of Ambiotec Environmental Consultants, Inc. (AEC). The following potential pollutant source areas were identified:

1) Can Crushing Area

A can crushing machine is exposed to storm water on the southwestern portion of the property near the fueling station. Off-spec or expired products are processed through the machine where liquid waste is directed to a sanitary sewer drain. Waste cans and plastic bottles are transferred to rolloff waste containers for off-site shipment and recycling. The can crushing operation is covered. The crushed liquid product is collected in a tank, and the pH is neutralized before sending to the POTW.

2) Waste Management Areas

Rolloff containers are used to contain waste cans and plastic bottles which previously had been processed through the can crushing machine. Residual amounts of beverages contained in the discarded cans and bottles potentially may be exposed to storm water.

A trash compactor rolloff unit is located near the can crushing machine in the southwest portion of the facility and is used primarily for paper and cardboard waste materials. Degradation of paper material due to storm water exposure may lead to an increase in suspended solid loads to storm water discharges.

Rolloff containers are located throughout the site for the purpose of storing general refuse prior to transfer for off-site disposal. Rolloff containers located near the fleet maintenance area are used for the storage of waste metal, equipment parts, and aluminum cans.

Vending machines, used compressors, refrigeration decks and other parts associated with vending machines and product dispenser equipment may be occasionally stored outside pending off-site shipment. Potential storm water pollutants include residual oil or other liquids associated with the parts.

3) Truck Loading/Unloading Areas

The loading dock areas at the PBG-Tulsa facility service the unloading of raw materials and the loading of product materials. Current storm water pollution practices include the use of dock awnings and truck seals to eliminate loading/unloading activities from exposure to storm water.

4) Aboveground Corn Syrup Storage Tank Area

One 20,000-gallon vertical tank is used to store corn syrup near the southeast corner of the main plant. The tank is equipped with tight-fitting hose connections to reduce the potential for spills to occur during product transfer activities. In February of 2005, a concrete berm was constructed around the tank.

5) Vegetated Areas

Improper maintenance of vegetated areas may lead to erosion which could impact storm water discharges at the site. Currently all unpaved areas have sufficient vegetation to minimize the potential for erosion at the site.

Section 6.3 presents a discussion of specific BMPs for the potential pollutant source areas.

5.0 Non-Storm Water Discharges

5.1 Summary of Existing Permits

Although there are no other OPDES permits associated with the facility, the facility is currently permitted by the City of Tulsa to discharge process waters to the sanitary sewer system. PBG-Tulsa sanitary discharge water includes typical sanitary discharges in addition to residual product liquids from can crushing activities.

5.2 Description of Known Non-Storm Water Discharges

The only known non-storm water discharges include minor amounts of residual product liquid associated with the can crushing activity. PBG-Tulsa is currently working to improve the system so that all waste liquids are conveyed to the sanitary sewer system. A berm exists around the entire can crushing operation now.

No other non-storm water discharges were apparent at the facility. All floor drains within the facility have been plugged and capped.

5.3 Non-Storm Water Discharge Evaluation

A review of facility diagrams was performed to identify potential non-storm water discharges at the site. Other than the discharges described in Section 5.2, no non-storm water discharge points were observed on the diagrams. In addition, dry weather inspections of the outfalls on November 15, 2001 and April 12, 2006 indicated no observable non-storm water discharges.

5.4 Certification of Non-Storm Water Evaluation

Certification that the regulated storm water discharges have been tested or evaluated for the presence of non-storm waste discharges at the facility is required for the initial implementation of the SWPPP and subsequent annual comprehensive site evaluations. Form 5-2 presents a certification of the evaluation performed during November 2001.

If such certification cannot be provided for the storm water discharges and conveyances, PBG-Tulsa must notify and provide the DEQ with the following:

- Description of evaluation procedures used or attempted;
- Results of such evaluations;
- Other relevant observations;
- Potential sources of non-storm water discharge(s); and
- Reasons for the inability to make such certification.

Form 5-3 should be used for PBG-Tulsa's documentation of such cases where certification cannot be provided.

6.0 Storm Water Management Program

PBG-Tulsa has implemented a comprehensive storm water management program for the facility which is designed to reduce potential contaminant loads in storm water discharged from the site. The following sections of the Storm Water Pollution Prevention Plan identify specific elements which will be implemented to meet the objectives of the OPDES Permit.

6.1 Pollution Prevention Team

The Pollution Prevention Team for the facility has the responsibility for developing, implementing, maintaining and revising the SWPPP. Table 6-1 identifies the team members and their areas of responsibilities.

There are four major areas of responsibilities for the team members:

X Employee Training: Implementing a storm water pollution prevention training program, including preparation of training materials, scheduling and coordinating training activities and conducting the training sessions.

X Storm Water Monitoring: Conducting quarterly visual monitoring of grab samples.

X Site Inspection: Conducting visual inspections, annual site evaluations and documenting inspections and evaluations.

X Record Keeping: Archiving all documents associated with the SWPPP and its implementation, including site maps, site evaluation reports, storm water monitoring data, maintenance records, and spill reports.

6.2 General Best Management Practices (BMPs)

Storm water pollution prevention BMPs have been and will continue to be performed at the facility to minimize or eliminate the discharge of pollutants in storm water discharges from the facility. General categories of BMPs are:

- Non-Structural Source Controls: Operational practices including good housekeeping, employee training and routine inspections that can improve water quality by minimizing or eliminating the accumulation of pollutants or the contact of pollutants with precipitation and subsequent runoff water.
- Structural Source Controls: Physical devices, features, or structures that can improve water quality by directing, diverting or otherwise controlling runoff in the vicinity of potential pollutant sources and thereby minimizing or eliminating the contact of pollutants with runoff water.
- Hydraulic controls: Devices, features, or conveyances which modify the rate or

amount of runoff and ability of runoff waters to transport potential pollutants.

- Treatment controls: Devices, equipment or systems which modify the quality of storm water passing into or through the treatment control.

Structural and non-structural source controls are the preferred methods and should be given first consideration in selection of possible control measures. Storm water treatment controls are presently not used nor are they expected to be used in the future at the PBG-Tulsa facility.

This SWPPP includes, but is not limited to, the following source controls:

- Good Housekeeping
- Spill Prevention and Response
- Sediment and Erosion Control
- Storm Water Runoff Control and Maintenance
- Best Management Practices (BMPs)
- Employee Training
- Periodic Inspections

These measures are to be continued at the facility and are described in the following sections.

6.2.1 Good Housekeeping

PBG-Tulsa will continue to use previously established good housekeeping practices to prevent contaminants from entering and impacting storm water discharges, and will be particularly emphasized at the potential pollutant source areas described in Section 4.0. Current on-site housekeeping practices may be expanded to reflect the concern for potential hazards to storm water discharges.

Good housekeeping practices are intended to maintain overall order and cleanliness, reduce the contact of potential pollutants with precipitation, and reduce the likelihood of release of pollutants to runoff waters. Appropriate good housekeeping BMPs for the facility includes the following categories:

- Cleaning-Related BMPs

  Cleaning operations will be conducted so as to minimize the amount of materials which could enter the storm water drainage system. In the event of minor spills, wet mopping techniques will be used in place of wash down, wherever feasible. If wash down is necessary, spent wash water will be visually inspected for pollutants and samples may be collected and analyzed prior to discharge to the storm sewer system. If evidence of contamination is found during analytical testing, wash water will be disposed in accordance with applicable federal, state and local regulations. On-site surfaces which

are exposed to storm water will be kept free of debris and other similar materials.

- Container Storage BMPs

  Proper storage of all materials will be performed to minimize storm water contact. Drums will be maintained in good condition, properly labeled with the contents and date, and completely covered. Drums should be stored, if possible, in a protected area with secondary containment. No chemical should be stored in a container unless the container's material and construction are compatible with the materials stored and with the conditions of storage such as pressure and temperature.

- Material Storage/Management BMPs

  The storage of materials and products and the arrangement of equipment at the facility will be conducted in an orderly fashion, especially in areas where significant activities take place. PBG-Tulsa will ensure that there is adequate space to conduct on-site operations and will facilitate proper housekeeping procedures to prevent the occurrence of spill or release incidents.

- Loading and Unloading BMPs

  Loading and unloading areas will be operated to minimize discharge of all transferred materials and/or contact with storm water. Loading dock awnings and truck seals will continue to be used at the site.

Good housekeeping BMPs selected for implementation at the facility are listed in Table 6-2.

6.2.2 Spill Prevention and Response

Development of an effective spill prevention and response program is essential to aid in minimizing potential storm water pollution. In the event of a spill or other release of a hazardous material or waste occurs at the site, specific spill response procedures will be used to abate and remediate the release. Attachment 3 presents a summary of spill response procedures which will be used for the facility. Spill prevention and response BMPs used at the facility are listed in Table 6-3. Current practices include the maintenance of spill response kits located at the fueling station.

6.2.3 Sediment and Erosion Control

Erosion of ground surfaces at the site may lead to an increase in the rate of

runon/runoff of storm water discharges. Erosion of ground surfaces at the facility is controlled by vegetation in areas which are not paved.

Construction can be a significant source of sediment pollutants. This SWPPP does not specifically address permitting or control of storm water discharges from construction activities that may require a permit for discharge of storm waters. However, an appropriate BMP for the facility is confirmation by the Pollution Prevention Team that any construction conducted at the facility is properly permitted and the construction activities conform to any permit requirements.

Sediment and erosion control BMPs selected for implementation at the facility are listed in Table 6-4.

6.2.4 Storm Water Runoff Control

Storm water runoff control practices may include devices or practices to divert, store, reuse and/or treat storm water prior to discharge. At the PBG-Tulsa facility, storm water is directed via sheet flow to six (6) outfalls on the southern boundary of the facility.

Pollutant source areas identified in Section 4.0 of this plan may be subject to additional storm water control features upon review of the current systems. Storm water controls which may be used include:

1) curbing or other form of drainage control to prevent or minimize the potential for storm water run-on to come into contact with significant sources of pollutants; or

2) roofs, covers or other forms of appropriate protection to prevent exposure.

Storm water runoff management practices at the facility are listed in Table 6-5.

6.2.5 Employee Training

Employee training programs must inform personnel at all levels of responsibility of the components and goals of the storm water pollution prevention plan. When trained properly, personnel are more capable of preventing spills, responding safely and effectively to an accident when one occurs, and recognizing situations that could lead to storm water contamination.

The Pollution Prevention Team will be responsible for assuring implementation of a training program for operations staff at the facility for the purpose of assuring the staff understands the SWPPP and how it is to be implemented in conjunction with other pollution control training.

PBG-Tulsa currently implements a monthly employee safety training program. The training program was expanded to incorporate storm water pollution prevention training, which will be provided to continuing employees at least **once a year, in the form of 3D training.** New employees will receive training as part of their facility orientation program. Training will be required for employees in the areas of:

- Objectives and requirements of the SWPPP;
- Good Housekeeping;
- Visual Inspections;
- Material/Waste Storage & Management Practices;
- Loading/Unloading Procedures;
- Spill Prevention and Response; and
- Storm Water Monitoring.

Implementation of the training program will include:

- Documentation of training program and its implementation (Form 6-1); and,
- Tracking of individual employee participation in training.

Attachment 4 presents a summary of training topics, training dates and personnel required to attend the training sessions.

6.2.6 Periodic Inspections/Maintenance

The Pollution Prevention Team will perform monthly inspections of the facility on a regular basis to assess the effectiveness of the pollution prevention BMPs described in Sections 6.2.1 thru 6.2.6. The inspections will take place at regulated areas of the facility to: 1) generally confirm conformance to the SWPPP; 2) identify incidents of nonconformance; 3) identify possible problems in the control of storm water pollution at the facility; and 4) ensure that Aquatic Resource of Concern pollutants are not exposed to storm water.

Areas to be inspected and maintained include:

- Can crushing area
- Waste management areas
- Truck loading/unloading areas
- Aboveground corn syrup storage tank area
- Vegetated Areas
- Outfalls

Periodic inspections will be performed at least once per month. A record of the inspections and important observations will be maintained on Form 6-2. The record will include:

- date of inspection;
- person performing the inspection;
- signatures of the person performing the inspection;
- observed problems; and
- corrective action taken to address observed problems, and persons responsible for undertaking or directing corrective actions.

The person performing the inspection is responsible for informing the Pollution Prevention Team of observed problems. The Pollution Prevention Team is responsible for ensuring that necessary corrective actions are undertaken in a timely manner. The inspection record is to be maintained as part of this SWPPP.

6.3 Specific BMPs for Potential Pollutant Sources

The implementation of best management practices (BMPs) associated with the potential pollutant source areas discussed in Section 4.0 will be necessary to assisting in the reduction of impacts to storm water discharges. Each of the source areas will be included in the periodic inspection program. Additional practices outlined below will be used at the facility.

- Can Crushing Area

  Minor spills of product liquids could occur at the can crushing area which may potentially affect storm water. In order to eliminate the possibility of spills from the area, PBG-Tulsa implemented the following: 1) a spill containment berm; 2) a tank to capture liquid from the crushed cans and neutralize the pH; and 3) direct conveyance of the process liquid to sanitary drain.

- Waste Management Areas

  Rolloff waste containers and the trash compactor will either be: 1) equipped with a cover to prevent waste materials from being exposed to storm water; 2) equipped with a floor drain system which conveys liquids to the sanitary sewer system; 3) transferred to a sheltered area; or 4) transferred to an outside area equipped with a sanitary sewer drain.

  Vending machine parts storage areas (e.g., refrigeration decks) will either be: 1) equipped with a shelter to prevent exposure of the materials to storm water; or 2) staged at an indoor area.

- Truck Loading/Unloading Areas

  PBG-Tulsa will continue to use dock seals and exterior awnings to prevent exposure of transferred materials to storm water. In the event of leaks or spills, mats will be used to cover the storm water inlets to prevent discharge of pollutants to the storm water system.

- Aboveground Corn Syrup Storage Tank

  In order to contain any leaks or spills of corn syrup, the tanks system was equipped with a secondary containment dike; and 2) a spill control kit.

- Vegetated Areas

  Vegetated areas will be inspected for evidence of erosion. Any identified barren or damaged areas will be immediately vegetated or repaired.

6.4 Aquatic Resource of Concern Requirements

The OPDES has specific requirements for industrial facilities which are located within AAquatic Resource of Concern@ (ARC) areas of the State. These requirements are designed to provide additional protection to threatened and endangered species, and critical habitat.

Under the OPDES, PBG-Tulsa is required to implement procedures for meeting compliance with Step 2 of the ARC requirements. A copy of the requirement is presented in Attachment 7, and a description of activities required for the PBG-Tulsa facility is presented below.

- Pollutants such as oil, grease, solid waste, human waste, hazardous or toxic material, or other material not authorized for discharge under this permit must be properly captured, treated and disposed.

  Action: Currently these pollutants are not exposed to storm water at the PBG-Tulsa facility. Best management practices described above should be sufficient for ensuring that the potential for these pollutants to migrate from the property has been minimized.

- If you are required to perform annual numeric effluent limitation monitoring you must include in your SWPPP the steps you will take to prevent any removed pollutants from entering a storm water stream.

  Action: Currently the PBG-Tulsa facility is not subject to annual numeric effluent limitation monitoring; therefore, this requirement is not applicable.

- A schedule must be included which describes the inspection practices that will be used to ensure that control measures are working effectively.

  Action: The periodic inspections BMP described in Section 6.2.6 should be sufficient for documenting inspections relating to these pollutants.

- Hazardous materials and production waste products must be stored in a manner that minimizes their contact with storm water. An emergency response plan must be included which addresses the handling of accidental spills or leaks.

  Action: The only production waste materials potentially exposed to storm water are minor amounts of residual liquids from can crushing activities. The facility is currently working to improve the system to direct all liquids to the sanitary sewer system. A description of emergency spill response actions is included in Attachment 3.

6.5 Program Implementation

In accordance with the new OPDES Permit, pollution prevention BMPs selected for the facility are to be implemented as soon as possible.

7.0 Storm Water Monitoring Requirements

The PBG-Tulsa facility is required to perform quarterly visual monitoring of storm water discharges according to the OPDES regulations. No benchmark monitoring is currently required for the facility according to the OPDES regulations. Samples will be collected during the following quarterly intervals: January through March; April through June; July through September; and October through December. The samples will be collected during daylight hours during a storm event which is a minimum of 0.1 inches of rainfall. Grab samples will be collected within the first 30 minutes (or as soon thereafter as practical, but not to exceed one hour) of when the runoff begins discharging at the single outfall. The grab samples will be examined and documented for observations of color, odor, clarity, floating solids, settled solids, suspended solids, foam, oil sheen and other obvious indicators of storm water pollution. Visual examination reports will be maintained on-site in the pollution prevention plan.

