32	45827	Conveyor C-7 to Screen S-3

Notes	Unit Type	Status	Latitude	Longitude
	Transfer Point	Operating	36.228190	-95.805790

Emission Release Point ID: 45711 — **Name: Conveyor C-7 to Screen S-3** — **Type: Fugitive** — **Status: Operating**

Parameters

Gas Exit Vel. (ft/s)	Height (ft)	Diameter (ft)	Temp (F)	Flow Rate (acfm)
0	0	0	0	0

Fugitive Release Point Parameters

Fugitive area(sqft)	Fugitive Ht. (ft)
1306800	10

Process Data

Process ID: 154743 **SCC:** 30502006 — **Is Process Data Confidential?** N

Process Description: Industrial Processes, Mineral Products, Stone Quarrying - Processing (See also 305320), Miscellaneous Operations: Screen/Convey/Handling

Process Material: Limestone

Material I/O: Used (Input)

Process (Throughput) Rates

Units: Tons

Maximum Hourly	Typical Daily	Actual Annual
210	1400	**341813**

Combustion Processes

Fuel Heat Input Design Capacity: 0 NOT APPLICABLE

Fuel Data (combustion processes only)

			Sulfur(Wt%)	Ash (Wt%)
Fuel Heat Content	0	N/A	0	0

Actual Hours/Year: 1915

Typical Operating Periods (when process is operational)

Hours/Day 8 — **Days/Week** 5 — **Weeks/Year** 52

Seasonal Operating Fractions

Spring 0.25 — **Summer** 0.25 — **Fall** 0.25 — **Winter** 0.25

DEQ FORM 605-006

Oklahoma Department of Environmental Quality
Annual Comprehensive Site Compliance Evaluation Report for Industrial Facilities (ACSCER)

Submission of this Comprehensive Site Compliance Evaluation Report, Part B, provides notice that the party identified in Section I of this form is not required to conduct Benchmark Monitoring for storm water discharges associated with industrial activities under the OPDES program. This Annual Comprehensive Site Compliance Evaluation Report is required for all authorized industrial facilities.

All Requested Information Must Be Provided On This Form (Part A) and the ACSCER Form (Part B).
See Instructions On Page 4 of The Form.

Section I.

OPDES Permit Authorization Number: OKR052301

Section II. Facility Operator Information

Name: Sherwood Construction Company, Inc. Phone: 918-266-6861

Address: P.O. Box 10

City: Catoosa County: Rogers Zip Code: 74015

Section III. Facility Location

Name: Greenhill Materials Company, Inc. Phone: 918-266-6861

Address: 14701 E. Highway 266

City: Owasso County: Rogers Zip Code: 74055

Latitude: 36.234 deg N Longitude: 95.802 deg W

Section IV. Certification

I certify under penalty of law that I have read and understand the requirements for filing this Comprehensive Site Compliance Evaluation Report, which is to be filed by March 1st of each year beginning in 2012.

This report is also to be retained as part of the SWP3 for at least three (3) years from the date permit coverage expires or is terminated and will be made available to any State or Federal Inspector visiting this facility. All records of actions taken in accordance with 4.10 of this permit as part of the Storm Water Pollution Prevention Plan will be retained for at least three (3) years from the date permit coverage expires or is terminated. I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gathered and evaluated the information submitted. Based upon my inquiry of the person or persons who manage the system, or those persons directly involved in gathering the information, the information submitted is to the best of my knowledge and belief true, accurate, and complete. I am aware there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Annual Comprehensive Site Compliance Evaluation Report - Part B Page 1.

Reporting Period: 03/01/2015 to 12/31/2015.

✓ How many routine facility inspections did you perform during the reporting period? None

✓ How many corrective actions to remove the original violation and document these actions according to corrective action deadlines?

Date	Deficiencies	Corrected (Y or N)	Date Corrected
12/31/2015	No quarterly inspections	N	

✓ What must you do to correct the deficiencies that remain uncorrected?

Will start conducting quarterly visual sampling and documentation

✓ Were all BMPs you indicated you would be using in your SWP3 including good housekeeping practices, actually being implemented at the time of the Annual Comprehensive Site Compliance Evaluation?
Yes ____ No X

✓ If one or more BMPs were not being implemented, were corrective actions taken after the FIRST inspection to find the problem?
Yes ____ No ____ All BMPs were being implemented ____ See above

✓ Was/were the same failure(s) to implement a BMP deficiency(ies) noted in more than one inspection?
Yes ____ No X No deficiencies noted in any inspection ____

✓ Did any of your routine facility inspections find that one or more of your BMPs was not effective in controlling the pollutant source for which it was designed?
Yes ____ No X All BMPs were effective ____

✓ If you found one or more ineffective BMPs, have they all been replaced with an alternative or modified BMP?
Yes ____ No X All BMPs were being effective ____

✓ Are there additional BMPs needed to address any conditions requiring corrective action?
Yes ____ No X

✓ At any time during the reporting period, did you discover any previously unidentified illicit discharges from your facility or previously unidentified pollutants in the existing discharges?
Yes ____ No X

✓ Have all illicit discharges (including any discovered in previous years) been eliminated or permitted?
Yes ____ No ____ Permit applied for ____ No known illicit discharges X

✓ Have any significant spills or leaks occurred at your facility during the reporting period?
Yes ____ No X

✓ If any significant spills or leaks occurred, did they result in either a dry weather discharge or an actual discharge of the spilled or leaked material commingled with storm water (as opposed to the spilled material being washed away by storm water?)
Yes ____ No X

Part B. Page 2

✓ If any significant spills or leaks occurred, did they result in more than the minimum amounts of material being discharged in storm water? Base your answer on your knowledge of the material you spilled or that leaked. The minimum amounts could vary with the nature (toxicity, oxygen demand, pH, etc.) of the spilled or leaked material from amounts left after normal "sweeping" type cleanup to the point at which even trace amounts left after cleanup could cause an environmental problem.
Yes ____ No____ No spills or leaks occurred X

✓ Have all known spills or leaks been cleaned up or otherwise prevented from contaminating storm water that would be discharged under the authority of this permit?
Yes ____ No____ No spills or leaks occurred X

✓ How many times did you visually monitor all your storm water discharges at all the facility outfalls during the reporting year, and document the condition of and around the outfalls, including flow dissipation measures to prevent scouring? (Count only those done in accordance with the procedures at Part G.7.A Quarterly Visual Monitoring)
Yes ____ No____ Number of Visual Monitoring 0

✓ Would the results of your visual monitoring indicate that there are pollutants in your storm water discharges that are not adequately controlled by your current BMPs?
Yes ____ No X

✓ If the results of your visual monitoring indicated a potential problem, was it due to one or more of the following?

1. New pollutant source (including exposure of previously unexposed material).
2. Failure to implement or maintain an existing BMP.
3. Less than expected performance from a BMP.
4. No BMP was selected to deal with that problem. N/A - None documented
5. N/A (No problems identified)

✓ If your visual monitoring indicated a potential problem, what have you done to resolve the problem?

1. Eliminated exposure or pollutant source.
2. Modified existing BMPs.
3. Added a new BMP.
4. Plan to address problem by end of current reporting year.
5. Nothing planned.
6. N/A (No problems identified).

✓ Did any analysis of any element tested during any previous discharge monitoring period exceed the numeric limitation value?
Yes ____ No X

✓ If your answer to the previous question was "Yes", please name the element and the test results.

Element	Test Results	Element	Test Results
N/A			

✓ Are there any required revisions to the SWP3 resulting from the inspection?
Yes X No _

Separate SWP3 will be developed for this plant.

606-11-2	Calibration records for instruments and equipment maintained	24	☐
606-11-2	Chain of custody documents, date, time, place of sample, sampler, number and type of samples, preservatives used and signatures	25	☐
606-5-1	No visible oil sheen (violation of OWQS)	26	☐
606-5-1	No visible foam or solids (violation of OWQS)	27	☐

Re: Annual Comprehensive Site Compliance Evaluation Reports (ACSCERs) for Concrete Batch Plants

Dear Mr. Ritchie:

The Oklahoma Department of Environmental Quality (DEQ) is in receipt of several ACSCERs for batch facilities owned and operated by Greenhill Concrete Products, Inc. The plants and their respective permit authorization numbers are contained in the following table:

Owasso	OKG11T212	Broken Arrow	OK0045781		

The ACSCERs have been entered into a database and are deemed complete for the 2015 permit year. If you have any questions regarding this letter, please do not hesitate to call me at (405) 702-8112, or write to me at the letterhead address.

Sincerely,

Michelle Chao
District Representative
Water Quality Division

Date: 7/27/2016

Total number of items marked: 2

Number of critical items marked: 2

ITEM NO.	CRITICAL ITEMS
*01	**Facility permitted: Authorization on file** – A Permit must be obtained that authorizes the discharge of storm water and an NOI must be on file
*02	**SWPPP developed**– Each construction or industrial facility must have a pollution plan developed.
*04	**BMP properly implemented in accordance with SWP3** - Best management practices (sediment control measures, good housekeeping) must be implemented as stated in the SWP3.
*11	**Non-Allowable Discharges Prevented** – Facilities or activities are authorized for the discharges for which the general permit applies. Any discharges that are not compliant with the eligibility conditions of the general permit are not authorized by the general permit. Ineligible discharges must be permitted by an appropriate permit (individual or alternative) to be compliant.
*15	**Final Stabilization completed** – Site must be stabilized to within 70% of the original natural vegetative ground cover. If the original natural vegetative ground cover was 50% then the required vegetative stabilization required is 35% (.50 X .70 = .35); temporary erosion and sediment control measures have been removed or will be removed at an appropriate time to ensure final stabilization is maintained. This requirement is also for the termination of asphalt batch plants (Sector D) and concrete batch plants (Sector E) of the Industrial Storm Water Permit (OKR05).
*16	**Operations have ceased** - Facility is closed and no longer in operation or there is no further construction activity occurring.
*18	**Permitted discharges have ceased** – The facility may be in operation but the authorized activity is no longer in operation (e.g. have changed SIC or NAC code)
	NON-CRITICAL ITEMS
03	SWPPP posted at the construction or facility site or locally available
05	Silt barriers in place, effective and maintained – All barriers described in the SWP3 must maintained and effective in controlling sediment leaving the construction site.
06	Sediment basins (if required) adequate and maintained as required – Sediment basins must be adequate size (3600 cubic feet/acre) and maintained (cleaned out when storage capacity is reduced by 50%). Required if stated in SWP3 or site is greater than 10 acres without site constraints.
07	Inspection of BMPs at required frequency and documented – Owner/operators of construction sites are required to conduct inspections of the sediment control measures every 14 days, maintain records of the inspections and modify the SWPPP as needed. For industrial facilities, the frequency is determined by the SWPPP and is to be completed by qualified personnel. The SWPPP is to be updated within 14 days of the inspection. All results and corrective actions must be documented in the SWPPP.
08	Vegetation established on completed areas – As sections of a project are completed vegetative stabilization is initiated.
09	Offsite tracking of mud and sediment prevented – Offsite tracking of mud and sediment by construction vehicles to be prevented. Areas that have evidence of offsite tracking are to be cleaned.
10	Other control measures implemented – Other control measures as stated in the General Permit must be met to minimize solid material from entering waters of the state. No solid materials, including floatable debris may be discharged. Generation of dust must be minimized. Tracking or blowing of raw, final, or waste materials from areas of no exposure to exposed areas must be minimized.
12	The requirements and procedures for quarterly visual monitoring are applicable to all industrial facilities covered under the general storm water permit, regardless of the facility's sector or SIC code (except those that qualify for No Exposure). The requirements and procedures are found in part 5.1.1 of the general permit and the results must be documented and maintained onsite with the SWPPP.
13	NELM Reports submitted and maintained - Table 1-3 of Part 1.3 of the general permit identifies industrial storm water discharges subject to Numeric Effluent Limitation Monitoring (NELM). Industry specific numerical limitations and compliance monitoring requirements are described in Part 12 of the general permit. The requirements and procedures are found in Part 5.2 and the results must be documented and maintained onsite with the SWPPP, and submitted to the DEQ on a Discharge Monitoring Report (DMR).
14	An Annual Comprehensive Site Compliance Evaluation Report (ACSCER) must be completed by all industrial facilities covered by the general permit. The ACSCER must be filed during the period October 2 to October 1 each year and submitted to DEQ no later than December 1 and maintained with the SWPPP. The requirements for completing the ACSCER are found in Part 4.8 of the general permit.
17	Facility has met the final stabilization requirements under permit OKR10 and may submit a Notice of Termination form (605-003)

ADDITIONAL COMMENTS

MEMORANDUM

DATE : July 8, 2005

TO : File

FROM : David Youngman
Environmental Programs Specialist

THROUGH : Rhonda Jeffries
Environmental Programs Manager

SUBJECT : Sherwood Construction – Closure Memorandum
Enforcement Case 1546

On February 4, 2005, an unannounced air quality full compliance evaluation was conducted at the Sherwood Construction Greenhill Materials rock crushing plant located in Rogers County, OK. As a result of the inspection a Level 3 Letter was issued on March 9, 2005.

Issue #1
As a result of the inspection on February 14, 2005, the inspectors learned that Greenhill Materials has not submitted any Annual Emissions Inventories.

The facility submitted the 2002, 2003, and 2004 Annual Emissions Inventories on May 9, 2005.

Issue #2
Information gathered during the inspection indicated that the facility did not conduct Reference Method 9 testing as required in Permit No. 99-034-O, Specific Condition 6.

The facility conducted Method 9 Visual Emissions Testing on March 14-16, 2005. The results were submitted to the DEQ on March 29, 2005.

Issue #3
At the time of the inspection, the facility was not recording the daily use of water for particulate matter control as required in Permit No. 99-034-O, Specific Condition 12.

On April 12, 2005, the facility submitted the new record used to record the daily use of water for particulate matter control, which the facility started recording on April 1, 2005.

Issue #4
Finally, the inspectors learned that the Facility has replaced the original screen with a 6' x 16' Cedar Rapids screen, added an 8' x 20' Simplicity wet screen, and added additional conveyors to transport crushed rock to rail cars. The DEQ records indicate that this

equipment was installed without obtaining either an applicability determination or a permit modification.

On June 2, 2005, the facility submitted a new permit application for the facility. Permit No. 2005-012-O is currently under administrative review.

No other compliance measures were required for this case and it is now closed.

RE: SECOND RESPONSE TO COMPLIANCE LETTER OF MARCH 9, 2005 GREENHILL MATERIALS SHERWOOD CONSTRUCTION LIMESTONE QUARRY.

Dear Ms. Jeffries:

Attached please find daily water usage report forms that our client, Greenhill Materials/Sherwood Construction has developed for its rock crushing operation. The Company will begin using the Crusher water record form upon installation of the water meter that has been ordered for this purpose.

We are proceeding with preparation of the construction permit application and the AEI's referenced in my letter of March 29, 2005. Per instructions from John Munro of your agency, these reports will be filed in hard copy format.

Please contact me at (Rbeeson@enercon.com) or 665-7693, ext. 317 if you or your staff have any questions.

Sincerely

ENERCON SERVICES, INC.

Randal J. Beeson
Senior Project Manager

RE: RESPONSE TO COMPLIANCE LETTER OF MARCH 9, 2005
GREENHILL MATERIALS SHERWOOD CONSTRUCTION LIMESTONE QUARRY.

Dear Ms. Jeffries:

Sherwood Construction has retained Enercon Services, Inc. as its consultant to address the deficiencies identified in your letter of March 9, 2005 to Mr. Shawn Roberts. Please note the following with respect to specific deficiencies:

1. **Annual Emission Inventories (AEIs), Reporting Years 2002 Through 2004:**

   As you are aware, the deadline for submitting RY2004 AEIs has been extended to April 29, 2004. Enercon will file Greenhill's RY2004 AEI no later than that date. We are requesting a 15-day extension (to May 14, 2005) for submittal of the RY2002 and RY2003 reports for the facility.

2. **Method 9 Visual Emission (VE) Testing:**

   Greenhill contracted with Air Hygiene to conduct Method 9 VE testing. This work has been completed and a copy of Air Hygiene's report showing compliance with Subpart OOO requirements is attached.

3. **Failure to Maintain Records of Daily Water Use:**

   Greenhill has been maintaining monthly records of plant water use. The Company will begin maintaining daily records as soon as a master form has been developed. A copy of this form will be submitted under separate cover.

4. **Screen Replacement and Addition of Process Equipment:**

   Greenhill has previously replaced one of the original screens. In addition several conveyors two radial stackers and a rail loadout facility have been added. Enercon will prepare and submit a Construction Permit Application to ODEQ-ROAT for these changes. We are requesting an extension from April 8, 2005 to April 30 2005 to complete and submit this application. Upon approval of the Construction Permit, Enercon will prepare and submit an updated Operating Permit Application.

Please contact me at (Rbeeson@enercon.com) or 665-7693, ext. 317 if you or your staff have any questions.

Sincerely

ENERCON SERVICES, INC.

Randal J. Beeson
Senior Project Manager

Stack Emissions Study
from the
Crusher and Conveyor Equipment
prepared for
Greenhill Materials
Owasso, Oklahoma
March 14-16, 2005

1.0 INTRODUCTION

Air Hygiene International, Inc. (Air Hygiene) has completed the stack sampling survey for opacity from the transfer points of the crusher and conveyor equipment, at Greenhill Materials's, Greenhill Materials Plant near Owasso, Oklahoma. This report details the background information, test results, process description, sampling/analysis methodology, and quality control/assurance activities of the stack sampling survey conducted on March 14-16, 2005.

1.1 TEST PURPOSE AND OBJECTIVES

The specific objective was to determine the visible emissions from the exhaust of Greenhill Materials's crusher and conveyor equipment, during normal operating conditions. This information will be used to confirm compliance with the air quality permit requirements.

1.2 SUMMARY OF TEST PROGRAM

The following list details pertinent information related to this specific project:

1.2.1 Participating Organizations:
- Oklahoma Department of Environmental Quality (ODEQ)
- Greenhill Materials
- Air Hygiene

1.2.2 Industry:
- Aggregate Processing

1.2.3 Plant Location:
- Greenhill Materials Plant near Owasso, Oklahoma

1.2.4 Equipment of Interest:
- Crusher and conveyor equipment

1.2.5 Emission points:
- Transfer points of the crusher and conveyor equipment

1.2.6 Pollutants to be Measured:
- Visible Emissions

1.2.7 Dates of Emission Test:
- March 14-16, 2005

1.3 KEY PERSONNEL

Greenhill Materials:	Shawn Roberts	918-625-3902
Air Hygiene:	Thomas Graham	918-307-8865

2.0 SUMMARY OF TEST RESULTS

2.1 EMISSION TEST RESULTS

Results from the sampling conducted at the Greenhill Materials Plant from the crusher and conveyor equipment, transfer points on March 14-16, 2005 are summarized in the following table.

TABLE 2.1
SUMMARY OF TEST RESULTS

Sample Point	Parameter				
	Average Opacity	Maximum Opacity	6 Minute Averages	6 Minute Maximum	Readings Above 10%

350' Belt to Rail Cars	0	0	0	0	0

3.0 SOURCE OPERATION

3.1 PROCESS DESCRIPTION

Trucks feed raw materials to a main crusher. The resulting crushed materials are transported on a conveyor system to other processes and storage piles. The entire process is wetted by use of a continuous misting system.

4.0 SAMPLING AND ANALYTICAL PROCEDURES

4.1 TEST METHODS

The emission tests on the crusher and conveyor equipment at the Greenhill Materials Plant was performed following EPA methods described by the Code of Federal Regulations, Title 40, Part 60, Appendix A. Table 4.1 below outlines the specific method performed on March 14-16, 2005.

TABLE 4.1
SUMMARY OF SAMPLING METHODS

Pollutant or Parameter	Sampling Method	Analysis Method
Opacity	EPA Method 9	Visual Observation

The sampling and analysis procedure used during these tests conforms in principle with the methods outlined in the Code of Federal Regulations (CFR), Title 40, Part 60, Appendix A, Method 9. Figure 4.1 depicts the sample points used for the opacity tests. A visual sample was taken at 15 second intervals for a period of 60 minutes at each emission point. All readings were then recorded on a field data sheet. Data records can be found in Appendix A and C of this report.

APPENDIX B

Quality Assurance Activities

QUALITY ASSURANCE PROGRAM SUMMARY

Air Hygiene ensures the quality and validity of its emission measurement and reporting procedures through a rigorous quality assurance (QA) program. The program is developed and administered by an internal QA team and encompasses five major areas:

1. QA reviews of reports, laboratory work, and field-testing
2. Equipment calibration and maintenance
3. Chain-of-custody
4. Training
5. Knowledge of current test methods

Each of these areas is discussed individually below.

QA Reviews

Air Hygiene's review procedure includes review of each source test report, along with laboratory and fieldwork, by the QA Team. The most important review is the one that takes place before a test program begins. The QA Team works closely with technical division personnel to prepare and review test protocols. Test protocol review includes selection of appropriate test procedures, evaluation of interferences or other restrictions that might preclude use of standard test procedures, and evaluation and/or development of alternate procedures.

Equipment Calibration and Maintenance

The equipment used to conduct the emission measurements is maintained according to the manufacturer's instructions to ensure proper operation. In addition to the maintenance program, calibrations are carried out on each measurement device according to the schedule outlined by the Environmental Protection Agency. Quality control checks are also conducted in the field for each test program.

Chain-of-Custody

Air Hygiene maintains full chain-of-custody documentation on all samples and data sheets. In addition to normal documentation of changes between field sample custodians, laboratory personnel, and field test personnel, Air Hygiene documents every individual who handles any test component in the field (e.g., probe wash, impinger loading and recovery, filter loading and recovery, etc.). Samples are stored in a locked area to which only Air Hygiene personnel have access. Field data sheets are secured at Air Hygiene's offices upon return from the field.

Training

Personnel's training is essential to ensure quality testing. Air Hygiene has formal and informal training programs, which include:

1. Attendance at EPA-sponsored training courses
2. Enrollment in EPA correspondence courses
3 A requirement for all technicians to read and understand Air Hygiene's QA manual
4. In-house training and QA meetings on a regular basis
5. Maintenance of training records

Knowledge of Current Test Methods

With the constant updating of standard test methods and the wide variety of emerging test procedures, it is essential that any qualified source tester keep abreast of new developments. Air Hygiene subscribes to services, which provide updates on EPA reference methods, rules, and regulations. Additionally, source test personnel regularly attend and present papers at testing and emission-related seminars and conferences. Air Hygiene personnel maintain membership in the Air and Waste Management Association and the American Industrial Hygiene Association.

VISIBLE EMISSIONS EVALUATOR

This is to certify that

Pandu Sattvika

met the specifications of Federal Reference Method 9 and qualified as a visible emissions evaluator. Maximum deviation on white and black smoke did not exceed 7.5% opacity and no single error exceeding 15% opacity was incurred during the certification test conducted by Eastern Technical Associates of Raleigh, North Carolina. This certificate is valid for six months from date of issue.

CERTIFIED MAIL, RETURN RECEIPT REQUESTED

Mr. Shawn Roberts, Plant Manager
Greenhill Materials Sherwood Construction
4716 N. 193rd E. Ave.
Catoosa, Oklahoma 74015

Re: February 4, 2005 Air Quality compliance evaluation at Greenhill Materials Sherwood Construction – Limestone Quarry.

Dear Mr. Roberts:

Enclosed is a copy of the report for the Air Quality compliance evaluation conducted on February 4, 2005, at the Limestone Quarry, located on Highway 266, Rogers County, Oklahoma. The inspector noted the following items of concern:

As a result of the inspection on February 14, 2005, the inspectors learned that Greenhill Materials has not submitted any Annual Emissions Inventories. OAC 252:100-5 states the following:

> **252:100-5-2.1. Emission inventory**
> (a) **Requirement to file an emission inventory.** Theowner or operator of any facility that is a source of air emissions shall submit a complete emission inventory annually on forms obtained from the Division.
>
> (1) **General requirements.** The inventory shall cover operations during a calendar year and shall be submitted prior to March 1 of the following year, unless the Division has granted a 30-day extension. An additional 30-day extension may be granted for good cause shown.

Information gathered during the inspection indicated that the facility did not conduct Reference Method 9 testing. Permit No. 99-034-O, Specific Condition 6 states the following:

> 6. The permittee shall notify the Agency in writing 5 working days before beginning the 2002 construction season. The permittee shall conduct opacity testing by Reference Method 9 for the primary crusher, pug mixer, each screen, and each transfer point of the conveyors (all as near as practical to equipment design capacity). This testing shall be finalized within 30 days after the beginning of the year 2002 construction season. The testing results shall be submitted to Air Quality within 10 working days after the required testing is completed as part of conditions of this operating permit.

At the time of the inspection, the facility was not recording the daily use of water for particulate matter control. Permit No. 99-034-O, Specific Condition 12 states the following:

12. The permittee shall keep records of operations as listed below. These records shall be retained on location or at a local field office for a period of at least two years following dates of recording, and shall be made available to regulatory personnel upon request.

(a) Throughput of the crusher (daily and 12 rolling).
(b) Throughput of the pug mixer (daily and 12 rolling).
(c) Hours of operation (daily and 12 rolling)
(d) Certification of sulfur content for each fuel delivery.
(e) Daily use of water used for PM control.

Finally, the inspectors learned that the Facility has replaced the original screen with a 6' x 16' Cedar Rapids screen, added an 8' x 20' Simplicity wet screen, and added additional conveyors to transport crushed rock to rail cars. The DEQ records indicate that this equipment was installed without obtaining either an applicability determination or a permit modification.

The Department requests your immediate attention be given to these deficiencies and requests that you take the appropriate steps necessary to rectify the problem, including submitting an Emissions Inventory, scheduling Method 9 testing, providing a copy of the daily water record, and submitting a permit modification within 30 days of receipt of this letter. A failure to rectify these deficiencies may result in further enforcement action.

The Department recognizes and appreciates your efforts to remain in compliance. Thank you for your continued diligence in these matters. If you have any questions regarding this matter or require assistance, please contact David Youngman of the Department at (918) 293-1618.

Sincerely,

Rhonda Jeffries, Environmental Programs Manager

SIC Code 1422

SITE CONTACTS/DEQ INSPECTION TEAM

On December 30, 2003, from 9:30 until 10:20, a full air quality compliance inspection was conducted at the above-referenced facility. David Youngman, an Environmental Programs Specialist with the Department of Environmental Quality, Air Quality Division, conducted the inspection. Mr. John Curtis, Plant Manager, represented the facility throughout the inspection. Credentials were properly presented upon arrival.

PERMIT HISTORY

Greenhill Materials Sherwood Construction operates a synthetic minor limestone rock quarry and crushing plant in Tulsa County. The facility was issued Construction Permit #99-034-C on October 5, 1999, to construct a new portable rock crushing plant. The Operating Permit #99-034-O was then issued on February 8, 2002.

FACILITY AND PROCESS DESCRIPTION

This facility does rock quarrying from virgin earth, rock crushing/sizing, pug mixing, and the necessary rock transporting. The quarried rock is trucked from the blasting area to the crusher area and stockpiled.

The stockpiled quarried rock is dumped into the crusher hopper using a diesel-powered front-end loader. The hopper feeds the primary jaw crusher at the maximum rate of 300 TPH. Conveyors B, C, and D take the crushed rock from the primary crusher to the secondary crusher (all conveyors are in-line conveyors in that they all transport the same amount of rock in series, continuously). Conveyor F takes 300 TPH to the screen. 50

TPH are screened "fall through" which goes to the radial shaker (the device that stock piles the crushed rock by size) via conveyors O, M, and N. There are two additional rock streams from the screen i.e., conveyors J, K, and L take 200 TPH to the "base rock" pile, and the other stream of 50 TPH goes back to the secondary crusher (needs further crushing) via conveyors H and I. These operations produce 300 TPH of stockpiled crushed rock. The front-end loaders then load the delivery trucks from the desired sized rock piles.

On customer demand, some of the crushed rock is run through the pug mixer. The portable Pug Mixer is nothing more than a diesel engine driven mixing operation where crushed rock is dumped into a hopper by a front-end loader. The rock is then conveyed to the mixer that contains the required amount of water. The purpose for this operation is to meet customer moisture specifications.

The rock crusher is designed to be "road portable" i.e., specific width and length after break down. In order for the crusher unit to meet the operational and road requirements, an unusual number of conveyors are necessary.

The facility operates an estimated 2,500 hours/year, and produces an estimated 750,000 TPY of crushed limestone. The pug mixer processes an estimated 500,000 TPY of the previously crushed rock.

The fuel for the diesel engines is stored in a 10,000 gallon, bottom fill tank located on-site.

EMISSIONS/SOURCE CLASSIFICATION

The facility is a synthetic minor source for PM10. The facility has failed to file an Emissions Inventory for 2002; the 2003 Emissions Inventory is not due until March 1, 2004.

APPLICABLE REGULATIONS AND RULES

OAC 252:100-1	General Provisions
OAC 252:100-3	Air Quality Standards and Increments
OAC 252:100-5	Registration, Emission Inventory and Annual Operating Fees
OAC 252:100-7	Permits for Minor Facilities
OAC 252:100-9	Excess Emission and Reporting Requirements
OAC 252:100-13	Open Burning
OAC 252:100-19	Control of Emission of Particulate Matter
OAC 252:100-25	Smoke, Visible Emissions, and Particulates
OAC 252:100-29	Control of Fugitive Dust
OAC 252:100-43	Sampling and Testing Methods

OAC 252:100-45 Monitoring of Emissions

ANNUAL COMPLIANCE CERTIFICATION
The facility does not have a TV permit and is not required to file an ACC.

COMPLIANCE HISTORY
The Facility has not had any previous air quality enforcement issues.

EXCESS EMISSIONS
The facility has not reported any occurrences of excess emissions.

SPECIFIC CONDITIONS/RECORD INSPECTION
1. Points of emission and emission limitations:

Equipment Activity[1]	Emissions		NSPS Applicable
	lb/hr	TPY	Yes/No
Feeder	0.005	0.006	Y
Jaw Crusher	0.14	0.18	Y
Impact Crusher	0.14	0.18	Y
Screen	0.45	0.56	Y
13 Conveyors	5.47	6.89	Y
Radial Stacker	0.21	0.26	Y
Radial Stacker	0.21	0.26	Y
Fugitives	31.35	39.20	N

(1) This includes the rock crusher and the pug mixer.

Diesel Engine Data	Bhp	Uncontrolled Emissions									
		NO_x		VOC		CO		SO_2		PM_{10}	
		lb/hr	TPY	lb/hr	TPY	lb/hr	TPY	lb/hr	TPY	lb/hr	TPY
J.Deere/ 4039T	95	1.58	1.97	0.02	0.02	0.06	0.07	0.32	0.40	0.64	0.80

The facility has not filed an emissions inventory, therefore it could not be determined if the facility is operating in compliance with this specific condition.

2. The permittee is authorized to operate the rock crusher at process weight rates up to but not to exceed 300 TPH ("working day" average) and 750,000 TPY.

The crusher production from January 1, 2003 to November 30, 2003, was 143,920 tons. The hourly average was 248.18 tons, indicating compliance with this specific condition.

3 The permittee is authorized to operate the pug mixer at process weight rates up to but not to exceed 300 TPH ("working day" average) and 500,000 TPY.

The pug mixer production from January 1, 2003 to November 30, 2003, was 58,940 tons. The hourly average was 101.62 tons, indicating compliance with this specific condition.

4. The permittee shall be authorized to operate this facility continuously (24 hours per day, every day of the year).

There is no compliance determination required for this specific condition.

5. Equipment/activities listed in Specific Condition #1 subject to NSPS Subpart OOO shall comply with the following opacity standards:

Hopper loading:	10 %
Primary crusher:	15 %
Second crusher:	15%
Screen:	10 %
Belt Conveyors:	10 %
Radial Stackers:	10 %

The crusher was not operating during the inspection; therefore no compliance determination could be made.

6. The permittee shall notify the Agency in writing 5 working days before beginning the 2002 construction season. The permittee shall conduct opacity testing by Reference Method 9 for the primary crusher, pug mixer, each screen, and each transfer point of the conveyors (all as near as practical to equipment design capacity). This testing shall be finalized within 30 days after the beginning of the year 2002 construction season. The testing results shall be submitted to Air Quality within 10 working days after the required testing is completed as part of conditions of this operating permit.

The results of the testing required by this specific condition could not be located in the DEQ files.

7. The diesel engine shall only use diesel fuel with a maximum sulfur content of 0.6%w.

On January 5, 2004, the facility provided some records requested during the inspection. Along with the information submitted, Mr. Curtis included the statement that a certificate of sulfur content would be forwarded to the inspector as soon as Greenhill Materials received it from the supplier. As of January 15, 2004, the facility has not provided a copy of the sulfur content of the diesel fuel, more information is needed to determine compliance.

8. Reasonable precautions shall be taken to minimize fugitive dust emissions from loading and unloading operations, roads, and stockpiles. These precautions shall include, but not be limited to:

a) Use of water or chemicals on roads, stockpiles, and materials during transfer operations.
b) Application of other coatings or coverings to substances susceptible to becoming air-borne or wind-borne.
c) Covering or wetting material in trucks.
d) Planting and maintaining vegetation coverings or windbreaks.
e) Locate stockpiles as to provide minimum exposure to high winds and avoid open spaces in line with neighboring homes and businesses.
f) All crusher spray bars should be fully operational when crusher is operating

The facility maintains a water truck and the roads appeared to be wet during the inspection, indicating compliance with this specific condition.

9. The permittee may relocate any portable sources covered under this permit by obtaining a relocation permit in accordance with OAC 252:100-7-17 prior to relocating the portable source to another site. Relocating of such a source without a relocation permit shall void this operating permit for that source and subject the new facility to stationary source permit requirements.

The facility has not relocated any of the equipment listed in this permit, indicating compliance with this specific condition.

10. An engine serial number or other acceptable form of permanent (non-removable) identification shall be on the engine.

The engine had a serial plate attached, indicating compliance with this specific condition.

11. Replacement (including temporary periods of up to six months for maintenance, etc.) of the internal combustion engine shown in this permit with an engine of lesser or equal emissions of each pollutant is authorized under the following conditions:

a. The permittee shall notify AQD in writing not later than 7 days in advance of the startup of replacement engines/turbines. Said notice shall identify the equipment removed and shall include the new engine/turbine make, model, and horsepower; date of the change, and any change in emissions.

b. The emissions limitations on any replacement engine shall not exceed the PPH rates of NOx and CO shown in SC 6.

The facility has not replaced any engines, indicating compliance with this specific condition.

12. The permittee shall keep records of operations as listed below. These records shall be retained on location or at a local field office for a period of at least two years following dates of recording, and shall be made available to regulatory personnel upon request.

(a) Throughput of the crusher (daily and 12 rolling).

The facility provided the crusher throughput from January 1, 2003 through November 30, 2003. The facility also provided weekly totals for the month of November but failed to provide daily records (Attachment A). More information is needed to determine compliance.

(b) Throughput of the pug mixer (daily and 12 rolling).

The facility provided the pug mixer throughput from January 1, 2003 through November 30, 2003, but failed to provide daily records (Attachment A). More information is needed to determine compliance.

(c) Hours of operation (daily and 12 rolling)

The facility provided the hours of operation from January 1, 2003 through November 30, 2003, but failed to provide daily records (Attachment A). More information is needed to determine compliance.

(d) Certification of sulfur content for each fuel delivery.

On January 5, 2004, the facility provided some records requested during the inspection. Along with the information submitted, Mr. Curtis included the statement that a certificate of sulfur content would be forwarded to the inspector as soon as Greenhill Materials received it from the supplier. As of January 15, 2004, the facility has not provided a copy of the sulfur content of the diesel fuel, indicating a violation of this condition.

(e) Daily use of water used for PM control.

The facility has not kept daily records for water use. The facility estimates that between 2 million and 2.5 million gallons of water was used for dust control, but this was not a record of daily use, indicating a violation of this condition (Attachment A).

FIELD INSPECTION

A physical inspection was made inside and outside the facility to further document the compliance status of the facility with federal and state air quality regulations as well as permit #99-034-O. Upon arrival at the facility the inspector introduced himself to Mr. John Curtis, Plant Manager, who explained that the facility was loading haul trucks but not operating the crushing plant during the holidays. Mr. Curtis proceeded to escort the inspector on a tour of the facility, including the feeder, jaw crusher, impact crusher, screen, conveyors, and radial stackers. Mr. Curtis then pointed out the wash facility that was installed three to four months prior to the inspection. The inspector then requested the records required by the permit. These included the January 1, 2003 through November 30, 2003, total throughput of the crusher, pug mixer, and the hours of operation. Additionally, the November 2003 daily records of the crusher throughput, pug mixer throughput, hours of operation and water usage for dust control were requested. Finally, the certification of the sulfur content for each fuel delivery was requested. Mr. Curtis

explained that the facility had not been recording the daily use of water and asked if he could have a few days to gather the records because the majority of the personnel were on vacation. Mr. Curtis and the inspector agreed to a record due date of January 8, 2004. When questioned about the facility not filing an Emissions Inventory, Mr. Curtis stated that Daryl Worrley would need to be contacted. The inspection concluded at 10:20.

SUMMARY

Greenhill Materials Sherwood Construction operates a rock quarry and crushing plant in Tulsa County. The facility has failed to file an annual Emissions Inventory for 2002, indicating a violation of OAC 100:252-5. Because of a lack of emissions data more information is required to determine compliance with Specific Condition 1. The testing results required for Specific Condition 6 could not be located in the DEQ facility files; therefore more information is needed to determine compliance. The facility is waiting on the certification for the sulfur content of the diesel fuel, indicating a violation of Specific Condition 12 (d). More information is needed to determine compliance with Specific Condition 7. The facility failed to provide the daily records of the crusher throughput, pug mixer throughput, and hours of operation; therefore, more information is needed to determine compliance with Specific Condition 12 (a), (b) and (c). Mr. Curtis stated that the facility did not record the daily usage of water to control particulate matter, indicating a violation of Specific Condition 12 (e). Finally, the facility added a new wash facility to the crushing plant without a permit modification, indicating a violation of 252:100-8-5 (c).

From: John Curtis

RE: 29 Dec 03 Inspection

David-

To follow up your visit to our operation, we supply the following requested information:

Crusher Output - For the calendar year, through the end of November 03, total crusher output = 143,920 tons. For the specific month of November 03, the total was 12,400 tons.

Pugmill output for the calendar year through November = 58,940 tons.

Hours of operation = crusher hours thru Nov = 580

November 03 crusher = 76 hours

Week 11/4 = 39 hours

Week 11/11 = 19 hours

Week 11/18 = 18 hours

Weeks 11/25 & 11/30 = 0

Water used for dust control: we estimate the annual use on haul roads and staging areas to be between 2 million and 2.5 million gallons. That is 75 watering days @ 4 tanker loads per day.

A certificate of sulfur content for fuel will be forwarded to you as soon as we receive it from the supplier

Please let us know what other information we can provide. - JC

OKLAHOMA DEPARTMENT OF ENVIRONMENTAL QUALITY
AIR QUALITY DIVISION

MEMORANDUM: February 17, 2005

TO: Inspection Files

THROUGH: Rhonda Jeffries, Environmental Program Manager

FROM: David Youngman, Environmental Programs Specialist

SUBJECT: Air Quality Compliance Inspection
Greenhill Materials Sherwood Construction
Limestone Quarry
Tulsa County, Oklahoma
Full Compliance Evaluation ID 02017
AIRS ID 143-00215
SIC Code 1422

SITE CONTACTS/DEQ INSPECTION TEAM

On February 4, 2005, from 10:05 until 11:15, a full air quality compliance inspection was conducted at the above-referenced facility. Brandie Carson and David Youngman, Environmental Programs Specialist with the Oklahoma Department of Environmental Quality, Air Quality Division, conducted the inspection. Credentials were properly presented upon arrival. Shawn Roberts, Plant Manager, represented the facility throughout the inspection. Daryl Worley represented the facility during phone conversations after the inspection.

PERMIT HISTORY

Greenhill Materials Sherwood Construction operates a synthetic minor limestone rock quarry and crushing plant in Tulsa County. The facility was issued Construction Permit #99-034-C on October 5, 1999, to construct a new portable rock crushing plant. The Operating Permit #99-034-O was then issued on February 8, 2002.

FACILITY AND PROCESS DESCRIPTION

This facility does rock quarrying from virgin earth, rock crushing/sizing, pug mixing, and the necessary rock transporting. The quarried rock is trucked from the blasting area to the crusher area and stockpiled.

The stockpiled quarried rock is dumped into the crusher hopper using a diesel-powered front-end loader. The hopper feeds the primary impact crusher at the maximum rate of 300 TPH. Conveyors B, C, and D take the crushed rock from the primary crusher to the

secondary crusher (all conveyors are in-line conveyors in that they all transport the same amount of rock in series, continuously). Conveyor F takes 300 TPH to the screen. 50 TPH are screened "fall through" which goes to the radial shaker (the device that stock piles the crushed rock by size) via conveyors O, M, and N. There are two additional rock streams from the screen i.e., conveyors J, K, and L take 200 TPH to the "base rock" pile, and the other stream of 50 TPH goes back to the secondary crusher (needs further crushing) via conveyors H and I. These operations produce 300 TPH of stockpiled crushed rock. The front-end loaders then load the delivery trucks from the desired sized rock piles. The facility added an 8' x 20' Simplicity wet screen in 2001, which follows the secondary crusher in the sequence. Additionally, the facility replaced the original screen with a 6' x 16' screen.

In late 2002, the facility replaced the portable Pug Mixer, which utilized the John Deer diesel engine, with permanent Davis Electric Pug Mill. On customer demand, some of the crushed rock is run through the pug mixer. The rock is then conveyed to the mixer that contains the required amount of water. The purpose for this operation is to meet customer moisture specifications.

The rock crusher is designed to be "road portable" i.e., specific width and length after break down. In order for the crusher unit to meet the operational and road requirements, an unusual number of conveyors are necessary. In addition to the conveyors listed in the permit, the facility built a conveyor system to the rail tracks to allow for the loading of rail cars.

The facility operates an estimated 2,500 hours/year, and produces an estimated 750,000 TPY of crushed limestone. The pug mixer processes an estimated 500,000 TPY of the previously crushed rock.

The fuel for the diesel engines is stored in a 10,000 gallon, bottom fill tank located on-site.

EMISSIONS/SOURCE CLASSIFICATION

Greenhill Materials is a synthetic minor source for PM. The facility has never filed an Annual Emissions Inventory.

APPLICABLE REGULATIONS AND RULES

OAC 252:100-1	General Provisions
OAC 252:100-3	Air Quality Standards and Increments
OAC 252:100-5	Registration, Emission Inventory and Annual Operating Fees
OAC 252:100-7	Permits for Minor Facilities
OAC 252:100-9	Excess Emission and Reporting Requirements
OAC 252:100-13	Open Burning
OAC 252:100-19	Control of Emissions of Particulate Matter
OAC 252:100-25	Smoke, Visible Emissions, and Particulates
OAC 252:100-29	Control of Fugitive Dust

OAC 252:100-31	Control of Emission of Sulfur Compounds
OAC 252:100-37	Control of Emission of Volatile Organic Compounds (VOCs)
OAC 252:100-43	Sampling and Testing Methods
OAC 252:100-45	Monitoring of Emissions

ANNUAL COMPLIANCE CERTIFICATION
The facility does not have a TV permit and is not required to file an ACC.

COMPLIANCE HISTORY
The Facility has not had any previous air quality formal enforcement issues.

EXCESS EMISSIONS
The facility has not reported any excess emissions.

SPECIFIC CONDITIONS/RECORD INSPECTION
1. Points of emission and emission limitations:

Equipment Activity[1]	Emissions		NSPS Applicable
	lb/hr	TPY	Yes/No
Feeder	0.005	0.006	Y
Jaw Crusher	0.14	0.18	Y
Impact Crusher	0.14	0.18	Y
Screen	0.45	0.56	Y
13 Conveyors	5.47	6.89	Y
Radial Stacker	0.21	0.26	Y
Radial Stacker	0.21	0.26	Y
Fugitives	31.35	39.20	N

(1) This includes the rock crusher and the pug mixer.

Diesel Engine Data	Bhp	Uncontrolled Emissions									
		NO_x		VOC		CO		SO_2		PM_{10}	
		lb/hr	TPY	lb/hr	TPY	lb/hr	TPY	lb/hr	TPY	lb/hr	TPY
J.Deere/ 4039T	95	1.58	1.97	0.02	0.02	0.06	0.07	0.32	0.40	0.64	0.80

The facility has not filed an emissions inventory as required by OAC 252:100-5, therefore it could not be determined if the facility is operating in compliance with this specific condition. The PorTec Pug Mixer was removed from the facility.

2. The permittee is authorized to operate the rock crusher at process weight rates up to but not to exceed 300 TPH ("working day" average) and 750,000 TPY.

The crusher production from January 1, 2004 to December 31, 2004, was 466,187 tons, indicating compliance with this specific condition (Attachment A).

3. The permittee is authorized to operate the pug mixer at process weight rates up to but not to exceed 300 TPH ("working day" average) and 500,000 TPY.

The pug mixer production from January 1, 2004 to December 31, 2004, was 9,943.54 tons, indicating compliance with this specific condition (Attachment B).

4. The permittee shall be authorized to operate this facility continuously (24 hours per day, every day of the year).

There is no compliance determination required for this specific condition.

5. Equipment/activities listed in Specific Condition #1 subject to NSPS Subpart OOO shall comply with the following opacity standards:

Hopper loading:	10 %
Primary crusher:	15 %
Second crusher:	15%
Screen:	10 %
Belt Conveyors:	10 %
Radial Stackers:	10 %

During onsite inspection, some opacity was observed at the Primary Crusher but subsided before a Method 9 could be conducted.

6. The permittee shall notify the Agency in writing 5 working days before beginning the 2002 construction season. The permittee shall conduct opacity testing by Reference Method 9 for the primary crusher, pug mixer, each screen, and each transfer point of the conveyors (all as near as practical to equipment design capacity). This testing shall be finalized within 30 days after the beginning of the year 2002 construction season. The testing results shall be submitted to Air Quality within 10 working days after the required testing is completed as part of conditions of this operating permit.

The facility has not performed this test. Mr. Daryl Worley stated that the company is scheduling the Reference Method 9 testing and will inform the DEQ when the dates are confirmed.

7. The diesel engine shall only use diesel fuel with a maximum sulfur content of 0.6%w.

The facility provided a copy of the most recent delivery of diesel fuel. The Bill of Lading (Attachment C) states that the sulfur content is equal to or less than 0.05% by weight, indicating compliance with this specific condition.

8. Reasonable precautions shall be taken to minimize fugitive dust emissions from loading and unloading operations, roads, and stockpiles. These precautions shall include, but not be limited to:

a) Use of water or chemicals on roads, stockpiles, and materials during transfer operations.
b) Application of other coatings or coverings to substances susceptible to becoming air-borne or wind-borne.
c) Covering or wetting material in trucks.
d) Planting and maintaining vegetation coverings or windbreaks.
e) Locate stockpiles as to provide minimum exposure to high winds and avoid open spaces in line with neighboring homes and businesses.
f) All crusher spray bars should be fully operational when crusher is operating

The facility maintains a water truck and the roads appeared to be wet during the inspection, indicating compliance with this specific condition.

9. The permittee may relocate any portable sources covered under this permit by obtaining a relocation permit in accordance with OAC 252:100-7-17 prior to relocating the portable source to another site. Relocating of such a source without a relocation permit shall void this operating permit for that source and subject the new facility to stationary source permit requirements.

The facility removed the old screen unit and the PorTec Pug Mixer; a relocation permit was not obtained for either piece of equipment.

10. An engine serial number or other acceptable form of permanent (non-removable) identification shall be on the engine.

The facility has removed the original PorTec Pug Mixer, but Mr. Roberts stated that the Primary Crusher continued to be powered by the Kolberg 3850. The serial number on the engine was not verified during the inspection do to the danger of the loading of the primary crusher.

11. Replacement (including temporary periods of up to six months for maintenance, etc.) of the internal combustion engine shown in this permit with an engine of lesser or equal emissions of each pollutant is authorized under the following conditions:

a. The permittee shall notify AQD in writing not later than 7 days in advance of the startup of replacement engines/turbines. Said notice shall identify the equipment removed and shall include the new engine/turbine make, model, and horsepower; date of the change, and any change in emissions.

b. The emissions limitations on any replacement engine shall not exceed the PPH rates of NOx and CO shown in SC 6.

The facility has not replaced any internal combustion engines, indicating compliance with this specific condition.

12. The permittee shall keep records of operations as listed below. These records shall be retained on location or at a local field office for a period of at least two years following dates of recording, and shall be made available to regulatory personnel upon request.

(a) Throughput of the crusher (daily and 12 rolling).

The facility provided the crusher throughput from January 1, 2004 through December 31, 2004, which included weekly and daily totals, indicating compliance with this condition (Attachment A).

(b) Throughput of the pug mixer (daily and 12 rolling).

The facility provided the pug mixer throughput from January 1, 2003 through November 30, 2003, which included weekly and daily totals, indicating compliance with this condition (Attachment B).

(c) Hours of operation (daily and 12 rolling)

Mr. Roberts stated that the total crushing hours for 2004 were 1,206 hours.

(d) Certification of sulfur content for each fuel delivery.

The facility provided a copy of the most recent delivery of diesel fuel. The Bill of Lading (Attachment C) states that the sulfur content is equal to or less than 0.05% by weight, indicating compliance with this condition.

(e) Daily use of water used for PM control.

The facility provided records of monthly water usage reports (Attachment D), but has not kept daily records for water use. Daryl Worley stated that facility personnel were creating a document to record this data in the future. Mr. Worley stated that a copy of the document would be provided to the DEQ when completed.

FIELD INSPECTION

A physical inspection was made inside and outside the facility to further document the compliance status of the facility with federal and state air quality regulations along with Permit No. 99-034-O. Upon arrival at the facility the inspectors presented proper credentials and were introduced to Mr. Shawn Roberts, the plant manager. After explaining the purpose of the inspection, Mr. Roberts escorted the inspectors on a tour of the facility. After pointing out the different equipment, Mr. Roberts stated that the facility replaced the original screen with a 6' x 16' Cedar Rapids screen, added an 8' x 20' Simplicity wet screen, and added a new conveyor to transport crushed rock to rail cars. While driving around the facility some opacity was noticed at the primary crusher but quickly subsided before a Method 9 could be conducted. The facility roads were wet

and no fugitive dust was observed. After touring the facility, the inspection party proceeded to Mr. Roberts office were the inspectors requested the records required by the permit. Mr. Roberts was able to provide the throughput of the crusher, pug mixer, and the hours of operation. He stated that Daryl Worley at the Sherwood offices would have the additional records. The inspection concluded at 11:15.

SUMMARY

The facility has failed to file an Annual Emissions Inventory, indicating a violation of OAC 252:100-5. Because the facility has not submitted an Emission Inventory, compliance with Specific Condition 1 could not be determined. The facility did not conduct Reference Method 9 testing, indicating a violation of Specific Condition 6. The original permitted screen and the PorTec Pug Mixer were both removed without a relocation permit, indicating that this equipment may be operating elsewhere without a permit. The facility has not been maintaining the daily use of water, indicating a violation of Specific Condition 12(e). Additionally, Mr. Roberts stated that the facility has replaced the original screen with a 6' x 16' Cedar Rapids screen, added an 8' x 20' Simplicity wet screen, and added a new conveyor to transport crushed rock to rail cars. This equipment was added without first obtaining a permit modification or applicability determination.

David, please find attached the most recent fuel purchase bill of lading.

Thanks
Daryl

; IS TO CERTIFY THAT THE HEREIN NAMED MATERIALS ARE
)PERLY CLASSIFIED, DESCRIBED, PACKAGED, MARKED AND
ELED, AND ARE IN PROPER CONDITION FOR TRANSPORTA-
N, ACCORDING TO APPLICABLE REGULATIONS OF THE D.O.T.

;HIPMENT INCLUDES UNLEADED GASOLINE THE PRODUCT
NTAINS NO MORE THAN 0.05 GRAMS OF LEAD PER GALLON
) NO MORE THAN 0.005 GRAMS OF PHOSPHOROUS PER GAL-
N CONFORMING TO E.P.A. REGULATIONS - 40 CFR 80 -.

CEIVED SUBJECT TO TARIFFS OR CONTRACT IN EFFECT THIS
TE.

E CARRIER CERTIFIES THAT THE CARGO TANK SUPPLIED FOR
IS SHIPMENT IS A PROPER CONTAINER FOR THE TRANSPOR-
TION OF THIS COMMODITY AS DESCRIBED BY THE SHIPPER.

E DRIVER BY SIGNING THIS TICKET HEREBY CERTIFIES THAT TRANSPORT
S LOADED AS SPECIFIED.

DEQ FORM 605-006

Oklahoma Department of Environmental Quality
Annual Comprehensive Site Compliance Evaluation Report for Industrial Facilities (ACSCER)

Submission of this Comprehensive Site Compliance Evaluation Report, Part B, provides notice that the party identified in Section I of this form is not required to conduct Benchmark Monitoring for storm water discharges associated with industrial activities under the OPDES program. This Annual Comprehensive Site Compliance Evaluation Report is required for all authorized industrial facilities.

All Requested Information Must Be Provided On This Form (Part A) and the ACSCER Form (Part B).

See Instructions On Page 4 of The Form.

Section I.

OPDES Permit Authorization Number: OKR 051574

Section II. Facility Operator Information

Name: Greenhill Concrete Products, Inc. Phone: 918-266-6861

Address: 5411 N. 145th E. Ave.

City: Owasso County: Rogers Zip Code: 74055

RECEIVED FEB 23 2012 DEQ

Section III. Facility Location

Name: Same as above Phone:

Address:

City: County: Zip Code:

Latitude: 36.232 deg N Longitude: 95.810 deg W

Section IV. Certification

I certify under penalty of law that I have read and understand the requirements for filing this Comprehensive Site Compliance Evaluation Report, which is to be filed by March 1st of each year beginning in 2012.

This report is also to be retained as part of the SWP3 for at least three (3) years from the date permit coverage expires or is terminated and will be made available to any State or Federal Inspector visiting this facility. All records of actions taken in accordance with 4.10 of this permit as part of the Storm Water Pollution Prevention Plan will be retained for at least three (3) years from the date permit coverage expires or is terminated. I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gathered and evaluated the information submitted. Based upon my inquiry of the person or persons who manage the system, or those persons directly involved in gathering the information, the information submitted is to the best of my knowledge and belief true, accurate, and complete. I am aware there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Print Name: Matt Ritchie Date: 2/20/12

Annual Comprehensive Site Compliance Evaluation Report - Part B
Page 1.

Reporting Period: January 1 to December 31, 2011

✓ How many routine facility inspections did you perform during the reporting period? 3

✓ How many corrective actions (Part 4.2.17.3) to remove the original violation and document these actions according to corrective action deadlines?

Date	Deficiencies	Corrected (Y or N)	Date Corrected
6/22/2011	Drums improperly stowed	Y	6/30/2011
6/22/2011, 9/27/2011	Containment maintenance	Y	11/20/2011
12/22/2011	Urea hose nozzle on ground	Y	12/28/2011

✓ What must you do to correct the deficiencies that remain uncorrected?

_____

_____

✓ Were all BMPs you indicated you would be using in your SWP3 (Part 4.2.8) including good housekeeping practices, actually being implemented at the time of the Annual Comprehensive Site Compliance Evaluation?
Yes X No_____

✓ If one or more BMPs were not being implemented, were corrective actions taken after the FIRST inspection to find the problem?
Yes _____ No_____ All BMPs were being implemented X

✓ Was/were the same failure(s) to implement a BMP deficiency(ies) noted in more than one inspection?
Yes X No_____ No deficiencies noted in any inspection _____

✓ Did any of your routine facility inspections find that one or more of your BMPs was not effective in controlling the pollutant source for which it was designed?
Yes _____ No X All BMPs were effective _____

✓ If you found one or more ineffective BMPs, have they all been replaced with an alternative or modified BMP?
Yes _____ No_____ All BMPs were being effective X

✓ Is there additional BMPs needed to address any conditions requiring corrective action?
Yes _____ No X

✓ At any time during the reporting period, did you discover any previously unidentified illicit discharges from your facility or previously unidentified pollutants in the existing discharges?
Yes _____ No X

✓ Have all illicit discharges (including any discovered in previous years) been eliminated or permitted?
Yes _____ No_____ Permit applied for _____ No known illicit discharges X

✓ Have any significant spills or leaks occurred at your facility during the reporting period?
Yes _____ No X

✓ If any significant spills or leaks occurred, did they result in either a dry weather discharge or an actual discharge of the spilled or leaked material commingled with storm water (as opposed to the spilled material being washed away by storm water?)
Yes _____ No X

Part B. Page 2

✓ If any significant spills or leaks occurred, did they result in more than the minimum amounts of material being discharged in storm water? Base your answer on your knowledge of the material you spilled or that leaked. The minimum amounts could vary with the nature (toxicity, oxygen demand, pH, etc.) of the spilled or leaked material from amounts left after normal "sweeping" type cleanup to the point at which even trace amounts left after cleanup could cause an environmental problem.
Yes _____ No__x__ No spills or leaks occurred_____

✓ Have all known spills or leaks been cleaned up or otherwise prevented from contaminating storm water that would be discharged under the authority of this permit?
Yes __x__ No_____ No spills or leaks occurred_____

✓ How many times did you visually monitor all your storm water discharges at all the facility outfalls during the reporting year, and document the condition of and around the outfalls, including flow dissipation measures to prevent scouring? (Count only those done in accordance with the procedures at Part 5.1 - Quarterly Visual Monitoring)
Yes __x__ No_____ Number of Visual Monitoring __2____

✓ Would the results of your visual monitoring indicate that there are pollutants in your storm water discharges that are not adequately controlled by your current BMPs?
Yes _____ No__x__

✓ If the results of your visual monitoring indicated a potential problem, was it due to one or more of the following?
1. New pollutant source (including exposure of previously unexposed material).
2. Failure to implement or maintain an existing BMP.
3. Less than expected performance from a BMP.
4. No BMP was selected to deal with that problem.
(5.) N/A (No problems identified)

✓ If your visual monitoring indicated a potential problem, what have you done to resolve the problem?
1. Eliminated exposure or pollutant source.
2. Modified existing BMPs.
3. Added a new BMP.
4. Plan to address problem by end of current reporting year.
5. Nothing planned.
(6.) N/A (No problems identified).

✓ Did any analysis of any element tested during any previous discharge monitoring period exceed the numeric limitation value?
Yes _____ No_____ NA _____

✓ If your answer to the previous question was "Yes", please name the element and the test results.

Element	Test Results	Element	Test Results
_____	_____	_____	_____
_____	_____	_____	_____
_____	_____	_____	_____

✓ Is there any required revisions to the SWP3 resulting from the inspection?
Yes _____ No__x__

See Page 4 for Instructions

Annual Comprehensive Site Compliance Evaluation Report - Part B
Page 1.

Reporting Period: 1/1/2012 - 12/31/2012.

✓ How many routine facility inspections did you perform during the reporting period? 3

✓ How many corrective actions (Part 4.2.17.3) to remove the original violation and document these actions according to corrective action deadlines?

Date	Deficiencies	Corrected (Y or N)	Date Corrected
3/19/2012	Used oil pallets draining to T01	Y	6/21/2012
6/22/2012	Form oil totes lack containment	Y	9/27/2012
9/28/2012	Two drums sitting on apron on west side of shop	Y	10/5/2012

✓ What must you do to correct the deficiencies that remain uncorrected?
Drum storage area on west side of shop needs to be eliminated.

✓ Were all BMPs you indicated you would be using in your SWP3 (Part 4.2.8) including good housekeeping practices, actually being implemented at the time of the Annual Comprehensive Site Compliance Evaluation?
Yes ____ No X

✓ If one or more BMPs were not being implemented, were corrective actions taken after the FIRST inspection to find the problem?
Yes X No____. All BMPs were being implemented ____

✓ Was/were the same failure(s) to implement a BMP deficiency(ies) noted in more than one inspection?
Yes X No____ No deficiencies noted in any inspection ____

✓ Did any of your routine facility inspections find that one or more of your BMPs was not effective in controlling the pollutant source for which it was designed?
Yes X No____ All BMPs were effective ____

✓ If you found one or more ineffective BMPs, have they all been replaced with an alternative or modified BMP?
Yes ____ No X All BMPs were being effective ____ Drum storage area on west side of shop will soon be eliminated.

✓ Is there additional BMPs needed to address any conditions requiring corrective action?
Yes X No____ Earthen containment walls for Form Oil totes need to be constructed.

✓ At any time during the reporting period, did you discover any previously unidentified illicit discharges from your facility or previously unidentified pollutants in the existing discharges?
Yes ____ No X

✓ Have all illicit discharges (including any discovered in previous years) been eliminated or permitted?
Yes ____ No____ Permit applied for ____ No known illicit discharges X

✓ Have any significant spills or leaks occurred at your facility during the reporting period?
Yes X No____

✓ If any significant spills or leaks occurred, did they result in either a dry weather discharge or an actual discharge of the spilled or leaked material commingled with storm water (as opposed to the spilled material being washed away by storm water?)
Yes ____ No X

Part B. Page 2

✓ If any significant spills or leaks occurred, did they result in more than the minimum amounts of material being discharged in storm water? Base your answer on your knowledge of the material you spilled or that leaked. The minimum amounts could vary with the nature (toxicity, oxygen demand, pH, etc.) of the spilled or leaked material from amounts left after normal "sweeping" type cleanup to the point at which even trace amounts left after cleanup could cause an environmental problem.
Yes _____ No_X_ No spills or leaks occurred_____

✓ Have all known spills or leaks been cleaned up or otherwise prevented from contaminating storm water that would be discharged under the authority of this permit?
Yes _X_ No_____ No spills or leaks occurred_____

✓ How many times did you visually monitor all your storm water discharges at all the facility outfalls during the reporting year, and document the condition of and around the outfalls, including flow dissipation measures to prevent scouring? (Count only those done in accordance with the procedures at Part 5.1 - Quarterly Visual Monitoring)
Yes _X_ No_____ Number of Visual Monitoring _1_____ Inability to sample was due to lack of rainfall and timing (nighttime precipitation.)

✓ Would the results of your visual monitoring indicate that there are pollutants in your storm water discharges that are not adequately controlled by your current BMPs?
Yes _____ No_X_

✓ If the results of your visual monitoring indicated a potential problem, was it due to one or more of the following?
1. New pollutant source (including exposure of previously unexposed material).
2. Failure to implement or maintain an existing BMP.
3. Less than expected performance from a BMP.
4. No BMP was selected to deal with that problem.
X5. N/A (No problems identified)

✓ If your visual monitoring indicated a potential problem, what have you done to resolve the problem?
1. Eliminated exposure or pollutant source.
2. Modified existing BMPs.
3. Added a new BMP.
4. Plan to address problem by end of current reporting year.
5. Nothing planned.
X6. N/A (No problems identified).

✓ Did any analysis of any element tested during any previous discharge monitoring period exceed the numeric limitation value?
Yes _____ No_____ NA

✓ If your answer to the previous question was "Yes", please name the element and the test results.

Element	Test Results	Element	Test Results

✓ Is there any required revisions to the SWP3 resulting from the inspection?
Yes _____ No_X_

Section IV. Certification

I certify under penalty of law that I have read and understand the requirements for filing this Comprehensive Site Compliance Evaluation Report, which is to be filed by March 1st of each year beginning in 2012.

This report is also to be retained as part of the SWP3 for at least three (3) years from the date permit coverage expires or is terminated and will be made available to any State or Federal Inspector visiting this facility. All records of actions taken in accordance with 4.10 of this permit as part of the Storm Water Pollution Prevention Plan will be retained for at least three (3) years from the date permit coverage expires or is terminated. I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gathered and evaluated the information submitted. Based upon my inquiry of the person or persons who manage the system, or those persons directly involved in gathering the information, the information submitted is to the best of my knowledge and belief true, accurate, and complete. I am aware there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

DEQ LCLS

Annual Comprehensive Site Compliance Evaluation Report - Part B
Page 1.

Reporting Period: 1/1/2011 to 12/31/2011.

✓ How many routine facility inspections did you perform during the reporting period? 3

✓ How many corrective actions (Part 4.2.17.3) to remove the original violation and document these actions according to corrective action deadlines?

Date	Deficiencies	Corrected (Y or N)	Date Corrected
6/22/2011	Housekeeping	Y	6/23/2011
9/28/2011	Housekeeping	Y	9/28/2011
12/28/2011	Housekeeping	Y	12/28/2011

✓ What must you do to correct the deficiencies that remain uncorrected?
NA. Note - Most housekeeping issues are related to truckers tossing trash as they drive past a dumpster on their way out of the quarry.

✓ Were all BMPs you indicated you would be using in your SWP3 (Part 4.2.8) including good housekeeping practices, actually being implemented at the time of the Annual Comprehensive Site Compliance Evaluation?
Yes Y No_____

✓ If one or more BMPs were not being implemented, were corrective actions taken after the FIRST inspection to find the problem?
Yes _____ No_____ All BMPs were being implemented X

✓ Was/were the same failure(s) to implement a BMP deficiency(ies) noted in more than one inspection?
Yes _____ No X No deficiencies noted in any inspection _____

✓ Did any of your routine facility inspections find that one or more of your BMPs was not effective in controlling the pollutant source for which it was designed?
Yes _____ No_____ All BMPs were effective X

✓ If you found one or more ineffective BMPs, have they all been replaced with an alternative or modified BMP?
Yes _____ No_____ All BMPs were being effective X

✓ Is there additional BMPs needed to address any conditions requiring corrective action?
Yes _____ No X

✓ At any time during the reporting period, did you discover any previously unidentified illicit discharges from your facility or previously unidentified pollutants in the existing discharges?
Yes _____ No X

✓ Have all illicit discharges (including any discovered in previous years) been eliminated or permitted?
Yes _____ No_____ Permit applied for _____ No known illicit discharges X

✓ Have any significant spills or leaks occurred at your facility during the reporting period?
Yes _____ No X

✓ If any significant spills or leaks occurred, did they result in either a dry weather discharge or an actual discharge of the spilled or leaked material commingled with storm water (as opposed to the spilled material being washed away by storm water?)
Yes _____ No X

Part B. Page 2

✓ If any significant spills or leaks occurred, did they result in more than the minimum amounts of material being discharged in storm water? Base your answer on your knowledge of the material you spilled or that leaked. The minimum amounts could vary with the nature (toxicity, oxygen demand, pH, etc.) of the spilled or leaked material from amounts left after normal "sweeping" type cleanup to the point at which even trace amounts left after cleanup could cause an environmental problem.
Yes _____ No_____ No spills or leaks occurred__x___

✓ Have all known spills or leaks been cleaned up or otherwise prevented from contaminating storm water that would be discharged under the authority of this permit?
Yes __x__ No_____ No spills or leaks occurred_____

✓ How many times did you visually monitor all your storm water discharges at all the facility outfalls during the reporting year, and document the condition of and around the outfalls, including flow dissipation measures to prevent scouring? (Count only those done in accordance with the procedures at Part 5.1 - Quarterly Visual Monitoring)
Yes __x__ No_____ Number of Visual Monitoring ___1___

✓ Would the results of your visual monitoring indicate that there are pollutants in your storm water discharges that are not adequately controlled by your current BMPs?
Yes _____ No__x__

✓ If the results of your visual monitoring indicated a potential problem, was it due to one or more of the following?
1. New pollutant source (including exposure of previously unexposed material).
2. Failure to implement or maintain an existing BMP.
3. Less than expected performance from a BMP.
4. No BMP was selected to deal with that problem.
5. N/A (No problems identified)

✓ If your visual monitoring indicated a potential problem, what have you done to resolve the problem?
1. Eliminated exposure or pollutant source.
2. Modified existing BMPs.
3. Added a new BMP.
4. Plan to address problem by end of current reporting year.
5. Nothing planned.
6. N/A (No problems identified).

✓ Did any analysis of any element tested during any previous discharge monitoring period exceed the numeric limitation value?
Yes _____ No_____ Not applicable since facility does not conduct dewatering and is not required to conduct Numeric Effluent Limitation Monitoring (NELM).

✓ If your answer to the previous question was "Yes", please name the element and the test results.

Element	Test Results	Element	Test Results

✓ Is there any required revisions to the SWP3 resulting from the inspection?
Yes __x__ No_____ Updated SWP3 to comply with new General Permit.

Re: Authorization for Storm Water Discharge from Industrial Activity(ies)
Authorization Number: OKR052212

Dear Mr Ritchie:

The new Notice of Intent (NOI) for the facility listed below was received on September 28, 2011 and processed by the Oklahoma Department of Environmental Quality. Enclosed is an authorization allowing you to discharge storm water associated with industrial activities under the terms and conditions in accordance with Oklahoma's OPDES Storm Water General Permit OKR05 for the following site located in Rogers County.

Facility:
GREENHILL MATERIALS CO INC - CATOOSA
14701 EAST 46TH ST NORTH
OWASSO, OK 74055

All applicable fees associated with this authorization have been paid.

Sites that remain active as of July 1, 2012 will be invoiced for the full permit year (July 1, 2012 - June 30, 2013).

If you have any questions regarding this permit or the Storm Water Program, please call Matthew Johnson of the Environmental Complaints and Local Services Division at (405) 702-6182.

Sincerely,

Matt Johnson

Environmental Complaints and Local Services

Enclosures

c: Claremore DEQ Office

Oklahoma Department of Environmental Quality
Authorization to Discharge Under the OPDES Storm Water Industrial General Permit OKR05

AUTHORIZATION NO. **OKR052212**

In compliance with the Oklahoma Pollution Discharge Elimination System (OPDES) Act 27A O.S. §2-6-201, the Rules of the Department of Environmental Quality (DEQ), and in reliance on the certified statements and representations heretofore made in its application,

Sherwood Construction Company, Inc.

PO Box 10

Catoosa, OK 74015

Is authorized to discharge storm water from an industrial site located in Rogers County at

Greenhill Materials Co Inc. - Catoosa

14701 East 46th St North

Owasso, OK 74055

The receiving body of water is Bird Creek.

This facility discharges into a 303(d) listed stream.

The OPDES requires permittees to have a Storm Water Pollution Plan (SWP3) which includes a description of appropriate control measures. These are applicable to your industrial site, which is subject to inspection. Proof of this authorization must be available at the facility.
The Authorization shall become effective **February 22, 2012** and will expire at midnight September 4, 2016.

All terms and conditions of the modified OPDES Storm Water Industrial General Permit OKR05, as published on September 5, 2011, shall apply to the recipient of this authorization.

Re: Authorization for Storm Water Discharge from Construction or Land Disturbing Activity
Authorization Number OKR100068

Dear Ed Kallay:

The new Notice of Intent (NOI) for the facility listed below was received on October 15, 2002 and processed by the Oklahoma Department of Environmental Quality. Enclosed is an authorization allowing you to discharge storm water associated with construction or land disturbing activities under the terms and conditions in accordance with Oklahoma's OPDES Storm Water General Permit OKR10 for the following site located in Tulsa County.

Facility: Greenhill Subdivision
4401 S Lewis Ave
Tulsa

All applicable fees associated with this initial authorization have been paid for the current permit period. The annual fee for a General Permit is $150.00. The annual fee covers the permit period July 1 – June 30.

If you have any questions regarding this permit or the Storm Water Program, please call Robert Huber of the Environmental Complaints and Local Services Division at (405) 702-6222.

Sincerely,

Robert Huber

DEQ FORM # 640-523 (Rev.09/12/2012)

ITEM NO.	CRITICAL ITEMS
*01	**Facility permitted: Authorization on file** – A Permit must be obtained that authorizes the discharge of storm water and an NOI must be on file
*02	**SWPPP developed**– Each construction or industrial facility must have a pollution plan developed.
*04	All applicable permit fees as established in OAC 252:606 have been paid - In accordance with 252:606-3-4 (d) and Part 1.3.1(3) of the OKR05 or Part 1.4.1(E) of the OKR10, applicants must pay the application fee and applicable permit fee to receive authorization
*05	**BMP properly implemented in accordance with SWP3** - Best management practices (sediment control measures, good housekeeping) must be implemented as stated in the SWP3.
*12	**Non-Allowable Discharges Prevented** – Facilities or activities are authorized for the discharges for which the general permit applies. Any discharges that are not compliant with the eligibility conditions of the general permit are not authorized by the general permit. Ineligible discharges must be permitted by an appropriate permit (individual or alternative) to be compliant.
*16	**Final Stabilization completed** – Site must be stabilized to within 70% of the original natural vegetative ground cover. If the original natural vegetative ground cover was 50% then the required vegetative stabilization required is 35% (.50 X .70 = .35); temporary erosion and sediment control measures have been removed or will be removed at an appropriate time to ensure final stabilization is maintained. This requirement is also for the termination of asphalt batch plants (Sector D) and concrete batch plants (Sector E) of the Industrial Storm Water Permit (OKR05).
*17	**Operations have ceased** - Facility is closed and no longer in operation or there is no further construction activity occurring.
*19	**Permitted discharges have ceased** – The facility may be in operation but the authorized activity is no longer in operation (e.g. have changed SIC or NAC code)
	NON-CRITICAL ITEMS
03	SWPPP posted at the construction or facility site or locally available
06	Silt barriers in place, effective and maintained – All barriers described in the SWP3 must maintained and effective in controlling sediment leaving the construction site.
07	Sediment basins (if required) adequate and maintained as required – Sediment basins must be adequate size (3600 cubic feet/acre) and maintained (cleaned out when storage capacity is reduced by 50%). Required if stated in SWP3 or site is greater than 10 acres without site constraints.
08	Inspection of BMPs at required frequency and documented – Owner/operators of construction sites are required to conduct inspections of the sediment control measures every 14 days, maintain records of the inspections and modify the SWPPP as needed. For industrial facilities, the frequency is determined by the SWPPP and is to be completed by qualified personnel. The SWPPP is to be updated within 14 days of the inspection. All results and corrective actions must be documented in the SWPPP.
09	Vegetation established on completed areas – As sections of a project are completed vegetative stabilization is initiated.
10	Offsite tracking of mud and sediment prevented – Offsite tracking of mud and sediment by construction vehicles to be prevented. Areas that have evidence of offsite tracking are to be cleaned.
11	Other control measures implemented – Other control measures as stated in the General Permit must be met to minimize solid material from entering waters of the state. No solid materials, including floatable debris may be discharged. Generation of dust must be minimized. Tracking or blowing of raw, final, or waste materials from areas of no exposure to exposed areas must be minimized.
13	The requirements and procedures for quarterly visual monitoring are applicable to all industrial facilities covered under the general storm water permit, regardless of the facility's sector or SIC code (except those that qualify for No Exposure). The requirements and procedures are found in part 5.1.1 of the general permit and the results must be documented and maintained onsite with the SWPPP.
14	NELM Reports submitted and maintained - Table 1-3 of Part 1.3 of the general permit identifies industrial storm water discharges subject to Numeric Effluent Limitation Monitoring (NELM). Industry specific numerical limitations and compliance monitoring requirements are described in Part 12 of the general permit. The requirements and procedures are found in Part 5.2 and the results must be documented and maintained onsite with the SWPPP, and submitted to the DEQ on a Discharge Monitoring Report (DMR).
15	An Annual Comprehensive Site Compliance Evaluation Report (ACSCER) must be completed by all industrial facilities covered by the general permit. The ACSCER must be filed during the period October 2 to October 1 each year and submitted to DEQ no later than December 1 and maintained with the SWPPP. The requirements for completing the ACSCER are found in Part 4.8 of the general permit.
18	Facility has met the final stabilization requirements under permit OKR10 and may submit a Notice of Termination form (605-003)

Total number of items marked: **0**

Number of critical items marked: **0**

NOTICE TO COMPLY BY:

____ / ____ / ____

ITEM NO.	CRITICAL ITEMS
*01	**Facility permitted: Authorization on file** – A Permit must be obtained that authorizes the discharge of storm water and an NOI must be on file
*02	**SWPPP developed**– Each construction or industrial facility must have a pollution plan developed.
*04	All applicable permit fees as established in OAC 252:606 have been paid - In accordance with 252:606-3-4 (d) and Part 1.3.1(3) of the OKR05 or Part 1.4.1(E) of the OKR10, applicants must pay the application fee and applicable permit fee to receive authorization
*05	**BMP properly implemented in accordance with SWP3** - Best management practices (sediment control measures, good housekeeping) must be implemented as stated in the SWP3.
*12	**Non-Allowable Discharges Prevented** – Facilities or activities are authorized for the discharges for which the general permit applies. Any discharges that are not compliant with the eligibility conditions of the general permit are not authorized by the general permit. Ineligible discharges must be permitted by an appropriate permit (individual or alternative) to be compliant.
*16	**Final Stabilization completed** – Site must be stabilized to within 70% of the original natural vegetative ground cover. If the original natural vegetative ground cover was 50% then the required vegetative stabilization required is 35% (.50 X .70 = .35); temporary erosion and sediment control measures have been removed or will be removed at an appropriate time to ensure final stabilization is maintained. This requirement is also for the termination of asphalt batch plants (Sector D) and concrete batch plants (Sector E) of the Industrial Storm Water Permit (OKR05).
*17	**Operations have ceased** - Facility is closed and no longer in operation or there is no further construction activity occurring.
*18	**Permitted discharges have ceased** – The facility may be in operation but the authorized activity is no longer in operation (e.g. have changed SIC or NAC code)
	NON-CRITICAL ITEMS
03	SWPPP posted at the construction or facility site or locally available
06	Silt barriers in place, effective and maintained – All barriers described in the SWP3 must maintained and effective in controlling sediment leaving the construction site.
07	Sediment basins (if required) adequate and maintained as required – Sediment basins must be adequate size (3600 cubic feet/acre) and maintained (cleaned out when storage capacity is reduced by 50%). Required if stated in SWP3 or site is greater than 10 acres without site constraints.
08	Inspection of BMPs at required frequency and documented – Owner/operators of construction sites are required to conduct inspections of the sediment control measures every 14 days, maintain records of the inspections and modify the SWPPP as needed. For industrial facilities, the frequency is determined by the SWPPP and is to be completed by qualified personnel. The SWPPP is to be updated within 14 days of the inspection. All results and corrective actions must be documented in the SWPPP.
09	Vegetation established on completed areas – As sections of a project are completed vegetative stabilization is initiated.
10	Offsite tracking of mud and sediment prevented – Offsite tracking of mud and sediment by construction vehicles to be prevented. Areas that have evidence of offsite tracking are to be cleaned.
11	Other control measures implemented – Other control measures as stated in the General Permit must be met to minimize solid material from entering waters of the state. No solid materials, including floatable debris may be discharged. Generation of dust must be minimized. Tracking or blowing of raw, final, or waste materials from areas of no exposure to exposed areas must be minimized.
13	The requirements and procedures for quarterly visual monitoring are applicable to all industrial facilities covered under the general storm water permit, regardless of the facility's sector or SIC code (except those that qualify for No Exposure). The requirements and procedures are found in part 5.1.1 of the general permit and the results must be documented and maintained onsite with the SWPPP.
14	NELM Reports submitted and maintained - Table 1-3 of Part 1.3 of the general permit identifies industrial storm water discharges subject to Numeric Effluent Limitation Monitoring (NELM). Industry specific numerical limitations and compliance monitoring requirements are described in Part 12 of the general permit. The requirements and procedures are found in Part 5.2 and the results must be documented and maintained onsite with the SWPPP, and submitted to the DEQ on a Discharge Monitoring Report (DMR).
15	An Annual Comprehensive Site Compliance Evaluation Report (ACSCER) must be completed by all industrial facilities covered by the general permit. The ACSCER must be filed during the period October 2 to October 1 each year and submitted to DEQ no later than December 1 and maintained with the SWPPP. The requirements for completing the ACSCER are found in Part 4.8 of the general permit.