Monitoring reports are required to be submitted to the City of Tulsa, Department of Environmental Services, under City Permit No. OKS000201.

Visual monitoring guidance and forms are included in Attachment 5.

8.0 Annual Site Compliance Evaluation

In order to achieve the storm water management objectives of this SWPPP:

X An annual comprehensive site compliance evaluation will be performed; and,

X Revisions to the SWPPP will be made on an as-needed basis to reflect any significant changes at the facility which affect the character of storm water discharges from the facility.

8.1 Site Evaluation

A comprehensive evaluation of the facility will be made at intervals not to exceed 12 months. The first evaluation will occur no later than 12 months after initial certification of the SWPPP. The annual evaluation will be performed by or under the direction of the Pollution Prevention Team. The Pollution Prevention Team can utilize such assistance as it may deem necessary to conduct and report upon the evaluation.

The objectives of the annual comprehensive facility evaluation are to:

X Review conformance of site activities with the SWPPP;
X Assess effectiveness of control measures prescribed by the SWPPP; and,
X Identify modifications and improvements to the SWPPP as may be appropriate to achieving the objective of the SWPPP.

Each incident of noncompliance to the current SWPPP found in the annual evaluation will be addressed and specific actions and requirements for removing the deficiency will be identified.

The comprehensive annual site evaluation will include at a minimum the elements described below to the extent that such elements apply to the facility or may relate to or describe conditions in storm water discharges from the facility.

8.1.1 Site Map Revision

The facility site map will be revised, as necessary, to reflect current conditions at the facility or at areas of the facility which can be reasonably expected to significantly affect storm water discharges. The revision will include significant changes or modifications in drainage structures, drainage controls, drainage patterns, outfall locations, facility structures or operating areas.

8.1.2 Verification and Identification of Sources

Previously identified sources and new sources of potential storm water pollutants will be identified and verified. Areas of previously identified sources will be examined to determine whether the source has remained unchanged or has been either significantly changed or removed.

Regulated areas of the facility will be inspected to identify any new or previously unidentified sources. This identification will incorporate an evaluation of the possible presence of new or previously unidentified non-storm water discharges. Any identified sources will be described in the modified SWPPP.

8.1.3 Outfall Inspection

The annual storm water inspections will be performed in the same manner as the quarterly inspections. The objective is to observe for evidence of polluted runoff discharges which could significantly affect receiving waters. Such evidences will include but not be limited to:

- X Presence of floatable materials or items;
- X Presence of an oil or petroleum sheen or free product;
- X Odors emanating from runoff in inlets or discharge at outfalls;
- X Oil or other pollutant residuals (as evidenced by actual product or significant coloration) on soil or conveyance structure surfaces;
- X Presence of apparent non-storm water discharges; and,
- X Discoloration of discharging or immediate receiving waters.

8.1.4 Verification and Assessment of Source Control Implementation

Each BMP described in the current SWPPP for control of pollutants in storm water discharges will be inspected and evaluated to determine:

- X Whether the BMP has been implemented or utilized;
- X Whether the BMP is being maintained or operated properly; and
- X Whether the BMP is effective in minimizing or reducing potential pollutants in storm water discharges.

If a control, lack of a control, or implementation of a control is found to be inconsistent with the current SWPPP, such deficiency will be noted as an incidence of noncompliance to the SWPPP.

The evaluation of effectiveness of a control can include: the amount or degree of apparent pollutant availability in a source area, the nature and character of runoff

waters from a source area; the degree of proper or complete functioning of the control; or the nature and character of the receiving stream.

8.1.5 Spill Response

A review of spill response procedures will be made during the annual evaluation. This review will include a review of any spill control or response plans for the facility. This review will also include an inspection of spill response equipment and its consistency with the spill response procedures. The inspection will include:

- X Availability of appropriate equipment and supplies;
- X Functioning capabilities of equipment;
- X Appropriate access to equipment and supplies by personnel who may have to use the equipment and supplies; and
- X Appropriate knowledge of availability and use of equipment and supplies by appropriate facility personnel.

Weaknesses or deficiencies in the spill response procedures or equipment and supplies will be identified in the modified SWPPP.

8.1.6 Other Plans and Requirements

New permits, permit renewals, administrative orders, enforcement orders, new compliance plans, or revisions of compliance plans pertinent to regulated storm water discharges will be reviewed and evaluated for consistency with this SWPPP.

Any new or modified municipal or other local requirements for control of pollutants in storm water discharges will be identified and evaluated for requirements for this SWPPP as appropriate.

8.1.7 Non-Storm Water Discharges

An evaluation will be performed for the presence of non-storm water discharges to site storm water conveyances or commingling with regulated storm water discharges. The evaluation will be performed using procedures prescribed in Section 5.0 of this SWPPP and any other such procedures and methods that may be judged to be necessary, advantageous, effective, or otherwise appropriate to achieving the objectives of this SWPPP.

8.1.8 Identification of Additional BMPs or BMP Modifications

Modifications of existing BMPs will be developed based upon the evaluation of new potential pollutant sources, the results of the outfall inspection, the evaluation of

existing BMPs and the review of the spill response procedures.

For each new BMP or modification to an existing BMP, the identification will include:

- X Description of the BMP or BMP modification;
- X Location(s) or area(s) for implementation of the BMP or BMP modification;
- X General requirements for implementation of the BMP or BMP modification (such as training, purchase of equipment and supplies, or construction requirements); and
- X Schedule for BMP or BMP modification implementation.

8.2 Annual Evaluation Report

A report will be prepared based on the findings of the annual evaluation. The report will address all elements, as described above, of the evaluation. It will also include:

- X Date(s) of on-site evaluation activities;
- X Name(s) of people participating in on-site evaluation activities;
- X Summary of evaluation scope and findings;
- X Significant observation evaluation elements;
- X Presentation of any storm water sampling results not previously identified or otherwise presented in the SWPPP;
- X Identification of an incidence of noncompliance to the SWPPP, if any, or certification that the facility in compliance with the current SWPPP at the time of the site evaluation;
- X Actions to be undertaken to address any incidence of noncompliance to the SWPPP; and,
- X Identification of new, modified, or additional actions, BMPs, and measures to be undertaken, pursued, or otherwise implemented to meet the objectives of the SWPPP, as identified from the annual site evaluation.

The annual evaluation report will become a part of the SWPPP and serve as documentation that the annual evaluation has been performed in accordance with MSGP regulations. The annual evaluation report should be completed within 30 days of the completion of the site inspection. Copies of the annual reports are kept in the files in the office of the Plant Manager.

8.3 SWPPP Revisions

PBG-Tulsa has the right to revise this SWPPP in any manner and at any such times that it judges to be appropriate to meeting the objectives of the SWPPP, conforming to company

policy, or complying with regulatory requirements.

8.3.1 Annual Evaluation Revisions

Based upon the annual site evaluation and the report upon that evaluation, the SWPPP may be revised as appropriate once each year to reflect the changes in site conditions in the regulated areas of the facility as identified during the annual site evaluation. The SWPPP revisions should be completed within 30 days of completion of the annual site evaluation.

8.3.2 Other Revisions

The SWPPP will be amended or otherwise appropriately revised whenever (i) there is a change in the design, construction, operation, or maintenance in the regulated areas of the facility or which may significantly impact upon regulated storm water discharges from the facility, or (ii) conditions occur or develop at the facility which can be reasonably expected to significantly impact upon storm water discharges from the facility.

Revisions to the SWPPP document will be done within a timely manner after occurrence of the conditions or completion of the action giving rise to the revision. Two weeks will be considered a timely manner, unless the nature of the action or occurrence is such that the action or occurrence cannot be described until an extended period of time has passed (e.g., construction projects). In this latter case, the revision will take place within two weeks after completion of the event.

The revisions necessitated by changes in the design, construction, operation, or maintenance of the facility which may significantly impact upon the regulated storm water discharges and pollutants therein will be done as appropriate to the nature of changes, in a manner which provides accurate description of the change, and in conformance with good engineering practice.

8.3.3 Actions Due to SWPPP Revisions

Actions required as a consequence of changes to the SWPPP will be accomplished in a timely manner, but within twelve (12) weeks after the annual site evaluation. In the event that the action required necessitates construction or other process-oriented activity requiring significant time (more than twelve weeks) for completion, the timely initiation of the activity and execution of the activity with due diligence will be considered to be in conformance with this SWPPP.

8.4 Documentation of SWPPP Revisions

Changes to the SWPPP will be incorporated in this SWPPP by appropriately dated

addendums, additions, changes, or attachments.

9.0 DOCUMENTATION AND CERTIFICATION

Actions required by this SWPPP will be documented using the forms provided herein, or other such forms or documents substantially equivalent in content to those provided herein that may be prepared from time to time. Such documentation will become part of the SWPPP.

All certifications of the SWPPP will be signed by a responsible corporate officer. All written reports required by the SWPPP will also be signed by a responsible corporate office. If signatory authority is delegated to another by a responsible corporate officer, a copy of such delegation will be attached to the SWPPP.

Certification will be provided for evaluation of non-storm water discharges using Form 5-2.

The SWPPP has been initially certified. The annual certification will certify the SWPPP and all revisions to it since the previous certification. Certifications will be made using forms provided herein. Completed SWPPP certification forms (Form 9-1) are and will continue to be attached to this SWPPP.

Inspections and maintenance activities will be documented and recorded in the plan as well as any incidents of spills, leaks or other discharges.

The record keeping and reporting plan include the following elements:

1) All visual inspections, including field notebooks, timed and dated photographs, videotapes and/or drawings and maps;
2) Maintenance activities;
3) Spill events, including, as appropriate: the date and time of the incident, quantity released, weather conditions, duration, cause, environmental problems, response procedures, parties notified, recommended revisions of the BMP program, operating procedures, and/or equipment needed to prevent recurrence; and
4) Writing formal reports relating to significant releases, particularly reportable quantity releases which are reported to the National Response Center.

In addition, any change to the storm water pollution prevention plan relating to design, construction, operation, or maintenance of systems or processes exposed to storm water influences will be documented in this plan.

A record summarizing the following related activities will be maintained with this document:

- Annual inspections;
- Periodic visual inspections;
- Spill response activities;
- Storm water monitoring results; and

- Regulatory inspections.

Form 9-2 is provided for the summary of these activities.

Suitable blank forms to be used for certification, reporting logging and inspections that are required in this SWPPP are provided in Attachment 1. Completed forms become attachments to this SWPPP and are filed in Attachment 2.

Records will be maintained for at least one year after the expiration date of the permit.

TABLE 6-2

GOOD HOUSEKEEPING BMPs FOR FACILITY

AREA TO APPLY BMP	DESCRIPTION	DATE BY WHICH TO IMPLEMENT (If different than in text)
All Source Areas	Use dry cleanup methods, such as floor dry or other absorbent material, for petroleum or other liquids. Capture, contain and properly dispose of cleanup materials.	
All Source Areas	Pick up loose materials and trash periodically and as needed.	
All Source Areas	Sweep designated paved areas periodically and as needed. Pick up, contain and properly dispose of sweepings.	
All Source Areas	Periodically or as needed, wash down or mop designated paved areas that are subject to accumulation of pollutants where the pollutants are not readily removed by sweeping. Mop water or wash down water will be conveyed to a floor drain which discharges to the sanitary sewer.	
All Source Areas	Any other waste waters generated during routine housekeeping activities, such as wash down of designated paved areas or cleanup of materials handling equipment, will be conveyed to a sanitary sewer drain.	
Waste Storage Areas	Suitable waste collection containers, such as rolloff containers, are provided at the facility. These containers are solely for the collection of solid non-hazardous, non-recyclable, non-liquid wastes. The management controls listed below will continue to be followed to ensure that waste containers do not become a source of storm water contaminants at the facility.	
Waste Storage Areas	- Keep trash picked up and placed in durable, non-leaking containers or rolloff containers with covers. - No hazardous waste, petroleum waste, or other regulated waste will be placed in a rolloff or other receptacle to be disposed with routine non-hazardous trash.	
All Source Areas	All excess or spent materials that are not needed should be disposed of in the most cost effective manner.	

TABLE 6-2

GOOD HOUSEKEEPING BMPs FOR FACILITY

AREA TO APPLY BMP	DESCRIPTION	DATE BY WHICH TO IMPLEMENT (If different than in text)
Materials Storage Areas	Drums containing materials (i.e. not a waste and not an excess material) must be: - Stored on a paved or otherwise impermeable surface or on pallets. - Kept closed at all times. - Stored under a roof; or if stored outside, must be elevated, tilted or covered to prevent water from accumulating on top and entering the drum. - Properly marked at all times. Additional good materials management practices for drum storage areas include the following which will be implemented wherever feasible: - Maintain proper isle space to allow access and inspection. - Stack drums only if lower and upper drums are secure(e.g. banded) and on pallets. Do not stack drums greater than 2 high per pallet. - Segregate drum storage areas for incompatible materials. - Store materials and conduct maintenance activities under existing cover, where available. - Store materials (i.e. chemical, out of service equipment , dry pallets) in appropriately designated areas and reduce size of areas with exposed materials.	
All Source Areas	Wherever possible, store materials and containers on pallets or racks. In addition to contributing to good inventory management, this will facilitate inspection and cleanup of materials handling and storage areas.	
Proposed construction Areas	Review plans for new construction to identify all proposed or potential connections to the storm water drainage system. Examples of improper connections to the storm water drainage system are listed in the facility SWPPP. Inspect actual construction to ensure that improper connections are not made.	As needed
All Source Areas	Regularly inspect and clean sumps, storm drain catch basins or other points of water detention.	As needed
All source Areas	Provide employee training on good housekeeping.	

TABLE 6-2

GOOD HOUSEKEEPING BMPs FOR FACILITY

AREA TO APPLY BMP	DESCRIPTION	DATE BY WHICH TO IMPLEMENT (If different than in text)
Aboveground Storage Tank Areas	Periodically inspect tanks and piping for signs of potential leaks.	

TABLE 6-3

SPILL PREVENTION AND RESPONSE BMPs

AREA TO APPLY BMP	DESCRIPTION	DATE BY WHICH TO IMPLEMENT (If different than in text)
Can crushing area Waste management areas Loading/unloading areas Aboveground storage tanks	Acquire the appropriate spill prevention equipment, and provide quarterly inventory and inspection of the equipment	
Can crushing area Waste management areas Loading/unloading areas Aboveground storage tanks Fueling station	Keep and use absorbents and spill cleanup materials readily available for control of minor leaks and spills (e.g., spill kits).	
Can crushing area Waste management areas Loading/unloading areas Aboveground storage tanks	Use dry cleanup methods when spill occurs.	
Waste management areas Loading/unloading areas Fleet maintenance area Aboveground storage tanks	Use temporary diversion devices or structures to divert spills from storm water drains and inlets.	
Can crushing area Waste management areas Loading/unloading areas Aboveground storage tanks	Capture and properly dispose of spilled materials.	
All Employees	Provide spill and leak control and cleanup training as part of new and continuing storm water training.	

TABLE 6-4

SEDIMENT AND EROSION CONTROL BMPs

AREA TO APPLY BMP	DESCRIPTION	DATE BY WHICH TO IMPLEMENT (If different than in text)
All Source Areas	Where appropriate, maintain or establish vegetation in unpaved areas to minimize erosion potential	
All Construction Areas	Minimize exposure and disturbance of soil and natural surfaces during new construction. Minimize unnecessary construction disturbance and use staged construction. Note that under existing regulations, construction projects that disturb in excess of 5 acres are subject to special storm water permitting and control measures.	As needed
All Construction Areas	Insure that all construction obtains the necessary storm water discharge permits and ensure their compliance	As needed
All Construction Areas	In small construction areas, control erosion using straw bales, silt fences, coverings over dirt piles, and other methods to reduce runon and runoff.	As needed

TABLE 6-5

STRUCTURAL CONTROL MAINTENANCE BMPs

AREA TO APPLY BMP	DESCRIPTION	DATE BY WHICH TO IMPLEMENT (If different than in text)
All Source Areas Outfalls	Remove spilled materials which may clog storm drains, including debris and other materials collecting at low points across the site.	
Waste Management Areas	Provide cover or sanitary floor drains at rolloff container areas.	
Truck Loading/ Unloading Areas	Use mats to cover storm drains in the event of a significant spill of materials during loading/unloading activities.	
Aboveground Syrup Tanks	Install secondary containment dike around tanks and/or install drip pans at hose connections.

CERTIFICATION OF SWPPP FOR THE PEPSI BOTTLING GROUP-TULSA FACILITY

I certify under the penalty of law that this document, all attachments, and any revisions to this document or its attachments made since the last certification prior to the present were prepared under my direction or supervision in accordance with a system designed to ensure that qualified personnel properly gathered and evaluated the information submitted. Based upon my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

SPILL RESPONSE CONTACTS AND PROCEDURES

GENERAL FACILITY INFORMATION AND EMERGENCY CONTACTS

Name of Facility:	Pepsi Bottling Group - Tulsa Marketing Unit
Address of Facility:	510 West Skelly Drive Tulsa, Oklahoma 74107
Type of Facility:	Beverage bottling facility
SIC Code:	2086
Operating Schedule: **Administrative Hours:**	24 hours/day; 7 days/week (excluding major holidays)
Number of Employees:	Approximately 350
Emergency Contact:	Mr. Colby Ballard / Ray Newman
Title:	Safety Coordinator / Plant Manager
Work Phone:	(918) 445-8163 / (918) 445-8012
Emergency Phone:	(918) 809-5028 cell / (918) 636-2989
	Colby responsible for overall safety program Ray responsible for overall plant operations
EMERGENCY POLICE/ FIRE DEPT. PHONE:	911
Emergency Response Coordinator:	Crisis Event Management Services Mr. Lee Thompson 7706 Treeline Drive Sugar Land, Texas 77479 **24-hour emergency phone: (888) 450-0907** Office: (281) 343-0907 Respond to spills that impact SWPPP
SWPPP Technical Consultant:	Dennis Hunter, Orion Environmental (865) 577-7124

GENERAL SPILL RESPONSE PROCEDURES

Leaks, Seeps, and Other Non-Flowing Releases of Nonflammable Products

1) Take actions and/or confirm that containment is provided by checking the position of valves, placement of sandbags, etc.

2) Notify the facility personnel responsible for supervising remedial actions of the location and status of the release. Document actions taken to mitigate spill.

Leak, Seeps, and Other Non-Flowing Releases of Flammable Products

1) Call for assistance from appropriate personnel.

2) Terminate possible ignition sources such as motors, vehicles, etc.

3) Post qualified personnel at a safe location to prevent entry into the affected areas by unauthorized persons.

4) Take actions and/or confirm that containment is provided by checking the position of valves, placement of sandbags, etc.

5) Notify the facility personnel responsible for supervising remedial actions of the location and status of the release. Document actions taken to mitigate spill.

Flowing Releases of Nonflammable Products

1) Terminate the source of the release.

2) Take actions and/or confirm that containment is provided by checking the position of valves, placement of sandbags, etc.

3) Notify the facility personnel responsible for supervising remedial actions of the location and status of the release. Document actions taken to mitigate spill.

GENERAL SPILL RESPONSE PROCEDURES (CONTINUED)

Flowing Releases of Flammable Products

1) Call for assistance from all personnel in immediate area; warn other personnel, including those off-site, that there may be immediate danger due to the release.

2) Terminate source and any ignition source such as motors, vehicles, etc.

3) Post qualified personnel at a safe location to prevent entry into the affected areas by unauthorized persons.

4) Take actions and/or confirm that containment is provided by checking the position of valves, placement of sandbags, etc.

5) Notify the facility personnel responsible for supervising remedial actions of the location and status of the release. If the supervisory personnel are not available, notify the local Fire Department immediately. Document actions taken to mitigate spill.

VISUAL MONITORING GUIDANCE AND FORMS

Visual Monitoring

The requirements and procedures for visual monitoring are applicable to all facilities required to perform storm water runoff monitoring as per the City of Tulsa Ordinance #18588.

- You must perform and document a visual examination of a storm water discharge associated with industrial activity from each outfall, except discharges exempted below. The visual examination must be made during daylight hours (e.g., normal working hours).

- Your visual examinations must be made of samples collected within the first 30 minutes (or as soon thereafter as practical, but not to exceed 1 hour) of when the runoff or snowmelt begins discharging from for your facility. The examination must document observations of color, odor, clarity, floating solids, settled solids, suspended solids, foam oil sheen, and other obvious indicators of storm water pollution. The examination must be conducted in a well-lighted area. No analytical tests are required to be performed on the samples. All such samples must be collected for the discharge resulting for a storm event that is greater than 0.1 inches in magnitude and that occurs at least 72 hours from the previously measurable (greater that 0.1 inch rainfall) storm event. Where practicable, the same individual should carry out the collection and examination of discharges for the entire permit term.

Representative Outfalls – Substantially Identical Discharges
If your facility has two (2) or more outfalls that you believe discharge substantially identical effluents, based on similarities of the industrial activities, significant materials or storm water management practices occurring within the outfalls' drainage areas, you may examine the effluent of just one of the outfalls and report that the examination also applies to the substantially identical outfall(s). For this to be permissible, you must describe in a letter, the following: locations of the outfalls; why the outfalls are expected to discharge substantially identical effluents. This letter must accompany the sampling results when submitted to the City of Tulsa.

The following Table is an example of what you should look for in a visual monitoring sample.

Table - Visual Monitoring

Parameter	Method	Results
Color and Extent	Visual	Clear, yellow, red, blue, green, brown, black, milky, etc.
Odor	Smell	None, earthy, sewage, musky, rotten eggs, petroleum, etc.
Clarity or Turbidity	Come up with your own test Such as, clean off the label From a 2 liter clear plastic bottle, fill with the sample, and try to see things through it.	1) can't see through the bottle 2) can see through but could not read newsprint 3) can see through and can read newsprint. 4) pretty clear, but not as clear as bottled water 5) as clear as bottled water
Floating solids	Visual	Yes/no – describe what they are
Settled solids	Use same 2 liter bottle	Tablespoons or cups of material or millimeters of solids on bottom after 24 hours
Suspended solids	Look through the container	What do you see?
Foam	Visual	Yes/no – how thick is the foam?

		How much of the surface does it cover? What color is the foam?
Oil sheen	Visual	Color an extent
Other obvious indicators of storm water pollution	Indicate what you observed that would lead a reasonable person to believe that the storm water was polluted.	Tell it like you see it.

- You must maintain your visual examination reports onsite. The report must include the examination date and time, examination personnel, the nature of the discharge (i.e., runoff or snow melt), visual quality of the storm water discharge (including observations of color, odor, clarity, floating solids settled solids, suspended solids, foam, oil sheen and other obvious indicators of storm water pollution), and probable sources of any observed storm water contamination.
- Inactive and unstaffed sites: When you are unable to conduct visual storm water examinations at an inactive and unstaffed site, you may exercise a waiver of the monitoring requirement as long as the facility remains inactive and unstaffed. If you exercise this waiver, you must maintain a certification stating the site is inactive and unstaffed and that performing visual examinations during a qualifying event is not feasible. You must sign and date this waiver for it to be valid.

Visual Monitoring Form

City of Tulsa-Environmental Services
4818 S. Elwood
Tulsa, Oklahoma 74107

Completed by: _____
Title: _____
Location: _____
Date & Time: _____

Instructions: Operations will sample and analyze the following areas: access roads/rail lines, equipment storage and maintenance areas (indoor and outdoor), fueling and chemical areas, residual treatment or storage, wastewater treatment areas. Operations will complete the Field Inspections Form included, at times of a potential pollutant. Records of inspection shall be maintained within Pollution Prevention Plan.

General Information

Time Since Last Rain (more than 0.1 in.): longer than 72 hours ago___ less than 72 hours ago___ (Invalid rain event...do not sample)
Time Since Beginning of Current Rain Event: less than 1 hr. ago___ greater than 1 hr. ago___ (Invalid rain event...do not sample)
Total Rainfall of Current Event: greater than 0.1 in.___ less than 0.1 in.___ (Invalid sample...must re-sample)

Visual Observations (Samples should be taken in a clear bottle)

Color: Clear___ Red___ Yellow___ Green___ Gray___ Black___ Other_____
Odor: None___ Earthy___ Sewage___ Musky___ Rotten Eggs___ Petroleum___ Other_____
Clarity: Can't see through bottle___ Can see through but could not read newsprint___ Can see through and can read newsprint___
Pretty clear, but not as clear as bottled water:___ As clear as bottled water___
Floating solids: Yes___ No___ Description:_____
Settled solids: Yes___ No___ Size of bottle:_____ Amount of settled solids in bottle:_____
Suspended solids: Yes___ No___Description:_____
Foam: Yes___ No___ Thickness:_____ How much of the surface does it cover?:_____ Color:_____
Oil Sheen: Yes___ No___ Color and Extent:_____
Other obvious indicators of storm water pollution:_____

CERTIFICATION

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry or the person or persons who manage the system or those persons directly responsible for gathering the information is, to the best of my knowledge and belief, true, accurate and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Name & Official Title (Type or Print):_____

Date Signed:_____

ATTACHMENT 6

OPDES REQUIREMENTS FOR BEVERAGE FACILITIES

Sector U - Food and Kindred Products

U.1 Covered Storm Water Discharges

The requirements in Part 12.U apply to storm water discharges associated with industrial activity from Food and Kindred Products facilities as identified by the SIC Codes specified in Table 1-2 and Part 1.2.1.

U.2 Industrial Activities Covered by Sector U.

The types of activities that permittees under Sector U are primarily engaged in are:

- Meat products;
- Dairy products;
- Canned, frozen and preserved fruits, vegetables, and food specialties;
- Grain mill products;
- Bakery products;
- Sugar and confectionery products;
- Fats and oils;
- Beverages;
- Miscellaneous food preparations and kindred products and tobacco products manufacturing.

U.3 Limitations on Coverage.

Not covered by this permit: storm water discharges identified under Part 1.2.3 from industrial plant yards, material handling sites; refuse sites; sites used for application or disposal of process wastewaters; sites used for storage and maintenance of material handling equipment; sites used for residential wastewater treatment, storage, or disposal; shipping and receiving areas; manufacturing buildings; and storage areas for raw material and intermediate and finished products. This includes areas where industrial activity has taken place in the past and significant materials remain. "Material handling activities" include the storage, loading / unloading, transportation or conveyance of any raw material, intermediate product, finished product, by-product or waste product.

- **Prohibition of Non-Storm Water Discharges (See also Part 1.2.2)**

  Not authorized by this permit: discharges subject to Part 1.2.2 include discharges containing: boiler blowdown, cooling tower overflow and blowdown, ammonia refrigeration purging and vehicle washing / clean-out operations.

U.4 Storm Water Pollution Prevention Plan (SWP3) Requirements

In addition to the following requirements, you must also comply with the requirements listed in Part 4.

- **Drainage Area Site Map. (See also Part 4.2.2)**
  Identify the locations of the following activities if they are exposed to storm water / runoff: vents / stacks from cooking, drying and similar operations; dry product vacuum transfer lines; animal holding pens; spoiled product; and broken product container storage areas.

- **Potential Pollutant Sources. (See also Part 4.2.4)**
  Describe, in addition to food and kindred products processing-related industrial activities, application and storage of pest control chemicals (e.g., rodenticides, insecticides, fungicides, etc.) used on plant grounds.

- **Inspections. (See also Part 4.2.8)**
  Inspect on a regular basis, at a minimum, the following areas where the potential for exposure to storm water exists: loading and unloading areas for all significant materials; storage areas including associated containment areas; waste management units; vents and stacks emanating from industrial activities; spoiled product and broken product container holding areas; animal holding pens; staging areas; and air pollution control equipment.

- **Employee Training. (See also Part 4.2.8)**
  Address pest control in the training program.

U.5 Visual Monitoring: Quarterly visual monitoring is a requirement. See Part 5.1.1.

ATTACHMENT 7

OPDES AQUATIC RESOURCE OF CONCERN REQUIREMENTS (STEP 2)

2. If your industrial facility is not located within any of these areas, the facilities storm water discharge or storm water discharge related activities are not likely to significantly affect endangered and threatened species. You may then skip Step 2 and further investigation is unnecessary.
3. If your facility is located within the area of any of the Aquatic Resources of Concern, continue on to Step 2.

Step 2. Implementation of Storm Water Control Measures to Protect Endangered and Threatened Species:

1. If your industrial facility is located within the area of an Aquatic Resource of Concern you must incorporate the following measures into the SWP3 for the facility.
   a. Pollutants such as, oil, grease, solid waste, human waste, hazardous or toxic material, or other material not authorized for discharge under this permit must be properly captured, treated, and correctly disposed of. These potential pollutants must be properly managed and their contact with storm water minimized or eliminated to the greatest extent practicable.
   b. If you are required to perform annual numeric effluent limitation monitoring you must include in your SWP3 the steps you will take to prevent any removed pollutants from entering a storm water stream. These pollutants must be retained on site, treated, or disposed of properly to the greatest extent practicable. Control measures must be properly installed and maintained at all times, and off-site accumulations of any escaped sediment must be removed.
   c. A schedule must be included which describes the inspection practices that will be used to ensure that control measures are working effectively.
   d. Hazardous materials and production waste products must be stored in a manner that minimizes their contact with storm water. An emergency response plan must be included which addresses the handling of accidental spills or leaks.

2. You must comply with any terms and conditions imposed under the eligibility requirements to ensure that your storm water discharges and storm water discharge-related activities are protective of listed species and/or critical habitat. Any such terms and conditions must be incorporated in the your SWP3. In accordance with Part 1.2.5 of the permit, your signed NOI will be deemed to constitute your certification of eligibility. If the eligibility requirements cannot be met, you may seek coverage under a DEQ individual permit.

Step 3 Check the appropriate box on the NOI Form.

There are three different options to certify your eligibility. Check the box that corresponds to the option on which you are relying.

   a. Your facility is not located in or draining to an Aquatic Resource of Concern as identified on the map. Your facility is located in or drains to an Aquatic Resource of Concern and you agree to implement the control measures specified in Step 2 above.
   b. Your facility is located in or drains to an Aquatic Resource of concern and you agree to implement the control measures specified in Step 2 above.
   c. You are relying on another permittee's certification of eligibility and agree to comply with any conditions attached to that certification.

Summary of
Storm Water Pollution Prevention Activities

Pepsi Bottling Group
510 West Skelly Drive
Tulsa, Oklahoma

Activity	Frequency	Comments
Periodic Inspections	Monthly	Inspect potential pollutant source areas, structural BMPs, storm drains and outfalls. Correct inefficiencies.
Collect Storm Water Samples and Document Observations	Quarterly	Visual monitoring only no analytical testing required.
Site Compliance Evaluation	Annually	Ensure that SWPPP is updated.
Employee Training	Annually	For personnel involved in outdoor activities (e.g., fleet maintenance, fork lift operators, etc.) May be performed in conjunction with safety training program.

GSA No. 0245-EPA-OT

ID - For Official Use Only

VIII. Type of Regulated Waste Activity *(Mark 'X' in the appropriate boxes. Refer to Instructions.)*

A. Hazardous Waste Activity

1. Generator (See Instructions)
   - [ ] a. Greater than 1000kg/mo (2,200 lbs.)
   - [ ] b. 100 to 1000 kg/mo (220 - 2,200 lbs.)
   - [X] c. Less than 100 kg/mo (220 lbs.)
2. Transporter (Indicate Mode in boxes 1-5 below)
   - [ ] a. For own waste only
   - [ ] b. For commercial purposes

   Mode of Transportation
   - [ ] 1. Air
   - [ ] 2. Rail
   - [ ] 3. Highway
   - [ ] 4. Water
   - [ ] 5. Other - specify
3. [ ] Treater, Storer, Disposer (at installation) Note: A permit is required for this activity; see instructions.
4. Hazardous Waste Fuel
   - [ ] a. Generator Marketing to Burner
   - [ ] b. Other Marketers
   - [ ] c. Burner - indicate device(s) - Type of Combustion Device
     - [ ] 1. Utility Boiler
     - [ ] 2. Industrial Boiler
     - [ ] 3. Industrial Furnace
5. [ ] Underground Injection Control

B. Used Oil Fuel Activities

1. Off-Specification Used Oil Fuel
   - [ ] a. Generator Marketing to Burner
   - [ ] b. Other Markerer
   - [ ] c. Burner - indicate device(s) - Type of Combustion Device
     - [ ] 1. Utility Boiler
     - [ ] 2. Industrial Boiler
     - [ ] 3. Industrial Furnace
2. [ ] Specification Used Oil Fuel Marketer (or On-site Burner) Who First Claims the Oil Meets the Specification

IX. Description of Regulated Wastes *(Use additional sheets if necessary)*

A. Characteristics of Nonlisted Hazardous Wastes. Mark 'X' in the boxes corresponding to the characteristics of nonlisted hazardous wastes your installation handles. *(See 40 CFR Parts 261.20 - 261.24)*

1. Ignitable (D001)	2. Corrosive (D002)	3. Reactive (D003)	4. EP Toxic (D000)	(List specific EPA hazardous waste number(s) for the EP Toxic contaminant(s))
X				

B. Listed Hazardous Wastes. (See 40 CFR 261.31 - 33. See instructions if you need to list more than 12 waste codes.)

1	2	3	4	5	6
F003					
7	**8**	**9**	**10**	**11**	**12**

C. Other Wastes. (State or other wastes requiring an I.D. number. See instructions.)

1	2	3	4	5	6

X. Certification

I certify under penalty of law that I have personally examined and am familiar with the information submitted in this and all attached documents, and that based on my inquiry of those individuals immediately responsible for obtaining the information, I believe that the submitted information is true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fines and imprisonment.