OPDES FORM 605-002B		Oklahoma Department of Environmental Quality (DEQ) Notice of Intent (NOI) for Storm Water Discharges Associated With INDUSTRIAL ACTIVITIES Under the OPDES Multi-sector Industrial General Permit OKR05

Submission of this Notice of Intent constitutes notice that the party identified in Section I of this form intends to be authorized by the DEQ for storm water discharges associated with industrial activity in the State of Oklahoma. Becoming a permittee obligates such discharger to comply with the terms and conditions of the permit. IN ORDER TO OBTAIN AUTHORIZATION, ALL REQUESTED INFORMATION MUST BE PROVIDED ON THIS FORM. SEE INSTRUCTIONS ON BACK OF THE FORM.

☐ NEW APPLICATION ☑ MODIFICATION OF CURRENT PERMIT Enter previous permit authorization number, if any: OK R051574

I. Facility Owner/Operator Information

Name: Sherwood Construction Company, Inc. Phone: 918-266-6861

Mailing Address: P.O. Box 10 Status of Owner/Operator: P

City: Catoosa State: OK Zip Code: 74015 - Email Address: mattr@greenhill-concrete.com

II. Site Information

Name of the Facility: Greenhill Concrete Products, Inc.

Location of Facility: 5411 N. 145th E. Ave.

City: Owasso Zip Code: 74055 -

Latitude: 36.232 deg N Longitude: 95.810 deg W County: Rogers

III. Facility Activity

MS4 Operator: NA

Receiving Water Body: Unnamed Ephemeral Tributary of Bird Creek

Is the receiving water body on the DEQ 303(d) impaired water list? ☐ Yes ☑ No

SIC or Designated Activity Code and Sector Primary : 3273 Sector: E Secondary : Sector:

Is your SWP3 developed? ☑ Yes ☐ No Are you required to submit Discharge Monitoring Reports ? N (Yes) or (No)

ENDANGERED SPECIES ELIGIBILITY

a. ☑ My facility is not located in or draining to Federal and State sensitive waters and watersheds.

b. ☐ My facility is located in or drains to Federal and State sensitive waters and watersheds and I agree to implement the control measures specified in Step 2 of Exhibit 1.

c. ☐ I am relying on another permittee's certification of eligibility and agree to comply with any conditions attached to that certification.

IV. Certification: All Applicants:

I certify under penalty of law that I have read and understand Part 1.2 of the permit eligibility requirements for coverage under the Storm Water Multi-Sector Industrial General Permit, including those requirements relating to the protection of endangered or threatened species or critical habitat, Exhibit 1. Furthermore, this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gathered and evaluated the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations. I understand that continued coverage under the Storm Water Multi-Sector Industrial General Permit is contingent upon maintaining eligibility as provided for in Part 1.2

Subject: RE: noi form

Julie,

I apologize for the delay in my getting back to you on this as I have been out of town. Our intent is to renew permit number OKR051574, not to permit a new site. The location has not changed, but the established address is 5411 N. 145th E. Ave. Please let me or Randy Beeson know if you need anything else.

Thanks,
Matt Ritchie

Subject: noi form

Hi Matt,

Im looking at your NOI for the renewal of your storm water permit, the OKR051574 number on your form pulls up site address 5600 N 145th East Ave in our database. The address you wrote on the form does not match. (5411 N 145th E Ave). Also the Facility name is not the same. Are you trying to renew permit OKR051574 or do you need a new permit for a new site? Please clarify what you are needing so we can start the review process.

Thank you,
Julie Seese 405-702-6116

Form Approved OMB Number: 2025-0009

(IMPORTANT: Type or print; read instructions before completing form) Approval Expires: 11/30/2017

EPA	FORM R	TRI Facility IO Number
		7412WGRNHL4912S
United States Environmental Protection Agency	Section 313 of the Emergency Planning and Community Right-to-know Act of 1986, also known as Title III of the Superfund Amendments and Reauthorization Act.	Toxic Chemical, Category or Generic Name
		Nitrate compounds

WHERE TO SEND COMPLETED FORMS:	1. TRI Data Processing Center P.O.Box 1513 Lanham, MD 20703-1513 ATTN: TOXIC CHEMICAL RELEASE INVENTORY	2. APPROPRIATE STATE OFFICE (See instructions in Appendix F)

This section only applies if you are revising or withdrawing a previously submitted form, otherwise leave blank:	Revision (enter up to two code(s)) [ ] [ ]	Withdrawal (enter up to two code (s)) [ ] [ ]

Important: See Instructions to determine when "Not Applicable (NA)" boxes should be checked.

Part I. FACILITY IDENTIFICATION INFORMATION

SECTION 1. REPORTING YEAR : 2011

SECTION 2. TRADE SECRET INFORMATION

2.1 Are you claiming the toxic chemical identified on page 2 trade secret?	2.2 Is this copy	
[ ] Yes (Answer question 2.2;Attach substantiation forms) [X] NO (Do not answer 2.2; Go to Section 3)	[ ] Sanitized [ ] Unsanitized (Answer only if "YES" in 2.1)	

SECTION 3. CERTIFICATION (Important: Read and sign after completing all form sections.)

I hereby certify that I have reviewed the attached documents and that, to the best of my knowledge and belief, the submitted information is true and complete and that the amounts and values in this report are accurate based on reasonable estimates using data available to the preparers of this report.

Name and official title of owner/operator or senior management official:	Signature:	Date Signed:
VP Materials		4/26/2012

SECTION 4. FACILITY IDENTIFICATION

4.1		TRI Facility IO Number	7412WGRNHL4912S

Facility or Establishment Name	Facility or Establishment Name or Mailing Address(if different from street address)	
Greenhill Concrete Products, Inc. Portable Concrete Plant	Greenhill Concrete Products, Inc. Portable Concrete Plant	
Street 4912 S. Elwood Avenue	Mailing Address	
City/County/State/Zip Code Tulsa/Tulsa/OK/741267412	City/State/Zip Code Catoosa/OK/74015	Country (Non-US)

4.2	This report contains information for : (Important: check a or b; check c or d if applicable)	a. [X] An Entire facility	b. [ ] Part of a facility	c. [ ] A Federal facility	d. [ ] GOCO

4.3	Technical Contact name	MATT RITCHIE	Email Address MATTR@GREENHILLCONCRETE.COM		Telephone Number (include area code) (918) 266-6861		
4.4	Public Contact name	JOHN CURTIS	Email Address JOHNC@SHERWOODOKLAHOMA.COM		Telephone Number (include area code) (918) 266-6861		
4.5	NAICS Code (s)	a. 327320 (Primary)	b.	c.	d.	e.	f.

4.6	Dun and Bradstreet Number(s) (9 digits)	a. NA
		b.

SECTION 5. PARENT COMPANY INFORMATION

5.1	Name of Parent Company	SHERWOOD CONSTRUCTION CO INC	Parent Company Name Not Standard []	No U.S. Parent Company (for TRI Reporting purposes)	NA [ ]
5.2	Parent Company's Dun & Bradstreet Number	NA [ ]	NA		

EPA Form 9350-1 (Rev. 06/2014) - Previous editions are obsolete.

1 , 2 , 3 , 4 , 5 Return to Facility Detail

EPA FORM R PART II. CHEMICAL - SPECIFIC INFORMATION	TRI Facility ID Number 7412WGRNHL4912S Toxic Chemical, Category or Generic Name Nitrate compounds

SECTION 1. TOXIC CHEMICAL IDENTITY (Important DO NOT complete this section if you completed Section 2 below.)

1.1	CAS Number (Important: Enter only one number exactly as it appears on the Section 313 list. Enter category code if reporting a chemical category.) N511
1.2	Toxic Chemical or Chemical Category Name (Important: Enter only one name exactly as it appears on the Section 313 list.) Nitrate compounds
1.3	Generic Chemical Name (Important: Complete only if Part I, Section 2.1 is checked "yes". Generic Name must be structurally descriptive). NA
1.4	Distribution of Each Member of the Dioxin and Dioxin-like Compounds Category. (If there are any numbers in boxes 1-17, then every fieid must be filled in with either 0 or some number between 0.01 and 100. Distribution shouid be reported in percentages and the total should equal 100%. If you do not have speciation data available, indicate NA.)

	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17
NA []	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0

SECTION 2. MIXTURE COMPONENT IDENTITY (Important: DO NOT complete this section if you completed Section 1 above.)

2.1	Generic Chemical Name Provided by Supplier (Important: Maximum of 70 characters, including numbers, spaces, and punctuation.)

SECTION 3. ACTIVITIES AND USES OF THE TOXIC CHEMICAL AT THE FACILITY (Important: Check all that apply.)

3.1	Manufacture the toxic chemical:	3.2	Process the toxic chemical:	3.3	Otherwise use the toxic chemical:
	a. [ ] Produce b. [ ] Import				

If produce or import:		
c. [ ] For on-site use/processing d. [ ] For sale/distribution e. [ ] As a byproduct f. [ ] As an impurity	a. [ ] As a reactant b. [ ] As a formulation component c. [ ] As an article component d. [ ] Repackaging e. [ ] As an impurity	a. [X] As a chemical processing aid b. [ ] As a manufacturing aid c. [ ] Ancillary or other use

SECTION 4. MAXIMUM AMOUNT OF THE TOXIC CHEMICAL ONSITE AT ANY TIME OURING THE CALENDAR YEAR

4.1	[03] (Enter two-digit code from instruction package.)

SECTION 5.QUANTITY OF THE TOXIC CHEMICAL ENTERING EACH ENVIRONMENTAL MEDIUM ONSITE

			A. Total Release (pounds/year*) (Enter range code or estimate**)	B. Basis of Estimate (enter code)	C. % From Stormwater
5.1	Fugitive or non-point air emissions	NA [X]			
S.2	Stack or point air emissions	NA [X]			
5.3	Discharges to receiving streams or water bodies (enter one name per box)	NA [ ]			
	Stream or Water Body Name	Reach Code (optional)			
5.3.1					
5.3.2					
5.3.3					
If additional pages of Part II, Section 5.3 are attached, indicate the total number of pages in this box [ ] and indicate the Part II, Section 5.3 page number in this box. [ ] (example: 1,2,3, etc.)					

*For Oioxin and Oioxin-like Compounds, report in grams/year

EPA Form 9350-1 (Rev. 06/2014) - Previous editions are obsolete.

**Range Codes: A=1-10 pounds; B=11-499 pounds; C=500-999 pounds.

DEQ FORM 605-006 Sept. 5, 2011

Oklahoma Department of Environmental Quality
Annual Comprehensive Site Compliance Evaluation Report for Industrial Facilities (ACSCER)

Submission of this Comprehensive Site Compliance Evaluation Report, Part B, provides notice that the party identified in Section I of this form is not required to conduct Benchmark Monitoring for storm water discharges associated with industrial activities under the OPDES program. This Annual Comprehensive Site Compliance Evaluation Report is required for all authorized industrial facilities.

All Requested Information Must Be Provided on This Form (Part A) and the ACSCER Form (Part B).
See Instructions On Page 4 of The Form.

Section I.
OPDES Permit Authorization Number: ~~OKR050659~~ OKR051059

Section II. Facility Operator Information

Name: Limco-Airepair, Inc. Phone: (918) 445-4300

Address: 5304 South Lawton Ave.

City: Tulsa County: Tulsa Zip Code: 74107

Section III. Facility Location

Name: Limco-Airepair, Inc. Phone: (918) 445-4300

Address: 5304 South Lawton Ave.

City: Tulsa County: Tulsa Zip Code: 74107

Latitude: 39.0516 N Longitude: 96.0003 W

Section IV. Certification

I certify under penalty of law that I have read and understand the requirements for filing this Comprehensive Site Compliance Evaluation Report, which is to be filed by March 1 st of each year beginning in 2007.

This report is also to be retained as part of the SWP3 for at least three (3) years from the date permit coverage expires or is terminated and will be made available to any State or Federal Inspector visiting this facility. All records of actions taken in accordance with 4.10 of this permit as part of the Storm Water Pollution Prevention Plan will be retained for at least three (3) years from the date permit coverage expires or is terminated. I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gathered and evaluated the information submitted. Based upon my inquiry of the person or persons who manage the system, or those persons directly involved in gathering the information, the information submitted is to the best of my knowledge and belief true, accurate, and complete. I am aware there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Annual Comprehensive Compliance Site Evaluation Report - Part B
Page 1.

Reporting Period: 2014

✓ How many routine facility inspections did you perform during the reporting period? 4

✓ How many corrective actions (Part 4.2.17.3) to remove the original violation and document these actions according to corrective action deadlines?

Date	Deficiencies	Corrected (Y or N)	Date Corrected
	None		

✓ What must you do to correct the deficiencies that remain uncorrected?

✓ Were all BMPs you indicated you would be using in your SWP3 (Part 4.2.8) including good housekeeping practices, actually being implemented at the time of the annual Comprehensive Site Compliance Evaluation?
Yes ☒ No ☐

✓ If one or more BMPs were not being implemented, were corrective actions taken after the FIRST inspection to find the problem?
Yes ☐ No ☐ All BMPs were being implemented ☒

✓ Was/were the same failure(s) to implement a BMP deficiency(ies) noted in more than one inspection?
Yes ☐ No ☐ No deficiencies noted in any inspection ☒

✓ Did any of your routine facility inspections find that one or more of your BMPs was not effective in controlling the pollutant source for which it was designed?
Yes ☐ No ☐ All BMPs were effective ☒

✓ If you found one or more ineffective BMPs, have they all been replaced with an alternative or modified BMP?
Yes ☐ No ☐ All BMPs were being effective ☒

✓ Is there additional BMPs needed to address any conditions requiring corrective action?
Yes ☐ No ☒

✓ At any time during the reporting period, did you discover any previously unidentified illicit discharges from your facility or previously unidentified pollutants in the existing discharges?
Yes ☐ No ☒

✓ Have all illicit discharges (including any discovered in previous years) been eliminated or permitted?
Yes ☐ No ☐ Permit applied for ☐ No known illicit discharges ☒

✓ Have any significant spills or leaks occurred at your facility during the reporting period?
Yes ☐ No ☒

✓ If any significant spills or leaks occurred, did they result in either a dry weather discharge or an actual discharge of the spilled or leaked material commingled with storm water (as opposed to the spilled material being washed away by storm water?)
Yes ☐ No ☒

Part B. Page 2

✓ If any significant spills or leaks occurred, did they result in more than the minimum amounts of material being discharged in storm water? Base your answer on your knowledge of the material you spilled or that leaked. The minimum amounts could vary with the nature (toxicity, oxygen demand, pH, etc.) of the spilled or leaked material from amounts left after normal "sweeping" type cleanup to the point at which even trace amounts left after cleanup could cause an environmental problem.

Yes ☐ No ☐ No spills or leaks occurred ☒

✓ Have all known spills or leaks been cleaned up or otherwise prevented from contaminating storm water that would be discharged under the authority of this permit?

Yes ☐ No ☐ No spills or leaks occurred ☒

✓ How many times did you visually monitor all your storm water discharges at all the facilities during the reporting year, and document the condition of and around the outfalls, including flow dissipation measures to prevent scouring? (Count only those done in accordance with the procedures at Part 5.1 - Quarterly Visual Monitoring)

Yes ☐ No ☐ Number 4

✓ Would the results of your visual monitoring indicate that there are pollutants in your storm water discharges that are not adequately controlled by your current BMPs?

Yes ☐ No ☒

✓ If the results of your visual monitoring indicated a potential problem, was it due to one or more of the following? 5 - N/A

1. New pollutant source (including exposure of previously unexposed material).
2. Failure to implement or maintain an existing BMP.
3. Less than expected performance from a BMP.
4. No BMP was selected to deal with that problem.
5. N/A (No problems identified)

✓ If your visual monitoring indicated a potential problem, what have you done to resolve the problem? 6 - N/A

1. Eliminated exposure or pollutant source.
2. Modified existing BMPs.
3. Added a new BMP.
4. Plan to address problem by end of current reporting year.
5. Nothing planned.
6. N/A (No problems identified).

✓ Did any analysis of any element tested during any previous discharge monitoring period exceed the numeric limitation value?

Yes ☐ No ☒

✓ If your answer to the previous question was "Yes", please name the element and the test results.

Element	Test Results	Element	Test Results
N/A	N/A	N/A	N/A

✓ Is there any required revisions to the SWP3 resulting from the inspection?

Yes ☐ No ☒

See Page 4 for Instructions

Section IV. Certification

I certify under penalty of law that I have read and understand the requirements for filing this Comprehensive Site Compliance Evaluation Report, which is to be filed by March 1 st of each year beginning in 2007.

This report is also to be retained as part of the SWP3 for at least three (3) years from the date permit coverage expires or is terminated and will be made available to any State or Federal Inspector visiting this facility. All records of actions taken in accordance with 4.10 of this permit as part of the Storm Water Pollution Prevention Plan will be retained for at least three (3) years from the date permit coverage expires or is terminated. I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gathered and evaluated the information submitted. Based upon my inquiry of the person or persons who manage the system, or those persons directly involved in gathering the information, the information submitted is to the best of my knowledge and belief true, accurate, and complete. I am aware there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Annual Comprehensive Compliance Site Evaluation Report - Part B
Page 1.

Reporting Period: 2008.

✓ How many routine facility inspections did you perform during the reporting period? 4

✓ How many total deficiencies in implementing your SWP3 and complying with your permit were noted in any inspection?

Date	Deficiencies	Corrected (Y or N)	Date Corrected
12-31-2008	Drums stored outside of containment	Yes	1-30-2009

✓ What must you do to correct the deficiencies that remain uncorrected?
NA

✓ Were all BMPs you indicated you would be using in your SWP3 (Part 4.2.8) including good housekeeping practices, actually being implemented at the time of the annual Comprehensive Site Compliance Evaluation?
Yes ☐ No ☒

✓ If one or more BMPs were not being implemented, were corrective actions taken after the FIRST inspection to find the problem?
Yes ☒ No ☐ All BMPs were being implemented ☐

✓ Was/were the same failure(s) to implement a BMP deficiency(ies) noted in more than one inspection?
Yes ☐ No ☐ No deficiencies noted in any inspection ☒

✓ Did any of your routine facility inspections find that one or more of your BMPs was not effective in controlling the pollutant source for which it was designed?
Yes ☐ No ☐ All BMPs were effective ☒

✓ If you found one or more ineffective BMPs, have they all been replaced with an alternative or modified BMP?
Yes ☐ No ☐ All BMPs were being effective ☒

✓ At any time during the reporting period, did you discover any illicit discharges from your facility?
Yes ☐ No ☒

✓ Have all illicit discharges (including any discovered in previous years) been eliminated or permitted?
Yes ☐ No ☐ Permit applied for ☐ No known illicit discharges ☒

✓ Have any significant spills or leaks occurred at your facility during the reporting period?
Yes ☐ No ☒

✓ If any significant spills or leaks occurred, did they result in either a dry weather discharge or an actual discharge of the spilled or leaked material commingled with storm water (as opposed to the spilled material being washed away by storm water?)
Yes ☐ No ☒

Part B. Page 2

✓ If any significant spills or leaks occurred, did they result in more than the minimum amounts of material being discharged in storm water? Base your answer on your knowledge of the material you spilled or that leaked. The minimum amounts could vary with the nature (toxicity, oxygen demand, pH, etc.) of the spilled or leaked material from amounts left after normal "sweeping" type cleanup to the point at which even trace amounts left after cleanup could cause an environmental problem.
Yes ☐ No ☐ No spills or leaks occurred ☒

✓ Have all known spills or leaks been cleaned up or otherwise prevented from contaminating storm water that would be discharged under the authority of this permit?
Yes ☐ No ☐ No spills or leaks occurred ☒

✓ How many times did you visually monitor all your storm water discharges during the reporting year? (Count only those done in accordance with the procedures at Part 5.1 - Quarterly Visual Monitoring)
Number 4

✓ Would the results of your visual monitoring indicate that there are pollutants in your storm water discharges that are not adequately controlled by your current BMPs?
Yes ☐ No ☒

✓ If the results of your visual monitoring indicated a potential problem, was it due to one or more of the following? 5 - N/A
1. New pollutant source (including exposure of previously unexposed material).
2. Failure to implement or maintain an existing BMP.
3. Less than expected performance from a BMP.
4. No BMP was selected to deal with that problem.
5. N/A (No problems identified)

✓ If your visual monitoring indicated a potential problem, what have you done to resolve the problem? 6 - N/A
1. Eliminated exposure or pollutant source.
2. Modified existing BMPs.
3. Added a new BMP.
4. Plan to address problem by end of current reporting year.
5. Nothing planned.
6. N/A (No problems identified).

✓ Did any analysis of any element tested during any previous discharge monitoring period exceed the numeric limitation value?
Yes ☐ No ☒

✓ If your answer to the previous question was "Yes", please name the element and the test results.

IV. Certification

I certify under penalty of law that I have read and understand the requirements for filing this Comprehensive Site Compliance Evaluation Report and report which is to be filed within sixty (60) days of the end of each permit year.

This report is also to be retained as part of the SWP3 for at least three (3) years from the date permit coverage expires or is terminated and will be made available to any State or Federal Inspector visiting this facility. All records of actions taken in accordance with 4.10 of this permit as part of the Storm Water Pollution Prevention Plan will be retained for at least three (3) years from the date permit coverage expires or is terminated. I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gathered and evaluated the information submitted. Based upon my inquiry of the person or persons who manage the system, or those persons directly involved in gathering the information, the information submitted is to the best of my knowledge and belief true, accurate and complete. I am aware there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Annual Comprehensive Compliance Site Evaluation Report - Part B

Page 1.

Reporting Period: Oct. '00 - Oct. '01.

✓ How many routine facility inspections did you perform during the reporting period? 3

✓ How many total deficiencies in implementing your SWP3 and complying with your permit were noted in any inspection?

Date	Deficiencies	Corrected (Y or N)	Date Corrected
None			

✓ What must you do to correct the deficiencies that remain uncorrected?

N/a

✓ Were all BMPs you indicated you would be using in your SWP3 (Part 4.2.7.2) including good housekeeping practices, actually being implemented at the time of the annual Comprehensive Site Compliance Evaluation?

Yes ✓ No_____

✓ If one or more BMPs were not being implemented, were corrective actions taken after the FIRST inspection to find the problem?

Yes _____ No_____ All BMPs were being implemented ✓

✓ Was/were the same failure(s) to implement a BMP deficiency(ies) noted in more than one inspection?

Yes _____ No_____ No deficiencies noted an any inspection ✓

✓ Did any of your routine facility inspections find that one or more of your BMPs was not effective in controlling the pollutant source for which it was designed?

Yes _____ No_____ All BMPs were effective ✓

✓ If you found one or more ineffective BMP, have they all been replaced with an alternative or modified BMP?

Yes _____ No_____ All BMPs were being effective ✓

✓ At any time during the reporting period, did you discover any illicit discharges from your facility?

Yes _____ No ✓

✓ Have all illicit discharges (including any discovered in previous years) been eliminated or permitted?

Yes _____ No_____ Permit applied for _____ No known illicit discharges ✓

✓ Have any significant spills or leaks occurred at your facility during the reporting period?

Yes _____ No ✓

✓ If any significant spills or leaks occurred, did they result in either a dry weather discharge or an actual discharge of the spilled or leaked material commingled with storm water (as opposed to the spilled material being washed away by storm water?

Yes _____ No N/a

RECEIVED

NOV 16 2001

WATER QUALITY DIVISION

Part B. Page 2

✓ If any significant spills or leaks occurred, did they result in more than the minimum amounts of material being discharged in storm water? Base your answer on your knowledge of the material you spilled or that leaked. The minimum amounts could vary with the nature (toxicity, oxygen demand, pH, etc.) of the spilled or leaked material from amounts left after normal "sweeping" type cleanup to the point at which even trace amounts left after cleanup could cause an environmental problem.
Yes _____ No_____ No spills or leaks occurred ✓

✓ Have all known spills or leaks been cleaned up or otherwise prevented form contaminating storm water that would be discharged under the authority of this permit?
Yes _____ No_____ No spills or leaks occurred ✓

✓ How many times did you visually monitor all your storm water discharges during the reporting year? (Count only those done in accordance with the procedures at Part 5.1.1 - Quarterly visual Monitoring)
Number 0 - no rain events were available during business hours.

✓ Would the results of your visual monitoring indicate that there are pollutants in your storm water discharges that are not adequately controlled by your current BMPs?
Yes _____ No n/a

✓ If the results of your visual monitoring indicated a potential problem, was it due to one or more of the following?
1. New pollutant source (including exposure of previously unexposed material).
2. Failure to implement or maintain an existing BMP.
3. Less than expected performance from a BMP.
4. No BMP was selected to deal with that problem.
(5) N/A (No problems identified)

✓ If your visual monitoring indicated a potential problem, what have you done to resolve the problem?
1. Eliminated exposure or pollutant source.
2. Modified existing BMP.
3. Added new BMP.
4. Plan to address problem by end of current reporting year.
5. Nothing planned.
(6) N/A (No problems identified).

✓ Did any analysis of any element tested during any previous discharge monitoring period exceed the numeric limitation value?
Yes _____ No_____ n/a

✓ If your answer to the previous question was "Yes", please name the element and the test results.

Oklahoma Department of Environmental Quality
Authorization to Discharge Under the OPDES Storm Water Industrial General Permit OKR05

AUTHORIZATION NO. **OKR051059**

In compliance with the Oklahoma Pollution Discharge Elimination System (OPDES) Act 27A O.S. §2-6-201, the Rules of the Department of Environmental Quality (DEQ), and in reliance on the certified statements and representations heretofore made in its application,

Limco Airepair Inc

5304 South Lawton Ave

Tulsa, OK 74107

Is authorized to discharge storm water from an industrial site located in **Tulsa** County at
Limco Airepair Inc
5304 South Lawton Ave
Tulsa, OK 74107

The receiving body of water is Mooser Creek.
This facility discharges into a 303(d) listed stream.
This facility discharges into an aquatic resource of concern.

The OPDES requires permittees to have a Storm Water Pollution Prevention Plan (SWP3) which includes a description of appropriate control measures. These are applicable to your industrial site, which is subject to inspection. Proof of this authorization must be available at the facility.
The Authorization shall become effective **February 3, 2014** and will expire at midnight September 4, 2016.

All terms and conditions of the OPDES Storm Water Industrial General Permit OKR05, as published on September 5, 2011, shall apply to the recipient of this authorization.

Authorization Number OKR051059

Dear TRACY CALLEN:

The new Notice of Intent (NOI) for the facility listed below was received on July 28, 2006 and processed by the Oklahoma Department of Environmental Quality. Enclosed is an authorization allowing you to discharge storm water associated with industrial activities under the terms and conditions in accordance with Oklahoma's OPDES Storm Water General Permit OKR05 for the following site located in TULSA County.

Facility: LIMCO AIREPAIR INC
5304 S LAWTON AVE
TULSA, Oklahoma

THIS FACILITY DISCHARGES INTO A 303(d) LISTED STREAM.
This Facility Discharges to an Aquatic Resource of Concern.

All applicable fees associated with this authorization have been paid.

If you have any questions regarding this permit or the Storm Water Program, please call Matt Pace of the Environmental Complaints and Local Services Division at (405) 702-6222.

Sincerely,

Matt Pace
Storm Water Unit
Environmental Complaints and Local Services

c: Rick Austin, DEQ Regional Manager
Regional Office at Tulsa
Scott Van Loo, NPDES Coordinator, City of Tulsa

Oklahoma Department of Environmental Quality
Authorization to Discharge Under the OPDES Storm Water Industrial General Permit OKR05

AUTHORIZATION NO. OKR051059

In compliance with the Oklahoma Pollution Discharge Elimination System (OPDES) Act 27A O. S. §2-6-201, the Rules of the Department of Environmental Quality (DEQ), and in reliance on the certified statements and representations heretofore made in its application,

LIMCO AIREPAIR INC
5304 S LAWTON AVE
TULSA, OK 74017

Is authorized to discharge storm water from an Industrial site located in TULSA County at:

LIMCO AIREPAIR INC
5304 S LAWTON AVE
TULSA, Oklahoma

The receiving body of water is MOOSER CREEK THEN TO ARKANSAS RIVER.
THIS FACILITY DISCHARGES INTO A 303(d) LISTED STREAM.
This Facility Discharges to an Aquatic Resource of Concern.
The OPDES requires permittees to have a Storm Water Pollution Prevention Plan (SWP3) which includes a description of appropriate sediment control measures. These are applicable to your Industrial site, which is subject to inspection. Proof of this authorization must be available at the facility.

The Authorization shall become effective 8/25/2006 and will expire at midnight on May 2, 2011.

All terms and conditions of the modified OPDES Storm Water Industrial General Permit OKR05, as published on May 3, 2006, shall apply to the recipient of this authorization.

Re: Notice of Intent

Please find enclosed the Notice of Intent for Limco Airepair International, Inc. located in Tulsa, Oklahoma. Limco Airepair manufactures, remanufactures, and repairs aircraft heat exchangers. The facility's mailing address is 5304 S. Lawton, Tulsa, OK 74107. Limco Airepair's SIC code is 3728 placing the facility in Sector AB. A pollution prevention plan has been prepared for the facility and is on-site. A copy of the NOI and permit authorization will be sent to the City of Tulsa.

Please note that a NOI has already been submitted for this company; however, the NOI was dated October 1 and was not the current form. This submission is intended to replace the original submission.

Please feel free to contact me at (918) 355-1342 if there are any questions regarding this Notice of Intent.

RE: Storm Water Pollution Prevention Plan
LIMCO-AIREPAIR, INC

Dear Bill Williams:

The storm water pollution prevention plan (SWP3) submitted for the above-referenced industrial facility is incomplete. Based on the review of our staff, the SWP3 does not meet one or more of the minimum requirements listed in Part 4 of the OKR05 General Permit. Please submit to our office a revised SWP3 that addresses the following deficiency (ies) within seven (7) working days, **April 4, 2012**.

1. Provide a general location map that identifies the nearest receiving waters within one mile of the facility.
2. Provide a map identifying the following:
   - the size of the property in acres
   - the location of significant structures and impervious surfaces;
   - directions of storm water flow;
   - locations of all existing structural BMP's;
   - locations of surface waters on or adjacent to the facility, indicating if any of the waters are impaired and, if so, whether the waters have TMDL's established for them;
   - locations of all storm water conveyances including ditches, pipes and swales;
   - locations of potential pollutant sources and where significant materials are exposed to storm water;
   - locations of where significant spills or leaks have occurred;
   - locations of all storm water monitoring points;
   - municipal separate storm sewer systems, where your storm water discharges to them;
   - locations of storm water inlets and outfalls and an approximate outline of the area draining to each outfall;
   - location and description of all non-storm water discharges;
   - locations of where the following are located and exposed: fueling stations; vehicle and equipment maintenance and/or cleaning areas; loading/unloading areas; locations used for treatment, storage or disposal of wastes; liquid storage tanks; processing and storage areas; access roads, rail lines used by carriers of materials/products; the location of any transfer area for substance in bulk; and machinery;
   - location and source of run-on to your site from adjacent property that contains significant quantities of pollutants.
3. Your SWP3 must include a *signed* certification that all discharges have been tested or evaluated for the presence of non-storm water. Please see Part 4.2.12 of the OKR0S General Permit.
4. Documentation of permit eligibility related to TMDL. See Part 4.2.14 of the OKR05 General Permit. Please note that the facility discharges to an impaired water.
5. Provide an emergency spill response plan that identifies the following: personnel responsible for implementing the plan in the event of a spill (include names, titles, and contact information), the

number for the local authorities, the DEQ 24 hour complaints hotline number, the number for the National Spill Response Center, the name and number of an environmental cleanup company and the immediate procedures for cleanup/containment of both small and large spills.

6. Your SWP3 must be consistent (and updated as necessary to remain consistent) with applicable, municipal, or local storm water, waste disposal, sanitary sewer or septic system regulations to the extent these apply to your facility.
7. A schedule must be included which describes the inspection practices that will be used to ensure that control measures are working effectively. *Monthly* inspection shall be conducted for areas of the facility with significant activities.

Once the complete and revised SWP3 is received by our office, the DEQ reserves the right to further review the completeness of your application and request additional information if necessary. DEQ will not issue an authorization without the requested information. Please note, discharges that occur without coverage under the General Permit for Industrial Activities (OKR05) are in violation.

Information not received by the indicated deadlines or non-responsiveness to our request may result in your application being referred for enforcement.

If you have any questions, please contact me at (405) 702-6167.

Sincerely,

Amber McIntyre

Re: Authorization for Storm Water Discharge from Industrial Activity(ies)
Authorization Number: OKR051059

Dear BILL WILLIAMS

The new Notice of Intent (NOI) for the facility listed below was received on December 8, 2011 and processed by the Oklahoma Department of Environmental Quality. Enclosed is an authorization allowing you to discharge storm water associated with industrial activities under the terms and conditions in accordance with Oklahoma's OPDES Storm Water General Permit OKR05 for the following site located in Tulsa County.

Facility:
LIMCO AIREPAIR INC
5304 SOUTH LAWTON AVE
TULSA, OK 74107

All applicable fees associated with this authorization have been paid.

Sites that remain active as of July 1, 2014 will be invoiced for the full permit year (July 1, 2014 - June 30, 2015).

If you have any questions regarding this permit or the Storm Water Program, please call Matthew Johnson of the Environmental Complaints and Local Services Division at (405) 702-6182.

Storm Water Pollution Prevention Plan Goal

1.0 Purpose

The purpose of Limco Airepair International's Storm Water Pollution Prevention Plan (PPP) is to control or eliminate the discharge of storm water pollutants from facility property. Limco Airepair's primary SIC of 3728 requires this business to obtain a storm water permit and prepare a pollution prevention plan. Limco Airepair desires to ensure that the facility site is not contributing to storm water pollution and has prepared this pollution prevention plan in accordance with the rules and regulations of the Oklahoma Multi-Sector General Permit and Sector AB. The facility will conduct periodic inspections of facility property and will conduct quarterly visual evaluations as required by this plan.

Pollution Prevention Team and Responsibilities

2.0 Pollution Prevention Plan Team Members

Pollution prevention team meetings will be held periodically to ensure that all portions of the pollution prevention plan are being implemented including visual monitoring and periodic inspections.

The pollution prevention team is responsible for the following:

- **Implementing** all general permit and pollution prevention plan requirements.
- **Defining** and agreeing upon an appropriate set of goals for the facility's storm water management program.
- **Being aware** of any changes that are made in plant operations to determine whether any changes must be made to the Storm Water Pollution Prevention Plan.
- **Maintaining** a clear line of communication with plant management to ensure a cooperative partnership.

The Pollution Prevention Plan Team Roster is on the following page.

POLLUTION PREVENTION TEAM MEMBER ROSTER	
Leader: Dan Kraft	**Title:** Executive Vice President-Sales
	Phone: (918) 445-4300
Responsibilities: Implement the pollution prevention plan and ensure that employee training is conducted. Conduct quarterly visual sampling. Ensure periodic inspections are conducted, and follow-up on and make any needed repairs on items noticed during periodic or other inspections. Maintain all records pertaining to the storm water permit or plan.	
Member: Tracy Callan	**Title:** EHS Coordinator
	Phone: (918) 445-4302
Responsibilities: Follow the pollution prevention plan, and fill in for the team leader in his absence. Conduct inspections of chemical inventories. Be a member of the spill response team.	
Member: Roy Cameron	**Title:** Clean Line Operator
	Phone: (918) 445-4300
Responsibilities: Follow the pollution prevention plan, and conduct periodic inspections. Be a member of the spill response team.	
Spill Response Coordinator: Tracy Callan	**Title:** EHS Coordinator
	Phone: (918) 445-4302
Responsibilities: Ensure that procedures are developed for isolating, containing, and cleaning up any spills or releases of Section 313 Water Priority Chemicals or any other pollutant. Also, establish and implement reporting procedures for when spills or releases occur.	

Limco Airepair International Site Assessment

3.0 Facility Information

Limco Airepair International, Inc. owns approximately 5 acres of land on which one permanent building sits with a total of 170,000 ft^2. The facility began operations at this site in 1995. Prior to this date, the facility was owned and operated by an oil field tooling shop. A YMCA is located to the south of the facility, a wood pallet manufacturer to the west, and Pepsi is located to the east and north of the facility.

A facility layout has been prepared that identifies the locations where storm water is discharged from the facility (outfalls), possible pollutant sources, and drainage patterns on facility property. This map is located in Appendix 1. Structural storm water control measures, locations of past significant spills or releases, nearby water bodies, storm water runoff with significant potential for causing soil erosion, and locations of exposed significant materials or industrial activities, if present, are shown on this layout.

3.1 Municipal Separate Storm Sewer Systems & Receiving Waters

Limco Airepair's storm water is discharged to storm drains located throughout the facility and a creek. Therefore, this facility's storm water is discharged into the City of Tulsa's Municipal Separate Storm Sewer System. The receiving water for this portion of the system is Mooser Creek and ultimately the Arkansas River. The City of Tulsa requires that documentation proving that a Notice of Intent was filed with the Oklahoma Department of Environmental Quality be sent to them by certified mail.

3.2 Possible Pollutants and Potential Impact

A facility audit was conducted on July 19, 2006 for the purpose of gathering information to design a facility layout, identifying possible sources of storm water pollution, identifying structural and nonstructural controls existing at the facility, and identifying Best Management Practices in place at the facility. As a result of the audit, the following list of exposed significant material was developed. The potential sources of pollution listed below have been assigned

to different categories of risk to storm water including low, moderate, and high.

- Sand blasting sheds - moderate,
- Miscellaneous metal storage - moderate,
- Scrap metal container – moderate,
- Wood pallets and/or crates - low,
- Hazardous waste 90-day storage area – moderate,
- Plant vehicle traffic - moderate, and
- Plant trash dumpsters - moderate.
- Flammable liquid storage area – moderate.

The materials stored outside during the past three years consist of the same materials currently stored outside. A material storage list is located in Appendix 6.

3.3 Pollutants of Concern as Identified with Pollutant Sources

The pollutants of concern associated with the items identified in the previous section are as follows:

- Sand blasting sheds – Storm water contamination with particulate matter, metals, and metal oxides if of concern.
- Miscellaneous metal storage – There are two possible sources of pollution regarding metal storage. First, if the pH of the rain is acidic, the possibility of polluting storm water with metals and metal oxides exists. Second, any oil and grease or material left on or in the metal like cutting fluids from use or manufacture is of concern for storm water pollution.
- Scrap metal container – In addition to possible contamination of storm water with metals, metal oxides, oil and grease, and cutting fluids, particulate matter contamination is likely.
- Wood pallets and/or crates – There is a possibility of contamination of storm water with any materials that have been spilled on pallets during use and before outside storage.
- Hazardous waste storage area – The possibility for contamination of storm water with organic solvents and paints is a possibility in this

area. A newly installed roof over the area will reduce the likelihood and severity.

- Flammable liquid storage area – The possibility for contamination of storm water with organic solvents and paints is a possibility in this area. A newly installed roof over the area will reduce the likelihood and severity.

- Plant vehicle traffic – The possibility exists of contaminating storm water with oil and grease, antifreeze, hydraulic fluid, etc. from plant vehicles.

- Plant trash dumpsters – Storm water can be contaminated with particulate matter and various other materials from items disposed of in the plant dumpster.

3.4 Description of Facility Operations

Limco Airepair conducts manufacturing, remanufacturing, and repair of heat exchangers for aircraft. The heat exchangers are made primarily from aluminum, stainless steel, and copper. The manufacturing process consists of grinding, welding, polishing, machining, dip cleaning, painting, etc. The equipment is put into wooden crates and stored inside the facility prior to shipping.

3.5 Facility Storage and Shipping/Receiving Areas

There is one outside storage area at Limco Airepair's facility. It is designated as the South Storage Area. Most raw material storage takes place inside the facility building or inside sheds located outside. Manufacturing operations take place inside the facility building and inside the outdoor sheds. Plant vehicles travel through all areas of the facility. The following materials are stored in the South Storage Area.

South Storage Area: The items located in this storage area consist of plant trash dumpsters, a scrap metal container, the 90-day hazardous waste accumulation point, flammable liquid storage, wood pallets, miscellaneous metal, various wood crates, and sheds for storage and sand blasting operations.

Most materials are loaded and unloaded through the loading docks greatly minimizing contact of storm water with materials. However, wood crates and metals must occasionally be unloaded outside and brought into the facility via forklift. The shipping and receiving areas are located on the east and south sides of the facility.

3.6 Management of Materials

Limco Airepair is a large quantity generator of hazardous waste. This waste is generated from the painting process, clean line operations, and solvent cleaning operations and is removed from the facility at least once every 90 days by Perma-Fix Treatment Services. The waste is stored in the 90-day accumulation area until removal. The storage area is equipped with concrete secondary containment capable of containing 110% of the volume of one drum. Spill equipment will be kept handy.

Scrap metal is generated from this facility. One scrap metal accumulation container is located in the South Storage Area. The types of scrap metal generated include stainless steel, aluminum, and copper. The facility also has two plant trash dumpsters and one cardboard accumulation container. Waste Management removes the trash as needed, and Borg removes the scrap metal from the facility approximately once every forty-five days.

This facility has a wastewater treatment process located inside the facility building. This operation removes metals and adjusts the pH of water from the clean line operations. The sludge from the system is disposed of in accordance with all waste rules and regulations, and the facility has an Industrial Wastewater Discharge permit from the City of Tulsa.

3.7 Structural and Nonstructural Storm Water Control Methods

Limco Airepair has several structural control measures in place in addition to nonstructural methods. Structural measures at the facility consist of an enclosed room for the air compressors, covered loading/unloading docks, and conveyances for storm water. Several sheds have been put in place for outside storage. Most of the facility (80%) consists of asphalt and gravel. The remaining 20% consists of grass. The roof is equipped with downspouts, and there are several storm drains on the facility property. Other structural methods consist of filters on exhaust air from the paint booth and blasting booth.

Another structural method is the containment for the hazardous waste accumulation area. Any storm water that is trapped in this area is evaluated for any signs of potential pollution. If there is any evidence that the water is contaminated, it will be drummed up and sent off-site for proper disposal. A form documenting these inspections is located in Appendix 3.

Nonstructural methods consist of a general policy of inside storage and parking of plant vehicles inside the facility building when not in use. Plant vehicles are maintained inside the facility building or at an off-site location.

3.8 Spills or Leaks

Limco Airepair has not had any spills of any significance in the past three years as documented on the form in Appendix 2. The most likely place for a spill at the facility is inside the facility at the clean line operations, the solvent degreasing operations, and wastewater treatment operations, and outside of the facility at the waste accumulation point. It is highly unlikely that any spilled material would reach facility outfalls. The drainage point for these areas would be Outfalls 1 and 2. More information regarding spills can be found in Section 4 of this plan.

3.9 Sampling Data

Limco Airepair has documented previous inspections of storm water at facility outfalls. These records can be found on file at the facility. The facility will institute a storm water visual monitoring program as a requirement of this plan.

3.10 Non-Storm Water Discharge Evaluation

Since non-storm water discharges are prohibited by the storm water permit except those authorized in Part 1.2.4, a visual evaluation was conducted of the facility to ensure that these types of discharges were not occurring. The evaluation was conducted on July 19, 2006 and consisted of a walking inspection of all facility property and outfalls. At the time of the inspection, no non-storm water discharges were observed, but possible discharges are listed below. The facility does use process water, but the water is used inside the facility building and is discharged to the sanitary sewer.

Possible non-storm water discharges from the facility include only uncontaminated air conditioning and compressor condensate and potable line flushing from the fire suppression system and fire hydrants.

Best Management Practices

4.0 Purpose of Best Management Practices

Oklahoma's Multi-Sector General Permit requires the incorporation of the following Best Management Practices (BMPs) into the pollution prevention plan: (A) Good Housekeeping, (B) Minimizing Exposure, (C) Preventive Maintenance, (D) Spill Prevention and Response Procedures, (E) Routine Facility Inspections, (F) Employee Training, (G) Sediment and Erosion Control, and (H) Management of Runoff. These BMPs are discussed in the following sections.

4.1 Good Housekeeping

Good housekeeping practices are designed to maintain a clean and orderly work environment. Often the most effective first step towards preventing pollution in storm water from industrial sites involves merely using good common sense to improve the facility's basic housekeeping methods. The following are some simple procedures that have been incorporated into an effective good housekeeping program:

- **Improve** operation and maintenance of industrial machinery and processes.
- **Implement** careful material storage practices.
- **Maintain** up-to-date material inventory.
    - Identify all chemical substances present in the workplace.
    - Label all containers showing name and type of substance, stock number, etc.
- **Schedule** routine cleanup operations and regular garbage and waste material pickups.
- **Maintain** well-organized work areas.
- **Train** employees about good housekeeping practices.

- **Conduct** routine inspections for leaks and conditions of drums, tanks, and container.

4.2 Minimizing Exposure

Where practicable, Limco Airepair has made it policy to protect industrial materials and activities by a storm resistant shelter with the goal of preventing exposure to rain, snow, snowmelt, or runoff. Some examples of this policy include the inside storage of materials, material storage sheds, and plant trash dumpsters equipped with lids.

4.3 Preventive Maintenance

Limco Airepair has developed a preventive maintenance program that involves inspections and maintenance of storm water management devices and routine inspections of facility operations to detect faulty equipment. Equipment (such as air compressors) will be checked regularly for signs of deterioration. All inspections must be documented on the forms supplied in Appendix 3.

- All chemical storage containers including drums, tanks, and totes are labeled.

- Storm drains located throughout the grounds are inspected regularly to ensure that there are no obstructions blocking the flow of storm water.

- All chemical storage containers, full and empty, are inspected on a regular basis.

- All plant vehicles are inspected on a regular basis for fluid leaks. If problems are detected, the vehicle will be taken out of service until repaired. It is important to note that the repairs are conducted inside the facility building or over tarps.

- Filters for the spray booth and sand blasting operations are maintained in good condition.

- The hazardous waste storage area secondary containment is inspected on a regular basis.

- Spill equipment is inspected to ensure its readiness.

EPCRA, SECTION 313, FACILITY PREVENTIVE MAINTENANCE INSPECTION REQUIREMENTS—All areas of the facility must be inspected for the following on a daily basis:

- Leaks or conditions that would lead to discharges of Seetion 313 water priority chemicals,

- Conditions that could lead to direct eontact of storm water with raw materials, intermediate materials, waste materials or products,

- Piping, pumps, storage tanks and bins, pressure vessels, process and material handling equipment, and material bulk storage areas for leaks, wind blowing, corrosion, support or foundation failure, or other deterioration or no containment.

Any items found during inspection must be corrected immediately. If a leak or release is found, it must be immediately reported to the Spill Response Coordinator.

Limco Airepair has water priority chemicals in use at the facility. However, with proper use of the chemicals, containment devices, and inspection procedures, contamination of storm water with these chemicals is highly unlikely. Spill equipment is kept at liquid chemical use areas.

4.4 Spill Prevention and Response Procedures

Areas where spills are likely to occur and their drainage points are clearly identified in Section 3.8 of this plan. Employees are aware of response procedures, including material handling and storage requirements. Access to spill equipment at the facility will be provided where appropriate.

4.5 Spill Prevention Plan Considerations

- Install leak detection devices as necessary.

- Adopt good housekeeping practices.

- Perform regular visual inspections to identify areas for potential leaks or spills.

- Recycle, reduce, and reuse process materials to minimize waste onsite.

4.6 Spill Response Plan

Limco Airepair's Spill Response Plan consists of the following four items:

- Identification of a spill response team to implement the spill response plan.
- Identification of safety measures.
- Development of procedures for notifying appropriate authorities (police, fire, hospital, Publicly Owned Treatment Works [POTW], etc.) in the event of a spill.
- Identification of spill containment, diversion, isolation, and cleanup practices.

4.6.1 Spill Response Team

The spill response team is composed of the members of the storm water pollution prevention team. The Spill Response Coordinator is the Pollution Prevention Plan Team Leader. Additional members may be added to the team as required. This information may be found in Section 2.0 of this plan.

4.6.2 Spill Response Safety Measures

Limco Airepair's safety measures are comprised of the following:

- Notification – Upon discovery of spill or release, the Spill Response Coordinator or a member of the Spill Response Team should be notified immediately.
- Awareness and Safety - Employees should not attempt a response until the substance, its dangers, and proper personal protective equipment have been identified. The Spill Response Team will identify the hazards associated with the substance and proper personal protective equipment required by consulting the product MSDS and/or container labels.

4.6.3 Spill Notification

If Limco Airepair experiences a reportable spill, the Spill Response Coordinator or a member of the Spill Response Team will notify the following agencies:

Environmental Release Hotline - (800) 832-8224
Tulsa County Sheriff's Office - 911 or (918) 596-8684
National Response Center (NRC) - (800) 424-8802

Department of Environmental Quality (DEQ) - (800) 522-0206
EPA Region 6, 24-Hour Spill Hotline -(214) 665-2222
Fire Department\Local Emergency Planning Committee – 911 /
(918) 596-7361

4.6.7 Spill Containment, Diversion, Isolation, and Cleanup Practices

Material Safety Data Sheets identify the appropriate procedures and materials to use for spill abatement and cleanup of the named product. Appropriate cleanup materials and equipment will be kept in areas where materials are handled or stored, and which have a high potential for spills.
If a spill or release occurs, the following steps will be followed in order:

- The Spill Response Coordinator or other member of the spill response team will be notified of the spill or release.

- The Spill Prevention Coordinator or appropriate individual will determine if the spill\release is "reportable," and immediately notify the appropriate Regulatory agencies. **Agency telephone numbers are in Section 4.6.3.** The Spill Prevention Coordinator will be responsible for follow-up calls and reports to Regulatory Agencies.

- Identify the substance spilled or released. The MSDS will be consulted to determine: 1) what personal protective equipment (PPE) is needed, 2) the manufacturer's suggested cleanup procedures, and 3) any hazards presented by the substance (reactive with water, etc).

- If it is possible, the cause of the leak or release will be eliminated. This could involve placing a drum in an overpack drum, closing off a pipe, etc.

- The spill or release will be contained as well as possible. Appropriate spill containment equipment should be used such as absorbent, shovels, brooms, etc. If applicable spark proof cleanup equipment will be used.

- The spill will be cleaned up using methods described in the product MSDS or other references.

- All clean-up materials and impacted materials will be disposed of properly and according to Federal, State, and local requirements.

These same procedures will be followed if the spill or release involves a Section 313 Water Priority Chemical.

4.7 Routine Facility Inspections

Periodic visual inspections of the facility will be conducted to ensure that all of the elements of the plan are in place and working properly to prevent pollution of storm water runoff from the facility. These inspections will include raw metal storage areas, finished product storage areas, material and chemical storage areas, recycling areas, loading and unloading areas, equipment storage areas, and vehicle maintenance areas. The inspection forms are located in Appendix 3. The following will be implemented to facilitate visual inspections:

- Qualified, trained plant personnel will be designated to regularly inspect the facility's equipment and storage areas, evaluate existing storm water BMPs, track results of inspections, make necessary changes, and maintain records of all inspections

- Inspection records will note when inspections were done, who conducted the inspection, what areas were inspected, what problems were found, and what steps were taken to correct any problems.

All deficiencies in the implementation of the SWPPP found during the inspection will be corrected as soon as possible and no later than within 14 days of the inspection. Facility inspection records will be kept with the plan for at least three years after coverage under the permit terminates.

4.8 Employee Training

Limco Airepair will develop an employee-training program that covers spill prevention and response, good housekeeping, and material management practices. All employees will be required to sign in order to verify that training was provided. A sign in sheet is provided in Appendix 5.

The goals of this training program are to teach personnel, at all levels of responsibility, the components and goals of the storm water pollution prevention plan and to create overall sensitivity to storm water pollution prevention concerns. This training will be given to all employees and will be conducted on an annual basis by designated personnel. New employees will also be trained in the requirements of this program as part of the introductory training.

EPCRA, Section 313, Facility Requirements—There are additional training requirements for employees and contractor personnel who work in areas where EPCRA, Section 313, water priority chemicals are used or stored. These individuals will be trained in the following areas on an annual basis:

- ❖ Preventive measures, including spill prevention and response and preventive maintenance,
- ❖ Pollution control laws and regulations,
- ❖ The facility's pollution prevention plan, and
- ❖ Features and operations of the facility that are designed to minimize discharges of Section 313 water priority chemicals, particularly spill prevention procedures.

4.9 Sediment and Erosion Control

There are no areas of this facility that are significantly affected by erosion as 80% of the outside facility surfaces consist of asphalt and gravel, and the remaining surfaces consist of grass. These surfaces will be maintained in order to prevent future erosion or sediment problems.

4.10 Management of Runoff

The runoff from Limco Airepair is not of significant concern to warrant implementation of additional structural BMPs. The facility property is relatively flat, and storm water released from the facility property should be uncontaminated. If runoff problems are found during the periodic inspections, this plan will be modified and additional measures implemented.

Aquatic Resources of Concern

5.0 Documentation of Permit Eligibility Related to Endangered Species

Limco Airepair's storm water is discharged to the City of Tulsa's MS4, for which the receiving water is the Arkansas River by way of Mooser Creek. The following is the documentation supporting the facility's determination of permit eligibility.

5.1 Documentation of Screening

According to a topo map of the area surrounding the facility and the Aquatic Resources of Concern map in the MSGP, Limco Airepair's facility lies within an aquatic resource of concern.

5.2 Required Protection Measures and Implementation

Pollutants such as oil, grease, solid waste, human waste, hazardous or toxic material, or other material not authorized for discharge under this permit must be properly captured, treated, and correctly disposed of according to the MSGP. The only pollutants of concern for Limco Airepair are oil and grease and a small amount of toxic material from hazardous waste. Measures to address these possible pollutants have already been described in the plan. However, a short description is given below.

The majority of storm water that could be contaminated by hazardous waste will be captured in a secondary containment area. The water will be inspected before each release and again before it reaches the outfalls. If pollution of the water in the containment is evident, the water will be packaged in drums and sent off-site. Periodic facility inspections will be conducted as well to ensure that the containment device is functioning properly. This inspection will also ensure that all problems found are addressed immediately. Spill equipment is kept nearby for any spill that might occur as a result of a transportation problem; however, all employees driving forklifts are certified operators.

Pollutants such as oil and grease are not of large concern with this facility since the majority of oil and grease is used inside the facility building, and waste materials are kept in the hazardous waste accumulation area until pickup. Plant vehicles are inspected on a regular basis and maintained inside the facility building or off-site. These measures should eliminate storm water contamination from plant vehicles.

Monitoring and Reporting

6.0 Comprehensive Site Compliance Evaluation

Limco Airepair will have qualified personnel conduct an annual site compliance evaluation. The following will be carried out as part of the facility's compliance evaluation:

- Storm water discharge areas will be inspected for any evidence of pollutants entering the drainage system.

- The effectiveness of BMPs will be evaluated. Some questions that will be asked are:
  - Is the site cleaner?
  - Are the employees more familiar with good housekeeping measures and spill prevention and response practices?

- Structural measures, sediment controls, and all other storm water BMPs will be observed to ensure that they are functioning properly.

- Inspectors will look for industrial materials, residue or trash on the ground that could contaminate or be washed away in storm water; leaks or spills from industrial equipment, drums, barrels, tanks, or similar containers; offsite tracking of industrial materials or sediment where vehicles enter or exit the site; tracking or blowing of raw, final, or waste materials from areas of no exposure to exposed areas; and for evidence of, or the potential for, pollutants entering the drainage system.

- Outside storage areas including the hazardous waste storage area, scrap metal storage, sand blasting sheds, plant trash containers, and drainage from roof will be evaluated.

The plan will be revised as needed within fourteen days of inspection. If existing BMPs need to be modified or if additional BMPs are necessary, implementation must be completed before the next anticipated storm event or as soon as practicable.

A report will be prepared and submitted on the proper forms summarizing inspection results and all follow-up actions. The report will be submitted between October 1 and November 30 of each year beginning in 2001. The report will be kept on file with the pollution prevention plan in Appendix 8.

6.1 Quarterly Visual Monitoring of Storm Water

Limco Airepair will conduct quarterly visual inspections of storm water discharged through facility outfalls. Instructions for collecting and evaluating the storm water are listed below, and the visual evaluation forms can be found in Appendix 4.

Storm water samples must be collected on a quarterly basis from Outfalls 1, 2, and 3 by a member of the pollution prevention team or a designated, qualified individual. The samples should be collected in clear and clean containers. The samples must be taken within thirty minutes of the beginning of discharge from a storm. If it is not possible to obtain a sample within the first thirty minutes, then a sample may be obtained any time up to one hour after the beginning of the discharge. The storm must be preceded by three days (72 hours) of no rain, and the storm must provide enough rain to cause a discharge through the outfalls. The samples should be evaluated for the following parameters: color, odor, clarity, oil sheen, particulate matter, foam, and any other noticeable items needing to be documented. Additional guidelines can be found in the permit on page 33 in Table 5-1. If any of the above test positive in the sample, immediately evaluate the facility site for the source of pollution. If possible, rectify the problem immediately. Document all information on the evaluation form. If pollution is occurring often, the facility will reevaluate the pollution prevention plan, and modify it in such a way as to eliminate the pollution problem.

The facility has five outfalls. Sampling will be conducted at three of the five outfalls. Sampling will not be conducted at Outfalls 4, and 5 since there is no industrial activity occurring in these areas.

6.2 Recordkeeping and Reporting

Limco Airepair will record and maintain records of spills, leaks, inspections, and maintenance activities for at least three years after the expiration of the permit at the facility on S. Lawton. When spills and leaks are involved, records should include information such as the date and time of the incident, weather conditions, cause, and the resulting environmental impact. The permit, permit authorization, copy of NOI, and applicable state or local plans or regulations will be kept in Appendix 7. In addition, the following documentation will be retained on file.

- A copy of the Notice of Intent and Permit Authorization.
- A copy of the permit requirements.
- Any applicable state or local plans or regulations.
- Information on process water discharge to the sanitary sewer.

- ❖ All inspection records.
- ❖ Records of actions taken in response to inspections.
- ❖ Visual storm water evaluation records.
- ❖ Annual Site Compliance Evaluation Reports.
- ❖ Spill or release records.
- ❖ Employee training records.

6.3 Maintaining an Updated SWPPP

If major changes occur in Limco Airepair's facility design, construction, operation, or maintenance, the storm water pollution prevention plan will be revised accordingly and in a timely fashion. The plan will also be amended if it is found during inspections that the plan is ineffective in eliminating or significantly minimizing pollutants or controlling pollutants in discharges from the facility.

Signature, Plan Review, and Making Plans Available

7.0 Required Signature

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to ensure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

_____ _____

Tracy Callan, EHS Coordinator Date

7.1 Plan Location and Public Access

This plan will be kept on-site at Limco Airepair International, Inc. in Tulsa, Oklahoma as required. The plan and all information pertaining to the storm water permit will be kept for at least three years after the expiration of the permit.

7.2 Director-Required Plan Modifications

Upon reviewing this plan, the permitting authority may find that it does not meet one or more of the minimum standards established by the pollution prevention plan requirements. In this case, the permitting authority will notify the facility of the changes that must be made to improve the plan.

WORKSHEET

LIST OF SIGNIFICANT SPILLS AND LEAKS	**COMPLETED BY:** **TITLE:** **DATE:**

Directions: Record below all significant spills and significant leaks of toxic or hazardous pollutants that have occurred at the facility in the three years prior to the effective date of the permit.

Definitions: Significant spills include, but are not limited to releases of oil or hazardous substances in excess of reportable quantities.

1st Year Prior

Date (month, day, year)	Spill	Leak	Location (as indicated on site map)	Description				Response Procedure		Preventive Measures Taken
				Type of Material	Quantity	Source, if known	Reason	Amount of Material Recovered	Material No Longer Exposed to Storm Water (True/False)	
NONE										

2nd Year Prior

Date (month, day, year)	Spill	Leak	Location (as indicated on site map	Description				Response Procedure		Preventive Measures Taken
				Type of Material	Quantity	Source, if known	Reason	Amount of Material Recovered	Material No Longer Exposed to Storm Water (True/False)	
NONE										

3rd Year Prior

Date (month, day, year)	Spill	Leak	Location (as indicated on site map	Description				Response Procedure		Preventive Measures Taken
				Type of Material	Quantity	Source, if known	Reason	Amount of Material Recovered	Material No Longer Exposed to Storm Water (True/False	
NONE										

WORKSHEET

NON-STORM WATER DISCHARGE ASSESSMENT AND CERTIFICATION				COMPLETED BY: _____ TITLE: _____ DATE:	
Date of Test of Evaluation	**Outfall Directly Observed During the Test (identify as indicated on the site map)**	**Method Used to Test or Evaluate Discharge**	**Describe Results from Test for the Presence of Non-Storm Water Discharge**	**Identify Potential Significant Sources**	**Name of Person Who Conducted the Test or Evaluation**

CERTIFICATION

I, _____(responsible corporate official), certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Amber McIntyre, Environmental Programs Specialist
Water Quality Division
Oklahoma Department of Environmental Quality
P.O. Box 1677
Oklahoma City, Oklahoma 73101-1677

RECEIVED
APR 25 2012
DEQ ECLS

Dear Amber McIntyre:

Enclosed you will find a modified SWP3 with the following changes:

1. General Location map that identifies the nearest receiving waters within one mile of the facility.
2. Maps have been updated (and enclosed) to include:
   a. The size of the property in acres-Outfalls and Water Flow map
   b. The location of significant structures and impervious surfaces-Outfalls and Water Flow Map
   c. Direction of storm water flow-Outfalls and Water Flow Map
   d. Locations of all existing structural BMP's-Outfalls and Water Flow Map
   e. Locations of surface waters on or adjacent to the facility, indicating if they are impaired and, if so, whether the waters have TMDL's established for them: -1) Limco Airepair Inc. Map Location Relative to Mooser Creek and the Arkansas River; ; 2) General Location Map-receiving Waters within One Mile; 3) TMDL for Mosser Creek E-Coli.
   f. Locations of all storm water conveyances including ditches and storm drains-Outfalls and Water Flow Map
   g. Locations of potential pollutant sources and where significant materials are exposed to storm water-Limco Airepair Material Storage Map
   h. Locations of where significant spills or leaks have occurred-(none have occurred, therefore none are listed)
   i. Locations of all storm water monitoring points-Outfalls and Water Flow Map
   j. Municipal separate storm sewer systems-(none)
   k. Locations of storm water inlets and outfalls and appropriate outline of the area draining to each outfall-Outfalls and Water Flow Map
   l. Location and description of all non-storm water discharges-Outfalls and Water Flow Map (None)
   m. Locations of where the following are located and exposed: fueling stations (none); vehicle and equipment maintenance and/or cleaning

LIMCO AIREPAIR, INC. • 5304 South Lawton Avenue • Tulsa, Oklahoma 74107
Phone (918) 445-4300

areas (all inside), loading/unloading areas (all inside); processing (none) and storage areas; locations for treatment (none), storage (listed on map), and disposal of waste (none); liquid storage tanks (none); access roads, rail lines used by carriers of materials/products (none); the location of any transfer area for substance in bulk (none); and machinery (none outside)- Limco Airepair. Materials Storage Map

   n. Location and source of run-on to the site from adjacent property that contains significant quantities of pollutants (none known) -General Location Map.

3. Enclosed is a certification that all discharges have been evaluated for the presence of non-storm water.
4. Enclosed is documentation of permit eligibility related to TMDL (printout from the ODEQ website GIS Map and Data Viewer). Waterbodies OK120420010070_00 (Mooser Creek) has 2010 303D TMDL's include E Coli. The 2008 303D TMDL's include E Coli. None of these TMDL's will be impacted by the storm water based on knowledge of the storm water runoff quality, (they are not parameters likely to be discharged by Limco Airepair storm water). Page 18 of the SWP3 plan refers to the TMDLs.
5. Emergency spill response procedures are located in the storm water SWP3 and also in the Limco Airepair Emergency Plan.
   a. Personnel responsible for the implementing of the plan in the event of a spill (include names, titles, and contact information): page 4, 14, and 15
   b. DEQ 24 hour complaints hotline number: page 5
   c. National Response Center phone number: page 5
   d. Name and number of an environmental cleanup company: page 15- Sooner Emergency Services
   e. Immediate procedures for cleanup/containment of both small and large spills: page 13, 14, and 15; procedures are also contained in the Limco Airepair Emergency Plan
6. The SWP3 must be consistent (and updated as necessary) with regulations: page 21, section 6.3 of the plan
7. A schedule has been included describing inspection practices that will be used to ensure that control measures are working effectively. Annual, Quarterly, Monthly and Weekly inspections.

Amber, please feel free to call me regarding information submitted or feel free to call Ed Liston (Paradigm EHS Consulting-918-605-0351) for additional information you might need.

Bill Williams,
Director of Facilities and EH&S

Storm Water Pollution Prevention Plan Goal

1.0 Introduction

The Oklahoma Department of Environmental Quality (DEQ) has issued the "Multi-sector General Permit OKR05 for Storm Water Discharges from Industrial Activities within the State of Oklahoma". This permit replaces general permit OKR05, which expired on May 2, 2011.

In compliance with the Clean Water Act (The Act, USC 125 *et seq.*) and with the provisions under the Oklahoma Pollutant Discharge Elimination System (OPDES), OAC 252:606-1-3(b)(3)(L) incorporating by reference 40 CFR 122.26, as amended, except as provided in Part I.2 of the permit, owners/operators of storm water discharges from industrial facilities, described by their Standard Industrial Classification Code or Activity Code specified in Part 1.2 and Table 1.2 of the permit are authorized to discharge in accordance with the conditions and requirements set forth in the permit. Only those owners/operators of storm water discharges from industrial activities who submit a Notice of Intent and receive authorization in accordance with Part 2 of the ODEQ permit are authorized under this general permit. This permit became effective on May 3, 2006. Facilities are given 90 days from this date to submit their Notice of Intent to discharge storm water. All currently permitted industrial facilities are required to reapply to the DEQ for coverage under the OKR05 permit. This permit and the authorization to discharge shall expire five years after the effective date.

BACKGROUND

On November 19, 1996, EPA Region 6 approved the State of Oklahoma's application for the DEQ to administer and enforce the National Pollutant Discharge Elimination System (NPDES) program for discharges of pollutants, including storm water discharges, within the State of Oklahoma. The DEQ issued its first Multi-Sector General Permit (MSGP) GP-00-01 on October 2, 2000. The permit was for discharges associated with industrial activities within 29 different sectors, each comprised of similar Standard Industrial Classification (SIC) Codes or activity codes (e.g. HZ, SE, LF, and TW).

The reissuance procedure for the permit is based on the Oklahoma Environmental Code found at Title 27A of the Oklahoma Statutes, Section 2-14-101, *et seq*, and rules found at Oklahoma Administrative Code (OAC) 252:004-7.

1.1 Purpose

The purpose of Limco Airepair's Storm Water Pollution Prevention Plan (PPP) is to control or eliminate the discharge of storm water pollutants from facility property. Limco Airepair's primary SIC of 3728 requires this business to obtain a storm water permit and prepare and submit a pollution prevention plan. Limco Airepair desires to ensure that the facility site is not contributing to storm water pollution and has prepared this pollution prevention plan in accordance with the rules and regulations of the Oklahoma Multi-Sector General Permit and Sector AB. The facility will conduct periodic inspections of facility property and will conduct quarterly visual evaluations as required by this plan.

Pollution Prevention Planning and Organization

2.0 Pollution Prevention Plan Team Members

As a first step in the process of implementing a storm water pollution prevention plan, a team of individuals have been selected to assist in its implementation. Members were selected based on the expertise of all relevant departments to ensure that all aspects of the operations are considered.

Pollution prevention team meetings will be held periodically to ensure that all portions of the pollution prevention plan are being implemented including visual monitoring and periodic inspections.

The pollution prevention team is responsible for the following:

- **Implementing** all general permit and pollution prevention plan requirements and attending periodic team meetings as required.
- **Defining** and agreeing upon an appropriate set of goals for the facility's storm water management program.
- **Being aware** of any changes that are made in plant operations to determine whether any changes must be made to the Storm Water Pollution Prevention Plan.
- **Maintaining** a clear line of communication with plant management to ensure a cooperative partnership.

The Pollution Prevention Plan Team Roster is on the following page.

POLLUTION PREVENTION TEAM MEMBER ROSTER	
Leader: Bill Williams	**Title:** Director of Facilities and EH&S
	Phone: (918) 445-4300 work (918) 607-3665 cell
Responsibilities: Implement the pollution prevention plan and ensure that employee training is conducted. Conduct quarterly visual sampling. Ensure periodic inspections are conducted, and follow-up on and make any needed repairs on items noticed during periodic or other inspections. Maintain all records pertaining to the storm water permit or plan.	
Member: Roy Camron	**Title:** Clean Line Lead
	Phone: (918) 445-4300
Responsibilities: Follow the pollution prevention plan, attend quarterly team meetings, and conduct periodic inspections of processes and potential pollution sources.	
Member: Robert Poggi	**Title:** Maintenance Tech
	Phone: (918) 445-4300
Responsibilities: Follow the pollution prevention plan, attend quarterly team meetings, and conduct periodic inspections of processes and potential pollution sources.	
Spill Response Coordinator: Bill Williams	**Title:** Director of Facilities and EH&S
	Phone: (918) 445-4300 work (918) 607-3665 cell
Responsibilities: Follow the pollution prevention plan, attend quarterly team meetings, and act as emergency response coordinator.	

2.1 Coordination With Other Facility Environmental/Safety Plans

The pollution prevention plan has been developed as a comprehensive, stand-alone document. Actions required as a result of any type of emergency including spills should follow the Emergency Action/Fire Prevention. Procedures for handling of hazardous chemicals are contained in the company Hazard Communication Program. There are no other plans, which relate to storm water pollution prevention.

2.2 Releases of Reportable Quantities of Hazardous Substances/Oil

The general permit provides that the discharge of hazardous substances or oil from a facility must be eliminated or minimized in accordance with the storm water pollution plan.

Oklahoma Department of Environmental Quality Reporting Requirements

Where a permitted storm water discharge contains a hazardous substance or oil producing sheen into waters of the state, Notify the Oklahoma DEQ as soon as there is knowledge of the discharge (800-522-0206). A written report shall be submitted within five (5) days to: ODEQ. Discharge Report and Response Center, P.O. Box 1677, Oklahoma City, Ok 73101-1677. The report shall include the date and time of incident, weather conditions, location, type, concentration and volume, cause, and any environmental problems.

EPA Spill Reporting Requirements

Where a permitted storm water discharge contains a hazardous substance or oil in an amount equal to or in excess of a reporting quantity established under 40 CFR Part 117, or 40 CFR Part 302 during a 24-hour period, the following actions must be taken: (at this time Limco Airepair does not have these materials)

- Notify the National Response Center as soon as there is knowledge of the discharge (800-424-8802)
- Modify plan within 14 days of knowledge of the release to provide a description of the release, account of circumstances, date of release, and preventive actions.
- Submit a report to the EPA within 14 days of knowledge of the release
- For spills and leaks, records should include information such as the date and time of the incident, weather conditions, cause, and resulting environmental problems. The incident should be entered in the Significant Spills Chart of this report.

Limco Airepair International Site Assessment

3.0 Facility Information

Limco Airepair International, Inc. owns approximately 4.3 acres of land on which one permanent building sits with a total of 170,000 ft^2 The facility began operations at this site in 1995. Prior to this date, the facility was owned and operated by an oil field tooling shop. A YMCA is located to the south of the facility, a wood pallet manufacturer to the west, and Pepsi is located to the east and north of the facility.

Facility diagrams been prepared that identifies building locations, storm water outfalls, distance to the Mosser Creek and the Arkansas River, possible pollutant sources, and drainage patterns on facility property. These diagrams are located in Section 2 of the manual. Structural storm water control measures, locations of past significant spills or releases, nearby water bodies, storm water runoff with significant potential for causing soil erosion, and locations of exposed significant materials or industrial activities, if present, are shown on these diagrams.

3.1 Municipal Separate Storm Sewer Systems & Receiving Waters

Limco Airepair's storm water is discharged to three storm drains located in the parking lot and over gravel parking areas to offsite locations. The storm water system discharge (outfall 2) and one other main storm outfall (outfall 1) located to the south of the facility have been selected for visual monitoring to ensure compliance with storm water requirements. Section 2 diagrams show the location of selected outfalls. The immediate receiving stream is Mooser Creek. The eventual receiving water is the Arkansas River which is approximately 0.55 miles east. Limco Airepair lies within the west bank corridor of the Arkansas River.

3.2 Materials Inventory: Possible Pollutants and Potential Impact

The materials inventory is designed to identify those materials that may have been or may be exposed to storm water at the facility. Attention is given to methods and locations of storage and disposal that could/would contribute to the contamination of storm water runoff. The inventory is conducted utilizing the Material Inventory Worksheet. Based on the material inventory, worksheet "Description of Exposed Significant Material" is used to describe

the significant materials that are currently exposed. Worksheets are in Section 3.

A facility audit was conducted on for the purpose of gathering information to design a facility layout, identifying possible sources of storm water pollution, identifying structural and nonstructural controls existing at the facility, and identifying Best Management Practices in place at the facility. As a result of the audit, the following list of exposed significant material was developed. The potential sources of pollution listed below have been assigned to different categories of risk to storm water including low, moderate, and high.

- Sand blasting sheds – low risk,
- Miscellaneous metal storage - negligible risk;
- Outside scrap metal container – contained - negligible risk;
- Outside storage of wood pallets and/or crates – negligible risk;
- Outside hazardous waste 90-day storage area – Covered storage area is equipped with concrete secondary containment capable of containing 110% of the volume of one drum. - Inspected weekly- moderate risk;
- Outside flammable liquid storage area – Covered storage area is equipped with concrete secondary containment capable of containing 110% of the volume of one drum. – inspected weekly- moderate risk;
- Plant vehicle traffic - The possibility exists of contaminating storm water with oil and grease, antifreeze, hydraulic fluid, etc. from employee owned vehicles. However this is considered a negligible risk, and
- Plant trash dumpsters - negligible risk;

The materials stored outside during the past three years consist of the same materials currently stored outside. A "Pollutant Source Identification" worksheet (Section 3) is available to identify those pollutants of concern.

3.3 Pollutants of Concern as Identified with Pollutant Sources

The pollutants of concern associated with the items identified in the previous section are as follows:

- Sand blasting – Storm water contamination with particulate matter, metals, and metal oxides if of concern. This is considered a negligible risk due to being in a fully enclosed building.
- Miscellaneous metal storage – There are two possible sources of pollution regarding metal storage. First, if the pH of the rain is acidic,

the possibility of polluting storm water with metals and metal oxides exists. Second, any oil and grease or material left on or in the metal like cutting fluids from use or manufacture is of concern for storm water pollution.