Signature	Name and Official Title *(type or print)*	Date Signed

Subject: ODEQ, Radiation Management - Permit No. XR253

Mr. Sproles,

Permit No. XR253 is not electronically documented and I will need to request the file from Central Records and will take some time due to priority requirements. Radiation Management will send this information by email with an attached scanned PDF document as a copy.

Please be advised that this information is required to be available on request at the company facility.

THE PEPSI BOTTLING GROUP

To: Oklahoma Department of Environmental Quality, Land Protection Division
ATTN: Jon Roberts

From: Christina Kearns, Pepsi Bottling Group, LLC - Tulsa, OK

CC: Carole Hamner, Pam Tibbetts

Date: December 2, 2005

Re: Cancellation of duplicate EPA ID number

RECEIVED
DEC 0 9 2005
Land Protection Division
Department of Environmental Quality

Dear Mr. Roberts:

In a telephone conversation on November 18, 2005, Carole Hamner, PBG Environmental Manager, and Al Colter with OK DEQ, discussed the issue we at Bottling Group, LLC have in regard to our facility in Tulsa. The facility is currently operating with two EPA ID numbers. Specifically, the numbers we are using are:

- OKR000003608 – Pepsi Cola Company at 510 W. Skelly Drive in Tulsa, OK 74107
- OKD981610546 – Beverage Products Company at 5202 S. Houston in Tulsa, OK 74157

We believe the second number for Beverage Products Company was never updated to reflect the change in ownership, and we mistakenly applied for a second EPA ID number using the Skelly Drive address. The reason there are two different addresses is because our facility has two entrances, one on S. Houston, and one on Skelly Drive.

According to Al Colter, we may not be able to cancel either number, but instead, one will remain as a reference to the other in your state RCRA database. Mr. Colter said we should keep number OKR000003608 active, since we have had an inspection from the DEQ under that number. Therefore, we ask that OKD981610546 be cancelled, or referenced to the OKR number.

Our waste streams consist of small amounts of waste ink, and some fluids from our fleet maintenance shop.

I am attaching EPA Form 8700-12 to request a name change for OKR000003608. We are the Bottling Group, LLC, not the Pepsi Cola Company. Please let me know if you need any other information or have questions.

Sincerely,

Christina Kearns

SEND COMPLETED FORM TO: The Appropriate State or EPA Regional Office.

United States Environmental Protection Agency

RCRA SUBTITLE C SITE IDENTIFICATION FORM

RECEIVED DEC 09 2005 Land Protection Division Department of Environmental Quality

1. Reason for Submittal (See instructions on page 13.)

MARK ALL BOX(ES) THAT APPLY

Reason for Submittal:

- ☐ To provide Initial Notification of Regulated Waste Activity (to obtain an EPA ID Number for hazardous waste, universal waste, or used oil activities)
- ☐ To provide Subsequent Notification of Regulated Waste Activity (to update site identification information)
- ☐ As a component of a First RCRA Hazardous Waste Part A Permit Application
- ☒ As a component of a Revised RCRA Hazardous Waste Part A Permit Application (Amendment #_____)
- ☐ As a component of the Hazardous Waste Report

2. Site EPA ID Number (page 14)

EPA ID Number: OKR000003608

3. Site Name (page 14)

Name: PEPSI COLA COMPANY → HAS CHANGED TO [redacted] BOTTLING GROUP, LLC

4. Site Location Information (page 14)

Street Address: 510 W. SKELLY DRIVE

City, Town, or Village: TULSA [redacted] State: OK

County Name: TULSA Zip Code: 74107

5. Site Land Type (page 14)

Site Land Type: ☒ Private ☐ County ☐ District ☐ Federal ☐ Indian ☐ Municipal ☐ State ☐ Other

6. North American Industry Classification System (NAICS) Code(s) for the Site (page 14)

A. 311111 B.

C. D.

7. Site Mailing Address (page 15)

Street or P. O. Box: SAME AS ABOVE

State:

Country: Zip Code:

8. Site Contact Person (page 15)

First Name: CHRISTINA MI: Last Name: KEARNS

Phone Number: (918) 445-8011 Extension: Email address: christina.kearns@pepsi.com

9. Operator and Legal Owner of the Site (pages 15 and 16)

A. Name of Site's Operator: BOTTLING GROUP, LLC Date Became Operator (mm/dd/yyyy): 01/06/1999

Operator Type: ☒ Private ☐ County ☐ District ☐ Federal ☐ Indian ☐ Municipal ☐ State ☐ Other

B. Name of Site's Legal Owner: BOTTLING GROUP, LLC Date Became Owner (mm/dd/yyyy): 01/06/1999

Owner Type: ☒ Private ☐ County ☐ District ☐ Federal ☐ Indian ☐ Municipal ☐ State ☐ Other

EPA ID NO: 0 KR 0 0 0 0 0 3 6 0 8

OMB#: 2050-0028 Expires 1/31/2006

9. Legal Owner (Continued) Address	Street or P. O. Box: SAME AS ABOVE	
	City, Town, or Village:	
	State:	
	Country:	Zip Code:

10. Type of Regulated Waste Activity
Mark "Yes" or "No" for all activities; complete any additional boxes as instructed. (See instructions on pages 17 to 20.)

A. Hazardous Waste Activities
Complete all parts for 1 through 6.

Y ☒ N ☐ **1. Generator of Hazardous Waste**
If "Yes", choose only one of the following - a, b, or c.

- ☐ a. LQG: Greater than 1,000 kg/mo (2,200 lbs./mo.) of non-acute hazardous waste; or
- ☐ b. SQG: 100 to 1,000 kg/mo (220 - 2,200 lbs./mo.) of non-acute hazardous waste; or
- ☒ c. CESQG: Less than 100 kg/mo (220 lbs./mo.) of non-acute hazardous waste

In addition, indicate other generator activities.

Y ☐ N ☒ d. United States Importer of Hazardous Waste

Y ☐ N ☒ e. Mixed Waste (hazardous and radioactive) Generator

Y ☐ N ☒ **2. Transporter of Hazardous Waste**

Y ☐ N ☒ **3. Treater, Storer, or Disposer of Hazardous Waste (at your site)** Note: A hazardous waste permit is required for this activity.

Y ☐ N ☒ **4. Recycler of Hazardous Waste (at your site)**

Y ☐ N ☒ **5. Exempt Boiler and/or Industrial Furnace**
If "Yes", mark each that applies.
- ☐ a. Small Quantity On-site Burner Exemption
- ☐ b. Smelting, Melting, and Refining Furnace Exemption

Y ☐ N ☒ **6. Underground Injection Control**

B. Universal Waste Activities

Y ☐ N ☒ **1. Large Quantity Handler of Universal Waste (accumulate 5,000 kg or more) [refer to your State regulations to determine what is regulated]. Indicate types of universal waste generated and/or accumulated at your site. If "Yes", mark all boxes that apply:**

	Generate	Accumulate
a. Batteries	☐	☐
b. Pesticides	☐	☐
c. Thermostats	☐	☐
d. Lamps	☐	☐
e. Other (specify) _____	☐	☐
f. Other (specify) _____	☐	☐
g. Other (specify) _____	☐	☐

Y ☐ N ☒ **2. Destination Facility for Universal Waste**
Note: A hazardous waste permit may be required for this activity.

C. Used Oil Activities
Mark all boxes that apply.

Y ☐ N ☒ **1. Used Oil Transporter**
If "Yes", mark each that applies.
- ☐ a. Transporter
- ☐ b. Transfer Facility

Y ☐ N ☒ **2. Used Oil Processor and/or Re-refiner**
If "Yes", mark each that applies.
- ☐ a. Processor
- ☐ b. Re-refiner

Y ☐ N ☒ **3. Off-Specification Used Oil Burner**

Y ☐ N ☒ **4. Used Oil Fuel Marketer**
If "Yes", mark each that applies.
- ☐ a. Marketer Who Directs Shipment of Off-Specification Used Oil to Off-Specification Used Oil Burner
- ☐ b. Marketer Who First Claims the Used Oil Meets the Specifications

EPA ID NO: 0 1 K R 1 0 1 0 1 0 1 0 3 1 6 1 0 8 1 OMB#: 2050-0028 Expires 1/31/2006

11. Description of Hazardous Wastes (See instructions on page 21.)

A. Waste Codes for Federally Regulated Hazardous Wastes. Please list the waste codes of the Federal hazardous wastes handled at your site. List them in the order they are presented in the regulations (e.g., D001, D003, F007, U112). Use an additional page if more spaces are needed.

D001						
D002						

B. Waste Codes for State-Regulated (i.e., non-Federal) Hazardous Wastes. Please list the waste codes of the State-regulated hazardous wastes handled at your site. List them in the order they are presented in the regulations. Use an additional page if more spaces are needed for waste codes.

12. Comments (See instructions on page 21.)

REASON FOR SUBMISSION OF THIS FORM IS TO CORRECT NAME ON ID #: COMPANY NAME HAS CHANGED FROM PEPSI COLA COMPANY TO [redacted] BOTTLING GROUP, LLC.

ADDITIONALLY, PER INCLUDED LETTER, WOULD LIKE TO REFERENCE THE 2 (EPA ID #'s TO SAME FACILITY (BOTTLING GROUP, LLC)

13. Certification. I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.
For the RCRA Hazardous Waste Part A Permit Application, all operator(s) and owner(s) must sign (see 40 CFR 270.10 (b) and 270.11).
(See instructions on page 21.)

DEQ FORM 605-006	Oklahoma Department of Environmental Quality Annual Comprehensive Site Compliance Evaluation Report for Industrial Facilities (ACSCER)

Submission of this Comprehensive Site Compliance Evaluation Report, Part B, provides notice that the party identified in Section I of this form is not required to conduct Benchmark Monitoring for storm water discharges associated with industrial activities under the OPDES program. This Annual Comprehensive Site Compliance Evaluation Report is required for all authorized industrial facilities.

All Requested Information Must Be Provided On This Form (Part A) and the ACSCER Form (Part B).

See Instructions On Page 4 of The Form.

Section I.

OPDES Permit Authorization Number: OKR051569

Section II. Facility Operator Information

Name: Pepsi Beverages Company Phone: 918-445-8066

Address: 510 W. Shelby Dr.

City: Tulsa County: Tulsa Zip Code: 74107

Section III. Facility Location

Name: Pepsi Beverages Company Phone: 918-445-8066

Address: 510 W. Shelby Dr

City: Tulsa County: Tulsa Zip Code: 74107

Latitude: 36.089244 Longitude: -95.997256

Section IV. Certification

I certify under penalty of law that I have read and understand the requirements for filing this Comprehensive Site Compliance Evaluation Report, which is to be filed by March 1st of each year beginning in 2012.

This report is also to be retained as part of the SWP3 for at least three (3) years from the date permit coverage expires or is terminated and will be made available to any State or Federal Inspector visiting this facility. All records of actions taken in accordance with 4.10 of this permit as part of the Storm Water Pollution Prevention Plan will be retained for at least three (3) years from the date permit coverage expires or is terminated. I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gathered and evaluated the information submitted. Based upon my inquiry of the person or persons who manage the system, or those persons directly involved in gathering the information, the information submitted is to the best of my knowledge and belief true, accurate, and complete. I am aware there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Annual Comprehensive Site Compliance Evaluation Report - Part B
Page 1.

Reporting Period: 2015.

✓ How many routine facility inspections did you perform during the reporting period? 12

✓ How many corrective actions (Part 4.2.17.3) to remove the original violation and document these actions according to corrective action deadlines?

Date	Deficiencies	Corrected (Y or N)	Date Corrected
11/11/15	Trash Around Compost	Y	11/16/15

✓ What must you do to correct the deficiencies that remain uncorrected?
Added to master cleanup school duty.

✓ Were all BMPs you indicated you would be using in your SWP3 (Part 4.2.8) including good housekeeping practices, actually being implemented at the time of the Annual Comprehensive Site Compliance Evaluation?
Yes ✓ No____

✓ If one or more BMPs were not being implemented, were corrective actions taken after the FIRST inspection to find the problem?
Yes ____ No____ All BMPs were being implemented ✓

✓ Was/were the same failure(s) to implement a BMP deficiency(ies) noted in more than one inspection?
Yes ____ No____ No deficiencies noted in any inspection ✓

✓ Did any of your routine facility inspections find that one or more of your BMPs was not effective in controlling the pollutant source for which it was designed?
Yes ____ No____ All BMPs were effective ✓

✓ If you found one or more ineffective BMPs, have they all been replaced with an alternative or modified BMP?
Yes ____ No____ All BMPs were being effective ✓

✓ Is there additional BMPs needed to address any conditions requiring corrective action?
Yes ____ No ✓

✓ At any time during the reporting period, did you discover any previously unidentified illicit discharges from your facility or previously unidentified pollutants in the existing discharges?
Yes ____ No ✓

✓ Have all illicit discharges (including any discovered in previous years) been eliminated or permitted?
Yes ____ No____ Permit applied for ____ No known illicit discharges ✓

✓ Have any significant spills or leaks occurred at your facility during the reporting period?
Yes ____ No ✓

✓ If any significant spills or leaks occurred, did they result in either a dry weather discharge or an actual discharge of the spilled or leaked material commingled with storm water (as opposed to the spilled material being washed away by storm water?)
Yes ____ No ✓ no spills.

Part B. Page 2

✓ If any significant spills or leaks occurred, did they result in more than the minimum amounts of material being discharged in storm water? Base your answer on your knowledge of the material you spilled or that leaked. The minimum amounts could vary with the nature (toxicity, oxygen demand, pH, etc.) of the spilled or leaked material from amounts left after normal "sweeping" type cleanup to the point at which even trace amounts left after cleanup could cause an environmental problem.
Yes _____ No_____ No spills or leaks occurred ✓

✓ Have all known spills or leaks been cleaned up or otherwise prevented from contaminating storm water that would be discharged under the authority of this permit?
Yes ✓ No_____ No spills or leaks occurred ✓

✓ How many times did you visually monitor all your storm water discharges at all the facility outfalls during the reporting year, and document the condition of and around the outfalls, including flow dissipation measures to prevent scouring? (Count only those done in accordance with the procedures at Part 5.1 - Quarterly Visual Monitoring)
Yes _____ No_____ Number of Visual Monitoring 4

✓ Would the results of your visual monitoring indicate that there are pollutants in your storm water discharges that are not adequately controlled by your current BMPs?
Yes _____ No ✓

✓ If the results of your visual monitoring indicated a potential problem, was it due to one or more of the following?
1. New pollutant source (including exposure of previously unexposed material).
2. Failure to implement or maintain an existing BMP.
3. Less than expected performance from a BMP.
4. No BMP was selected to deal with that problem.
5. N/A (No problems identified)

✓ If your visual monitoring indicated a potential problem, what have you done to resolve the problem?
1. Eliminated exposure or pollutant source.
2. Modified existing BMPs.
3. Added a new BMP.
4. Plan to address problem by end of current reporting year.
5. Nothing planned.
6. N/A (No problems identified)

✓ Did any analysis of any element tested during any previous discharge monitoring period exceed the numeric limitation value?
Yes _____ No ✓

✓ If your answer to the previous question was "Yes", please name the element and the test results.