- Scrap metal container – In addition to possible contamination of storm water with metals, metal oxides, oil and grease, and cutting fluids, particulate matter contamination is likely. Scrap metal bens are water tight.

- Wood pallets and/or crates - There is a possibility of contamination of storm water with any materials that have been spilled on pallets during use and before outside storage. This is considered a negligible risk due to any contamination on wooden crates would be easily identifiable and corrected

- Hazardous waste storage area – hazardous solvent waste accumulation storage area (approximately twenty 55 gallon drums) located on the south side of the facility. Facility hazardous waste (paint and organic solvent waste) are accumulated in this area prior to being picked up and transported by an approved waste vendor. This is considered a moderate risk due to being storage area is equipped with concrete secondary containment capable of containing 110% of the volume of one drum. Dailey visual inspections and documented weekly inspections are conducted at this area. This is considered a moderate risk due to containment, routine inspections and improved housekeeping.

- Plant trash Compactor Trash compactor is an enclosed self-contained unit on a concrete pad. This is considered a negligible risk due to any surface contamination would be easily identifiable and corrected.

3.4 Description of Facility Operations

Limco Airepair conducts manufacturing, remanufacturing, and repair of heat exchangers for aircraft. The heat exchangers are made primarily from aluminum, stainless steel, and copper. The manufacturing process consists of grinding, welding, polishing, machining, dip cleaning, painting, etc. The equipment is put into wooden crates and stored inside the facility prior to shipping.

3.5 Facility Storage and Shipping/Receiving Areas

There is one outside storage area at Limco Airepair's facility. It is designated as the South Storage Area. Most raw material storage takes place inside the facility building or inside sheds located outside. Manufacturing operations

take place inside the facility building. Plant vehicles travel through all areas of the facility. The following materials are stored in the South Storage Area.

South Storage Area: The items located in this storage area consist of a scrap metal container, the 90-day hazardous waste accumulation point, wood pallets, miscellaneous metal, various wood crates, and sheds for storage.

Most materials are loaded and unloaded through the loading docks greatly minimizing contact of storm water with materials. However, wood crates and metals must occasionally be unloaded outside and brought into the facility via forklift. The shipping and receiving areas are located on the east and south sides of the facility.

3.6 Management of Materials

Limco Airepair is a large quantity generator of hazardous waste. This waste is generated from the painting process, clean line operations, and solvent cleaning operations and is removed from the facility at least once every 90 days by RINCO Treatment Services. The waste is stored in the 90-day accumulation area until removal. The storage area is equipped with concrete secondary containment capable of containing 110% of the volume of one drum. Spill containment equipment is maintained on site.

Scrap metal is generated from this facility. Two scrap metal accumulation container is located in the South Storage Area. The types of scrap metal generated include stainless steel, aluminum, and copper. The facility also has one plant trash compactor. All American Waste Management removes the trash as needed, and Advanced Metal Recovery removes the scrap metal from the facility approximately once every forty-five days.

This facility has a wastewater treatment process located inside the facility building. This operation removes metals and adjusts the pH of water from the clean line operations. The sludge from the system is disposed of in accordance with all waste rules and regulations, and the facility has an Industrial Wastewater Discharge permit from the City of Tulsa.

3.7 Structural and Nonstructural Storm Water Control Methods

Limco Airepair has several structural control measures in place in addition to nonstructural methods. Structural measures at the facility consist of an enclosed room for the air compressors, covered loading/unloading docks, and conveyances for storm water. Several sheds have been put in place for outside storage. Most of the facility (80%) consists of asphalt and gravel. The remaining 20% consists of grass. The roof is equipped with downspouts, and there are several storm drains on the facility property. Other structural methods consist of filters on exhaust air from the paint booth and blasting booth.

Another structural method is the containment for the hazardous waste accumulation and flammable liquid storage areas. Any storm water that is trapped in this area is evaluated for any signs of potential pollution. If there is any evidence that the water is contaminated, it will be drummed up and sent off-site for proper disposal. A form documenting these inspections is located in Section 4.

Nonstructural methods consist of a general policy of inside storage and parking of plant vehicles inside the facility building when not in use. Plant vehicles are maintained inside the facility building.

3.8 Spills or Leaks

Limco Airepair has not had any spills of any significance in the past three years as documented on the form in Section 3. The most likely place for a spill at the facility is inside the facility at the clean line operations, the solvent degreasing operations, and wastewater treatment operations, and outside of the facility at the waste accumulation point. It is highly unlikely that any spilled material would reach facility outfalls. The drainage point for these areas would be Outfalls 1 and 2. More information regarding spills can be found in Section 4 of this plan.

3.9 Sampling Data

Limco Airepair has documented previous inspections of storm water at facility outfalls. These records can be found on file at the facility. The facility will continue a storm water visual monitoring program as a requirement of this plan. Future records from monitoring will be maintained by the Director of Facilities and EH&S.

3.10 Non-Storm Water Discharge Evaluation

Non-storm water discharges are prohibited by the storm water permit except those authorized in Part 1.2.4 and listed below. This facility has a wastewater treatment process located inside the facility building. This operation removes metals and adjusts the pH of water from the clean line operations. The sludge from the system is disposed of in accordance with all waste rules and regulations, and the facility has an Industrial Wastewater Discharge permit from the City of Tulsa

The certification process is documented utilizing worksheet "Non-Storm Water Discharge Assessment and Certification". Failure to conduct the certification must be reported to the EPA using worksheet "Non-Storm Water Discharge Failure To Certify Notification". Forms are located in Section 3.

Allowable Non-Storm Water Discharges.

You are also authorized for the following non-storm water discharges, provided the non-storm water component of your discharge is in compliance uncontaminated.

1. Fire hydrant flushings;
2. Potable water including drinking fountain water and water line flushings;
3. Uncontaminated air conditioning or compressor condensate;
4. Irrigation drainage;
5. Landscape watering provided all pesticides, herbicides, and fertilizer have been applied in accordance with manufacturer's instructions;
6. Pavement wash waters where no detergents are used and no spills or leaks of toxic or hazardous materials have occurred (unless all spilled material has been removed);
7. Routine external building wash down which does not use detergents;
8. Uncontaminated ground water or spring water;
9. Foundation or footing drains where flows are not contaminated with process materials such as solvents;
10. Incidental windblown mist from cooling towers that collects on rooftops or adjacent portions of your facility, but NOT intentional discharges from the cooling tower (e.g.,"piped" cooling tower blow down or drains).
11. Discharges or flows from emergency firefighting activities will be allowed, if measures are taken to reduce any such pollutant releases.

3.11 Summary of Potential Pollutant Sources

Pollutant sources are shown in section 3.3.

Best Management Practices

4.0 Purpose of Best Management Practices

Oklahoma's Multi-Sector General Permit requires the incorporation of the following Best Management Practices (BMPs) into the pollution prevention plan: (A) Good Housekeeping, (B) Minimizing Exposure, (C) Preventive Maintenance, (D) Spill Prevention and Response Procedures, (E) Routine Facility Inspections, (F) Employee Training, (G) Sediment and Erosion Control, and (H) Management of Runoff. These BMPs are discussed in the following sections. Worksheet "Pollutant Source Identification" can be used to list pollutant sources, existing management practices, and a description of new BMP options. Worksheet "BMP Identification" can be used to describe BMPs that have been selected to minimize storm water pollution. Worksheet "Implementation" is available to be used to develop a schedule for implementing each BMP. Worksheets are available in Section 3.

4.1 Good Housekeeping

Good housekeeping practices are designed to maintain a clean and orderly work environment. Often the most effective first step towards preventing pollution in storm water from industrial sites involves merely using good common sense to improve the facility's basic housekeeping methods. The following are some simple procedures that have been incorporated into an effective good housekeeping program:

- **Improve** operation and maintenance of industrial machinery and processes.
- **Implement** careful material storage practices. Minimize outside raw materials and oils. If storage is outside, elevate and cover the material. All buckets and barrels should be stored inside or if outside, stored elevated and covered.
- **Maintain** up-to-date material inventory.
    - Identify all chemical substances present in the workplace.
    - Label all containers showing name and type of substance, stock number, etc.

- **Schedule** routine cleanup operations and regular garbage and waste material pickups. Outside spills of metal shavings should be routinely cleaned up.

- **Maintain** well-organized work areas.

- **Train** employees about good housekeeping practices.

- **Conduct** routine inspections for leaks or spill, condition of drums, tanks, and containers.

4.2 Minimizing Exposure

Where practicable, Limco Airepair has made it policy to protect industrial materials and activities by a storm resistant shelter with the goal of preventing exposure to rain, snow, snowmelt, or runoff. Some examples of this policy include the inside storage of materials, material storage sheds, and plant trash dumpsters equipped with lids.

4.3 Preventive Maintenance

Limco Airepair has developed a preventive maintenance program that involves inspections and maintenance of storm water management devices and routine inspections of facility operations to detect faulty equipment. Equipment (such as air compressors, forklifts, and other oil containing equipment) will be checked regularly for signs of deterioration. All inspections must be documented on the forms supplied in Section 4.

- All chemical storage containers including drums and totes are labeled.

- Storm water outfalls are inspected regularly to ensure that there has been no contamination.

- All oil storage containers, full and empty, are inspected on a regular basis.

- Maintain equipment to prevent leaks (forklifts, compressors, and other equipment). All plant vehicles are inspected on a regular basis for fluid leaks. If problems are detected, the vehicle will be taken out of service until repaired. Vehicle service is performed offsite.

- Spill equipment is inspected to ensure its readiness.

- Conditions that could lead to direct contact of storm water with raw materials, waste materials or products,

Any items found during inspection must be corrected immediately. If a leak or release is found, it must be immediately reported.

4.4 Spill Prevention Considerations

Areas where spills are likely to occur and their drainage points are clearly identified in Section 3.8 of this plan. Employees are aware of response procedures, including material handling and storage requirements. Access to spill equipment at the facility will be provided where appropriate.

- ❖ Adopt good housekeeping practices.
- ❖ Perform regular visual inspections to identify areas for potential leaks or spills.
- ❖ Recycle, reduce, and reuse process materials to minimize waste onsite.
- ❖ Monitor operations and methods conducted by outside vendors or contractors when picking up waste oil or delivering oils

4.5 Spill Response

Limco Airepair's Spill Response consists of the following items:

- ❖ Identification of safety measures.
- ❖ Development of procedures for notifying appropriate authorities in the event of a spill.
- ❖ Identification of spill containment, diversion, isolation, and cleanup practices.

4.5.1 Spill Response Team

The spill response team is composed of the members of the storm water pollution prevention team. The Spill Response Coordinator is the Director of facilities and EH&S. Additional members may be added to the team as required.

4.5.2 Spill Response Safety Measures

Limco Airepair's safety measures are comprised of the following:

- ❖ Notification – Upon discovery of spill or release, the Spill Response Coordinator or a member of the Spill Response Team should be notified immediately.
- ❖ Awareness and Safety - Employees should not attempt a response until

the substance, its dangers, and proper personal protective equipment have been identified. The Spill Response Team will identify the hazards associated with the substance and proper personal protective equipment required by consulting the product MSDS and/or container labels.

4.5.3 Spill Notification

If Limco Airepair experiences a spill the Spill Response Coordinator or a member of the Spill Response Team will take action listed in section 2.2.

4.5.4 Spill Containment, Diversion, Isolation, and Cleanup Practices

Material Safety Data Sheets identify the appropriate procedures and materials to use for spill abatement and cleanup of the named product. Appropriate cleanup materials and equipment will be kept in areas where materials are handled or stored, and which have a high potential for spills (Hazardous Waste Storage Area). Reference should be made to the Limco Airepair Emergency Action Plan for additional information (materials, emergency equipment).

If a spill or release occurs, the following steps will be followed in order:

- The Spill Response Coordinator or other member of the spill response team will be notified of the spill or release immediately.

- The Spill Prevention Coordinator or appropriate individual will determine if the spill\release is "reportable," and immediately notify the appropriate Regulatory agencies. **Agency telephone numbers are in Section 2.2.** The Spill Prevention Coordinator will be responsible for follow-up calls and reports to Regulatory Agencies.

- Call 9-911 if the incident poses a fire hazard (larger spill), outside help from the Tulsa Fire Department should be obtained.

- If cleanup or containment is needed beyond a small spill or what would be an incidental spill, Sooner Emergency Services should be called for this service. The emergency response hotline is 1-800-722-4901. Their address is 2131 S. 49th W. Ave, Tulsa, Ok 74107.

- Identify the substance spilled or released. The MSDS will be consulted to determine: 1) what personal protective equipment (PPE) is needed, 2) the manufacturer's suggested cleanup procedures, and 3) any hazards presented by the substance (reactive with water, etc).

- If it is possible, the cause of the leak or release will be eliminated. This could involve placing a drum in an over pack drum, closing off a pipe, etc.

- ❖ The spill will be contained as well as possible. Appropriate spill containment equipment should be used such as absorbent, shovels, brooms, etc. Equipment available is listed in the emergency plan.

- ❖ The spill will be cleaned up using methods described in the product MSDS or other references.

- ❖ All clean-up materials and impacted materials will be disposed of properly and according to Federal, State, and local requirements.

4.6 Routine Facility Inspections

Quarterly inspections of the facility will be conducted to ensure that all of the elements of the plan are in place and working properly to prevent pollution of storm water runoff from the facility. These inspections will include raw metal storage areas, finished product storage areas, material and chemical storage areas, recycling areas, loading and unloading areas, equipment storage areas, and vehicle maintenance areas. The inspection forms are located in Section 4. The following will be implemented to facilitate visual inspections:

- ❖ Qualified, trained plant personnel will be designated to regularly inspect the facility's equipment and storage areas, evaluate existing storm water BMPs, track results of inspections, make necessary changes, and maintain records of all inspections

- ❖ Inspection records will note when inspections were done, who conducted the inspection, what areas were inspected, what problems were found, and what steps were taken to correct any problems.

All deficiencies in the implementation of the SWPPP found during the inspection will be corrected as soon as possible and no later than within 14 days of the inspection. Facility inspection records will be kept with the plan for at least three years after coverage under the permit terminates.

4.7 Employee Training

Limco Airepair will develop an employee-training program that covers spill prevention and response, good housekeeping, and material management practices. All employees will be required to sign in order to verify that training was provided. A sign in sheet is provided in Section 5.

The goals of this training program are to teach personnel, at all levels of responsibility, the components and goals of the storm water pollution prevention plan and to create overall sensitivity to storm water pollution prevention concerns. This training will be given to all employees and will be conducted on an annual basis by designated personnel. New employees will

also be trained in the requirements of this program as part of the introductory training.

These individuals will be trained in the following areas on an annual basis:

- Preventive measures, spill prevention/response and preventive maintenance: Clearly identify potential spill areas and drainage routes. Familiarize employees with past spill events; explain why they happened and the resulting environmental impact. Review emergency contacts and telephone numbers. Inform personnel who pollution prevention team members are. Review spill clean-up procedures. Review applicable sections of the Emergency Action/Fire Prevention Plan and Hazard Communication Program.

- Material Handling and Storage: Inform employees as to which materials are hazardous and where those materials are stored. Inform employees on the importance of container labels, recycling practices, waste storage procedures, importance of keeping valves tightly closed and drums securely sealed, and how to properly fuel vehicles and avoid "topping off" (filling vehicle to the capacity to where it overflows).

- The facility's pollution prevention plan, and

- Good Housekeeping: review of basic cleanup procedures, i.e. sweeping, oil cleanup, trash pickup, etc. Indicate proper waste disposal locations for each type of refuse. Inform employees where routine cleanup equipment is stored.

4.8 Sediment and Erosion Control

There are no areas of this facility that are significantly affected by erosion as 80% of the outside facility surfaces consist of asphalt and gravel, and the remaining surfaces consist of grass. These surfaces will be maintained in order to prevent future erosion or sediment problems.

4.9 Management of Runoff

The runoff from Limco Airepair is not of significant concern to warrant implementation of additional structural BMPs. The facility property is relatively flat, and storm water released from the facility property should be uncontaminated. If runoff problems are found during the periodic inspections, this plan will be modified and additional measures implemented.

Aquatic Resources of Concern

5.0 Federal or State Sensitive Waters or Watersheds

Limco Airepair's storm water is discharged to Mooser Creek. This creek runs into the Arkansas River located 0.55 miles to the East. Maps in section 2 show the relationship to sensitive areas. TMDLs have been established for the receiving portion of Mooser Creek, water body OK120420010070_00, 3.9 mile section. TMDLs include E Coli. None of these TMDL's will be impacted by the storm water based on knowledge of the storm water runoff quality (they are not parameters likely to be discharged by Limco Airepair. storm water). However, This SWP3 will be monitored closely in order to not contribute pollutants that will impact the TMDLs associated with this portion of Mooser Creek.

Monitoring and Reporting

6.0 Comprehensive Site Compliance Evaluation

Limco Airepair will have qualified personnel conduct an annual site compliance evaluation. The following will be carried out as part of the facility's compliance evaluation:

- Storm water discharge areas will be inspected for any evidence of pollutants entering the drainage system.

- The effectiveness of BMPs will be evaluated. Some questions that will be asked are:
  - Is the site clean?
  - Are the employees more familiar with good housekeeping measures and spill prevention and response practices?

- Structural measures, sediment controls, and all other storm water BMPs will be observed to ensure that they are functioning properly.

- Inspectors will look for industrial materials, residue or trash on the ground that could contaminate or be washed away in storm water; leaks or spills from industrial equipment, drums, barrels, tanks, or similar containers; and for evidence of, or the potential for, pollutants entering the drainage system.

- Outside storage areas including the hazardous waste storage area, scrap metal storage, sand blasting sheds, plant trash containers, and drainage from roof will be evaluated.

The plan will be revised as needed within fourteen days of inspection. If existing BMPs need to be modified or if additional BMPs are necessary, implementation must be completed before the next anticipated storm event or as soon as practicable.

A report will be prepared and submitted on the proper forms summarizing inspection results and all follow-up actions. The report will be submitted by March 1st of the year. The report will be kept on file with the pollution prevention plan in Section 6.

6.1 *Quarterly Visual Monitoring of Storm Water*

Limco Airepair will conduct quarterly visual inspections of storm water discharged through facility outfalls. Instructions for collecting and evaluating

the storm water are listed below, and the visual evaluation forms can be found in Section 7.

Storm water samples must be collected on a quarterly basis from by a member of the pollution prevention team or a designated, qualified individual. Outfalls 1, and 2 (Section 2) have industrial activity associated with them and therefore will be examined quarterly. Where practicable, the same individual will carry out the collection and examination of discharges throughout the life of the permit to ensure the greatest degree of consistency. The visual examination must be made during daylight hours. The samples should be collected in clear and clean containers. No analytical tests are required to be performed on the samples. The samples must be taken within thirty minutes of the beginning of discharge from a storm. If it is not possible to obtain a sample within the first thirty minutes, then a sample may be obtained any time up to one hour after the beginning of the discharge. The storm must be preceded by three days (72 hours) of no rain, and the storm event must be greater than 0.1 inches in magnitude The samples should be evaluated for the following parameters: color, odor, clarity, oil sheen, floating solids, settled solids, suspended solids, foam, and any other noticeable items needing to be documented. If any of the above test positive in the sample, immediately evaluate the facility site for the source of pollution. If possible, rectify the problem immediately. Document all information on the evaluation form. If pollution is occurring often, the facility will reevaluate the pollution prevention plan, and modify it in such a way as to eliminate the pollution problem.

6.2 Recordkeeping and Reporting

Limco Airepair will record and maintain records of spills, leaks, inspections, and maintenance activities for at least three years after the expiration of the permit. When spills and leaks are involved, records should include information such as the date and time of the incident, weather conditions, cause, and the resulting environmental impact. The permit, permit authorization, copy of NOI, and applicable state or local plans or regulations will be kept in Section 8. In addition, the following documentation will be retained on file

- A copy of the Notice of Intent and Permit Authorization.
- A copy of the permit requirements.
- Any applicable state or local plans or regulations.
- Information on process water discharge to the sanitary sewer.
- All inspection records.
- Records of actions taken in response to inspections.

- Visual storm water evaluation records.
- Annual Site Compliance Evaluation Reports.
- Spill or release records.
- Employee training records.

6.3 Maintaining an Updated SWPPP

If major changes occur in Limco Airepair's facility design, construction, operation, or maintenance, the storm water pollution prevention plan will be revised accordingly and in a timely fashion. The plan will also be amended if it is found during inspections that the plan is ineffective in eliminating or significantly minimizing pollutants or controlling pollutants in discharges from the facility.

The plan will also require updates as necessary to remain consistent with applicable municipal, or local storm water, waste disposal, sanitary sewer regulations to the extent these apply to the facility.

Signature, Plan Review, and Making Plans Available

7.0 Required Signature

I certify under penalty of law that I have read and understand the requirement for this Storm Water Pollution Prevention Plan. I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to ensure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

NON-STORM WATER DISCHARGE ASSESSMENT	**Completed by:** Ed Liston **Title:** EH&S Professional **Date:** November 11, 2011

Directions: List all outfalls tested, the date of the test, the type of evaluation, possible pollutants, and person conducting evaluation.

Outfall Observed	Date	Type of Evaluation	Possible Pollutants	Evaluator
Outfall 1 East	11/11/11	Visual Observation	Oil and grease, antifreeze, hydraulic fluid, particulate matter, metals, metal oxides, organics, and hazardous waste	Ed Liston
Outfall 2 West	11/11/11	Visual Observation	Oil and grease, antifreeze, hydraulic fluid, particulate matter, metals, metal oxides, organics, and hazardous waste	Ed Liston

Non-storm water discharges were not observed during the evaluation.

Authorized facility non-storm water discharges consist of:

- Uncontaminated air conditioning and compressor condensate and
- Potable water from fire suppression system flushing and hydrants.

RE: Limco Airepair

Dear Mr. Williams:

My name is Jordan Caldwell and I have been assigned as the ODEQ Project Manager for this site. Please refer future correspondence to me.

Our last communication regarding the Limco Airepair site was on February 6, 2012. It was my understanding that site characterization activities had been put on hold due to some internal staff restructuring. Are you still Using A&M Engineering and Environmental Services as your consultant and if so, who is your current contact? Within 30 days of receipt of this letter, please provide an update on the status of the site including any recent sample results or future plans for the site characterization work.

Sincerely,

C. Jordan Caldwell

Enclosed is our Phase II ESA report for your review. Please advise of any action required on our part.

Abby Gleeson from A & M Engineering performed the study and asked that I emphasize that the upgradient test hole had higher concentrations than downgradient holes, with the exception of TH-2 and the Trichloroethylene concentration.

RE: Closure / Removal of Voluntary Cleanup Site

Regarding Case _09-303_, Program Code_292062411_ The _Limco Air repair site in Tulsa, Oklahoma has been removed as an active Voluntary Cleanup/Cost Reimbursement Site.

Reason for removal:

____ Cleanup to Residential Standards

____ Cleanup to Residential Standards with deed notice required

____ Cleanup to Industrial Standards with deed notice required

____ Withdrew from Program

____ Removed from Program due to inactivity

____ Referred to another program for possible enforcement

XX Other:

____Withdrew from Program
_____
_____
_____

Effective 15 days from the date of this memorandum, there should be no more charges made to this MACO or CO account.

RE: Limco Airepair Withdrawl

Dear Mr. Williams:

Per our previous conversation, it is my understanding that you no longer wish to continue participation in the Voluntary Cleanup Program. We have started the process of closing the file and reimbursing you the remaining funds left in your account with us. Could you provide a letter confirming your desire to leave the program to finalize this process? Thank you for your assistance in this matter.

Sincerely,

C. Jordan Caldwell

Certified Mail Provides:

- A mailing receipt
- A unique identifier for your mailpiece
- A record of delivery kept by the Postal Service for two years

Important Reminders:

- Certified Mail may ONLY be combined with First-Class Mail® or Priority Mail®.
- Certified Mail is *not* available for any class of international mail.
- NO INSURANCE COVERAGE IS PROVIDED with Certified Mail. For valuables, please consider Insured or Registered Mail.
- For an additional fee, a *Return Receipt* may be requested to provide proof of delivery. To obtain Return Receipt service, please complete and attach a Return Receipt (PS Form 3811) to the article and add applicable postage to cover the fee. Endorse mailpiece "Return Receipt Requested". To receive a fee waiver for a duplicate return receipt, a USPS® postmark on your Certified Mail receipt is required.
- For an additional fee, delivery may be restricted to the addressee or addressee's authorized agent. Advise the clerk or mark the mailpiece with the endorsement *"Restricted Delivery"*.
- If a postmark on the Certified Mail receipt is desired, please present the article at the post office for postmarking. If a postmark on the Certified Mail receipt is not needed, detach and affix label with postage and mail.

IMPORTANT: Save this receipt and present it when making an inquiry.

Re: Limco Airepair Phase II Report

Dear Mr. Kraft:

We have reviewed the Limited Phase II Environmental Site Assessment by A&M Engineering and Environmental Services, Inc., dated February 10, 2009 and we have the following comments.

In our opinion, three soil samples and four water samples would not be enough to evaluate a site of this size and complexity. Groundwater in TH-2 significantly exceeded the maximum contaminant level for Trichloroethylene (TCE). Based on its location by the hazardous drum storage, you have a documented environmental issue that would require further evaluation. Several metals exceed MCLs which could also indicate a problem.

I am attaching information regarding our Voluntary Cleanup Program.

Sincerely,

Kerry Paul
Environmental Programs Specialist
Land Protection Division

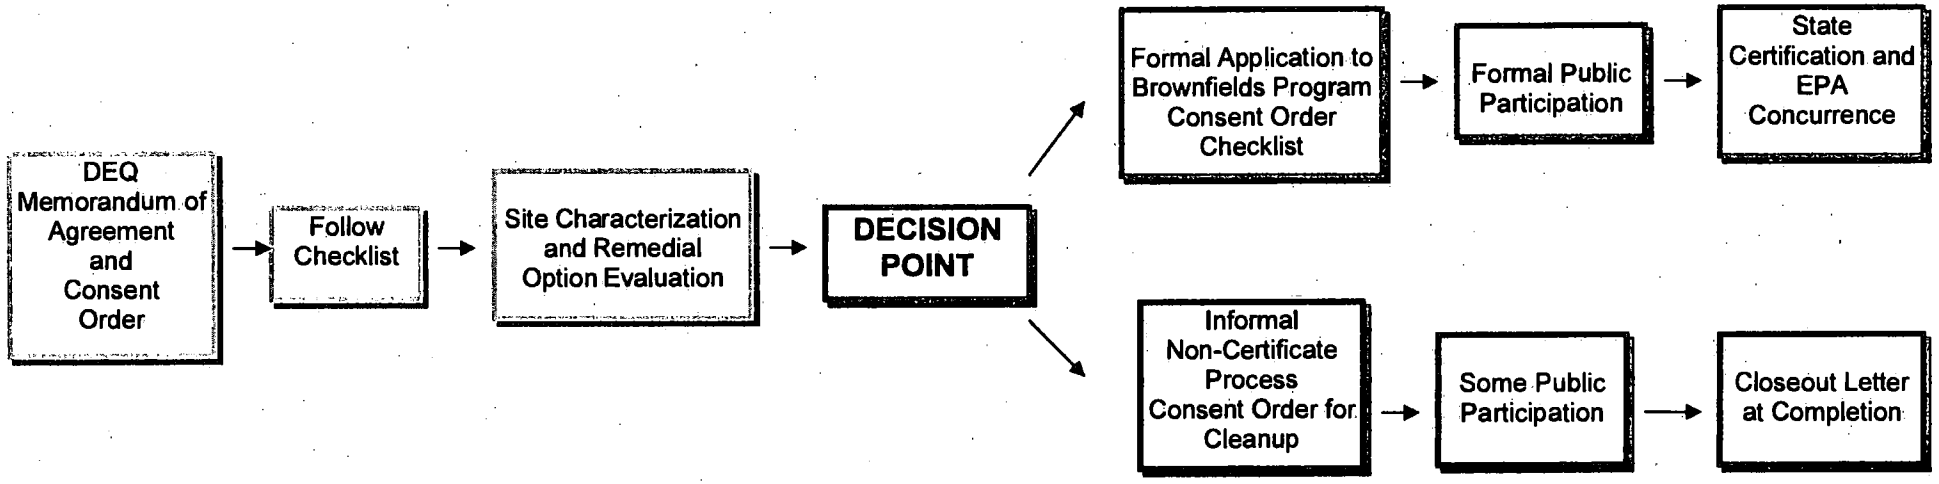
BROWNFIELDS AND VOLUNTARY CLEANUP PROGRAM STRUCTURE*

* under revision

Pre-application Phase (Site Characterization)

Post-application Phase (Cleanup)



CHECKLIST for ALL VOLUNTARY CLEANUP PROJECTS

STEP ONE **MEMORANDUM of AGREEMENT and CONSENT ORDER (MACO)**

_____ Pre-application conference. [OAC 252:002-15-30(a)]

_____ Two copies of each relevant Affidavit. [OAC 252:002-15-30(b)(3)]

_____ Of applicant as landowner [OAC 252:002-15-30(b)(3)] OR

_____ Of notice to landowner [Ibid]; and

_____ Of landowner [Ibid], if not applicant

_____ MACO signed by applicant & DEQ.

STEP TWO **DATA GATHERING & DOCUMENT PREPARATION**

PART ONE

_____ SITE CHARACTERIZATION [OAC 252:220-5-1]

_____ Work plan [OAC 252:220-5-1(b)]; and

_____Quality assurance project plan (QAPP); and

_____Sampling and analysis plan (SAP); and

_____Health and safety plan (HSP); and a

_____Site Characterization Report [OAC 252:220-5-1(c)(1)-(7)]

_____Summary of a title search document (1); and

_____Complete operational history of the site (2); and

_____Information about the current use(s) of the property (3); and

_____Documentation which identifies all potential receptors, human and ecological, and potential contamination migration pathways (4); and

_____Delineation of all sources of contamination associated with the site, including contaminated soil, and the location, size, constituents and concentrations of each source (5); and

_____Delineation of the nature and extent of contamination (6); and

_____Any site specific information requested by the DEQ (7).

PART TWO

_____ RISK ASSESSMENT [OAC 252:220-5-2]

_____ Future use of the property identified [OAC 252:220-5-2(a)] as

_____ Industrial/commercial _____ Agricultural _____ Residential

_____Default risk-based cleanup levels calculated based on future use of the property [OAC 252:220-5-2(b)]; or

_____Site-specific risk assessment performed to produce site-specific risk-based cleanup levels based on future use of the property.[Ibid]

PART THREE

_____ REMEDIAL OPTION EVALUATION [OAC 252:220-5-3]

_____ Remedial option(s) identified [OAC 252:220-5-3(a)]

_____For each identified remedial option, a narrative discussion of

_____ Risk-based cleanup levels; and

_____Economic feasibility; and

_____Technical feasibility; and

_____Reliability; and

_____Institutional controls needed to maintain future use of the site [OAC 252:220-5-3(a)]

PART FOUR

_____ REMEDIATION PLAN FOR PREFERRED OPTION [OAC 252:220-5-4]

_____The preferred option identified [OAC 252:220-5-3(b)]

_____The remedial action objectives (RAOs) [OAC 252:220-5-4(b)(1)]; and

_____All applicable state and federal laws, rules, standards, limitations, criteria and requirements (sort of an ARAR thing) [Ibid @ (2)]; and

_____Methods to verify how risk-based cleanup levels will be achieved [Ibid @ (3)]; and

_____Future monitoring and maintenance requirements [Ibid @ (4)].

STATUTORY REQUIREMENTS for BROWNFIELDS APPLICATIONS [27A O.S.Supp.1997, §2-15-105(B)(1)-(8)]

_____A description of the property (1)(a); and

_____The concentrations of contaminants (1)(b) in the

_____soils (Ibid),

_____surface water (Ibid), or

_____ groundwater at the site (Ibid); and,

_____The air releases which may occur during remediation of the site (1)(c), and

_____Any monitoring which is to occur after issuance of the Certificate (1)(d); and

_____A remediation plan or a proposal for no action (2); and

_____The current and proposed use of groundwater on and near the site (3); and

_____The operational history of the site (4); and

_____The current use of areas contiguous to the site (4); and

_____The present and proposed uses of the site (5);

_____Information concerning

_____The nature and extent of any contamination and releases of contaminants which have occurred at the site (6); and

_____ Any possible impacts on areas contiguous to the site (6);

_____Any analytical results or other data which characterizes the soil, groundwater or surface water on the site (7); and

_____An analysis of the human pathways to exposure from contamination at the site based upon the property's future use (8); and

_____An analysis of the environmental pathways to exposure from contamination at the site based upon the property's future use (8).

_____ **Statutory requirement [27A O.S. Supp. 1997, §2-15-105(C)]** Based on the potential risk to human health and safety and to the environment posed by the environmental contamination caused by regulated substances at the site, the applicant considered

_____The possibility of movement of the contamination in a form and manner which would result in exposure to humans and to the surrounding environment at levels which exceed applicable standards or which represent an unreasonable risk to human health and safety, or the environment as determined by the DEQ; and

_____Potential risks associated with the remediation proposal or no action necessary determination and the economic and technical feasibility and reliability of that proposal or determination.

Historical activities that are the source of contamination being investigated appear to have been caused by chemicals spilled on the property incident to manufacturing activities at the site. The company would like to join our voluntary cleanup program to characterize the contamination in the soil and groundwater.

No penalties or SEPS are required of a voluntary project such as this.

	)	
RESPONDENT.	)	

OKLAHOMA
DEPT. OF ENVIRONMENTAL QUALI

NOV 20 2009

FILED BY: _____
HEARING CLERK

MEMORANDUM OF AGREEMENT AND CONSENT ORDER FOR SITE CHARACTERIZATION

The parties to this case, the Oklahoma Department of Environmental Quality ("DEQ") and Limco Airepair, Inc. ("Respondent") (collectively, "Parties"), agree to this Memorandum of Agreement and Consent Order for Site Characterization ("MACO") in order to resolve certain environmental regulatory issues. At the time of the execution of this MACO, Respondent is entering the DEQ's Voluntary Cleanup Program ("VCP").

FINDINGS OF FACT

1. Respondent is Limco Airepair, Inc.

2. Respondent's real property being characterized pursuant to this MACO ("Site") is located at 5304 South Lawton Avenue, Tulsa, Oklahoma. Respondent is the owner of the Site.

3. Respondent informs the DEQ that historical activities, that are the source of, or may have contributed to the potential contamination being investigated, appear to have been caused by chemicals that were either spilled onto the property incident to manufacturing activities being conducted on the site or that were leaked onto the property from an off-site location.

4. Respondent informs the DEQ that the following environmental permits, registrations, authorizations, orders, enforcement actions or National Priorities List (NPL)

activities are applicable to the respondent or the Site:

Environmental Permits
➢ Tier 2 (State) - A listing of facilities which store or manufacture hazardous materials and submit a chemical inventory report.
➢ TRIS (Federal) – Toxic Chemical Release Inventory System. TRIS identifies facilities which release toxic chemicals to the air, water and land in reportable quantities under SARA Title III Section 313.
➢ AIRS – (State) – Permitted AIRS facility (air permit)
➢ RCRA – LQG (Federal) – Resource Conservation Recovery Act – Large Quantity Generator. RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.
➢ NPDES – National Pollutant Discharge Elimination System.
➢ Storm Water Pollution Prevention Plan (SP3).
➢ EPA Form "R".
Environmental registrations
• The subject site facility, Limco Airepair is reported to be a RCRA-LQG (EPA ID: OKR000000612). The facility was originally reported to be a Small Quantity Generator in 1995 but changed to a LQG in 2000. The facility generates the following wastes: solvents (lacquer thinner), caustic acid (sodium hydroxide), chromium, trichloroethylene, solvent mixtures (toluene, methyl ethyl ketone), and cadmium. The facility had 19 reported violations in January 1999 and as of July 1999 all 19 violations were in compliance. Two (2) additional violations were reported in January 2007 and were in compliance as of March 9, 2007. The violations consisted of used oil

generators, pre-transport generator and general generators and the 19 violations from 1999 were informal written violations. According to EDR and EPA information, the Limco Airepair facility is currently in compliance.
• The subject site is reported on the Tier 2 database (Facility ID: FATR200724U7GT002YBJ). Since the facility stores certain chemicals on-site, it is required to report those chemicals, the stored quantity, the type of storage container, and location of each chemical. The reported chemicals on the Tier 2 include: Hydrogen Fluoride, Nitric Acid (>40%), and Sulfuric Acid. There have been no reported releases of these chemicals on-site.
• The subject site is reported to be a TRIS facility (Facility ID: 74107LMCRP53). Currently the subject site releases approximate 8,260 pounds of Toluene (TRI Chemical ID: 000108883) from fugitive or non-point air emissions. Any Toluene waste is transferred to an off-site facility for treatment and disposal. The facility previously released Methyl Ethyl Ketone and Trichloroethylene but no longer generates these chemicals. Limco Airepair is currently in compliance with their Air Quality Permit.

5. Respondent informs the DEQ that, to its knowledge, the following

conditions currently exist or have existed in the past at the Site that are or were not in compliance with any environmental laws or regulations:

Compliance Summary
• 01/30/2007 Compliance Evaluation Inspection On-site (Generators Pre-Transport) (achieved compliance on 03/09/2007)
• 01/30/2007 Compliance Evaluation Inspection On-site (Used Oil Generators) (achieved compliance on 03/09/2007)
• 01/19/1999 Compliance Evaluation Inspection On-site (Generators – General) (achieved compliance on 07/06/1999

6. Respondent states that it first notified the DEQ of the environmental conditions that are the subject of this MACO in February, 2009 by written correspondence. Subsequently, on September 2, 2009, a meeting was held at the offices of the DEQ in Oklahoma City, to discuss addressing the contamination through the DEQ VCP and/or Brownfield Programs. Respondent first became aware of the possible contamination in December of 2008. Prior to the execution of this MACO, the DEQ provided assistance to Respondent by informing Respondent of the technical requirements and procedures for participating in the Brownfield Program; and

7. Respondent informs the DEQ that the harm that has resulted or is expected to result from the conditions at the Site is a release, or potential release, of contaminants to soil and groundwater at the Site.

8. The parties agree that it is beneficial to resolve these matters promptly and by agreement and, as to this matter, waive the filing of a petition or other pleading, and Respondent waives the right to a hearing.

CONCLUSIONS OF LAW

9. The DEQ has regulatory jurisdiction and authority in this matter, and Respondent is subject to the jurisdiction and authority of the DEQ under Oklahoma law, including but not limited to the Oklahoma Environmental Quality Act, 27A O.S. §1-1-101 *et seq.* and the Oklahoma Environmental Quality Code, specifically 27A Okla. Statutes (O.S.) §§ 2-6-105, 2 –7– 123, 2-10-301(H), and 2-15-101 *et seq.* and applicable rules.

10. The Parties are authorized by 75 O.S. §309(E) and 27A O.S. §2-3-506(B) to resolve this matter by agreement.

11. If the Respondent remediates the Site to risk based standards, Respondent acknowledges that the DEQ shall file a Notice of Remediation in the land records of the county in which the property is located unless said property is remediated to unrestricted use. Respondent shall grant an easement to the DEQ for ingress and egress to assure ongoing protection of the Remedy as provided in the deed notice.

12. The DEQ acknowledges that Respondent has submitted various technical documents for review and comment, including but not limited to the following: Limited Phase I and II Environmental Site Assessments prepared by A&M Engineering Services, Inc.

13. Respondent does not admit any Conclusions of Law.

ORDER

14. Within thirty (30) days of effective date of this MACO, Respondent will submit to the DEQ a Work Plan to characterize the Site in conformance with guidance documents recommended by the DEQ including a Quality Assurance Project Plan (QAPP), a Sampling and Analysis Plan (SAP) and a Health and Safety Plan (HSP) for the site.

15. The SAP must contain schedules for completion of each task and shall not be implemented until after approval of the Work Plan by the DEQ. If the DEQ determines that the results of the SAP indicate the need for additional tasks to be performed by Respondent to properly characterize the Site, Respondent and DEQ shall negotiate an amendment to the SAP that is acceptable to the parties.

16. If either Party believes work needs to be performed prior to completion of the Site Characterization, Respondent or the DEQ may request the performance of a Removal Action (RA) or an Interim Remedial Measure (IRM).

17. Within thirty (30) days after completing the tasks outlined in the Work Plan, Respondent shall submit a Site Characterization Report to the DEQ in accordance with guidance documents provided by the DEQ at its website,

http://www.deq.state.ok.us/ lpdnew/ FactSheets/SiteCharacterizationTemplate.

18. Within thirty (30) days from the effective date of this Order, Respondent shall submit a valid check for $5,000.00. The check shall be mailed to: Comptroller, Administrative Services Division, Department of Environmental Quality, P.O. Box 2036, Oklahoma City, Oklahoma, 73101-2036 and shall reference the case number and case name. The DEQ will establish an account for Respondent with the funds referenced herein above, from which the DEQ will draw to pay its costs necessary for oversight of tasks set forth in this MACO and, if a deed notice is filed by the DEQ, to pay the filing fee pursuant to Oklahoma law. The DEQ oversight costs will include all reasonably-incurred direct costs of the DEQ's oversight arrangement for the investigation including, but not limited to, time and travel costs of DEQ personnel, contractor costs, and the costs of collecting and analyzing split samples. The salary and fringe benefit component of

oversight costs will be charged as direct costs. Indirect costs for on-Site and off-Site oversight will be charged at the current federal percentage rate until a new indirect cost rate is negotiated with the United States Environmental Protection Agency, at which time the negotiated rate will be used. The DEQ will provide a written quarterly accounting to Respondent documenting the receipt and disbursement of the funds referenced herein above. When and if the balance of Respondent's account falls below $500.00, the DEQ will notify Respondent in writing, and Respondent will submit a check for a sum sufficient to bring the account balance back to $5,000.00. Respondent will have the right to audit any accounting submitted by the DEQ at Respondent's expense. The DEQ will promptly credit any overcharges to Respondent's account. Upon completion of the tasks set forth in this MACO the DEQ will promptly return any funds remaining in Respondent's account to Respondent.

19. Respondent must also include a description of the monitoring which is to occur after issuance of the Certificate of Completion or Certificate of No Action Necessary and a summary of a title search document.

20. With the exception of DEQ approved RAs or IRMs, a Consent Order for Remediation will be negotiated and signed by the DEQ and Respondent before remedial work is begun at the Site.

GENERAL PROVISIONS

21. Upon their approval by the DEQ, any final reports, plans, specifications, schedules and attachments required under this MACO are incorporated into it and enforceable under it. Failure of Respondent to respond within a reasonable time to any

errors, deficiencies or other regulatory requirements identified by the DEQ is a violation of this MACO.

22. No informal advice, guidance, suggestions or comments by employees of the DEQ regarding reports, plans, specifications, schedules, and other writings relieve or modify Respondent's obligation to obtain written approval by the DEQ, when required by this MACO.

23. Respondent agrees to allow agents of the DEQ entry onto the site at reasonable times and without advance notice, for the purposes of inspecting, sampling, testing, records review and other authorized activities to assess compliance with this MACO. If Respondent is required to sample or test, Respondent agrees to give the DEQ reasonable notice of the sampling or testing date and time and allow the DEQ to observe and/or split-sample.

24. Nothing in this MACO relieves Respondent of its obligation to comply with all applicable federal, state and local statutes, rules and ordinances.

25. This MACO is enforceable as a final order of the Executive Director of the DEQ. The DEQ will retain jurisdiction of this matter for the purposes of interpreting, implementing and enforcing the terms and conditions of this MACO and for the purpose of resolving disputes.

26. Nothing in this MACO limits the DEQ's right to take enforcement action for violations discovered or occurring after the effective date of this MACO.

27. Respondent and the DEQ agree that the provisions of this MACO should be considered severable, and should a court of competent jurisdiction find any provisions to be

inconsistent with state or federal law and therefore unenforceable, the remaining provisions will remain in full force and effect.

28. The provisions of this MACO apply to and are binding upon Respondent and their officers, directors, employees, agents, successors and assigns. No change in the ownership or corporate status of Respondent will alter Respondent's responsibilities under this MACO.

29. Neither the fact that Respondent and the DEQ have entered into this MACO, nor the Findings of Fact and Conclusions of Law, shall be used for any purpose in this or any other proceeding except the enforcement by the parties of this MACO. As to others who are not parties, nothing contained in this MACO is an admission by Respondent of the Findings of Fact or Conclusions of Law, and entry into this MACO is not an admission by Respondent of liability for conditions at or near the facility or a waiver of any right, cause of action or defense Respondent otherwise has.

30. Respondent and the DEQ agree that the venue of any action in district court for the purposes of interpretation, implementation and enforcement of this MACO will be Oklahoma County, Oklahoma.

31. The requirements of this MACO will be considered satisfied and this MACO terminated when Respondent receives written notice from the DEQ that Respondent has demonstrated that all the terms of the MACO have been completed to the satisfaction of the DEQ.

32. The parties may amend this MACO by mutual consent. Such amendments must be in writing and the effective date of the amendments will be the date on which they are signed by the DEQ.

33. Unless otherwise specified, any report, notice or other communication required under this MACO must be in writing and must be sent by mail or by electronic submission or both to:

Legal:	Andrew T. Harrison, Esq. SNEED LANG HERROLD, P.C. 1700 Williams Center Tower I 74136 One West Third Street Tulsa, Oklahoma 74103	Technical:	A&M Engineering Services 10010 East 16th Street Tulsa, Oklahoma

The designated persons may be changed by letter to the signatories and incorporated herein by reference without amending this Order.

34. The individuals signing this MACO certify that they are authorized to sign it and to legally bind the parties they represent.

35. This MACO becomes effective on the date of the signature below of the Executive Director of the DEQ.

Dear Mr. Roberts:

A & M Engineering and Environmental Services, Inc. (A & M Engineering) is pleased to submit two (2) hard copies of the Site Characterization Work Plan for the Limco Airepair facility based on the Memorandum of Agreement and Consent Order (MACO), dated November 20, 2009. The Work Plan has been prepared and submitted on behalf of Limco Airepair, Inc.

If you have any questions concerning this report, please do not hesitate to contact me at (918)-665-6575.

Respectfully,

Abigail Lazar
Project Manager

CITY OF TULSA, TULSA COUNTY, OKLAHOMA

1. INTRODUCTION

A & M Engineering and Environmental Services, Inc. (A & M Engineering) was contracted in June 2009 by Limco Airepair, Inc. to prepare a Work Plan for the Targeted Voluntary Cleanup Program - Limco Airepair Facility (the "Site"). The Site consists of approximately 4.7 acres of land with building facilities, located within the Northwest ¼ of the Northeast ¼ of Section 35, Township 19 North, Range 12 East in the City of Tulsa, Tulsa County, Oklahoma. The Site is situated in the northeast portion of the State of Oklahoma and within the west-central portion of Tulsa County. The Topographic Map (Figure 1), depicting the location and the Site Map (figure 2) depicting the general layout of the Site, are provided in Attachment A. The Site is zoned as Light Industrial (IL).

This Work Plan is being presented for review to the Oklahoma Department of Environmental Quality (ODEQ) in association with the consent order (Case No. 09-303). In preparing this Work Plan, Limco Airepair and A & M Engineering reviewed the information and data included in the previous studies and have conducted several site visits.

The objective of this Work Plan is to outline the tasks that Limco Airepair is proposing for development of a Site Characterization Report, Removal Action Design Report, and Removal Action Plan. All reports and plans will be in compliance with US Environmental Protection Agency (US EPA) and ODEQ guidelines and criteria.

BACKGROUND:

The Site consists of two industrial buildings, equipment/material storage yard, and parking lot occupied by Limco Airepair, a company that manufactures and assembles heat transfers, ducting, and air conditioning units. Limco Airepair owns the main building and leases the building located on the west portion of the site. Basic operations that are conducted on-site include: the manufacture and repair operations of heat exchangers and repair of aircraft air ducts. The facility operates 16 hours a day, 5.5 days a week and 22 days month, or 4,224 hours per year.

A Phase I ESA was originally conducted in December 2008 and February2009 for the Limco Site. According to historical resources and the site inspection, the Site consisted of vacant land until the main building structure was constructed in the mid to late 1970s with additions in the early 1980s. The leased building was also constructed in the mid to late 1970s. Limco Airepair has occupied the main building since the mid 1990s and leased the adjacent building since 2006. According to records, light industrial/manufacturing companies have occupied the Site from 1976 to 2008.

On February26, 2009, four (4) borings (TH-1 through TH-4) were drilled at the Site. All of the borings were drilled near the main building. TH-1 was located north of the main building and employee parking lot and was the upgradient boring. TH-2 was situated approximately 50 feet southeast of the Compressor Room. All of the borings were completed with one (1)-inch diameter screens for groundwater sampling. After letting both borings recharge for groundwater, water samples were collected from TH-1, TH-2, and TH-4. There was no groundwater in TH-3 so no groundwater sample was collected. An additional surface soil sample (S-Drum) was collected east of the flammable drum storage in a drainage ditch. The previous sample locations are shown on Figure 3 in Appendix A.

Groundwater concentration levels in TH-1 were elevated for Arsenic, Barium, Beryllium, Cadmium, Chromium, Lead, Mercury, and Zinc above the Primary Drinking Water Maximum Contaminant Levels (MCLs). Groundwater concentration levels in TH-2 were elevated for Arsenic, Barium, Beryllium, Cadmium, Chromium, Lead, and Trichloroethylene above MCLs. No groundwater sample was collected from TH-3 since there was no water in the boring. Groundwater concentration levels in TH-4 were elevated for Arsenic, Barium, Beryllium, Cadmium, Chromium, and Lead above MCLs.

The concentrations that are above the MCLs are highest in the upgradient sample (TH-1). The upgradient TH-1 sample did not have any detected organics, however, TH-2 and TH-4 have some elevated organic parameters. The organic parameters are low in concentration except for the Trichloroethylene in TH-2. Trichloroethylene in TH-2 is 0.202 mg/L and is above the MCL of 0.005 mg/L.

The groundwater is encountered at the base of the alluvial unit which has a low yield. The analytical data of groundwater samples from the three (3) borings show metals impact (Arsenic, Barium, Beryllium, Cadmium, Chromium, Lead and Mercury) that exceed the Maximum Contaminant Levels for Primary Drinking Waters Standards. However, the metals impact is not related to the Site since the upgradient boring (TH-1) has the highest metals concentrations. TH-2 groundwater sample detected Trichloroethylene (TCE) at 0.202 mg/L concentration and TH-4 at 0.001 mg/L. TCE was not detected in TH-1 (upgradient) groundwater sample. Therefore, TCE contamination maybe related to the subject facility. The Trichloroethylene MCL is 0.005 mg/L and TH-2 groundwater exceeded this level.

Metals and a few organic parameters were detected in the soil samples, however the detected parameters were in relatively low concentrations. The S-Drum sample showed elevated concentrations levels compared to the other two soil samples for Copper, Selenium, and Zinc. The detected parameter concentration levels were compared to the

Risk-Based Screening Levels for Industrial Sites (DAF=1) and none of the detected parameters exceeded the Risk-Based Screening Levels.

The groundwater analytical table (Table 1) and the soil analytical table (Table 2) are provided in Attachment A.

2. SITE CHARACTERIZATION REPORT PREPARATION

Based on past Site operations and utilization, previous studies, and Site observations, the following tasks are proposed for gathering the necessary information and field data required for the preparation of the Site Characterization Report. A complete Sampling and Analysis Plan for collecting the field data for the Site Characterization Report is provided in Attachment B of this work plan. The Quality Assurance Project Plan (QAPP) is provided in Attachment C and the Site Specific Health and Safety Plan is provided in Attachment D.

TASK 1: INSTALL MONITORING WELLS

Eight (8) monitoring wells will be completed to determine the groundwater flow direction. The proposed monitoring well locations (Figure 4) are provided in Attachment A.

TASK 2: EVALUATE SUBSURFACE SOIL

The subsurface material from the split barrel will be screened using a Photo Ionization Detector (PID). The soil zones with a high PID reading (over 10) will be sampled and analyzed for volatile organics (Method 8260). The zones with high PID readings (over 10) will be sampled (grab). If the PID readings are below 10, no samples will be collected in that boring.

TASK 3: COLLECT GROUNDWATER SAMPLES

Groundwater samples will be collected from each of the eight (8) monitoring wells and sampled for pH, Conductivity, Priority Metals, Chloride, Dissolved Oxygen, Total Dissolved Solids (TDS), and volatiles (Method 8260). If the detected metals are above Maximum Concentration Levels (MCLs), the water samples will be filtered and reanalyzed to determine if the sediments impacted the water.

TASK 4: INVESTIGATE NEARBY FACILITIES

Since the upgradient water samples indicated elevated concentrations for Arsenic, Barium, Beryllium, Cadmium, Chromium, Lead, Mercury, and Zinc, the nearby industrial facilities will be evaluated and investigated for reported violations and permits. In addition, potential sources of off-site source contamination will be investigated.

TASK 5: PLUG MONITORING WELLS

Once the on-site environmental contamination issues are resolved, the eight (8) monitoring wells will be plugged in accordance with the Oklahoma Water Resources Board (OWRB).

TASK 6: PREPARATION OF SITE CHARACTERIZATION REPORT

Prepare and finalize the Site Characterization Report.

The Site Characterization Report at a minimum will include the following components:

1. Review of available information and document findings, including the current and previous usage of the Site.

2. A physical characteristic description of the Site, including geology, soil, hydrogeology, surface hydrology, land use, meteorology, at a minimum.

3. Detailed description of the involved contaminants, sources, release characteristics, and contaminated media.

4. Procedures used to determine the nature and extent of the contaminants, present the sampling results and collected field data, and evaluate the transport pathways.

5. Using the collected field data, determine the areas where the contamination exists above "screening levels" set by the US EPA and determine the site specific risk-based clean-up levels using ODEQ approved methodology.

6. Document the possibility of contamination movement in pathways that would result in exposure to humans and to surrounding environments at levels that exceed EPA screening levels or Maximum Contaminant Levels (MCLs).

7. Identify remedial options and additional field data collection needs, if any, to further study the identified remedial options.

8. Develop a sampling plan to collect additional data, if needed, for preparing the Removal Action Design Report and conduct the additional sampling following ODEQ approval.

3. REMOVAL ACTION DESIGN REPORT PREPARATION

The Removal Action Design Report shall evaluate at least two (2) possible removal actions alternatives from the collected data. The removal action alternatives and "no action" alternative shall address threats to human health and the environment. The evaluation shall include:

1. Summary of the completed Site Characterization work.

2. Description of contaminants of concern, including a discussion and summary of collected data (with appropriate QA/QC and data validation information);

3. An evaluation of possible exposure pathways, including areal extent of contaminants of concern.

4. Removal action goals and appropriate action levels;

5. A description of at least two (2) potential action alternatives and a "no action" alternative for the site, including an evaluation of the effectiveness of the removal action alternatives in terms of long term remedial objectives and reduction of risk to human health and the environment;

6. A comparison and justification of the costs of each removal action.

7. A consideration of appropriate regulations, standards, etc., pertinent to each removal action alternative evaluated.

8. A preferred alternative of an appropriate removal action giving adequate supporting rationale for its selection based on the above defined criteria. Necessary plans, diagrams, etc., to implement the proposed removal action should be included; The final selection of an appropriate removal action will be done by the ODEQ and the public; and

9. Establishment of adequate post-removal confirmation sampling to determine removal action performance.

4. REMOVAL ACTION PLAN PREPARATION

After the ODEQ approval of the Removal Action Design, a Removal Action Plan containing additional designs, technical specifications, etc. of the preferred removal alternative will be submitted to the ODEQ for review and approval prior to starting any construction activity.

5. PROJECT SCHEDULE

The Project Schedule is prepared to cover only the tasks for the Site Characterization and Reporting. If remedial tasks are needed, a new schedule will be prepared for those tasks.

The following summarizes the Project Schedule for Initial Tasks:

1. Prepare and Submit Work Plan
2. Obtain ODEQ Approval for the Work Plan
3. Prepare and Coordinate the implementation of the Sampling & Analysis Plan (SAP)
4. Inform ODEQ at least two (2) weeks prior to initiation of Field Work
5. Implement SAP requirements in the Field
6. Obtain Analytical Results
7. Prepare Site Characterization Report and Submit to ODEQ
8. Obtain ODEQ comments
9. Decide on Additional Data Collection
10. Implement Additional Data Collection (if necessary)
11. Prepare Addendum to Site Characterization Report and Submit to ODEQ

The Project Schedule is provided in Attachment E.

FOR

SITE CHARACTERIZATION WORK PLAN

LIMCO AIREPAIR
ODEQ – LPD CASE NO. 09-303
WITHIN THE NORTHWEST ¼ OF THE NORTHEAST ¼ OF SECTION 35, TOWNSHIP 19 NORTH, RANGE 12 EAST
CITY OF TULSA, TULSA COUNTY, OKLAHOMA

1.0 INTRODUCTION

A & M Engineering and Environmental Services, Inc. (A & M Engineering) is contracted by Limco Airepair, Inc. to conduct Site Characterization at the Limco Airepair ("Site") located in Tulsa, Oklahoma.

The Site consists of approximately 4.7 acres of land with building facilities, located within the Northwest ¼ of the Northeast ¼ of Section 35, Township 19 North, Range 12 East in the City of Tulsa, Tulsa County, Oklahoma. The Site is situated in the northeast portion of the State of Oklahoma and within the west-central portion of Tulsa County. The Topographic Map (Figure 1), depicting the location and the Site Map (Figure 2) depicting the general layout of the Site, are provided in Attachment A. The Site is zoned as Light Industrial (IL).

This Sampling and Analysis Plan is prepared to address and determine any impact to soil and groundwater from either migration of contaminants onto the Site due to historical off-site use or previous on-site activities. The collected data from the site investigation will be presented in a site characterization report.

1.1 SITE LOCATION

The Site is situated between Highway 75 and the Arkansas River and south of Interstate 44, within the Carbondale area of Tulsa, Oklahoma. The Site is situated within the Northwest ¼

of the Northeast ¼ of Section 35, Township 19 North, Range 12 East in the City of Tulsa, Tulsa County, Oklahoma.

The Site consists of 4.7 acres of land with two industrial buildings. Light industrial properties (the Pepsi Plant, associated parking lots and administrative offices, and Fentress Oil Company) surround the Site to the north, east, and west. Mooser Creek and undeveloped woodland are situated south of the Site. A Site Layout Map (Figure 2) is provided in Appendix A.

1.2 BACKGROUND

The Site consists of two industrial buildings, equipment/material storage yard, and parking lot occupied by Limco Airepair, a company that manufactures and assembles heat transfers, ducting, and air conditioning units. Limco Airepair owns the main building and leases the building located on the west portion of the site. Basic operations that are conducted on-site include: the manufacture and repair operations of heat exchangers and repair of aircraft air ducts. The facility operates 16 hours a day, 5.5 days a week and 22 days month, or 4,224 hours per year.

A Phase I ESA was originally conducted in December 2008 and January 2009 for the Limco Site. According to historical resources and the site inspection, the Site consisted of vacant land until the main building structure was constructed in the mid to late 1970s with additions in the early 1980s. The leased building was also constructed in the mid to late 1970s. Limco Airepair has occupied the main building since the mid 1990s and leased the adjacent building since 2006. According to records, light industrial/manufacturing companies have occupied the Site from 1976 to 2008.

1.3 PREVIOUS STUDIES AND INVESTIGATIONS

A Phase I Environmental Site Assessment (ESA) was conducted at the Limco Airepair Facility in December 2008 and January 2009 by A & M Engineering and Environmental Services, Inc. (A&M Engineering). In order to further evaluate the condition of the subsurface near the floor grates and pits near the Clean Line area and WWTS, further assessment of the soil and groundwater was recommended.

On January 26, 2009, four (4) borings (TH-1 through TH-4) were drilled at the Site. All of the borings were drilled near the main building. TH-1 was located north of the main building and employee parking lot and was the upgradient boring. TH-2 was situated approximately 50 feet southeast of the Compressor Room. All of the borings were completed with one (1)-inch diameter screens for groundwater sampling. After letting both borings recharge for groundwater, water samples were collected from TH-1, TH-2, and TH-4. There was no groundwater in TH-3 so no groundwater sample was collected. An additional surface soil sample (S-Drum) was collected east of the flammable drum storage in a drainage ditch. The previous sample locations are shown on Figure 3 in Appendix A.

Groundwater concentration levels in TH-1 were elevated for Arsenic, Barium, Beryllium, Cadmium, Chromium, Lead, Mercury, and Zinc above the Primary Drinking Water Maximum Contaminant Levels (MCLs). Groundwater concentration levels in TH-2 were elevated for Arsenic, Barium, Beryllium, Cadmium, Chromium, Lead, and Trichloroethylene above MCLs. No groundwater sample was collected from TH-3 since there was no water in the boring. Groundwater concentration levels in TH-4 were elevated for Arsenic, Barium, Beryllium, Cadmium, Chromium, and Lead above MCLs.

The concentrations that are above the MCLs are highest in the upgradient sample (TH-1). The upgradient TH-1 sample did not have any detected organics, however, TH-2 and TH-4 have some elevated organic parameters. The organic parameters are low in concentration except for the Trichloroethylene in TH-2. Trichloroethylene in TH-2 is 0.202 mg/L and is above the MCL of 0.005 mg/L.

The groundwater is encountered at the base of the alluvial unit which has a low yield. The analytical data of groundwater samples from the three (3) borings show metals impact (Arsenic, Barium, Beryllium, Cadmium, Chromium, Lead and Mercury) that exceed the Maximum Contaminant Levels for Primary Drinking Waters Standards. However, the metals impact is not related to the Site since the upgradient boring (TH-1) has the highest metals concentrations. TH-2 groundwater sample detected Trichloroethylene (TCE) at 0.202 mg/L concentration and TH-4 at 0.001 mg/L. TCE was not detected in TH-1 (upgradient) groundwater sample. Therefore, TCE contamination maybe related to the subject facility. The Trichloroethylene MCL is 0.005 mg/L and TH-2 groundwater exceeded this level.

Metals and a few organic parameters were detected in the soil samples, however the detected parameters were in relatively low concentrations. The S-Drum sample showed elevated concentrations levels compared to the other two soil samples for Copper, Selenium, and Zinc. The detected parameter concentration levels were compared to the Risk-Based Screening Levels for Industrial Sites (DAF=1) and none of the detected parameters exceeded the Risk-Based Screening Levels.

The Groundwater Analysis Summary (Table 1) and the Soil Analysis Summary (Table 2) are provided in Appendix B. The Previous Sample Locations Map (Figure 3) is provided in Appendix A.

The analytical data shows impact to the groundwater at the site from either previous on-site activities or the historical adjacent properties, located north of the site.

1.4 SCOPE OF WORK

Based on historical Site operations and utilization, historical adjacent property land uses (e.g. light industrial activities), previous studies, and site observations, the following tasks are proposed for gathering the necessary information and field data required for the preparation of the Site Characterization Report.

TASK 1: INSTALL MONITORING WELLS

Eight (8) monitoring wells will be completed to determine the groundwater flow direction. The proposed monitoring well locations (Figure 4) are provided in Attachment A.

TASK 2: EVALUATE SUBSURFACE SOIL

The subsurface material from the split barrel will be screened using a Photo Ionization Detector (PID). The soil zones with a high PID reading (over 10) will be sampled and analyzed for volatile organics (Method 8260). The zones with high PID readings (over 10) will be sampled (grab). If the PID readings are below 10, no samples will be collected in that boring.

TASK 3: COLLECT GROUNDWATER SAMPLES

Groundwater samples will be collected from each of the eight (8) monitoring wells and sampled for pH, Conductivity, Priority Metals, Chloride, Dissolved Oxygen, Total Dissolved Solids (TDS), and volatiles (Method 8260). If the detected metals are above Maximum Concentration Levels (MCLs), the water

samples will be filtered and reanalyzed to determine if the sediments impacted the water.

TASK 4: INVESTIGATE NEARBY FACILITIES

Since the upgradient water samples indicated elevated concentrations for Arsenic, Barium, Beryllium, Cadmium, Chromium, Lead, Mercury, and Zinc, the nearby industrial facilities will be evaluated and investigated for reported violations and permits. In addition, potential sources of off-site source contamination will be investigated.

TASK 5: PLUG MONITORING WELLS

Once the on-site environmental contamination issues are resolved, the eight (8) monitoring wells will be plugged in accordance with the Oklahoma Water Resources Board (OWRB).

TASK 6: PREPARATION OF SITE CHARACTERIZATION REPORT

Prepare and finalize the Site Characterization Report.

In order to successfully accomplish the objectives set forth, the following specific sampling will be completed to address the identified potential environmental concerns:

1.4.1. SUBSURFACE SOIL INVESTIGATION:

The subsurface material from the split barrel will be screened using a Photo Ionization Detector (PID). The soil zones with a high PID reading (over 10) will be sampled and analyzed for volatile organics (Method 8260). The zones with high PID readings (over 10) will be sampled (grab). If the PID readings are below 10, no samples will be collected in that boring.

A ratio of ten (10) percent duplicates will be used for soils samples.

1.4.2. GROUNDWATER INVESTIGATION:

Eight (8) monitoring wells (MW-1, MW-2, MW-3, MW-4, MW-5, MW-6, MW-7, and MW-8) will be drilled and completed to determine the impact to the groundwater underlying the Site. Groundwater samples will be analyzed for pH, Conductivity, Priority Metals, Chloride, Dissolved Oxygen, Total Dissolved Solids (TDS), and volatiles (Method 8260). If the detected metals are above Maximum Concentration Levels (MCLs), the water samples will be filtered and reanalyzed to determine if the sediments impacted the water.

The monitoring well locations are shown in Figure 4, provided in Appendix A. These monitoring wells will be drilled to the uppermost aquifer, sampled with a split barrel, and visually inspected to a total depth of 30 feet. The subsurface material from the split barrel will be described by a field geologist. In addition, all soils samples will be screened using a Photo Ionization Detector (PID). The soil zones with a high PID (over 10) reading will be sampled and analyzed for volatile organics (Method 8260).

The eight (8) borings on the Site will be completed as monitoring wells and utilized for groundwater sampling. The data from these monitoring wells will be utilized to define the uppermost aquifer characteristics.

2.0 DRILLING AND TESTHOLE COMPLETION

2.1 DRILLING PROCEDURE FOR MONITORING WELLS

Testholes will be drilled using a standard type drill rig with hollow stem augers. The drilling auger will be used for boring the Testholes and accessing the subsurface materials for sampling. Each Testhole will be drilled to a maximum depth of thirty (30) feet. At the conclusion of drilling and following any sample collection activities at a Testhole location, the cuttings will be placed inside 55-gallon drums. The driller used for this project will be an Oklahoma certified monitoring well driller. Boring logs will be recorded for each Testhole at the time of drilling by an adequately qualified and experienced environmental professional. All samples from the borings will be scanned using a Photo Ionization Detector (PID). At a minimum, boring logs will include the following:

- Project Name and number
- Testhole name/number
- Date and time of start and finish
- Weather conditions
- Environmental Professional's name
- Driller's name
- Testhole location
- Rig type bit size/auger size
- Depth of Testhole
- Sample ID number (if collected)
- Narrative description of encountered materials including:
  - ❖ Soil/rock type
  - ❖ Color and stain
  - ❖ Moisture content
  - ❖ Odor
  - ❖ Suspect contaminant
- Drilling observations including:
  - ❖ Hole stability/caving
  - ❖ Advance rates

- ❖ Drilling difficulties
- Equipment failures or other deviations from the drilling plan

An example of a Soil Boring Log Form (Form 1) is provided in Appendix C.

Upon completion each Testhole will be completed as a monitoring well. Also, in accordance with the OWRB regulations a Construction & Plugging Report Form will be completed and submitted for each Testhole. A copy of the OWRB Construction & Plugging Report for Testholes (Form 2) is provided in Appendix C.

2.2 BORING DESCRIPTION

Borings will be completed in the general areas of concern based upon visual site characteristics and accessibility. All physical characteristics of samples will be described and recorded in the field log book with the PID readings as well.

3.0 INSPECTION, SAMPLING, AND TESTING PROTOCOLS

All the proposed monitoring wells for this project will be drilled to the uppermost aquifer or to a depth of 30 feet.

3.1 SAMPLING EQUIPMENT

Equipment that may be used to collect soil samples from the Testholes includes the following:

- Drill rig
- Stainless steel spoon
- Steel hand shovel
- Plastic zip-lock bags
- Pre-cleaned wide-mouth containers with Teflon lined lids
- Alconox soap and distilled water for equipment decontamination
- Photo Ionization Detector (PID)

Uppermost groundwater samples obtained from the monitoring wells will be collected using individually wrapped, disposable bailers.

3.2 PROTOCOL FOR SOILS SAMPLING

A total of eight (8) monitoring wells will be drilled using a standard drill rig with hollow stem augers. Representative samples will be obtained by the split-barrel sampling procedure. Soil samples will be sniffed using a Photo Ionization Detector (PID). The monitoring wells will be drilled to a maximum depth of 30 feet. The monitoring wells will be completed in the general areas of concern based upon visual site characteristics and accessibility and they are shown on Figure 4 in Appendix A.

- The sampling technician(s) will don clean PPE as specified (gloves). The sampling equipment (split barrels) will be thoroughly cleaned with Alconox/distilled water mixture and rinsed with distilled water prior to the first sample collection. The drill rig operators will don leather gloves and the drill auger will be thoroughly cleaned and rinsed with steam cleaner between each Testhole location. All decontamination and rinsate water will be collected, drummed, sampled and properly disposed. Each five (5) foot split barrel will be inspected by a geologist and screened with the PID. The zones with high PID readings (over 10) will be sampled (grab). The samples will be put into laboratory prepared sample containers. The soil samples will be analyzed for volatile organics (Method 8260).

- After the Testhole has been properly evaluated, team members will clean the equipment with Alconox and distilled water. Drill augers will be thoroughly cleaned and rinsed with a steam cleaner. Team members will don clean latex gloves prior to obtaining the next sample.

- The above sampling sequence will be followed for each of the remaining Testhole locations.

Decontamination of sampling equipment will be conducted at the conclusion of the sampling event as described in a subsequent section of this document.

3.3 PROTOCOL FOR UPPERMOST GROUNDWATER SAMPLING

Uppermost groundwater samples will be collected from eight (8) monitoring wells using the following protocol:

- Prior to sampling, each monitoring well will be purged at least three well-volumes and the boring will be allowed to recover to approximately eighty percent of its initial volume (if possible in the allotted time).

- The sampling technician(s) will don clean PPE as specified. Water samples will be collected with individually wrapped, disposable bailers, eliminating the need for initial decontamination of the sampling device. Sample labels will be completed with an indelible marker and affixed to the sample containers prior to the collection of water samples.

- The bailer will be slowly lowered into the water until water resistance is "felt". The bailer will continue to be lowered further until approximately ¾ of bailer length is submerged.

- The bailer will be gently raised out of the water and the subjective appearance of the sample (i.e. floating debris, free product (LNAPL, DNAPL), sheen, color, clarity, etc.) will be noted in the sampling log.

- A water sample will be slowly decanted into the appropriately labeled sample vial, provided by the lab, via the fluid extractor located at the bottom of the bailer. If sediments prevent flow through the extractor, the liquid will be carefully poured into sample vial from the top of bailer with minimal agitation.

- The sample container, which is provided by the lab and supplied with the appropriate preservative, will then be inspected to assure that the container is filled to the point where the meniscus is formed above the lip of the sample container. A Teflon-lined cap will be quickly placed onto the sample container

and tightened securely. The sample container will be checked to ensure no air bubbles are present. A custody seal will be placed over the lid of the sample container. The sample jars for organic testing will be collected first, then the metals, and then inorganics.

- Sealed samples will be placed in a suitable holder to prevent breakage and put in an ice chest packed with sufficient ice to ensure sample temperature is maintained below four (4) degrees Centigrade for transport to analytical laboratory.

The samples will be collected and analyzed using the appropriate EPA SW846 methods listed below.

- ❖ EPA Method 8260 (Volatile Organics)
- ❖ EPA Method 6010 (Priority Metals)
- ❖ Standard Methods 4500-Cl C (Chloride)
- ❖ Standard Methods 4500-O G (Dissolved Oxygen)
- ❖ Standard Methods 2540 C (Total Dissolved Solids – TDS)
- ❖ EPA Method SW 9040 B (pH)
- ❖ EPA Method SW 9050 A (Conductivity)

3.3.1. Quality Control Measures for Uppermost Groundwater Sampling

Trip Blank

Trip Blanks to be used are QC samples which originate from analyte-free water taken from the laboratory to the sampling site and returned to the laboratory with the volatile organic (VOA) samples. One trip blank will accompany each cooler to be shipped to the laboratory containing VOAs. Trip blanks are only analyzed for VOAs.

FIELD DUPLICATES

The field duplicates for water samples should be collected simultaneously. Field duplicates will be collected at a frequency of 10% per sample matrix. All the duplicates will be sent to the primary laboratory responsible for analysis. The same samples used for field duplicates shall be split by the laboratory and be used as the laboratory duplicate or matrix spike and a matrix spike duplicated (MS/MSD). This means that for the duplicate sample, there will be analyses of the normal sample, the field duplicate and the laboratory MS/MSD. A separate MS/MSD will not be collected in the field, but will be obtained from the field duplicate by splitting the sample in the laboratory.

3.4 DECONTAMINATION PROCEDURES

Equipment that may come in contact with potentially contaminated soil, sediment, or water will be decontaminated prior to and after use. Decontamination consists of steam cleaning (high pressure, hot water washing), phosphate-free detergent wash (Alconox), and distilled, deionized (DI), or clean water rinse, as appropriate.

Sampling and drilling equipment will be decontaminated utilizing EPA guidelines. Summary decontamination steps are as follows:

3.4.1. WATER SAMPLING EQUIPMENT

Prior to collecting a water sample, non-dedicated sampling equipment must be decontaminated according to the following procedure.

- EQUIPMENT: Remove all visible contamination with distilled water and an Alconox™ solution. If this is not effective, use a clean soft cloth or sponge or use pressurized water to clean equipment. If required, a brush may be used to clean stainless steel or metal equipment but not plastic equipment, which may be

scratched by the brush. After cleaning equipment, triple rinse equipment with distilled water.

- HOSES: Clean outside of hoses with high pressure hot water. Pump three (3) volumes of distilled water through hoses. If possible, use pressurized distilled water.

- PROBE TIPS AND METERS: Triple rinse with distilled water.

- Collect sample according to the specific procedure for the sample type.

- Rinse all sample collection equipment with clean tap water followed by distilled water. Store equipment in clean containers.

3.4.2. DRILLING EQUIPMENT

Steam clean downhole equipment on drill rigs such as augers, drill rods and drill bits prior to and/or after use adjacent to each Testhole. Remove visible soil and grease.

Wash steel tapes, well sounders, transducers and water quality probes in a phosphate-free detergent solution and rinse in distilled or DI water or wipe clean after each use. Clean the portion of these devices inserted into Testholes with a mild soap solution.

3.5 SAMPLE PACKAGING AND TRANSPORT

Each sample will be packaged and transported appropriately as described in the following protocol:

- Collect samples in appropriate containers already supplied with the required preservatives by the lab.

- Print the following information clearly in waterproof ink on the label for each sample container: the preservative that has been added to each sample container, the sample number, the project number, the initials of the sample collector, and the date and time the sample was collected. For water samples, package sets together if appropriate. Each VOC set should be placed together in a labeled Ziploc plastic bag.

- Fill out field sample log and chain-of-custody record.

- Separate and place samples in coolers according to laboratory destination and according to expected concentrations (e.g., lowest concentration samples together). Each cooler must weigh less than 70 pounds including ice. Package samples well to protect from shipping damage.

- Place samples on ice to maintain the temperature below 4 degrees Centigrade, as necessary.

- Seal the top two copies of each chain-of-custody form inside a Ziploc bag. Use strapping tape to attach the packet to the inside of the cooler lid. Samples will always be accompanied by a chain-of-custody record. When transferring samples, both the individuals relinquishing and receiving the samples will sign and date the chain-of-custody record. Samples will be packaged properly for shipment, including isolation of samples thought to have high chemical concentrations and dispatched to the appropriate laboratory for analysis.

- Secure cooler with custody seal.

- Label coolers correctly, placing "Fragile" and "This-End-Up" labels on coolers, as appropriate.

- Transport the coolers to the analytical laboratory via A & M Engineering Team personnel or designated couriers. The planned mode of sample transport is to use couriers employed by the laboratory. Alternatively, commercial couriers, A & M Engineering Team couriers, or overnight shipment may be used. Specific transportation arrangements are dependent on the location, timing, viable resources, and personnel.

3.6 SAMPLE CUSTODY

Sample custody procedures will be followed through sample collections, transfer, analysis and ultimate disposal. The purpose of these procedures is to assure that the integrity of samples is maintained during their collection, transportation and storage prior to analysis and sample material is properly disposed after analysis. Sample custody begins with the shipment of the empty sample containers. Sample containers are shipped from the laboratory in sealed coolers or cartons with appropriate seals and custody documentation. Sample quantities, types and locations will be determined before the actual field work commences. The Sample Technician will be responsible for the care and custody of the samples until properly transferred. Custody transfer will be documented on the Chain-of-Custody Form. An example of the Chain of Custody form is included as Form 3 in Appendix C.