Element	Test Results	Element	Test Results

✓ Is there any required revisions to the SWP3 resulting from the inspection?
Yes _____ No ✓

Re: Authorization for Storm Water Discharge from Industrial Activity(ies)
Authorization Number OKR051569

Dear SHANNON BARRETT:

The new Notice of Intent (NOI) for the facility listed below was received on April 9, 2007 and processed by the Oklahoma Department of Environmental Quality. Enclosed is an authorization allowing you to discharge storm water associated with industrial activities under the terms and conditions in accordance with Oklahoma's OPDES Storm Water General Permit OKR05 for the following site located in TULSA County.

Facility: PEPSI BOTTLING GROUP
510 WEST SKELLY DR
TULSA, OKLAHOMA

THIS FACILITY DISCHARGES INTO A 303(d) LISTED STREAM.
This Facility Discharges to an Aquatic Resource of Concern.

All applicable fees associated with this authorization have been paid.

Sites that remain active as of July 1, 2007 will be invoiced for the full permit year (July 1, 2007 – June 30, 2008).

If you have any questions regarding this permit or the Storm Water Program, please call Matt Pace of the Environmental Complaints and Local Services Division at (405) 702-6222.

Sincerely,

Matt Pace
Storm Water Unit

Oklahoma Department of Environmental Quality
Authorization to Discharge Under the OPDES Storm Water Industrial General Permit OKR05

AUTHORIZATION NO. OKR051569

In compliance with the Oklahoma Pollution Discharge Elimination System (OPDES) Act 27A O. S. §2-6-201, the Rules of the Department of Environmental Quality (DEQ), and in reliance on the certified statements and representations heretofore made in its application,

PEPSI BOTTLING GROUP
510 WEST SKELLY DR
TULSA, OK 74107

Is authorized to discharge storm water from an Industrial site located in TULSA County at:

PEPSI BOTTLING GROUP
510 WEST SKELLY DR
TULSA, OKLAHOMA

The receiving body of water is MOOSER CREEK.
THIS FACILITY DISCHARGES INTO A 303(d) LISTED STREAM.
This Facility Discharges to an Aquatic Resource of Concern.
The OPDES requires permittees to have a Storm Water Pollution Prevention Plan (SWP3) which includes a description of appropriate sediment control measures. These are applicable to your Industrial site, which is subject to inspection. Proof of this authorization must be available at the facility.

The Authorization shall become effective April 12, 2007 and will expire at midnight on May 2, 2011.

All terms and conditions of the modified OPDES Storm Water Industrial General Permit OKR05, as published on May 3, 2006, shall apply to the recipient of this authorization.

COLLECTION NOTICE

Dear PEPSI BOTTLING GROUP:

The Department of Environmental Quality previously issued the enclosed invoice to you for the above stated amount. This invoice was for the 2010 Storm Water Renewal Fee assessed to you for the Storm Water Permit Authorization # **OKR051569.** As of today, the Department has not received the payment for this fee.

COPY

Please mail your payment with the bottom portion of the attached invoice in the enclosed envelope within THIRTY (30) DAYS to avoid having this debt forwarded to the Legal Department for further collection. If you feel you received this notice in error, please contact Kelsey Akin at (405) 702-6116 or Kelsey.Akin@deq.ok.gov.

Failure to pay this invoice may prevent the issuance of future authorizations. In accordance with 252:4-7-15(b), the DEQ may not issue a new, modified or renewed permit or other authorization if you have not paid all monies owed to the DEQ.

Thank you for your cooperation in this matter.

Sincerely,

Matt Pace

Instructions - DEQ Notice of Intent (NOI) for Storm Water Discharges Associated with Industrial Activity to be Covered Under the OPDES General Permit OKR05

Who Must File A Notice Of Intent Form

Federal law at 40 CFR Part 122 as adopted by reference in OAC 252:606 1-3 (b)(3) prohibits point source discharges of storm water associated with industrial activity to a water body(ies) of the US without an Oklahoma Pollutant Discharge Elimination System (OPDES) permit. If you have questions about whether you need a permit under the OPDES Storm Water program, or if you need information, write to the address listed below or telephone the Environmental Complaints & Local Services, Department of Environmental Quality (DEQ), at (405) 702-6100 and ask for the Storm Water Program.

Where to File a NOI Form

NOIs must be sent to the following address:

DEQ/Environmental Complaints & Local Services
P.O. Box 1677
Oklahoma City, OK 73101-1677
Fax: (405)702-6226

Completing the Form

You must type or print, using upper-case letters, in the appropriate areas only. If you have any questions on this form, call DEQ-ECLS at (405) 702-6100 and ask for the Storm Water Program.

Section I. Facility Owner/Operator Information

Check the appropriate box if you are filing a new NOI, or you are updating your current NOI. Enter your current or previous permit authorization number, if any. Provide the legal name, mailing address, email address if any, and telephone number of the person, firm, public organization, or any other entity that either individually or together meets the following two criteria: (1) have operational control over the facility; and (2) have the day-to-day operational control of those activities at the facility necessary to ensure compliance with plan requirements and permit conditions. Do not use a colloquial name.

Enter the appropriate letter to indicate the legal status of the operator of the facility: F = Federal; S = State; M = Municipal or Public (other than Federal or State); P = Private.

Section II. Site Information

Enter the facility's official or legal name and complete street address, including city, county, state, and ZIP code and phone number. If the site lacks a street address, indicate with a general statement the location of the site (e.g., Intersection of State Highways 61 and 34). The applicant must also provide the latitude and longitude of the facility in degrees, minutes, and seconds to the nearest 15 seconds.

The latitude and longitude of your facility may be located on USGS quadrangle maps. The quadrangle maps can be obtained at 1-888-ASK-USGS. Longitude and latitude may also be obtained from the DEQ's website at: http://maps.deq.ok.gov/deq_wq/

Section III. Facility Activity Information

If the storm water discharges to a Municipal Separate Storm Sewer System (MS4), enter the name of the operator of the MS4. A MS4 is defined as a conveyance or system of conveyances, including roads with drainage systems, municipal streets, catch basins, curbs, gutters, ditches, man-made channels, or storm drains, that are owned or operated by a state, city, town, borough, parish, district, association, or other public body which is designed or used for collecting or conveying storm water.

If the facility discharges storm water directly to receiving waters, enter the name of the nearest named receiving water body.
Check appropriate box if the receiving water body is listed as the DEQ 303(d) impaired water.
Enter the primary and secondary SIC Code and respective Sector(s). For industrial activities defined in 40 CFR 122.26(b)(14)(I)-(x) that do not have SIC codes that accurately describes the principal product use the following two character codes:
HZ = Hazardous waste treatment, storage, or disposal facilities, including those that are operating under interim status or a permit under subtitle C of RCRA (40)CFR 122.26(b)(14)(iv);
SE = Steam electric power generating facilities, including coal handling sites (40 CFR 122.26 (b)(14)(vii);
TW = Treatment works treating domestic sewage or any other sewage sludge or wastewater treatment device or system, used in the storage, treatment, recycling, and reclamation of municipal or domestic sewage (40 CFR 122.26(b)(14)(ix);
LF = Landfills and open dumps that receive industrial waste from any facility described in this subsection (40 CFR 122.26(b)(14)(v), as adopted by reference in OAC 252:606 1-3 (b)(3)(L);

Indicate if your industrial facility is required to collect storm water samples for analysis and submit Discharge Monitoring Reports for Numerical Effluent Limitations. Refer to the permit for information on monitoring requirements. Indicate the monitoring status by entering Yes or No in the appropriate space.

Complete the section on Endangered Species Eligibility by checking the appropriate box:

a. Your facility is not located in Federal and State sensitive waters and watersheds as identified on the map.

b. Your facility is located in Federal and State sensitive waters and watersheds and you agree to implement the control measures specified in Step 2.

c. You are relying on another permittee's certification of eligibility and agree to comply with any conditions attached to that certification.

Section IV. Certification

Federal Statutes provide for severe penalties for submitting false information on this application form. Federal regulations require this application to be signed as follows:

For a corporation: by a responsible corporate officer, which means:(i) a president, secretary, treasurer, or vice-president of the corporation in charge of a principal business function, or any other person who performs similar policy or decision making functions for the corporation, or (ii) the manager of one or more manufacturing, production, or operating facilities, provided, the manager is authorized to make management decisions which govern the operation of the regulated facility including having the explicit or implicit duty of making major capital investment recommendations, and initiating and directing other comprehensive measures to assure long term environmental compliance with environmental law and regulations; the manager can ensure that the necessary systems are established or actions taken to gather complete and accurate information for permit application requirements; and where authority to sign documents had been assigned or delegated to the manager in accordance with corporate procedures;

For a partnership or sole proprietorship: by a general partner of the proprietor, or;

For a municipality, state, Federal, or other public facility: by either a principal executive or ranking elected official.

PLEASE MAKE SURE YOU ACQUIRE A COPY OF THIS PERMIT AND READ ALL TERMS AND CONDITIONS.

Annual Comprehensive Compliance Site Evaluation Report - Part B

Page 1.

Reporting Period: Sept 2010 - Sept 2011.

✓ How many routine facility inspections did you perform during the reporting period? 12

✓ How many total deficiencies in implementing your SWP3 and complying with your permit were noted in any inspection?

Date	Deficiencies	Corrected (Y or N)	Date Corrected
9/23/11	City storm flume needs repair	N	emailed city 9/22
9/23/11	Update SWPPP to reflect team membership changes	Y	9/23/11

✓ What must you do to correct the deficiencies that remain uncorrected?

Currently in conversation with city regarding storm flume.

✓ Were all BMPs you indicated you would be using in your SWP3 (Part 4.2.7.2) including good housekeeping practices, actually being implemented at the time of the annual Comprehensive Site Compliance Evaluation?

Yes X No_____

✓ If one or more BMPs were not being implemented, were corrective actions taken after the FIRST inspection to find the problem?

Yes _____ No_____ All BMPs were being implemented X

✓ Was/were the same failure(s) to implement a BMP deficiency(ies) noted in more than one inspection?

Yes _____ No X No deficiencies noted an any inspection X

✓ Did any of your routine facility inspections find that one or more of your BMPs was not effective in controlling the pollutant source for which it was designed?

Yes _____ No_____ All BMPs were effective X

✓ If you found one or more ineffective BMP, have they all been replaced with an alternative or modified BMP?

Yes _____ No_____ All BMPs were being effective X

✓ At any time during the reporting period, did you discover any illicit discharges from your facility?

Yes _____ No X

✓ Have all illicit discharges (including any discovered in previous years) been eliminated or permitted?

Yes _____ No_____ Permit applied for _____ No known illicit discharges X

✓ Have any significant spills or leaks occurred at your facility during the reporting period?

Yes _____ No X

✓ If any significant spills or leaks occurred, did they result in either a dry weather discharge or an actual discharge of the spilled or leaked material commingled with storm water (as opposed to the spilled material being washed away by storm water?

Yes _____ No_____ N/A X

Part B. Page 2

✓ If any significant spills or leaks occurred, did they result in more than the minimum amounts of material being discharged in storm water? Base your answer on your knowledge of the material you spilled or that leaked. The minimum amounts could vary with the nature (toxicity, oxygen demand, pH, etc.) of the spilled or leaked material from amounts left after normal "sweeping" type cleanup to the point at which even trace amounts left after cleanup could cause an environmental problem.
Yes _____ No_____ No spills or leaks occurred__X__

✓ Have all known spills or leaks been cleaned up or otherwise prevented form contaminating storm water that would be discharged under the authority of this permit?
Yes _____No_____ No spills or leaks occurred__X__

✓ How many times did you visually monitor all your storm water discharges during the reporting year? (Count only those done in accordance with the procedures at Part 5.1.1 - Quarterly visual Monitoring)
Number_____

✓ Would the results of your visual monitoring indicate that there are pollutants in your storm water discharges that are not adequately controlled by your current BMPs?
Yes _____No__X__

✓ If the results of your visual monitoring indicated a potential problem, was it due to one or more of the following?
1. New pollutant source (including exposure of previously unexposed material).
2. Failure to implement or maintain an existing BMP.
3. Less than expected performance from a BMP.
4. No BMP was selected to deal with that problem.
5. N/A (No problems identified)

✓ If your visual monitoring indicated a potential problem, what have you done to resolve the problem?
1. Eliminated exposure or pollutant source.
2. Modified existing BMP.
3. Added new BMP.
4. Plan to address problem by end of current reporting year.
5. Nothing planned.
6. N/A (No problems identified).

✓ Did any analysis of any element tested during any previous discharge monitoring period exceed the numeric limitation value?
Yes _____No__X__ N/A

✓ If your answer to the previous question was "Yes", please name the element and the test results.

SHANNON BARRETT
PEPSI BOTTLING GROUP
510 WEST SKELLY DR
Tulsa, OK 74107

Dear SHANNON BARRETT:

Re: PEPSI BOTTLING GROUP
OKR051569

The General Permit for Storm Water Associated with Industrial Activities (OKR05) expired on May 2, 2011 and will be reissued on September 5, 2011. Active facilities with authorizations issued under the previous OKR05 have until December 5, 2011 to become compliant with and obtain authorization under the new permit. For facilities where operations have ceased and there are no longer discharges of storm water a Notice of Termination (Form 605-003) must be submitted.

Enclosed are a new Notice of Intent (NOI) and a Storm Water Fee Statement. The fee statement indicates the fee amounts associated with the industrial storm water permit, and the payment options. Fee payments may be submitted along with the request form. Those not submitting fees will be invoiced at a later date. The completed NOI and Fee Statement may be submitted to:

Department of Environmental Quality
Attention: ECLS Storm Water Unit
PO Box 1677
Oklahoma City, OK. 73101-1677
or fax to (405) 702-6226 (credit card payments only)

Facilities located within any corridor/area of Federal and State sensitive waters and watersheds for listed species (Exhibit 1 in the MSGP), as defined by the U.S. Fish & Wildlife Service (USFWS) and Oklahoma Department of Wildlife Conservation (ODWC), must submit a complete SWP3 to ODEQ with the NOI submittal.

For more information about the reissued general permit and forms please visit our website at:

http://www.deq.state.ok.us/WQDnew/stormwater/msgp/index.html

If you have any questions, please contact the Storm Water Unit at (405) 702-6100.

Thank you for your cooperation,

Site Description (Part 4.2.2)

Page 4 Description of Activities

✓ General Location Map

✓ Legible Site Map identifying the following:

- ✓ The size of the property in acres 45 acres
- ✓ The location of significant structures and impervious surfaces
- ✓ Directions of storm water flow
- ✓ Locations of all existing structural BMPs
- ✓ Locations of surface waters on or adjacent to the facility, indicating if any of the waters are impaired and, if so, whether the waters have TMDL's established for them
- ✓ Locations of all storm water conveyances including ditches, pipes, and swales
- ✓ Locations of potential pollutant sources and where significant materials are exposed to storm water
- ✓ Locations of where significant spills or leaks have occurred
- ✓ Locations of all storm water monitoring points, if any
- ✓ Municipal Separate Storm Sewer Systems, where your storm water discharges to them
- ✓ Locations of storm water inlets and outfalls indicating if you are treating one or more outfalls as "substantially identical" and an approximate outline of the area draining to each outfall
- ✓ Location and description of all non-storm water discharges
- ✓ Locations of where the following are located and exposed: fueling stations; vehicle and equipment maintenance and/or cleaning areas; loading/unloading areas; locations used for treatment, storage or disposal of wastes; liquid storage tanks; processing and storage areas; access roads, rail lines used by carriers of materials/products; the location of any transfer area for substance in bulk; and machinery
- ✓ Location and source of run-on to your site from adjacent property that contains significant quantities of pollutants

RE: Storm Water Pollution Prevention Plan
Pepsi Beverages Company

Dear Kevin Kelsey:

The storm water pollution prevention plan (SWP3) submitted for the above-referenced industrial facility is incomplete. Based on the review of our staff, the SWP3 does not meet one or more of the minimum requirements listed in Part 4 of the OKR05 General Permit. Please submit to our office a revised SWP3 that addresses the following deficiency (ies) within seven (7) working days, **October 20, 2011**.

1. The certification statement on page 27 is not signed.
2. Documentation of permit eligibility related to impaired waters. Please note that the facility discharges into an impaired water and the requirements outlined in Part 4.214 of the OKR05 General Permit must be implemented.

Once the complete and revised SWP3 is received by our office, the DEQ reserves the right to further review the completeness of your application and request additional information if necessary. DEQ will not issue an authorization without the requested information. Please note, discharges that occur without coverage under the General Permit for Industrial Activities (OKR05) are in violation.

Information not received by the indicated deadlines or non-responsiveness to our request may result in your application being referred for enforcement.

If you have any questions, please contact me at (405) 702-6167.

Sincerely,

Amber McIntyre

DETAILED WASTE DESCRIPTION

Waste Name: Solid waste Contaminated with Hydrocarbons
If waste was generated out-of-state, is it classified as hazardous in the state of origin? ☐ Yes ☐ No ☐ NA- Okla. waste

Approximate amount of waste to be disposed: 350

Disposal frequency: ☐ One-time ☐ Weekly ☐ Monthly ☐ Annually
Physical characteristics: ☒ Solid ☐ Sludge ☐ Liquid ☐ Combination
☐ Tons ☐ Pounds ☒ Cubic yards ☐ Drums ☐ Other:

Method used to determine waste is non-hazardous: ☒ Analysis ☒ Generator knowledge ☐ Both

Process generating waste (be specific and use additional sheets if necessary):
Towers Impacted Facility Releasing Diesel Fuel To AREA

DESIGNATED RECEIVING LANDFILL

Name: American Environmental Landfill Permit #: 355702/

GENERATOR CERTIFICATION

I understand this form must be signed by the original waste generator or other persons authorized by 27A O.S. §2-10-501(H).

To the best of my knowledge, I certify:

- The information contained herein is accurate, complete, and representative of the waste to be disposed;
- The waste identified above is not a characteristically hazardous waste as identified by 40 CFR 261, Subpart C, is not a listed hazardous waste as identified by 40 CFR 261, Subpart D or contaminated with a listed hazardous waste, and is not otherwise identified as a hazardous waste by the Department of Environmental Quality; and
- This waste will be managed in accordance with all applicable statutes and rules of the Department of Environmental Quality.

RE: Pepsi

Dear Tracy Fuson:

Green Country Testing, Inc. received 3 samples on 6/3/2011 for the analyses presented in the following report.

In accordance with your instructions, Green Country Testing conducted the analysis shown on the following pages on samples submitted by your company. The results related only to the items tested. Unless otherwise noted, all analysis was conducted using EPA approved methodologies. Test reports meet all the NELAC requirements. All relevant sampling information is on the attached chain-of-custody form. The initials SUB as the analyst designate any testing sub-contracted by Green Country Testing.

Certifications/Accreditation: OK - 7604
AR - ADEQ
KS - E-10232
LA - 4002

A scope of Certified/Accredited parameters is available upon request. If you have any questions regarding these tests results, please feel free to call.

Sincerely,

Brian Duzan

DETAILED WASTE DESCRIPTION

Waste Name: Non RCRA, Non DOT Liquids & Solids

If waste was generated out-of-state, is it classified as hazardous in the state of origin? ☐ Yes ☐ No ☒ NA- Okla. waste

Approximate amount of waste to be disposed:

15000

☐ Tons ☐ Pounds ☐ Cubic yards ☐ Drum ☒ Other Gallons

Disposal frequency:

☐ One-time ☐ Weekly ☐ Monthly ☒ Annually

Physical characteristics:

☒ Solid ☒ Sludge ☒ Liquid ☐ Combination

Method used to determine waste is non-hazardous: ☐ Analysis ☒ Generator knowledge ☐ Both

Process generating waste (be specific and use additional sheets if necessary):

Cleanout of sanitary sewer drain box because contractor broke a drain line causing fill sand to enter the system. Water carried sand to drain box.

DESIGNATED RECEIVING LANDFILL

Name: American Environmental Landfill **Permit #:** 3557021

GENERATOR CERTIFICATION

I understand this form must be signed by the original waste generator or other persons authorized by 27A O.S. §2-10-501(H).

To the best of my knowledge, I certify:

- **The information contained herein is accurate, complete, and representative of the waste to be disposed;**
- **The waste identified above is not a characteristically hazardous waste as identified by 40 CFR 261, Subpart C, is not a listed hazardous waste as identified by 40 CFR 261, Subpart D or contaminated with a listed hazardous waste, and is not otherwise identified as a hazardous waste by the Department of Environmental Quality; and**
- **This waste will be managed in accordance with all applicable statutes and rules of the Department of Environmental Quality.**

To the best of my knowledge, I certify:

- The information contained herein is accurate, complete, and representative of the waste to be disposed;
- The waste identified above is not a characteristically hazardous waste as identified by 40 CFR 261, Subpart C, is not a listed hazardous waste as identified by 40 CFR 261, Subpart D or contaminated with a listed hazardous waste, and is not otherwise identified as a hazardous waste by the Department of Environmental Quality; and
- This waste will be managed in accordance with all applicable statutes and rules of the Department of Environmental Quality.

IMAGED AS RECEIVED

SINCLAIR
MATERIAL SAFETY DATA SHEET
SINCLAIR DIESEL MSDS No. 58

1. CHEMICAL PRODUCT AND COMPANY IDENTIFICATION

Trade Name (Used on Label):	Diesel
Description:	Diesel
Synonyms:	Diesel, Distillate, Cycle Oil, Fuel Oil, Diesels Cycle Oil, Furnace Oil
Chemical Family:	Liquid Hydrocarbons
EMERGENCY TELEPHONE:	CHEMTREC - (800) 424-9300 or (703) 527-3887 (collect)
SUPPLIER:	Sinclair Oil Corporation P. O. Box 30825 Salt Lake City, Utah 84130
TELEPHONE:	(888) 340-3466
FAX:	(801) 524-2740

2. COMPOSITION, INFORMATION ON INGREDIENTS

CAS Registry Number: #1 Diesel 8008-20-6
#2 Diesel 68476-34-6

COMPOSITION COMMENTS:

	Typical wt.%	CAS Registry #
#1 Diesel		
Toluene	0-0.5	108-88-3
Naphthalene	0-0.5	91-20-3
#2 Diesel		
Toluene	0-0.5	108-88-3
Naphthalene	0-0.5	91-20-3

EXPOSURE GUIDELINES:

	OSHA			ACGIH		
COMPONENTS	TWA	STEL	CEILING	TWA	STEL	UNIT
Toluene	200		300			ppm
Naphthalene	10			10	15	ppm
Petroleum Distillates (Naphtha)	500					ppm

3. HAZARDS IDENTIFICATION

EMERGENCY OVERVIEW:

Colorless, red, blue, or amber liquid with kerosene odor. May cause eye, skin and respiratory tract irritation.

POTENTIAL HEALTH EFFECTS:

Trauma and burns secondary to explosions and fires can result. In enclosed spaces, oxygen may be displaced by vapors or consumed by combustion. Incomplete combustion will produce carbon monoxide and other toxic gases.

INHALATION:

Overexposure may cause weakness, headache, nausea, confusion, blurred vision, drowsiness and other central nervous system effects.

EYE CONTACT:

Contact may cause eye irritation. Naphthalene vapor causes eye irritation.

SKIN CONTACT:

Contact may irritate or burn skin. Absorption through the skin may cause symptoms of intoxication, followed by kidney damage.

INGESTION:

If aspirated (liquid enters lung) following ingestion, severe lung irritation and pulmonary edema (swelling of lung tissue) may occur. Aspiration may also result in central nervous system depression or excitement. Serious permanent lung damage may result. Nausea, vomiting, diarrhea, and abdominal pain may occur following ingestion.

4. FIRST AID MEASURES

Remove all clothing impregnated with material immediately. Consult a physician for major exposures of inhalation or skin contact.

INHALATION:

Remove from further exposure. If unconsciousness occurs, seek immediate medical assistance. If breathing stops, use mouth-to-mouth resuscitation.

EYE CONTACT:

Flush immediately with water for at least 15 minutes minimum. Seek medical attention promptly.

SKIN CONTACT:
Discard contaminated leather articles. Wash contact areas with soap and water. Launder contaminated clothing before reuse.

INGESTION:
DO NOT INDUCE VOMITING. Get medical assistance promptly. (Note to physician: Material if aspirated into the lungs may cause chemical pneumonitis. Treat appropriately.)

5. FIRE FIGHTING MEASURES

Flashpoint and Method:	100° F Minimum
Flammable Limits:	LEL - 1.3 UEL - 6
Autoignition Temperature:	490° - 545° F

GENERAL HAZARD:
Incomplete burning can produce carbon monoxide. Vapors will be released above flash point and when mixed with air, can burn or explode in confined space if exposed to sources of ignition.

FIRE FIGHTING INSTRUCTIONS:
Use foam, dry chemical, CO_2, water fog or vaporizing liquid (Halon). Keep personnel removed from and up-wind of fire. Cool adjacent structures and storage drums with water spray. Evacuate area. Prevent runoff from fire control dilution from entering streams or drinking water supply.

FIRE FIGHTING EQUIPMENT:
Use of SCBA in enclosed or confined spaces, or as otherwise needed. Bunker gear.

HAZARDOUS COMBUSTION PRODUCTS:
May produce carbon monoxide.

9. PHYSICAL AND CHEMICAL PROPERTIES

Vapor Pressure: < 1 PSIA	Vapor Density: >1
Specific Gravity: 0.75 - 0.90	(Air = 1)
Solubility in Water: No	Freezing Point: 0° F
pH: N/A	Appearance: colorless, red, blue or amber
Boiling Point: 550° F	Physical State: Liquid

10. STABILITY AND REACTIVITY

GENERAL:
This product is stable.

INCOMPATIBLE MATERIALS AND CONDITIONS TO AVOID:
Strong acids, alkalies and oxidizers. Avoid heat, sparks, flame and static electricity.

HAZARDOUS DECOMPOSITION:
Incomplete burning can produce carbon monoxideGENERAL:

11. TOXICOLOGICAL INFORMATION

SYSTEMIC:
Petroleum-derived fuels and fuel oils are complex and variable mixtures of hydrocarbons. In general, the more viscous the mixture, the less toxic it will be. At high level exposures, humans experience multiple organ failures, some of which may be due to hypoxia and secondary to the failure of other organ systems. In humans kidney failure has been noted only at high, acute levels of exposures, and appears reversible. Liver enzymes may be transiently elevated. At lower level exposures, most acute health effects are reversible. People can be exposed by inhalation, ingestion and dermal contact. Frequently, people are exposed by combined dermal and inhalation exposure.

ACUTE:
Inhalation: Headaches, confusion, disorientation, blurred vision occur with inhalation. Higher exposures may cause hallucinations, CNS excitation, drowsiness, CNS depression. Seizure and coma occur from very high exposures and death may result from respiratory depression. ECG changes, cardiac arrhythmias, tachycardia, shock and cardiovascular collapse can occur. Pneumonia, pulmonary edema and hemorrhages can occur.

Inhalation of 8000-16000 mg/m3 for 2 to 4 hours was lethal to rats.

Ingestion: Central nervous system, cardiovascular, and respiratory effects have been reported with acute exposures to various hydrocarbon fuels and oils similar to those reported with inhalation. Nausea, vomiting, cramping and diarrhea may occur.

6. ACCIDENTAL RELEASE MEASURES

LAND SPILL:

Shut off and eliminate all ignition sources. Keep people away. Remove leaking containers to a safe area. Contain and remove by mechanical means. Add sand, earth or other suitable absorbent to spill area than scrape off the ground. Guard against contamination of water supplies. Report spills to appropriate authorities. Dispose of in accordance with Federal, State and Local regulations.

WATER SPILL:

Spill may be removed from water with mechanical dredges or lifts. Report spills to appropriate authorities. Dispose of in accordance with Federal, State and Local regulations.

7. HANDLING AND STORAGE

GENERAL:

Ground and bond all transfer and storage equipment. Drums must be grounded/ bonded/ equipped with self- closing valves, pressure vacuum bungs and flame arrestors. Store away from ignition sources in a cool area. Outside or detached storage is preferred.

When handling use non-sparking tools and equipment. Do not use as a cleaner or solvent, use only as fuel. Do not siphon by mouth.

8. ENGINEERING CONTROLS, RESPIRATORY & PERSONAL PROTECTION

ENGINEERING CONTROLS:

Provide ventilation sufficient to prevent exceeding recommended exposure limit or build-up of explosive concentrations of vapor in air. Use explosion-proof equipment.

PERSONAL PROTECTION:

RESPIRATOR:

Approved respiratory protection must be used when vapors or mist concentrations are unknown or exceed the TLV. Avoid prolonged or repeated breathing of vapor or mists.

PROTECTIVE CLOTHING:

Use full-face shield, chemical goggles, impervious gloves, boots and whole body protection.

Eye: Conjunctivitis and burning, watery eyes have been reported in acute exposures to various hydrocarbon fuels and oils.

Skin: Mild erythema to full thickness chemical burns have occurred after prolonged exposure to various hydrocarbon fuels and oils.

Chronic:
Chronic dermatitis with acanthosis, inflammation, parakeratosis and hyperkeratosis have occurred with chronic exposures to various hydrocarbon fuels and oils.
Occupational exposures in petroleum refining are considered Group 2A (probably carcinogenic) by IARC.

12. DISPOSAL CONSIDERATIONS

RCRA: Disposal of this product or material contaminated with this product may be regulated by RCRA due to the characteristic of ignitability.

EPA Hazard Class: Acute Hazard/Chronic Hazard/Fire Hazard

Dispose of in accordance with Federal, State, and Local regulations.

13.TRANSPORT INFORMATION

DOT (Department of Transportation):

PROPER SHIPPING NAME:	Combustible Liquid nos (Diesel #1, Diesel #2)
HAZARD CLASS:	Combustible Liquid
IDENTIFICATION NUMBER:	UN 1993 PG III
NAERG96 NUMBER:	128

14. REGULATORY INFORMATION

CERCLA (Comprehensive Environmental Response Compensation, and Liability Act):
Naphthalene and Toluene are hazardous substances under CERCLA and therefore are subject to emergency notification requirements.

SARA TITLE III (Superfund Amendments and Reauthorization Act): Naphthalene and Toluene are subject to SARA Title III, Sections 311 and 312, which require MSDS reporting and hazardous chemical inventory reporting.

Naphthalene and Toluene are also subject to SARA Title III, Section 313, which requires chemical release reporting.

15.OTHER INFORMATION

NFPA 704/HMIS

Health - 0 Flammability - 2 Reactivity - 0
(0=insignificant, 1=slight, 2=moderate, 3=high, 4=extreme)

REVISION SUMMARY:
Complete review of MSDS, December 2002.

THIS PRODUCT MATERIAL SAFETY DATA SHEET PROVIDES HEALTH AND SAFETY INFORMATION. THE PRODUCT SHOULD BE USED IN APPLICATIONS CONSISTENT WITH THIS PRODUCT LITERATURE. FOR ANY OTHER USES, EXPOSURES SHOULD BE EVALUATED SO THAT APPROPRIATE HANDLING PRACTICES AND TRAINING PROGRAMS CAN BE ESTABLISHED TO ENSURE SAFE WORKPLACE OPERATIONS

THIS MATERIAL SAFETY DATA SHEET IS PROVIDED IN GOOD FAITH AND MEETS THE REQUIREMENTS OF THE HAZARDOUS COMMUNICATION PROVISIONS OF SARA TITLE III AND 29CFR1910.1200(g) OF THE OSHA REGULATIONS. THE ABOVE INFORMATION IS BASED ON REVIEW OF AVAILABLE INFORMATION SINCLAIR BELIEVES IS RELIABLE AND IS SUPPLIED FOR INFORMATIONAL PURPOSES ONLY. SINCLAIR DOES NOT GUARANTEE ITS COMPLETENESS OR ACCURACY. SINCE CONDITIONS OF USE ARE OUTSIDE THE CONTROL OF SINCLAIR, SINCLAIR DISCLAIMS ALL WARRANTIES, EXPRESS OR IMPLIED, AND ANY LIABILITY FOR DAMAGE OR INJURY WHICH RESULTS FROM THE USE OF THE ABOVE DATA. NOTHING HEREIN IS INTENDED TO PERMIT INFRINGEMENT OF VALID PATENTS AND LICENSES.

LETTER OF AGENT

Environmental Remediation Specialists, Inc., ERS, and its affiliates, upon your approval and signature below, can sign waste profile forms, waste characterization forms, DEQ waste notification forms, waste manifests, and other applicable waste related forms generated during emergency response activities, industrial activities, waste characterization, waste pickup, waste transportation, and / or site cleanup events "as agent for Pepsi Bottling Group ", thereby speeding up the disposal and closure process.

Please sign below to indicate your approval for Environmental Remediation Specialists, Inc., ERS, and its affiliates to sign above mentioned documents on behalf of Pepsi Bottling Group .

Please return a signed and dated copy of this letter to: ERS Incident Coordinator, P.O. Box 6344, Tulsa, OK 74148 or via fax to 1-866-738-8713, or via email to documents@ersok.com.