At the chemical laboratory, a designated sample custodian will accept custody of the shipped samples and verify that the information on the sample label matches that on the

chain-of-custody form(s). Pertinent information as to sample condition, shipment, pickup, and courier will also be checked on the chain-of-custody form(s). In addition, a project receipt checklist (e.g. Cooler Receipt Form) will also be completed by the custodian. Information on the date and time of receipt, method of shipment, and sample condition will be recorded on this form. The custodian will then enter the appropriate data into the laboratory sample tracking system. The laboratory custodian will use the sample number on the sample label as well as assign a unique laboratory number to each sample. The custodian will then transfer the sample(s) to the proper analyst(s) or store the sample(s) in the appropriate secure area.

Laboratory personnel will be responsible for the care and custody of samples from the time they are received and are responsible for sample disposal. Data sheets and laboratory records will be retained as part of the permanent documentation for a period of at least 3 years.

Samples and extracts are retained by the analytical laboratory for up to 30 days after the data are reported by the laboratory. Unless notified otherwise by the site managers, excess or unused samples are disposed by the laboratory in a manner consistent with appropriate government regulations.

3.7 SUBMISSION OF SAMPLES TO ACCREDITED LABORATORIES FOR TESTING

The ODEQ certified laboratory that will be used for analysis of collected environmental samples will be Green Country Testing of Tulsa, Oklahoma. Analytical methodologies and quantitation limits can be found in Green Country Testing's Quality Assurance Program Plan included in Appendix D.

4.0 DOCUMENTATION

4.1 SAMPLE DOCUMENTATION

Each sample will be labeled and sealed properly immediately after collection. Sample identification documents will be carefully prepared so that identification and chain-of-custody records can be maintained and sample disposition can be controlled. Forms will be filled out with waterproof ink. The following identification documents will be used during the investigation:

- Sample Labels
- Sample Custody Seals
- Field Sampling Logs
- Field Logs
- Chain-of-Custody Forms

4.1.1. SAMPLE LABELS

Sample labels are necessary to prevent misidentification of samples. Preprinted sample labels will be provided. An example of A & M Engineering's Sample label is included as Form 4 and a Custody seal as Form 5, both provided in Appendix C. Where necessary, the label will be protected from water and solvents with clear label-protection tape. Each label contains the following information:

- Project name
- Initials of collector
- Date and time of collection
- Place of collection (job site)
- Sample number
- Well/boring number
- Depth
- Type sample (composite/grab)
- Preservative, if any

4.1.2. FIELD SAMPLING LOGS

A Field Sampling Log will be used during each sampling event by the Sample Technician to record activities as they relate to the progress of the investigation. The field sampling logs will be retained in the investigation files according to project number for that task. An example of the Field Sampling Log (Form 6) is provided in Appendix C. Entries in the field sampling log will include at least the following information:

- Project name and number
- Site location
- Name of sampler and date
- Names of personnel onsite
- Sample locations
- Volumes of samples collected
- Sample identification numbers
- Field observations and comments

4.1.3. DAILY FIELD LOGS

A Field Log will be used daily by the Sample Technician to record activities as they relate to the progress of the investigation. An example of a Daily Field Log (Form 7) is provided in Appendix C. The field logs will be retained in the investigation files according to project number for that task. Entries in the field log will include at least the following information:

- Project name
- Project number
- Name of author and date
- Chronology and location of activities
- Names and affiliations of personnel onsite

- Instrument calibration details and identification number
- Decontamination procedures
- Sample collection or measurement methods
- Number of samples collected
- Sample identification numbers
- Sample distribution (laboratory)
- Field observations and comments
- Any modifications to or deviation from the site specific work plan

4.1.4. CHAIN-OF-CUSTODY RECORD

A chain-of-custody record will be filled out for and will accompany every sample to the analytical laboratory to establish the documentation necessary to track sample possession from the time of collection. A copy of the chain-of-custody form will be retained in the investigation files according to project number. The record will contain the following information:

- Sample number or identification
- Names of samplers
- Signature of collector, sampler or recorder
- Location of project
- Project manager's name
- Date of collection
- Place of collection (site location)
- Sample type
- Analyses requested
- Inclusive dates of possession
- Signature of person relinquishing or receiving sample
- Laboratory sample number, where applicable
- Date and time of sample receipt
- Method of shipment and courier name

4.1.5. CORRECTIONS TO SAMPLE DOCUMENTATION

Original data recorded in field investigation daily reports, chain-of-custody records, and other forms will be written in waterproof ink. None of these documents will be altered, destroyed or discarded, even if they are illegible or contain inaccuracies that require a replacement document.

If an error is made on a document compiled by one individual, that individual will make the necessary correction by crossing a single line through the error, entering the correct information and initialing and dating the change. The erroneous information will not be obliterated. Any subsequent error(s) discovered on a document will be corrected by the person discovering the error. All corrections will be initialed and dated. Site-specific documentation will be reviewed by site managers on a daily basis.

4.1.6. TRANSFER OF FIELD DOCUMENTATION

During site-specific field operations, field investigation daily logs will be faxed to Project Managers on a daily basis. In the absence of a facsimile, field geologists and/or engineers will be in contact with Project Managers, or, at a minimum, the Field Operations Manager via mobile telephones. During drilling associated with the installation of monitoring wells, site managers will review boring logs prior to constructing the well.

At the end of each week of field operations, all field documentation will be copied and hard copies sent to the Project Manager for review. A copy of this documentation will also be kept at the on-site field office for future reference, if necessary. The original field documents will be submitted to the Project Manager for preparation of the final report.

4.2 REPORT GENERATION

Following inspection and sampling activities, and upon receipt of laboratory analytical results, a report will be generated that summarizes the findings.

INTRODUCTION

The staff at Green Country Testing, Inc. (GCT) consists of highly qualified personnel having years of experience with the EPA methodologies. To service the needs of our customers better, our staff is actively pursuing the research and use of new methodologies and instrumentation. GCT provides full quality data packages on a standard turn time. Express service is also available without sacrificing data quality. In addition to our excellent turn time and extremely competitive fee schedules, a key to our success has been superior customer service. We at GCT understand the time pressures inherent to the environmental industry and have developed a management system to provide the highest quality results as rapidly as possible.

1.0 ORGANIZATION AND MANAGEMENT

1.1 Policy Statement

GCT has the responsibility and the commitment to establish procedures, which assure precise, accurate, complete, and representative data, is known and thoroughly documented. This Quality Assurance Manual contains the policies, procedures and requirements for the implementation and documentation of the quality assurance program used by GCT to ensure the production of scientifically sound, legally defensible data of proven quality. Holding times are only applicable to regulatory samples tested at GCT. All personnel concerned with environmental testing activities must familiarize themselves with the quality documentation and implement policies and procedures in their work. At GCT, Management has the highest commitment to compliance with NELAC, found in the NELAC standard in chapter five on Quality Systems.

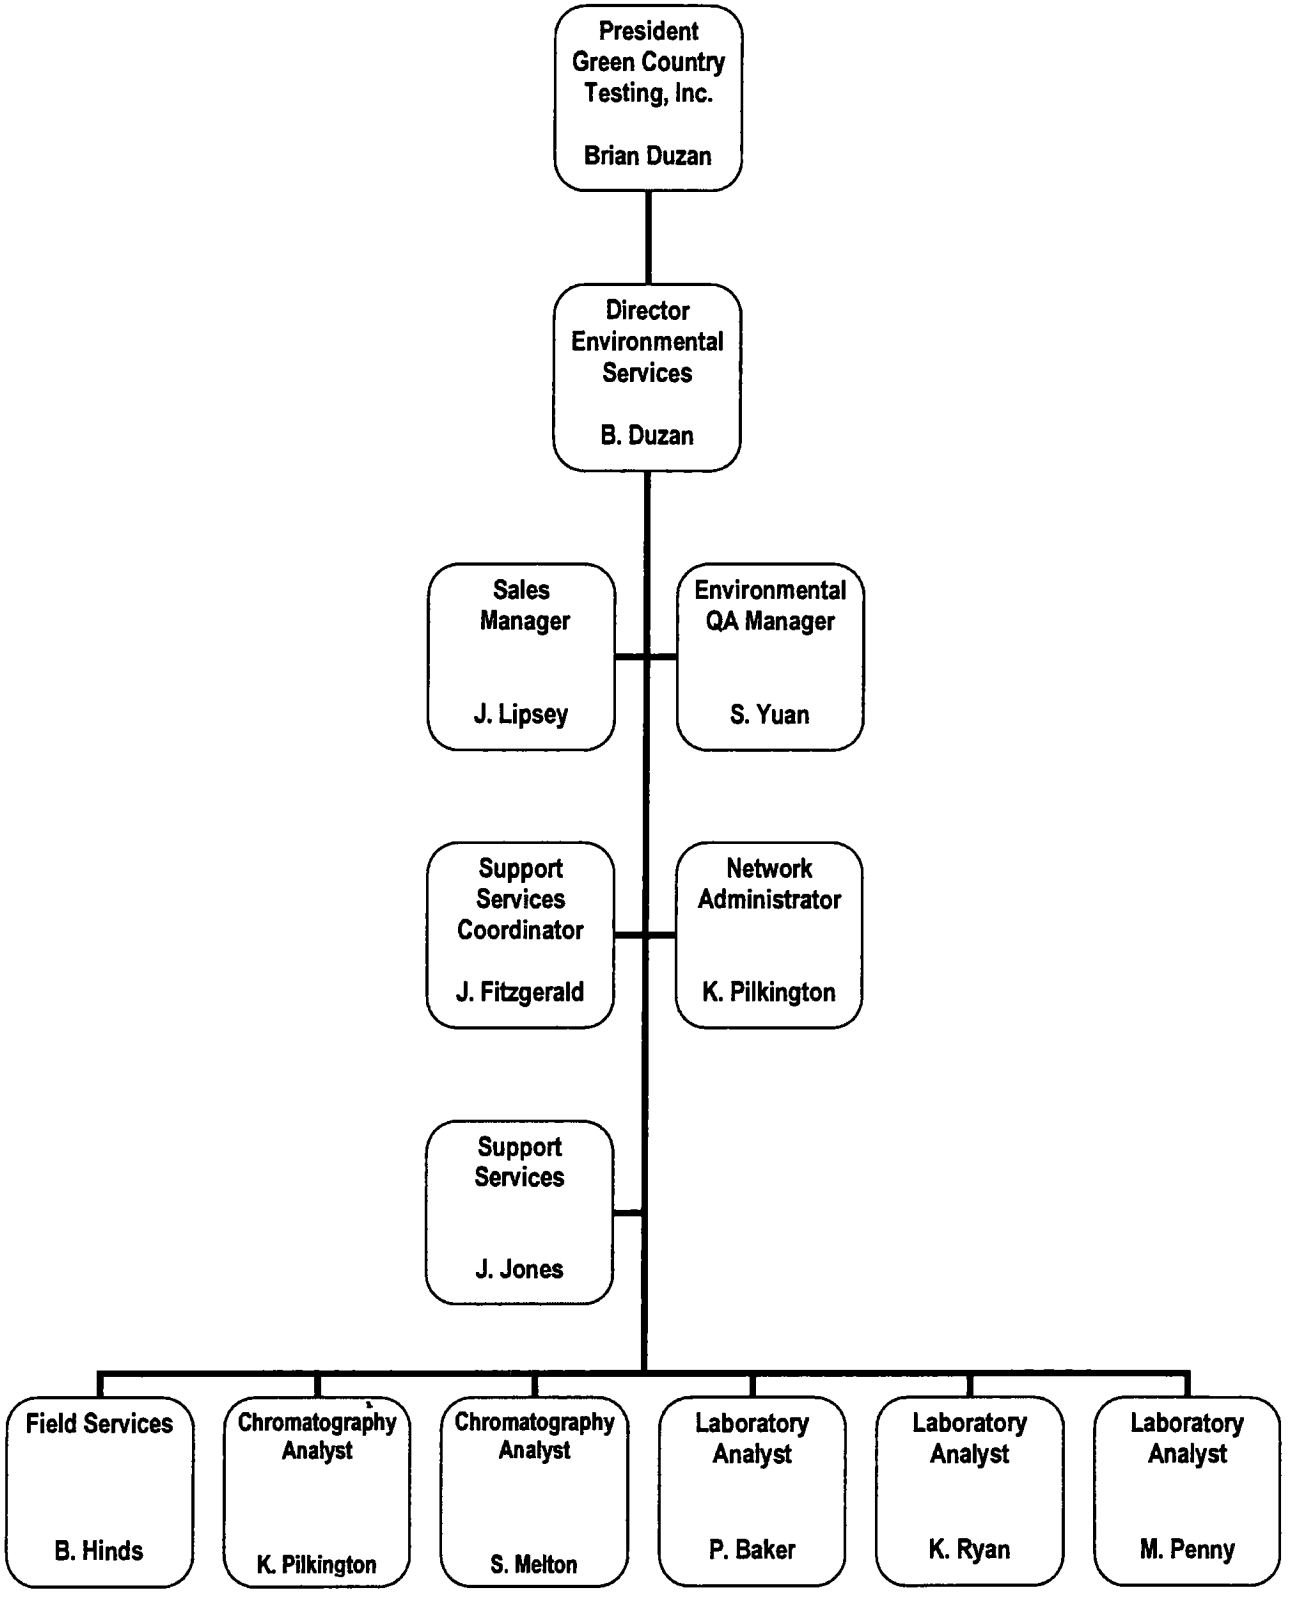
The methodologies used by GCT's Environmental laboratory primarily include those published by the USEPA and other agencies in the texts listed in **Appendix V** of this document.

1.2 Organization

Executing an effective program demands the commitment and attention of both management and staff. The Laboratory Director manages the QA program. The implementation of the QA program is the responsibility of the QA Manager who reports directly to the President. The Group Leaders who reports to the Laboratory Director coordinates each laboratory department. In addition, all personnel within the organization play a vital role in assuring the quality of our work. We believe the success of Green Country Testing is dependent upon the continued commitment of all within the organization to a strong and viable QA program.

For a complete list of laboratory personnel, **See Appendix II.**

1.2.1 Organization Charts



1.2.2 Laboratories Capabilities

Gas Chromatography/Mass Spectroscopy (GC/MS) Section

GC/MS is an acronym for gas chromatography coupled mass spectrometry, the state-of-the-art instrumentation for the qualitative and quantitative assessment of low level organic pollutants. Analyses are performed on a wide variety of matrices including soils, waters, sludges, oils, and solvents. The environmental target analyses done by the GC/MS section include organic priority pollutants, EPA hazardous substance list (CLP list) and Skinner List (refinery residuals). The qualitative power of the GC/MS is routinely used to screen hazardous waste samples for disposal decision making.

Gas Chromatography (GC) Section

The chromatography section uses gas chromatographs (GC). By combining a variety of sample introduction techniques: on column injection, and purge and trap with selective and semi-selective detectors, sensitive and precise quantitation of many organic contaminants can be efficiently accomplished. The use of chromatographic separation techniques with selective detectors can achieve low parts per billion detection limits for many organic compounds of environmental concern. In addition to trace level environmental contaminants, the chromatography section performs the challenging task of characterizing waste streams for target organic constituents so that appropriate disposal procedures can be chosen.

Trace Metals Section

GCT's metals section has the capability to analyze samples for more than 70 parameters using both Inductively Coupled Plasma Atomic Emission Spectroscopy (ICP) and Atomic Absorption Spectroscopy (AA) technology. Samples that can be analyzed range from drinking waters to soil and hazardous wastes.

General Chemistry Section

The general chemistry section of the laboratory has capabilities for over forty different analyses making GCT truly a full service laboratory. A variety of methodologies are employed to test water, wastewater, soil and hazardous waste. The general chemistry section is responsible for classical, physical, and colorimetric analysis of environmental samples as well as more sophisticated analysis using TOC. The analytical information developed in this and other sections is necessary for appropriate waste disposal procedures to be followed.

Data Management Section

The data management section and the support services group are responsible for sample custody in the laboratory, sample log in, sample tracking, and accounting and report generation. Data management maintains and operates the laboratory's custom developed computerized Laboratory Information Management System. Data management is the heart of analytical flow and sample management. For maintenance and operational procedures, refer to GCT LIMS Training Manual.

Field Services Section

The field services section within the support services group provides pick-up services in the surrounding area. This section also performs manhole, tank, drum, soil, and NPDES sampling.

Network Administration Section

The IT section is responsible for the integrity of the GCT website, the server and the network of computers related to all above stated sections. The IT section is also responsible for keeping the LIMS system in pristine working condition. This LIMS system tracks all aspects of samples and their complete process through the lab including reagents and chemicals related to their analysis. In addition, the IT section is accountable for data archival and its storage.

1.2.3 Laboratory Personnel, Authority and Responsibilities

Laboratory Director

Minimum Requirements

- Bachelor's Degree in Science or 4 years experience in a related field
- 5 years experience in the area of environmental analysis

Responsibilities

- Overseeing a QA program that ensures all data generated is scientifically sound, legally defensible, and of known precision and accuracy
- Monitoring the QA Plan in coordination with the QA Manager to ensure compliance with QA objectives
- Prescribing and monitoring corrective actions
- Coordinating certification programs within the laboratory
- Scheduling and conducting annual management audits

Authority

The Director is the final authority on all issues dealing with data quality and has the authority to require that procedures be amended or discontinued, or analyses suspended or repeated. He also has the authority to suspend or terminate employees on the grounds of dishonesty, incompetence, or repeated non-compliance with QA procedures.

Deputization

In the absence of the Director or QA Manager, Organic Chemist, Sharon Melton shall hold responsibility for all technical decisions and interpretations involving testing procedures, methods, and reports. In the event that the Technical Director has a temporary absence of 15 consecutive days, Sharon Melton shall be the designated, qualified staff member taking this role. The accrediting body shall be notified in writing in the event that the Technical Director is absent for 65 consecutive calendar days.

Keli Pilkington has been designated as the Head over the Microbiology Department at Green Country Testing, Inc.

The laboratories approved signatories shall be Brian Duzan, Sharon Melton and Star Yuan.

Quality Assurance Manager

Minimum Requirements

- Bachelor of science degree or 4 years experience in a related field
- Two years experience in environmental testing
- Knowledge and understanding of all methods being performed in the laboratory
- Knowledge and understanding the NELAC Quality System.

Responsibilities

- Developing and implementing QA procedures within Green Country Testing to improve and maintain consistent data quality
- Maintaining a current version of the QA plan and annually reviewing the QA plan to assess and to ensure the effectiveness of the QA program
- Maintaining other laboratory procedures.
- Maintaining records and archives of all QA/QC data, PT results, audit comments, and customer inquiries concerning data quality.
- Performing statistical analyses of QC data and establishing data bases which accurately reflect the performance of the laboratory
- Distributing performance evaluation (PT) samples on a routine basis
- Evaluating the results of PT samples, and applying corrective actions as needed to ensure each department is able to generate data which meets the data quality objectives defined in this QA plan
- Reporting the status of the laboratory QA program to the Director with formal and informal communications

Authority

The Quality Assurance Manager of the laboratory has the authority to stop work for reasons of doubtful quality and, in conjunction with the Director, can accept data that fall outside normal QC limits if, in their judgement, there are technical reasons that warrant the acceptance of the data, but the data will still be flagged accordingly. The QA Officer will have access to the highest level of management for any decisions involving the quality of data or the quality program.

Deputization

In the absence of the QA Manager, the Group Leader of each test area shall hold responsibility in their respective testing divisions to accept or reject data based on well-defined QC criteria.

Chromatography Analyst

Minimum Requirements

- Bachelor degree and/or
- Two years experience in environmental testing

Chemists

Minimum Requirements

- Bachelor of science degree
- One year experience in environmental testing

Technicians (Analysts)

Minimum Requirements
- High school diploma or equivalent
- Six months experience in environmental testing

Responsibilities
- Having a working knowledge of the Green Country Testing's QA plan
- Ensuring all work is generated in compliance with the Green Country Testing's QA plan
- Performing all work according to defined methods
- Ensuring all documentation related to their work is complete and accurate
- Providing management with immediate notification of quality problems

Authority
Laboratory personnel have the authority to accept or reject data based on compliance with well-defined QC acceptance criteria. Laboratory management must approve the acceptance of data that falls outside QC criteria.

Network Administrator

Minimum Requirements
- High school diploma or equivalent
- Knowledge in Server 2003, MS Access and Office suite, TCP/IP, HTML

Responsibilities
- Imaging and restoration of workstations
- Archiving and backup of data
- Updating of the GCT website
- Maintenance of all equipment in the GCT intra network and LIMS system

Support Services

Minimum Requirements
- High school diploma or equivalent
- Working knowledge of DOS and Windows

Responsibilities
- Sample receipt and login
- Checking for proper sample containers, collection and preservatives
- Distributing samples throughout the laboratory for analysis
- Client services

Support Services Coordinator

Minimum Requirements
- High school diploma or equivalent
- Working knowledge of DOS and Windows

Responsibilities
- Client services

- Printing of draft and final reports
- Maintaining the LIMS system
- Scheduling of sampling events

Field Services

Minimum Requirements
- High school diploma or equivalent

Responsibilities
- Collecting and pickup of samples
- Preparing sampling containers and equipment
- Field testing of parameters with short holding times such as pH, Total Residual Chlorine and Dissolved Oxygen

Sales Manager

The Sales Manager position is a non-technical position. The requirements for this position will be evaluated on a case by case basis.

1.2.4 Client Confidentiality and Conflict of Interest

Green Country Testing's policy regarding client confidentiality is very rigid. Only authorized personnel may give verbal results. GCT personnel may only give results to other individuals if GCT has received prior consent from the client.

Test data shall only be supplied to the client submitting the sample. Only at the request of the client shall information be released to a third party. This request shall be submitted in writing, where applicable.

Only authorized employees are allowed access to a customer's file.

All GCT employees are obligated to maintain all company trade secrets, proprietary information, and confidential information. Confidential information includes, without limitation, manufacturing processes, computer programs, financial data, and marketing plans. Management and personnel are to be free from any undue internal and external commercial, financial and other pressures and influences that may adversely affect the quality of their work.

All proprietary information received by a customer shall be held in strict confidence and will not be used for any purposes other than provision of the services for Green Country Testing.

Employees shall not copy, transmit, publish, summarize, quote, or make any commercial or other uses whatsoever of Green Country Testing or customer confidential information.

All Green Country Testings employees are obligated to maintain objectivity and be free of conflicts of interest in discharging their professional responsibilities. Conflicts of interest include, but are not limited to, internal pressures, acquisition or commitment to acquire any direct or material indirect financial interest in a customer and/or participation as a promoter, voting trustee, director, or Manager of a client.

Violation of this trust will result in disciplinary action and any other remedies provided by applicable law.

2.0 AUDITS, ESSENTIAL QUALITY CONTROLS AND DATA VERIFICATION

2.1 Internal Audits

It is the responsibility of the QA Manager to plan and organize internal audits. All areas of the laboratory will be audited annually by qualified personnel who are, wherever resources permit, independent of the activity to be audited. Internal audits identify sources of potential nonconformances and are proactive measures to improve the QA program. Areas will be audited at a rate of one per month. Areas will be audited in a manner such that all analysts will be audited annually. If a client's work is affected by an Internal Audit, they will be notified in writing. When an internal or third party audit takes place and non-conformances arise, corrective action will be instituted.

The following 12 areas shall be scheduled for internal audit during each year. A review shall be scheduled when there is evidence supporting data integrity issues. Client notification of the corrective action is required when these issues arise. The Quality Assurance Officer will conduct an Internal Audit on all employees annually or sooner if there is any evidence of inappropriate actions or vulnerabilities related to data integrity.

The areas are Login, Subcontracting, Oil and Grease, Trace Metals, Solids, BOD, Wet Chemistry, Soils, GC, GCMS, Field, Microbiology. Archived records, customer service, and the IT department are also reviewed in addition to these topics. Quality Control and Misc. items are also included.

2.1.1 As part of the internal audit schedule an audit trail review in Omega will be conducted every six months. In March and September the Quality Officer will review and document the audit trail data. Every six months when the audit trail is reviewed, the previous six months will be looked at.

2.1.2 As part of the internal audit schedule, a semi-annual review of holding time reports will be conducted. In March and September the Quality Officer will review and document the holding time report data for various tests in the laboratory.

2.2 Management Review

Management review is a valuable tool for measuring the overall effectiveness of the QA program. It serves as an instrument for evaluating the program design, identifying problems and trends, and planning for future needs. The QA Manager will submit reports to management summarizing the information gathered throughout the laboratory. The review will take into account the following:

1. Report and discussion of matters arising from the last meeting.
2. Report and discussion of any correspondence from accrediting agency.
3. Discussion of client audit reports.
4. Results of internal audits with appropriate corrective action.
5. Results from participation in proficiency testing.
6. In house quality checks.
7. Client complaints.
8. Personnel including issues and training for new and existing staff.

9. Adequacy of staff, equipment, facilities.
10. Future plans and estimates for new work, staff, equipment, etc.
11. Suggestions for improvement of quality system.
12. Preventive Actions.
13. Corrective Actions.
14. The Suitability of policies and procedures
15. Other concerns impacting the quality system.

The Annual Management Review will be assessed on a pre-determined schedule. This review shall be done within the first 30 calendar days of the year.

2.3 Audit Review

All audit and review findings and any corrective actions that arise from them will be documented and those documents maintained in the QA files.

2.4 Proficiency Testing (PT) Program

Green Country Testing operates its PT program under the "Run one, Report one" philosophy. All PT samples are handled exactly like client samples. Unacceptable practices include multiple analysis and averaging, laboratory personnel from another facility analyzing the samples, or reporting data from an outside source.

The laboratory participates in two PT studies per year per matrix, where applicable. Requirements are the satisfactory completion of two PT studies out of the last 3 completed within a 12-month period. For our Louisiana certification only, in the event that PT results are not acceptable, the laboratory shall perform a corrective action, and order a remedial PT within 30 days. Results are considered satisfactory when they are within the acceptance limits established by the vendor. These results will be shared with certifying agencies along with the appropriate corrective action including the results of a Corrective Action PT sample.

When PT samples are not available, the following can be used:
1. internal quality control procedures using statistical techniques;
2. certified reference materials and/or in-house quality control using secondary reference materials;
3. replicate testing using the same or different test methods;
4. re-testing of retained samples;
5. correlation of results for different but related analysis of a sample (for example, total phosphorus shall be greater than or equal to orthophosphate).

2.5 Preventive Actions

Preventive action is a pro-active process to identify opportunities for improvement rather than a reaction to the identification of problems or complaints. The laboratory shall identify needed improvements and potential sources of nonconformances, either technical or concerning the quality system. If preventive action is required, action plans shall be developed, implemented and monitored to reduce the likelihood of the occurrence of such nonconformances and to take advantage of the opportunities for improvement. The following are routine functions performed as preventive actions to identify improvements in the quality system:

1.) Internal Audits-Every month the QA/QC Officer will audit an area of the laboratory to identify sources of non-conformances and other issues leading to improvements in the quality system. For more information on internal audits refer to section 2.1 of the QAM.
2.) Control Charts-Twice a year the QA/QC Officer updates control charts in an effort to identify potential problems or non-conformances, and to track historical data generated by the laboratory. For specific information on control charting refer to the SOP on control charts.
3.) PT Studies-Twice a year the laboratory analyzes blind PT's to identify any analytical problems in the quality system. For more information on proficiency testing refer to section 2.4 of the QAM.

2.6 Corrective Actions

For general procedures for corrective actions and departures from laboratory policies and procedures, **See the Corrective Action SOP.**

To the extent possible, samples will be reported only if all quality control samples within the batch are acceptable. If a quality control measure is found to be out of control and sample reanalysis cannot be performed due to insufficient sample, the data will be reported and all samples associated with the failed quality control sample(s) will be flagged. Notations of failed quality control samples will be made to the Case Narrative.

Green Country Testing, Inc. shall notify the primary Accrediting Bodies of any corrective actions taken for failed PT samples within 30 calendar days after the receipt of the final report from the PT provider. For any 2 out of 3 failed PT samples a Quik Response shall be obtained.

The responsibility for authorizing the resumption of work following the finding of a nonconformance is the decision of management at GCT.

2.7 Essential Quality Control

Precision
The degree to which the measurement is reproducible. Precision can be assessed by replicate measurements of reference materials, environmental samples, or laboratory control samples. Green Country Testing routinely monitors precision by comparing the %RSD (relative standard deviation) of RPD (relative percent difference) between check sample measurements with control limits established at plus and minus three standard deviations from the mean RPD of historical check sample data.

Accuracy
A determination of how close the measurement is to the true value. Accuracy can be assessed using standard reference materials, check samples, or spiked environmental samples. Unless specified otherwise in special contracts, Green Country Testing monitors accuracy by comparing check sample results with the control limits established at plus/minus three standard deviation units from the mean of percent recovery of historical check sample results. The determination of the accuracy of a measurement requires knowledge of the true or accepted value for the analyte signal being measured.

Completeness
A measure of the amount of valid data obtained from a measurement system compared with the amount that is expected to be obtained under correct normal conditions. To be considered complete, the data set must contain all QC check analyses verifying precision and accuracy for

the analytical protocol. In addition, all data are reviewed in terms of stated goals in order to determine if the database is sufficient.

Detection Limits

Limit Of Detection (LOD) - Method Detection Limit (MDL)

An LOD/MDL shall be initially determined for the compounds of interest in each test method in a quality system matrix in which there are not target analytes nor interferences at a concentration that would impact the results or the LOD/MDL must be determined in the quality system matrix of interest.

An MDL / LOD is the minimum signal level required to qualitatively identify a specific analyte by a specific procedure at 99% confidence level. An LOD/MDL is measured by analyzing a minimum of seven (7) replicates spiked at one (1) to five (5) times the expected method detection limit. It is calculated by the student t-value (99%) with n-1 degree of freedom times the standard deviation (MDL = t (n-1, 1-a=0.99)(s), where t (n-1, 1-a=0.99) is the t-statistic appropriate for the n number of samples used to determine s, at the 99% level. The LOD may also be determined by using blank data, but this process is not approved by the Oklahoma Department of Environmental Quality for MDL studies. Green Country Testing chooses to use the above procedure to determine MDL's and LOD's as documented in 40 CFR Part 136 Appendix B.

The validity of the LOD/MDL shall be confirmed by qualitative identification of the analyte(s) in a QC sample in each quality system matrix containing the analyte at no more than 2-3X the LOD/MDL for single analyte tests and 1-4X the LOD/MDL for multiple analyte tests. This verification shall be performed on every instrument that is to be used for analysis of samples and reporting of data. The LOD/MDL shall be verified annually for each quality system matrix, method, and analyte.

An LOD/MDL study is not required for any component for which spiking solutions or quality control samples are not available. The LOD/MDL must be determined each time there is a change in the test method that affects how the test is performed, or when a change in instrumentation occurs that affects the sensitivity of the analysis.

Limit Of Quantitation (LOQ) - Practical Quantitation Limit (PQL).

The LOQ / PQL shall be at level greater than the LOD / MDL. The LOQ study is not required for any component or property for which spiking solutions or quality control samples are not commercially available or otherwise inappropriate. The validity of the LOQ shall be confirmed annually by successful analysis of a QC sample containing the analytes of concern in each quality system matrix 1-2X the claimed LOQ.

Estimation of Uncertainty of Measurement

In most cases the nature of the test method will preclude rigorous, metrologically and statistically valid, calculation of uncertainty of measurement. As outlined in A2LA's "Guide for Estimation of Measurement Uncertainty in Testing", the best over all process is to use control charting. By control charting a known or accepted value, we can set the action limits for an estimate of measurement uncertainty at approximately the 99.7% level of confidence (3 Sigma) and the warning limits will provide an estimate of uncertainty at approximately the 95% level of confidence (2 sigma). The control charts can be generated upon clients request.

For complete details of internal quality control, **See NELAC Chapter 5 Quality Systems and the various SOPs including the SOP on Control Charts.**

2.7.1 Method Blanks

Reagent or analytical blanks are analyzed to assess the level of contamination that exists in the analytical system and might lead to the reporting of elevated concentration levels or false positive data.

An analytical blank is analyzed with every batch of samples processed. The analytical blank consists of reagents specific to the method carried through every aspect of the procedure, including preparation, clean up, and analysis. Ideally, the concentration of an analyte in the blank is below the reporting limit for that analyte. However, some common laboratory solvents and metals are difficult to eliminate to the parts-per-billion level commonly reported in environmental analyses. Documentation shall be provided by the analyst in the appropriate logbook each time a method blank is contaminated. Reprocessing or data qualification may be necessary. Upon data review by the QA/QC officer corrective action shall be necessary to minimize or eliminate the problem of contaminated blanks.

2.7.2 Laboratory Control Samples

Second source certified LCS and/or NIST traceable standards are used with each routine analytical method. LCS compounds consists of an aliquot of a clean (control) matrix similar to the sample matrix and of the same weight or volume: e.g, organic-free water for the water matrix or sand or soil (free of organic interferences) for the solid matrix. LCSs are used to monitor performance of routine analytical methods on a day-to-day basis. They are analyzed with each batch of samples and are supplemented with surrogates (where methods require) to ensure operational QC is available with each batch of samples processed.

2.7.2.1 If a large number of analytes are in the LCS, it becomes statistically likely that a few will be outside the control limits. This may not indicate the system is out of control, therefore corrective action may not be necessary. Upper and lower marginal exceedence (ME) limits can be established to determine when corrective action is necessary. A ME is defined as being beyond the LCS control limit (3 standard deviations), but within the ME limits. ME limits are between 3 and 4 standard deviations around the mean.

2.7.2.2 The number of analytes in the LCS is the basis for the number of allowable marginal exceedances. If more analytes exceed the LCS control limits than is allowed, or if any one analyte exceeds the ME limits, the LCS fails and corrective action is necessary. For methods with long lists of analytes, the marginal exceedance approach is relevant. It will not apply to target analytes lists with fewer than 11 analytes.

The number of allowable marginal exceedances is as follows:

1) >90 analytes in LCS, 5 analytes allowed in ME of the LCS control limit;
2) 71-90 analytes in LCS, 4 analytes allowed in ME of the LCS control limit;
3) 51-70 analytes in LCS, 3 analytes allowed in ME of the LCS control limit;

4) 31-50 analytes in LCS, 2 analytes allowed in ME of the LCS control limit;
5) 11-30 analytes in LCS, 1 analytes allowed in ME of the LCS control limit;
6) <11 analytes in LCS, no analytes allowed in ME of the LCS control limit;

Marginal exceedances must be random. If the same analyte exceeds the LCS control limit repeatedly, it is an indication of a systemic problem. Corrective action must be taken after the source of the error is located.

2.7.3 Duplicates

A duplicate is a sample that is divided into two separate aliquots. The aliquots are processed separately and the results (expressed as relative percent difference [RPD]) are compared to determine the effects of the matrix on the precision of the analysis.

2.7.4 Matrix Spike and Matrix Spike Duplicates

A matrix spike (MS) is a routine sample to which known concentrations of analytes have been added. The MS is taken through the entire analytical procedure and the recovery of the analytes is calculated. Results are expressed as percent recovery. The MS is used to evaluate the effect of the sample matrix on the accuracy of the analysis.

A matrix spike duplicate (MSD) is a sample divided into two separate aliquots, each of which is spiked with known concentrations of analytes. The two spiked aliquots are processed separately and the results compared to determine the effects of the matrix on the precision and accuracy of the analysis. Results are expressed as RPD and percent recovery.

NOTE: If the spike concentration is not specified in the SOP, the analyst may use discretion as to what level is necessary during analysis.

2.7.5 Surrogate Recoveries

Green Country Testing routinely adds surrogates to samples requiring GC analysis. These surrogates are organic compounds that are similar to the analytes of interest in chemical behavior, but which are not normally found in environmental samples. The surrogate recoveries are used by the lab to assess both the performance of the analytical system and the effectiveness of the method in dealing with each sample matrix. Surrogate recovery information is routinely reported to clients with all data packages.

3.0 PERSONNEL

3.1 Laboratory Management Responsibilities

The quality of all tests performed by Green Country Testing is dependent to a great extent on the skill levels and manpower distribution of all operating personnel. The QA department shall review each new program for special requirements, and periodically thereafter review the test capabilities of the equipment and the personnel.

Minimum Training Requirements include the following:

Instrument Operators	1 year experience + training course
Analyst - Chemistry Procedures	6 months experience
Analyst – Microbiological Procedures	6 months experience + training course
Analyst – Biomonitoring Procedures	6 months experience + acceptable reference toxicants
Sample Preparation	3 months experience
Sample Collection and Field Testing	6 months experience

Technicians in training must demonstrate the ability to reproduce reliable results through in-house QC samples and proficiency testing. They must work directly under the supervision of the Director, QA Manager, Technical Manager or Group Leader.

3.2 Records

The QA Manager maintains training files on every analyst. This file includes the analyst's education and experience credentials, training certificates, records of training courses, safety courses in compliance with OSHA guidelines, and analyst proficiency testing results. Training is provided for all personnel on an on-going basis.

4.0 FACILITIES – ACCOMODATION AND ENVIRONMENT

4.1 Environment and Work Areas

Test equipment and standards shall be calibrated and utilized in an environment controlled to the extent that dust, humidity, temperature, vibration electric mains, and corrosion or other factors do not interfere with precision measurements.

The conductivity of the Type II water used by the laboratory is checked weekly and recorded.

The laboratory enforces a physical separation of preparation or analysis when such activities would adversely affect the quality of the testing or measurement.

When required for equipment accuracy, certain testing areas shall be monitored for temperature and humidity control.

4.2 Evaluation of New Work

Upon the review of requests, tenders, and contracts at GCT, the laboratory shall ensure that the policies and procedures for these reviews leading to a contract for testing shall be defined, documented and understood. All new work shall be reviewed to ensure the laboratory has the appropriate facilities and resources available before accepting samples.

For all new clients, new contracts, new requests, and tenders a form shall be filled out for documentation. This shall include client information, if it is for compliance purposes, any unusual requirements, analyses requested, and if our certification covers the requested test. A contract may be any written or oral agreement to provide a client with environmental testing services. Any differences between the request or tender and the contract shall be resolved before any work commences. Each contract shall be acceptable both to the laboratory and the client.

In the event that the laboratory suffers a suspension or loss of accreditation, clients will be notified in writing via our customer service department within 7 working days.

5.0 EQUIPMENT AND REFERENCE MATERIALS

Any instrument which has been subjected to overloading or mishandling, or which gives suspect results, or has been shown by verification or otherwise to be defective, shall be taken out of service, clearly identified and wherever possible stored at a specified place until it has been repaired and shown by calibration, verification or check standard to perform satisfactorily. The laboratory shall examine the effect of this defect on previous tests, and where necessary reanalyze questionable samples.

Each major instrument shall be labeled, marked or otherwise identified to indicate its calibration status.

Records are maintained on each major piece of equipment and are located in the Equipment Manual and QA files. Manufacturer's manuals are kept in various locations throughout the laboratory to enable convenient access.

Maintenance logbooks are utilized to document the details of maintenance carried out to date and planned for the future, as well as, history of any damage, malfunction, modification or repair.

New Equipment

The Director, Technical Manager or QA Manager is responsible for establishing and maintaining a system for the qualification and calibration of all new test and measuring equipment used for testing.

All new equipment shall be installed, qualified, and calibrated with the use of a check standard, or by certifiable standards prior to use. All test and measuring equipment shall be recalibrated at regular intervals or whenever subjected to an environment that may affect its accuracy.

Reference Materials

Records of reference materials significant to the tests performed are maintained in the form of certificates of analysis. All of these records are stored in the QA files.

6.0 MEASUREMENT TRACEABILITY AND CALIBRATION

6.1 General Requirements

The laboratory shall have available all the necessary equipment, reference material, and methodologies to perform all analyses in accordance with US EPA protocols. All measuring operations and testing equipment having an effect on the accuracy or validity of tests shall be calibrated and/or verified before being put into service and on a continuing basis.

All test equipment shall be operated in accordance with written test procedures. In the event the laboratory must use equipment outside its permanent control, it shall ensure that the relevant requirements are met. All equipment shall be properly maintained. Maintenance procedures are documented in this manual and in the various equipment SOPs.

6.2 Traceability of Calibration

All calibration standards are traceable to national standards of measurement. Calibration records include the lot number of the appropriate standard(s). It is the QA Manager's responsibility to maintain records of all certificates of analysis for each lot of standard or reagent purchased by the lab.

6.3 Reference Standards

Reference standards of measurement such as Class 1 weights or NIST traceable thermometers are used for calibration or verification ONLY and no other purpose. This equipment is calibrated annually by certified calibrating bodies. Calibration certificates are kept in the QA files. The laboratory will conform to all manufacturing guidelines and procedures for the safe handling, transport, storage and use of reference standards in order to prevent contamination and protect their integrity.

6.4 Support Equipment

Support equipment is the necessary equipment used to support laboratory operations. These include but are not limited to: environmental chambers, balances, ovens, refrigerators, freezers, incubators, water baths, temperature measuring devices (including thermometers and thermistors), thermal/pressure sample preparation devices and volumetric dispensing devices (such as Eppendorf, or automatic dilutor/dispensing devices) if quantitative results are dependent on their accuracy, as in standard preparation and dispensing or dilution into a specified volume.

All support equipment shall be maintained to ensure that the equipment is capable of being properly calibrated. See **various SOP's** for calibration acceptance criteria. When support equipment can not be properly calibrated, the Group Leader, QA Manager, Technical Manager, Assistant Director, or Director shall be notified immediately so that the equipment can be removed from service. Service reports are kept in the QA files or within the lab containing the equipment. Maintenance logs are kept near the equipment.

Equipment will be calibrated or verified on the following schedule:

Autoclaves	daily or before each use by analyst using fixed thermometer + indicator
Balances	daily or before each use by analyst + annual service by certified vendor
Conductivity meters	daily or before each use by analyst + annual cell constant determination
Freezers	daily $\leq 0^{\circ}C$ by analyst
Fume Hoods	annually by certified vendor
Meters w/auto temp compensation	annually by QA Manager or designee
NIST traceable thermometers	annually by certified vendor
Ovens, Incubators, and Baths	daily or before each use by analyst
Total Coliform & Fecal Coliform Incubators	twice daily at least 4 hours apart
pH meter	daily or before each use by analyst
Pipettors (Eppendorf or Repipets)	quarterly by QA Manager or designee
Refrigerators	daily (0-6°C) by analyst
Working thermometers	annually by QA Manager or designee

6.5 Instrument Calibration

6.5.1 Initial Instrument Calibration

The details of initial instrument calibration are included in the method Standard Operating Procedure (SOP). Sufficient raw data records are retained to permit reconstruction of the initial instrument calibration including calibration date, test method, instrument, analysis date, analyte name(s), analyst, concentration and response, calibration curve or response factor; or unique equation or coefficient used to reduce instrument responses to concentration.

Initial calibrations are verified with a second source standard (LCS) or a lot other than that of the calibration standard. In the case that testing includes sample preparation, the analyst shall analyze the second source standard without preparation. All calibration standards must be traceable to national standards, where available. Certificates of analysis for calibration standards are kept in the QA files.

All calibration curves require a minimum of 3 standards. Acceptable calibration curves require a 0.995 or better correlation coefficient. If this criteria is not met, the problem must be identified and resolved before the calibration is attempted again. If the calibration is automated and samples are analyzed with it and the acceptance criteria is not met, corrective actions must be performed, documented, and the calibration and all samples reanalyzed.

Sample results greater than the highest calibration standard must be diluted and reanalyzed. The lowest calibration standard must be above the Practical Quantitation Limit (PQL). Calibration standards must include concentrations at or below the regulatory limit if the laboratory knows these limits, unless these concentrations are below the PQL.

6.5.2 Continuing Instrument Calibration Verification

When an initial instrument calibration is not performed on the day of analysis, the validity of the initial calibration shall be verified prior to sample analyses by a continuing instrument calibration verification with each analytical batch. The details of the continuing instrument calibration are included in the method SOP.

A CCV must be analyzed at the beginning and end of each analytical batch. If an internal standard is used, only one CCV must be analyzed per analytical batch. Sufficient raw data records must be retained to permit reconstruction of the CCV and must explicitly connect the CCV to the initial calibration.

7.0 TEST METHODS AND STANDARD OPERATING PROCEDURES

7.1 Standard Operating Procedures (SOPs) and Test Methods

It shall be the responsibility of the QA Manager and the Director to ensure that the current procedures are being used. If the latest revision is not in our possession, the client or regulatory agency shall be asked to provide the new revision. The Director or QA Manager shall review new testing procedures to ensure GCT complies with the latest regulations and client needs. The most recent method shall be kept and used at the bench level. This system ensures that all of the procedures conducted by Green Country Testing are of the latest revision.

Standard operating procedures (SOPs) have been developed by Green Country Testing for all procedures and testing performed by GCT staff. Copies of these procedures are controlled by QA and kept at the bench level throughout the laboratory to make them readily available to all analysts. One set of manuals is kept by the QA Manager along with a listing of the location of all controlled copies. Another full set of procedure is centrally located for easy access by all GCT personnel.

All procedures shall be purged from the system when a new revision is put into use. The QA Manager will retain one copy of each outdated revision in a "Superseded" file. For specific and detailed information on standard operating procedures, please refer to the SOP manuals. The listing of the most recent in-house revision of each procedure is on file separate of this manual and is controlled separately by an approved SOP. Strict document control is exercised over all laboratory manuals and postings.

Any samples that do not fall into the standard SOP's or standard methods shall be dealt with on an individual basis. The analyst shall inform the Laboratory Director or QA/QC Officer and they will come up with a plan on how to handle the unusual sample. Any departures from the SOP or published methods will be documented and the data shall be flagged accordingly.

Refer to the SOP on the Creation of Revision of SOP's.

7.2 Data Verification

Analytical data generated within Green Country Testing are extensively checked for accuracy and completeness. The data validation process consists of data generation, reduction, and 3 levels of review, as described below:

Level I

The analyst who generates the analytical data has the prime responsibility for the correctness and completeness of the data. All data are generated and reduced following protocols specified in referenced methods. Each analyst reviews the quality of his work based on the following set guidelines, where applicable:

- The appropriate methods have been followed with any special sample preparation requirements;
- Sample preparation information is properly documented;
- Analysis information (lab ID, client, test method and result) is correct;
- QC samples are within established control limits;
- Documentation is complete (e.g. all anomalies in the preparation and analysis have been documented, out-of-control rechecks [if required] are complete; holding times are documented, etc.).

The data results are documented, initialed and dated by the analyst. This initial review step, performed by the analyst, is the first level of review. The analyst then passes the data to an independent reviewer (the Group Leader, Technical Manager, QA Manager, or Director or another qualified analysts trained to run the test being checked) who performs the LEVEL II review.

Level II
A peer, the Technical Manager, QA Manager, or Director performs an independent review of the data. This review is also conducted according to the following set of guidelines and is structured to ensure, where applicable:

- Calibration data are scientifically sound, appropriate to the method, and completely documented;
- QC check samples are within established guidelines;
- Qualitative identification and quantification of sample components are correct;
- Documentation is complete and correct (e.g. anomalies in the preparation and analysis have been documented; out-of-control rechecks [if required] are complete; holding times are documented, etc.);

Level II reviews are structured so that all calibration data and QC sample results is reviewed. If no problems are found with the data, the review is complete. A date stamp is used by the reviewer. If any problems are found with the data, all samples in the batch are checked in their entirety. Corrections or amendments to test records are made in a manner that does not obliterate the original data and are dated and initialed by the person responsible.

Level III
The final report is given to the QA Manager, Assistant Director or Environmental Director for final review. The report and data are reviewed to assure that the data package is complete and the results are consistent with method and contract requirements. The final reviewer signs the final report and takes ultimate responsibility for data released to the client.

7.3 Documentation and Labeling of Standards and Reagents

Quality data requires traceable standards of proven purity. To ensure the highest purity possible, all primary reference standards and standard solutions used by Green Country Testing are obtained from the National Bureau of Standards, the EPA Repository or other reliable commercial sources. GCT attempts to use only standards traceable to NIST or traceable back to its original source. All standard logs allow for the identification of the standard used and lot

number so that it is traceable to the analyses performed. For more information concerning the standards, refer to the standard logs.

Stock and working standards are checked with each use for signs of deterioration, such as discoloration, formation of precipitates, or change of concentration. All containers are properly labeled with compound, concentration, expiration date, initials of analyst, and date of preparation.

Reagents are examined for purity by subjecting a blank aliquot or sub-sample to the analytical methods corresponding to its intended use. All materials shall be stored under appropriate conditions in accordance with OSHA guidelines specific to each chemical to ensure the integrity of the materials and the health and safety of all employees.

7.4 Computers and Electronic Data Related Requirements

All computers and electronic data requirements are developed and maintained by the IS department. For complete details of the program, **See IS Manual on LIMS Validation, SOP on Sample receipt and Login, and SOP on Data Backup and Archival.**

8.0 SAMPLE HANDLING, SAMPLE ACCEPTANCE AND SAMPLE RECEIPT

Data of known quality begins with the collection of the sample. All sampling and ambient data collection is performed in accordance with accepted guidelines and procedures established by the USEPA and Oklahoma Department of Environmental Quality (ODEQ). A number of sampling protocols may be employed to satisfy these project requirements though the ultimate objective for all sampling is to obtain a representative sample.

Prior to establishing sampling stations and parameters to be analyzed, a thorough review of program objectives is undertaken by the Account Managers in association with the Director and Field Services group. This review establishes the sampling points, type of sample required, and the analytical parameters to be used in the project. The sampling and parameter information help set the type of field equipment, collection bottles, and preservation chemicals required completing the program.

As part of this review, the client will be an important element for successful completion of the sampling event. Any client may request a copy of our QAM or other SOP's to aid in there ability to ensure that the quality objectives are met. If upon having a conversation with the client we determine that their knowledge may be insufficient or lacking in certain areas, we may choose to send them our QAM or SOP's to further there knowledge on the requirements for sampling and analysis of samples.

Samples must be collected in appropriate containers which have been properly cleaned and to which the correct preservative has been added. This step is important to ensure volatilization, adsorption, or chemical change introduces no contamination. Green Country Testing can assist in the sample collection process with trained sampling technicians and by making available to the client a set of appropriate sample containers that have been properly prepared for use in sample collection.

The maximum holding times recommended by Green Country Testing, appropriate containers and preservatives, and minimum sample volumes required for routine organic, metal and conventional parameters are in agreement with state and federal policies.

When the laboratory personnel must split samples, specific standard operating procedures are followed.

8.1 Sample Tracking

The sample is assigned a unique 1 letter 8-digit number. Each sample point or location shall be assigned a separate fraction number i.e. –01A, -02A, etc. For example, T02090001-01A is the sample(s) for Tulsa (T), in the year 2002 (02), in the month of September (09), is the first sample(s) of the month (0001), and is the first sampling point or location (fraction 1).

This sample number (workorder number or laboratory ID) is shortened and a label is printed out with all pertinent sample information, for example, T02090001-01A becomes 209001-1.

See the SOP for sample login and receipt.

8.2 Sample Acceptance

All samples must meet the following requirements for acceptance for analysis, where applicable:

1. The chain of custody must be complete and shall include client, sample description, date and time of collection, sampler, preservation type, sample type, relinquishing and received by signatures, and special remarks concerning the sample. Results generated in the field shall be recorded in the comments section along with the time of analysis and the analyst initials.
2. All samples must be properly labeled with a durable label completed in indelible ink and shall include client, description, date and time of collection, sampler, and required tests.
3. All samples shall arrive in proper sample containers with the appropriate preservatives.
4. All samples shall arrive prior to holding time expiration.
5. All samples shall arrive with sufficient sample volume to perform the required tests.
6. All samples that show signs of damage, contamination or inadequate storage shall be brought to the attention of the client.

When any of these criteria are not met, the client shall be notified immediately. If the client insists that the sample be analyzed, the date, time, client's name and specifics of the conversation shall be written on the Sample Login Checklist. If the client cannot be contacted, the Laboratory Director, QA Manager, or Technical Manager shall make the decision for sample acceptance. This information will be written on the Sample Login Checklist.

8.3 Sample Receipt

Samples are received either directly from the client, through a courier such as United Parcel Service or Federal Express or through our field services section (route driver). The samples are checked for label identification and for complete, accurate chain of custody after which the individual performing login signs the chain. The condition of the samples is recorded on the Sample Login Checklist. When questions arise due to the sample's suitability for testing (i.e. discrepancy between ID on sample container and chain of custody or analyses required, etc) the laboratory shall contact the client for further instruction or clarification before proceeding.

Samples follow a two-phase login procedure. The first includes manually recording information and assigning a unique identification number in a logbook. The second consists of entering the sample login information into a computerized LIMS system, which stores all identification and essential information.

The login book includes the receiving date, assigned sample number and the client's name. ONLY black will be used. The sample is checked with pH paper to determine if it is appropriately preserved (where necessary). Any discrepancies are noted on the Sample Login Checklist. Holding times are verified and the analyst is notified if the holding times are to expire soon. The samples are distributed to the appropriate locations for analysis or to the appropriate storage area until analysis.

8.4 Sample Storage

Samples that are stored under refrigeration require a temperature of 0-6°C. Separate refrigerators exist for all standards, reagents, food and other potentially contaminating sources. Sample fractions, extracts, leachates and other sample preparation products are stored in the same manner as the original sample.

See Appendix IV.

8.5 Sample Disposal

All samples are disposed in compliance with all applicable federal, state, and local guidelines. Samples will be retained for 4 to 8 weeks after sample analysis. Various samples are stored for longer periods at the request of the client.

See various SOPs and the Chemical Hygiene Plan.

9.0 RECORDS

All records that would allow historical reconstruction of laboratory activities are maintained for **7 years.** This includes but is not limited to the following:

1. Customer purchase orders
2. Customer test records and test instructions with data results
3. Log in books
4. Calibration, standard preparation logs and maintenance logs
5. Test reports and chain-of-custody
6. Computer database information (transferred and stored on disk or tape)

There are two filing systems at GCT, one for the current year and one for the previous year. The files for the current year are located in the main file cabinets outside the laboratory director's office. The files for the previous year are kept in the vault room, which is located in the Organics department. Every year the new files will be started in the main file cabinets, the previous year placed in the vault, and the oldest year boxed up and taken out to the storage shed.

Only permanent ink in black will be used. No entry will be obliterated by any method. If corrections are to be made, it will be a single line strike through with date and initials of person making the change. In the event of ownership transfer of the laboratory or the laboratory ceases operation, the client shall be notified and the records shall be maintained by the current ownership or transferred to the new ownership or transferred to the client.

Refer to the SOP on Sample receipt and login

10.0 LABORATORY REPORT FORMAT AND CONTENTS

Reports will contain the following, where applicable:

1. Cover page with laboratory name and division, client name and address, workorder number (laboratory ID or sample number), approval signature, date sample received, and date of report issuance.
2. The Case Narrative or comments page will contain the following:
   a) client generated results such as pH, Dissolved Oxygen, Flows, Temps, Chlorine Residual;
   b) subcontracted results to LELAP or ODEQ accredited labs without existing LIMS test code
   c) notations of non standard sample conditions such as temperature out of the 4 ± 2°C criteria;
   d) failed quality control samples such as Method Blanks, LCS/LCSD or MS/MSD along with samples that cannot be reanalyzed due to insufficient quantities;
   e) deviations from test methods such as emulsions that would require filtration of the sample not called for within the test method;
   f) and/or notations of missing required items i.e. dates and times of collection.
3. The report also contains the following statements: "This report shall not be reproduced except in full, without the written approval of Green Country Testing, Inc." and "The results relate only to the samples tested."
4. Chain of custody forms or sampling request form with custody information and Sample Login Checklist.
5. The report body shall contain results generated by Green Country Testing employees along with appropriate data flags for failed QC.
6. Results may include any and all QC and related documents associated with sample testing.

When there is exceptionally permitting departures from documented policies and procedures or from standard specifications, the analyst should consult the management of GCT on how to proceed and additionally provide documentation in the appropriate logbook.

Report Generation
Environmental reports are generated by the Laboratory Management System (LIMS).

For Report Generation, refer to the **GCT SOP on Sample receipt and login.**

Report Revisions
Reports may be revised at the request of the customer and approval of the Director. Green Country Testing may also revise the reports upon discovery of an omission or error. A notation of "REVISED" and the date is made in the LIMS whenever a report is revised. The original report is kept unchanged and a copy of the revised report is placed in the file.

Faxing/Mailing Reports
Reports will be faxed to customers upon their request. Reports may also be faxed at the request of the Director, QC staff, or Administrative Assistant's discretion.

Faxed transmissions will include the following:

"Confidentiality Notice: This facsimile transmission (and/or the documents accompanying it) may contain confidential information belonging to the sender. The information is intended only for the use of the individual or entity named above. If you are not the intended recipient, you are hereby notified that any disclosure, copying, distribution or

the taking of any action in reliance on the contents of this transmission is strictly prohibited. If you have received this transmission in error, please immediately notify us by telephone to arrange for the return of the documents."

Final data (data that has completed the QC process and a hard copy is/has been sent to the client) may be given by anyone in the department.

Reports will only be mailed or faxed to those persons and companies whom have been specifically designated by the customer to receive them.

Clients are notified via Customer Service within 48 hours or two business days when events cast doubt on the validity of test results.

11.0 SUBCONTRACTING ANALYTICAL SAMPLES

Only certified companies will perform calibrations of laboratory equipment. These certifications are kept on file in the QA files.

Analytical services not performed by Green Country Testing will ONLY be sent LELAP or ODEQ certified laboratories or other required certifications as required. Copies of these certifications are kept on in the QA files. Clients are notified in writing of subcontracted work. Lab reports denote subcontracted work with their certification number in the analyst field.

Appropriate chain-of-custody procedures are followed when submitting samples to a subcontractor for analysis. Subcontracted reports are kept in the file with the copy of the client's report. All subcontractors must show conformance to Green Country Testing quality requirements. Where available, standard operating procedures will be requested and filed in the QA files.

12.0 OUTSIDE SUPPORT SERVICES AND SUPPLIES

Outside support and supplies will be purchased from sources qualified and/or approved by the Director and/or QA Manager. The laboratory will purchase only those supplies that are of adequate quality to provide confidence regarding the reliability of the analysis.

All supplies and equipment purchased will be inspected and tested (where appropriate) to verify the quality of the item. Under no circumstances will consumable supplies be used until inspection is complete.

The purchasing agent will maintain records of all suppliers from who support services or supplies are purchased. The purchasing agent may choose a vendor when negotiating a lower price as long as the quality of the item is equivalent to or better than the original. The Director must give approval for the changes.

Copies of purchase orders, packing slips, and vendor invoices are maintained in a separate file.

Refer to the SOP on Reception, Storage and Labeling of Consumables

13.0 COMPLAINTS

Complaints by clients or personnel for any circumstances raising doubt about the laboratory's adherence to policy or procedure will require an internal audit for resolution. Once resolved, full documentation of the corrective action procedure is filed for future reference. The QA Manager

and/or Director routinely review corrective action documentation. For other complaints or comments from clients, a logbook is kept by Customer Service to document these occurrences so that we might determine trends or other courses of action.

14.0 ETHICS AND DISCIPLINARY POLICY

14.1 Ethics Policy

The successful business operation and reputation of Green Country Testing is built upon the principles of fair dealing and ethical conduct of our employees. Our reputation for integrity and excellence requires careful observance of the spirit and letter of all applicable laws and regulations, as well as a scrupulous regard for the highest standards of conduct and personal integrity.

The continued success of Green Country Testing is dependent upon our customers' trust, and we are dedicated to preserving that trust. Employees owe a duty to Green Country Testing, its customers, and shareholders to act in a way that will merit the continued trust and confidence of the public.

GCT will comply with all applicable laws and regulations and expects employees to conduct business in accordance the letter and spirit of all applicable laws and to refrain from any illegal, dishonest, or unethical conduct.

In general, the use of good judgement, based on high ethical principles, will guide you with respect to acceptable conduct. If a situation arises where it is difficult to determine the proper course of action, the matter shall be discussed openly with the Laboratory Director and Quality Assurance Officer.

Compliance with this policy of ethics is the responsibility of every employee. Disregarding or failing to comply with this policy could lead to disciplinary action, up to and including possible termination of employment.

Ethics training will be conducted on an annually basis by the Quality Assurance Officer.

Refer to SOP on Employee Training

14.2 Disciplinary Policy

This policy states GCT' s position on administering equitable and consistent discipline for deviations from the policies within this manual. The major purpose of any disciplinary action is to correct the problem, prevent recurrence, and prepare the employee for satisfactory service in the future.

Disciplinary action may call for any of four measures – verbal warning, written warning, suspension with or without pay, or termination of employment- depending on the severity of the problem and the number of occurrences. There may be circumstances when the measures are followed in progression. Use of discipline is intended to correct problems at an early stage, benefiting both the employee and Green Country Testing.

15.0 MANUAL AND LOGBOOK REGISTRATION AND DISTRIBUTION

The quality manual and laboratory logbooks shall be distributed and maintained on a controlled copy basis. Manuals released for distribution must be signed by authorized personnel. All

registered manuals and logbooks must be accounted for on the internal document control log located in the QA/QC office. Each time a manual or logbook is distributed, it is given a unique ID number in either the Quality Manual log or the laboratory notebook log with the start date and GCT ID number on the front cover. It is the responsibility of each employee who receives a registered manual to read and understand the contents of the manual.

The quality manual shall be reviewed annually to ensure continued correctness and applicability. When required, interim reviews shall be made. Notification of proposed additions and/or amendments may be made by anyone at any time and submitted to the Quality Assurance Manager. All requests shall be reviewed by the Director and QA Manager for approval. Approved additions and/or amendments shall be distributed to registered manual holders. It is the responsibility of each registered manual holder to enter the approved amendment in his or her manual. Amendments within each manual revision shall be numbered consecutively and records maintained on the list of approved revisions/amendments. All users have read only access to sensitive documents, however management and QA personnel at GCT have full control to make the necessary changes to these documents. All external documents shall be given a unique ID number in the external document control log located in the QA/QC office.

State of Arkansas
Department of Environmental Quality
Laboratory Certification Program

GREEN COUNTRY TESTING

TULSA, OK

has earned certification by law in accordance with Code Annotated §8-2-201 et seq., the State Environmental Laboratory Certification Program Act for the following parameters:

Alkalinity	pH	Calcium	Selenium
Ammonia	Phenol	Chromium	Silver
BOD	Sulfate	Cobalt	Sodium
CBOD	TDS	Copper	Thallium
Chloride	Total Phosphorus	Iron	Titanium
Chlorine	TSS	Lead	Vanadium
COD	Aluminum	Magnesium	Zinc
Cyanide	Antimony	Manganese	DRO
Fluoride	Arsenic	Mercury	GRO
Hardness	Barium	Molybdenum	Semi-volatiles
Nitrate	Beryllium	Nickel	Volatile Organics
Oil & Grease	Cadmium	Potassium	

Laboratory ID: **88-0968**
Certificate Number: **09-025-1**
Issued Date: **27 April 2009**
Expired Date: **6 February 2010**

Oklahoma Department of Environmental Quality
Laboratory Accreditation Program

State Laboratory ID: 7604
EPA ID: OK01007

Certificate #: 2009-82

Green Country Testing, Inc.

6825 E. 38th Street
Tulsa, OK 74145

has been certified for the examination of environmental samples for fields of testing listed on the laboratory's Scope of Accreditation.

Continued certification is contingent upon successful on-going compliance with OAC 252:301 which was promulgated and adopted pursuant to the Oklahoma Environmental Quality Code (Code), 27AO.S. § 2-4-101 *et seq.* Specific methods and analytes certified are cited on the laboratory's Scope of Accreditation.

The Scope of Accreditation and reports of on-site inspections are on file at the Oklahoma DEQ, Customer Services Division, Laboratory Accreditation Program, 707 N Robinson, P.O. Box 1677, Oklahoma City, Oklahoma 73101-1677, (405) 702-1000, www.deq.state.ok.us. Clients and customers may verify with this agency the laboratory's certification status for particular methods and analytes.

ISSUED: 9/1/2009

EXPIRES: 8/31/2010

Judith A. Duncan, Customer Services Division Director

David Caldwell, Laboratory Accreditation Program

This certificate is valid proof of certification only when associated with its Scope of Accreditation.

STATE OF LOUISIANA
DEPARTMENT OF ENVIRONMENTAL QUALITY

Is hereby granting a Louisiana Environmental Laboratory Accreditation to:

Green Country Testing, Inc.

6825 E. 38th St.
Tulsa, OK 74145

Agency Interest No. 85693

According to the Louisiana Administrative Code, Title 33, Part I, Subpart 3, LABORATORY ACCREDITATION, the State of Louisiana formally recognizes that this laboratory is technically competent to perform the environmental analyses listed on the scope of accreditation detailed in the attachment.

The laboratory agrees to perform all analyses listed on this scope of accreditation according to the Part I, Subpart 3 requirements and acknowledges that continued accreditation is dependent on successful ongoing compliance with the applicable requirements of Part I. Please contact the Department of Environmental Quality, Louisiana Environmental Laboratory Accreditation Program (LELAP) to verify the laboratory's scope of accreditation and accreditation status. Accreditation by the State of Louisiana is not an endorsement or a guarantee of validity of the data generated by the laboratory, and does not constitute an endorsement of the suitability of the listed methods for any specific application.

To be accredited initially and maintain accreditation, the laboratory agrees to participate in two single-blind, single-concentration PT studies, where available, per year for each field of testing for which it seeks accreditation or maintains accreditation as required in LAC 33:I.4711.

DISTRIBUTION LIST

Copies of the approved Quality Assurance Project Plan (QAPP) will be distributed by Limco Airepair, Inc. and sent to the Quality Assurance (QA) officers of the following organizations or entities:

1) Oklahoma Department of Environmental Quality – Land Protection Division
2) Limco Airepair, Inc. – Mr. Dan Kraft
3) Sneed Lang Herrold, PC – Mr. Andrew Harrison
4) A & M Engineering and Environmental Services, Inc.

It shall be the responsibility of the QA officers to distribute the QAPP to the project managers and any representatives of other groups involved.

QUALITY ASSURANCE PROJECT PLAN (QAPP)
FOR
SITE CHARACTERIZATION WORK PLAN

LIMCO AIREPAIR
ODEQ – LPD CASE NO. 09-303
WITHIN THE NORTHWEST ¼ OF THE NORTHEAST ¼ OF SECTION 35, TOWNSHIP 19 NORTH, RANGE 12 EAST
CITY OF TULSA, TULSA COUNTY, OKLAHOMA

A. PROJECT MANAGEMENT

A.1. PROJECT/TASK ORGANIZATION

A & M Engineering and Environmental Services, Inc. (A & M Engineering) was contracted in June 2009 by Limco Airepair to prepare a Work Plan for the Limco Airepair ("Site"). The Site consists of approximately 4.7 acres of land with building facilities, located within the Northwest ¼ of the Northeast ¼ of Section 35, Township 19 North, Range 12 East in the City of Tulsa, Tulsa County, Oklahoma. The Site is situated in the northeast portion of the State of Oklahoma and within the west-central portion of Tulsa County. The Topographic Map (Figure 1), depicting the location and the Site Map (figure 2) depicting the general layout of the Site, are provided in Attachment A. The Site is zoned as Light Industrial (IL) by the City of Tulsa and surrounding areas are mainly Light Industrial.

This Work Plan is being presented for review to the Oklahoma Department of Environmental Quality (ODEQ) in association with the consent order (Case No. 09-303). In preparing this Work Plan, Limco Airepair, Inc. and A & M Engineering reviewed the information and data included in the previous studies and have conducted several site visits.

The Oklahoma Department of Environmental Quality (ODEQ) and Limco Airepair will function as both project decision maker and data user for this project. Mr. Irfan Taner (Chief Geologist/Senior Project Manager) of A & M Engineering is the Project Manager (PM)

and will serve as final authority for work conducted by or through A & M Engineering for the duration of this project. Mr. David Cooper (Environmental & Safety Specialist) of A & M Engineering will act as Project Supervisor (PS) reporting directly to Mr. Taner. A Compliance & Safety Specialist, Field Engineer, and Field Technician may be assigned during various aspects of this project and will report directly to Mr. Taner, as will the drilling subcontractor, Mr. Allan Brantley (General Manager) of Mohawk Drilling. Additional personnel may be assigned as necessary by the PM to support the work involved and maintain scheduled project deadlines. Mr. Turgay Ertugrul, PE (Vice President) of A & M Engineering will act as Project Quality Assurance Manager (PQAM) and will communicate directly to Mr. Taner. The EPA certified laboratory that will be used for analysis of collected environmental samples will be Green Country Testing with Mr. Brian Duzan (Director of Laboratory Operations) reporting directly to the Project QA Manager, Mr. Turgay Ertugrul. Professional qualifications of A & M Engineering personnel associated with this project can be found in Appendix B. The Project Organizational and Implementation Chart (Table 1) is provided in Appendix C and represents the relationships and lines of authority for the proposed project personnel during implementation of the project.

The project is expected to begin after ODEQ approval is obtained. The project will be implemented in two (2) phases, the field portion and the office portion. Field activities will take approximately two (2) weeks and the laboratory and report preparation will take approximately Nine (9) weeks.

A.2. PROBLEM DEFINITION/BACKGROUND

The Site consists of two industrial buildings, equipment/material storage yard, and parking lot occupied by Limco Airepair, a company that manufactures and assembles heat transfers, ducting, and air conditioning units. Limco Airepair owns the main building and leases the building located on the west portion of the site. Basic operations that are conducted on-site include: the manufacture and repair operations of heat exchangers and repair of aircraft air ducts. The facility operates 16 hours a day, 5.5 days a week and 22 days month, or 4,224 hours per year.

A Phase I ESA was originally conducted in December 2008 and January 2009 for the Limco Site. According to historical resources and the site inspection, the Site consisted of vacant land until the main building structure was constructed in the mid to late 1970s with additions in the early 1980s. The leased building was also constructed in the mid to late 1970s. Limco Airepair has occupied the main building since the mid 1990s and leased the adjacent building since 2006. According to records, light industrial/manufacturing companies have occupied the Site from 1976 to 2008.

The Site Layout (Figure 2) in Appendix A shows the layout of the Site.

A.3. PREVIOUS STUDIES AND INVESTIGATIONS

A Phase I Environmental Site Assessment (ESA) was conducted at the Limco Airepair Facility in December 2008 and January 2009 by A & M Engineering and Environmental Services, Inc. (A&M Engineering). In order to further evaluate the condition of the subsurface near the floor grates and pits near the Clean Line area and WWTS, further assessment of the soil and groundwater was recommended.

On January 26, 2009, four (4) borings (TH-1 through TH-4) were drilled at the Site. All of the borings were drilled near the main building. TH-1 was located north of the main

building and employee parking lot and was the upgradient boring. TH-2 was situated approximately 50 feet southeast of the Compressor Room. All of the borings were completed with one (1)-inch diameter screens for groundwater sampling. After letting both borings recharge for groundwater, water samples were collected from TH-1, TH-2, and TH-4. There was no groundwater in TH-3 so no groundwater sample was collected. An additional surface soil sample (S-Drum) was collected east of the flammable drum storage in a drainage ditch. The previous sample locations are shown on Figure 3 in Appendix A.

Groundwater concentration levels in TH-1 were elevated for Arsenic, Barium, Beryllium, Cadmium, Chromium, Lead, Mercury, and Zinc above the Primary Drinking Water Maximum Contaminant Levels (MCLs). Groundwater concentration levels in TH-2 were elevated for Arsenic, Barium, Beryllium, Cadmium, Chromium, Lead, and Trichloroethylene above MCLs. No groundwater sample was collected from TH-3 since there was no water in the boring. Groundwater concentration levels in TH-4 were elevated for Arsenic, Barium, Beryllium, Cadmium, Chromium, and Lead above MCLs.

The concentrations that are above the MCLs are highest in the upgradient sample (TH-1). The upgradient TH-1 sample did not have any detected organics, however, TH-2 and TH-4 have some elevated organic parameters. The organic parameters are low in concentration except for the Trichloroethylene in TH-2. Trichloroethylene in TH-2 is 0.202 mg/L and is above the MCL of 0.005 mg/L.

The groundwater is encountered at the base of the alluvial unit which has a low yield. The analytical data of groundwater samples from the three (3) borings show metals impact (Arsenic, Barium, Beryllium, Cadmium, Chromium, Lead and Mercury) that exceed the Maximum Contaminant Levels for Primary Drinking Waters Standards. However, the metals impact is not related to the Site since the upgradient boring (TH-1) has the highest metals concentrations. TH-2 groundwater sample detected Trichloroethylene (TCE) at 0.202 mg/L

concentration and TH-4 at 0.001 mg/L. TCE was not detected in TH-1 (upgradient) groundwater sample. Therefore, TCE contamination maybe related to the subject facility. The Trichloroethylene MCL is 0.005 mg/L and TH-2 groundwater exceeded this level.

Metals and a few organic parameters were detected in the soil samples, however the detected parameters were in relatively low concentrations. The S-Drum sample showed elevated concentrations levels compared to the other two soil samples for Copper, Selenium, and Zinc. The detected parameter concentration levels were compared to the Risk-Based Screening Levels for Industrial Sites (DAF=1) and none of the detected parameters exceeded the Risk-Based Screening Levels.

The Groundwater Analysis Summary (Table 2) and the Soil Analysis Summary (Table 3) are provided in Appendix C.

The analytical data shows impact to the groundwater at the site from either previous on-site activities or the historical adjacent properties, located north of the site.

A.4. PROJECT/TASK DESCRIPTION AND SCHEDULE

Based on historical Site operations and utilization, historical adjacent property land uses (e.g. light industrial activities), previous studies, and site observations, the following tasks are proposed for gathering the necessary information and field data required for the preparation of the Site Characterization Report.

TASK 1: INSTALL MONITORING WELLS

Eight (8) monitoring wells will be completed to determine the groundwater flow direction. The proposed monitoring well locations (Figure 4) are provided in Attachment A.

TASK 2: EVALUATE SUBSURFACE SOIL

The subsurface material from the split barrel will be screened using a Photo Ionization Detector (PID). The soil zones with a high PID reading (over 10) will be sampled and analyzed for volatile organics (Method 8260). The zones with high PID readings (over 10) will be sampled (grab). If the PID readings are below 10, no samples will be collected in that boring.

TASK 3: COLLECT GROUNDWATER SAMPLES

Groundwater samples will be collected from each of the eight (8) monitoring wells and sampled for pH, Conductivity, Priority Metals, Chloride, Dissolved Oxygen, Total Dissolved Solids (TDS), and volatiles (Method 8260). If the detected metals are above Maximum Concentration Levels (MCLs), the water samples will be filtered and reanalyzed to determine if the sediments impacted the water.

TASK 4: INVESTIGATE NEARBY FACILITIES

Since the upgradient water samples indicated elevated concentrations for Arsenic, Barium, Beryllium, Cadmium, Chromium, Lead, Mercury, and Zinc, the nearby industrial facilities will be evaluated and investigated for reported violations and permits. In addition, potential sources of off-site source contamination will be investigated.

TASK 5: PLUG MONITORING WELLS

Once the on-site environmental contamination issues are resolved, the eight (8) monitoring wells will be plugged in accordance with the Oklahoma Water Resources Board (OWRB).

TASK 6: PREPARATION OF SITE CHARACTERIZATION REPORT

Prepare and finalize the Site Characterization Report.

The Site Characterization Report at a minimum will include the following components:

1. Review of available information and document findings, including the current and previous usage of the Site.

2. A physical characteristic description of the site, including geology, soil, hydrogeology, surface hydrology, land use, meteorology, at a minimum.

3. Photographs of sample locations and sampling activities will be provided in the report.

4. Detailed description of the involved contaminants, sources, release characteristics, and contaminated media.

5. Procedures used to determine the nature and extent of the contaminants, present the sampling results and collected field data, and evaluate the transport pathways.

6. Using the collected field data, determine the areas where the contamination exists above "screening levels" set by the US EPA Regional Screening Levels and determine the site specific risk-based clean-up levels using ODEQ approved methodology.

7. Document the possibility of contamination movement in pathways that would result in exposure to humans and to surrounding environments at levels that exceed EPA screening levels or Maximum Contaminant Levels (MCLs).

8. Identify remedial options and additional field data collection needs, if any, to further study the identified remedial options.

9. Develop a sampling plan to collect additional data, if needed, for preparing the Removal Action Design Report and conduct the additional sampling following ODEQ approval.

10. All records will be maintained for five (5) years.

In order to successfully accomplish the objectives set forth, the following specific sampling will be completed to address the identified potential environmental concerns:

A.4.1. SUBSURFACE SOIL INVESTIGATION:

The subsurface material from the split barrel will be screened using a Photo Ionization Detector (PID). The soil zones with a high PID reading (over 10) will be sampled and analyzed for volatile organics (Method 8260). The zones with high PID readings (over 10) will be sampled (grab). If the PID readings are below 10, no samples will be collected in that boring.