As always, we appreciate the opportunity to provide you with our professional consulting, emergency response, and remediation services and look forward to our continued relationship.

Respectfully submitted,
Environmental Remediation Specialists, Inc.
Tulsa / Oklahoma City / Fort Smith

DEQ Form # 515-860

MATERIAL SAFETY DATA SHEET

AMOCO NO. 2 DIESEL FUEL (FP)

MSDS No. 11147000 ANSI/ENGLISH

1.0 CHEMICAL PRODUCT AND COMPANY IDENTIFICATION

PRODUCT NAME: AMOCO NO. 2 DIESEL FUEL (FP)

MANUFACTURER/SUPPLIER:

Amoco Oil Company
200 East Randolph Drive
Chicago, Illinois 60601 U.S.A.

EMERGENCY HEALTH INFORMATION:
1 (800) 447-8735

EMERGENCY SPILL INFORMATION:
1 (800) 424-9300 CHEMTREC (USA)

OTHER PRODUCT SAFETY INFORMATION:
(312) 856-3907

2.0 COMPOSITION/INFORMATION ON INGREDIENTS

Component	CAS#	Range % by Wt.
Petroleum distillate	68476-30-2	95-100
Naphthalene	91-20-3	0-1
Xylene	1330-20-7	0-1

(See Section 8.0, "Exposure Controls/Personal Protection", for exposure guidelines)

3.0 HAZARDS IDENTIFICATION

EMERGENCY OVERVIEW: Warning! Combustible. Harmful or fatal if liquid is aspirated into lungs. Causes skin irritation on prolonged or repeated contact.

POTENTIAL HEALTH EFFECTS:

EYE CONTACT: No significant health hazards identified.

SKIN CONTACT: Causes skin irritation on prolonged or repeated contact. See "Toxicological Information" section (Section 11.0).

INHALATION: No significant health hazards identified for the liquid fuel. See "Toxicological Information" section (Section 11.0).

INGESTION: Harmful or fatal if liquid is aspirated into lungs. See "Toxicological Information" section (Section 11.0).

HMIS CODE: (Health:2) (Flammability:2) (Reactivity:0)

NFPA CODE: (Health:2) (Flammability:2) (Reactivity:0)

4.0 FIRST AID MEASURES

EYE: Flush eyes with plenty of water.

SKIN: Wash exposed skin with soap and water. Remove contaminated clothing, including shoes, and thoroughly clean and dry before reuse.

INHALATION: If adverse effects occur, remove to uncontaminated area.

INGESTION: If swallowed, do NOT induce vomiting. Get immediate medical attention.

5.0 FIRE FIGHTING MEASURES

FLASHPOINT: Greater than 141°F (61°C)

UEL: 7.5%

LEL: 0.6%

AUTOIGNITION TEMPERATURE: Not determined.

FLAMMABILITY CLASSIFICATION: Combustible Liquid.

EXTINGUISHING MEDIA: Agents approved for Class B hazards (e.g., dry chemical, carbon dioxide, foam, steam) or water fog.

UNUSUAL FIRE AND EXPLOSION HAZARDS: Combustible liquid.

FIRE-FIGHTING EQUIPMENT: Firefighters should wear full bunker gear, including a positive pressure self-contained breathing apparatus.

PRECAUTIONS: Keep away from sources of ignition (e.g., heat and open flames). Use with adequate ventilation.

HAZARDOUS COMBUSTION PRODUCTS: Incomplete burning can produce carbon monoxide and/or carbon dioxide and other harmful products.

6.0 ACCIDENTAL RELEASE MEASURES

Remove or shut off all sources of ignition. Prevent spreading by diking, ditching, or absorbing on inert materials. Keep out of sewers and waterways.

7.0 HANDLING AND STORAGE

HANDLING: Use with adequate ventilation. Keep away from ignition sources (e.g., heat, sparks, or open flames). Ground and bond containers when transferring materials. Wash thoroughly after handling.

STORAGE: Store in combustible liquids storage area. Store away from heat, ignition sources, and open flame in accordance with applicable regulations.

8.0 EXPOSURE CONTROLS / PERSONAL PROTECTION

EYE: None required; however, use of eye protection is good industrial practice.

SKIN: Avoid prolonged or repeated skin contact. Wear protective gloves if prolonged or repeated contact is likely.

INHALATION: Use with adequate ventilation.

ENGINEERING CONTROLS: Control airborne concentrations below the exposure guidelines.

EXPOSURE GUIDELINES:

Component	CAS#	Exposure Limits
Petroleum distillate	68476-30-2	No exposure limit established
Naphthalene	91-20-3	OSHA PEL: 10 ppm (1989)(1971) OSHA STEL: 15 ppm (1989); Not established. (1971) ACGIH TLV-TWA: 10 ppm ACGIH TLV-STEL: 15 ppm
Xylene	1330-20-7	OSHA PEL: 100 ppm (1989)(1971) OSHA STEL: 150 ppm (1989); Not established. (1971)

		ACGIH TLV-TWA: 100 ppm ACGIH TLV-STEL: 150 ppm

9.0 CHEMICAL AND PHYSICAL PROPERTIES

APPEARANCE AND ODOR: Liquid. Clear or red or blue or purple.

pH: Not determined.

VAPOR PRESSURE: Not determined.

VAPOR DENSITY: Not determined.

BOILING POINT: 340-675°F (approximate range)

MELTING POINT: Not determined.

SOLUBILITY IN WATER: Negligible, below 0.1%.

SPECIFIC GRAVITY (WATER=1): 0.85 to 0.88

VISCOSITY: 1.8-3.6cSt at 100°F

10.0 STABILITY AND REACTIVITY

STABILITY: Stable.

CONDITIONS TO AVOID: Keep away from ignition sources (e.g. heat, sparks, and open flames).

MATERIALS TO AVOID: Avoid chlorine, fluorine, and other strong oxidizers.

HAZARDOUS DECOMPOSITION: None identified.

HAZARDOUS POLYMERIZATION: Will not occur.

11.0 TOXICOLOGICAL INFORMATION

ACUTE TOXICITY DATA:

EYE IRRITATION: Testing not conducted. See Other Toxicity Data.

SKIN IRRITATION: Testing not conducted. See Other Toxicity Data.

DERMAL LD50: Testing not conducted. See Other Toxicity Data.

ORAL LD50: Testing not conducted. See Other Toxicity Data.

INHALATION LC50: Testing not conducted. See Other Toxicity Data.

OTHER TOXICITY DATA: Specific toxicity tests have not been conducted on this product. Our hazard evaluation is based on information from similar products, the ingredients, technical literature, and/or professional experience.

Middle distillate: From skin-painting studies of petroleum distillates of similar composition and distillate range, it has been shown that these types of materials often possess weak carcinogenic activity in laboratory animals. In these tests, the material is painted on the shaved backs of mice twice a week for their lifetime. The material is not washed off between applications. Therefore, there may be a potential risk of skin cancer from prolonged or repeated skin contact with this product in the absence of good personal hygiene. This particular product has not been tested for carcinogenic activity, but we have chosen to be cautious in light of the findings with other distillate streams.

Occasional skin contact with this product is not expected to have serious effects, but good personal hygiene should be practiced and repeated skin contact avoided. This product can also be expected to produce skin irritation upon prolonged or repeated skin contact. Personal hygiene measures taken to prevent skin irritation are expected to be adequate to prevent risk of skin cancer.

Materials of this type have been shown to produce kidney damage in male rats following prolonged inhalation exposures. Following extensive research, this effect appears to be unique to the male rat and is considered to be of little or no relevance in terms of human health risk.

This product has a sufficiently low vapor pressure to prevent a hazardous buildup of vapors unless the product is heated, used in a confined space with inadequate ventilation or misted. Inhalation of mist or high concentrations of vapors can produce dizziness, headache, and nausea and possibly irritation of the eye, nose and throat.

Aspiration of this product into the lungs can cause chemical pneumonia and can be fatal. Aspiration into the lungs can occur while vomiting after ingestion of this product. Do not siphon by mouth.

NIOSH has recommended that whole diesel exhaust be regarded as a potential occupational carcinogen, based on findings of carcinogenic responses in laboratory animals exposed to whole diesel exhaust. The excess cancer risk for workers exposed to diesel exhaust has not been calculated; however, exposure should be minimized to reduce potential risk.

No component of this product present at levels greater than 0.1% is identified as a carcinogen by the U.S. National Toxicology Program, the U.S. Occupational Safety and Health Act, or the International Agency on Research on Cancer (IARC).

12.0 ECOLOGICAL INFORMATION

Ecological testing has not been conducted on this product.

13.0 DISPOSAL INFORMATION

Disposal must be in accordance with applicable federal, state, or local regulations. Enclosed-controlled incineration is recommended unless directed otherwise by applicable ordinances.

The container for this product can present explosion or fire hazards, even when emptied! To avoid risk of injury, do not cut, puncture, or weld on or near this container. Since the emptied containers retain product residue, follow label warnings even after container is emptied.

14.0 TRANSPORTATION INFORMATION

U.S. DEPT OF TRANSPORTATION

Shipping Name	Diesel Fuel
Hazard Class	Combustible liquid.
Identification Number	NA1993
Packing Group	III

15.0 REGULATORY INFORMATION

CERCLA SECTIONS 102a/103 HAZARDOUS SUBSTANCES (40 CFR Part 302.4): This product is exempt from the CERCLA reporting requirements under 40 CFR Part 302.4. However, if spilled into waters of the United States, it may be reportable under 33 CFR Part 153 if it produces a sheen.

SARA TITLE III SECTION 302 EXTREMELY HAZARDOUS SUBSTANCES (40 CFR Part 355): This product is not regulated under Section 302 of SARA and 40 CFR Part 355.

SARA TITLE III SECTIONS 311/312 HAZARDOUS CATEGORIZATION (40 CFR Part 370): This product is defined as hazardous by OSHA under 29 CFR Part 1910.1200(d).

SARA TITLE III SECTION 313 (40 CFR Part 372): This product contains the following substance(s), which is on the Toxic Chemicals List in 40 CFR Part 372:

Component/CAS Number	Weight Percent
Xylene 1330-20-7	1
Naphthalene 91-20-3	1

U.S. INVENTORY (TSCA): Listed on inventory.

OSHA HAZARD COMMUNICATION STANDARD: Combustible liquid. Irritant.

EC INVENTORY (EINECS/ELINCS): Not determined.

JAPAN INVENTORY (MITI): Not determined.

AUSTRALIA INVENTORY (AICS): Not determined.

KOREA INVENTORY (ECL): Not determined.

CANADA INVENTORY (DSL): Not determined.

PHILIPPINE INVENTORY (PICCS): Not determined.

16.0 OTHER INFORMATION

Prepared by:

Environment, Health and Safety Department

Issued: March 28, 1994

This material safety data sheet and the information it contains is offered to you in good faith as accurate. We have reviewed any information contained in this data sheet which we received from sources outside our company. We believe that information to be correct but cannot guarantee its accuracy or completeness. Health and safety precautions in this data sheet may not be adequate for all individuals and/or situations. It is the user's obligation to evaluate and use this product safely and to comply with all applicable laws and regulations. No statement made in this data sheet shall be construed as a permission or recommendation for the use of any product in a manner that might infringe existing patents. No warranty is made, either express or implied.

   - ☐ Treated Hazardous Waste Debris
   - ☐ Treated Characteristic Hazardous Waste
3. Is the waste from a Federal (40 CFR 300, Appendix B) or state mandated clean-up? If yes, see instructions. ☐ Yes ☑ No
4. Does the waste represented by this waste profile sheet contain radioactive material? ☐ Yes ☑ No
   a. If yes, is disposal regulated by the Nuclear Regulatory Commission? ☐ Yes ☐ No
   b. If yes, is disposal regulated by a State Agency for radioactive waste/NORM? ☐ Yes ☐ No
5. Does the waste represented by this waste profile sheet contain concentrations of regulated Polychlorinated Biphenyls (PCBs)? ☐ Yes ☑ No
   a. If yes, is disposal regulated under TSCA? ☐ Yes ☐ No
6. Does the waste contain untreated, regulated, medical or infectious waste? ☐ Yes ☑ No
7. Does the waste contain asbestos? ☐ Yes ☑ No If Yes, ☐ Friable ☐ Non Friable
8. Is this profile for remediation waste from a facility that is a major source of Hazardous Air Pollutants (Site Remediation NESHAP, 40 CFR 63 subpart GGGGG)? ☐ Yes ☑ No
   If yes, does the waste contain <500 ppmw VOHAPs at the point of determination? ☐ Yes ☐ No

E. Generator Certification (Please read and certify by signature below)

By signing this Generator's Waste Profile Sheet, I hereby certify that all:

1. Information submitted in this profile and all attached documents contain true and accurate descriptions of the waste material;
2. Relevant information within the possession of the Generator regarding known or suspected hazards pertaining to this waste has been disclosed to WM/the Contractor;
3. Analytical data attached pertaining to the profiled waste was derived from testing a representative sample in accordance with 40 CFR 261.20(c) or equivalent rules; and
4. Changes that occur in the character of the waste (i.e. changes in the process or new analytical) will be identified by the Generator and disclosed to WM (and the Contractor if applicable) prior to providing the waste to WM (and the Contractor if applicable).
5. Check all that apply:
   - ☐ Attached analytical pertains to the waste. Identify laboratory & sample ID #'s and parameters tested: _____ # Pages: _____
   - ☐ Only the analyses identified on the attachment pertain to the waste (identify by laboratory & sample ID #'s and parameters tested). Attachment #: _____
   - ☒ Additional information necessary to characterize the profiled waste has been attached (other than analytical). Indicate the number of attached pages: 6
   - ☐ I am an agent signing on behalf of the Generator, and the delegation of authority to me from the Generator for this signature is available upon request.
   - ☒ By Generator process knowledge, the following waste is not a listed waste and is below all TCLP regulatory limits.

Certification Signature: _____ Title: _____

Company Name: _____ Name (Print): _____

Date: _____

FOR WM USE ONLY

Management Method: ☐ Landfill ☐ Bioremediation ☐ Non-Hazardous solidification ☐ Other: _____

Approval Decision: ☐ Approved ☐ Not Approved

Waste Approval Expiration Date: _____

Management Facility Precautions, Special Handling Procedures or Limitation on approval:

- ☐ Shall not contain free liquid
- ☐ Shipment must be scheduled into disposal facility
- ☐ Approval Number must accompany each shipment
- ☐ Waste Manifest must accompany load

WM Authorization Name / Title: _____ Date: _____

State Authorization (If Required): _____ Date: _____

MISSISSIPPI LIME COMPANY – MATERIAL SAFETY DATA SHEET
OSHA HAZARD COMMUNICATION

PRODUCT IDENTIFICATION	CHEMICAL ABSTRACT NUM.	DATE REVISED
CALCIUM HYDROXIDE (CODEX) Snowflake ®	CAS No. 1305-62-0	01/01/2002

Section V – Reactivity Data

Stability	Unstable		Conditions to Avoid – NA
	Stable	X	
Incompatibility (Materials to Avoid)		Acids, Fluorine	
Hazardous Decomposition or Byproducts		None	
Hazardous Polymerization	May Occur		Conditions to Avoid – NA
	Will Not Occur	X	

Section VI – Health Hazard Data

Route(s) of Entry	Inhalation? – YES	Absorption Through Skin? – YES	Ingestion (swallowing)? – YES
Health Hazards	Acute	Corrosive to skin and eyes. Causes irritation and inflammation to mucous membrane and respiratory passages.	
	Chronic		

Carcinogenicity Calcium Hydroxide	NTP?	IARC Monographs?	OSHA Regulated?
	NO	NO	NO

Signs and Symptoms of Exposure	Irritation of skin, eyes and respiratory tract.
Medical Conditions Generally Aggravated by Exposure	Respiratory disease, skin condition.
Emergency and First Aid Procedures	Remove to fresh air. Wash skin with soap and water. Flush out eyes with generous amounts of water. Drink plenty of water if swallowed. See Physician.

Section VII – Precautions for Safe Handling

Steps to Be Taken in Case Material is Released or Spilled	Normal clean-up procedures. Care should be taken to avoid causing dust to become airborne. Vacuum cleaning systems are recommended.
Waste Disposal Method	Dispose of product in accordance with Federal, State and Local regulations.
Precautions to Be Taken in Handling	Store away from incompatible substances.
Other Precautions	None.