A ratio of ten (10) percent duplicates will be used for soils samples.

A.4.2. GROUNDWATER INVESTIGATION:

Eight (8) monitoring wells (MW-1, MW-2, MW-3, MW-4, MW-5, MW-6, MW-7, and MW-8) will be drilled and completed to determine the impact to the groundwater underlying the Site. Groundwater samples will be analyzed for pH, Conductivity, Priority Metals, Chloride, Dissolved Oxygen, Total Dissolved Solids (TDS), and volatiles (Method 8260). If the detected metals are above Maximum Concentration Levels (MCLs), the water samples will be filtered and reanalyzed to determine if the sediments impacted the water.

The monitoring well locations are shown in Figure 4, provided in Appendix A. These monitoring wells will be drilled to the uppermost aquifer, sampled with a split barrel, and visually inspected to a total depth of 30 feet. The subsurface material from the split barrel will be described by a field geologist. In addition, all soils samples will be screened using a Photo Ionization Detector (PID). The soil zones with a high PID (over 10) reading will be sampled and analyzed for volatile organics (Method 8260).

The eight (8) borings on the Site will be completed as monitoring wells and utilized for groundwater sampling. The data from these monitoring wells will be utilized to define the uppermost aquifer characteristics.

A.4.3. SAMPLING METHODS

The samples will be collected and analyzed using the appropriate EPA SW846 methods listed below.

- EPA Method 8260 (Volatile Organics)
- EPA Method 6010 (Priority Metals)
- Standard Methods 4500-Cl C (Chloride)
- Standard Methods 4500-O G (Dissolved Oxygen)

- ❖ Standard Methods 2540 C (Total Dissolved Solids – TDS)
- ❖ EPA Method SW 9040 B (pH)
- ❖ EPA Method SW 9050 A (Conductivity)

A.5. QUALITY OBJECTIVES AND CRITERIA FOR MEASUREMENT DATA

The objective of field sampling and laboratory analytical procedures is to obtain defensible data using the data quality objective (DQO) process for data collection. Data quality requirements for precision, accuracy, representativeness, comparability and completeness are defined for the site and must be achieved in order to satisfy DQOs.

Action levels for decision making will be utilized from the US EPA Regional Screening Levels for Industrial Properties and the US EPA Primary Drinking Water Standards.

Quality objectives in the field are to collect representative samples of groundwater and assure no cross reference in the process. To achieve these objectives in the field, sampling personnel will consist of experienced professionals and will follow the Sampling and Analysis Plan procedures. Sampling personnel will note specific attention to decontamination processes for field equipment and drilling equipment. If sampling equipment, water level measurement devices, or field screening equipment is reused in the field, the decontamination procedures will be conducted in accordance with the relevant SOP and rinsate samples will be collected for analysis. During field activities, field duplicate and split samples will be collected approximately ten (10) percent of the total samples. Daily trip blanks, equipment blanks, and field blanks will be collected.

Quality objectives for laboratory measurements are to obtain data meeting detection limits as required by the US EPA SW-846 for each specific test method, conduct matrix spike/matrix spike duplicates, recovery ranges, method blanks, and other laboratory standard quality requirements.

If the concentration levels detected in the analytical results are higher than the action levels, additional investigation maybe necessary.

If duplicate/spilt sample analytical results vary more than 15 percent, then the laboratory matrix spike and recovery ranges will be evaluate to determine any relation. Otherwise, the duplicate/spilt samples will be retested and re-evaluated.

The parameters to be analyzed are further outlined in the Sampling and Analysis Plan, located in Appendix D.

The Sampling and Analysis Plan also provides requirements for field sampling and testing. Samples will be collected in the field according to the Sampling and Analysis Plan, which provides the details for decontamination of sampling equipment, sample packaging and preservation, transportation, sample numbering, chain-of-custody and documentation requirements. Samples will be collected in the field and sent to laboratories certified to perform the required analyses. Trip blank and duplicate samples will be used to develop estimates of the accuracy and precision of the analytical data. Field surveillance of sampling, field measurements and chain-of-custody procedures will be used to verify that proper techniques are being followed.

A.6. SPECIAL TRAINING REQUIREMENT/CERTIFICATIONS

All A & M Engineering field personnel have completed the 40-hour level training for Hazardous Waste Operators (HAZWOPER). A & M Engineering personnel involved in supervisory positions have received the additional 8-hour supervisor's training. Annual 8-hour refresher courses are taught in-house for A & M Engineering personnel. The drilling subcontractor (Mohawk Drilling) is certified by the Oklahoma Water Resources Board.

Appendix E contains a copy of the OWRB Drilling/Pump Contractors license for Mohawk Drilling. Documentation of all employees training including that for Mohawk Drilling is maintained at A & M Engineering's corporate office.

A.7. DOCUMENTATION AND RECORDS

Records generated as a result of analytical sampling activities are considered Quality Assurance Records and will be processed in accordance with the requirements of this QAPP. Documents such as Chain-of-Custody Records, analytical testing results and other required laboratory deliverables are essential documents necessary to ensure the integrity and defensibility of data used to make decisions in the remediation process. Furthermore, Quality Assurance Records provide the record of events that have occurred for all aspects of the site investigation work and their adequate generation, review, protection and submittal is essential to the success of the project.

Sample documentation is described in Section B.2, Sampling Method Requirements. Copies of all field generated data including daily logs, sampling logs, and all other relevant forms and documentations will be maintained by the PM.

As the project progresses and if need is warranted, the PQAM will update this QAPP to ensure that it contains the necessary information required to cover new findings or procedures for the successful completion of this project. Following any revision change, identified in the document control format, copies of the updated QAPP will be distributed to the QA officers indicated on the distribution list. It shall be the responsibility of the QA officers to distribute the QAPP to the project managers and any representatives of other groups involved.

At the conclusion of the project, the PM will summarize the work accomplished and submit a final report to the ODEQ in hard copy form, and in electronic form. Any changes to the Work Plan and/or the QAPP will be recorded in the field logbook and in the final report to the data user(s) and regulator.

Records pertaining to this project and its related work tasks, including all field generated data, laboratory analytical data, etc., will be maintained in the A & M Engineering project archives for a minimum of five (5) years following the conclusion of work performed.

B. MEASUREMENT/DATA ACQUISITION

B.1. SAMPLING PROCESS DESIGN

SOIL SAMPLING

Eight (8) Testholes will be drilled using a standard type drill rig with hollow stem augers. The drilling auger will be used for boring the Testholes and accessing the subsurface materials for sampling. Each Testhole will be drilled to a maximum depth of thirty (30) feet. All samples from the borings will be scanned using a Photo Ionization Detector (PID). The soil zones with a high PID (over 10) reading will be sampled and analyzed for volatile organics (Method 8260). These soil samples will consist of a grab sample. The Testholes will be completed in the general areas of concern based upon visual site characteristics and accessibility. Sampling of the soil materials will be conducted using the following procedure:

- The sampling technician(s) will don clean PPE as specified (gloves). The sampling equipment (stainless steel spoons, wash bowls, etc.) will be thoroughly cleaned with Alconox/distilled water mixture and rinsed with distilled water prior to the first sample collection. The drill rig operators will don leather gloves and the drill auger will be thoroughly cleaned and rinsed with steam cleaner between each Testhole location. All decontamination and rinsate water will be collected, drummed, sampled and properly disposed. Each five (5) foot split barrel will be inspected by a geologist and screened with the PID. The zones with high PID readings (over 10) will be sampled (grab). The samples will be put into laboratory prepared sample containers. The soil samples will be analyzed for volatile organics (Method 8260).

- Each soil sample will be sniffed using a Photo Ionization Detector (PID). If there is an elevated or high PID reading (over 10), a grab sample will be collected at that depth. Any samples collected for volatile organics will consist of a grab sample.

- Soil samples will only be collected if there is a high or elevated PID reading (over 10). The soil samples from the specific depths in that Testhole will consist of a grab sample unique to that Testhole location for *VOCs* analysis. The grab samples will be split two (2) ways with one split sent to the analytical laboratory while the other split will be retained for archive in a refrigerator at the A & M Engineering office. The sample splits will be placed in separate identically labeled glass 500-ml capacity jars provided by the lab with one set placed in coolers for shipment to the laboratory and one set of split samples maintained in archive. The sampling team will maintain a Sampling Log for future reference and sampling activity, including the PID readings, will be documented in the Field Notebook.

- A custody seal will be placed over the lid of the sample container. Sealed samples will be placed in a suitable holder to prevent breakage and put in an ice chest packed with sufficient ice to ensure sample temperature is maintained below four (4) degrees Centigrade for transport to the analytical laboratory. A chain of custody form will accompany all samples to the lab.

- After the Testhole has been properly sampled, team members will clean the equipment, stainless steel bowl and mixing tools with Alconox and distilled water. Drill augers will be thoroughly cleaned and rinsed with a steam cleaner. Team members will don clean latex gloves prior to obtaining the next sample.

- The above sampling sequence will be followed for each of the remaining Testhole locations.

- Decontamination of sampling equipment will be conducted at the conclusion of the sampling event as described in a subsequent section of this document.

UPPERMOST GROUNDWATER SAMPLING

Uppermost groundwater samples will be collected from eight (8) monitoring wells used for the acquisition of the soil samples using the following protocol:

- The static water level and total Testhole depth will be measured with an electric metering tape (decontaminated between locations) and recorded in the field notebook. The water volume of the Testhole will be calculated, and the Testhole will be purged until either: a minimum of three volumes have been removed, the Testhole is evacuated, or the discharged water indicates stabilization of temperature, conductivity, and pH. Initial subjective analysis of the water (odor, color, appearance, etc.) will be recorded in the sampling log.

- Prior to sampling, the Testhole will be allowed to recover to approximately eighty percent of its initial volume (if possible in the allotted time).

- The sampling technician(s) will don clean PPE as specified. Water samples will be collected with individually wrapped, disposable bailers, eliminating the need for initial decontamination of the sampling device. Sample labels will be completed with an indelible marker and affixed to the sample containers prior to the collection of water samples.

- The bailer will be slowly lowered into the water until water resistance is "felt." The bailer will continue to be lowered further until approximately ¾ of bailer length is submerged.

- The bailer will be gently raised out of the water and the subjective appearance of the sample (i.e. floating debris, free product (LNAPL, DNAPL), sheen, color, clarity, etc.) will be noted in the sampling log.

- A water sample will be slowly decanted into the appropriately labeled sample vial, provided by the lab, via the fluid extractor located at the bottom of the bailer. If sediments prevent flow through the extractor, the liquid will be carefully poured into sample vial from the top of bailer with minimal agitation.

- The sample container, which is provided by the lab and supplied with the appropriate preservative, will then be inspected to assure that the container is filled to the point where the meniscus is formed above the lip of the sample container. A Teflon-lined cap will be quickly placed onto the sample container and tightened securely. The sample container will be checked to ensure no air bubbles are present. A custody seal will be placed over the lid of the sample container. The sample jars for organic testing will be collected first, then the metals, and then inorganics.

- Sealed samples will be placed in a suitable holder to prevent breakage and put in an ice chest packed with sufficient ice to ensure sample temperature is maintained below four (4) degrees Centigrade for transport to analytical laboratory.

The samples will be collected and analyzed using the appropriate EPA SW846 methods listed below.

- EPA Method 8260 (Volatile Organics)
- EPA Method 6010 (Priority Metals)
- Standard Methods 4500-Cl C (Chloride)
- Standard Methods 4500-O G (Dissolved Oxygen)
- Standard Methods 2540 C (Total Dissolved Solids – TDS)
- EPA Method SW 9040 B (pH)
- EPA Method SW 9050 A (Conductivity)

B.2. SAMPLING METHODS REQUIREMENTS

This section will describe the Standard Operating Procedures (SOP's) utilized for sampling during the site investigation activities including quality control, decontamination, packaging, and transport and sample custody. Sample documentation is described and examples of types of documentation forms are provided.

B.2.1. RESPONSIBILITIES

PROJECT QUALITY ASSURANCE MANAGER (PQAM)

The PQAM is responsible for the performance of preparatory, initial and follow-up inspections of analytical sampling activities to ensure compliance with the requirements of this procedure and the Quality Assurance Project Plan.

SAMPLE TECHNICIAN

The Sample Technician is responsible for the physical collection of samples in accordance with the requirements of this procedure, and for ensuring proper chain-of-custody of collected samples.

B.2.2. DEFINITIONS

B.2.2.1. SAMPLING EVENT

A sampling event is considered to be from the time the sampling personnel arrive at the site until the personnel leave for more than a day. An example of two sampling events would occur if sampling personnel went to a site for three weeks, collected surface samples, drilled borings and put groundwater wells in place. During this visit, soil and water samples were collected. The sampling crew then left the site for two months, thus concluding the first sampling event. The crew

later returned to collect another set of samples over a three-day period. The second visit would constitute the second sampling event.

B.2.2.2. TRIP BLANKS

Trip Blanks are QC samples, which originate from analyte-free water taken from the laboratory to the sampling site and returned to the laboratory with the volatile organic (VOA) samples. One trip blank will accompany each cooler to be shipped to the laboratory containing VOAs. Trip blanks are only analyzed for VOAs.

B.2.2.3. FIELD DUPLICATES/SPLITS

Field Duplicates (or splits) for soil samples will be collected in the field and prepared by homogenizing the soil sample and splitting into two samples. All samples except those designated for VOA analysis will be homogenized and split. For VOA analysis, select segments of soil will be taken from the Testhole cuttings and placed into 40 ml glass vials. Testhole cuttings may be sealed and shipped to the laboratory for subsampling if the project deems this appropriate. The field duplicates for water samples will be collected simultaneously. Field duplicates will be collected at a frequency of 10% per sample matrix. All the duplicates should be sent to the primary laboratory responsible for analysis. The same samples used for field duplicates shall be split by the laboratory and be used as the laboratory duplicate or matrix spike and a matrix spike duplicated (MS/MSD). This means that for the duplicate sample, there will be analyses of the normal sample, the field duplicate and the laboratory MS/MSD. A separate MS/MSD will not be collected in the field, but will be obtained from the field duplicate by splitting the sample in the laboratory.

B.2.2.4. EQUIPMENT BLANK

Equipment Blanks are a type of QC sample and are the final analyte-free water rinse collected after equipment decontamination and during a sampling event. Equipment rinsate will be taken once for each sample medium. If analytes pertinent to the project are found in the rinsate, the field decontamination procedure will be evaluated and improved. The rinsates are analyzed for the same parameters as the related samples.

B.2.2.5. FIELD BLANK

Field Blanks are a type of QC sample that consists of the source water used in decontamination and steam cleaning. At a minimum, one field blank from each event must be collected and analyzed for the same parameters as the related samples.

B.2.2.6. DECONTAMINATION

Equipment that may come in contact with potentially contaminated soil, sediment, waste, or water will be decontaminated prior to and after use. Decontamination consists of steam cleaning (high pressure, hot water washing), phosphate-free detergent (Alconox™) wash, and distilled, deionized (DI), or clean water rinse, as appropriate.

Sampling and drilling equipment will be decontaminated utilizing EPA guidelines. Summary decontamination steps are as follows:

B.2.3. WATER SAMPLING EQUIPMENT

Prior to collecting a water sample, non-dedicated sampling equipment must be decontaminated according to the following procedure.

- *EQUIPMENT:* Remove all visible contamination with distilled water and an Alconox solution. If this is not effective, use a clean soft cloth or sponge or use pressurized water to clean equipment. If required, a brush may be used to clean stainless steel or metal equipment but not plastic equipment, which may be scratched by the brush. After cleaning equipment, the equipment will be triple rinsed with distilled water.

- *HOSES:* Clean outside of hoses with high pressure hot water. Pump three (3) volumes of distilled water through hoses. If possible, use pressurized distilled water.

- *PROBE TIPS AND METERS:* Triple rinse with distilled water.

- Rinse all sample collection equipment with clean tap water followed by distilled water. Store equipment in clean containers.

- The water stabilization process for groundwater sampling and data collection will be documented in the field log and in the groundwater SOP.

- In order to prevent contamination to the sample bailer, disposable plastic sheeting will be laid down around the wells and when the bailer is pulled out of the well, the bailer will fall on the clean plastic or will never touch the ground.

B.2.4. WASTE, SOIL, & SEDIMENT SAMPLING EQUIPMENT

Equipment used to collect samples for chemical analysis requires thorough decontamination, as described below:

- Wash equipment (augers, split barrels, utensils, etc.) with distilled water and an Alconox™ solution. **If visible contamination remains, steam clean the equipment.**
- A solvent rinse (Isopropanol) may be required to remove organic contamination that is not removed by washing and/or steam cleaning.
- Rinse with clean tap water.
- Triple rinse all equipment with distilled water and allow to air dry.
- Collect sample according to the specific procedure for the sample type.
- Rinse all sample collection equipment with clean tap water followed by distilled water. Store equipment in clean containers.

B.2.5. DRILLING EQUIPMENT

Steam clean downhole equipment on drill rigs such as augers, drill rods and drill bits prior to and/or after use at a designated wash pad. Remove visible soil and grease.

B.2.6. WATER SAMPLING EQUIPMENT

Wash steel tapes, well sounders, transducers and water quality probes in a phosphate-free detergent solution and rinse in distilled or DI water or wipe clean after each use. Clean the portion of these devices inserted into wells with a mild soap solution.

B.2.7. QUALITY ASSURANCE SAMPLE CODES

F – Field Blank

T – Trip Blank

D – Duplicate

The sample code will be followed by a four (4)-digit date, which the first two (2) digits indicate the month and the last two (2) digits indicate the day of the month (Example: August 14th would be written as 0814).

B.2.8. SAMPLE PACKAGING AND TRANSPORT

Each sample will be packaged and transported appropriately as described in the following protocol:

- Collect samples in appropriate containers already supplied with the required preservatives by the lab.

- Print the following information clearly in waterproof ink on the label for each sample container: the preservative that has been added to each sample container, the sample number, the project number, the initials of the sample collector, and the date and time the sample was collected. For water samples, package sets together if appropriate. Each VOC set should be placed together in a labeled Ziploc plastic bag.

- Fill out field sample log and chain-of-custody record.

- Separate and place samples in coolers according to laboratory destination and according to expected concentrations (e.g., lowest concentration samples together based in PID readings). Each cooler must weigh less than 70 pounds including ice. Package samples well to protect from shipping damage.

- Place samples on ice, as necessary.

- Seal the top two copies of each chain-of-custody form inside a zip lock bag. Use strapping tape to attach the packet to the inside of the cooler lid. Samples will always be accompanied by a chain-of-custody record. When transferring samples, both the individuals relinquishing and receiving the samples will sign and date the chain-of-custody record. Samples will be packaged properly for shipment, including isolation of samples thought to have high chemical concentrations and dispatched to the appropriate laboratory for analysis.

- Secure cooler with custody seal.

- Label coolers correctly, placing "Fragile" and "This-End-Up" labels on coolers, as appropriate.

- Transport the coolers to the designated analytical laboratories via A & M Engineering Team personnel or designated couriers. The planned mode of sample transport is to use couriers employed by the laboratory. Alternatively, commercial couriers, A & M Engineering Team couriers, or

overnight shipment may be used. Specific transportation arrangements are dependent on the location of the Delivery Order Site and the analytical laboratories; specific procedures will be described in site-specific planning documents.

B.2.9. SAMPLE CUSTODY

Sample custody procedures will be followed through sample collections, transfer, analysis and ultimate disposal. The purpose of these procedures is to assure that the integrity of samples is maintained during their collection, transportation and storage prior to analysis and sample material is properly disposed after analysis. Sample custody begins with the shipment of the empty sample containers. Sample containers are shipped from the laboratory in sealed coolers or cartons with appropriate seals and custody documentation. Sample quantities, types and locations will be determined before the actual field work commences. The Sample Technician will be responsible for the care and custody of the samples until properly transferred. Custody transfer will be documented on the Chain-of-Custody Form. An example of the chain of custody form (Form 1) used by A & M Engineering is included in the Appendix F.

At the chemical laboratory, a designated sample custodian will accept custody of the shipped samples and verify that the information on the sample label matches that on the chain-of-custody form(s). Pertinent information as to sample condition, shipment, pickup, and courier will also be checked on the chain-of-custody form(s). In addition, a project receipt checklist (e.g. Cooler Receipt Form) will also be completed by the custodian. Information on the date and time of receipt, method of shipment, and sample condition will be recorded on this form. The custodian will then enter the appropriate data into the laboratory sample tracking system. The laboratory custodian will use the sample number on the sample label as well as assign a unique laboratory

number to each sample. The custodian will then transfer the sample(s) to the proper analyst(s) or store the sample(s) in the appropriate secure area.

Laboratory personnel will be responsible for the care and custody of samples from the time they are received and are responsible for sample disposal. Data sheets and laboratory records will be retained as part of the permanent documentation for a period of at least five (5) years.

Samples and extracts are retained by the analytical laboratory for up to 30 days after the data are reported by the laboratory. Unless notified otherwise by the site managers, excess or unused samples are disposed by the laboratory in a manner consistent with appropriate government regulations.

B.2.10. SAMPLE DOCUMENTATION

Each sample will be labeled and sealed properly immediately after collection. Sample identification documents will be carefully prepared so that identification and chain-of-custody records can be maintained and sample disposition can be controlled. Forms will be filled out with waterproof ink. The following identification documents will be used during the investigation:

- Sample Labels
- Field Sampling Logs
- Field Logs
- Chain-of-Custody Forms

B.2.11. SAMPLE LABELS

Sample labels are necessary to prevent misidentification of samples. Preprinted sample labels will be provided. An example of A & M Engineering's Sample label (Form 2) is included in Appendix F of this report. Where necessary, the label will be protected from water and solvents with clear label-protection tape. Each label contains the following information:

- Project name
- Initials of collector
- Date and time of collection
- Place of collection (job site)
- Sample number
- Well/boring number
- Depth
- Type sample (composite/grab)
- Preservative, if any

B.2.12. FIELD SAMPLE LOGS

A Field Sampling Log will be used during each sampling event by the Sample Technician to record activities as they relate to the progress of the investigation. The field sampling logs will be retained in the investigation files according to project number for that task.

An example of a Field Sampling Log (Form 3) is provided Appendix F. Entries in the field sampling log will include at least the following information:

- Project name and number
- Site location

- Name of sampler and date
- Names of personnel onsite
- Sample locations
- Volumes of samples collected
- Sample identification numbers
- Field observations and comments

B.2.13. FIELD LOGS

A Field Log will be used daily by the Sample Technician to record activities as they relate to the progress of the investigation. Form 4 is an example of a Daily Field Log form used by A & M Engineering and is provided in Appendix F. The field logs will be retained in the investigation files according to project number for that task. Entries in the field log will include at least the following information:

- Project name
- Project number
- Name of author and date
- Chronology and location of activities
- Names and affiliations of personnel onsite
- Instrument calibration details and identification number
- Decontamination procedures
- Sample collection or measurement methods
- Number of samples collected
- Sample identification numbers
- Sample distribution (laboratory)
- Field observations and comments
- Any modifications to or deviation from the site specific work plan

B.2.14. CHAIN-OF-CUSTODY RECORD

A chain-of-custody record will be filled out for and will accompany every sample to the analytical laboratory to establish the documentation necessary to track sample possession from the time of collection. A copy of the chain-of-custody form will be retained in the investigation files according to project number. The record will contain the following information:

- Sample number or identification
- Names of samplers
- Signature of collector, sampler or recorder
- Location of project
- Project manager's name
- Date of collection
- Place of collection (site location)
- Sample type
- Analyses requested
- Inclusive dates of possession
- Signature of person relinquishing or receiving sample
- Laboratory sample number, where applicable
- Date and time of sample receipt
- Method of shipment and courier name

B.2.15. CORRECTIONS TO SAMPLE DOCUMENTATION

Original data recorded in field investigation daily reports, chain-of-custody records, and other forms will be written in waterproof ink. None of these documents will be altered, destroyed or discarded, even if they are illegible or contain inaccuracies that require a replacement document.

If an error is made on a document compiled by one individual, that individual will make the necessary correction by crossing a single line through the error, entering the correct information and initialing and dating the change. The erroneous information will not be obliterated. Any subsequent error(s) discovered on a document will be corrected by the person discovering the error. All corrections will be initialed and dated. Site-specific documentation will be reviewed by site managers on a daily basis.

B.2.16. TRANSFER OF FIELD DOCUMENTATION

During site-specific field operations, field investigation daily logs will be faxed to Project Manager on a daily basis. In the absence of a facsimile, field geologists and/or engineers will be in contact with Project Managers, or, at a minimum, via mobile telephones. During drilling associated with the installation of monitoring wells, the Field Geologist will review boring logs prior to constructing the well.

At the end of each week of field operations, all field documentation will be copied and hard copies sent to the Project Manager for review. A copy of this documentation will also be kept at the on-site field office for future reference, if necessary. The original field documents will be submitted to the Project Manager for preparation of final report.

B.3. ANALYTICAL METHODS

Analytical methods, preservatives, holding times, and internal laboratory QA/QC protocols are described in Appendix G.

B.4. QUALITY CONTROL

Quality control measures during sample collection activities for this project will include the use of Trip Blanks and Duplicates.

B.5. INSTRUMENT/EQUIPMENT TESTING, INSPECTION, AND MAINTENANCE

A pH meter, PID, and electric water level instrument will be used for this project in the field. Inspection, testing, and maintenance protocols for Laboratory equipment can be found in Appendix G.

B.6. INSTRUMENT/EQUIPMENT CALIBRATION AND FREQUENCY

Field measurement instruments or equipment used for this project in the field will be calibrated per the manufacturer requirements. Calibration protocols for Laboratory equipment can be found in Appendix G.

B.7. INSPECTION/ACCEPTANCE OF SUPPLIES AND CONSUMABLES

Sample containers will be provided by the laboratory contracted to perform analytical services. The PQAM will inspect sample containers for integrity, correct volume for analytical parameter, and appropriate preservative, if necessary, prior to their use in the field. The sample technician will inspect sample containers in the field. Any sample container found to be inadequate will not be used for sample collection and storage. Sample containers are always ordered in excess of the required number to ensure that an adequate number of sample containers are available in the field for sample collection and storage.

The protocols for inspection and acceptance of laboratory supplies and consumables can be found in Appendix G.

B.8. NON-DIRECT MEASUREMENTS

A search for non-direct measurements will be conducted for water wells within a two-mile radius of the Site. The Oklahoma Water Resources Board online database will be utilized for the well information.

B.9. DATA MANAGEMENT

Analytical data from laboratories is sent directly to the PQAM, who reviews the data to verify that it meets the required accuracy and precision of the data quality objectives as indicated by the various quality control measures. Following review and approval, the data is sent to the PM for analysis and incorporation into a final report to the ODEQ, who, for this project, is the decision maker and end user of the data. The analytical data is compiled into tabular form in electronic format during the data analysis by the PM. The software used to tabulate the analytical data is the Microsoft Excel program operating in a XP networking environment.

C. ASSESSMENT/OVERSIGHT

C.1. PROJECT QUALITY ASSURANCE MANAGER (PQAM)

All project activities will be monitored by PQAM to ensure that they are consistent with the procedures described in the Work Plan and are capable of providing data of sufficient quality to achieve the project objectives. PQAM is responsible for the following activities:

- Implement Quality Assurance Project Plan (QAPP)
- Maintain communication with Project Manager, Project Supervisor, and Sampling Personnel to ensure that all field activities are performed in accordance with the Work Plan and achieve the Quality Standards required
- Conduct field audits during remediation and sampling activities to determine if proper procedures are being followed
- Review field and analytical data for completeness and accuracy
- Report on a regular and timely basis inspection/test results
- Maintain a Quality Assurance file of all data and other project records

C.2. LABORATORY QA/QC OFFICER

Green Country Testing of Tulsa, Oklahoma will analyze environmental samples and laboratory QA/QC will be the responsibility of the laboratory QA/QC Officer (Ms. Star Yuan). Also, the Laboratory Manager (Mr. Brian Duzan) is responsible for QA/QC requirements. A Quality Assurance Program Plan for Green Country Testing is included as Appendix G. The Laboratory QA/QC Officers will report to the Project Quality Assurance Manager.

D. DATA VALIDATION AND USABILITY

D.1. DATA VALIDATION

This Quality Execution Procedure establishes the requirements and responsibilities associated with identifying, reporting, controlling, dispositioning and correcting deviations identified in the execution of work.

D.1.1. RESPONSIBILITIES

PROJECT QUALITY ASSURANCE MANAGER (PQAM)

The PQAM is responsible for ensuring that a system of identification and resolution of deficient items is established for execution of the work. The PQAM is also responsible for reporting of adverse trends and programmatic problems to the Project Manager.

PROJECT MANAGER (PM)

The Project Manager is responsible for coordinating the development of dispositions to those deviations which require an engineering evaluation to determine the appropriate corrective action and for resolving items appearing on the Rework Items List.

PROJECT SUPERVISOR

Project Supervisor is responsible for assuring that identified deviations are controlled and corrected. If a Nonconformance Report (NCR) is issued, the corrective action shall conform to the disposition. The Nonconformance Report could be issued by the PQAM, PM, or Project Supervisor, however the report has to be approved by the PQAM.

SUBCONTRACTOR

For work performed by subcontractors, the subcontractors are responsible for assuring that deviations are identified, controlled, documented, reported, corrected and re-

inspected. If a Nonconformance Report (NCR) is issued, the corrective action shall conform to the disposition.

D.1.2. DEFINITIONS

DEVIATION

A Deviation is any departure from established requirements. Deviations may result in defects that may be corrected through rework or that may result in non-conformances that require engineering evaluation in order to be resolved.

NONCONFORMANCE

A Nonconformance is deviation of such a nature that its resolution involves the coordination of multiple organizations or requires a formal engineering review. Generally, any deviation that cannot be resolved by performance of rework is considered nonconformance.

D.1.3. PROCEDURE

IDENTIFICATION OF DEVIATIONS

Deviations are usually identified by inspectors (PQAM, PM, or Project Supervisor) during the conduct of routine inspections or tests. However, deviations may be identified at any time by anyone involved with the work and reported to the applicable inspector or to the PQAM.

When deviations are identified, they should be tagged or otherwise marked, if feasible, by the inspector to both prevent inadvertent additional work that might hinder correction and to assist in locating the item for rework.

Many deviations involve situations where the condition can be corrected by re-performing operations that have already been specified without obtaining additional information or approvals. Examples include: insufficient depth of soil sample collection; incorrect sample container used for sample storage, etc.

DOCUMENTATION OF DEVIATIONS

Deviations or items requiring rework shall be identified on the Daily Field Log that is completed daily.

Items requiring rework shall be entered on the Rework Items List. Deficient items that can be resolved by reworking by the end of the shift need not be recorded on the Rework Items List.

A copy of the Rework Items List shall be provided to the Project Manager or Site Supervisor who is responsible for correction of the deficient item. A copy of the Rework Items List shall also be submitted to the PQAM, as the lists are generated.

The PQAM shall maintain a current status of the resolution of items on the Rework Items List and update the list as deficient items are reworked.

When all deviations on a Rework Items List are closed, the list shall be maintained for record purposes.

REVIEW BY PROJECT QUALITY ASSURANCE MANAGER

Rework Item Lists showing open deviations shall be reviewed by the PQAM to ensure the identified deviations are tracked and corrective action is taken for resolution.

D.2. DATA USABILITY

Data usability will be determined by the PQAM using the following criteria:

- Documentation indicating that all deviations on the Rework Item List have been closed through corrective action.

- Documentation of field sampling procedures and investigation activities as prescribed in this QAPP Plan.

- Internal analytical laboratory QA/QC documentation provided by contracted lab.

- Preventative maintenance records and calibration logs for all field measurement devices.

Review of the above documentation and all data accumulated during the duration of the project will be conducted by the PQAM. If field sampling techniques, site inspections, laboratory analytical procedures, and data handling methods have been followed as described in this QAPP and its supporting documents, then the data will be deemed acceptable. Any changes or deviations from the approved work plan will be documented and corrective action will be taken to assure that all data presented is valid, and of solid, scientifically defensible quality.

The deviation expected for this project is the field sampling locations, which could be located within 15 feet of the original proposed location. Trip blank, equipment blank, or duplicate/spilt sample variations or detections will be evaluated and deducted from the data.

APPENDIX B

A & M ENGINEERING PROJECT PERSONNEL RESUMES

Professional Qualifications of

Turgay M. Ertugrul, P. E.

Senior Civil and Environmental Engineer

Education

M. S., Environmental Engineering,
Johns Hopkins Univ., 1982
B. S., Civil Engineering,
Univ. of Maryland, 1976

Registrations and Certifications

Registered Professional Engineer: Oklahoma; Maryland; Kentucky; Kansas; Missouri; Iowa
Licensed UST Tank Consultant - Oklahoma
Certified Hazardous Waste Operator and Supervisor

Areas of Expertise and Experience

Mr. Ertugrul, Vice President, is experienced in project management, construction, design and development of contract drawings, specifications and reports for Subtitle C and Subtitle D landfills, wastewater treatment and disposal projects, hazardous and toxic waste cleanup, pumping stations, sanitary sewer systems, storm drains and sewage installations, municipal facilities and residential subdivisions. In addition, he supervises subcontractors, construction personnel, engineers and draftsmen who comprise project teams. His experience includes preliminary studies, engineering design specification, construction management and review, preparation of operation and maintenance manuals, feasibility studies, start-up services and facility troubleshooting for wastewater collection and transport systems, water distribution systems, water and wastewater treatment facilities, pumping stations, water storage tanks, wells, flow metering structures, solid waste hazardous waste treatment and disposal facilities, hazardous and toxic waste cleanup and other related solid waste/hazardous waste, water and wastewater facilities.

1992-Pres.	A & M Engineering and Environmental Services, Inc., Tulsa, OK
1981-1992	Greenhorne & O'Mara, Inc., Greenbelt, MD
1976-1981	James Petrica & Assoc., Towson, MD
1973-1975	J. E. Greiner Environmental Sciences, Baltimore, MD

Associations

American Society of Civil Engineers
Society of American Military Engineers
Water Pollution Control Federation
American Waterworks Association
Chesapeake Water Pollution Control Association

Representative Project Experience (Partial List)

Victory Landfill, Bartlesville, OK, Phibro Resources Corp. Project Manager for design and permit application preparation of a 2,000,000 cy Subtitle C industrial landfill. Hydrological modeling using Soil Conservation Services' TR-55 hydrograph modeling method for determining hydrological impact of a stream relocation needed in the design of the landfill. Prepared pollution prevention plan for approximately 100 acres of disturbed area and acquired stream relocation wetlands permits from the Corps of Engineers.

J. I. Case Landfill, Pryor, OK, EMCON
Project Manager for closure construction and certification of 13 acre landfill. Obtained ODEQ approval for closure of 9 million gallon stormwater settling pond. Removed, stabilized, and disposed in the landfill approximately 16,000 cy of foundry sand contaminated sludge.

Cell B Landfill, Morgantown, KY, IMCO Recycling Inc. Project Manager for design, permit application, and construction of 800,000 cy Subtitle C industrial landfill. Included hydrological modeling in the design of stormwater management pond and preparation of pollution prevention plan.

Landfill Closure, Sand Springs, OK, The Kerr Group
Project Manager for closure design, permit application, construction and certification of two glass waste landfills. Included preparation of storm runoff calculations and grading to divert storm drainage away from the landfill caps.

Foundry Lead Abatement, Tulsa, OK, McDonnell Douglas
Project Manager for abatement of lead contamination of equipment and foundry building interior at Air Force Plant No. 3.

WWTP Demolition, Tulsa, OK, McDonnell Douglas Corp. Project Manager for demolition of decommissioned waste water treatment plant and disposal of contaminated materials.

Valley Industries Site, Catoosa, OK, Tulsa-Rogers County Port of Catoosa. Project Manager for UST removal and disposal, building interior decontamination.

Professional Qualifications of

Turgay M. Ertugrul, P. E.

Senior Civil and Environmental Engineer

(Continued)

Representative Project Experience (Partial List)

Yaffe Iron & Metals Co., Inc., Muskogee, Oklahoma
Design of stormwater management and sedimentation impoundment and structures for a 60 acre scrap yard located in an urban area. The hydrological design is based on runoff volume and peak flows calculated using the U.S. Department of Agriculture Soil Conservation Service's TR-55 Urban Hydrology Modeling for Small Watersheds. All structures are sized to pass a 100 year, 24 hour storm event.

Wastewater Treatment Plant, Frederick, Maryland
Design of a 7 million gpd advanced wastewater treatment plant using innovative and alternative technology. Included constructing new plant out of the flood plain and demolition of existing plant located in flood plain and prone to flooding. HEC I and HEC II hydrograph routing methods were prepared and a bridge access to the plant site was designed and constructed. Prepared sediment erosion and stormwater management plans.

WWTP Sludge Loading Facility, Baltimore, MD
Concept development, design, and construction services for 1,500 ton capacity sludge storage and rapid truck loading facility for 625 tpd. Project included design drawings for stormwater management and sediment and erosion control measures.

IMCO Recycling Inc., Morgantown, Kentucky
Managed design and preparation of specifications for vertical expansion of a double-lined Class I disposal landfill for disposing hazardous waste material.

Farmland Industries, Coffeyville, Kansas
Closure of an oily sludge pond by soil solidification and landfilling

Mountain Lake Water System Improvements, Garrett County, Maryland
Hydrogeological analysis, design and construction services for rehabilitation of existing springs, new springs, water storage tank and altitude control valve vault.

Wastewater Treatment Plant Upgrading, Anne Arundel County, Maryland
Rehabilitation of a 2 million gpd wastewater treatment plant, including septage receiving station, aerated grit chamber, flow metering, chlorine contact tank, automatic chlorination and sulfonation equipment, post-aeration system, sludge dewatering system utilizing belt type filter press, lime stabilization system for sludge treatment and phosphorus removal facilities.

Representative Project Experience (Partial List)

Water Pollution Control Facility, Monroe County, Michigan
Planning and design of wet weather improvements to a 24 million gpd activated sludge treatment plant, including improvements to existing flood pumping stations, 6,300 linear feet of 48-inch and 66-inch relief interceptor sewer, various sewer diversion structures, a 59 million gpd raw wastewater screening and pumping station, a 54 million gpd wet weather treatment facility and 6,900 linear feet of outfall sewer.

Sewage Facilities Study, Aberdeen Proving Grounds, Maryland
Evaluated alternate sewerage facilities to accommodate future growth and future nutrient removal requirements, including siting evaluations, conceptual designs and life cycle cost analyses for 2.0 mgd collection and treatment facilities.

Powder Mill Branch Metering Station, Baltimore, Maryland
Planning and design of hydraulic relief structure and Parshall flume-flow metering station.

Septage Facilities, Anne Arundel County, Maryland
Responsible for planning and design of completely automated septage receiving facility, with computer controlled sampling, testing, data management and system controls, grease receiving station and grit receiving and dewatering station. Included hydrological study and hydrograph modeling using TR-55 for the construction area as part of a Chesapeake Bay Construction in Sensitive Area Study

Swan Pond Facilities Study, Charles County, Maryland
Prepared planning studies with conceptual designs and cost estimates for water supply, storage and distribution, vacuum sewer wastewater collection and advanced wastewater treatment facility for a 2,000 home community. Included stormwater management study and wetlands delineation and permitting.

Sanitary Landfill, Charles County, Maryland
Provided design and permitting assistance for capacity expansion and closure for an existing 90 acre sanitary landfill, including cap design, surface runoff collection system, stormwater management and gas venting.

Replacement Well, Indian Head Naval Ordnance Station, Maryland
Managed hydrogeologic investigation, well testing and design of replacement 200 gpm well, well pump, flow metering, chlorination system, well house and site improvements.

Professional Qualifications of

Irfan Taner, C. P. G. and P.G.

Geologist/Hydrogeologist

Education

M. S., Geology, University of Istanbul - 1974,
Graduate Studies (Geology),
University of Tulsa - 1980 - 1981
B. S., Geology/Geophysics,
University of Istanbul -1973

Areas of Expertise and Experience

Mr. Taner has over 26 years professional experience in earth sciences. He has developed expertise in field and subsurface mapping, hydrogeology, environmental geology, stratigraphy, structural geology/tectonics, petroleum geology and engineering geology. His experience in hydrogeology - environmental geology includes hazardous and non-hazardous site characterization, evaluation, and remedial design; groundwater monitor well design, construction and sampling; deep injection well design, permitting, construction and operation; landfill permitting design and construction; groundwater characterization and modeling. He has used many different data sets in different disciplines and, from this experience, has developed the expertise to integrate them and evaluate very complex projects.

Mr. Taner has also served as an expert in several civil litigations involving environmental cases.

1988-Pres.	Chief Geologist, A & M Engineering and Environmental Services, Inc.
1983-1988	Consulting Geologist, A. A. Meyerhoff and Associates, Tulsa, Oklahoma
1981-1983	Geologist/Geophysicist, Borehole Exploration Co., Tulsa, Oklahoma
1980-1981	Geologist, Cities Service Technology Center, Tulsa, Oklahoma
1976-1980	Geologist, Turkish Petroleum, Ankara,
1975-1976	Geologist, Turkish Army, Ankara, Turkey

Publications

Mr. Taner has published 20 papers in refereed journals and co-authored two books, China - Stratigraphy, Paleogeography & Tectonics, a comprehensive treatment of the geology of China, and Tectonics: A New Hypothesis of Global Geodynamics, both published by Kluwer Academic Publishers.

Associations

Association of Engineering Geologists
American Association of Petroleum Geologists
Association of Groundwater Scientists and Engineers
AAPG Division of Environmental Geosciences (Charter Member)
Tulsa Geological Society

Registrations and Certifications

Certified Professional Geologist: American Institute of Professional Geologists
Registered Professional Geologist: Tennessee, Kentucky, and Kansas
Licensed UST Tank Consultant - Oklahoma
Licensed Geotechnical Well Driller - Oklahoma
Certified Hazardous Waste Operator

Representative Project Experience (Partial List)

Yaffe Iron and Metal, Inc., Liberal, Kansas
Investigation, remedial design, and remediation of lead contaminated soil at metal recycling facility.

Sun Pipe Line Company, Enid, Oklahoma
Project manager for excavation, removal of TPH contaminated soil. The project included removal and disposal of a 10,000 gallon UST from a site in Enid, OK.

U.S. Air Force/McDonnell Douglas, USAF Plant # 3, Tulsa, Oklahoma
Project Manager for Lead-Based Paint and Asbestos Survey of over 1.5 million square feet facilities.

U.S. Air Force/McDonnell Douglas, USAF Plant # 3, Tulsa, Oklahoma
Project Manager for process areas characterization for soil and groundwater contamination, remedial design, and remediation. Machine pits contamination investigation, remediation and closure. Hydrogeological investigation and groundwater modeling for onsite hazardous waste lagoons and landfill. Delisting of F 002,0 003, 005, and 019 wastes and cleanup and closure of landfill.

Professional Qualifications of

Irfan Taner, C. P. G. and P.G.

Geologist/Hydrogeologist

Representative Project Experience (Partial List)

Kaiser Aluminum and Chemical Corp., Tulsa, OK.
Conducted survey and site characterization of groundwater around waste disposal pond containing radioactive material. Designed and installed groundwater monitoring system and oversee operation of the system.

Kaiser Aluminum and Chemical Corp., Tulsa, OK.
Conducted Quality Assurance of radiation protection program for the remediation of adjacent properties surrounding a radioactive contaminated waste disposal pond. Reviewed documentation and procedures used by construction group during the project.

IMCO Recycling Inc., Morgantown, Kentucky.
Project Manager for design, permit application preparation, and construction of Class I industrial deep injection well. Conducted hydrogeological surveys of plant area for onsite landfills, retention ponds and plant structures and developed three dimensional models for the site. Installed surface and groundwater monitoring systems and oversee operation of the systems.

Duralast (Unarco Industries, Inc.), Tulsa, Oklahoma.
Site characterization, groundwater and surface water investigation, remedial design for soil and groundwater, and site remediation.

A-Z Terminal Corp., Amelia, Louisiana
Investigation, remedial design, and remediation of a pipe supply yard having metals contaminated soil. Excavated, transported and disposed 300 cy of treated soil.

Browning Ferris Industries, Tulsa, Oklahoma.
Groundwater investigation, permitting, and evaluation of groundwater monitoring system.

Valero Energy, San Antonio, Texas.
Conducted hydrogeological survey and investigated soil and groundwater contamination in relation to oil field. Prepared remediation design.

American Freightways, Tulsa, Oklahoma
Project manager for conducting ORBCA analysis as a result of confirmed release.

Representative Project Experience (Partial List)

Farmland Industries, Inc., Coffeyville, Kansas.
Conducted survey and site characterization of hazardous refinery sludge ponds. Prepared groundwater evaluation for pond closures and onsite landfill construction. Designed and installed groundwater monitoring system for lagoons and landfill.

IMCO Recycling Inc., Sapulpa, Oklahoma.
Investigated the shallow and deep groundwater aquifers in relation to onsite Class I industrial deep injection well, retention pond and landfill. Assisted in management and disposal of aluminum salt cake, magnesium salt cake, and baghouse dust from an aluminum and magnesium recycling operation.

Bonus Store Wagoner, Oklahoma
Project manager for removal of four UST's and site remediation conducted under ORBCA rules.

Professional Qualifications of

David M. Cooper

Project Manager / Marketing Director / Safety Director

Education

Business Administration, Austin Peay State University
Hazardous Materials Management, Oklahoma State University
Occupational Safety & Health, OSHA Training Institute

Areas of Expertise and Experience

Mr. Cooper has experience and training as a Certified Hazardous Materials Manager and as a Corporate Health and Safety Officer and Safety Training Instructor. Mr. Cooper Has served as Foreman, Superintendent, General Manager and Safety Officer for nearly twenty years

Mr. Cooper has been involved in numerous projects pertaining to the Tri-State Mining Area and the wastes associated with lead and zinc mining.

Registrations and Certifications

OSHA Outreach Safety Training Instructor
Certified Hazardous Waste Operator (Supervisor) Instructor

Representative Project Experience (Partial List)

American Airlines Maintenance Facility, Tulsa, Oklahoma
On-site Project Manager for the decontamination and decommissioning of the former metals plating facility. Responsible for the identification, classification and disposal of several thousand gallons of plating waste and the decontamination and removal of the plating equipment

Compass Industries Superfund Site, Tulsa, Oklahoma
Foreman / Safety Officer responsible for employee occupational safety during the completion of a multi-million dollar Superfund Project.

Ark City Superfund Site Arkansas City, Kansas
General Manager / Superintendent of a multi-million dollar acid sludge neutralization / solidification and capping Superfund Project in southern Kansas

West Bank Interceptor Project, Tulsa, Oklahoma
Superintendent / Safety Officer of a major utilities construction project involving the treatment and discharge of nearly five million gallons of petroleum contaminated ground water and the recovery of 40,000 barrels of petroleum product.

Representative Project Experience (Partial)

Bartlesville Lead Abatement, Bartlesville, Oklahoma
General Manager for the lead contaminated soils removal from over 400 residences in the Superfund Operable Unit.

Blackwell Smelter Project, Blackwell, Oklahoma
General Manager of operations during the residential soils removal and smelter site cleanup. Constructed the on-site repository and cap.

Galena Superfund Site, Galena, Kansas
General Manager / Site Safety Officer for the mining waste clean up project. This project was part of the Tri-State Mining Area Superfund Project.

Baxter Springs Superfund Site, Baxter Springs, Kansas
General Manager for the cleanup of the mining waste generated during the lead mining conducted in this area.

Tar Creek Superfund Project, Picher, Oklahoma
General Manager for the one of the Projects conducted in this area. The Tar Creek Superfund Site is one of many associated with the Tri-State Mining Area Cleanup.

Sand Springs Petrochemical Superfund Project
Sand Springs, Oklahoma
On-site project manager and Safety Officer during the initial Test and Studies Phase for the neutralization and solidification of acid sludge generated during petroleum refining.

U.S. Air Force, McConnell Air Force Base
Wichita, Kansas
On-site Superintendent / Safety Officer for a Project consisting of the removal, identification, solidification-stabilization, and disposal of RCRA hazardous wastes generated in 45 oil/water separators throughout the base.

Macklenberg-Duncan Inc. Oklahoma City, Oklahoma
On-site Superintendent for project consisting of the identification, insitu-solidification / stabilization, removal, and disposal of wastes generated during the manufacturing of numerous household products and adhesives.

Professional Qualifications of

Abigail Lazar

Project Manager/Environmental Scientist

Education

B.S., Environmental Studies—Emphasis in Biological Resources and Ecology, San Jose State University - 1998

Areas of Expertise and Experience

Mrs. Lazar has been involved in a variety of projects for A & M Engineering such as Phase I and II Environmental Assessments, Brownfield Sites, VCP sites, Asbestos and Mold inspections, QA/QC for construction of landfills, monitoring well testing, NPDES storm water monitoring, and wetland delineations.

Mrs. Lazar has conducted Health and Safety Inspections for a variety of facilities and has conducted numerous environmental compliance audits or a variety of facilities.

Registrations and Certifications

- Certified Hazardous Waste Operator
- Certified AHERA Inspector
- Certified 38-Hour Army Corps of Engineers Wetland Delineation and Management Training
- Certified State of Oklahoma Real Estate Instructor
- AIHA—Mold Assessment, Remediation, and Prevention—BMPs

Representative Project Experience (Partial)

Corps of Engineers, Tulsa District, Oklahoma
Phase I Environmental Assessment and Asbestos inspection of 15 duplexes and 4 houses in Oklahoma City, Oklahoma for a proposed parking lot.

ASCOG, Duncan Oklahoma
Phase I Environmental Assessments of five sites throughout southwest Oklahoma. Asbestos Inspection of 60,000 square feet building.

Representative Project Experience (Partial)

Williams Exploration and Production, Tulsa, Oklahoma
Conducted Wetlands Delineation for 17-mile proposed pipeline.

Muscogee (Creek) Nation—Oklahoma
Performed NEPA EA and Phase I ESAs investigations for multiple properties, including a proposed water line site, proposed recreation facilities, industrial parks, residences, community centers, museum, gaming facility, and smoke shop.

United States Cellular—Oklahoma, Kansas, and Missouri
Performed NEPA EA and Phase I ESAs investigations for multiple proposed cellular tower sites.

Waste Management, Tulsa, Oklahoma
QA/QC inspector for the installation of the clay, GCL, HDPE, and Geotextile liners for 5.93-Acre and 7.8-Acre landfills.

Waste Management, Knoxville, Tennessee
QA/QC inspector for the installation of the clay, HDPE, Geotextile, and sand liners and installation of the leachate collection system for a 5.50-Acre landfill.

Waste Management, Oklahoma City, Oklahoma
QA/QC inspector for the installation of the HDPE, and Geotextile liners for 3.2-Acre landfill.

American Environmental Landfill, Sand Springs Oklahoma
Quality Assurance inspector for the installation of clay, GCL, and HDPE liner for 6.7-Acre landfill.

Spectrum Field Services—Velma, Oklahoma
Conducted Phase I Environmental Assessment for gas plant and associated compressor stations. Prepared SPCC Plans for each site.

Abigail Lazar

Project Manager/Environmental Scientist

Representative Project Experience (Partial)

Phase I Environmental Site Assessments for:

- *Doerner, Saunders, Daniel & Anderson*—Texas, Oklahoma, Texas, Kansas, and Missouri
- *ASCOG*—Lawton, Chickasha, Devol, Temple, Oklahoma
- *U.S. Corps of Engineers, Tulsa District*—Oklahoma City, Oklahoma
- *Tulsa Industrial Authority*—Tulsa, Oklahoma
- *Muscogee (Creek) Nation*—Sapulpa, Coweta, Okmulgee, Cromwell, Oklahoma
- *Oklahoma Ordnance Works Authority*—Pryor, Oklahoma
- *Bank of America*—Georgia, Florida, California, Tennessee, Indiana, South Carolina, North Carolina, Texas, Missouri, Arkansas, New Mexico, Oklahoma
- *US Bank*—Saint Louis, Missouri
- *Safety Kleen*—Illinois, Kentucky, California
- *Glover Properties*—Tulsa, Oklahoma
- *CB Richard Ellis*—Tulsa, Oklahoma
- *Adwon Properties*—Tulsa, Oklahoma
- *McLeodUSA*—Tulsa, Oklahoma
- *Dresser Flow Control*—Corpus Christi, Texas
- *KMO Development*—Tulsa, Oklahoma
- *First National Bank & Trust*—Tulsa, Oklahoma
- *Git 'n' Go*—Tulsa, Oklahoma
- *State Bank*—Tulsa, Oklahoma
- *Godwin Associates*—Broken Arrow, Oklahoma
- *Oklahoma National Bank*—Tulsa, Oklahoma
- *Oklahoma State University*, - Stillwater, Oklahoma
- *KeeTooWah Band*—Cherokee City, Oklahoma
- *AVB Bank (previously Arkansas Valley State Bank)*—Tulsa Area, Oklahoma
- *NAI Realtors*—Tulsa, Oklahoma
- *Trust Company of Oklahoma*—Tulsa, Oklahoma
- *Newman Contracting Company*—Sapulpa and Glenpool, Oklahoma
- *Small Business Association*—Tulsa Area, Oklahoma
- *Reasors*—Tulsa, Oklahoma

Representative Project Experience (Partial)

Phase II Environmental Site Assessments for:

- *Acme Brick Company*—Wichita Kansas
- *GEA Rainey Corporation*—Catoosa, Oklahoma
- *US Bank*—Golden City, Missouri
- *Bancorp South*—Marshall, Texas
- *ALL Consulting*—Oklahoma City, Oklahoma
- *211 S. Elgin, LLC*—Tulsa, Oklahoma
- *Orchids Paper Products*—Pryor, Oklahoma
- *Limco Airepair*—Tulsa, Oklahoma

Modern Plating, Co., Inc. - Tulsa, Oklahoma
Managed environmental permits including: NPDES Stormwater, Form R, Tier II, and Sanitary Sewer Discharge Permit. Administered quantitative and qualitative analysis and reports for the chemistry lab.

Wallis Oil Company-Saint Louis, Missouri
Wrote Missouri Risk Based Corrective Action (MRBCA) Tier I Reports and UST Closure Reports for previous and existing gasoline stations.

Vertex Environmental—Tulsa and Stillwater, Oklahoma
Conducted asbestos inspections for several buildings (approximately 4,000 sq. feet total) for demolition and remodeling purposes. Sampling included roof core samples.

Limco Airepair—Tulsa, Oklahoma
Prepared the Work Plan, Sampling & Analysis Plan, QAPP, and Health & Safety Plan for a VCP Site Characterization.

Mayo Shopping Center—Tulsa, Oklahoma
Conducted a limited asbestos inspection for a retail strip shopping center (approximately 10,000 sq. feet) for a additional Scope of Work for a Phase I ESA.

ALL Consulting—Oklahoma City, Oklahoma
Conducted a mold inspection for a Brownfields property (30,000 sq. feet). Collected surface swab samples.

Professional Qualifications of

Ty M. Ertugrul

Environmental Scientist

Education

B.S., Environmental Science,
University of Evansville - 1998

Areas of Expertise and Experience

Mr. Ertugrul has been involved in a variety of projects for A & M Engineering such as Phase I Environmental Assessments, Phase II Environmental Assessments, monitoring well testing, NPDES Stormwater monitoring, Storm Water Pollution Prevention Plans and proposal development.

Mr. Ertugrul has conducted certified AHERA Asbestos Inspections for a variety of facilities in Tulsa, Oklahoma and Chicago, Illinois.

Mr. Ertugrul has also worked as the QA/QC Inspector for Waste Management in Knoxville, Tennessee and IMCO Recycling Company in Sapulpa, Oklahoma and Morgantown, KY.

Registrations and Certifications

Certified Hazardous Waste Operator
Certified Nuclear Moisture Density Gauge Operator
Certified AHERA Asbestos Inspector
Certified HUD Lead Inspector

Representative Project Experience (Partial)

Williams Natural Gas, Tulsa, Oklahoma
QA/QC Inspector for inventory of 55-gallon drums for service stations in Colorado, Kansas, Nebraska, and Oklahoma. Sampled 55-gallon drums for laboratory analysis.

Kerr Plastics, Sand Springs, Oklahoma
Collection and evaluation of quarterly groundwater sampling event.

Waste Management, Tulsa, Oklahoma
Sieve analysis of clay samples.

IMCO Recycling Company, Sapulpa, Oklahoma
Collection and evaluation of quarterly groundwater sampling event.

McDonnell Douglas Corporation/USAF, Tulsa, Oklahoma
Soil and groundwater monitoring well sampling for industrial landfill post-closure monitoring services.

Representative Project Experience (Partial)

McDonuell Douglas Corporation/USAF, Tulsa, Oklahoma
Collected paint samples for lead-based-paint analysis, evaluation, and abatement of foundry at the Air Force Plant No. 3.

IMCO Recycling Company, Sapulpa, Oklahoma
Performed analysis and standard Proctor for soils to be used in construction of storm water retention pond. QA/QC inspector for clay liner for storm water retention pond. Conducted nuclear density tests.

Allied Materials, Stroud, Oklahoma
Collected and evaluated quarterly groundwater sampling events.

Waste Management, Knoxville, Teunessee
QA/QC inspector for the landfill access road. Conducted nuclear density tests on road. Oversaw the demolition of a building and pad. Oversaw excavation of Cell B landfill.

IMCO Recycling Compauy, Sapulpa, Oklahoma
Prepared Storm Water Pollution Prevention Plan

Sandy Creek Wastewater Treatmeut Facility, Sand Springs, Oklahoma
Prepared Storm Water Pollution Prevention Plan

IMCO Recycling Company, Sapulpa, Oklahoma
Prepared construction design permit, certification for completion of project, and closure plan.

Kaiser Aluminnm, Tulsa, Oklahoma
Collection and evaluation of quarterly groundwater sampling event. Prepare quarterly groundwater report. Assisted in capping contaminated soil in consolidation area.

Phase I Environmental Assessments/Audits:
United States Cellular, Tulsa, Oklahoma
First National Bank of Oklahoma Tulsa, Oklahoma
Arvest-State Bank Tulsa, Oklahoma
Salvation Army, Tulsa, Oklahoma
First National of Broken Arrow, Broken Arrow, Oklahoma
Roman Real-Estate, Chicago, Illinois
Hall, Rosenbaum, & Associates, Broken Arrow, Oklahoma
Rock Springs Partnership, Broken Arrow, Oklahoma
Williams Energy, Tulsa, Oklahoma

Phase II Environmental Assessments/Audits:
Roman Real -Estate, Chicago, Illinois
United States Cellular, Tulsa, Oklahoma
Hall, Rosenbaum, & Associates, Broken Arrow, Oklahoma

A &M Engineering and Environmental Services, Inc.

DRILLING/PUMP CONTRACTOR LICENSE

This is to certify that ***MOHAWK DRILLING, INC.*** *License Number* ***DPC-0563***

whose address is ***10010 E. 16th STREET TULSA, OK 74128***

has complied with the provision of Title 82 O. S., § 1020.16, as amended, and is hereby authorized to operate at each activity certified below in the State of Oklahoma in accordance with the above named law and the rules and regulations made by the Oklahoma Water Resources Board to govern and regulate such work.

1. **Commercial drilling and plugging of groundwater wells, test holes & observation wells**
2. **Commercial drilling and plugging of monitoring wells and geotechnical borings**
3. **Commercial installation of water well pumps**
4. **Commercial drilling and plugging of heat exchange wells**

Certified Activities
2
July 1, 2009
through
June 30, 2011

This license to remain in full force and effect in accordance with term unless expired, revoked, suspended or cancelled.

CITY OF TULSA, TULSA COUNTY, OKLAHOMA

SECTION 1 PROJECT SUMMARY AND KNOWN HAZARDS

A & M Engineering and Environmental Services, Inc. (A & M Engineering) was contracted in June 2009 by Limco Airepair, Inc. to prepare a Work Plan for the Targeted Voluntary Cleanup Program - Limco Airepair Facility (the "Site"). The Site consists of approximately 4.7 acres of land with building facilities, located within the Northwest ¼ of the Northeast ¼ of Section 35, Township 19 North, Range 12 East in the City of Tulsa, Tulsa County, Oklahoma. The Site is situated in the northeast portion of the State of Oklahoma and within the west-central portion of Tulsa County. The Site consists of two industrial buildings, equipment/material storage yard, and parking lot occupied by Limco Airepair, a company that manufactures and assembles heat transfers, ducting, and air conditioning units. Limco Airepair owns the main building and leases the building located on the west portion of the site. Basic operations that are conducted on-site include: the manufacture and repair operations of heat exchangers and repair of aircraft air ducts. The facility operates 16 hours a day, 5.5 days a week and 22 days month, or 4,224 hours per year.

The Topographic Map (Figure 1), which depicts the location and general layout of the subject site, is provided in Appendix A.

The Phase II ESA/Site Characterization will be performed on-site in accordance with ASTM guidance in order to evaluate the degree of contamination and distribution. The

investigation will include eight (8) monitoring wells (maximum 30 feet depth each) within the accessible portions of the site using a standard type drill rig with hollow stem augers in order to facilitate the collection of solid and liquid (if present) samples for laboratory analyses. Potential contaminants include Arsenic, Barium, Beryllium, Cadmium, Chromium, Lead, Mercury, and Zinc, and volatiles.

Based upon our preliminary review of the information provided we have identified the following primary health and safety concerns associated with this project:

1. Worker awareness
2. Emergency contingency
3. Site control and work zones
4. Facility access / egress and parking arrangements
5. Potential Contaminants
6. Aboveground and underground utilities
7. Drill rig safety
8. Trips and falls
9. Heat and Cold Stress
10. Hygiene and Personal Protective Equipment
11. Decontamination procedures

SECTION 2 CONTACT INFORMATION

PRIMARY PROJECT CONTACT

Contact Name	Mr. Irfan Taner
Title	Chief Geologist / Senior Project Manager
Company	A & M Engineering and Environmental Services, Inc.
Company Address	10010 East 16th Street Tulsa, Oklahoma 74128
Office Telephone	(918) 665-6575
Cellular Telephone	(918) 606-0104

SECTION 3 WORKER AWARENESS

Prior to commencement of investigation activities a Preliminary Site Entry Evaluation Form (Appendix A) will be completed by the Site Project Manager (SPM) or Corporate Health & Safety Officer (CHSO) or his designee as deemed necessary by Corporate Management (CM).

Relative to the information compiled on the Preliminary Site Entry Evaluation Form and in reference to the health and safety requirements included herein a Pre-Inspection Health & Safety Meeting will be conducted for all A & M Engineering personnel and subcontractors to be involved on-site.

Attendees will be required to sign the Pre-Job Safety Orientation Signature Sheet included as Appendix B.

SECTION 4 EMERGENCY CONTINGENCY

Prior to project commencement an assembly point will be designated for emergency situations. The closest emergency response entities are shown below:

Major Emergencies:

Saint Francis Hospital
6161 S. Yale Ave.
Tulsa, Oklahoma 74104
(918) 494-2200

DIRECTIONS SEE APPENDIX C (HOSPITAL MAP A)

Minor Emergencies:

Concentra
5682 W. Skelly Dr.
Tulsa, Oklahoma 74107
(918) 446-1891

DIRECTIONS SEE APPENDIX C (HOSPITAL MAP B)

ALL EMERGENCIES 911

SECTION 5 SPECIFIC SITE CONTROL AND WORK ZONES

In regards to specific site control the Work Zones will be designated in the field and may change based upon investigative activities. Designation of these zones will be accomplished using existing features. In the absence of such features signage, safety fence, and caution tape may be used.

SECTION 6 FACILITY ACCESS / EGRESS AND PARKING ARRANGEMENTS

Workers will enter and exit the site at the designated access points. All workers will be restricted to the areas where they are performing work and wandering will not be permitted. The speed limits will be strictly enforced and vehicles will not exceed a maximum speed limit of 15 MPH on-site unless otherwise posted.

Roadways will not be blocked without prior approval. Vehicles and equipment will not be left running unattended. No weapons, firearms, or explosives will be allowed on any worker or within any vehicle/equipment entering the site.

SECTION 7 POTENTIAL CONTAMINANTS

Potential contaminants include Arsenic, Barium, Beryllium, Cadmium, Chromium, Lead, Mercury, and Zinc, and volatiles. Such contaminants may be encountered within the Testhole soils or uppermost groundwater during drilling and sampling activities.

SECTION 8 ABOVEGROUND AND UNDERGROUND UTILITIES

In accordance with the Oklahoma Underground Facilities Damage Prevention Act (Title 142) the Oklahoma One-Call System (Call Okie) will be notified a minimum of 48 hours prior to drilling activities. The notification number is (800) 522-6543 and the website address is www.callokie.com.

SECTION 9 DRILLING ACTIVITIES

During drilling activities the sampling personnel will stay clear of the workers and down hole auger. The sampling personnel will only enter the immediate drilling work zone once they have given notice to the drill rig operator and received his all clear. Grab samples will not be collected directly from the auger unless the drill rig operator has first stopped rotation of the down hole auger.

All drilling equipment will be operated in accordance with the Diamond Core Drill Manufacturers Association (DCDMA) and National Drilling Contractors Association (NDCA) Drilling Safety Guide included in Appendix D.

SECTION 10 TRIP AND FALLS

The drilling and sampling area can often be cluttered with both drilling and sampling equipment. These areas will be identified and walkways will be established in order to provide a safe work area free of clutter.

SECTION 11 WEATHER STRESS

HEAT STRESS

One of the most common types of stress that can affect field personnel is heat stress. Heat stress is typically a result of personnel protective equipment (PPE) that decreases natural body ventilation, although it can occur at any time work is being performed at elevated temperatures. In order to prevent heat stress the workers will monitor each other and look for common symptoms including the following:

- Red, hot, dry skin
- Nausea, dizziness, confusion, rapid pulse rate
- Lack of sweat
- Pale, clammy skin
- Weakness, cramps

In the event these symptoms are encountered the individuals clothing should be loosened and they should be sponged with cool water, moved to a cool place, and given water to drink.

In addition to monitoring, workers will be provided unlimited bottled drinking water and instructed to drink at least 16 ounces of water before beginning work and 4-8 ounces of water every 20 minutes for a total of 1-2 gallons per day. A shaded area will also be provided for breaks.

COLD WEATHER STRESS

Cold stress is less of a concern but can pose a hazard to workers once the temperatures reach less than 32°F. In addition, wind chill factors must be considered when evaluating the potential for cold stress conditions such as loss of mobility, loss of grip, numbness in the

extremities and even frostbite and hypothermia. During extreme cold temperatures, employees will be provided the clothing and equipment (at no cost) necessary to maintain an acceptable body temperature and perform job duties safely. In addition, a means to escape the cold (i.e., building, trailer, vehicle, etc.) will be provided for periodic breaks.

SECTION 12 HYGIENE AND PERSONNEL PROTECTIVE EQUIPMENT

All workers required to work within areas that may require the use of respirators will be clean shaven, except for mustaches which do not exceed the corners of the upper lip and sideburns which do not extend below the earlobes. Bottled drinking water and toilet facilities will be provided, as appropriate in designated areas. Smoking and other tobacco use will be limited to restricted areas. Fire protection and extinguishing equipment will be provided in each company vehicle. First aid assistance and first aid kits will be provided.

Mandatory Personal Protective Equipment (PPE) will be provided to all workers (at no cost) and include the following at a minimum:

- Hard Hat (ANSI Z89.1 approved)
- Safety Glasses (ANSI Z87.1 approved)
- Leather or Latex Gloves
- Steel Toed Boots with minimum 6-inch uppers

Other PPE that may be used in areas of specific need will be provided to all workers (at no cost) and include the following:

- Tyvek Suites
- Half or Full Faced Respirators equipped with Organic Vapor filters
- Hearing Protection (ear plugs)

Appropriate clothing and long pants (or Tyvek suit) must be worn at all times. Workers conducting drilling activities will wear leather gloves at all times. Personnel conducting sampling activities will wear latex gloves at all times. Workers and personnel in close proximity to the drill rig will also wear hearing protection. Personnel will be instructed to wash their work clothes daily and wash their hands and face repeatedly with soap and water prior to eating.

Half or full faced air-purifying respirators equipped with Organic Vapor filters may be used during physical sampling activities in the event noticeable vapors are detected.

SECTION 13 DECONTAMINATION

Decontamination of equipment and workers will be conducted within a designated decontamination area inside the work area. The order of worker decontamination will be as follows:

Step 1 Remove Respirator/rinse with soap & water (if worn)
Step 2 Remove Tyvek Suite & place in trash container (if worn)
Step 3 Rinse boots with soap & water using brush inside metal tub (if worn)
Step 4 Remove vinyl gloves & place in trash container
Step 5 Wash hands and face repeatedly with soap and water

Field personnel will be directed to wash their hands and face repeatedly with soap and water prior to eating. Disposable Tyvek suits (if worn) and other PPE will be deposited inside a trash container (demarcated & with lid) for appropriate off-site disposal. The rinsate water will be very minimal and simply allowed to evaporate inside the metal tubs.

SECTION 14 INJURY TO EMPLOYEES AND INCIDENT INVESTIGATION

All injuries will be reported immediately to a site representative. An Occupational Injury and Illness Report will be completed and supplied to the designated representative within one working day of the incident, no matter how minor. Incident investigations will be conducted in accordance with A & M Engineering policy.

SECTION 15 SPECIFIC ENVIRONMENTAL STANDARDS

Provisions will be made to ensure that all work is done in compliance with all environmental laws, rules, and regulations in a way that minimizes potential releases to the environment. In the event a spill occurs steps will be taken to immediately stop and/or control the release and notification will be provided to the client and client representatives immediately. Investigative activities will be conducted in accordance with the A & M Engineering Corporate Health & Safety Plan (CHSP).

SECTION 16 CORPORATE HEALTH AND SAFETY PLAN

A & M Engineering has a Corporate Health & Safety Plan (CHSP) in place that addresses all aspects of health and safety encountered on typical project sites. However, specific project needs are addressed in this Site Specific Health & Safety Plan with the support of the CHSP, which can be provided upon request.

APPENDIX D

DCDMA & NDCA DRILLING SAFETY GUIDE

DRILLING SAFETY GUIDE

The Drilling Safety Guide has been prepared through the volunteer efforts of member delegations of the Diamond Core Drill Manufacturers Association (DCDMA) and the National Drilling Contractors Association (NDCA) and is published by the National Drilling Federation for the benefit of the drilling industries.

This guide contains suggested safety procedures. It is not intended to nor does it set forth any standard industry procedures or requirements, nor does it contain any procedures or requirements mandated by law. It is to be used as a guideline for the safe operation of drilling equipment. NDF, DCDMA and NDCA and their officers and members deny any liability for any injury to persons or property which may occur even if these procedures are properly followed. Further, neither the NDF, DCDMA nor the NDCA or their officers or members accept responsibility for the completeness of the guide or the applicability of the statements or procedures to the use of all drilling machines and tools in all environments. Many aspects of drilling safety cannot be expressed in detail and cannot be met by mechanical means, but can only be accomplished with the exercise of intelligence, care and common sense.

Table Of Contents

12. Safe Use Of Electricity 21

13. React To Contact With Electricity 24

14. Safe Use Of Wire Line Hoists, Wire Rope And Hoisting Hardware 24

15. Safe Use Of Cathead And Rope Hoists 27

16. Safe Use Of Augers 29

17. Safety During Rotary And Core Drilling 30

18. Safety During Travel 31

19. Loading And Unloading 33

20. Off-Road Movement 33

21. Tires, Batteries And Fuel 34

22. First Aid 36

23. Drill Rig Utilization 36

24. Drill Rig Alterations 36

2. Governmental Regulations

All local, state and federal regulations or restrictions, currently in effect or effected in the future, take precedence over the recommendations and suggestions which follow. Government regulations will vary from country to country and from state to state.

3. The Safety Supervisor

The safety supervisor for the drill crew will in most cases be the drill rig operator.

- The safety supervisor should consider the "responsibility" for safety and the "authority" to enforce safety to be a matter of first importance.
- The safety supervisor should be the leader in using proper personal safety gear and set an example in following the rules that are being enforced on others.
- The safety supervisor should enforce the use of proper personal protective safety equipment and take appropriate corrective action when proper personal protective safety equipment is not being used.
- The safety supervisor should understand that proper maintenance of tools and equipment and general "housekeeping" on the drill rig will provide the environment to promote and enforce safety.
- Before drilling is started with a particular drill, the safety supervisor must be assured that the operator (who may be the safety supervisor) has had adequate training and is thoroughly familiar with the drill rig, its controls and its capabilities.
- The safety supervisor should inspect the drill rig at least daily for structural damage, loose bolts and nuts, proper tension in chain drives, loose or missing guards or protective covers, fluid leaks, damaged hoses and/or damaged pressure gauges and pressure relief valves.
- The safety supervisor should check and test all safety devices such as emergency shut-down switches at least daily and preferably at the start of a drilling shift. Drilling should not be permitted until all emergency shut-down and warning systems are working correctly. Do not wire around, bypass or remove an emergency device.
- The safety supervisor should check that all gauges, warning

- The safety supervisor should assure that there is a first-aid kit on each drill rig and a fire extinguisher on each drill rig and on each additional vehicle and assure that they are properly maintained.
- The safety supervisor (and as many crew members as possible) should be well trained and capable of using first-aid kits, fire extinguishers and all other safety devices and equipment.
- The safety supervisor should maintain a list of addresses and telephone numbers of emergency assistance units (ambulance services, police, hospitals, etc.) and inform other members of the drill crew of the existance and location of the list.

4. Individual Protective Equipment

For most geotechnical, mineral and/or groundwater drilling projects, individual protective equipment should include a safety hat, safety shoes, safety glasses and close fitting gloves and clothing. The clothing of the individual drill rig worker is not generally considered protective equipment; however, your clothing should be close fitting but comfortable, without loose ends, straps, drow strings or belts or otherwise unfastened parts that might catch on some rotating or translating component of the drill rig. Rings and jewelry should not be worn during a work shift.

- Safety Head Gear. Safety hats (hard hats) should be worn by everyone working or visiting at or near a drilling site. All safety hats should meet the requirements of ANSI Z89.1. All safety hats should be kept clean and in good repair with the headband and crown straps properly adjusted for the individual drill rig worker or visitor.
- Safety Shoes or Boots. Safety shoes or boots should be worn by all drilling personnel and all visitors to the drill site that observe drilling operations within close proximity of the drill rig. All safety shoes or boots should meet the requirements of ANSI Z41.1
- Gloves. All drilling personnel should wear gloves for protection against cuts and abrasion which could occur while handling wire rope or cable and from contact with sharp edges and burrs on drill rods and other drilling or sampling tools. All gloves should be close fitting and not have large cuffs or loose ties which can catch on rotating or translating components of the drill rig.

5. Housekeeping On And Around The Drill Rig

The first requirement for safe field operations is that the safety supervisor understands and fulfills the responsibility for maintenance and "housekeeping" on and around the drill rig.

- Suitable storage locations should be provided for all tools, materials and supplies so that tools, materials and supplies can be conveniently and safely handled without hitting or falling on a member of the drill crew or a visitor.
- Avoid storing or transporting tools, materials or supplies within or on the mast (derrick) of the drill rig.
- Pipe, drill rods, casing, augers and similar drilling tools should be orderly stacked on racks or sills to prevent spreading, rolling or sliding.
- Penetration or other driving hammers should be placed at a safe location on the ground or be secured to prevent movement when not in use.
- Work areas, platforms, walkways, scaffolding and other accessways should be kept free of materials, debris and obstructions and substances such as ice, grease or oil that could cause a surface to become slick or otherwise hazardous.
- Keep all controls, control linkages, warning and operation lights and lenses free of oil, grease and/or ice.
- Do not store gasoline in any portable container other than a non-sparking, red container with a flame arrester in the fill spout and having the word "gasoline" easily visible.

6. Maintenance Safety

Good maintenance will make drilling operations safer. Also, maintenance should be performed safely.

- Wear safety glasses when performing maintenance on a drill rig or on drilling tools.
- Shut down the drill rig engine to make repairs or adjustments to a drill rig or to lubricate fittings (except repairs or adjustments that can only be made with the engine running). Take precautions to prevent accidental starting of an engine during maintenance by removing or tagging the ignition key.

• Replace all caps, filler plugs, protective guards or panels and high pressure hose clamps and chains or cables that have been removed for maintenance before returning the drill rig to service.

7. Safe Use Of Hand Tools

There are almost an infinite number of hand tools that can be used on or around a drill rig and in repair shops and more than an equal number of instructions for proper use. "Use the tool for its intended purpose" is the most important rule. The following are a few specific and some general suggestions which apply to safe use of several hand tools that are often used on and around drill rigs.

• When a tool becomes damaged, either repair it before using it again or get rid of it.

• When using a hammer, any kind of hammer for any purpose, wear safety glasses and require all others around you to wear safety glasses.

• When using a chisel, any kind of chisel, for any purpose, wear safety glasses and require all others around you to wear safety glasses.

• Keep all tools cleaned and orderly stored when not in use.

• Use wrenches on nuts – don't use pliers on nuts.

• Use screwdrivers with blades that fit the screw slot.

• When using a wrench on a tight nut – first use some penetrating oil, use the largest wrench available that fits the nut, when possible pull on the wrench handle rather than pushing, and apply force to the wrench with both hands when possible and with both feet firmly placed. Don't push or pull with one or both feet on the drill rig or the side of a mud pit or some other blocking-off device. Always assume that you may lose your footing – check the place where you may fall for sharp objects.

• Keep all pipe wrenches clean and in good repair. The jaws of pipe wrenches should be wire brushed frequently to prevent an accumulation of dirt and grease which would otherwise build up and cause wrenches to slip.

• Never use pipe wrenches in place of a rod holding device.

• Replace hook and heel jaws when they become visibly worn.

safe working area. Drilling should not be commenced when tree limbs, unstable ground or site obstructions cause unsafe tool handling conditions.

9. Start Up

- All drill rig personnel and visitors should be instructed to "stand clear" of the drill rig immediately prior to and during starting of an engine.
- Make sure all gear boxes are in neutral, all hoist levers are disengaged, all hydraulic levers are in the correct nonactuating positions and the cathead rope is not on the cathead before starting a drill rig engine.
- Start all engines according to the manufacturer's manual.

10. Safety During Drilling Operations

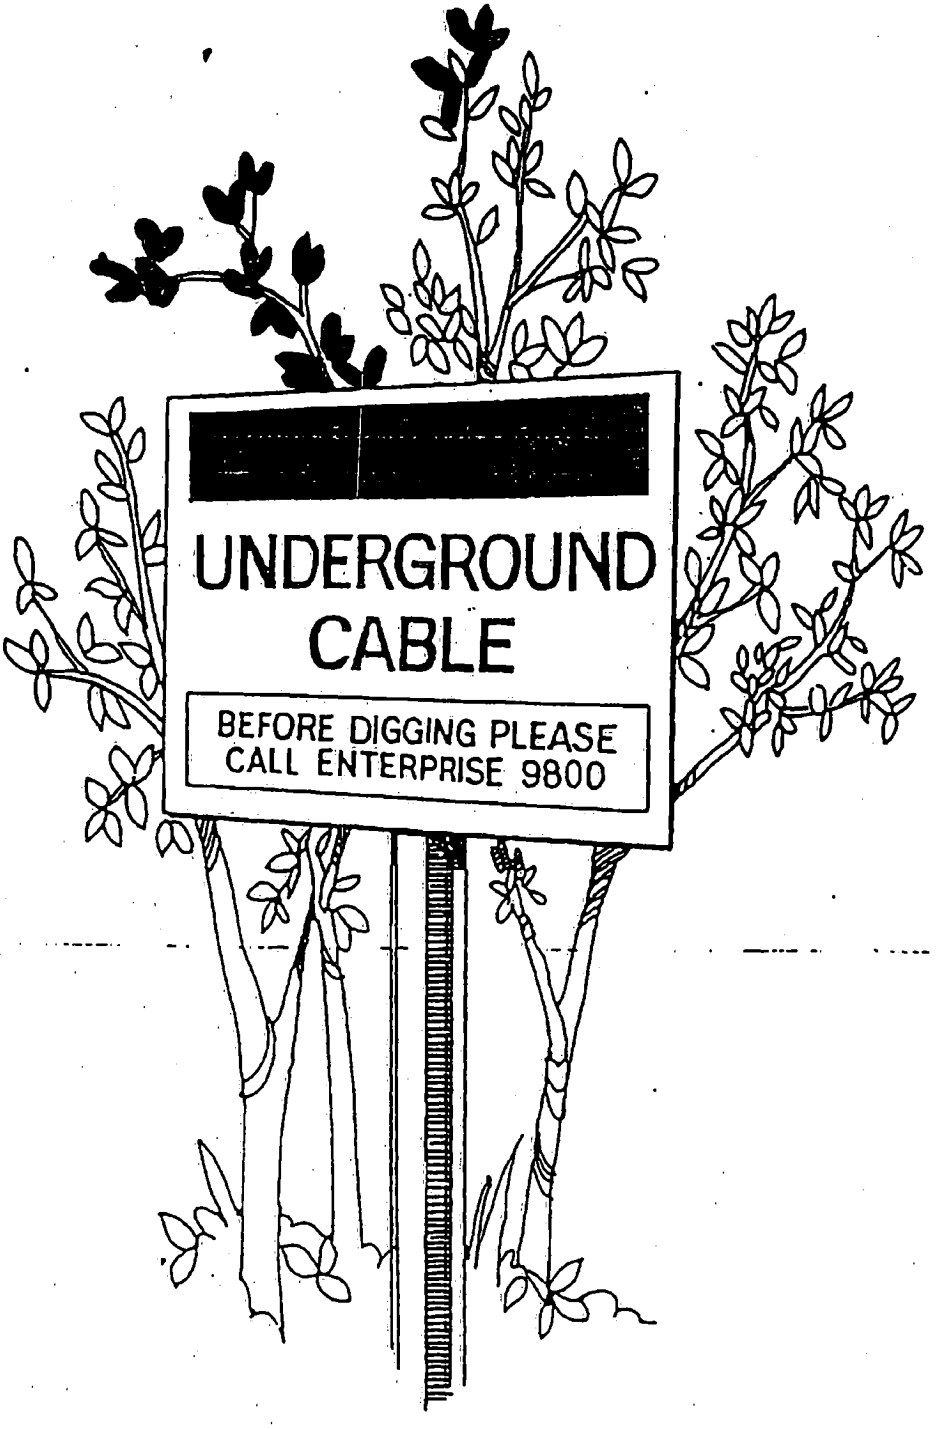
Safety requires the attention and cooperation of every worker and site visitor.

- Do not drive the drill rig from hole to hole with the mast (derrick) in the raised position.
- Before raising the mast (derrick) look up to check for overhead obstructions. (Refer to Section 11 on Overhead and Buried Utilities.)
- Before raising the mast (derrick), all drill rig personnel (with exception of the operator) and visitors should be cleared from the areas immediately to the rear and the sides of the mast. All drill rig personnel and visitors should be informed that the mast is being raised prior to raising it.
- Before the mast (derrick) of a drill rig is raised and drilling is commenced, the drill rig must be first leveled and stabilized with leveling jacks and/or solid cribbing. The drill rig should be releveled if it settles after initial set up. Lower the mast (derrick) only when the leveling jacks are down and do not raise the leveling jack pods until the mast (derrick) is lowered completely.
- Before starting drilling operations, secure and/or lock the mast (derrick) if required according to the drill manufacturer's recommendations.

- When working on a derrick platform, use a safety belt and a lifeline. The safety belt should be at least 4 in. (100 mm) wide and should fit snugly but comfortably. The lifeline, when attached to the derrick, should be less than 6 ft. (2 m) long. The safety belt and lifeline should be strong enough to withstand the dynamic force of a 250 lb. (115 kg) weight (contained within the belt) falling 6 ft. (2 m).
- When climbing to a derrick platform that is higher than 20 ft. (6 m), a safety climbing device should be used.
- When a rig worker is on a derrick platform, the lifeline should be fastened to the derrick just above the derrick platform and to a structural member that is not attached to the platform or to other lines or cables supporting the platform.
- When a rig worker first arrives at a derrick platform, the platform should immediately be inspected for broken members, loose connections and loose tools or other loose materials.
- Tools should be securely attached to the platform with safety lines. Do not attach a tool to a line attached to your wrist or any other part of your body.
- When you are working on a derrick platform, do not guide drill rods or pipe into racks or other supports by taking hold of a moving hoist line or a traveling block.
- Loose tools and similar items should not be left on the derrick platform or on structural members of the derrick.
- A derrick platform over 4 ft. (1.2 m) above ground surface should have toe boards and safety railing that are in good condition.
- Workers on the ground or the drilling floor should avoid being under rig workers on elevated platforms, whenever possible.

Be careful when lifting heavy objects:

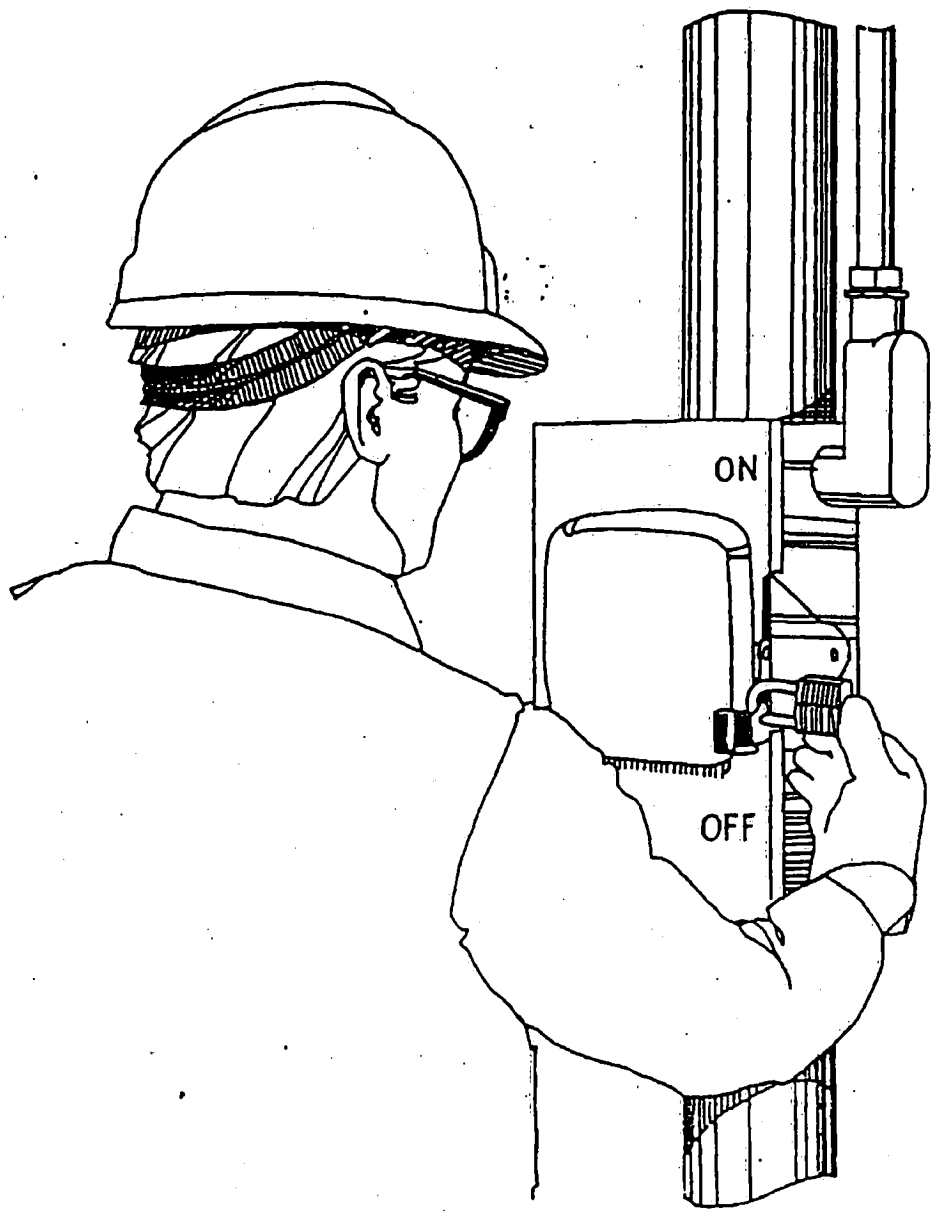
- Before lifting any object without using a hoist, make sure that the load is within your personal lifting capacity. If it is too heavy, ask for assistance.
- Before lifting a relatively heavy object, approach the object by bending at the knees, keeping your back vertical and unarched while obtaining a firm footing. Grasp the object firmly with both hands and stand slowly and squarely while keeping your back vertical and unarched. In other words, perform the lifting with the muscles in your legs, not with the muscles in your lower back.



• Watch for sagging power lines before entering a site. Do not lift power lines to gain entrance. Call the utility and ask them to lift or raise the lines or deenergize (turn off) the power.

• Before raising the drill rig mast (derrick) on a site in the vicinity of power lines, walk completely around the drill rig. Determine what the minimum distance from any point on the drill rig to the nearest

positions are well lit without shadows or blind spots. The following specific recommendations emphasize the safe use of electricity during land-based drilling operations:



- Before working on an electrical power or lighting system, lock-out the main panel box with your own lock and keep the key on your person at all times.
- All wiring should be installed using high quality connections, fixtures and wire, insulated and protected with consideration of the

13. React To Contact With Electricity

If a drill rig makes contact with electrical wires, it may or may not be insulated from the ground by the tires of the carrier. Under either circumstance the human body, if it simultaneously comes in contact with the drill rig and the ground, will provide a conductor of the electricity to the ground. Death or serious injury can be the result. If a drill rig or a drill rig carrier makes contact with overhead or underground electrical lines:

- Under most circumstances, the operator and other personnel on the seat of the vehicle should remain seated and not leave the vehicle. Do not move or touch any part, particularly a metallic part, of the vehicle or the drill rig.
- If it is determined that the drill rig should be vacated, then all personnel should jump clear and as far as possible from the drill. Do not step off – jump off, and do not hang on to the vehicle or any part of the drill when jumping clear.
- If you are on the ground, stay away from the vehicle and the drill rig, do not let others get near the vehicle and the drill rig and seek assistance from local emergency personnel such as the police or a fire department.
- When an individual is injured and in contact with the drill rig or with power lines, attempt rescue with extreme caution. If a rescue is attempted, use a long, dry, unpainted piece of wood or a long, dry, clean rope. Keep as far away from the victim as possible and do not touch the victim until the victim is completely clear of the drill rig or electrical lines.
- When the victim is completely clear of the electrical source and is unconscious and a heart beat (pulse) cannot be detected, begin cardiopulmonary resuscitation (CPR) immediately.

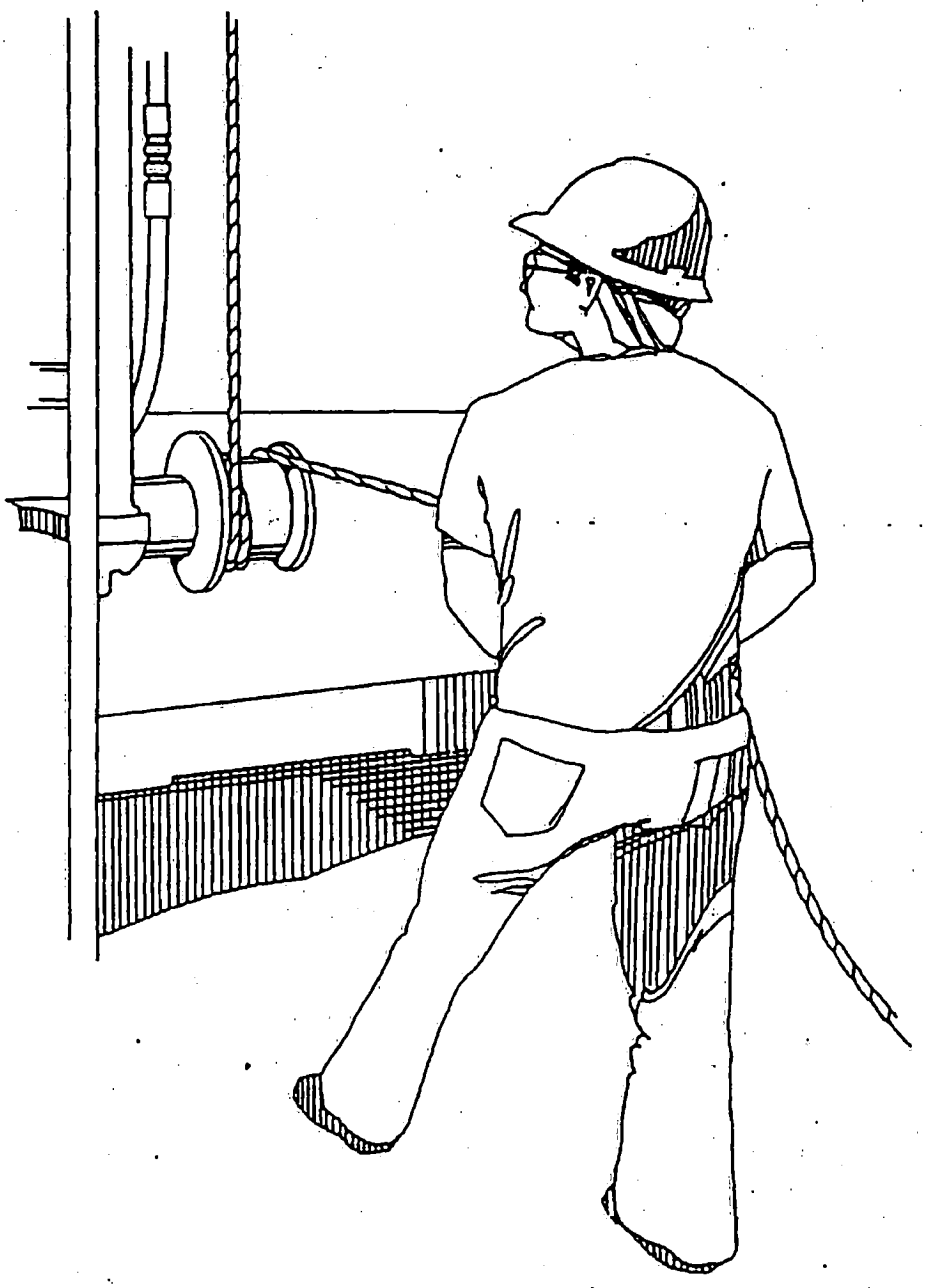
14. Safe Use Of Wire Line Hoists, Wire Rope And Hoisting Hardware

The use of wire line hoists, wire rope and hoisting hardware should be as stipulated by the American Iron and Steel Institute Wire Rope Users Manual.

sheaves according to the manufacturer's recommendations.

- When stuck tools or similar loads cannot be raised with a hoist, disconnect the hoist line and connect the stuck tools directly to the feed mechanism of the drill. Do not use hydraulic leveling jacks for added pull to the hoist line or the feed mechanism of the drill.
- When attempting to pull out a mired down vehicle or drill rig carrier, only use a winch on the front or rear of the vehicle and stay as far as possible away from the wire rope. Do not attempt to use tool hoists to pull out a mired down vehicle or drill rig carrier.
- Minimize shock loading of a wire rope – apply loads smoothly and steadily.
- Avoid sudden loading in cold weather.
- Never use frozen ropes.
- Protect wire rope from sharp corners or edges.
- Replace faulty guides and rollers.
- Replace worn sheaves or worn sheave bearings.
- Replace damaged safety latches on safety hooks before using.
- Know the safe working load of the equipment and tackle being used. Never exceed this limit.
- Clutches and brakes of hoists should be periodically inspected and tested.
- Know and do not exceed the rated capacity of hooks, rings, links, swivels, shackles and other lifting aids.
- Always wear gloves when handling wire ropes.
- Do not guide wire rope on hoist drums with your hands.
- Following the installation of a new wire rope, first lift a light load to allow the wire rope to adjust.
- Never carry out any hoisting operations when the weather conditions are such that hazards to personnel, the public or property are created.
- Never leave a load suspended in the air when the hoist is unattended.
- Keep your hands away from hoists, wire rope, hoisting hooks, sheaves and pinch points as slack is being taken up and when the load is being hoisted.
- Never hoist the load over the head, body or feet of any personnel.

• Never operate a cathead (or perform any other task around a drill rig) with loose unbuttoned or otherwise unfastened clothing or when wearing gloves with large cuffs or loose straps or lacings.



• Do not use a rope that is any longer than necessary. A rope that is too long can form a ground loop or otherwise become entangled with the operator's legs.

- Only use the manufacturer's recommended method of securing the auger to the power coupling. Do not touch the coupling or the auger with your hands, a wrench or any other tools during rotation.
- Whenever possible, use tool hoists to handle auger sections.
- Never place hands or fingers under the bottom of an auger section when hoisting the auger over the top of the auger section in the ground or other hard surfaces such as the drill rig platform.
- Never allow feet to get under the auger section that is being hoisted.
- When rotating augers, stay clear of the rotating auger and other rotating components of the drill rig. Never reach behind or around a rotating auger for any reason whatever.
- Use a long-handled shovel to move auger cuttings away from the auger. Never use your hands or feet to move cuttings away from the auger.
- Do not attempt to remove earth from rotating augers. Augers should be cleaned only when the drill rig is in neutral and the augers are stopped from rotating.

17. Safety During Rotary And Core Drilling

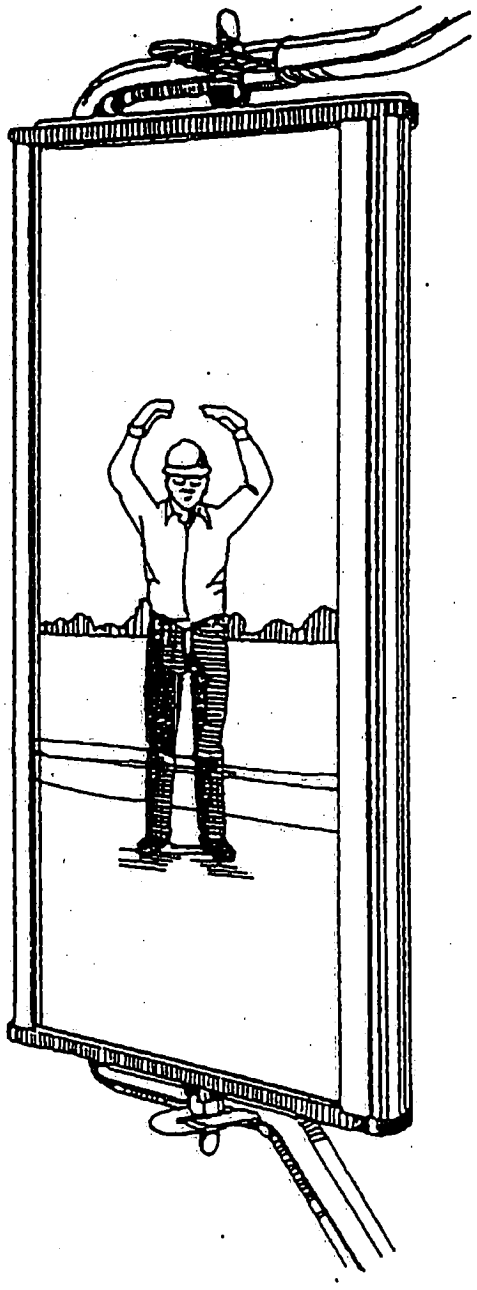
Rotary drilling tools should be safety checked prior to drilling:

- Water swivels and hoisting plugs should be lubricated and checked for "frozen" bearings before use.
- Drill rod chuck jaws should be checked periodically and replaced when necessary.
- The capacities of hoists and sheaves should be checked against the anticipated weight to the drill rod string plus other expected hoisting loads.

Special precautions that should be taken for safe rotary or core drilling involve chucking, joint break, hoisting and lowering of drill rods:

- Only the operator of the drill rig should brake or set a manual chuck so that rotation of the chuck will not occur prior to removing the wrench from the chuck.
- Drill rods should not be broked during lowering into the hole with drill rod chuck jaws.

• Watch for low hanging electrical lines, particularly at the entrances to drilling sites or restaurants, motels or other commercial sites.



• Never travel on a street, road or highway with the mast (derrick) of the drill rig in the raised or partially raised position.

• Remove all ignition keys when a drill rig is left unattended.

channels or ditches squarely, not at an angle.

- Use the assistance of someone on the ground as a guide when lateral or overhead clearance is close.
- After the drill has been moved to a new drilling site, set all brakes and/or locks. When grades are steep, block the wheels.
- Never travel off-road with the mast (derrick) of the drill rig in the raised or partially raised position.

21. Tires, Batteries And Fuel

Tires on the drill rig must be checked daily for safety and during extended travel for loss of air and they must be maintained and/or repaired in a safe manner. If tires are deflated to reduce ground pressure for movement on soft ground, the tires should be reinflated to normal pressures before movement on firm or hilly ground or on streets, roads and highways. Under inflated tires are not as stable on firm ground as properly inflated tires. Air pressures should be maintained for travel on streets, roads and highways according to the manufacturer's recommendations. During air pressure checks, inspect for:

- Missing or loose wheel lugs.
- Objects wedged between duals or embedded in the tire casing.
- Damaged or poorly fitting rims or rim flanges.
- Abnormal or uneven wear and cuts, breaks or tears in the casing.

The repair of truck and off-highway tires should only be made with required special tools and following the recommendations of a tire manufacturer's repair manual.

Batteries contain strong acid. Use extreme caution when servicing batteries.

- Batteries should only be serviced in a ventilated area while wearing safety glasses.
- When a battery is removed from a vehicle or service unit, disconnect the battery ground clamp first.
- When installing a battery, connect the battery ground clamp last.
- When charging a battery with a battery charger, turn off the power source to the battery before either connecting or disconnecting charger leads to the battery posts. Cell caps should be loosened

22. First Aid

At least one member of the drill crew, and if only one, preferably the drilling and safety supervisor, should be trained to perform first aid. First aid is taught on a person-to-person basis, not by providing or reading a manual. Manuals should only provide continuing reminders and be used for reference. It is suggested that courses provided or sponsored by the American Red Cross or a similar organization would best satisfy the requirements of first aid training for drill crews.

For drilling operations it is particularly important that the individual responsible for first aid should be able to recognize the symptoms and be able to provide first aid for electrical shock, heart attack, stroke, broken bones, eye injury, snake bite and cuts or abrasions to the skin. Again, first aid for these situations is best taught to drill crew members by instructors qualified by an agency such as the American Red Cross.

A first aid kit should be available and well maintained on each drill site.

23. Drill Rig Utilization

Do not attempt to exceed manufacturers' ratings of speed, force, torque, pressure, flow, etc. Only use the drill rig and tools for the purposes which they are intended and designed.

24. Drill Rig Alterations

Alterations to a drill rig or drilling tools should only be made by qualified personnel and only after consultation with the manufacturer.

OPERATING INSTRUCTIONS

I. SET-UP PROCEDURES

1. Be sure to check with local utility companies regarding the locations of any underground utilities.
2. Check overhead for power lines and other obstructions that would cause a hazard when raising the mast.
3. Start the engine and allow time for warm-up.
4. Check function of both safety kill switches as follows:
   a) There is one safety kill switch, located on front of the control panel; and two safety shutdown tape switches, one on the left side of the control panel and the other located across the rear of the truck bed.
   b) Push the safety kill switch that is located on the panel. Verify engine shutdown.
   c) Pull this switch back out, restart the engine, and push in each of the shut down switches. Verify engine shutdown.

> WARNING: DO NOT PROCEED WITH THE DRILLING OPERATION IF THE SAFETY KILL SWITCHES ARE NOT FUNCTIONAL!

II. HYDRAULIC JACKS

1. Each jack is controlled by a singlesolenoid valve operated by a rocker switch.
2. Before extending the jacks, make sure they are clear of any obstructions.
3. Call "clear" to notify others that the jacks will be actuated.
4. Pushing in at bottom of rocker switch lowers the jacks and pushing in at top retracts them.
5. When the valves are in neutral the jacks are locked in place.
6. The jack valves have internal pilot-operated checks to prevent tampering when the engine is shut down.
7. Be sure that the jacks are fully retracted before moving the vehicle.

III. HYDRAULIC SLIDE BASE

1. The slide base is operated by a single control solinoid valve, activated by a rocker switch.
2. Pushing in at bottom of rocker switch extends the drill 18" to the rear.

3. Pushing in at top of rocker switch retracts the drill.
4. Drilling work is performed with the slide base extended, so that upon retraction the sheavers will align with the hole.

IV. HYDRAULIC WINCHES

1. Inspect all cables and hooks before using the winches. Wear gloves when handling the cables.
2. Each winch is controlled by a single hydraulic pilot operated valve.
3. Pulling up on the pilot valve will cause the winch to raise the load.
4. Pushing down on the pilot valve will cause the winch to lower the load.
5. Winches have a one way safety brake which locks to hold the load in case of an hydraulic failure.

> WARNING:
> PROPER CABLE ORIENTATION MUST BE MAINTAINED FOR THE SAFETY BRAKE TO FUNCTION PROPERLY.

V. MAST

1. The mast and feed frame are controlled by a single solinoid valve, operated by a rocker switch.
2. Pushing in at bottom of rocker switch will raise the mast and feed frame.
3. Pushing in at top of rocker switch will lower the mast and feed frame.
4. The mast and feed frame pivot together. When it is desired to raise the feed frame without the mast, pull out the two pins (located near the top of the feed frame) that pin the mast and feed frame together. The feed frame will then raise and the mast will continue to rest on the headache rack.

> WARNING:
> BEFORE RAISING THE MAST, MAKE SURE THAT THE WINCH AND CATHEAD LINES ARE LOOSE AND THAT THERE ARE NO OVERHEAD POWER LINES OR OBSTRUCTIONS.

VI. CATHEAD

1. The cathead is driven by an hydraulic motor controlled by a solinoid hydraulic valve, operated by a detended rocker switch..
2. Disengage the clutch and put the main transmission in neutral (never operate the cathead and rotary simultaneously).

3. Select the appropriate cathead speed by adjusting engine RPM.
4. Be sure that the rope is loose on the cathead drum and push in at top of rocker switch.

VII. WATER PUMP

1. The water pump is controlled by a hydraulic friction-hold pilot operated control valve.
2. The pilot valve controls the OFF - ON and direction of the flow and speed.
   a) Pushing down on the pilot valve lever engages the pump in the forward direction.
   b) Pulling up on the pilot valve lever engages the pump in the reverse direction.
3. Water pump speed can be controlled by position of the friction-hold pilot valve.

VIII. ROTARY

1. The rotary has five forward speeds and one reverse speed.
2. Rotary speeds are selected by shifting the drill transmission to the appropriate gear.
3. Transmission is a manual shift.
4. Making sure the spindle is clear of equipment and personnel, shift transmission from neutral to desired gear.
5. Once engaged, the rotary speed can then be controlled by the throttle.

IX. FEED

1. The speed system is controlled by an hydraulicpilot operated control valve.
2. Feed speed can be controlled by the pilot control valve handle position from 0 to maximum.
3. Bit pressure is set by separate pressure control valve. Bit pressure setting will not affect retract speed or pressure.
4. Set down pressure required with bit pressure valve. The hydraulic pump will automatically reduce flow to only the amount required to maintain bit pressure setting, keeping heat build-up to a minimum.

IMPORTANT

When ordering parts :

- Always give the serial number of your drill rig. This will assure shipping of the correct parts. Failing to give the serial number may result in a delay in processing your order.
- Furnish entire part number of part desired and give a description exactly as shown on the parts diagram.
- Always state exactly how many parts wanted.
- When ordering hydraulic valves, always be certain to give the functions, (i.e. waterpump, jack, jack, jack.) This will assure the correct parts.

PS Form 3 ... tions

Certified Mail Provides:

- A mailing receipt
- A unique identifier for your mailpiece
- A record of delivery kept by the Postal Service for two years

Important Reminders:

- Certified Mail may ONLY be combined with First-Class Mail® or Priority Mail®.
- Certified Mail is *not* available for any class of international mail.
- NO INSURANCE COVERAGE IS PROVIDED with Certified Mail. For valuables, please consider Insured or Registered Mail.
- For an additional fee, a *Return Receipt* may be requested to provide proof of delivery. To obtain Return Receipt service, please complete and attach a Return Receipt (PS Form 3811) to the article and add applicable postage to cover the fee. Endorse mailpiece "Return Receipt Requested". To receive a fee waiver for a duplicate return receipt, a USPS® postmark on your Certified Mail receipt is required.
- For an additional fee, delivery may be restricted to the addressee or addressee's authorized agent. Advise the clerk or mark the mailpiece with the endorsement *"Restricted Delivery"*.
- If a postmark on the Certified Mail receipt is desired, please present the article at the post office for postmarking. If a postmark on the Certified Mail receipt is not needed, detach and affix label with postage and mail.

IMPORTANT: Save this receipt and present it when making an inquiry.

PS Form 3800, August 2006 *(Reverse)* PSN 7530-02-000-9047

SENDER: *COMPLETE THIS SECTION*

- Complete items 1, 2, and 3. Also complete item 4 if Restricted Delivery is desired.
- Print your name and address on the reverse so that we can return the card to you.
- Attach this card to the back of the mailpiece, or on the front if space permits.

DECLARATION OF ELECTRONIC FILING OF THE 2011 ANNUAL HAZARDOUS WASTE REPORT

For the calendar year January 1, 2011, through December 31, 2011

EPA ID: OKR000000612

Site/Company Name: LIMCO AIREPAIR, INC.

Site Address: 5304 S. LAWTON

City: TULSA State: OK Zip: 74107

Mailing Address: 5304 S. LAWTON

City: TULSA State: OK Zip: 74107

Contact Name: BILL WILLIAMS Phone No: 9184454300 Ext:

Contact Title: DIRECTOR OF FACILITIES

Part I - Declaration of Filer

I certify under penalty of law that the information shown on my 2011 Hazardous Waste Report, which I filed electronically, and that this document and all attachments were prepared under my direction or supervision, in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted, is correct and current. Based on my inquiry of the person or persons who manage the system or those directly responsible for gathering the information, the information submitted is to the best of my knowledge and belief, true, accurate and complete. I am aware that there are significant penalties under Section 3008 of the Resource Conservation and Recovery Act for submitting false information, including the possibility of fine and imprisonment for known violations.

Part II- Signature of Certification

Last Name: WILLIAMS First Name: BILL Title: DIRECTOR OF FACILITIES

Signature:  Date: 01/20/2012

Part III - Method of File Transmittal

___CD

__X__ARM Web Site

** Note: This is not the 2011 Annual Hazardous Waste Report. Only file this form if you submitted your 2011 Annual Hazardous Waste Report electronically. This form alone does not constitute submittal of the 2011 Hazardous Waste Report but is required for all methods of electronic submission of the report.

Submit Date: 01/20/2012

SEND COMPLETED FORM TO: The Appropriate State or EPA Regional Office	United States Environmental Protection Agency **RCRA SUBTITLE C SITE IDENTIFICATION FORM (2011)**
1. Reason for Submittal MARK ALL BOX(ES) THAT APPLY	**Reason for Submittal:** ☐ To provide an Initial Notification (first time submitting site identification information / to obtain an EPA ID number for this location) ☐ To provide Subsequent Notification of Regulated Waste Activity (to update site identification information). ☐ As a component of a First RCRA Hazardous Waste Part A Permit Application. ☐ As a component of a Revised RCRA Hazardous Waste Part A Permit Application (Amendment # _____). ☒ As a component of the Hazardous Waste Report. (If marked, see sub-bullet below) ☒ Site was a TSD facility and/or generator of >1,000 kg of hazardous waste, >1 kg of acute hazardous waste, or >100 kg of acute hazardous waste spill cleanup in one or more months of the report year (or State equivalent LQG regulations)
2. Site EPA ID Number	**EPA ID Number:** OKR000000612
3. Site Name	**Name:** LIMCO AIREPAIR, INC.
4. Site Location Information	**Street Adress:** 5304 S. LAWTON **City, Town, or Village:** TULSA **County:** TULSA **State:** OK **Country** US **Zip Code:** 74107

10. Type of Regulated Waste Activity
Mark "Yes" or "No" for all current activities (as of the date submitting the form); complete any additional boxes as instructed.

A. Hazardous Waste Activities; Complete all parts 1-7.

Y☒ N☐ **1. Generator of Hazardous Waste**
If Yes, choose only one of the following - a, b, or c.

- ☒ a. LQG: Generates, in any calendar month, 1,000 kg/mo (2,200 lbs./mo.) or more of hazardous waste; or Generates, in any calendar month, or accumulates at any time, more than 1 kg/mo (2.2 lbs./mo) of acute hazardous waste; or Generates, in any calendar month, or accumulates at any time, more than 100 kg/mo (220 lbs./mo) of acute hazardous spill cleanup
- ☐ b. SQG:. 100 to 1,000 kg/mo (220 - 2,200 lbs./mo.) of non-acute hazardous waste; or
- ☐ c. CESQG: Less than 100 kg/mo (220 lbs./mo.) of non-acute hazardous waste

If "Yes" above, indicate other generator activities.

Y☐ N☒ d Short-Term Generator (generate from a short-term or onetime event and not from on-going processes). If "Yes", provide an explanation in the Comments

Y☐ N☒ e. United States Importer of Hazardous Waste

Y☐ N☒ f. Mixed Waste (hazardous and radioactive) Generator

Y☐ N☒ **2. Transporter of Hazardous Waste**
If Yes, mark all that apply.

- ☐ a. Transporter
- ☐ b. Transfer Facility (at your site)

Y☐ N☒ **3. Treater, Storer, or Disposer of Hazardous Waste (at your site)**
Note: A hazardous waste permit is required for this activity.

Y☐ N☒ **4. Recycler of Hazardous Waste (at your site)**

Y☐ N☒ **5. Exempt Boiler and/or Industrial Furnace**
If Yes, mark each that applies.

- ☐ a. Small Quantity On-site Burner Exemption
- ☐ b. Smelting, Melting, and Refining Furnace Exemption

Y☐ N☒ **6. Underground Injection Control**

Y☐ N☒ **7. Receives Hazardous Waste from Off-site**

B. Universal Waste Activities; Complete all parts 1-2.

Y☐ N☒ **1. Large Quantity Handler of Universal Waste (accumulate 5,000 kg or more) [refer to your State regulations to determine what is regulated]. Indicate types of universal waste managed at your site.**
If "Yes", mark all boxes that apply:

- a. Batteries ☐
- b. Pesticides ☐
- c. Mercury containing equipment ☐
- d. Lamps ☐
- e. Other (specify) _____ ☐
- f. Other (specify) _____ ☐
- g. Other (specify) _____ ☐

Y☐ N☒ **2. Destination Facility for Universal Waste**
Note: A hazardous waste permit may be required for this

C. Used Oil Activities; Complete all parts 1-4.

Y☐ N☒ **1. Used Oil Transporter**
If Yes, mark each that applies.

- ☐ a. Transporter
- ☐ b. Transfer Facility

Y☐ N☒ **2. Used Oil Processor and/or Re-refiner**
If Yes, mark each that applies.

- ☐ a. Processor
- ☐ b. Re-refiner

Y☐ N☒ **3. Off-Specification Used Oil Burner**

Y☐ N☒ **4. Used Oil Fuel Marketer**
If Yes, mark each that applies.

- ☐ a. Marketer Who Directs Shipment of Off-Specification Used Oil to Off-Specification Used Oil Burner
- ☐ b. Marketer Who First Claims the Used Oil Meets the Specifications

D. **Eligible Academic Entities with Laboratories-Notification for opting into or withdrawing from managing laboratory hazardous wastes pursuant to 40 CFR Part 262 Subpart K**

You must check with your State to determine if you are eligible to manage laboratory hazardous wastes pursuant to 40 CFR Part 262 Subpart K

☐ 1. Opting into or currently operating under 40 CFR Part 262 Subpart K for the management of hazardous wastes in laboratories
See the item-by-item instructions for definitions of types of eligible academic entities. Mark all that apply:

- ☐ a. College or University
- ☐ b. Teaching Hospital that is owned by or has a formal written affiliation agreement with a college or university
- ☐ c. Non-profit Institute that is owned by or has a formal written affiliation agreement with a college or university

☐ 2. Withdrawing from 40 CFR Part 262 Subpart K for the management of hazardous wastes in laboratories

11. Description of Hazardous Wastes

A. Waste Codes for Federally Regulated Hazardous Wastes.

Please list the waste codes of the Federal hazardous wastes handled at your site. List them in the order they are presented in the regulations (e.g., D001, D003, F007, U112). Use an additional page if more spaces are needed.

D001, D002, D003, D006, D007, D035, D040, F001, F003, F005

B. Waste Codes for State-Regulated (i.e., non-Federal) Hazardous Wastes.

Please list the waste codes of the State-regulated hazardous wastes handled at your site. List them in the order they are presented in the regulations. Use an additional page if more spaces are needed for waste codes.

12. Notification of Hazardous Secondary Material (HSM) Activity

Y☐ N☒ Are you notifying under 40 CFR 260.42 that you will begin managing, are managing, or will stop managing hazardous secondary material under 40 CFR 261.2(a)(2)(ii), 40 CFR 261.4(a)(23), (24), or (25)?

If "Yes", you must fill out the Addendum to the Site Identification Form: Notification for Managing Hazardous Secondary Material.

13. Comments

14. Certification

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

OKLAHOMA DEPARTEMENT OF ENVIRONMENTAL QUALITY
AIR QUALITY DIVISION

MEMORANDUM **May 24, 2004**

TO: DFL Dawson F. Lasseter, P.E., Chief Engineer, Air Quality

THROUGH: RK Richard Kienlen, P.E., Engr. Mgr. II, New Source Permits Section

THROUGH: Hal Wright, Regional Office At Tulsa

FROM: Jennifer Tyler, Regional Office At Tulsa FACILITY # 3620

SUBJECT: Evaluation of Permit Application No. **99-026-O (M-2)**
Limco-Airepair, Inc. (LA)
5304 S. Lawton Ave.
Tulsa, Tulsa County, OK
Section 35, Township 19N, Range 12E
Directions: Taking Hwy 75 south you exit on I-44 East, take the first access road exit before merging onto I-44. Turn right on the access road and the first street you come to is South Lawton. Turn left onto Lawton, and the plant is at the end of the street on your right.

INTRODUCTION

Limco-Airepair, Inc. (LA) is requesting a modification of their current Operating Permit No. 99-026-O (M-1). The modification will include adding Xylene to Table No. 2 to correlate with Table No. 1, changing the wording of perchloroethylene to read trichloroethylene, and increasing the use of toluene, mineral spirits, IPA, and various paints.

PROCESS DESCRIPTION

In general, the plant has three product activities, i.e., the manufacture of different sizes of heat exchangers, the repair of various sizes of heat exchangers, and the repair of various sized aircraft air ducts.

Manufacturing Process

All ovens used for drying and soldering have a combined heat rate of 0.80 MMBTUH.

First, LA buys thin sheets of aluminum and stainless steel to use in the manufacture and repair of various products.

The steps in the manufacture of the heat exchangers are: material is cut, shaped, cleaned, welded/assembled, pressure tested, cleaned, heat dried, and coated. LA is required to test most of

the heat exchangers that are of a new design. The new units are performance tested for flow vs pressure drop of both the cooling medium (air) over the outside of the heat exchanger, and the medium to be cooled (engine lube oil, hydraulic fluid, etc.) which is on the inside of the exchanger. They are also tested for their heat transfer capabilities.

The steps in the repair of the heat exchangers are: inspected for flaws, repaired as necessary, pressure tested, cleaned, heat dried, and coated.

The steps in the repair of the air ducts are: inspected for flaws, cleaned, heat dried, repairs made, cleaned, and coated.

WELDING/SOLDERING

Various types of welding are used by LA, i.e., MIG, TIG, etc.

The soldering is done by placing assembled, "tinned" parts in natural gas fired ovens. Tinning is a process where the part is coated with the required amount of solder/flux on each joint to be soldered. The part is then heated to a temperature just above the melting point of the solder to allow the solder to melt and flow into the joint to be soldered. The part is then cooled to room temperature in ambient air.

SIZING/SHAPING

This is done with conventional sheet metal shears, sheet metal brakes, stamping machines, etc.

COATING

All products are cleaned and heat dried before coating.

The parts may get some combination of four types of coatings, i.e. paint, alodine, anodize, or silicone aluminum dip. Anodizing is done by an outside contractor; all others are done by LA.

Less than 10% of all products are spray-painted. The painting is done in a totally enclosed 12' x 12' x 8' high paint booth using a high volume low pressure spraying rig. The paint over-spray is sucked through a 95% efficient dry type filter at 3,500 acfm and exhausts 8 feet above grade through a 12-inch diameter duct.

The alodine process is done by soaking the part in a bath of nitric/chromic acid, which results in the desired surface getting a coat of aluminum oxide. This process does not use heat or electric current.

Silicone/Aluminum Dip solution consists of 8.4 gallons of Toluene, 1.0 gallon of Dow #805 silicone resin, and 1.6 pounds of aluminum powder. 61.5 gallons of this solution is placed in a 400-gallon dipping tank that is located in a totally enclosed room (10 ft x 12 ft x 10 ft high) within the shop. After the part is dipped (the part is completely coated) it is hung over the tank to drip and dry. The result is the part gets a thin coat of aluminum filled silicone. The air in the dipping room

is exhausted to the outside by a 22,000 acfm fan through a dry type filter in a 14 inch diameter duct at 10 ft above grade.

Anodizing is a process where a surface on the part gets a coating of aluminum by an electrolysis process. The part is made an anode as part of an electric circuit in a bath of acid, and as a result aluminum is deposited on the part's surface.

CLEANING

Parts are cleaned by different chemicals at different stages in the manufacturing/repair processes. The parts can be cleaned by hand wiping with solvents, acid, or caustic bath followed by water rinse or trichloroethylene degreaser.

The parts are dried after the cleaning process by electric heated ovens or natural gas fired ovens.

The facility operates 16 hours per day, 5.5 days per week, and 22 days a month, or 4,224 hours per year.

EMISSIONS

The significant air emissions are from the hand wiping of parts with solvents and coating. The air emissions from parts drying (combustion of natural gas), welding, and metal sizing/shaping are negligible, and will not be included in the following emissions analysis.

Purchases of acids and caustics used in the clean lines have been tabulated in the application. The replacement numbers are below any *de minimis* threshold. Much of the material is consumed in the cleaning operations, either through chemical combination with materials presented or through action as a flocculent. Potential emissions are negligible.

Limco estimates the use of trichloroethylene for the degreaser to be 520 gallons per year, which is shown in the following emission table. This includes material that was collected for reclamation. The emissions shown are the net amounts. The vapor degreaser holds 110 gallons of trichloroethylene and has a freeboard ratio of 1.3.

Materials used in cleaning and wipe down of the parts include 2,000 gallons per year (GPY) of MEK and 530 GPY of isopropyl alcohol. The use of mineral spirits in pressure testing is estimated to be 355 GPY. The facility uses 95 gallons of ten different primers, topcoats and solvents.

The following tables show the total facility VOC and HAPs emissions.

FACILITY TOTAL EMISSIONS [2]

USE	POLLUTANT	CAS NO.	HAP	CAT	De minimis		Permit limits	
					PPH	TPY	PPH	TPY
Dip Coat	Toluene	108883	Y	C	5.60	6.00	2.40	5.10
	Xylene	133027	Y	C	5.60	6.00	0.19	0.40
Degreaser	Trichloroethylene	79016	Y	A	0.57	0.60	1.50	3.20
Wipe	MEK	108101	N	C	5.60	6.00	3.20	6.80 [3]
Testing	Mineral Spirits	64742887	N	C	5.60	6.00	0.53	1.20
Wipe	IPA	67630	N	C	5.60	6.00	0.82	1.80
Paint [1]	Various	Various	NA	NA	(2)	(2)	0.22	0.50
TOTAL VOC								**19.00**
TOTAL HAPS								**8.70**

(1) If all the paint VOCs were Cat. A the de minimis would not be exceeded. (2) Does not include combustion emission pollutants, which are negligible. (3) EPA Screen3 modeling shows a maximum ground level concentration of 1,259 micrograms per cubic meter (ug/m^3) for an emission rate of 3.2 pounds per hour as compared to an allowable maximum acceptable ambient concentration (MAAC) of 59,000 ug/m^3.

The following table shows the VOC emission data comparison between the new permit and the existing permit in TPY.

Pollutant	Existing	New	Change
Paint	0.56	0.50	-0.06
Trichloroethylene	3.00	3.20	+0.20
Cleaning	7.50	6.80	-0.70
Testing	2.50	1.20	-1.30
Dip: Toluene	5.00	5.10	+0.10
Xylene	0.36	0.40	+0.04
Total	**18.92**	**17.20**	**-1.72**

OKLAHOMA AIR POLLUTION CONTROL RULES

OAC 252:100-1 (General Provisions) [Applicable]
Subchapter 1 includes definitions but there are no regulatory requirements.

OAC 252:100-3 (Air Quality Standards and Increments) [Applicable]
Subchapter 3 enumerates the primary and secondary ambient air quality standards and the significant deterioration increments. At this time, all of Oklahoma is in "attainment" of these standards.

OAC 252:100-4 (New Source Performance Standards) [Not Applicable]
Federal regulations in 40 CFR Part 60 are incorporated by reference as they exist on July 1, 2002, except for the following: Subpart A (Sections 60.4, 60.9, 60.10, and 60.16), Subpart B, Subpart C, Subpart Ca, Subpart Cb, Subpart Cc, Subpart Cd, Subpart Ce, Subpart AAA, and Appendix G. These requirements are addressed in the "Federal Regulations" section.

OAC 252:100-5 (Registration, Emission Inventory and Annual Operating Fees) [Applicable]
Subchapter 5 requires sources of air contaminants to register with Air Quality, file emission inventories annually, and pay annual operating fees based upon total annual emissions of regulated pollutants. An emission inventory was submitted and fees paid for previous years as required.

OAC 252:100-7 (Permits for Minor Facilities) [Applicable]
Subchapter 7 sets forth the permit application fees and the basic substantive requirements of permits for minor facilities. Since criteria pollutant emissions are less than 100 TPY for each pollutant, and emissions of HAPs will not exceed 10 TPY for any one HAP or 25 TPY for any aggregate of HAPs, the facility is defined as a minor source. As such, BACT is not required.

OAC 252:100-9 (Excess Emissions Reporting Requirements) [Applicable]
In the event of any release which results in excess emissions, the owner or operator of such facility shall notify the Air Quality Division as soon as the owner or operator of the facility has knowledge of such emissions, but no later than 4:30 p.m. the next working day. Within ten (10) working days after the immediate notice is given, the owner or operator shall submit a written report describing the extent of the excess emissions and response actions taken by the facility.

OAC 252:100-13 (Prohibition of Open Burning) [Applicable]
Open burning of refuse and other combustible material is prohibited except as authorized in the specific examples and under the conditions listed in this subchapter.

OAC 252:100-19 (Particulate Matter (PM)) [Applicable]
Section 19-4 regulates emissions of PM from new and existing fuel-burning equipment. AP-42 (7/98) Table 1.4 -1 lists natural gas TPM emissions to be 7.6 lbs/million scf or about 0.0076 lbs/MMBTU, which is in compliance.

OAC 252:100-25 (Visible Emissions and Particulates) [Applicable]
No discharge of greater than 20% opacity is allowed except for short-term occurrences that consist of not more than one six-minute period in any consecutive 60 minutes, not to exceed three such periods in any consecutive 24 hours. In no case shall the average of any six-minute period exceed 60% opacity. Based on past experience with this facility, the potential for violating the standards is negligible.

OAC 252:100-29 (Fugitive Dust) [Applicable]
No person shall cause or permit the discharge of any visible fugitive dust emissions beyond the property line on which the emissions originated in such a manner as to damage or to interfere with the use of adjacent properties, or cause air quality standards to be exceeded, or to interfere with the maintenance of air quality standards. Under normal operating conditions, this facility

has negligible potential to violate this requirement; therefore it is not necessary to require specific precautions to be taken.

OAC 252:100-31 (Sulfur Compounds) [Applicable]
Fuel-burning equipment at this facility uses commercial natural gas. The AP-42 (2/98), Table 1.4-2 emission factor of 0.6 pounds of SO_2 per million cubic feet equates to approximately 0.0006 lbs/MMBTU. This is well below the new equipment standard of 0.2 lbs/MMBTU for gas fuel.

OAC 252:100-33 (Nitrogen Oxides) [Not Applicable]
This subchapter limits new gas-fired fuel-burning equipment with rated heat input greater than or equal to 50 MMBTUH to emissions of 0.2 lbs of NO_x per MMBTU, three-hour average. There are no equipment items that exceed the 50 MMBTUH threshold.

OAC 252:100-35 (Carbon Monoxide) [Not Applicable]
None of the following affected processes are located at this facility: gray iron cupola, blast furnace, basic oxygen furnace, petroleum catalytic cracking unit, or petroleum catalytic reforming unit.

OAC 252:100-37 (Volatile Organic Compounds) [Not Applicable]
-15 Storage of VOCs. This facility does not store any hydrocarbon liquids, and is not an affected source under this section.
-36 Fuel-Burning Equipment. Under this section Limco is required to adjust the burners for essentially complete fuel combustion. Limco-Airepair burns only commercial-grade natural gas in the combustion units, which promotes compliance. The facility anticipates remaining in compliance under normal operations.
-25 This section limits the VOC content of coating used in coating lines or operations for any facility with VOC emissions in excess of 100 lbs/day. Coating parts operations will consume less than 50 pounds of VOC per day, so the facility is exempt.

OAC 252:100-39 (VOC in Nonattainment and Former Nonattainment Areas) [Applicable]
Part 7, Sections 46 concerns coating of metal parts and products. Per 39-46 (h), Limco is exempt as the VOC emissions from surface coating and cleaning do not exceed 10 TPY.

OAC 252:100-41 (Hazardous Air Pollutants and Toxic Air Contaminants) [Applicable]
Part 3 addresses hazardous air contaminants. NESHAP, as found in 40 CFR Part 61, are adopted by reference as they exist on July 31, 2002, with the exception of Subparts B, H, I, K, Q, R, T, W and Appendices D and E, all of which address radionuclides. In addition, General Provisions as found in 40 CFR Part 63, Subpart A, and the Maximum Achievable Control Technology (MACT) standards as found in 40 CFR Part 63, Subparts F, G, H, I, J, L, M, N, O, Q, R, S, T, U, W, X, Y, AA, BB, CC, DD, EE, GG, HH, II, JJ, KK, LL, MM, OO, PP, QQ, RR, SS, TT, UU, VV, WW, XX, YY, CCC, DDD, EEE, GGG, HHH, III, JJJ, LLL, MMM, NNN, OOO, PPP, QQQ, RRR, TTT, UUU, VVV, XXX, CCCC, GGGG, HHHH, NNNN, SSSS, TTTT, UUUU, VVVV, and XXXX are hereby adopted by reference as they exist on July 31, 2002. These standards apply to both existing and new sources of HAPs. These requirements are covered in the "Federal Regulations" section.

Part 5 is a **state-only** requirement governing toxic air contaminants. New sources (constructed after March 9, 1987) emitting any category "A" pollutant above de minimis levels must perform a BACT analysis, and if necessary, install BACT. All sources are required to demonstrate that emissions of any toxic air contaminant that exceed the de minimis level do not cause or contribute to a violation of the maximum acceptable ambient concentration (MAAC). There are two toxics that exceed their de minimis, MEK and Trichloroethylene. Trichloroethylene is a HAP and Category A toxic generated by the vapor degreaser, which is subject to a Maximum Achievable Control Technology (MACT) standard, 40 CFR Part 63, Subpart T. As such, Trichloroethylene is exempt from this part per §41-43(a)(3). Screen3 modeling for MEK has a ground-level concentration of 1,259 $\mu g/m^3$ as compared to a MAAC of 59,000 $\mu g/m^3$. This facility is in compliance.

OAC 252:100-43 (Testing, Monitoring, and Recordkeeping) [Applicable]
This subchapter provides general requirements for testing, monitoring and recordkeeping and applies to any testing, monitoring or recordkeeping activity conducted at any stationary source. To determine compliance with emissions limitations or standards, the Air Quality Director may require the owner or operator of any source in the state of Oklahoma to install, maintain and operate monitoring equipment or to conduct tests, including stack test, of the air contaminant source. All required testing must be conducted by methods approved by the Air Quality Director and under the direction of qualified personnel. A notice-of-intent to test and a testing protocol shall be submitted to Air Quality at least 30 days prior to any EPA Reference Method stack tests. Emissions and other data required to demonstrate compliance with any federal or state emission limit or standard, or any requirement set forth in a valid permit shall be recorded, maintained, and submitted as required by this subchapter, an applicable rule, or permit requirement. Data from any required testing or monitoring not conducted in accordance with the provisions of this subchapter shall be considered invalid. Nothing shall preclude the use, including the excusive use, or any credible evidence or information relevant to whether a source would have been in compliance with applicable requirements if the appropriate performance or compliance test or procedure had been performed.

FEDERAL REGULATIONS

PSD, 40 CFR Part 52 [Not Applicable]
PSD does not apply. Final total emissions are less than the threshold of 250 TPY of any single regulated pollutant and the facility is not one of the 26 specific industries with a threshold of 100 TPY.

NSPS, 40 CFR Part 60 [Not Applicable]
There are no sources or facilities at this site affected by any NSPS subpart.

NESHAP, 40 CFR Part 61 [Not Applicable]
There are no emissions of any of the regulated pollutants: arsenic, asbestos, benzene, beryllium, coke oven emissions, mercury, radionuclides, or vinyl chloride.

NESHAP, 40 CFR Part 63 [Subpart T Applicable]
Subpart T (Halogenated Solvent Cleaners). This standard was published in the Federal Register on December 2, 1994, and compliance by new degreasers was required immediately upon startup. The facility is an area source subject to Subpart T, and has complied with the initial notification requirement. A yearly report is required to be sent to the local DEQ office and an additional report concerning any emergency operation which was not in compliance, also sent to the local DEQ office. The first annual report was due on January 15, 2001, and every 12 months thereafter. The applicant has selected Option 1 from Table 1 of §63.463 to demonstrate compliance. This option requires a combination of a working-mode cover, freeboard ratio of 1.0, and superheated vapor. The applicant is in compliance.
Subpart GG (Aerospace Manufacturing and Rework Facilities). The facility engages in the type of activity described in paragraph 63.741 (a), but the facility does not qualify as a major source under the definition in 40 CFR 63.2. In addition, the subassemblies involved are not critical to structural integrity or flight performance, so the activities would also be excluded under §63.741(f). The facility is not an affected source and is not subject to this subpart.

Chemical Accident Prevention Provisions, 40 CFR Part 68 [Not Applicable]
This facility does not process or store more than the threshold quantity of any regulated substance (Section 112r of the Clean Air Act 1990 Amendments). More information on this federal program is available on the web page: www.epa.gov/ceppo.

Stratospheric Ozone Protection, 40 CFR Part 82 [Not Applicable]
This facility does not produce, consume, recycle, import, or export any controlled substances or controlled products as defined in this part, nor does this facility perform service on motor (fleet) vehicles that involves ozone-depleting substances. Therefore, as currently operated, this facility is not be subject to these requirements. To the extent that the facility has air-conditioning units that apply, the permit requires compliance with Part 82.

COMPLIANCE

Tier Classification and Public Review

This application has been classified as **Tier I** based on the request for an operating permit for an existing minor source. The status of all permit actions is available to the public in the Air Quality section of the DEQ Web Page at page: www.deq.state.ok.us

The applicant has submitted an affidavit that they are not seeking a permit for land use or for any operation upon land owned by others without their knowledge. The affidavit certifies that the applicant owns the real property.

Inspection

No inspection was performed on this facility because the facility did not remove or construct any new equipment. The modification requested was an increase in usage and a change in wording only.

Fee Paid

Permit modification fee of $500 was paid on February 20, 2004.

SUMMARY

There are no active Air Quality compliance or enforcement issues that would affect the issuance of this permit. Issuance of the modified operating permit is recommended.

STEVEN A. THOMPSON
Executive Director

OKLAHOMA DEPARTMENT OF ENVIRONMENTAL QUALITY

BRAD HENRY
Governor

MAY 24 2004

Mr. Michael Lowther, Operations Manager
Limco-Airepair, Inc.

Tulsa, OK 74107

Re: Operating Permit No. **99-026-O (M-2)**
Limco-Airepair, Inc.

Dear Mr. Lowther:

Enclosed is the permit authorizing operation of the referenced facility. Please note that this permit is issued subject to standard and specific conditions, which are attached. These conditions must be carefully followed since they define the limits of the permit and will be confirmed by periodic inspections.

Also note that you are required to annually submit an emissions inventory for this facility. An emissions inventory must be completed on approved AQD forms and submitted (hardcopy or electronically) by March 1st of every year. Any questions concerning the form or submittal process should be referred to the Emissions Inventory staff at 405-702-4100.

Thank you for your cooperation in this matter. If we may be of further service, please contact our office at (918) 293-1600. Air Quality personnel are located in the DEQ Regional Office at Tulsa, 3105 East Skelly Drive, Suite 200, Tulsa, Oklahoma, 74105.

Sincerely,

Jennifer L. Tyler

AIR QUALITY DIVISION
STATE OF OKLAHOMA
DEPARTMENT OF ENVIRONMENTAL QUALITY
707 N. ROBINSON STREET, SUITE 4100
P.O. BOX 1677
OKLAHOMA CITY, OKLAHOMA 73101-1677

Issuance Date: MAY 2 4 2004 Permit Number: 99-026-O (M-2)

Limco-Airepair, Inc.,

having complied with the requirements of the law, is hereby granted permission to operate the facility to manufacture and repair aircraft parts at 5304 S. Lawton Avenue, Tulsa County, Oklahoma,

subject to the following conditions, attached:

[X] Standard Conditions dated October 31, 2003

[X] Specific Conditions

Chief Engineer, Air Quality Division

PERMIT TO OPERATE
AIR POLLUTION CONTROL FACILITY
SPECIFIC CONDITIONS

Limco-Airepair **Permit No. 99-026-O (M-2)**
Aircraft Subassembly Manufacturing and Repair

The permittee is authorized to operate in conformity with the specifications submitted to Air Quality on February 20, 2004. The Evaluation Memorandum dated May 24, 2004, explains the derivation of applicable permit requirements and estimates of emissions; however, it does not contain operating limitations or permit requirements. Continuing operations under this permit constitutes acceptance of, and consent to, the conditions contained herein.

1. Points of emission include the cleaning, degreasing, painting, and other coating areas. The significant emissions from all sources are listed below.

Table No.1

USE	POLLUTANT	Permit Limits	
		PPH	TPY
Dip Coat	Toluene	2.40	5.1
	Xylene	0.19	0.40
	805 Resin	0.20	0.43
Degreaser	Trichloroethylene	1.50	3.20
Wipe	MEK	3.20	6.80
Testing	Mineral Spirits	0.53	1.20
Wipe	IPA	0.82	1.80
Paint	Various	0.22	0.50

The emissions shown in the preceding table will not be exceeded under normal operating conditions provided the facility's use of materials shown in the following table is not exceeded.

Table No. 2

Materials	GPD (1)	GPY
Toluene	5.4	1,400
Xylene	0.43	110
805 Resin	0.60	157
Trichloroethylene	2.00	520
MEK	7.70	2,000
Mineral Spirits	1.37	355
IPA	2.04	530
Paints, various	0.39	100

(1) These gallons/day are work-week averages.

2. Alternate products and production quantities can be varied under the following conditions.

   a. Emissions do not exceed 10 TPY for a single HAP or 25 TPY of the HAPs aggregate.
   b. A change in either production or products is permitted provided there would be no increase in the quantity of the resulting emissions. Additionally, the use of alternate products shall not cause the total of each toxic to exceed the de minimis levels or the MAAC established by OAC 252:100-41.
   c. The facility shall notify the DEQ in writing 30 calendar days before making any operational changes that would cause significant air emissions.
   d. Maintain written documentation to show compliance with all current Federal, State and Local Regulations, Rules, and Codes, including modeling where compliance with a MAAC may be in question.

3. The degreaser is subject to NESHAP (40 CFR 63) Subpart T, Standards for Halogenated Solvent Cleaning, as published in the Federal Register on December 2, 1994, and shall be in compliance with this federal NESHAP, specifically with Option 1 of Table 1 of 40 CFR 63.463. All required reports shall be sent to the DEQ Regional Office at Tulsa.

4. The permittee shall comply with the following outlined provisions for operation of the degreaser, which are further detailed in OAC 252:100-39-42(b).

   a. The degreaser "working mode cover" shall operate easily and cause minimum disturbance to the vapor zone.

   b. The unit shall have safety switches to shut off sump heat if the coolant is not circulating or exceeds the recommended level.

   c. Since Limco has chosen Option 1 for Halogenated Degreasers shown in 40 CFR 63, Subpart T, the unit shall have a freeboard ratio not less than 1.0, a solvent super heater which shall maintain the solvent to a temperature no less than 10 degrees F above the boiling point of the solvent, and have a working mode cover. If, in the future, Limco decides one of the other options available in this subpart would be a better choice, Limco shall submit a written request describing their plan to the DEQ local office, and will not begin any change without written permission.

   d. Limco will properly train each person who will operate the degreaser before they are allowed to use the machine. The written syllabus used for training will be readily available to each trained operator.

5. All records necessary to demonstrate compliance with permit conditions shall be maintained on-site or at a readily accessible location for a period of at least two years following the date of recording and shall be available for review by regulatory personnel during normal business hours. Such records include, but are not necessarily limited to, the following.

    a. Records sufficient to demonstrate that the weekly averages of the product usages do not exceed those shown in Specific Condition #1, Table No.2 (exclusive of the vapor degreaser). If any of the GPD quantities in Table No. 2 are exceeded then compliance with that pollutant's MAAC must be demonstrated.
    b. Degreaser records required by Specific Condition #3.
    c. Material usages (monthly and 12-month rolling totals).

6. This permit supercedes all previous permits for this facility, which are now null and void.

MINOR SOURCE PERMIT TO OPERATE / CONSTRUCT
AIR POLLUTION CONTROL FACILITY
STANDARD CONDITIONS
(October 31, 2003)

A. The issuing Authority for the permit is the Air Quality Division (AQD) of the Oklahoma Department of Environmental Quality (DEQ) in accordance with and under the authority of the Oklahoma Clean Air Act. The permit does not relieve the holder of the obligation to comply with other applicable federal, state, or local statutes, regulations, rules, or ordinances. This specifically includes compliance with the rules of the other Divisions of DEQ: Land Protection Division and Water Quality Division.

B. A duly issued construction permit or authorization to construct or modify will terminate and become null and void (unless extended as provided in OAC 252:100-7-15(g)) if the construction is not commenced within 18 months after the date the permit or authorization was issued, or if work is suspended for more than 18 months after it is commenced. [OAC 252:100-7-15(f)]

C. The recipient of a construction permit shall apply for a permit to operate (or modified operating permit) within 60 days following the first day of operation. [OAC 252:100-7-18(a)]

D. Unless specified otherwise, the term of an operating permit shall be unlimited.

E. Notification to the Air Quality Division of DEQ of the sale or transfer of ownership of this facility is required and shall be made in writing by the transferor within 10 days after such date. A new permit is not required. [OAC 252:100-7-2(f)]

F. The following limitations apply to the facility unless covered in the Specific Conditions:

1. No person shall cause or permit the discharge of emissions such that National Ambient Air Quality Standards (NAAQS) are exceeded on land outside the permitted facility. [OAC 252:100-3]
2. All facilities that emit air contaminants are required to file an emission inventory and pay annual operating fees based on the inventory. Instructions and forms are available on the Air Quality section of the DEQ web page. *www.deq.state.ok.us* [OAC 252:100-5]
3. All excess emissions shall be reported to the Director of the Air Quality Division as soon as practical during normal office hours and no later than the next working day following the malfunction or release. Within ten (10) business days further notice shall be tendered in writing containing specific details of the incident. [OAC 252:100-9]
4. Open burning of refuse and other combustible material is prohibited except as authorized in the specific examples and under the conditions listed in the Open Burning Subchapter. [OAC 252:100-13]
5. No particulate emissions from new fuel-burning equipment with a rated heat input of 10 MMBTUH or less shall exceed 0.6 lbs/MMBTU. [OAC 252:100-19]

6. No discharge of greater than 20% opacity is allowed except for short-term occurrences which consist of not more than one six-minute period in any consecutive 60 minutes, not to exceed three such periods in any consecutive 24 hours. In no case shall the average of any six-minute period exceed 60% opacity. [OAC 252:100-25]
7. No visible fugitive dust emissions shall be discharged beyond the property line on which the emissions originate in such a manner as to damage or to interfere with the use of adjacent properties, or cause air quality standards to be exceeded, or interfere with the maintenance of air quality standards. [OAC 252:100-29]
8. No sulfur oxide emissions from new gas fuel-burning equipment shall exceed 0.2 lbs/MMBTU. No existing source shall exceed the listed ambient air standards for sulfur dioxide. [OAC 252:100-31]
9. Volatile Organic Compound (VOC) storage tanks built after December 28, 1974, and with a capacity of 400 gallons or more storing a liquid with a vapor pressure of 1.5 psia or greater under actual conditions shall be equipped with a permanent submerged fill pipe or with an organic material vapor-recovery system. [OAC 252:100-37-15(b)]
10. All fuel-burning equipment shall at all times be properly operated and maintained in a manner that will minimize emissions of VOCs. [OAC 252:100-37-36]
11. Except as otherwise provided, no person shall cause or permit the emissions of any toxic air contaminant in such concentration as to cause or to contribute to a violation of the MAAC. [OAC 252:100-41]

G. Any owner or operator subject to provisions of NSPS shall provide written notification as follows: [40 CFR 60.7 (a)]

1. A notification of the date of when construction of an affected facility will be commenced postmarked no later than 30 days prior to such date.
2. A notification of the anticipated date of initial start-up of an affected facility postmarked no more than 60 days nor less than 30 days prior to such a date.
3. A notification of the actual date of initial start-up of an affected facility postmarked within 15 days after such date.
4. If a continuous emission monitoring system is included in the construction, a notification of the date upon which the test demonstrating the system performance will commence, along with a pretest plan, postmarked no less than 30 days prior to such a date.

H. Any owner or operator subject to provisions of NSPS shall maintain records of the occurrence and duration of any start-up, shutdown, or malfunction in the operation of an affected facility or any malfunction of the air pollution control equipment. [40 CFR 60.7 (b)]

I. Any owner or operator subject to the provisions of NSPS shall maintain a file of all measurements and other information required by this subpart recorded in a permanent file suitable for inspection. This file shall be retained for at least five years following the date of such measurements, maintenance, and records. [40 CFR 60.7 (d)]

J. Any owner or operator subject to the provisions of NSPS shall conduct performance test(s) and furnish to AQD a written report of the results of such test(s). Test(s) shall be conducted within 60 days after achieving the maximum production rate at which the facility will be operated, but not later than 180 days after initial start-up. [40 CFR 60.8]

Michael Lowther, Operations Manager
Limco Airepair, Inc.
5304 S. Lawton Ave
Tulsa, OK 74107

Permit Number: 99-026-O (M-2)
Permit Writer: Jennifer Tyler
Current Date: March 15, 2004

SUBJECT: Facility: Limco Airepair, Inc.
Location: Section 35, T19N, R12E
Date Received: February 20, 2004

Dear Mr. Lowther,

Air Quality has received your permit application for modification. It has been given a permit number and assigned to the permit writer referenced above. The information supplied thus far appears to be **administratively complete.** The fee assessed for this application is $500, and $500 has been received. Please note that additional information may be required in the future.

New DEQ Uniform Permitting Tier rules became effective July 1, 1996, and include certain requirements. This application has been determined to be a **Tier I.**

Thank you for your cooperation. If we may be of further service, please contact our office at (918) 293-1600. The DEQ Regional Office At Tulsa's location and mailing address is 3105 East Skelly Drive, Suite 200, Tulsa, OK 74105.

Sincerely,

Jennifer L. Tyler

AIR QUALITY DIVISION

MEMORANDUM **October 31, 2001**

TO: DFL Dawson Lasseter, P.E., Chief Engineer, Air Quality

THROUGH: PF Phillip Fielder, P.E., New Source Permits Unit

THROUGH: Peer Review

FROM: Jack Fly, DEQ Regional Office at Tulsa

SUBJECT: Evaluation of Permit Application No. 99-026-O (M-1)
Limco-Airepair, Inc (LA)
Air Permit Modification
Aircraft Component Manufacturing/Repair Facility (SIC 3728)
5304 Lawton Ave
Tulsa County, Tulsa, Oklahoma 74121

INTRODUCTION

In the past, LA had two similar facilities located in Tulsa. On March 30, 2001, LA closed the facility located at 4250 South 76 East Avenue, Tulsa. The Lawton Ave plant is the only LA facility in Tulsa, and will take the workload of both facilities.

The applicant has requested a modification to the existing air permit No. 99-026-O to add another coating process plus increase the use of paints, degreaser solvent, parts cleaning solvents, and pressure testing fluid. The facility manufactures and repairs non-structural parts for the aerospace industry. This facility commenced operations in 1995. LA will remain a synthetic minor facility after the new operations commence.

Since the modification to the facility requested by LA increases the actual emissions by more than 5 tons per year (TPY) and is adding a new piece of equipment, a construction permit and modified operating permit are required per OAC 252:100-7. The fees associated with the permits are $1,500.

When issued Permit 99-026-O (M-1) will cover the entire facility, and all other LA air permits are void.

PROCESS DESCRIPTION

In general, the plant has three product activities i.e., the manufacture of different sizes of heat exchangers, the repair of various sizes of heat exchangers, and the repair of various sized aircraft air ducts.

Manufacturing Process

All the ovens used for drying and soldering have a combined heat rate of 0.80 MMBTUH

First, LA buys thin sheets of aluminum and stainless steel to use in the manufacture and repair of all three products.

The steps in the manufacture of the heat exchangers are: material is cut, shaped, cleaned, welded/assembled, pressure tested, cleaned, heat dried, and coated. LA is required to test most of the heat exchangers that are of a new design. The new units are performance tested for flow vs pressure drop of both the cooling medium (air) over the outside of the heat exchanger, and the medium to be cooled (engine lube oil, hydraulic fluid, etc) which is on the inside of the exchanger. They are also tested for its heat transfer capabilities.

The steps in the repair of the heat exchangers are: inspected for flaws, repaired as necessary, pressure tested, cleaned, heat dried, and coated.

The steps in the repair of the air ducts are: inspection for flaws, cleaning, heat dried, repairs made, cleaned, and coated.

WELDING/SOLDERING

Various types of welding are used by LA i.e., MIG, TIG, etc.

The soldering is done by placing assembled, "tinned" parts in natural gas fired ovens. Tinning is a process where the part is coated with the required amount of solder/flux on each joint to be soldered. The part is then heated to a temperature just above the melting point of the solder to allow the solder to melt and flow into the joint to be soldered. The part is then cooled to room temperature in ambient air.

SIZING/SHAPING

This is done with conventional sheet metal shears, sheet metal brakes, stamping machines, etc.

COATING

All products are cleaned and heat dried before coating.

The parts may get some combination of four types of coatings i.e. paint, alodine, anodize, or silicone aluminum dip. Anodizing is done by an outside contractor; all others are done by LA.

Less than 10% of all products are spray-painted. The painting is done in a totally enclosed 12' x 12' x 8' high paint booth using a high volume low pressure spraying rig. The paint over spray is sucked through a 95% efficient dry type filter at 3,500 acfm and exhausts 8 feet above grade through a 12-inch diameter duct.

The alodine process is done by soaking the part in a bath of nitric/chromic acid, which results in the desired surface getting a coat of aluminum oxide. This process does not use heat or electric current.

The new coating process is called Silicone/Aluminum Dip. The dip solution consists of 8.4 gallons of Toluene, 1.0 gallons of Dow #805 silicone resin, and 1.6 pounds of aluminum powder. 61.5 gallons of this solution is placed in a 400-gallon dipping tank that is located in a totally enclosed room (10 ft x 12 ft x 10 high) within the shop. This basically means that the part to be coated is dipped in the solution as opposed to spraying/brushing/etc. After the part is dipped (the part is completely coated) it is hung over the tank to drip and dry. The result is the part gets a thin coat of aluminum filled silicone. The air in the dipping room is exhausted to the outside by a 22,000 acfm fan through a dry type filter in a 14 inch diameter duct to 10 ft above grade. This air that is exhausted is replaced by room air.

Anodizing is a process where a surface on the part gets a coating of aluminum by an electrolysis process. The part is made an anode as part of an electric circuit in a bath of acid, and as a result aluminum is deposited on the part's surface.

CLEANING

Parts are cleaned by different chemicals at different stages in the manufacturing/repair processes. The parts can be cleaned by hand wiping with solvents, acid, or caustic bath followed by water rinse or trichloroethylene degreaser.

The parts are dried after the cleaning process by electric heated ovens or natural gas fired ovens.

The facility operates 16 hours per day, 6 days per week, and 52 weeks per year, or 4,992 hours per year.

EMISSIONS

The significant air emissions are from the hand wiping of parts with solvents and coating. The air emissions from parts drying (combustion of natural gas), welding, and metal sizing/shaping are insignificant, and will not be included in the following emissions analysis.

Purchases of acids and caustics used in the clean lines have been tabulated in the application. The replacement numbers are below any *de minimis* threshold. Much of the material is consumed in the cleaning operations, either through chemical combination with materials presented or through action as a flocculent. Potential emissions are negligible.

Limco estimates the use of trichloroethylene (Perc) for the degreaser to be 520 gallons per year which is shown in the following emission table. This includes material that was collected for reclamations. The emissions shown are the net amounts. The vapor degreaser holds 110 gallons of Perc and has a freeboard ratio of 1.3.

Materials used in cleaning and wipe down of the parts include 2,000 gallons per year (GPY) of MEK and 520 GPY of isopropyl alcohol. The use of mineral spirits in pressure testing is estimated to be 300 GPY. The facility plans to use 95 gallons of ten different primers, topcoats and solvents. A "supercoat" was created by assuming the worst polluting characteristic of each coating. Using this supercoat to represent all coating performed at the facility yields 0.31 TPY of VOC, with a maximum toxic solvent emission of 0.08 TPY of MEK. Assuming transfer and filter efficiencies of zero, a total of 0.36 TPY of particulates are emitted, with a maximum toxic particulate emission of 0.15 TPY of polymeric HDI.