Section VIII – Control Measures

Respiratory Protection – Dust filter mask is recommended as minimal protection

Ventilation	Local Exhaust – To maintain TLV's and PEL's Mechanical – To maintain TLV's and PEL's	Special – None Other – None

Protective Gloves – Cloth or leather gloves will protect skin
Eye Protection – Fitted goggles will reduce eye injury
Other Protective Clothing – Long sleeve shirts and pants
Work / Hygienic Practices – Maintain dust exposure limits below TLV and PEL. If not possible then use respiratory protection.

Section IX – Regulatory Compliance

Listed on the U.S. EPA TSCA Inventory and not regulated as a hazardous material by the Department of Transportation (DOT).

PEPSI Tuesday, September 14, 2004

MISSISSIPPI LIME COMPANY – MATERIAL SAFETY DATA SHEET
OSHA HAZARD COMMUNICATION

PRODUCT IDENTIFICATION	CHEMICAL ABSTRACT NUM.	DATE REVISED
CALCIUM HYDROXIDE (CODEX) Snowflake ®	CAS No. 1305-62-0	01/01/2002

Section I

MANUFACTURER	24 Hour Emergency Contact Number: (800) 437-5463	HMIS RATING
Mississippi Lime Company 3923 South Lone Pine Springfield, Missouri 65804	Telephone Number for Information: (800) 437-5463	Health - 2 Flammability - 0 Instability (React) - 0 Protective Equip - E
	Contact: J. S. Castleberry	

Section II – Hazardous Ingredients / Identity Information

Hazardous Components

Specific Chemical Identity / Common Name	OSHA PEL	ACGIH TLV	Other Limits Recommended	% (Optional)
Calcium Hydroxide; Slaked Lime	5 mg/m³	5 mg/m³		

Calcium Hydroxide is not listed on the NTP, IARC, or OSHA lists of carcinogens. Mississippi Lime Company recommends using personal protection equipment when handling this product.

Section III – Physical / Chemical Characteristics

Boiling Point (Calcium Oxide)	5162 °F	Specific Gravity (H_2O) = 1)	2.2
Vapor Pressure (mm Hg)	NA	Melting Point	1076 °F
Vapor Density (Air = 1)	NA	Evaporation Rate	NA
Solubility in Water	0.185% @ 0° C; 0.077% @ 100° C		
Appearance and Color	White powder; odorless		

Section IV – Fire and Explosion Hazard Data

Flash Point	NA	Flammable Limits – NA
Extinguishing Method	NA	
Special Fire Fighting Procedures	NA	
Unusual Fire and Explosion Hazards	NA

MATERIAL SAFETY DATA SHEET

I. PRODUCT IDENTIFICATION

Manufacturer's Name: Fe-3, Inc.	Regular Telephone No. 1 (972) 382-2381 Emergency Telephone No. (800) 424-9300
Address: Business Rt. 289 North, Celina, Texas 75009	
Trade Name: Fe^3	
Synonyms: FERRIC SULFATE SOLUTION	
Shipping Name: DOT: CORROSIVE LIQUID, N.O.S. CORROSIVE MATERIAL (LIQUID FERRIC SULFATE—50% WATER NA 3264)	

II. HAZARDOUS INGREDIENTS

Material or Component (Typical)	Cas No.	% w/w	Hazard Data
Ferric Sulfate	10028-22-5	49.0	**Health hazard:** Product is toxic orally, is corrosive to the eye, and will burn the skin.
Free Sulfuric Acid	7664-93-9	.5-1.0	
Water (balance of formulation)			**Aquatic toxicity:** Ferric sulfate is listed as toxic to aquatic life, Category C. 40 CFR Parts 116-118.

III. PHYSICAL DATA

Boiling Point, 750 mm hg	Approx. 212°F	Freezing Point: Does not freeze at 0°F
Specific Gravity (H_2O=1)	1.400 to 1.455	Vapor Pressure: NA
Vapor Density (Air-1)	NA	Solubility in H_2O% by Wt. Infinite
% Volatiles by Vol.	NA	Evaporation Rate (Butyl Acetate - 1)
Appearance and Odor	Red-Brown solution. No detectable odor.	Ph (as is) Approximately 1.0 Ph (1% soln) Approximately 1.8

IV. FIRE AND EXPLOSION DATA

Flash Point (Test Method)	N.A.	Autoignition Temperature	N.A.
Flammable Limits in Air, % by Vol.	Lower N.A.	Upper N.A.	
Extinguishing Media	Product does not burn or support flame. If product is present in a fire, water, CO_2 or dry chemical may be used. Product is highly acidic and if in open container avoid splashing.		
Special Fire Fighting Proc.	Do not allow product or water containing product to enter a navigable stream. At temperatures above 600° C, product decomposes to iron oxide and sulfur trioxide.		
Unusual Fire & Explosion Hazard.	None known.		

V. HEALTH HAZARD INFORMATION

Health Hazard Data	Hazard Classification	Basis for Classification	Source
Routes of Exposure Inhalation	Not determined, but expected to be low due to other toxicological tests, physical and chemical characteristics.	NA	NA
Skin Contact	Not a primary skin irritant by FHSA standards.	Primary dermal irritation index = 0.0 for 24 and 72 hours.	Laboratory test in accord with FHSA procedure.
Skin Absorption	Not toxic dermally by FHSA standards.	Est. dermal LD_{50} (Rabbit) - (Male) Greater than 2.0 g/kg body weight (Female) Greater than 2.0 g/kg body weight	Laboratory test in accord with FHSA procedure
Eye Contact	Corrosive to the eye by by FHSA standards.	Eye irritation scores: 24 hours. . . . . 45.2 48 hours. . . . . 56.2 72 hours. . . . . 56.3 7 days 63.4	Laboratory tests in accord with FHSA procedure.
Ingestion	Toxic by FHSA standards.	Oral LD_{50}. (Rats-male) - Between 2.5 and 5.0 g/kg body weight. (Rats-female) = Between 2.5 and 5.0 g/kg body weight.	Laboratory tests accord with FHSA procedure.

EFFECTS OF OVEREXPOSURE:

Acute Overexposure: None known except as listed in Section V above.
Chronic Overexposure: None known except as listed in Section V above.

EMERGENCY AND FIRST AID PROCEDURES

EYES	Immediately irrigate with large amounts of water for at least 15 minutes. Hold eyelids apart during irrigation. Send patient to a physician immediately.
SKIN	Flush with water while removing clothing and shoes. Continue to flush for at least 15 minutes. Call a physician Wash clothes before reuse.
INHALATION	Remove from area and give artificial respiration if needed and seek medical assistance.
INGESTION	Treat as a corrosive liquid. Drink large quantities of water or milk to reduce concentration and neutralize acid. Do not induce vomiting. Call physician immediately.

VI. REACTIVITY DATA

CONDITIONS CONTRIBUTING TO INSTABILITY:
None Known.

INCOMPATIBILITY:
Product solution is corrosive to mild steel, copper, copper alloys and galvanized steel. May be corrosive to paints, enamels, and concrete. Reacts with lime and other basic materials to form insoluble iron salts.

HAZARDOUS DECOMPOSITION PRODUCTS:
None normally. At temperatures above 600° C, sulfur trioxide may be released.

CONDITIONS CONTRIBUTING TO HAZARDOUS POLYMERIZATION:
None known.

VII DISPOSAL, SPILL OR LEAK PROCEDURE

AQUATIC TOXICITY (e.g., 96 HR. TLM):
No data is known to be available. EPA has rated ferric sulfate in Category C in the Waters Program hazardous substance list in 40 CFR Parts 116-118

WASTE DISPOSAL METHOD:
Neutralize with lime, soda ash, or bicarbonate and remove to approved landfill.

STEPS TO BE TAKEN IF MATERIAL IS RELEASED OR SPILLED:
Prohibit product from running into streams or navigable waters. Neutralize and remove to approved landfill. Wash down spill area with water. Check with waste treatment plant before flushing down large amounts of spilled product.

NEUTRALIZING CHEMICALS:
Lime (calcium carbonate, calcium hydroxide, calcium oxide), soda ash or sodium bicarbonate.

VIII. SPECIAL PROTECTION INFORMATION:

VENTILATION REQUIREMENTS:
No special ventilation is believed to be necessary under normal use conditions.

SPECIFIC PERSONAL PROTECTION EQUIPMENT:

RESPIRATORY:
None known necessary under normal use. If mists occur, or may occur, use a respirator having an activated carbon filter suitable for sulfuric acid mists.

EYE:
Chemical goggles should be worn when handling this product as it is corrosive to the eye.

GLOVES
Chemical or rubber gloves should be worn.

OTHER CLOTHING AND EQUIPMENT:
Acid resistant clothing is recommended. Safety shoes are recommended when handling product in drums.

IX. SPECIAL PRECAUTIONS:

There should be a substance placard with UN3264, being of Hazard Class 8 and packing group III. 8, UN3264, III

PRECAUTIONARY STATEMENTS:
Product is corrosive to mild steel and containers should bear a corrosive D.O.T. label. There should be a substance placard with UN3264.

OTHER HANDLING AND STORAGE REQUIREMENTS:
Liquid Ferric Sulfate solution is corrosive to mild steel. Storage and equipment materials should include fiberglass, reinforced plastics, plastics, rubber, lead, type 304 or better grades of stainless steel.

ADDITIONAL REGULATORY CONCERNS:

FEDERAL:

FDA.

USDA:

CPSC:

TSCA: Is this product, or all its ingredients, being certified for inclusion on the Toxic Substances Control Act inventory of chemical substances? YES.

OTHER: The ferric sulfate meets the AWWA standard for Ferric Sulfate in potable water. Standard AWWA B406-97

STATE:

OSHA: Product is a hazardous material as defined by 29 CFR Paragraph 1910, 1200 because it is corrosive to the eye.
Product *is not* listed by the National Toxicology Program, the International Agency for Research on Cancer, nor the Registry of Toxic Effects of Chemical Substances (1981-82) as a carcinogen or potential carcinogen.

SARA TITLE III: Product contains the following listed toxic chemicals which are subject to the reporting requirements of Section 313 of Title III of the Superfund Ammendments and Reauthorization Act of 1986 (SARA TITLE III) and 40 CFR, Part 372.

Listed Toxic Chemical	CAS#	Max % By Wgt.
None	N/A	N/A

RQ, CORROSIVE LIQUID
ACIDIC, INORGANIC, N.O.S.

NON-HAZARDOUS INDUSTRIAL WASTE NOTIFICATION/CERTIFICATION FORM

Please read instructions prior to completing this form.

IMAGED AS RECEIVED

Generator Name: The Pepsi Bottling Group
Mailing Address: 616 West Skelly Drive City Tulsa State OK Zip 74107
Point of Generation Address: 616 West Skelly Drive City Tulsa State OK Zip 74107
Generator Contact: Shane Rhoden Title Telephone 918-445-8022

DETAILED WASTE DESCRIPTION

Waste Name: Sediment Tank Sludge

If waste was generated out-of-state, is it classified as hazardous in the state of origin? [ ] Yes [ ] No [X] NA-Okla Waste

This waste stream is: [ ] New [X] Previously approved (previous approval number: QO-150306OK)

Approximate amount of waste to be disposed under this disposal plan: 2,000

[ ] Tons [ ] Pounds [X] Other Gallons
[ ] Cubic yards [ ] Drum

Disposal frequency: [ ] One-time [ ] Weekly [ ] Monthly [X] Annually

Physical characteristics: [ ] Solid [X] Liquid [X] Sludge [X] Combination

Method used to determine waste is non-hazardous: [ ] Analysis [ ] Generator knowledge [X] Both

Process generating waste (be specific and use additional sheets if necessary):
Chemicals are used to adjust alkalinity in the water before using in food grade products

DISPOSAL FACILITY INFORMATION

Facility name: Quarry Landfill Permit #: 3572042

GENERATOR CERTIFICATION

I understand this form must be signed by the original waste generator and not waste brokers, transporters, contractors, or other intermediate handlers.

To the best of my knowledge, I certify:

- The information contained herein is accurate, complete, and representative of the waste to be disposed;
- The waste identified above is not a characteristically hazardous waste as identified by 40 CFR 261, Subpart C, is not a listed hazardous waste as identified by 40 CFR 261, Subpart D or contaminated with a listed hazardous waste, and is not otherwise identified as a hazardous waste by the Department of Environmental Quality; and
- This waste will be managed in accordance with all applicable statutes and rules of the Department of Environmental Quality.

5. Special Billing Requirements:

RECERTIFICATION INFORMATION

1. Waste Name: Sediment Tank Sludge
2. Have you obtained any laboratory analysis of this waste within the past year? ☑ Yes ☐ No
3. Have you changed the raw materials used in the waste generating process or the waste generating process itself? ☐ Yes ☑ No
4. Is the laboratory analysis and/or other pertinent information previously submitted still representative of the waste as presently generated? ☑ Yes ☐ No

NOTE: IF YOU ANSWERED YES TO QUESTION 2 OR 3 LISTED ABOVE, PLEASE ATTACH APPROPRIATE DOCUMENTATION.

D. RECERTIFICATION STATEMENT. Green Country - 1123/08 6 Pages

By signing this form, the generator hereby certifies: The information provided in this document, the attached Waste Management Generator's Waste Profile Sheet, and all other attached documents contain true and accurate descriptions of this waste material. All new information regarding known or suspected hazards in the possession of the generator has been disclosed. The Generator hereby certifies this waste is not a "Hazardous Waste" as defined by the USEPA or Canadian Federal regulation and/or the state/province and this waste does not contain regulated radioactive materials or regulated concentrations of PCB's.

RE: Sample

Dear Shane Rhoden:

Green Country Testing, Inc. received 1 sample on 1/9/2008 for the analyses presented in the following report.

In accordance with your instructions, Green Country Testing conducted the analysis shown on the following pages on samples submitted by your company. The results related only to the items tested. Unless otherwise noted, all analysis was conducted using EPA approved methodologies. Test reports meet all the NELAC requirements. All relevant sampling information is on the attached chain-of-custody form. The initials SUB as the analyst designate any testing sub-contracted by Green Country Testing.

Certifications/Accreditation: OK - 7604
AR - ADEQ
KS - E-10232
LA - 4002

A scope of Certified/A[illegible] parameters is available upon request. If you have any questions regarding these tests results, p[illegible]e to call.

Sincerely,

Brian Duzan

NON-HAZARDOUS INDUSTRIAL WASTE NOTIFICATION/CERTIFICATION FORM

Please read instructions prior to completing this form.

DISPOSAL PLAN BY RULE | INDIVIDUAL DISPOSAL PLAN REQUEST FOR DISPOSAL | GENERAL DISPOSAL PLAN REQUEST FOR APPROVAL

Generator Name: The Pepsi Bottling Group

Mailing Address: 14501 N Kelley Ave City Oklahoma City State Ok Zip 73114

Point of Generation Address: OKC/Same City _____ State ___ Zip _____

Generator Contact: James Kinsey Title Product Mgr Telephone (405) 748-7530

DETAILED WASTE DESCRIPTION

Waste Name: Outdated or Non-Saleable product Pop

If waste was generated out-of-state, is it classified as hazardous in the state of origin? ☐ Yes ☐ No ☒ NA- Okla. waste

This waste stream is: ☒ New ☐ Previously approved (previous approval number: _____)

Approximate amount of waste to be disposed under this disposal plan: 400

☐ Tons ☐ Pounds ☒ Cubic yards ☐ Drum ☐ Other _____

Disposal frequency:

☐ One-time ☐ Weekly ☒ Monthly ☐ Annually

Physical characteristics:

☒ Solid ☐ Liquid ☐ Sludge ☐ Combination

individual pop cans

Method used to determine waste is non-hazardous: ☐ Analysis ☐ Generator knowledge ☐ Both

Process generating waste (be specific and use additional sheets if necessary):

Customer disposing of household product

DISPOSAL FACILITY INFORMATION

Facility name: Southeast OKC Landfill Permit #: 3555-028

GENERATOR CERTIFICATION

I understand this form must be signed by the original waste generator and not waste brokers, transporters, contractors, or other intermediate handlers.

To the best of my knowledge, I certify:

- The information contained herein is accurate, complete, and representative of the waste to be disposed;
- The waste identified above is not a characteristically hazardous waste as identified by 40 CFR 261, Subpart C, is not a listed hazardous waste as identified by 40 CFR 261, Subpart D or contaminated with a listed hazardous waste, and is not otherwise identified as a hazardous waste by the Department of Environmental Quality; and
- This waste will be managed in accordance with all applicable statutes and rules of the Department of Environmental Quality.