The following tables show the total all facility VOC and HAPs emissions.

FACILITY TOTAL EMISSIONS[2]

USE	POLLUTANT	CAS NO.	HAP	CAT	De minimis		Permit limits	
					PPH	TPY	PPH	TPY
Dip Coat	Toluene	108883	Y	C	5.60	6.00	1.60	5.0
	Xylene	133027	Y	C	5.60	6.00	0.12	0.36
Degreaser	Perc	79016	Y	A	0.57	0.60	0.96	3.0[3]
Wipe	MEK	108101	N	C	5.60	6.00	2.35	7.5[4]
Testing	MinSprts	64742887	N	C	5.60	6.00	0.80	2.50
Wipe	IPA	67630	N	C	5.60	6.00	0.64	2.00
Paint [1]	Various	Various	NA	NA	(2)	(2)	0.24	0.56
TOTAL VOC								20.92
TOTAL HAPS								8.36

(1) If all the paint VOCs were Cat A the de minimis would not exceeded. (2) Does not include combustion emissions pollutants which were calculated to be less than 1.0 TPY. (3) The emissions of the perc are exempt from the Subchapter 41, Part 5 toxic rules since it is under the NESHAP Subpart T. (4) EPA Screen 3 modeling shows a maximum ground level concentration of 592.6 micrograms per cubic meter (ug/m3) for an emission rate of 2.35 pounds per hour as compared to an allowable maximum acceptable ambient concentration (MAAC) of 59,000ug/m3.

The following table shows the VOC emission data comparison between the new permit and the existing permit. This somewhat large increase in emissions is the result of this facility doing the work of two.

Pollutant	Existing	New	Increase
Paint	0.31	0.56	0.25
Perc	1.0	3.0	2.0
Cleaning	3.29	7.37	4.08
Testing	1.12	2.50	1.38
Dip: Toluene	0.0	5.0	5.0
Xylene	0.0	0.36	0.36
Total	5.72	18.79	13.07

FEDERAL REGULATIONS

PSD, 40 CFR 52 [Not Applicable]
Final total emissions are less than the threshold of 250 TPY of any single regulated pollutant and the facility is not one of the 26 specific industries with a threshold of 100 TPY.

NSPS, 40 CFR Part 60 [Not Applicable]
There are no affected facilities or sources under any Subpart.

NESHAP, 40 CFR 61 [Not Applicable]
No benzene, arsenic, mercury, beryllium, vinyl chloride, coke oven emissions, asbestos or radionuclides are emitted.

NESHAP, 40 CFR Part 63 [T Applicable]
Subpart T (Halogenated Solvent Cleaners) This standard was published in the Federal Register on December 2, 1994, and compliance by new degreasers was required immediately upon startup. Applicant is subject to Subpart T, and has complied with the initial notification requirement. Now, a yearly report is required to be sent to the local DEQ office and an additional report concerning any emergency operation which was not in compliance, also sent to the local DEQ office. The first annual report was due on January 15, 2001, and every 12 months thereafter. Applicant has selected Option 1 from Table 1 of §63.463 to demonstrate compliance. This option requires a combination of a working-mode cover, freeboard ratio of 1.0, and superheated vapor. Applicant is in compliance.
Subpart GG (Aerospace Manufacturing and Rework Facilities). The facility engages in the type of activity described in paragraph 63.741 (a), but the facility does not qualify as a major source under the definition in 40 CFR 63.2. In addition, the subassemblies involved are not critical to structural integrity or flight performance, so the activities would also be excluded under §63.741(f). The facility is not an affected source and is not subject to this Subpart.

Chemical Accident Prevention Provisions, 40 CFR Part 68 [Not Applicable]
This facility does not process or store more than the threshold quantity of any regulated substance (Section 112r of the Clean Air Act 1990 Amendments). More information on this federal program is available on the web page: www.epa.gov/ceppo

OKLAHOMA AIR POLLUTION CONTROL RULES

OAC 252:100-1 (General Provisions) [Applicable]
Subchapter 1 includes definitions but there are no regulatory requirements.

OAC 252:100-3 (Air Quality Standards and Increments) [Applicable]
Primary Standards are in Appendix E and Secondary Standards are in Appendix F of the Air Pollution Control Rules. At this time, all of Oklahoma is in attainment of these standards.

OAC 252:100-4 (New Source Performance Standards) [Not Applicable]
Federal regulations in 40 CFR Part 60 are incorporated by reference as they exist on July 1, 2000, except for the following: Subpart A (Sections 60.4, 60.9, 60.10, and 60.16), Subpart B, Subpart C, Subpart Ca, Subpart Cb, Subpart Cc, Subpart Cd, Subpart Ce, Subpart AAA, and Appendix G.

OAC 252:100-5 (Registration, Emission Inventory and Annual Fees) [Applicable]
This subchapter requires potential sources of air contaminants to register with the Air Quality Division. An emission inventory was submitted and fees paid for previous years as required.

OAC 252:100-7 (Permits for Minor Facilities) [Applicable]
This facility qualifies as a minor source since total emissions of each criteria pollutant do not exceed 100 TPY and HAP emissions do not exceed the 10/25 TPY thresholds. As such, modeling, BACT, and public review are not necessary.

OAC 252:100-8 (Permits for Part 70 Sources) [Applicable]
This facility was originally permitted as a synthetic minor and this permit modification does not alter its permit status. Therefore this facility is not an affected source under this Subchapter.

OAC 252:100-9 (Excess Emission Reporting Requirements) [Applicable]
In the event of any release which results in excess emissions, the owner or operator of such facility shall notify the Air Quality Division as soon as practical during normal office hours and no later than **4:30 pm** the next working day following the malfunction or release. Further written notice containing specific details of the incident shall be submitted within ten (10) business days.

OAC 252:100-13 (Open Burning) [Applicable]
Open burning of refuse and other combustible material is prohibited except as authorized in the specific examples and under the conditions listed in this Subchapter.

OAC 252:100-19 (Particulate Matter) [Applicable]
Section 19-4 limits particulate emissions from new and existing fuel-burning equipment. AP-42 (7/98) Table 1.4-1 lists natural gas TPM emissions to be 7.6 lb/million scf or about 0.0076 lb/MMBTU, which is in compliance.

OAC 252:100-25 (Visible Emissions and Particulates) [Applicable]
No discharge of greater than 20% opacity is allowed except for short-term occurrences which consist of not more than one six-minute period in any consecutive 60 minutes, not to exceed three such periods in any consecutive 24 hours. In no case shall the average of any six-minute period exceed 60% opacity. Based on past experience with this facility, the potential for violating the standards are negligible.

OAC 252:100-29 (Fugitive Dust) [Applicable]
No person shall cause or permit the discharge of any visible fugitive dust emissions beyond the property line on which the emissions originate in such a manner as to damage or to interfere with the use of adjacent properties, or cause air quality standards to be exceeded, or interfere with the maintenance of air quality standards. Under normal operating conditions, this facility will not cause a problem in this area; therefore it is not necessary to require specific precautions to be taken.

OAC 252:100 –31 (Sulfur Compounds) [Applicable]
Because the driers burn commercial grade natural gas exclusively they are in compliance with the requirements of this Subchapter.

OAC 252:100-33 (Nitrogen Oxides) [Not Applicable]
These total maximum heat rate of combustion devices combined are rated at less than 1.0 MMBTUH and therefore is not an affected source under this Subchapter

OAC 252:100-35 (Carbon Monoxide) [Not Applicable]
This facility has none of the affected sources: foundry cupola, blast furnace, basic oxygen furnace, catalytic cracking unit, or catalytic reforming unit.

OAC 252:100-37 (Organic Materials) [Not Applicable]
-15 Storage of VOCs. This facility does not store any hydrocarbon liquids, and is not an affected source under this section.
-36 Fuel Burning Equipment. Under this Section Limco is required to adjust the fuel combustion for complete fuel combustion. LA burns only commercial grade natural gas in the combustion units which promotes compliance. The facility is anticipated to remain in compliance under normal operations.
-25 The coating of parts operations will consume less than 50 pounds of VOCs per day which is less than 100 pounds per day, and will therefore be exempt from this Subchapter.

OAC 252:100-39 (Volatile Organic Compounds in Nonattainment Areas) [Applicable]
Part 7, Section 39-46 concerns coating of metal parts and products. Limco is exempt as the VOC emissions from surface coating and cleaning will not exceed 10 TPY.

OAC 252:100-41 (Hazardous and Toxic Air Contaminants) [Not Applicable- **State Only**]
Part 3 addresses hazardous air contaminants. NESHAPs, as found in 40 CFR 61, are adopted by reference as they exist on July 1, 2000, with the exception of Subparts B, H, I, K, Q, R, T and W, and Appendices D and E, all of which address radionuclides. In addition, General Provisions as found in 40 CFR Part 63 Subpart A, and the Maximum Achievable Control Technology (MACT) standards as found in 40 CFR 63 Subparts F, G, H, I, L, M. N, O, Q, R, S, T, U, W, X, Y, CC, DD, EE, GG, HH, II, JJ, KK, LL, OO, PP, QQ, RR, SS, TT, UU, VV, WW, YY, CCC, DDD, EEE, GGG, HHH, III, JJJ, LLL, MMM, NNN, OOO, PPP, RRR, TTT, VVV, and XXX are adopted by reference as they exist on July 1, 2000. As noted above, this facility is not an affected source.

Part 5 is a state-only requirement governing toxic air contaminants. New sources (constructed after March 9, 1987) emitting any category A pollutant in amounts greater than the Category A de minimis level must be reviewed for the application of BACT. All sources are required to demonstrate that emissions of any toxic air contaminant do not cause or contribute to a violation of the MAAC. There are two toxics that exceed their de minimis, MEK and Perc. Perc is a HAP and also a Cat A toxic which is exempt from this Subchapter (it is under NESHAP, Subchapter T). Screen modeling for MEK has a GLC of 592.6 ug/m3 as compared to a MAAC of 59,000 ug/m3. The facility is in compliance.

Limco is not an affected source with respect to the following rules.

OAC 252:100-15	Mobile Sources	Not in source category
OAC 252:100-17	Incinerators	Not type of emission unit
OAC 252:100-21	PM from Wood waste Burning	Not type of emission unit
OAC 252:100-23	Cotton Gins	Not type of emission unit
OAC 252:100-24	Grain Elevators	Not in source category
OAC 252:100-33	Nitrogen Oxides	Exempted by size
OAC 252:100-35	Carbon Monoxide	Not in source category
OAC 252:100-43	Part 3 - Specific Methods	Not in source category
OAC 252:100-47	Landfills	Not in source category

INSPECTION

DEQ permit writer Jack Fly accompanied by Bob Johnson, Limco Plant Mgr, inspected the facility on September 24, 2001. The following table shows the VOC use after 9 months of operation, the quantities that were disposed of, the permit limits and the projected 12 months quantities used. The projected quantities show that under normal operating conditions the facility will not exceed the permit limits or the Toxic category, except the Perc which is exempt from Subchapter 41, Part 5 (as stated in Part 3 exemptions) requirements since Perc is a HAP and is subject to NESHAP, Subpart T.

Pollutant	Used, 9mos, 55gal drums	Disposed, 55gal drums	Pound/ Gallon	Tons Used, 9mos[1]	Projected Tons, 12 Mos	Permit Limits, Tons	Cat/ HAP	PPH	De Minimis	
									PPH	TPY
Toluene	18	0	6.9	3.41	4.53	5.0	C/Y	1.60	5.60	6.0
Perc	13	8	12.1	1.66	2.20	3.0	A/Y	0.96	0.57	0.6
MEK	34	4	6.7	5.53	7.37	7.5	C/N	2.35	5.60	6.0
MinSprts	8	4	6.3	0.70	0.93	2.50	C/N	0.80	5.60	6.0
IPA	11	4	6.5	1.25	1.66	2.00	C/N	0.64	5.60	6.0
VOC/PAINT	NA	NA	NA	0.14	0.19	0.19	A/Y	0.08	0.57	0.6

(1) Tons used is a net quantity i.e., purchased minus disposal.

Specifically the degreaser is operated infrequently, and was not in use at the time of this inspection. Certain recordkeeping requirements had not been met and a discussion as to how to meet these requirements ensued. All records and appropriate labeling of the degreaser were in place as of December 3, 1999.

TIER CLASSIFICATION AND PUBLIC REVIEW

This application has been classified as Tier I based on the request for an operating permit for an existing minor source. The status of all permit actions is available to the public in the Air Quality section of the DEQ Web Page at page: www.deq.state.ok.us

The applicant has submitted an affidavit that they are not seeking a permit for land use or for any operation upon land owned by others without their knowledge. The affidavit certifies that the applicant owns the real property.

FEES PAID

Permit fees of $1500 was paid; $1000 for construction and $500 for operating.

SUMMARY

The applicant has demonstrated compliance with the applicable air quality rules and regulations. Ambient air quality standards are not threatened at this site. There are no active Compliance or Enforcement Air Quality issues concerning this facility. Issuance of the permit is recommended.

PERMIT TO OPERATE
AIR POLLUTION CONTROL FACILITY
SPECIFIC CONDITIONS

LIMCO Airepair **Permit No. 99-026-O(M-1)**
Aircraft Subassembly Manufacturing and Repair

The permittee is authorized to operate in conformity with the specifications submitted to Air Quality on June 5, 2001, with supplemental information received October 19, 2001. The Evaluation Memorandum dated October 31, 2001 explains the derivation of applicable permit requirements and estimates of emissions; however, it does not contain operating limitations or permit requirements. Continuing operations under this permit constitutes acceptance of, and consent to, the conditions contained herein.

1. Points of emission include the cleaning, degreasing, painting, and other coating areas. The significant emissions from all sources are listed below.

Table No.1

USE	POLLUTANT	Permit limits	
		PPH	TPY
Dip Coat	Toluene	1.60	5.0
	Xylene	0.12	0.36
Degreaser	Perc	0.96	3.0
Wipe	MEK	2.35	7.50
Testing	MinSprts	0.80	2.50
Wipe	IPA	0.64	2.00
Paint (1)	Various	0.24	0.56
TOTAL VOC			20.9
TOTAL HAPS			8.36

The emissions shown in the preceding table will not be exceeded under normal operating conditions provided the facility's use of materials shown in the following table is not exceeded.

Table No. 2

Materials	GPD[(1)]	GPY
Toluene	5.1	1320
805 Resin	0.60	157
Perc	0.20	520
MEK	7.70	2000
MinSprts	1.15	300
IPA	2.00	520
Paints, various	0.31	80

(1) These GPD are work weekly averages.

Re: LIMCO-Airepair Operating Permit No. 99-026-O (M-1)

Dear Mr. Johnson:

Enclosed is the permit authorizing the operation of the modified referenced facility. Please note that this permit is issued subject to certain standard and specific conditions that are attached.

Thank you for your cooperation in this matter. If we may be of further service, please contact our office at (918) 461-7400. The DEQ Regional Office at Tulsa is located at 5051 South 129th East Avenue, Tulsa, OK and the mailing address is 5051-A South 129th East Avenue, Tulsa, OK, 74134.

Sincerely,

Jack Fly

PERMIT

AIR QUALITY DIVISION
STATE OF OKLAHOMA
DEPARTMENT OF ENVIRONMENTAL QUALITY
707 N. ROBINSON, SUITE 4100
P.O. BOX 1677
OKLAHOMA CITY, OKLAHOMA 73101-1677

Date OCT 31 2001 Permit No. 99-026-O(M-1)

Limco Airepair,

having complied with the requirements of the law, is hereby granted permission to operate a facility to manufacture and repair aircraft parts at 5304 S. Lawton Avenue, Tulsa, Tulsa County

subject to the following conditions, attached:

[X] Standard Conditions

[X] Specific Conditions

Chief Engineer, Air Quality Division

DEQ Form 885
Revised 7/93

2. Alternate products and production quantities can be varied under the following conditions.
   a. Emissions do not exceed 10 TPY for a single HAP or 25 TPY of the HAPs aggregate.
   b. A change in either production or products is permitted provided there would be no increase in the quantity or a decrease in the quality of the resulting emissions. Additionally the use of alternate products shall not cause the total of each toxic to exceed the de minimis levels or the MAAC established by OAC252:100-41.
   c. LA shall notify the DEQ in writing 30 calendar days before making any operational changes that would cause significant air emissions.
   d. Maintain written documentation to show compliance with all current Federal, State and Local Regulations, Rules, and Codes, including modeling where compliance with a MAAC may be in question.

3. The degreaser is subject to NESHAP (40 CFR 63) Subpart T, Standards for Halogenated Solvent Cleaning, as published in the Federal Register on December 2, 1994 and shall be in compliance with this federal NESHAP, specifically with Option 1 of Table 1 of 40 CFR 63.463. All required reports shall be sent to the DEQ Regional Office at Tulsa.

4. The permittee shall comply with the following outlined provisions for operation of the degreaser, which are further detailed in OAC 252:100-39-42(b).

   a) The degreaser "working mode cover" shall operate easily and cause minimum disturbance to the vapor zone.

   b) The unit shall have safety switches to shut off sump heat if the coolant is not circulating or exceeds the recommended level.

   c) Since Limco has chosen Option one for Halogenated Degreasers shown in 40 CFR 63, Subpart T, the unit shall have a freeboard ratio not less than 1.0, a solvent super heater which shall maintain the solvent to a temperature no less than 10 degrees F above the boiling point of the solvent, and have a working mode cover. If, in the future, Limco decides one of the other options available in this Subpart would be a better choice Limco shall submit a written request describing their plan to the DEQ local office, and will not begin any change without written permission.

   d) Limco will properly train each person that will operate the degreaser before they allowed using the machine. The written syllabus used to in training will be readily available to each trained operator.

5. All records necessary to demonstrate compliance with permit conditions shall be maintained on site or at a readily accessible location for a period of at least two years following the date of recording and shall be available for review by regulatory personnel during normal business hours. Such records include, but are not necessarily limited to, the following.

a) Records sufficient to demonstrate the weekly averages of the product usages do not exceed those shown in SC#1, Table No.2 (exclusive of the vapor degreaser). If any of the GPD quantities in table No. 2 are exceeded then compliance with that pollutant's MAAC must be demonstrated.
b) Degreaser records required by Specific Condition #3.
c) Material usages (monthly and 12-month rolling totals).

6. This permit supercedes all previous permits, which are now null and void.

SUBJECT: Sample of Degreaser Annual Reporting and Exceedance Forms

CONTENTS:
Please find attached sample forms that can be used for these reporting requirements.

Also I have included the verbiage that will appear in the forthcoming permit that will appear in the Federal Regulations Section, 40CFR63 Subpart T

NESHAP, 40 CFR Part 63 ***[T Applicable]***

Subpart T (Halogenated Solvent Cleaners) This standard was published in the Federal Register on December 2, 1994, and compliance by new degreasers was required immediately upon startup. Applicant is subject to Subpart T, and has complied with the initial notification requirement. Now a yearly report is required sent to the local DEQ office and one other additional report concerning any emergency operation which was not in compliance, also sent to the local DEQ office. The first annual report was due on January 15, 2001, and every 12 months thereafter. Applicant has selected Option 1 from Table 1 of §63.463 to demonstrate compliance. This option requires a combination of a working-mode cover, freeboard ratio of 1.0, and superheated vapor. Applicant is in compliance.

Formerly all reports were sent to EPA Region VI, but now all Part 63 reports should be sent to the DEQ office in Tulsa.

HALOGENATED SOLVENT CLEANER NESHAP

Annual Report

PART TWO - Information Required per Cleaning Machine
(Make copies for additional machines as necessary)

Cleaner Identification Number:_____

Check compliance option chosen and fill out appropriate report requirements.

☐ Control Options

All operators of solvent cleaning machines have received training on the proper operation of solvent cleaning machines and their control devices sufficient to pass the required operator test.

_____ _____
Signature Date

Previous Year's Solvent Consumption _____ Mg/yr.

☐ Alternative Standard

Cleaning machine size:

Solvent-air interface area _____ m^2
or
Solvent cleaning capacity _____ m^3

Average monthly solvent consumption _____ kg

Three month rolling average emission estimates: (calculations attached)

1. _____ kg From _____ To _____
Date Date

2. _____ kg From _____ To _____
Date Date

3. _____ kg From _____ To _____
Date Date

LIMCO Airepair, Inc. & Aeroduct

The Trichloroethylene usage in 2002 was exceeded due to an equipment malfunction in the degreasing machine that cause the heating elements to burn-out twice in the year. The facility had to replenish the Degreaser twice in the year to continue production. This consumed approximately an extra 330 gallons of Trichloroethylene, above normal usage. The waste from the degreasing change-out was properly disposed of at an approved facility. Procedures have been put in place if future problems with the equipment happen, to inform the Air Quality Division of such decencies. The rolling totals are exceeded due to this consumption in the 2003 information.

Operating hours should be assessed in the permit for proper evaluation of the emissions in the future.

1. The tables adds Xylene to Table No.2, to correlate parameters set forth in Table No.1
2. Request is also made to change Perchloroethylene, to read Trichloroethylene.
3. The usage is correlated based on gallons used in a year on average.
4. We have requested increases in the following gallon per year manner
    a. +80 gallons for Toluene
    b. –57 gallons for 805 Resin
    c. +55 gallons for Mineral Spirits
    d. +10 gallons for IPA
    e. +20 gallons of Various Paints

Please make the proper amendments to the permit. Contact me with any questions regarding any of the information (918-445-4300).

DEQ LANDOWNER NOTIFICATION AFFIDAVIT

Tier I, II, or III permit applications in which the applicant does not own all the land subject to the application must notify the owner(s). The basis for this requirement is Title 27A of the Oklahoma Statutes, Supplement 1996, § 2-14-103(9), as described in OAC 252:002-15-30(b)(3).

Please note that you MUST fill out and return this affidavit even if you don't have to give any landowner notice.

A	NOTICE TO THE LANDOWNER(S) IS NOT REQUIRED because: (check one)		
	My application does not involve any land.	☑	My application involves only land owned by me (or applicant business).

OR

B	NOTICE TO THE LANDOWNER(S) IS REQUIRED because the land is owned by someone other than myself or the applicant business AND I HAVE NOTIFIED the following (check one):		
	Landowner(s)		Lessor or Administrator or Executor of the land
METHOD OF DELIVERY (check one):			
	Actual notice, for which I have a signed and dated receipt		
	Service by Sheriff or private process server, for which I have an affidavit		
	Service by certified mail, restricted delivery, for which I have a signed return receipt		
	Legal publication, for which I have an affidavit of publication from the newspaper, because the landowners could not be located through due diligence		
MY RIGHT TO USE THIS LAND is by:			

	Lease		Easement		Other, Specify		

LANDOWNER AFFIDAVIT CERTIFICATION					
I, as the applicant or an authorized representative of the applicant, hereby certify that notice to the landowner(s) about the permit application for the facility described below was provided per Option A or B above.					
Company Name	Limco Airepair, Inc.		Facility Name	Limco Airepair, Inc.	
Facility Address or Legal Description.	5304 S. Lawton Ave. Tulsa, Oklahoma 74107				
Responsible Official (signature)	Michael Lowther			Date Signed	2/17/04
Responsible Official (typed)	Michael Lowther		Title	Operations Manager	

If the landowner notice applies to your application (Option B above) you can send the following form to them as your notice:

SUBJECT: Transporter Waste Status

Dear Margaret,

OKR 000000612 mm

Per your telephone call and our discussion, I would like to confirm at Limco-Airepair, Inc. (EPA ID #000000612) is not a transporter of chemical hazardous waste. All of our waste is being transported by licensed waste handlers. Currently, we are using the services of a Tulsa company, Perma Fix, to dispose of our chemical waste.

Your stated that DEQ records show our status has not changed since 1996. 1995 mm I believe the company has used outside licensed transporter since 1997 and they probably forgot to notice your department of the change. Please adjust your records to reflect the change.

If you have any additional questions please call me. My direct telephone number is 918 445-4331.

Thank You,

Bob Johnson
Controller

VIII. Type of Regulated Waste Activity *(Mark 'X' in the appropriate boxes. Refer to instructions.)*

A. Hazardous Waste Activity

1. Generator (See Instructions)
   - [ ] a. Greater than 1000kg/mo (2,200 lbs.)
   - [X] b. 100 to 1000 kg/mo (220 - 2,200 lbs.)
   - [ ] c. Less than 100 kg/mo (220 lbs.)

2. Transporter (Indicate Mode in boxes 1-5 below)
   - [X] a. For own waste only
   - [ ] b. For commercial purposes

   Mode of Transportation
   - [ ] 1. Air
   - [ ] 2. Rail
   - [ ] 3. Highway
   - [ ] 4. Water
   - [ ] 5. Other - specify

3. [ ] Treater, Storer, Disposer (at installation) Note: A permit is required for this activity; see instructions.

4. Hazardous Waste Fuel
   - [ ] a. Generator Marketing to Burner
   - [ ] b. Other Marketers
   - [ ] c. Burner - indicate device(s) - Type of Combustion Device
     - [ ] 1. Utility Boiler
     - [ ] 2. Industrial Boiler
     - [ ] 3. Industrial Furnace

5. [ ] Underground Injection Control

B. Used Oil Fuel Activities

1. Off-Specification Used Oil Fuel
   - [ ] a. Generator Marketing to Burner
   - [ ] b. Other Marketer
   - [ ] c. Burner - Indicate device(s) - Type of Combustion Device
     - [ ] 1. Utility Boiler
     - [ ] 2. Industrial Boiler
     - [ ] 3. Industrial Furnace

2. [ ] Specification Used Oil Fuel Marketer (or On-site Burner) Who First Claims the Oil Meets the Specification

IX. Description of Regulated Wastes *(Use additional sheets if necessary)*

A. Characteristics of Nonlisted Hazardous Wastes. Mark 'X' in the boxes corresponding to the characteristics of nonlisted hazardous wastes your installation handles. *(See 40 CFR Parts 261.20 - 261.24)*

1. Ignitable (D001)	2. Corrosive (D002)	3. Reactive (D003)	4. EP Toxic (D000)	(List specific EPA hazardous waste number(s) for the EP Toxic contaminant(s))
X	X	X	X	F002 U134 U159 D007

B. Listed Hazardous Wastes. (See 40 CFR 261.31 - 33. See instructions if you need to list more than 12 waste codes.)

1	2	3	4	5	6
7	**8**	**9**	**10**	**11**	**12**

C. Other Wastes. (State or other wastes requiring an I.D. number. See instructions.)

MR. AL COULTER
OKLAHOMA DEPARTMENT OF ENVIRONMENTAL QUALITY
1000 NORTHEAST TENTH STREET
OKLAHOMA CITY, OK 73117-1212

ref. EPA ID No. OKD981903222

Subject: Move of Facility

Dear Mr. Coulter,

Confirming our recent conversation about a new EPA ID Number, Airepair International, Inc. is in the process of moving from its current facility at 4250 So. 76th E. Ave., Tulsa OK 74145 to another larger facility at 5304 So. Lawton Ave., Tulsa, OK 74107. This move is not scheduled for completion until somewhat later this year. We will operate both facilities concurrently until all phases of the move are completed.

I am enclosing a completed EPA Form 8700-12 Notification of Regulated Waste Activity in order that a new ID Number may be assigned for the new location.

De-activation of ID No. OKD981903222 will be requested when all such activity completely ceases at that location.

Please submit the form at your earliest convenience.

It is believed that our status will change from that of Small Quantity Generator to Generator. We will need copies of the State Disposal Plan Application form and the instructions for completing them.

Please note that our mailing address has changed as follows:

Airepair International, Inc.
5304 So. Lawton Ave.
Tulsa, OK 741087

Your cooperation is appreciated.

Best regards,

J. Travis Owen, C.P.M.
Purchasing Manager
Environmental Coordinator

Oklahoma Administrative Code (OAC) 252:205-3-2 adopts by reference certain federal regulations found in Title 40 of the Code of Federal Regulations (40 CFR). This document does not include all state and federal regulations that may be applicable. Certain non-hazardous waste regulations are included on this form as referenced by OAC 252:515.

Regulatory Requirements	Area of Non-compliance	Remarks
A. General Requirements		
A.1. Has the o/o obtained an EPA ID number? [40 CFR 262.12(a)]		yes
A.2. Has the o/o used only transporters and TSDs that have an EPA ID number? [40 CFR 262.12(c)]		yes Rhinoco
A.3. Does the o/o make a HW determination for each solid waste generated? [40 CFR 262.11] *(Identify method: X testing X knowledge of process)*		
A.4. Identify each HW storage method that applies: X containers ____ tanks ____ drip pads ____ containment buildings *(If tanks, drip pads or containment buildings are used, the appropriate supplemental checklist must also be completed)*		
A.5. Does the o/o store HW on site for ≤ 90 days? [40 CFR 262.34(a)] If yes, skip to A.6. *(Note: This item does not apply to F006 wastes that are stored > 90 days. For such wastes, complete the "Alternative Requirements for F006 Waste Management" checklist, Section J)*		yes
A.5.1. Has the DEQ granted an extension of up to 30 days? [40 CFR 262.34(b)] *(Note: If no, the facility is regulated as a HW storage facility, subject to the applicable requirements of 40 CFR Part 264/265 & 270)*		
A.6. Does the o/o ensure an accumulation start date is clearly marked and visible for inspection on each container holding HW? [40 CFR 262.34(a)(2)]		- A.O.C. 2 of 14 drums missing accumulation start date
A.7. Does the o/o ensure each tank or container holding HW is labeled or clearly marked with the words, "Hazardous Waste?" [40 CFR 262.34(a)(3)]		1 drum missing label
A.8. Does the o/o operate and maintain the facility in a manner to prevent endangerment to public health and the environment and to minimize releases of HW or constituents to air, soil, or surface water? [OAC 252:205-5-4 & 9-1/40 CFR 262.34(a)(4) → 265.31]		✓
A.9. Has the o/o obtained an approved disposal plan? [OAC 252:205-5-1]		
A.10. Does the o/o update the disposal plan as needed to identify all hazardous wastes generated, revise waste codes, add new TSD facilities, etc? [OAC 252:205-5-1(1)]		✓
B. Manifest Requirements *(Identify the number of manifests reviewed: 3)*		
B.1. Does the o/o use a manifest when HW is transported off-site? [40 CFR 262.20(a)]		yes
B.2. Does each manifest identify a receiving facility that is permitted to accept the waste? [40 CFR 262.20(b)]		yes
B.3. Does each manifest have the hand-written signature of the generator? [40 CFR 262.23(a)(1)]		yes
B.4. Does each manifest have the hand-written signature of the initial transporter and date of acceptance? [40 CFR 262.23(a)(2)]		yes
B.5. If the o/o receives manifests from the designated receiving facility within 35 days of the date the waste was accepted by the initial transporter, skip to Section C.		
B.5.1. For manifests that were not received within 35 days, did the o/o contact the transporter and/or the designated receiving facility? [40 CFR 262.42(a)(1)]		NA
B.5.2. For manifests that were not received within 45 days, did the o/o submit an Exception Report to the DEQ that included both: (1) a legible copy of the manifest; AND (2) a cover letter explaining the efforts taken to locate the waste and the results of those efforts? [40 CFR 262.42(a)(2)]		NA

Regulatory Requirements	Area of Non-compliance	Remarks
C. Pre-Transport Requirements *(Note: Only applicable for HW ready for off-site shipment. If none, skip to Section D.)*		
C.1. Does the o/o package HW in accordance with applicable DOT regulations? [40 CFR 262.30]		
C.2. Does the o/o label each package in accordance with applicable DOT regulations? [40 CFR 262.31]		
C.3. Does the o/o mark each package in accordance with applicable DOT regulations? [40 CFR 262.32(a)]		NA
C.4. Does the o/o mark each container of ≤ 119 gallons with an appropriate HW label? [40 CFR 262.32(b)]		
C.5. Does the o/o placard each vehicle that will transport HW in accordance with applicable DOT regulations? [40 CFR 262.33]		
D. Satellite Accumulation Area (SAA) *(If no SAAs are in use, skip to Section E.)*		
D.1. Does the o/o accumulate ≤ 55 gallons of HW or ≤ one quart of acutely HW in each SAA? [40 CFR 262.34(c)(1)] If yes, skip to D.2.		NR
D.1.1. Has the o/o complied with the HW storage requirements for the excess waste within three days? [40 CFR 262.34(c)(2)]		NR
D.1.2. Has the o/o marked each container holding the excess accumulation of HW with the date the excess amount began accumulating? [40 CFR 262.34(c)(2)]		yes
D.2. Is each container in each SAA in good condition? [40 CFR 262.34(c)(1)(i) → 265.171] If yes, skip to D.3.		yes
D.2.1. Has the o/o transferred the waste into a container that is in good condition, or managed the waste in another way to prevent leaks? [40 CFR 262.34(c)(1)(i) → 265.171]		yes
D.3. Does the o/o ensure each container in each SAA is made of or lined with materials that are compatible with the waste being stored? [40 CFR 262.34(c)(1)(i) → 265.172]		yes
D.4. Does the o/o ensure each container in each SAA is closed, except when adding or removing waste? [40 CFR 262.34(c)(1)(i) → 265.173(a)]		yes
D.5. Does the o/o ensure each container in each SAA is marked with the words "Hazardous Waste" or with other words to identify its contents? [40 CFR 262.34(c)(1)(ii)]		yes
E. Container management		
E.1. Does the o/o ensure each container of HW is in good condition? [40 CFR 262.34(a)(1)(i) → 265.171] If yes, skip to E.2.		yes
E.1.1. Has the o/o transferred the waste into a container that is in good condition, or managed the waste in another way to prevent leaks? [40 CFR 262.34(a)(1)(i) → 265.171]		yes
E.2. Does the o/o ensure each container of HW is made of or lined with materials that are compatible with the waste being stored? [40 CFR 262.34(a)(1)(i) → 265.172]		yes
E.3. Does the o/o ensure each container of HW is closed, except when adding or removing waste? [40 CFR 262.34(a)(1)(i) → 265.173(a)]		yes
E.4. Does the o/o ensure each container of HW is opened, handled, or stored in a manner to prevent ruptures or leaks? [40 CFR 262.34(a)(1)(i) → 265.173(b)]		yes
E.5. Does the o/o ensure each HW container storage area is inspected at least weekly for leaks or deterioration of containers and the containment system? [40 CFR 262.34(a)(1)(i) → 265.174]		yes
E.6. Does the o/o ensure each container holding ignitable or reactive waste is stored at least 50 feet from the facility property line? [40 CFR 262.34(a)(1)(i) → 265.176]		yes
E.7. Does the o/o prevent incompatible wastes and/or materials from being placed into the same container? [40 CFR 262.34(a)(1)(i) → 265.177(a)] If yes, skip to E.8.		yes
E.7.1. Does the o/o ensure mixing of incompatible wastes and or materials is performed in a manner to prevent the generation of extreme heat, pressure, fire/explosion, violent reaction, uncontrolled toxic vapors or dust, uncontrolled flammable fumes, damage to structural integrity, or other problems that threaten human health or the environment? [40 CFR 262.34(a)(1)(i) → 265.177(a) → 265.17(b)]		yes

Regulatory Requirements	Area of Non-compliance	Remarks
E.8. Does the o/o ensure HW is not placed in an unwashed container that previously held an incompatible waste or material? [40 CFR 262.34(a)(1)(i) → 265.177(b)] If yes, skip to E.9.		ok
E.8.1. Does the o/o ensure mixing of incompatible wastes and or materials is performed in a manner to prevent the generation of extreme heat, pressure, fire/explosion, violent reaction, uncontrolled toxic vapors or dust, uncontrolled flammable fumes, damage to structural integrity, or other problems that threaten human health or the environment? [40 CFR 262.34(a)(1)(i) → 265.177(b) → 265.17(b)]		ok
E.9. Does the o/o ensure incompatible wastes and/or materials are physically separated by a dike, berm, wall, or other device? [40 CFR 262.34(a)(1)(i) → 265.177(c)]		ok
F. Air Emission Standards *(Note: Only applies to containers between 26.4 and 121.5 gal capacity storing hazardous waste with > 500 ppmw VOCs)*		
F.1. Does the o/o ensure the containers meet ONE of the following: *(Identify which standard is met)* ___ meet DOT regulations for hazardous materials transportation? [40 CFR 262.34(a)(1)(ii) → 265.1087(c)(1)(i)] OR X are equipped with a cover and closure devices forming a continuous barrier with no visible holes, gaps, or other open spaces into the interior of the container? [40 CFR 262.34(a)(1)(ii) → 265.1087(c)(1)(ii)] OR ___ are open-topped containers with an organic vapor suppressing barrier (such as an organic vapor suppressing foam) placed over the waste so that no hazardous waste is exposed to the atmosphere? [40 CFR 262.34(a)(1)(ii) → 265.1087(c)(1)(iii)]		All paint waste stored with 55 Gallon closed top with Bung Sealed No leaks
F.2. Does the o/o ensure the container covers or closure devices remain closed except when adding or removing waste or other material, when gaining access for routine activities, or for opening safety devices to avoid unsafe conditions? [40 CFR 262.34(a)(1)(ii) → 265.1087(c)(3)]		yes
F.3. Has the o/o attempted initial repairs of defects in containers, covers, or closure devices within 24 hours of detection? [40 CFR 262.34(a)(1)(ii) → 265.1087(c)(4)(iii)]		~~yes~~ NO
F.4. Did the o/o complete repairs within 5 calendar days after detection or remove hazardous waste from the container until repairs could be completed? [40 CFR 262.34(a)(1)(ii) → 265.1087(c)(4)(iii)]		NA
G. Personnel Training		
G.1. Has the o/o developed and implemented a training program for those employees who manage HW? [40 CFR 262.34(a)(4) → 265.16(a)] If no, skip to G.2.		yes
G.1.1. Does the o/o ensure the training is directed by a person trained in HW management procedures? [40 CFR 262.34(a)(4) → 265.16(a)(2)]		yes
G.1.2. Does the o/o ensure the training includes EACH of the following (as applicable to the facility): (1) procedures for using, inspecting, repairing, and replacing facility emergency and monitoring equipment; (2) key parameters for automatic waste feed cut-off systems; (3) use of communications or alarm systems; (4) responses to fires or explosions; AND (5) procedures for shutdown of operations? [40 CFR 262.34(a)(3) → 265.16(a)(3)] *(Note: OSHA emergency response training that includes these items is satisfactory for meeting this requirement)*		yes For Employees who Manage And Handle Hazardous waste.
G.2. Does the o/o ensure each new or reassigned employee receives training within 6 months of employment or reassignment? [40 CFR 262.34(a)(4) → 265.16(b)]		yes All truing completed within first 2 years of Hiring
G.3. Does the o/o ensure each employee receives an annual review of training? [40 CFR 262.34(a)(4) → 265.16(c)]		yes
G.4. Does the o/o maintain EACH of the following records at the facility: (1) the job title & name of each employee for all positions related to HW management; (2) a written job description for each position related to HW management, to include requisite skill, education, or other qualifications; (3) a written description of the type and amount of introductory and continuing education to be provided to the employee in each position; AND (4) records to document employee training? [40 CFR 262.34(a)(4) → 265.16(d)]		yes Training records maintained online with employee Job and Skill requirements
G.5. Does the o/o maintain training records of former employees for at least 3 years after employment ended? [40 CFR 262.34(a)(4) → 265.16(e)]		yes

Oklahoma Department of Environmental Quality
LARGE QUANTITY GENERATOR INSPECTION REPORT

EPA ID# OKR000000 612
DATE 5-6-14

Regulatory Requirements	Area of Non-compliance	Remarks
H. Preparedness & Prevention		
H.1. Does the o/o provide internal communications or an alarm system capable of providing immediate emergency instruction to personnel? [40 CFR 262.34(a)(4) → 265.32(a)]		yes
H.2. Does the o/o provide a telephone or radio that is immediately available to call emergency personnel? [40 CFR 262.34(a)(4) → 265.32(b)]		yes PA system
H.3. Does the o/o provide fire extinguishers, spill control equipment, decontamination equipment, and water at adequate volume and pressure? [40 CFR 262.34(a)(4) → 265.32(c) and (d)]		yes spill control located throughout facility
H.4. Does the o/o ensure all facility communications, alarms, fire protection equipment, and spill control equipment is tested and maintained as necessary to assure proper operation? [40 CFR 262.34(a)(4) → 265.33]		yes
H.5. Does the o/o ensure all personnel managing hazardous waste have immediate access to an internal alarm or emergency communication device? [40 CFR 262.34(a)(4) → 265.34(a)]		yes
H.6. When only one employee is on the premises, does the o/o ensure the employee has immediate access to a device capable of summoning external emergency assistance? [40 CFR 262.34(a)(4) → 265.34(b)]		NA
H.7. Does the o/o ensure there is sufficient aisle space to allow unobstructed movement of personnel and equipment in storage areas? [40 CFR 262.34(a)(4) → 265.35]		yes
H.8. Has the o/o provided local authorities with facility layout, properties of HW, locations of work areas, road entrances and evacuation routes? [40 CFR 262.34(a)(4) → 265.37(a)(1)]		yes
H.9. Has the o/o made agreements with emergency response contractors and equipment suppliers? [40 CFR 262.34(a)(4) → 265.37(a)(3)]		yes → SYRCO
H.10. Has the o/o provided local hospitals with properties of HW handled and types of injuries possible? [40 CFR 262.34(a)(4) → 265.37(a)(4)]		yes
I. Contingency Plan and Emergency Procedures		
I.1. Does the o/o have a contingency plan at the facility? [40 CFR 262.34(a)(4) → 265.51(a) & 53(a)]		yes
I.2. Has the o/o provided a copy of the contingency plan to all applicable local police and fire departments, hospitals, and emergency response teams? [40 CFR 262.34(a)(4) → 265.53(b)]		yes
I.3. Does the contingency plan describe actions to be taken by facility personnel in response to fires, explosions, or releases of HW or HW constituents? [40 CFR 262.34(a)(4) → 265.52(a)]		yes
I.4. Does the contingency plan include a description of the arrangements with local authorities? [40 CFR 262.34(a)(4) → 265.52(c)]		yes
I.5. Does the contingency plan include an up-to-date list of persons qualified to act as emergency coordinator? [40 CFR 262.34(a)(4) → 265.52(d)]		yes
I.6. Does the o/o ensure one person is listed as the primary emergency coordinator, with other persons listed in the order in which they will assume emergency coordinator responsibilities? [40 CFR 262.34(a)(4) → 265.52(d)]		Bill Bill Williams
I.7. Does the contingency plan include an up-to-date list of all emergency and decontamination equipment, its location, a brief description of the equipment, and a brief outline of its capabilities? [40 CFR 262.34(a)(4) → 265.52(e)]		yes
I.8. Does the contingency plan include an employee evacuation plan (to include evacuation signals, primary routes, and alternate routes)? [40 CFR 262.34(a)(4) → 265.52(f)]		yes
I.9. Did the o/o amend the contingency plan in the event of a regulatory change, plan failure during an emergency, the facility changes, the emergency coordinators change, or emergency equipment changes? [40 CFR 262.34(a)(4) → 265.54]		yes
I.10. Does the o/o ensure the emergency coordinator is on-site or on-call at all times? [40 CFR 262.34(a)(4) → 265.55]		yes
I.11. Does the o/o ensure the emergency coordinator is thoroughly familiar with all aspects of the contingency plan, facility operations, wastes managed, location of records, and has the authority to commit the resources to carry out the contingency plan? [40 CFR 262.34(a)(4) → 265.55]		yes
I.12. If there have been no incidents requiring implementation of the contingency plan, skip to Section J. *(**Note:** Identify date(s), nature, and quantities of releases)*		
I.12.1. Did the o/o carry out the provisions of the contingency plan during a fire, explosion, or release of HW or HW constituents? [40 CFR 262.34(a)(4) → 265.51(b)]		NA NA
I.12.2. Did the o/o immediately notify the DEQ? [OAC 252:205-13-1(a)]		

Regulatory Requirements	Area of Non-compliance	Remarks
I.12.3. Did the o/o submit a written report to the DEQ regarding the incident that included all of the following: (1) name, address, and phone number of the o/o; (2) name, address, and phone number of the facility; (3) date, time, and type of incident; (4) name and quantity of materials involved; (5) extent of any injuries; (6) assessment of actual or potential hazards to health or the environment; and (7) estimated quantity and disposition of material resulting from the incident? [40 CFR 262.34(a)(4) → 265.56(j)]		NA
I.12.4. Did the o/o ensure proper disposal of wastes generated as a result of the incident? [OAC 252:205-13-1(e)]		NA
J. Alternative Requirements for F006 Waste Management *(Note: Only applies to LQGs that store F006 waste > 90 days)*		
J.1. Does the o/o store F006 waste for ≤ 180 days (or ≤ 270 days if the waste must be transported more than 200 miles)? [40 CFR 262.34(g) and (h)] If yes, skip to J.2.		
J.1.1. Has the DEQ granted an extension of up to 30 days? [40 CFR 262.34(i)] *(Note: If no, the facility is regulated as a HW storage facility, subject to the applicable requirements of 40 CFR Part 264/265)*		
J.2. Has the o/o implemented pollution prevention practices that reduce the amount of hazardous substances, pollutants, or contaminants entering the F006 wastestream or otherwise entering the environment? [40 CFR 262.34(g)(1)]		
J.3. Does the o/o ensure the F006 waste is legitimately recycled through metals recovery? [40 CFR 262.34(g)(2)]		
J.4. Does the o/o ensure ≤ 20,000 kg (22 tons) of F006 waste is stored at all times? [40 CFR 262.34(g)(3)] If yes, skip to J.5		
J.4.1. Has the DEQ granted an exception to the accumulation limit? [40 CFR 262.34(i)] *(Note: If no, the facility is regulated as a HW storage facility, subject to the applicable requirements of 40 CFR Part 264/265)*		
J.5. Does the o/o ensure each container storing F006 waste meets all container storage requirements? [40 CFR 262.34(g)(4)(i)(A)]		NA
J.6. Does the o/o ensure each tank storing F006 waste meets all tank storage requirements? [40 CFR 262.34(g)(4)(i)(B)]		
J.7. Does the o/o ensure each containment building storing F006 waste meets all containment building requirements? [40 CFR 262.34(g)(4)(i)(C)] If N/A, skip to J.8.		
J.7.1. Does the o/o maintain ONE of the following: *(Identify which standard is met)* ___ a written description of: (1) procedures to ensure F006 waste remains in the building no longer than 180/270 days, (2) waste generation and management practices to demonstrate the 180/270-day limit is respected, and (3) documentation that the procedures are complied with?? [40 CFR 262.34(g)(4)(i)(C)(1)] OR ___ documentation that the unit is emptied at least once every 180/270 days? [40 CFR 262.34(g)(4)(i)(C)(2)]		
J.8. Does the o/o ensure the accumulation start date is clearly marked and visible for inspection on each container of F006 waste? [40 CFR 262.34(g)(4)(iii)]		
J.9. Does the o/o ensure each container and tank of F006 waste is clearly marked with the words "Hazardous Waste?" [40 CFR 262.34(g)(4)(iv)]		
K. Recordkeeping and Reporting		
K.1. Does the o/o maintain a copy of each manifest for at least 3 years? [40 CFR 262.40(a)]		Yes
K.2. Does the o/o maintain a copy of each Biennial Report and Exception Report for at least 3 years? [40 CFR 262.40(b)]		Yes
K.3. Does the o/o maintain a copy of test results, waste analyses, or other determinations for at least 3 years from the date the waste was last shipped to an on-site or off-site TSD facility? [40 CFR 262.40(c)]		Yes
K.4. Does the o/o prepare and submit a Biennial Report to the DEQ by March 1st of each even numbered year, or April 1st if approved by DEQ? [40 CFR 262.41(a)]		Yes
K.5. Does the o/o submit quarterly reports to the DEQ within 60 days of the end of each quarter? [OAC 252:205-5-3(a)]		Yes
K.6. Does the o/o ensure quarterly reports include EACH of the following: (1) the wastestream number from the disposal plan; (2) the EPA ID number of all transporters that transported waste; (3) the EPA ID number of the receiving facility; AND (4) the receiving facility handling codes? [OAC 252:205-5-3(b)]		Yes
K.7. Does the o/o ensure quarterly reports reflect HW treated on-site? [OAC 252:205-5-3(c)]		NA

Regulatory Requirements	Area of Non-compliance	Remarks
K.8. For any wastes shipped outside the United States, does the o/o submit to the DEQ, copies of manifests signed by the receiving facility for those wastes? [OAC 252:205-5-5(b)]		NA
L. Land Disposal Restrictions		
All generators		
L.1. Has the o/o determined if each hazardous waste generated meets the treatment standards of 40 CFR 268.40, 268.45, or 268.49? [40 CFR 268.7(a)(1)]		ok
L.2. For each hazardous waste that *does not* meet the applicable treatment standard, did the o/o include a one-time written notice with the initial shipment of such waste to the designated receiving facility that included EACH of the following: (1) waste codes and manifest number of the shipment; (2) notification that the waste is subject to LDR; (3) constituents of concern for F001-F005 and F039 wastes; (4) identification of underlying hazardous constituents; (5) applicable wastewater/non-wastewater category and subdivisions; (6) waste analysis data, when available; (7) required information regarding hazardous debris (if applicable); AND (8) required information regarding contaminated soil (if applicable)? [40 CFR 268.7(a)(2)]		ok
L.3. For each hazardous waste that *does* meet the applicable treatment standard, did the o/o include a one-time written notice with the initial shipment of such waste to the designated receiving facility that included EACH of the following: (1) waste codes and manifest number of the shipment; (2) notification that the waste is subject to LDR; (3) constituents of concern for F001-F005 and F039 wastes; (4) identification of underlying hazardous constituents; (5) applicable wastewater/non-wastewater category and subdivisions; (6) waste analysis data, when available; (7) required information regarding contaminated soil (if applicable); AND (8) required certification? [40 CFR 268.7(a)(3)]		ok
L.4. For each hazardous waste the o/o chose *not* to determine whether the waste met the treatment standard, did the o/o EITHER: *(Identify which standard is met)* X comply with item L.2. OR ___ provide a one-time written notice with the initial shipment that included (1) the waste codes and manifest number of the first shipment and (2) a certification stating, "This hazardous waste may or may not be subject to the LDR treatment standards. The treatment facility must make this determination." [40 CFR 268.7(a)(2)]		JR
L.5. Does the o/o maintain supporting data for his determination of the LDR status for each hazardous waste generated? [40 CFR 268.7(a)(6)]		ok JR
L.6. Does the o/o maintain copies of LDR notifications and supporting documents on site for at least 3 years after the waste was last shipped off-site? [40 CFR 268.7(a)(8)]		
Standards for generators who treat waste onsite to meet LDR standards		
L.7. Has the o/o developed a written waste analysis plan that meets EACH of the following requirements: (1) describes the procedures to be used to meet the treatment standards; (2) is based on a detailed chemical/physical analysis of a representative sample of the waste; (3) contains all information necessary to treat the waste; AND (4) is maintained in the facility files? [40 CFR 262.34(a)(4) → 268.7(a)(5)]		WA
L.8. Does the o/o perform EACH of the following for those treated wastes that are shipped off-site for disposal: (1) provide a one-time written notice that contains all of the required information to the receiving disposal facility; (2) include the required certification on the notice; (3) maintain a copy of the notice in the operating record; (4) submit a new notice and certification to the disposal facility if the waste changed; AND (5) maintain a copy of the new notice and certification in the operating record? [40 CFR 262.34(a)(4) → 268.7(a)(5)(iii) → 268.7(a)(3)]		NA
L.9. Did the o/o place a notice that included EACH of the following in the facility operating record: (1) name and address of the Subtitle D facility receiving the waste; (2) description of waste as generated, to include applicable waste codes, treatability groups, and underlying hazardous constituents; (3) signature of an authorized representative; AND (4) certification found at 40 CFR 268.7(b)(4) {or (b)(4)(iv), if applicable}? [40 CFR 268.9(d)]		NA

Oklahoma Department of Environmental Quality
LARGE QUANTITY GENERATOR INSPECTION REPORT

EPA ID# OKR000000 6/2
DATE 5-6-14

Regulatory Requirements	Area of Non-compliance	Remarks
M. Used Oil Requirements *(Identify each used ail management pracess canducted & approximate amaunt stored)* ___ *Generatar* ___ *Transporter* ___ *Used oil fuel marketer* _____ *gallons/drums*		
Rebuttable presumptian		
M.1. Does the o/o determine the total halogen concentration of used oil generated by the facility? [40 CFR 279.21(b)] *(Identify methad: ___ testing ___ knawledge af pracess)*		NA does not generate used oil.
M.2. If the total halogen > 1,000 ppm, does the o/o manage the used oil as hazardous waste? [40 CFR 279.21(b)] If yes, skip to M.3.		
M.2.1. Has the o/o demonstrated that the used oil does not contain significant quantities of halogenated hazardous constituents? [40 CFR 279.21(b)] *(**Note:** If na, the used ail must be managed as a hazardaus waste)*		
Used Oil Storage		
M.3. Does the o/o store used oil in accordance with appropriate Spill Prevention, Control, and Countermeasures requirements (e.g. containment/diversionary structures such as dikes, berms, or retaining walls sufficiently impervious to contain oil; curbing; culverting, gutters, or other drainage systems; weirs, booms, or other barriers; spill diversion ponds; retention ponds; or sorbent materials)? [40 CFR 279.22 → 40 CFR 112.7(c)(1)]		NA
M.4. Does the o/o store used oil only in tanks, containers, or units subject to regulation under 40 CFR 264/265? [40 CFR 279.22(a)]		
M.5. Does the o/o ensure containers and above-ground tanks storing used oil are in good condition and not leaking? [40 CFR 279.22(b)]		
M.6. Does the o/o ensure containers and above-ground tanks storing used oil are marked with the words "Used Oil?" [40 CFR 279.22(c)(1)]		
M.7. Does the o/o ensure fill pipes that transfer used oil to underground storage tanks are marked clearly with the words "Used Oil?" [40 CFR 279.22(c)(2)]		
M.8. In the event of a release of used oil, did the o/o perform each of the following: (1) stop the release; (2) contain the released used oil; (3) clean up and properly manage the released used oil and other materials; AND (4) repair or replace any leaking used oil tanks or containers prior to placing them back into service? [40 CFR 279.22(d)] *(Identify date and quantity af release, if knawn)*		
On-site burning in space heaters *(**Note:** Only applies if burning used oil in on-site space heaters)*		
M.9. Does the o/o only burn used oil generated by the facility or used oil received from household do-it-yourself used oil generators? [40 CFR 279.23(a)]		
M.10. Is the space heater designed to have a maximum capacity of ≤ 0.5 million BTU/hr? [40 CFR 279.23(b)]		NA
M.11. Does the o/o ensure heater combustion gasses are vented to the ambient air? [40 CFR 279.23(c)]		
Off-site shipments (Circle each method of off-site shipment used & complete appropriate checklist section) *Self-transportation to appvd collection ctr* *Self-transportation ta aggregation point* *Tolling arrangement* *Other*		
Self-transport to Collection Center		
M.12. Does the o/o self-transport only used oil generated by the facility or used oil received from household do-it-yourself used oil generators? [40 CFR 279.24(a)]		
M.13. Does the o/o self-transport used oil only in vehicles owned by the facility or a facility employee? [40 CFR 279.24(a)(1)]		NA
M.14. Does the o/o ensure no more than 55 gallons of used oil is self-transported at any one time? [40 CFR 279.24(a)(2)]		
M.15. Does the o/o ensure the used oil is self-transported to a used oil collection center that is registered, licensed, permitted, or authorized by a state, county, or local government to manage used oil? [40 CFR 279.24(a)(3)]		
Self-transport to Aggregation Point		
M.16. Does the o/o self-transport only used oil generated by the facility? [40 CFR 279.24(b)]		
M.17. Does the o/o self-transport used oil only in vehicles owned by the facility or a facility employee? [40 CFR 279.24(b)(1)]		NA
M.18. Does the o/o ensure no more than 55 gallons of used oil is self-transported at any one time? [40 CFR 279.24(b)(2)]		
M.19. Does the o/o ensure the used oil is self-transported to an aggregation point that is owned and/or operated by the facility? [40 CFR 279.24(b)(3)]		

Regulatory Requirements	Area of Non-compliance	Remarks
Tolling Arrangement		
M.20. Does the tolling arrangement identify the type of used oil and frequency of shipments? [40 CFR 279.24(c)(1)]		
M.21. Does the tolling arrangement state that the vehicle used to transport the used oil to the processor/re-refiner is owned and operated by the processor/re-refiner? [40 CFR 279.24(c)(2)]		
M.22. Does the tolling arrangement state that the vehicle used to transport the recycled oil back to the generator is owned and operated by the processor/re-refiner? [40 CFR 279.24(c)(2)]		NA
M.23. Does the tolling arrangement state that the reclaimed oil will be returned to the generator? [40 CFR 279.24(c)(3)]		
M.24. Does the o/o comply with the tolling arrangement requirements identified above?		
M.25. Does the o/o ensure the reclaimed used oil is used as a lubricant, cutting oil, or coolant? [40 CFR 279.24(c)]		
Other		
M.26. Does the o/o only use used oil transporters that have an EPA ID number? [40 CFR 279.24]		
M.27. Does the o/o self-transport used oil in quantities ≤ 55 gallons OR only to collection centers/aggregation points identified above? If yes, skip to Section N.		
M.27.1. Does the o/o ensure used oil is delivered to ONLY: (1) another used oil transporter that has an EPA ID number; (2) a used oil processing/re-refining facility that has an EPA ID number; (3) an off-specification used oil burner that has an EPA ID number; OR (4) an on-specification used oil burner? [40 CFR 279.43(a)]		
M.27.2. Does the o/o determine whether the used oil being transported has a total halogen content above or below 1,000 ppm? [40 CFR 279.44(a)]		NA
M.27.3. Does the o/o maintain records of each used oil shipment? [40 CFR 279.46(a)]		
M.27.4. Do the shipping records contain EACH of the following: (1) the facility name and address; (2) facility EPA ID number; (3) transporter EPA ID number; (4) destination facility EPA ID number; (5) quantity of used oil; (6) signature of the used oil generator and transporter; (7) date of shipment; (8) date of delivery to destination facility; AND (9) signature of destination facility representative? [40 CFR 279.46(a) & (b)]		
M.27.5. Does the o/o maintain shipping records for at least three years? [40 CFR 279.46(d)]		
N. Universal Waste Requirements *(Identify each universal waste managed)* ___ *Batteries* ___ *Pesticides* ___ *Mercury-containing equipment* ___ *Lamps* *(Identify universal waste handler status)* ___ *Small Quantity Handler (SQH, < 5,000 kg accumulated at one time)* ___ *Large Quantity Handler (LQH, ≥ 5,000 kg accumulated at any one time)*		
N.1. Does the o/o have an EPA ID number? [40 CFR 273.32 (LQH only)]		NA does Mercury
N.2. Does the o/o ensure containers of universal waste are compatible with the type of universal waste managed in the container? [40 CFR 273.13 (SQH)/273.33 (LQH)]		Also lamps
N.3. Does the o/o label or mark each container of universal waste with the words "Universal Waste ___," "Waste ___," or "Used ___?" [40 CFR 273.14 (SQH)/273.34 (LQH)]		
N.4. Does the o/o store universal wastes for less than one year? [40 CFR 273.15(a) (SQH)/273.35(a) (LQH)] If yes, skip to N.5.		
N.4.1. Is the extended storage time solely to allow the facility to accumulate quantities of universal waste to facilitate proper off-site management? [40 CFR 273.15(b) (SQH)/273.35(b) (LQH)]		
N.4.2. Did the o/o fully document the need for the extended storage time? [40 CFR 273.15(b) (SQH)/273.35(b) (LQH)]		
N.5. Is the o/o able to demonstrate the amount of time universal wastes have accumulated (such as through labeling containers, maintaining an inventory system, handling universal wastes separately from other wastes, or another method that clearly identifies the amount of time they have accumulated)? [40 CFR 273.15(c) (SQH)/273.35(c) (LQH)]		
N.6. Has the o/o provided training to employees in management of universal wastes? [40 CFR 273.16 (SQH)/273.36 (LQH)]		

Regulatory Requirements	Area of Non-compliance	Remarks
N.7. Has the o/o prevented a release of universal waste or their residues? If yes, skip to N.8.		
N.7.1. Did the o/o immediately contain all releases? [40 CFR 273.17(a) (SQH)/273.37(a) (LQH)]		
N.7.2. Did the o/o determine if materials resulting from the release are hazardous waste and properly manage, if so? [40 CFR 273.17(b) (SQH)/273.37(b) (LQH)]		
N.8. Does the o/o ensure universal wastes are shipped only to another universal waste handler, a destination facility, or a foreign destination? [40 CFR 273.18(a) (SQH)/273.38(a) (LQH)]		NA
N.9. Does the o/o ensure universal wastes shipped off-site are packaged, labeled, marked, and placarded in accordance with applicable Department of Transportation regulations? [40 CFR 273.18(c) (SQH)/273.38(c) (LQH)]		
N.10. Does the o/o maintain records of each off-site shipment of universal waste? [40 CFR 273.39(b) (LQH only)] *(Identify the number of shipping records examined ___)*		
N.10.1. Does the o/o ensure off-site shipment records contain EACH of the following: (1) name and address of the receiving facility; (2) quantity of each type of universal waste shipped; AND (3) the date the shipment left the facility? [40 CFR 273.39(b) (LQH only)]		
N.10.2. Does the o/o maintain records of off-site shipments for at least 3 years from the date of shipment? [40 CFR 273.39(c) (LQH only)]		
O. Non-Hazardous Waste Management		
O.1. Does the o/o ensure all non-RCRA waste, if disposed in Oklahoma, is disposed at a facility permitted by the DEQ to accept such waste? [27A O.S. §2-10-301(A)(1)]		
O.2. If the o/o disposes of > 10 yd^3 per month of non-hazardous industrial waste (NHIW) at an Oklahoma solid waste disposal facility, complete the following.		ok
O.2.1. Has the o/o submitted an NHIW notification/certification to the DEQ for each NHIW to be disposed in Oklahoma? [OAC 252:515-31-2(a)]		
O.2.2. Does the notification/certification meet the requirements of OAC 252:515, Appendix G or contain equivalent information? [OAC 252:515-31-3(b)]		

INSPECTION TYPE (check each that applies)

[X] **Routine RCRA Compliance Evaluation Inspection**
[ ] **Limited RCRA Compliance Evaluation Inspection (Circle items inspected)**
[ ] **CEI Follow-up (Circle items inspected)**
[ ] **Order Follow-up (Case No./Date_____) (Circle items inspected)**
[ ] **Citizen Complaint (Complaint #_____)**

Comments:
Area of Concern: 2 of 14 drums were not dated with accumulation start date - 1 drum missing label. Photograph drums with date and drum with label. Train employees who deal with MEK waste.

Oklahoma Department of Environmental Quality
LARGE QUANTITY GENERATOR INSPECTION REPORT

EPA ID# OKR 000006812
DATE 5-6-14

I have completed an inspection of your facility to evaluate compliance with the Oklahoma Hazardous Waste Management Act (27A O.S. § 2-7-101, *et seq.*), the Oklahoma Hazardous Waste Management regulations (OAC 252:205), the federal hazardous waste management regulations (40 CFR Parts 260 – 279), and certain portions of the Oklahoma Solid Waste Management regulations (OAC 252:515).

[X] Based on this inspection, it appears your facility is in compliance with all applicable regulations and statutes that were evaluated, and no further action is required. However, if additional review of the facts established during the inspection reveals areas of non-compliance, I will notify you in writing.

[ ] Items marked as "Area of Non-compliance" represent requirements where I have identified the facility to not be in compliance with the applicable statute or regulation. ***Please correct each area of non-compliance and submit documentation to me demonstrating compliance no later than*** _____. If further review of the facts established during this inspection reveals additional areas of non-compliance or that a violation was identified in error, I will notify you in writing. If you believe I have identified an area of non-compliance in error or if additional time is needed, please submit supporting documentation or a request for an extension within this same period.

This Notice in no way limits the DEQ's authority to pursue additional enforcement such as, but not limited to, an Administrative Order and/or assessment of penalties, based on the nature or gravity of violations found, failure to respond to this Notice, or otherwise in accordance with its statutory authority.

If you have any questions regarding this Notice, please contact me.

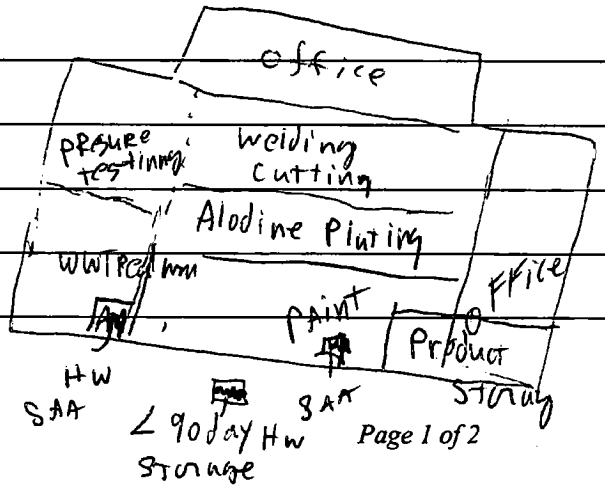
HAZARDOUS WASTE INSPECTION RECORD

Facility Information:			
Name: Limco Airepair	EPA ID #: OKR000006612	Disposal Plan #: 72 8097	Date: 5-6-12
Physical Address: 5304 S. Lawton	City: Tulsa	Zip: 74107	
Mailing Address: "	City: Tulsa	State and Zip: OK 74107	
County: Tulsa	Phone #: (918) 445-2210	# of Employees: 167	Years at Site: 15 + Yrs
Ownership: ISRAEL Based KMN Holdings and TAT technologies			
Facility Representative(s), Title(s): Bill Williams EHS Director			

Description of the Facility's Operations and Plant:

Limco Airepair Manufactures heat transfer Components for aerospace And various Military industries. products include heat exchngers, Precoolers, Airconditioners, fuel heater, and de mineralization systems used in airlines, electronics and maintenance Stations. operations are primarily Metal fabrication le grinding, welding, Cutting and threading metal components in the manufacture of Heat exchange Systems. other operations include painting, pressure testing and impregnating finished Products with alodine to examine any defects or weakness in their finished product to avoid inflight failures. facility has several HAZ waste Satelite Accumulation Areas and one less than 90 day Storage Area



Waste Streams:			
DESCRIBE EACH WASTE STREAM GENERATED INCLUDING THE PRODUCTION PROCESS	**GENERATION RATES**	**EPA WASTE CODES**	**DISPOSITION** *(include receiving facility's EPA ID#)*
Waste Paint/Solvent	2,000 lbs/month	D001, D035 F003 F005	Rhinco ARD981057870
TRIchlorethylene	500 lbs/month	D040, F001 F005	Rhinco ARD 981 057870
Acid WASTE	700 lbs/month	D002, D006 D007	Rhinco ARD981057870
Alkaline WASTE	200 lbs/month	D002, D007 D010	Rhinco ARD 981057870
Scrap Metal	- unknown -	NA	Bore Compressed Steel
Alodine Waste water	- unknown -	NA - pretreated on site, discharged and monitored By TULSA Waste water See photo log	

Comments:

Good Facility One area of concern, Identify and label Containers in Storage Area. HAZwaste labels are Subject to Weathering and need to Be Maintained So label does not fall of Container.

Weekly RCRA Inspection Compliance Summary

04-03-2014

Hazmat Pad: Three white containers, two 55 gal drums & wood box of unidentified chemicals for disposition placed on hazmat pad.

Hazmat Pad: Drum of D12-05 13 outside storage does not have the Hazardous Waste Label. (Twelfth week)

Outside Storage: Four drums of Diesel Fuel #2 not on spill containment pallet. (Tenth Week)

Compressor Room: Drum of Brayco Micronic 889 not in proper place. (Ninth Week)

Compressor Room: Drum of Trichloroethylene not in proper place. (Ninth week)

Compressor Room: Drum of MEK not in proper place. (Second week)

Weekly RCRA Inspection Compliance Summary

04-10-2014

Hazmat Pad: Three white containers, two 55 gal drums & wood box of unidentified chemicals for disposition placed on hazmat pad.

Hazmat Pad: Drum of D12-05 13 outside storage does not have the Hazardous Waste Label. (Thirteenth week)

Hazmat Pad: Two drums of Caustic Soda & a bag of Ammonium Bifuoride not on spill containment pallet & not in proper place.

Hazmat Pad: Drum of Sulfuric Acid not on spill containment pallet & not in proper place.

Hazmat Pad: Drum of 4-2-14 MEK/Epoxy/Toluene not on containment pad.

Outside Storage: Four drums of Diesel Fuel #2 not on spill containment pallet. (Eleventh Week)

Compressor Room: Drum of Brayco Micronic 889 not in proper place. (Tenth Week)

Compressor Room: Drum of Trichloroethylene not in proper place. (Tenth week)

Compressor Room: Two pink drums of Cimcool Mildraw not in proper place.

Compressor Room: Drum of MEK not in proper place. (Third week)

Weekly RCRA Inspection Compliance Summary

04-17-2014

Hazmat Pad: Three white containers, two 55 gal drums & wood box of unidentified chemicals for disposition placed on hazmat pad.

Hazmat Pad: Drum of D12-05 13 outside storage does not have the Hazardous Waste Label. (Fourteen weeks)

Hazmat Pad: Drum steel and one pasteboard drum marked Aluminum Oxide needs a Hazardous waste label.

Flammable Pad: Pink drum of Mildraw not on pad.

Outside Storage: Drum of D1-6-14 ATP & drum of D4-17-14 ATP not in proper place.

Outside Storage: Four drums of Diesel Fuel #2 not on spill containment pallet. (Twelfth Week)

Outside Storage: Four drums of Diesel Fuel #2 not on spill pallets.

Outside Storage: Drum of MEK waste not in proper place.

Compressor Room: Drum of Brayco Micronic 889 not in proper place. (Eleven Weeks)

Compressor Room: Drum of Trichloroethylene not in proper place. (Eleven weeks)

Report Description

The RCRA Site Detail report provides "all available details" from the handler module and summarized information from the waste activity monitoring module for one RCRA site. The report integrates National Biennial RCRA Hazardous Waste Report data with Site Identification data.

Details reported about the RCRA site include basic handler module information; the standard suite of universes; information about each source record received for the facility, including basic information, location and mailing address, source record and permit contact person (including historical records), list of NAICS codes, complete list of regulated waste activities; and summarized National Biennial RCRA Hazardous Waste Report information by reporting cycle year, including quantity totals (generated, managed, shipped, received), and top ten GM forms by quantity generated. Top ten GM form list shows reported waste description, quantities, onsite and offsite system types, and EPA and State waste codes.

Information listed for the RCRA site can be limited by latest historical information and most recent BR cycle.

Data is sorted by the most recent Received Date. If more than one record has the same Received Date, the data is sorted by Source Type (I-Implementer; N-Notification, B-Biennial Report with Subsequent Notification, R-Biennial Report, A-Part A, T-Temporary, E-Emergency).

List of Hazardous Waste Code Descriptions

Please run the lookup table report for LU_WASTE_CODES for description of federal and state waste codes in this report.

List of Handler Universe Abbreviations

Active	Active Status – Indicates that the facility could be subjet to the federal RCRA, Subtitle C or a state's authorized hazardous waste program. This definition has no legally enforceable or binding determination about the status of a particular site or the oblications of an owner or operator.
Commercial TSDF	Commercial TSDF – Indicates that the facility is a commercial operator of treating, storing and disposing of hazardous waste.
EI Indicator (HE/GW)	Environmental Indicator (Human Exposure/Groundwater Release) – Indicates that the facility has controls in place for Environmental Indicators. HE - Human Exposures ('+' indicates the exposure exists and is under control; '-' indicates the exposure exists and is not under control; 'N' indicates the exposure does not exist). GW - Groundwater Release ('+' indicates the exposure exists and is under control; '-' indicates the exposure exists and is not under control; 'N' indicates the exposure does not exist).
Federal Generator	Federal Generator Status – Indicates the regulatory status of the site as determined by the quantity and/or toxicity of hazardous wastes generated, stored or accumulated over a specified period of time.
HSM	HSM – Indicates that the facility manages hazardous secondary material(s) (e.g. spent material, by-product or sludge) that when discarded, would be identified as hazardous waste.
IC In Place	Institutional Controls in Place -- Indicates that the facility has Institutional Controls in place ('Y' indicates that the facility is in the universe).
Importer	Importer – Indicates that the facility imports hazardous waste into the United States from a foreign country.
Mixed Waste Generator	Mixed Waste Generator – Indicates that the facility is a generator or TSDF that handles waste mixed with nuclear source, special nuclear or by-product material.
Operating TSDF	Operating TSDF – Indicates that the facility is a Treatment, Storage or Disposal facility subject to any type of enforcement. It then specifies the type of facility (L - Land Disposal; I - Incinerator; B - BIF; S - Storage; T - Treatment).
Short Term Generator	Short Term Generator – Indicates that the facility is a short term or one time event generator and not generating from ongoing processes.
State Generator	State Generator Status – Indicates the regulatory status of the site in view of implementing the State's "broader in scope" or "more stringent than" rules. Although an implementing State might use terms that differ for their generators these terms would be translated to match the Federal regulatory term.
Transporter	Transporter – Indicates that the facility is engaged in the off-site transportation of hazardous waste. ('Y' indicates that the facility is in this universe).
Subpart K/College	Subpart K/College or University – Indicates facility has opted into the subpart k laboratory rule as a college or university.
Subpart K/Hospital	Subpart K/Teaching Hospital – Indicates facility has opted into the subpart k laboratory rule as a teaching hospital.
Subpart K/Non-profit	Subpart K/Non-profit Research Institute – Indicates facility has opted into the subpart k laboratory rule as a non-profit research institute.
Subpart K/Withdrawal	Subpart K/Withdrawal from Rule – Indicates facility has withdrawn from the subpart k laboratory rule.

This report may contain enforcement sensitive data.

RE: TURCO Sample Order No.: 1311184

Dear Bill Williams:

Green Country Testing, Inc. received 1 sample(s) on 11/14/2013 for the analyses presented in the following report.

In accordance with your instructions, Green Country Testing conducted the analysis shown on the following pages on samples submitted by your company. The results relate only to the items tested. Unless otherwise noted, all analysis were conducted using EPA approved methodologies. Test reports meet all the NELAC requirements. All relevant sampling information is on the attached chain-of-custody form. The initials SUB as the analyst designate any testing sub-contracted by Green Country Testing.

Certifications/Accreditation: OK - 7604 - AR - ADEQ - KS - E-10232 - LA - 4002

A scope of Certified/Accredited parameters is available upon request. If you have any questions regarding these tests results, please feel free to call.

Sincerely,

Brian Duzan
Laboratory Director

INSTRUCTIONS

The Disposal Plan is designed for RCRA hazardous waste generators and RCRA regulated materials. Small Quantity Generators and Conditionally Exempt Small Quantity Generators are exempt from the disposal plan requirements (see OAC 252:205-5-3). One disposal plan application should be completed for each waste generated at each plant which is the origination point of hazardous wastes. Approved Disposal Plans will be listed on the Land Protection Division's Web Page: http://www.deq.state.ok.us/LPDnew/DisposalPlan2/DisposalRequest.html

IDENTIFICATION OF WASTE GENERATOR

Generator's EPA ID number for the plant location is required. The disposal plan application will not be processed without this number. Please indicate if the application is for a new plan or an amendment.

Enter business/plant name, address, telephone number, etc., as indicated. If the plant address is identical to the business mailing address, enter "Same". Enter the name and title of the person in charge of the plant or plant contact. The person in charge or plant contact should verify all information submitted and sign and date the disposal plan. **A consultant's or preparer's signature will not be accepted in lieu of generator's signature.**

DETAILED WASTE DESCRIPTION

Enter waste name not the DOT description. This name will be used on the generator's listing to identify the waste stream. Enter all EPA waste codes from 40 CFR 261 SubParts C and/or D applicable to this particular waste stream. Indicate physical and chemical characteristics of this waste. Attach laboratory analysis for this waste stream. For necessary tests see 40 CFR 261, Appendices I through X. Material Safety Data Sheets (MSDS) may be used for off-specification products only.

PROCESS GENERATING WASTE

Provide detailed description of process generating waste. Description must be sufficient to properly characterize the waste and must account for each EPA waste code claimed.

TREATMENT, STORAGE, AND/OR DISPOSAL (TSD) FACILITY INFORMATION

Enter name and telephone number of site receiving waste. Give complete mailing address of TSD facility. Enter site location. Enter facility's EPA ID number. These will be checked against an EPA database to determine the facility's ability to accept this waste. If more than one TSD facility needs to be listed, use the continuation page. http://www.deq.state.ok.us/lpdnew/forms/Haz%20Waste/DPPLANCONTINUATION.pdf

AMENDMENTS TO PREVIOUSLY APPROVED WASTE STREAMS

Reference EPA identification and waste stream numbers in the top portion of the form. Indicate required amendments in the appropriate section(s).

FEES TO BE REMITTED WITH DISPOSAL PLAN APPLICATION (PURCHASE ORDERS ACCEPTABLE - COPY OF PURCHASE ORDER MUST BE SUBMITTED WITH APPLICATION).

Fees for disposal plans are:

Oklahoma Generators		**Out-of-State Generators**	
Processing fee (includes 2 waste streams)	$100.00	Processing fee (includes 2 waste streams)	$100.00
Monitoring and Inspection fee	100.00	Monitoring and Inspection fee	-0-
Each waste stream over two	50.00	Each waste stream over two	50.00

The generator is charged an annual generator fee on the same basis as the above listed fees.
Make checks and purchase orders payable to the Oklahoma Department of Environmental Quality.

AMENDMENTS

When adding waste streams to an existing plan, submit a $50.00 fee for each waste stream. There is no charge for adding or deleting information on waste streams.

ONE-TIME DISPOSAL FEES

If the generator has an existing disposal plan, the fee for a one-time disposal is $50.00 per waste stream. If there is no existing plan, the fee for Oklahoma and out-of-state generators is $100.00 for the first two waste streams and $50.00 for each additional waste stream.

Attach generator fees, if required, and mail to

PS Form 3800, August 2006 See Reverse for Instructions

Certified Mail Provides:

- A mailing receipt
- A unique identifier for your mailpiece
- A record of delivery kept by the Postal Service for two years

Important Reminders:

- Certified Mail may ONLY be combined with First-Class Mail® or Priority Mail®
- Certified Mail is *not* available for any class of international mail.
- NO INSURANCE COVERAGE IS PROVIDED with Certified Mail. For valuables, please consider Insured or Registered Mail.
- For an additional fee, a *Return Receipt* may be requested to provide proof of delivery. To obtain Return Receipt service, please complete and attach a Return Receipt (PS Form 3811) to the article and add applicable postage to cover the fee. Endorse mailpiece "Return Receipt Requested". To receive a fee waiver for a duplicate return receipt, a USPS® postmark on your Certified Mail receipt is required.
- For an additional fee, delivery may be restricted to the addressee or addressee's authorized agent. Advise the clerk or mark the mailpiece with the endorsement *"Restricted Delivery"*.
- If a postmark on the Certified Mail receipt is desired, please present the article at the post office for postmarking. If a postmark on the Certified Mail receipt is not needed, detach and affix label with postage and mail.

IMPORTANT: Save this receipt and present it when making an inquiry.

PS Form 3800, August 2006 *(Reverse)* PSN 7530-02-000-9047

SENDER: *COMPLETE THIS SECTION*

- Complete items 1, 2, and 3. Also complete item 4 if Restricted Delivery is desired.
- Print your name and address on the reverse so that we can return the card to you.
- Attach this card to the back of the mailpiece, or on the front if space permits.

Part I - Declaration of Filer

I certify under penalty of law that the information shown on my 2013 Hazardous Waste Report, which I filed electronically, and that this document and all attachments were prepared under my direction or supervision, in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted, is correct and current. Based on my inquiry of the person or persons who manage the system or those directly responsible for gathering the information, the information submitted is to the best of my knowledge and belief, true, accurate and complete. I am aware that there are significant penalties under Section 3008 of the Resource Conservation and Recovery Act for submitting false information, including the possibility of fine and imprisonment for known violations.

Part II- Signature of Certification

Last Name: WILLIAMS First Name: BILL Title: DIRECTOR OF FACILITIES

Signature: Date: 02/07/2014

Part III - Method of File Transmittal

____CD

__X__ARM Web Site

** Note: This is not the 2013 Annual Hazardous Waste Report. Only file this form if you submitted your 2013 Annual Hazardous Waste Report electronically. This form alone does not constitute submittal of the 2013 Hazardous Waste Report but is required for all methods of electronic submission of the report.

Submit Date: 02/10/2014

SEND COMPLETED FORM TO: The Appropriate State or EPA Regional Office	United States Environmental Protection Agency **RCRA SUBTITLE C SITE IDENTIFICATION FORM (2013)**
1. Reason for Submittal MARK ALL BOX(ES) THAT APPLY	**Reason for Submittal:** ☐ To provide an Initial Notification (first time submitting site identification information / to obtain an EPA ID number for this location) ☐ To provide Subsequent Notification of Regulated Waste Activity (to update site identification information). ☐ As a component of a First RCRA Hazardous Waste Part A Permit Application. ☐ As a component of a Revised RCRA Hazardous Waste Part A Permit Application (Amendment # _____). ☒ As a component of the Hazardous Waste Report. (If marked, see sub-bullet below) ☒ Site was a TSD facility and/or generator of >1,000 kg of hazardous waste, >1 kg of acute hazardous waste, or >100 kg of acute hazardous waste spill cleanup in one or more months of the report year (or State equivalent LQG regulations)
2. Site EPA ID Number	**EPA ID Number:** OKR000000612
3. Site Name	**Name:** LIMCO AIREPAIR, INC.
4. Site Location Information	**Street Adress:** 5304 S. LAWTON **City, Town, or Village:** TULSA **County:** OK143 **State:** OK **Country** US **Zip Code:** 74107

	B. Name of Site's Operator: LIMCO AIREPAIR, INC. **Date Became Operator:** 10/01/1995 **Type:** ☒ Private ☐ County ☐ District ☐ Federal ☐ Indian ☐ Municipal ☐ State ☐ Other

10. Type of Regulated Waste Activity
Mark "Yes" or "No" for all current activities (as of the date submitting the form); complete any additional boxes as instructed.

A. Hazardous Waste Activities; Complete all parts 1-7.

Y☒ N☐ **1. Generator of Hazardous Waste**
If Yes, choose only one of the following - a, b, or c.

- ☒ a. LQG: Generates, in any calendar month, 1,000 kg/mo (2,200 lbs./mo.) or more of hazardous waste; or Generates, in any calendar month, or accumulates at any time, more than 1 kg/mo (2.2 lbs./mo) of acute hazardous waste; or Generates, in any calendar month, or accumulates at any time, more than 100 kg/mo (220 lbs./mo) of acute hazardous spill cleanup
- ☐ b. SQG:. 100 to 1,000 kg/mo (220 - 2,200 lbs./mo.) of non-acute hazardous waste; or
- ☐ c. CESQG: Less than 100 kg/mo (220 lbs./mo.) of non-acute hazardous waste

If "Yes" above, indicate other generator activities.

Y☐ N☒ 2 Short-Term Generator (generate from a short-term or onetime event and not from on-going processes). If "Yes", provide an explanation in the Comments

Y☐ N☒ 3. United States Importer of Hazardous Waste

Y☐ N☒ 4. Mixed Waste (hazardous and radioactive) Generator

Y☐ N☒ **5. Transporter of Hazardous Waste**
If Yes, mark all that apply.

- ☐ a. Transporter
- ☐ b. Transfer Facility (at your site)

Y☐ N☒ **6. Treater, Storer, or Disposer of Hazardous Waste (at your site)**
Note: A hazardous waste permit is required for this activity.

Y☐ N☒ **7. Recycler of Hazardous Waste (at your site)**

Y☐ N☒ **8. Exempt Boiler and/or Industrial Furnace**
If Yes, mark each that applies.

- ☐ a. Small Quantity On-site Burner Exemption
- ☐ b. Smelting, Melting, and Refining Furnace Exemption

Y☐ N☒ **9. Underground Injection Control**

Y☐ N☒ **10. Receives Hazardous Waste from Off-site**

B. Universal Waste Activities; Complete all parts 1-2.

Y☐ N☒ **1. Large Quantity Handler of Universal Waste (accumulate 5,000 kg or more) [refer to your State regulations to determine what is regulated]. Indicate types of universal waste managed at your site.**
If "Yes", mark all boxes that apply:

- a. Batteries ☐
- b. Pesticides ☐
- c. Mercury containing equipment ☐
- d. Lamps ☐
- e. Other (specify) _____ ☐
- f. Other (specify) _____ ☐
- g. Other (specify) _____ ☐

Y☐ N☒ **2. Destination Facility for Universal Waste**
Note: A hazardous waste permit may be required for this

C. Used Oil Activities; Complete all parts 1-4.

Y☐ N☒ **1. Used Oil Transporter**
If Yes, mark each that applies.

- ☐ a. Transporter
- ☐ b. Transfer Facility

Y☐ N☒ **2. Used Oil Processor and/or Re-refiner**
If Yes, mark each that applies.

- ☐ a. Processor
- ☐ b. Re-refiner

Y☐ N☒ **3. Off-Specification Used Oil Burner**

Y☐ N☒ **4. Used Oil Fuel Marketer**
If Yes, mark each that applies.

- ☐ a. Marketer Who Directs Shipment of Off-Specification Used Oil to Off-Specification Used Oil Burner
- ☐ b. Marketer Who First Claims the Used Oil Meets the Specifications

D. **Eligible Academic Entities with Laboratories-Notification for opting into or withdrawing from managing laboratory hazardous wastes pursuant to 40 CFR Part 262 Subpart K**

You must check with your State to determine if you are eligible to manage laboratory hazardous wastes pursuant to 40 CFR Part 262 Subpart K

☐ 1. Opting into or currently operating under 40 CFR Part 262 Subpart K for the management of hazardous wastes in laboratories
See the item-by-item instructions for definitions of types of eligible academic entities. Mark all that apply:

- ☐ a. College or University
- ☐ b. Teaching Hospital that is owned by or has a formal written affiliation agreement with a college or university
- ☐ c. Non-profit Institute that is owned by or has a formal written affiliation agreement with a college or university

☐ 2. Withdrawing from 40 CFR Part 262 Subpart K for the management of hazardous wastes in laboratories

11. Description of Hazardous Wastes

A. Waste Codes for Federally Regulated Hazardous Wastes.

Please list the waste codes of the Federal hazardous wastes handled at your site. List them in the order they are presented in the regulations (e.g., D001, D003, F007, U112). Use an additional page if more spaces are needed.

D001, D002, D003, D006, D007, D010, D035, D040, F001, F003, F005

B. Waste Codes for State-Regulated (i.e., non-Federal) Hazardous Wastes.

Please list the waste codes of the State-regulated hazardous wastes handled at your site. List them in the order they are presented in the regulations. Use an additional page if more spaces are needed for waste codes.

EPA ID Number: OKR000000612

12. Notification of Hazardous Secondary Material (HSM) Activity

Y☐ N☒ Are you notifying under 40 CFR 260.42 that you will begin managing, are managing, or will stop managing hazardous secondary material under 40 CFR 261.2(a)(2)(ii), 40 CFR 261.4(a)(23), (24), or (25)?

If "Yes", you must fill out the Addendum to the Site Identification Form: Notification for Managing Hazardous Secondary Material.

13. Comments

14. Certification

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

P.O. BOX 1677
OKLAHOMA CITY, OKLAHOMA 73101-1677

Date JAN 14 2000 Permit No. 99-026-O

Limco Airepair,

having complied with the requirements of the law, is hereby granted permission to operate a facility to manufacture and repair aircraft parts at 5304 S. Lawton Avenue, Tulsa, Tulsa County, Oklahoma,

subject to the following conditions, attached:

[X] Standard Conditions

[ ] Standard Conditions for EPA New Source Performance Standards

[X] Specific Conditions

Chief Engineer, Air Quality Division

DEQ Form 885
Revised 7/93

PERMIT TO OPERATE
AIR POLLUTION CONTROL FACILITY
STANDARD CONDITIONS

1. This is a permit to operate in accordance with and under the authority of the Oklahoma Clean Air Act and the rules promulgated thereunder. It is subject to periodic review and change as deemed necessary to fulfill the intent and purposes of the Act and rules. It does not relieve the holder of the obligation to comply with other applicable federal, state, or local statutes, regulations, rules, or ordinances.

2. If any statement or representation in the application is found to be incorrect, this permit may be revoked and the permittee thereupon waives all rights thereunder; however, the application may be amended and a supplemental written permit issued.

3. Any modification of operating procedures from those for which this permit was issued which results in an increase in emission of air contaminants without notification of Air Quality shall be grounds for revocation of this permit.

4. Any agent of the Oklahoma Department of Environmental Quality shall have the right and authority to inspect, at reasonable times, the operation of the equipment for which this permit is issued.

5. This permit shall not be considered in any manner affecting the title of the premises upon which the equipment is located and does not release the permittee from any liability for damage to persons or property caused by or resulting from the maintenance or operation of the equipment for which this permit is issued.

6. In compliance with the Excess Emission and Malfunction Reporting Requirements of OAC 252:100-9, the permittee shall notify Air Quality, phone (405) 702-4100, of the occurrence as soon as practical during normal office hours and no later than the next working day. Further notice shall be tendered in writing within ten (10) business days.

7. This permit is valid for operations only at the specific location listed. Operation of minor sources at another location within Oklahoma requires a Relocation Permit from Air Quality. Major sources are not eligible for Relocation Permits.

8. Notification of the sale or transfer of ownership of this facility shall be postmarked within 10 days after such date.

PERMIT TO OPERATE
AIR POLLUTION CONTROL FACILITY
SPECIFIC CONDITIONS

LIMCO Airepair **Permit No. 99-026-O**
Aircraft Subassembly Manufacturing and Repair

The permittee is authorized to operate in conformity with the specifications submitted to Air Quality on April 23, 1999, with supplemental information received June 10, July 29, and December 3, 1999. The Evaluation Memorandum dated January 11, 2000, explains the derivation of applicable permit requirements and estimates of emissions; however, it does not contain operating limitations or permit requirements. Continuing operations under this permit constitutes acceptance of, and consent to, the conditions contained herein.

1. Points of emission include the drying ovens, cleaning, degreasing and coating areas. Emissions from all sources are below *de minimis* and only the vapor degreaser requires permit conditions.

2. No discharge of greater than 20% opacity is allowed except for short-term occurrences which consist of not more than one six-minute period in any consecutive 60 minutes, not to exceed three such periods in any consecutive 24 hours. In no case shall the average of any six-minute period exceed 60% opacity.

3. The degreaser is subject to NESHAP (40 CFR 63) Subpart T, Standards for Halogenated Solvent Cleaning, as published in the Federal Register on December 2, 1994, and shall be in compliance with this federal NESHAP, specifically with Option 1 of Table 1 of 40 CFR §63.463. All required reports shall be sent to the DEQ Regional Office at Tulsa.

4. The permittee shall comply with the following outlined provisions for operation of the degreaser, which are further detailed in OAC 252:100-39-42(b).

a) The unit door shall operate easily and without disturbing the vapor zone.

b) The unit shall have safety switches to shut off sump heat if the coolant is not circulating or exceeds the recommended level.

c) The unit shall have one or more of certain control devices or techniques, including a freeboard ratio not less than 0.75, a chiller, enclosed design, carbon adsorption, or any system whose efficiency is at least equal to any of the first four listed.

d) A conspicuous label summarizing the operating procedures shall be permanently attached to the unit. At a minimum, this label shall include all of the provisions described in OAC 252:100-39-42(b)(2).

5. All records necessary to demonstrate compliance with permit conditions shall be maintained on-site or at a readily accessible location and shall be available for review by regulatory personnel during normal business hours. Such records include, but are not necessarily limited to, the following.

a) Records sufficient to demonstrate that the facility continues in *de minimis* status, exclusive of the vapor degreaser.

b) Degreaser records required by Specific Condition #3.

OKLAHOMA DEPARTMENT OF ENVIRONMENTAL QUALITY
AIR QUALITY DIVISION

MEMORANDUM **January 11, 2000**

TO: Dawson Lasseter, P.E., Chief Engineer, Air Quality

THROUGH: Dave Dimick, P.E., Supervisor, Existing Source Permits Unit
Richard Kienlen, P.E., Interim Supervisor, New Source Permits Unit

THROUGH: Peer Review

FROM: Herb Neumann
DEQ Regional Office at Tulsa

SUBJECT: Evaluation of Permit Application No. **99-026-O**
Limco-Airepair, Inc.
Aerospace Component Manufacture and Repair
5304 S. Lawton Avenue, Tulsa, Tulsa County

The applicant has requested an applicability determination, or a permit if needed, for this existing facility. The facility manufactures and repairs heat exchanger and oil cooler components for the aerospace industry (SIC 3728). The facility commenced operations in 1995 and has never been permitted.

PROCESS DESCRIPTION

There are three process lines at this facility.
The Aero Duct process handles plenum ducts. They are processed through a clean line, go through an allodine process, and are painted. Allodine is a process to plate aluminum parts, involving a nitric/chromic acid bath. It is not heated and does not use electric current. The clean line involves various acids and caustics, none of which is emitted in significant amounts. A tabulation of paint, primers and solvents is found in the Emission Calculations section below.

The repair process handles heat exchangers and oil coolers. Repairs are made by welding as appropriate and the units are pressure tested for leaks using coolants, oils, mineral spirits and isopropyl alcohol. Parts are run through the clean line as above and then dried in an oven to remove any residual moisture. Less than 5% of all parts are painted, some are allodined, and some are shipped out for aluminum coating.

The manufacturing process builds heat exchangers and oil coolers. Sheet stainless steel is cut to form fins that are cleaned with MEK and then run through the degreaser. The degreaser uses trichloroethylene, a state-listed Category A toxic air contaminant and federally-listed hazardous air pollutant. These fins are then welded and shaped into heat exchangers and oil coolers. The units are then pressure tested as above and all subsequent steps are duplicated as indicated in the repair process already discussed.

The paint booth is 12′ × 12′ × 8′ high and uses one HVLP gun with an estimated transfer efficiency of 50%. Some process heat is provided by electricity, but there are three natural gas-fired ovens. The ovens are rated at 0.175, 0.3, and 0.3 MMBTUH, for a total of 0.775 MMBTUH. The vapor degreaser holds 110 gallons of trichloroethylene and has a solvent/air interface of 1,268.5 in^2. The only control device is a 95% efficient exhaust filter on the paint booth. The facility operates 16 hours per day, six days per week, and 52 weeks per year, or 4,992 hours per year.

EMISSION CALCULATIONS

Total rated heat input capacity of all three ovens is 0.775 MMBTUH. Actual fuel consumption for 1998 was 1,036 MMBTU. Maximum possible for continuous operation (8,760 hours) would be 6,789 MMBTU, while the amount consumed in 4,992 listed hours of operation would be 3,869 MMBTU. Combustion emissions are calculated here on a worst-case continuous operations basis, using AP-42 (3/98) Tables 1.4-1 & 2 and assuming 1,000 BTU/CF.

	Factor	Emissions	
Pollutant	lb/MMCF	lb/hr	TPY
NO_x	100	0.08	0.34
CO	84	0.07	0.29
PM_{10}	7.6	0.01	0.03
SO_2	0.6	<.01	<.01
VOC	5.5	<.01	0.02

Purchases of acids and caustics used in the clean lines have been tabulated in the application. Most of the replacement numbers are below any *de minimis* threshold. Much of the material is consumed in the cleaning operations, either through chemical combination with materials presented or through action as a flocculent. Potential emissions are negligible.

Purchases of trichloroethylene for the degreaser amounted to 3.57 tons for 1998. No material was disposed, so emissions are assumed to be equal to purchases. The facility has replaced the cover on this unit and has removed the lip exhaust. Addition of these measures should decrease future emissions to approximately 0.5 TPY.

Materials used in cleaning and wipedown of the parts include 1.88 TPY of MEK, 0.29 TPY of isopropyl alcohol and 0.02 TPY of toluene. Pressure testing uses 0.75 TPY of mineral spirits. The facility used 95 gallons of ten different primers, topcoats and solvents in 1998. A "supercoat" was created by assuming the worst polluting characteristic of each coating. Using this supercoat to represent all coating performed at the facility yields 0.31 TPY of VOC, with a maximum toxic solvent emission of 0.08 TPY of MEK. Assuming transfer and filter efficiencies of zero, a total of 0.36 TPY of particulates are emitted, with a maximum toxic particulate emission of 0.15 TPY of polymeric HDI.

The following table totals all facility VOC emissions, both as stated for 1998 and as inflated for growth. Combustion emissions were calculated at 8,760 hours, so they are already maximized. Degreaser emissions were assumed to double, based on the lack of historical data following the modifications. Cleaning, testing, and coating usage data were multiplied by 150%.

Source	1998 (TPY)	Projected (TPY)
Combustion	0.02	0.02
Degreaser	0.50	1.00
Cleaning	2.19	3.29
Pressure testing	0.75	1.12
Surface coating	0.31	0.47
Totals	2.77	5.90

FEDERAL REGULATIONS

PSD, 40 CFR Part 52 [Not Applicable]
The facility is not a major source and final total emissions are less than even the threshold of 100 TPY for 26 specific industries.

NSPS, 40 CFR Part 60 [Not Applicable]
The facility is not subject to any of the NSPS Subparts.

NESHAP, 40 CFR Part 61 [Not Applicable]
There are no emissions of any of the pollutants subject to 40 CFR 61 (asbestos, benzene, beryllium, coke oven emissions, inorganic arsenic, mercury, radionuclides, and vinyl chloride).

NESHAP, 40 CFR Part 63 [T Applicable]
Subpart T (Halogenated Solvent Cleaners). This standard was published in the Federal Register on December 2, 1994, and compliance by new degreasers was required immediately upon startup. Applicant is subject to Subpart T, has complied with the initial notification procedure, and has done all required reporting. Applicant has selected Option 1 from Table 1 of §63.463 to demonstrate compliance. This option requires a combination of a working-mode cover, freeboard ratio of 1.0, and superheated vapor. Applicant is in compliance.
Subpart GG (Aerospace Manufacturing and Rework Facilities). The facility engages in the type of activity described in paragraph 63.741 (a), but the facility does not qualify as a major source under the definition in 40 CFR 63.2. In addition, the subassemblies involved are not critical to structural integrity or flight performance, so the activities would also be excluded under §63.741(f). The facility is not an affected source and is not subject to this Subpart.

Chemical Accident Prevention Provisions, 40 CFR Part 68 [Not Applicable]
This facility does not process or store more than the threshold quantity of any regulated substance (Section 112r of the Clean Air Act 1990 Amendments). More information on this federal program is available on the web page: www.epa.gov/ceppo

OKLAHOMA AIR POLLUTION CONTROL RULES

OAC 252:100-5 (Registration of Air Contaminant Sources) [Applicable]
Subchapter 5 requires sources of air contaminants to register with Air Quality, file emission inventories annually, and pay annual operating fees based upon total annual emissions of regulated pollutants. The applicant shall comply with these requirements after the permit is issued.

OAC 252:100-7 (Permits for Minor Facilities) [Applicable]
Permits are not required for those facilities that emit less than 5 TPY of any regulated pollutant, have no emissions in excess of toxic category *de minimis* thresholds, and are not subject to federal regulations, such as NSPS or NESHAP. The degreaser was installed in 1995, is subject to 40 CFR 63 Subpart T, and thus the facility requires a minor source operating permit. As such, major source BACT consideration, modeling, and public review are not required.

OAC 252:100-8 (Permits for Part 70 Sources) [Not Applicable]
In addition to the permitting criteria under Subchapter 7, a source may require permitting under this Subchapter if it has emissions of HAPs in excess of 10 TPY for any one HAP or in excess of 25 TPY for any combination of HAPs. Although the facility does emit some HAPs, emissions do not exceed either threshold, and it is not subject to this rule.

OAC 252:100-19 (Particulate Matter Emissions from Fuel-burning Equipment) [Applicable]
All of the curing ovens are gas-fired and have very low heat inputs. AP-42 factors imply compliance with the standards of this Subchapter.

OAC 252:100-25 (Visible Emissions and Particulates) [Applicable]
No discharge of greater than 20% opacity is allowed except for short-term occurrences that consist of not more than one six-minute period in any 60 consecutive minutes, not to exceed three such periods in any consecutive 24 hours. In no case shall the average of any six-minute period exceed 60 % opacity.

OAC 252:100-29 (Fugitive Dust) [Applicable]
Processes likely to generate dust that might become an atmospheric pollutant must take reasonable measures to minimize such pollution. No visible emissions which harm or interfere with the rights of others may pass the property line of the originator of such emissions. There are no processes that generate fugitive dust and the facility is in compliance.

OAC 252:100-31 (Sulfur Oxides) [Applicable]
All combustion equipment is fired by commercial grade natural gas and satisfies the requirements of this Subchapter.

OAC 252:100-33 (Nitrogen Oxides) [Not Applicable]
The new equipment standard applies to fuel-burning equipment with a rated heat input of 50 MMBTUH or more. The facility has no such equipment.

OAC 252:100-35 (Carbon Monoxide) [Not Applicable]
This facility has none of the affected sources: foundry cupola, blast furnace, basic oxygen furnace, catalytic cracking unit, or other petroleum or natural gas process except stationary engines.

OAC 252:100-37 (Volatile Organic Compounds) [Applicable]
Solvent emissions from preparation, painting and cleanup are below the thresholds requiring extensive record keeping and limits on VOC content per gallon. Fuel-burning equipment shall be in compliance with the requirements of Section 37-36. The curing ovens shall be properly maintained and operated to provide essentially complete combustion.

OAC 252:100-39 (VOC in Nonattainment and Former Nonattainment Areas) [Applicable]
This Subchapter imposes additional conditions beyond those of Subchapter 37 on emissions of organic materials from new and existing facilities in Tulsa County.
Section 42 concerns metal cleaning. Subsection 42 (b) covers vapor type metal degreasers, with standards for construction and operation of such equipment. Paragraph 1 outlines equipment standards including: doors and covers in Subparagraph A; safety switches in Subparagraph B; equipment specifications such as freeboard, chillers, etc., in Subparagraph C; and, conspicuous labeling of the equipment in Subparagraph D. Paragraph 2 describes the labeling information required to comply with Subparagraph 1(D). Paragraph 3 lists compliance and recordkeeping criteria.
Section 46 concerns coating of parts and products. The facility engages in coating of aerospace components and is exempt from this Section.
Section 47 concerns aerospace industries coatings operations. The facility is exempt from this Section per §47(a)(3) because it emits less than 10 TPY of VOC.

OAC 252:100-41 (Hazardous and Toxic Air Contaminants) [Not Applicable - **State Only**]
Part 3 addresses hazardous air contaminants. NESHAPs, as found in 40 CFR 61 and 63, are adopted by reference as they exist on July 1, 1998, with certain exceptions. As noted above, this facility is not an affected source.
Part 5 is a state-only requirement governing toxic air contaminants. Sources are required to demonstrate that emissions of any toxic air contaminant that exceed *de minimis* level do not cause or contribute to a violation of the MAAC. As noted above, there are no emissions of toxics that exceed their respective *de minimis* thresholds.

INSPECTION

DEQ permit writer Herb Neumann inspected the facility on September 16, 1999. The degreaser is operated infrequently, and was not in use at the time of this inspection. Certain recordkeeping requirements had not been met and a discussion as to how to meet these requirements ensued. All records and appropriate labeling of the degreaser were in place as of December 3, 1999.

TIER CLASSIFICATION AND PUBLIC REVIEW

This application has been classified as Tier I based on the request for an operating permit for an existing minor source. The status of all permit actions is available to the public in the Air Quality section of the DEQ Web Page at page: www.deq.state.ok.us

The applicant has submitted an affidavit that they are not seeking a permit for land use or for any operation upon land owned by others without their knowledge. The affidavit certifies that the applicant owns the real property.

FEES PAID

Construction and operating permit fees of $750 (pre-June, 1999 application date).

SUMMARY

The applicant has demonstrated compliance with the applicable air quality rules and regulations. Ambient air quality standards are not threatened at this site. There are no active Compliance or Enforcement Air Quality issues concerning this facility. Issuance of the permit is recommended.

Re: Applicability Determination Request; Addendum to Construction/Operating Permit Applieation Submitted on April 23, 1999

This letter is an addendum to our Construction/Operating Air Permit Applieation. We have made ehanges to the vapor degreaser operations that have lowered the air emissions by 0.5 TPY. We have diseonnected the lip exhaust from the unit, therefore eliminating a draft across the tank. The reduction in vapor emissions will lower the overall VOC's at our faeility to 3.67 tons/year. Since this would be less than 5 tons/year of VOC's faeility wide, we would not be required to have an Air Permit.

OPTION 1

However, by December 9, 2000, we will be required to apply for a Title V Permit for the Vapor Degreaser operations, according to the Federal guidelines. We understand these guidelines are under review and ehanges may be coming out in the near future.

If you have any questions or need additional information, please do not hesitate to eall me at 445 – 4300.

Sincerely,

Danny Michaels – Risk Manager

Re: Permit Application Number **99-026-O**

Dear Mr. Sherwin,:

Review of the Operating Permit Application revealed the need for additional information regarding the Vapor Degreaser used at the LIMCO-Airepair Company i.e., is it a cold (non-heated), batch process, and does LIMCO consider the operation of the degreaser to be exempt from 40 CFR 63 Subpart T?

As the permit draft is being created there is the possibility that more information may be requested.

Please submit the requested information within 60 days. You should be aware that failure to submit an adequate response within 180 days might result in withdrawal of your application and forfeiture of your application fees. The permit review time is hereby tolled pending receipt of the requested information.

Thank you for your cooperation in this matter. If we may be of further service, please contact our office at (918) 461-7400. The DEQ Regional Office at Tulsa is now located at **(new location)** 5051 South 129th East Avenue, Tulsa, OK, **new mailing address** POBox 690898, zip 74169-0898.

Sincerely,

Jack Fly
Permit Writer

June 10, 1999

Mr. Jack Fly
DEQ Regional Office at Tulsa

Tulsa, OK 74169

Re: Permit Application Number 99-026-O

Dear Mr. Fly:

This letter is in response to your letter dated June 9, 1999. The vapor degreaser used at LIMCO-Airepair is a batch process. The operations are not exempt from 40 CFR 63 Subpart T. The facility is complying with Subpart T by using the following control methods: The solvent/air interface area is 1,268.5 square inches; tank capacity is 110 gallons; temperature at the center of the air blanket is 86 degrees F; and the freeboard ratio is 1:0. Existing controls include: a primary condenser for controlling the vapor blanket, sump heating coils to heat the liquid solvent, an are in the process of re-installing a lid that is leak-proof and crack free, and reduced room draft. Safety shut-down controls include overtemperature and low sump level alarms.

Also, LIMCO-Airepair will use the following control combinations, monitoring, training and recordkeeping requirements to ensure they met the guidelines that are specified in 40 CFR Part 63.463, Subpart T.

If you have any further questions or need additional information, please don't hesitate and call me at (918)622-2782.

Sincerely,

Robert E. Sherwin, Jr.
President

AFFIDAVIT ABOUT NOTICE TO LANDOWNER*

I, as the applicant or an authorized representative of the applicant, hereby certify that notice to the landowner(s) about the application described below:

__X__ IS NOT REQUIRED because:
_____ My application does not involve any land.
__X__ My application involves only land owned by me (or the applicant business).

A._____ IS REQUIRED because the land is owned by someone other than myself or the applicant business AND I HAVE NOTIFIED the landowner(s) by:
_____ actual notice for which I have a signed and dated receipt;
_____ service by sheriff or private process server for which I have an affidavit;
_____ service by certified mail restricted delivery for which I have a signed return receipt; or
_____ legal publication, for which I have an affidavit of publication from the newspaper, because the landowners could not be located through due diligence.

B._____ IS REQUIRED BUT INSTEAD of notice to the landowner(s), I notified the lessor or administrator or executor of the land by the method checked above. (Briefly explain here.)

IF THE APPLICANT DOES NOT OWN THE LAND, MY/ITS RIGHT TO USE THIS LAND is by:
_____ lease.
_____ easement.
_____ (Other) _____.

_____
Signature of Applicant or Applicant's Authorized Representative Position

Introduction

LIMCO-Airepair, Inc., located at 5304 South Lawton Avenue, Tulsa, Oklahoma, manufactures and repairs heatexchanger and oil cooler parts for the aerospace industry. The facility operates under the Standard Industrial Classification (SIC) Code: 3728

This is an application for a construction/operation permit for facility wide sources/processes that emits more than 5 tons of VOC's/year, uses natural gas to fuel drying and heat-treat ovens, paint booth, vapor degreaser, clean-line and welding operations.

Instruction #1: Required Information

1. Description of the process or operation.

   LIMCO-Airepair, Inc. manufactures and repairs parts for the aerospace industry. The parts are constructed from various metal alloys (stainless steel, aluminum, etc.) and a small volume (about 2% of parts) are painted in the paint booth and the rest are either coated by the alodine process or sent of to be dipped/coated with an aluminum paint before shipment to the customer.

2. Include a process flow diagram. This should be a simplified diagram, identifying each process or operation.

   Attachment 1 is a process flow diagram showing the flow of parts in and out of each process. Attachment 2 is a copy of the plant layout and the names of each department or process area.

3. The applicant must list and identify all expected air emissions, including toxic and hazardous substances. This information is a vital part of the application. Give the amount of these individual substances in rates of pounds per hour and tons per year. Specify and explain the basis used for this estimate, and include supporting data. Key emissions to process flow diagram by number or other identification means.

   Air emissions at LIMCO-Airepair, Inc. will be VOC's, welding operations, and from fuel burning sources (ovens) and clean-line processes. Copies of the material safety data sheets (MSDS) for all VOC sources are located in Attachment 3.

   The expected potential facility criteria emissions in pounds per hour and tons per year are listed below. The 1998 usage figures were used as the source for the numbers for the VOC emitting processes in the spreadsheet. The spreadsheet is shown in Attachment 4.

AIR EMISSIONS SUMMARY

Source/Emissions	Tons/Year	Pounds/Hour
Vapor Degreaser-Trichloroethylene	3.57	1.43
Cleaning Parts - MEK	1.88	0.75
Pressure Test - Mineral Spirits	0.75	0.30
Wiping Parts - Isopropyl Alcohol	0.29	0.11
Wiping Parts - Toluene	0.02	0.008
Paint Booth - VOC's (Total)	0.23	0.09

3 Ovens - Natural Gas (see questions #10 for gas usage and Attachment 6 Turn Around Document for point source emissions using Section 1.4 of AP-42). The other ovens used in the facility are powered by electricity.

Welding Operations used 0.87 Tons of rod for TIG welding. According to AP-42 method for determining air emissions produced from welding operations was insignificant. Also, according to Title V permitting requirements that if the welding process uses less that 53 tons of welding rod/wire then the source is insignificant and not necessary to report emissions.

Clean-Line Operations - see Question #7 for chemical usage and amounts). The process uses so little of acids and caustic solutions and should not be included within this permit application process. The tanks that are heated, use electricity to power the heating coils, not natural gas.

4. For major sources, provide the information requested in Instruction #2. A major source is defined as one which has the capability at maximum design capacity to emit 100 tons per year of any one pollutant.

   Not Applicable, LIMCO-Airepair, Inc. will not emit more than 25 tons per year of any single pollutant, nor 100 tons of total pollutants.

5. Give maximum process weight in pounds per hour and basis for calculation for establishing this number. (If necessary, a definition of process weight is given OAC 252:100-1). For nonmetallic mineral processing plants provide the maximum process weight in pounds/hour for each of equipment including each conveyor belt, and the plant capacity (the cumulative rated capacity of all initial crushers that are part of the plant).

   From the spreadsheet, the maximum process weight was calculated by taking the total number of VOC's facility wide = 13,391.05 pounds and divided by the number of hours in one year (8760). Maximum process weight for LIMCO-Airepair, Inc. is 1.52 pounds per hour.

   Actual process weight was calculated by the same formula with the exception of total actual operating hours (4992) being used. Actual process weight is 2.68 pounds per hour.

6. Hours of operations per day, days per week, weeks per year. (operating permit will be limited to the number of total hours of operation per year.) Where differences exist between operations, specify each rate.

The operating periods for which the permit is being sought are as follows:

Hours/day: 16
Days/week: 6
Weeks/year: 52

7. Describe the materials used in the process. Give their use or function when it is not self-explanatory.

Principal raw materials are metals (stainless steel and aluminum) of various gauges (thickness) and alloys of metal that are used in the manufacturing and repair of aerospace parts.

The Aero Duct (plenum ducts) process uses clean-line to clean, alodine parts, then sent to the paint booth to be primer and paint.

The Repair Process for heatexchangers and oil coolers goes to the Pressure Test Area and filled with combinations of coolants, oils, mineral spirits and isopropyl alcohol to tested for leaks, and then sent to the clean-line to be processed, then is dried in the ovens to remove moisture, and then sent to the paint booth to be painted (Oil-Coolers get primer and high-heat bake black paint, C-130 - Heatexchangers uses flat black paint (1 gallon for 1998) and 95% of all parts are alodine or sent out to be aluminum coated.

The Manufacturing Process cuts rolled sheets of stainless steel metal and forms fins. The fins are sent to be cleaned of oils by using MEK. Then they are cleaned more thorough by using the vapor degreaser process which uses 1,1,1 Trichloroethylene. The fins are sent back to be welded, stacked, brazed into various types of heatexchangers and oil-cooler parts. They are sent to the Pressure Test Area to be certified (see paragraph above for chemicals used), then sent to the clean-line to be cleaned. The parts will be either painted, alodine or sent out to be coated with aluminum paint. Manufacturing section uses Aviation gray paint for Magoca Gear Box Oil-Cooler and primer for Boeing Yellowjacket Fuel Cell Heatexchanger. They use 1 gallon/month of MEK and 0.5 gallon/month of Isopropyl Alcohol in the bench areas.

The paint department uses various primers, paints, epoxy coated, polyurethane materials and uses MEK to clean paint guns. On occasion uses xylene and toluene

to clean parts and materials of debris. All the paint waste is collected in drums and disposed of properly.

The Pressure Test Area uses coolants, oils, mineral spirits and isopropyl alcohol to test aircraft parts. Once the part has been tested it is immediately depressurized and drained into waste drums and properly disposed of as hazardous waste material.

The Clean-line Operations uses the following chemicals: Sulfuric Acid, Nitric Acid, Caustic soda, Hydrofluoric Acid and Sodium Medabisulfate. The tanks that are heated processes, uses electricity to heat coils, not natural gas. The following are the processes, chemicals used, dimensions of tanks, and amounts used in 1998. (See Attachment 7 for copy of MSDS's).

1. Waste water Treatment Process - Uses 2.5 drums/month of Sulfuric acid at 98% concentration that is diluted with water to a concentration of 10% Sulfuric Acid solution. Polymer to flocculate out metals and uses 1 gallon/month. Sodium Medabisulfate comes in 50 pound bags and mixed with water in a 55 gallon barrel. The use is for controlling the PH before discharging the waste water. Used 400 pounds last year.

2. Nitric and Hydrofluoric tank - The tank holds 40 gallons of solution and the W-1.5' x L-8' x D-2'. The process used 180 pounds of nitric acid and 144 gallons of hydrofluoric acid last year. The tank is keep at ambient temperature.

3. Isoprep 44 Process - Caustic degreaser that has a Ph of 10.5 and is classified as a soap cleaner. The tank is 284 gallons and the dimensions are W-4' x L-6' x D-28". The temperature of the tank is kept at 150F. The total amount used for 1998 was 3 drums (1,500 pounds).

4. Isoprep 33 Process - Hot alkaline etch (Caustic soda beads). The tank size, dimensions and temperature is the same as the Isoprep 44 Process. The total amount for 1998 used was 4 drums (2,200 pounds).

5. Smut-Go Process - To de-snut aluminum parts. The product consist of nitric acid. The tank size is 150 gallons and dimensions are W-4' x L-6' x D-28". The tank is kept at ambient temperature. The use for 1998 was 30 gallons.

6. Turco 4215 Process - Alkaline cleaner for aluminum parts. The tank size is 500 gallons and the

dimensions are W-4' x L-10' x D-28". The tank is kept at 135F. The total amount used in 1998 is 450 pounds. The material comes in powder form and is mixed with water.

7. Allodyne 1200S Process - For alodyning aircraft parts. The tank size is 325 gallons and the dimensions are W-4' x L-6' x D-28". The tank is kept at 85F. The total amount used in 1998 is 240 pounds. The material comes in powder form and is mixed with water.

8. If the process is cyclical instead of continuous, give length of cycle and time between cycles.

   All processes are continuous.

9. Does the process involve the use of potentially hazardous air contaminants and toxic materials? If so, and emission rate exceeds specified de minimis rates, determine MAAC and provide documentation to determine off property line maximum ground level concentration.

   Hazardous air contaminants will be emitted from the painting, vapor degreasing, cleaning parts, bench areas, and Pressure test area. The form of VOC's such as xylene, toluene, mineral spirits, isopropyl alcohol, MEK and trichloroethylene are considered to be low toxicity, Category C, substances. Some of the paints and primers has strontium chromate, chromium, crystalline silica and formaldehyde which are high toxicity, Category A substances. The emission of these substances are well below the de minimis levels.

10. For any combustion units, provide the information requested in Instruction No.#4, Items 2,3,4, and 7.

    LIMCO-Airepair has 3 ovens which uses natural gas fuel for operation. See Attachment 6; Point Source Turn Around Document to see the emissions for each source listed below. The following are the specifics:

    1. Grieve Gas Convection Oven #1 - Rated Heat Index is 175,000 Btu/hr.; and the fuel consumption for 1998 was 103.6 mmBtu. The maximum temperature is rated at 1250F.

    2. Jet Sweep Oven Model PB-1 #2 - Rated Heat Index is 300,000 Btu/hr.; and the fuel consumption for 1998 was 621.6 mmBtu. The oven temperature ranges from 0-500F, however the temperature never gets over 200F. The oven is used to dry parts of moisture after coming from the clean-line process.

3. Gehrich Drying Oven #3 - Rated Heat Index is 300,000 Btu/hr.; and the fuel consumption for 1998 was 310.8 mmBtu. The temperature range is 0-500F and is used exactly as the Jet Sweep Oven listed directly above.

Item #7 is not applicable at this particular facility.

11. For any hydrocarbon tanks provide the information requested in Instruction #3.

Not Applicable.

12. Include a plot plan showing location of manufacturing processes and location of outlets for airborne emissions. Key all flows and discharge outlets to the process flow diagrams by number or other identification means.

A facility plan with the requested information is included in Attachments 1 and 2.

13. Include a plot plan showing locations of the establishments, property lines, surrounding area residences and other types of structures and roadways.

See Attachment #5.

14. Fugitive Dust Control. Specify procedures to be used to minimize air pollution from operations not involving process emissions in which particulates are likely to be windborne, including the following items:

(a) Service roads and parking areas: These areas are all paved.
(b) Stockpiles or storage areas: Stockpiles are of raw materials such as steel and wood crates for shipping parts that do not produce a "fugitive dust"; storage areas for chemicals are enclosed inside.
(c) Loading and unloading materials: Materials are loaded and unloaded at the shipping and receiving dock.
(d) Transportation of dusty material by truck: not applicable.
(e) Any other enterprise which involves a substance likely to be scattered by the wind or susceptible to being airborne: The hazardous waste storage area is located outside on a concrete pad that is not covered. However, the area is monitored daily for container conditions and if any leaks/spills are present. We have procedures to ensure the integrity of this particular process through our RCRA Program, Spill Prevention Contigency Plan and Pollution Prevention Plan as part of the Stormwater Run-off Permit.

15. Emission Point Data

Paint Booth:

(a) Height above grade - 8 feet; Total Dimensions 12'D x 12'W x 8'H.
(b) Stack Inside Diameter - Not applicable; the paint booth vents to the outside west wall (from the outside the vent looks like a oversized louver) about 14' off the ground.
(c) Stack gas volume, velocity, temperature - Not Applicable.
(d) Mass emission rates, lbs/hr. - see emission table, Instruction 1, Item 3, and spreadsheet, Attachment 4.
(e) Distance to surrounding obstructions, give heights and plan view dimensions. No obstructions in the area.
(f) Facility property line locations - see Attachment 5.
(g) Type and number of guns used in booth: Only one gun is used and it is a Devilbiss model JGHV 531 HVLP.
(h) Transfer efficiency rate of guns: 50% efficient.
(i) Type of filter/filter efficiency: Paper Paint Collector Standard and the size is 20"x20"x1". The capture efficiency is 95%.

16. Specify whether stack sampling ports are being included in the construction and identify which stacks.

No sampling ports are included.

17. Air pollution control equipment.

The paint filter functions as the only pollution control equipment to control particulate emissions from the painting operations. There are no controls for VOC emissions.

18. Additional Information.

Instruction #2 (Reserved): Not applicable
Instruction #3: Not applicable
Instruction #4: Included in Question #10.
Instruction #5: Not applicable
Instruction #6: Not applicable
Turn Around Document: Included in Attachment 6.

SECTION 2 COMPOSITION/INFORMATION ON INGREDIENTS

This product is hazardous as defined in 29 CFR1910.1200.
OSHA HAZARD
Flammable
PEL; TLV
Eye irritant

SECTION 3 HAZARDS IDENTIFICATION

POTENTIAL HEALTH EFFECTS

EYE CONTACT:
Severely irritating. If not removed promptly, will injure eye tissue, which may result in permanent damage.

SKIN CONTACT:
Frequent or prolonged contact may irritate and cause dermatitis. Low order of toxicity.

INHALATION:
Vapor concentrations above recommended exposure levels are irritating to the eyes and the respiratory tract, may cause headaches and dizziness, are anesthetic and may have other central nervous system effects. Low order of toxicity.

INGESTION:
Low order of toxicity.
Small amounts of the liquid aspirated into the respiratory system during ingestion, or from vomiting, may cause bronchiopneumonia or pulmonary edema.

CHRONIC EFFECTS
There is no evidence that exposure to Methyl Ethyl Ketone (MEK) alone causes progressive or irreversible neurotoxic effects. However, simultaneous over-exposure to MEK and n-Hexane can potentiate the known irreversible neurotoxic effects of n-Hexane. There is no reported human evidence that these

Continues on page 2

The recommended permissible exposure levels indicated above reflect the levels revised by OSHA in 1989 or in subsequent regulatory activity. Although the 1989 levels have since been vacated by the 11th Circuit Court of Appeals, Exxon Chemical recommends that the lower exposure levels be observed as reasonable worker protection.

THE ACGIH RECOMMENDS THE FOLLOWING THRESHOLD LIMIT VALUES:
A TWA of 200 ppm (590 mg/m3) and a STEL of 300 ppm (885 mg/m3) for Methyl Ethyl Ketone.

SECTION III HEALTH INFORMATION

THE HEALTH EFFECTS NOTED BELOW ARE CONSISTENT WITH REQUIREMENTS UNDER THE OSHA HAZARD COMMUNICATION STANDARD (29 CFR 1910.1200).

EYE CONTACT
MODERATELY IRRITATING TO THE EYES.

SKIN CONTACT
MILDLY IRRITATING TO THE SKIN.

INHALATION
MAY CAUSE MILD IRRITATION TO THE NOSE, THROAT AND RESPIRATORY TRACT AND MAY RESULT IN CENTRAL NERVOUS SYSTEM (CNS) DEPRESSION.

INGESTION
IRRITATING TO THE GASTROINTESTINAL TRACT, CAUSING ABDOMINAL PAIN AND VOMITING, SOMETIMES BLOODY. INGESTION MAY CAUSE CNS DEPRESSION, LOW BLOOD PRESSURE, RAPID HEART BEAT AND LIVER DAMAGE.

SIGNS AND SYMPTOMS
IRRITATION AS NOTED ABOVE. EARLY TO MODERATE CNS (CENTRAL NERVOUS SYSTEM) DEPRESSION MAY BE EVIDENCED BY DIZZINESS, HEADACHE, DIZZINESS AND NAUSEA; IN EXTREME CASES, UNCONCIOUSNESS, RESPIRATORY DEPRESSION AND DEATH MAY OCCUR. LIVER DAMAGE MAY BE EVIDENCED BY LOSS OF APPETITE, JAUNDICE (YELLOWISH SKIN COLOR) AND SOMETIMES PAIN IN THE UPPER ABDOMEN ON THE RIGHT SIDE.

SECTION VII PHYSICAL DATA

BOILING POINT: 180 (OEG F) | SPECIFIC GRAVITY: 0.79 (H2O=1) | VAPOR PRESSURE: 32 @ 68 DEG F (MM HG)

MELTING POINT: 127 (OEG F) | SOLUBILITY: COMPLETE (IN WATER) | VAPOR DENSITY: 2.1 (AIR=1)

EVAPORATION RATE (N-BUTYL ACETATE =1): 1.4 | VOC: 100% @ 6.51 LB/GAL

APPEARANCE AND ODOR: COLORLESS, MOBILE LIQUID. MILD ODOR.

SECTION VIII FIRE AND EXPLOSION HAZARDS

FLASH POINT AND METHOD:
53 OEG F -TCC

FLAMMABLE LIMITS /% VOLUME IN AIR
LOWER: 2 UPPER: 12

EXTINGUISHING MEDIA
USE WATER FOG, "ALCOHOL" FOAM, DRY CHEMICAL OR CO2.

SPECIAL FIRE FIGHTING PROCEDURES AND PRECAUTIONS
WARNING. FLAMMABLE. CLEAR FIRE AREA OF UNPROTECTED PERSONNEL. DO NOT ENTER CONFINED FIRE SPACE WITHOUT FULL BUNKER GEAR (HELMET WITH FACE SHIELD, BUNKER COATS, GLOVES AND RUBBER BOOTS), INCLUDING A POSITIVE PRESSURE NIOSH APPROVED SELF-CONTAINED BREATHING APPARATUS. COOL FIRE EXPOSED CONTAINERS WITH WATER.

UNUSUAL FIRE AND EXPLOSION HAZARDS
CONTAINERS EXPOSED TO INTENSE HEAT FROM FIRES SHOULD BE COOLED WITH WATER TO PREVENT VAPOR PRESSURE BUILDUP WHICH COULD RESULT IN CONTAINER RUPTURE. CONTAINER AREAS EXPOSED TO DIRECT FLAME CONTACT SHOULD BE COOLED WITH LARGE QUANTITIES OF WATER AS NEEDED TO PREVENT WEAKENING OF CONTAINER STRUCTURE.

SECTION IX REACTIVITY

STABILITY: STABLE

HAZARDOUS POLYMERIZATION: WILL NOT OCCUR

CONDITIONS AND MATERIALS TO AVOID:
AVOID HEAT, SPARKS, FLAME AND CONTACT WITH STRONG OXIDIZING AGENTS. DO NOT STORE OR HANDLE IN ALUMINUM EQUIPMENT AT TEMPERATURES ABOVE 120 DEG. F.

HAZARDOUS DECOMPOSITION PRODUCTS
CARBON MONOXIDE AND UNIDENTIFIED ORGANIC COMPOUNDS MAY BE FORMED DURING COMBUSTION.

SECTION X EMPLOYEE PROTECTION

RESPIRATORY PROTECTION
IF EXPOSURE MAY OR DOES EXCEED OCCUPATIONAL EXPOSURE LIMITS (SEC. IV) USE A NIOSH-APPROVED RESPIRATOR TO PREVENT OVEREXPOSURE. IN ACCORD WITH 29 CFR 1910.134 USE EITHER AN ATMOSPHERE-SUPPLYING RESPIRATOR OR AN AIR-PURIFYING RESPIRATOR FOR ORGANIC VAPORS.

PROTECTIVE CLOTHING
AVOID CONTACT WITH EYES. WEAR CHEMICAL GOGGLES IF THERE IS LIKELIHOOD OF CONTACT WITH EYES. AVOID PROLONGED OR REPEATED CONTACT WITH SKIN. WEAR CHEMICAL-RESISTANT GLOVES AND OTHER CLOTHING AS REQUIRED TO MINIMIZE CONTACT. TEST DATA FROM PUBLISHED LITERATURE AND/OR GLOVE AND CLOTHING MANUFACTURERS INDICATE THE BEST PROTECTION IS PROVIDED BY NITRILE, NEOPRENE AND NATURAL RUBBER GLOVES.

MATERIAL SAFETY DATA SHEET

---

1. CHEMICAL PRODUCT AND COMPANY IDENTIFICATION

PRODUCT NAME: Toluene
HCI PRODUCT ID NUMBER: 03200
SYNONYMS: Methyl benzene, Toluol, Phenylmethane
CHEMICAL FAMILY NAME: Aromatic hydrocarbon

NFPA HAZARD RATINGS (H-F-R): 2-3-0
HMIS HAZARD RATINGS (H-F-R): 2-3-0

DISTRIBUTOR: HCI U.S.A. DISTRIBUTION COMPANIES, INC.
TECHNICAL RESOURCE CENTER
6529 S. BROADWAY
ST. LOUIS, MO 63111
(314) 353-6500

IN CASE OF EMERGENCY CALL: CHEMTREC 1-800-424-9300

---

2. COMPOSITION, INFORMATION ON INGREDIENTS

INGREDIENT	CAS No.	PERCENT
Toluene	000108-88-3	100

Trace impurities and additional material names not listed above may also appear in the Regulatory Information Section (Section 15) towards the end of the MSDS. These materials may be listed for local "Right to Know" compliance and for other reasons.

---

3. HAZARDS IDENTIFICATION

********** EMERGENCY OVERVIEW **********

Danger!
Contact with the eyes and skin can cause irritation.
Harmful or fatal if swallowed.
Excessive inhalation may cause central nervous system depression.
This material is highly toxic by ingestion.
Pulmonary aspiration hazard- can enter lungs and cause damage.

Continued

PERSONAL PROTECTIVE EQUIPMENT

SKIN: Wear protective gloves made of neoprene or rubber.

EYES: Wear chemical safety goggles.

RESPIRATORY: If engineering controls do not maintain airborne concentrations below recommended limits, use a NIOSH-approved respirator for organic vapors.

OTHER: Emergency showers, eye-wash stations, and fire blankets should be accessible. Wear protective clothing.

EXPOSURE GUIDELINES

INGREDIENT	ACGIH TLV	ACGIH STEL	OSHA PEL	OSHA STEL
Toluene	50 ppm (s)	150 ppm	200 ppm	150 ppm

s = skin

See 29 CFR 1910.1000 (D)(2) and ACGIH "Threshold Limit Values for Chemical Substances and Physical Agents Biological Exposure Indices" booklet (Appendix C) for the determination of exposure limits for mixtures. Consult an industrial hygienist or similar professional to confirm that the calculated exposure limits are appropriate.

---

9. PHYSICAL AND CHEMICAL PROPERTIES

I. GENERAL INFORMATION

Trade Name
Xylene
Chemical Family
Aromatic Hydrocarbon
Synonyms
o-, m- and p-xylene, Xylol, Dimethyl Benzene

CAS Registry Number
1330-20-7
DOT Proper Shipping Name
Xylene
DOT Hazard Class/Packaging Group
3 Flammable Liquid/III
DOT Identification Number
UN 1307
Reportable Quantity
Xylene/Ethylbenzene-1000 lb

II. SUMMARY OF HAZARDS

May cause irritation to eyes, skin and respiratory system. Avoid liquid, mist and vapor contact. Harmful or fatal if swallowed. Aspiration hazard, can enter lungs and cause damage. May cause irritation or be harmful if inhaled or absorbed through the skin. Flammable Liquid. Vapors may explode.

III. HAZARDOUS INGREDIENTS

Component	CAS No.	Concentration (%)
Ethylbenzene	100-41-4	2 - 35%
Hexane Isomers		1 - 4%
1,2,4 Trimethylbenzene	95-63-6	10 - 15%
Xylene	1330-20-7	60 - 95%

IV. PHYSICAL DATA

Boiling Point: 280°F
Melting Point: not applicable
Vapor Density (air=1): 3.7
Specific Gravity: 0.86 @ 60°F
Vapor Pressure: 0.4 psi @ 100°F
Percent Volatile: essentially 100%
Solubility in Water: Negligible (<0.1%)
Appearance and Odor: Clear, colorless liquid with sweet aromatic odor

V. FIRE AND EXPLOSION HAZARD DATA

Flash Point: 80 - 90°F
Autoignition Temperature: 870-980°F
Flammability Limits in Air
Lower Explosive Limit: 1.0%
Upper Explosive Limit: 7.0%
NFPA Classification
Health: Moderate (2)
Reactivity: Stable (0)
Fire: High (3)
Specific Hazard: not applicable

3. HAZARDS IDENTIFICATION

********** EMERGENCY OVERVIEW **********
* WARNING: Combustible Liquid and Vapor. Harmful if inhaled and may cause *
* delayed lung injury. Can cause nervous system depression. Aspiration *
* hazard if swallowed - can enter lungs and cause damage. Keep away from *
* heat, sparks, and flame. Avoid breathing vapor. Use ventilation *
* adequate to keep vapor below recommended exposure limits. Avoid contact *
* with eyes, skin and clothing. Wash thoroughly after handling. *
****

POTENTIAL HEALTH EFFECTS

PRIMARY ROUTE(S) OF ENTRY
Skin

EYES
Tests on similiar materials suggest acute irritation.

SKIN
Tests on similiar materials indicate acute irritation upon short-term exposure and chronic dermatitis on prolonged contact.

INGESTION
Acute aspiration hazard. Tests on similiar materials indicate possibility of the following symptoms: headache, nausea, droweiness, fatigue, pneumonitis, pulmonary adema, central nervous system depression, convulsions, and loss of consciousness.

INHALATION
Tests on similiar materials indicate the possibility of the following symptoms: headache, nasal and respiratory irritation, nausea, drowsiness, breathlessness, fatigue, central nervous system depression, convulsions, and loss of consciousness.

CHRONIC (CANCER INFORMATION)
Prolonged and/or repeated contact with this material may produce skin and eye irritation.
Carcinogen listed by : National Toxicology Program (NO)

Revision Date: 06/07/95

FROM :CALUMET LUBRICANTS TO : 318 425 0435 1996.05-28 11:05AM #771 P.03/18

9. PHYSICAL AND CHEMICAL PROPERTIES - Continued

BASIC PHYSICAL PROPERTIES
PHYSICAL STATE: Liquid
BOILING POINT: IBP >300°F IBP >149°C
MELTING POINT: N/A°F N/A°C
VAPOR PRESSURE: Reid @ 100F: 0.3 psu
VAPOR DENSITY (AIR=1): 5 (air = 1)
SPECIFIC GRAVITY: 0.76 Water = 1
MOLECULAR WEIGHT: 150.00
PACKING DENSITY: N/A
SOLUBILITY (H2O): negligible in water
PERCENT VOLATILES: 100
VOLATILE ORGANIC COMPOUNDS (VOC) CONTENT: 100.0 %
EVAPORATION RATE: 8 times slower than ethyl ether
pH: essentially neutral
VISCOSITY: 1.2 cst @ 100°F

Physical data may vary slightly to meet specifications.

10. STABILITY AND REACTIVITY

STABILITY: Stable under normal conditions

CONDITIONS TO AVOID (STABILITY)
Sources of ignition.

INCOMPATIBLE MATERIALS
Strong oxidizers.

HAZARDOUS DECOMPOSITION PRODUCTS
Incomplete combustion may produce fumes, smoke, carbon monoxide and other asphyxiants.

HAZARDOUS POLYMERIZATION: will not occur

11. TOXICOLOGICAL INFORMATION

ACUTE STUDIES

EYE EFFECTS
Irritation on contact.

SKIN EFFECTS
May cause irritation or dematitis with prolonged and repeated contact.

ACUTE ORAL EFFECTS
Tests on similiar materials indicate an order of acute oral toxicity.

ACUTE INHALATION EFFECTS
Acute toxicity expected on inhalation.

This product is not listed as carcinogenic or a potential carcinogen by the National Toxicology Program, by the I.A.R.C. monographs or by OSHA.

12. ECOLOGICAL INFORMATION

NO DATA GIVEN

13. DISPOSAL CONSIDERATIONS

Follow federal, state and local regulations. If "used", RCRA criteria must be determined. Do not flush to drain/storm sewer. Contract to authorized disposal service. If permitted incineration may be practical. Recommend recycling.

SECTION IV - FIRE AND EXPLOSION HAZARD DATA

DOT CATEGORY.: FLAMMABLE LIQUID
FLASH POINT: (MEK) 24 DEG. F TCC
Lower and Upper Explosive Limits: 1.0 - 13.1

OSHA CATEGORY: Flammable Liquid - Class IB
EXTINGUISHING MEDIA:
EXTINGUISH WITH DRY CHEMICAL, CO2, OR A UNIVERSAL TYPE FOAM.

UNUSUAL FIRE AND EXPLOSION HAZARDS:
THIS MATERIAL IS FLAMMABLE AND MAY BE IGNITED BY HEAT, SPARKS, FLAMES, OR OTHER SOURCES OF IGNITION (E.G. STATIC ELECTRICITY, PILOT LIGHTS, OR MECHANICAL/ELECTRICAL EQUIPMENT). VAPORS MAY TRAVEL CONSIDERABLE DISTANCES TO A SOURCE OF IGNITION WHERE THEY MAY IGNITE, FLASHBACK, OR EXPLODE. MAY CREATE VAPOR/AIR EXPLOSION HAZARD INDOORS, OUTDOORS, OR SEWERS. VAPORS ARE HEAVIER THAN AIR AND MAY ACCUMULATE IN LOW AREAS. IF CONTAINER IS NOT PROPERLY COOLED, IT MAY EXPLODE IN THE HEAT OF A FIRE.

SPECIAL FIRE FIGHTING PROCEDURES:
WEAR APPROPRIATE PROTECTIVE EQUIPMENT INCLUDING RESPIRATORY PROTECTION AS CONDITIONS WARRANT. STOP ALL SPILLS OR RELEASES IF IT CAN BE DONE WITHOUT RISK OR INJURY. MOVE UNDAMAGED CONTAINERS FROM FIRE AREA IF IT CAN BE DONE WITHOUT RISK OR INJURY. WATER SPRAY MAY BE USEFUL IN MINIMIZING OR DISPERSING VAPORS AND COOLING EQUIPMENT EXPOSED TO HEAT AND FLAMES. AVOID SPREADING BURNING LIQUID WITH WATER THAT IS USED FOR COOLING PURPOSES.

*** ALL Ingredients in this product are listed in the T.S.C.A. Inventory.

@ This material is listed as required by 29CFR 1910-1200 because it appeares on an airborn contaminants list. However, in this product it is in a fully encapsulated form and therefore is not hazardous to user under normal circumstances. If the cured product is sanded or ground so as to release respirable particles, suitable respiratory protection should be used.

BMS 10-11U TY I GR.A CLASS A (515K011).

SECTION III - PHYSICAL DATA

oiling Range: 240 - 500 Deg. F
ap. Rate: Slower than n-Butyl Acetate
latiles volume: 57.2 %
Vapor Density: Heavier than Air.
Liquid Density: Heavier than Water.
Wgt per gallon: 10.86 Pounds.
Spec. Gravity: 1.30
ppearance: LIQUID, SOLVENT ODOR
V.O.C. GR/L : 639 MIXED WITH 910-012 @ 1/1

SECTION IV - FIRE AND EXPLOSION HAZARD DATA

ammability Class: FLAMMABLE Flash Point: 60 F Setaflash LEL: 1. %
XTINGUISHING MEDIA:
EXTINGUISHERS (CARBON DIOXIDE, DRY CHEMICAL OR FOAM).
PECIAL FIRE FIGHTING PROCEDURES:
WATER SPRAY MAY BE INEFFECTIVE. COOL FIRE EXPOSED CONTAINERS WITH WATER. FOG NOZZLES ARE PREFERRABLE. WEAR NIOSH/MSHA APPROVED SELF-CONTAINED BREATHING APPARATUS AND PROTECTIVE CLOTHING TO PREVENT CONTACT WITH SKIN AND EYES.

NUSUAL FIRE & EXPLOSION HAZARDS:
VAPORS MAY ACCUMULATE IN INADEQUATELY VENTILATED OR CONFINED AREAS. VAPORS MAY FORM EXPLOSIVE MIXTURES WITH AIR. VAPORS MAY TRAVEL LONG DISTANCES. FLASHBACK OR FLAME TO THE HANDLING SITE MAY OCCUR. CLOSED CONTAINERS MAY EXPLODE WHEN EXPOSED TO EXTREME HEAT.

SECTION V - HEALTH HAZARD DATA

ERMISSIBLE EXPOSURE LEVEL
SEE SECTION II (NOT ESTABLISHED FOR PRODUCT).
FFECT OF OVEREXPOSURE:

NHALATION
EXPOSURE MAY CAUSE NASAL AND RESPIRATORY IRRITATION AND ACUTE CENTRAL NERVOUS SYSTEM DEPRESSION CHARACTERIZED BY HEADACHE, DIZZINESS, STAGGERING GAIT, CONFUSION OR UNCONSCIOUSNESS. ASPHYXIATION MAY RESULT FROM BREATHING OXYGEN DEFICIENT AIR.
KIN CONTACT:
PROLONGED OR REPEATED CONTACT MAY CAUSE IRRITATION, DEFATTING OR DERMATITIS.
PROLONGED OR REPEATED SKIN CONTACT MAY ALSO RESULT IN SKIN SENSITIZATION IN SOME INDIVIDUALS.
YE CONTACT:
CAUSES IRRITATION.
INGESTION:
MAY CAUSE GASTROINTESTINAL IRRITATION, NAUSEA, VOMITING AND DIARRHEA.
ASPIRATION OF MATERIAL INTO THE LUNGS CAN CAUSE CHEMICAL PNEUMONITIS WHICH CAN BE FATAL.

SECTION III - PHYSICAL PROPERTIES + FIRE AND EXPLOSION HAZARDS

FLASHPOINT FOR X-395 = 40 Deg. F Setaflash CC LEL: 1.20
BOILING RANGE = 226 to 500 Deg. F.
OSHA Classification = Flammable Liquid - Class IB
VAPOR DENSITY: Heavier than air.
EXTINGUISHING MEDIA: Use water fog, foam, dry chemical, or carbon dioxide.
WEIGHT BY VOLUME: 7.146 pounds per gallon
THEORETICAL VOLATILE ORGANIC CONTENT: 6.5 pounds per gallon less water.

SECTION IV - HEALTH INFORMATION

ACUTE: Over exposure by inhalation may cause irritation of the respiratory tract, headache, dizziness, or drowsiness.
SKIN OR EYE CONTACT: Irritant to the eyes and skin, and skin sensitivity.
EMERGENCY AND FIRST AID PROCEDURES: INHALATION: Remove from exposure. EYE CONTACT: Flush immediately with large amounts of running water for at least 15 minutes. SKIN CONTACT: Remove contaminated clothing and wash skin with soap and water. INGESTION: Drink water.
If necessary, consult a physician for any of these conditions.
ROUTES OF ENTRY: Product may be absorbed thru the following ways: eyes, inhalation, skin, & ingestion.
MEDICAL CONDITIONS GENERALLY AGGRAVATED BY EXPOSURE: Unknown at this time.
CHRONIC HEALTH EFFECTS: Those hazardous materials listed in Section II may affect the following organs: RESPIRATORY TRACT- CENTRAL NERVOUS SYSTEM- ALLERGIC RESPIRATORY/SKIN REACTION- CORNEAL INJURY- KIDNEYS- LIVER- ~~REPRODUCTIVE SYSTEM- CARDIAC SENSITIZATION.~~

SECTION V - REACTIVITY DATA

STABILITY: Stable. HAZARDOUS DECOMPOSITION BY-PRODUCTS: Fumes may contain carbon monoxide and oxides of nitrogen. May produce hazardous fumes when heated to decomposition as in welding.

SECTION VI - SPILL OR LEAK PROCEDURES

Remove all sources of ignition, avoid breathing vapors, ventilate area, and remove with inert absorbant and non-sparking tools. Dispose of in accordance with local, state, and federal regulations. Before attempting to clean up, see Section II.

SECTION VII - PRECAUTIONS IN HANDLING

VENTILATION: Provide general dilution or local exhaust ventilation to keep TWA and LEL below acceptable limits and to remove decomposition products.

RESPIRATORY PROTECTION: Where general dilution or local exhaust fails to adequately dilute the TWA/PEL of the material, then respiratory protection should be used as follows: Do not breathe vapor or spray mist. Wear an appropriate, properly fitted respirator approved by NIOSH/OSHA when exposed. An air line respirator (TC19C NIOSH/MSHA) is recommended.

PROTECTIVE EQUIPMENT: Chemical resistant gloves are required for prolonged or repeated contact. Use safety eyeware designed to protect against splash of liquids.

Do not take internally. Containers should be grounded when pouring. Avoid free fall of liquid in excess of a few inches. Make sure the drum is completely empty before attempting to weld or braze. The drum should be industrially cleaned prior to reuse. Do not flame cut, braze, or weld without a NIOSH approved respirator or appropriate ventilation.

SECTION III - PHYSICAL PROPERTIES + FIRE AND EXPLOSION HAZARDS

FLASHPOINT FOR 454-4-5 = 40 Deg. F Setaflash CC LEL: 1.10
BOILING RANGE = 200 to 343 Deg. F.
OSHA Classification = Flammable Liquid - Class IB
VAPOR DENSITY: Heavier than air.
EXTINGUISHING MEDIA: Use water fog, foam, dry chemical, or carbon dioxide.
WEIGHT BY VOLUME: 9.433 pounds per gallon
THEORETICAL VOLATILE ORGANIC CONTENT: 5.3 pounds per gallon less water.

SECTION IV - HEALTH INFORMATION

ACUTE: Over exposure by inhalation may cause irritation of the respiratory tract, headache, dizziness, or drowsiness.
SKIN OR EYE CONTACT: Irritant to the eyes and skin.
EMERGENCY AND FIRST AID PROCEDURES: INHALATION: Remove from exposure. EYE CONTACT: Flush immediately with large amounts of running water for at least 15 minutes. SKIN CONTACT: Remove contaminated clothing and wash skin with soap and water. INGESTION: Drink water.
If necessary, consult a physician for any of these conditions.
ROUTES OF ENTRY: Product may be absorbed thru the following ways: eyes, inhalation, skin, & ingestion.
MEDICAL CONDITIONS GENERALLY AGGRAVATED BY EXPOSURE: Unknown at this time.
CHRONIC HEALTH EFFECTS: Those hazardous materials listed in Section II may affect the following organs: RESPIRATORY TRACT- CENTRAL NERVOUS SYSTEM- KIDNEYS- LIVER- REPRODUCTIVE SYSTEM- CARDIAC SENSITIZATION- BLOOD- CORNEAL INJURY.

SECTION III - PHYSICAL PROPERTIES + FIRE AND EXPLOSION HAZARDS

FLASHPOINT FOR 446-21-7038 = 23 Deg. F Setaflash CC LEL: 1.10
BOILING RANGE = 168 to 999 Deg. F.
OSHA Classification = Flammable Liquid - Class IB
VAPOR DENSITY: Heavier than air.
EXTINGUISHING MEDIA: Use water fog, foam, dry chemical, or carbon dioxide.
WEIGHT BY VOLUME: 10.344 pounds per gallon
THEORETICAL VOLATILE ORGANIC CONTENT: 3.2 pounds per gallon less water.

SECTION IV - HEALTH INFORMATION

ACUTE: Over exposure by inhalation may cause irritation of the respiratory tract, headache, dizziness, or drowsiness.
SKIN OR EYE CONTACT: Irritant to the eyes and skin.
EMERGENCY AND FIRST AID PROCEDURES: INHALATION: Remove from exposure. EYE CONTACT: Flush immediately with large amounts of running water for at least 15 minutes. SKIN CONTACT: Remove contaminated clothing and wash skin with soap and water. INGESTION: Drink water.
If necessary, consult a physician for any of these conditions.
ROUTES OF ENTRY: Product may be absorbed thru the following ways: eyes, inhalation, skin, & ingestion.
MEDICAL CONDITIONS GENERALLY AGGRAVATED BY EXPOSURE: Unknown at this time.
CHRONIC HEALTH EFFECTS: Those hazardous materials listed in Section II may affect the following organs: RESPIRATORY TRACT- CENTRAL NERVOUS SYSTEM- KIDNEYS- LIVER- CARDIAC SENSITIZATION.

SECTION V - REACTIVITY DATA

STABILITY: Stable. HAZARDOUS DECOMPOSITION BY-PRODUCTS: Fumes may contain carbon monoxide and oxides of nitrogen. May produce hazardous fumes when heated to decomposition as in welding.

SECTION VI - SPILL OR LEAK PROCEDURES

Remove all sources of ignition, avoid breathing vapors, ventilate area, and remove with inert absorbant and non-sparking tools. Dispose of in accordance with local, state, and federal regulations. Before attempting to clean up, see Section II.

FLASHPOINT FOR X-530 = 45 Deg. F Setaflash CC LEL: 1.20
BOILING RANGE = 212 to 401 Deg. F.
OSHA Classification = Flammable Liquid - Class IB
VAPOR DENSITY: Heavier than air.
EXTINGUISHING MEDIA: Use water fog, foam, dry chemical, or carbon dioxide.
WEIGHT BY VOLUME: 7.812 pounds per gallon
THEORETICAL VOLATILE ORGANIC CONTENT: 5.0 pounds per gallon less water.

SECTION IV - HEALTH INFORMATION

ACUTE: Over exposure by inhalation may cause irritation of the respiratory tract, headache, dizziness, or drowsiness.
SKIN OR EYE CONTACT: Irritant to the eyes and skin, and skin sensitivity.
EMERGENCY AND FIRST AID PROCEDURES: INHALATION: Remove from exposure. EYE CONTACT: Flush immediately with large amounts of running water for at least 15 minutes. SKIN CONTACT: Remove contaminated clothing and wash skin with soap and water. INGESTION: Drink water.
If necessary, consult a physician for any of these conditions.
ROUTES OF ENTRY: Product may be absorbed thru the following ways: eyes, inhalation, skin, & ingestion.
MEDICAL CONDITIONS GENERALLY AGGRAVATED BY EXPOSURE: Unknown at this time.
CHRONIC HEALTH EFFECTS: Those hazardous materials listed in Section II may affect the following organs: RESPIRATORY TRACT- CENTRAL NERVOUS SYSTEM- ALLERGIC RESPIRATORY/SKIN REACTION- CORNEAL INJURY- KIDNEYS- LIVER- BLOOD- REPRODUCTIVE SYSTEM- CARDIAC SENSITIZATION.

SECTION V - REACTIVITY DATA

STABILITY: Stable. HAZARDOUS DECOMPOSITION BY-PRODUCTS: Fumes may contain carbon monoxide and oxides of nitrogen. May produce hazardous fumes when heated to decomposition as in welding.

SECTION VI - SPILL OR LEAK PROCEDURES

Remove all sources of ignition, avoid breathing vapors, ventilate area, and remove with inert absorbant and non-sparking tools. Dispose of in accordance with local, state, and federal regulations. Before attempting to clean up, see Section II.

SECTION VII - PRECAUTIONS IN HANDLING

VENTILATION: Provide general dilution or local exhaust ventilation to keep TWA and LEL below acceptable limits and to remove decomposition products.

RESPIRATORY PROTECTION: Where general dilution or local exhaust fails to adequately dilute the TWA/PEL of the material, then respiratory protection should be used as follows: Do not breathe vapor or spray mist. Wear an appropriate, properly fitted respirator approved by NIOSH/OSHA when exposed. An air line respirator (TC19C NIOSH/MSHA) is recommended.

PROTECTIVE EQUIPMENT: Chemical resistant gloves are required for prolonged or repeated contact. Use safety eyeware designed to protect against splash of

SECTION IV - FIRE AND EXPLOSION HAZARD DATA

DOT CATEGORY.: FLAMMABLE LIQUID
FLASH POINT: (MEK) 24 DEG. F TCC
Lower and Upper Explosive Limits: 1.0 - 12.0

OSHA CATEGORY: Flammable Liquid - Class IB
EXTINGUISHING MEDIA:
EXTINGUISH WITH DRY CHEMICAL, CO2, OR A UNIVERSAL TYPE FOAM.

UNUSUAL FIRE AND EXPLOSION HAZARDS:
THIS MATERIAL IS FLAMMABLE AND MAY BE IGNITED BY HEAT, SPARKS, FLAMES, OR OTHER SOURCES OF IGNITION (E.G. STATIC ELECTRICITY, PILOT LIGHTS, OR MECHANICAL/ELECTRICAL EQUIPMENT). VAPORS MAY TRAVEL CONSIDERABLE DISTANCES TO A SOURCE OF IGNITION WHERE THEY MAY IGNITE, FLASHBACK, OR EXPLODE. MAY CREATE VAPOR/AIR EXPLOSION HAZARD INDOORS, OUTDOORS, OR SEWERS. VAPORS ARE HEAVIER THAN AIR AND MAY ACCUMULATE IN LOW AREAS. IF CONTAINER IS NOT PROPERLY COOLED, IT MAY EXPLODE IN THE HEAT OF A FIRE.

SPECIAL FIRE FIGHTING PROCEDURES:
WEAR APPROPRIATE PROTECTIVE EQUIPMENT INCLUDING RESPIRATORY PROTECTION AS CONDITIONS WARRANT. STOP ALL SPILLS OR RELEASES IF IT CAN BE DONE WITHOUT RISK OR INJURY. MOVE UNDAMAGED CONTAINERS FROM FIRE AREA IF IT CAN BE DONE WITHOUT RISK OR INJURY. WATER SPRAY MAY BE USEFUL IN MINIMIZING OR DISPERSING VAPORS AND COOLING EQUIPMENT EXPOSED TO HEAT

D. Day

This product contains pigments which may become a dust nuisance when removed by abrasive blasting, sanding, or grinding.

SECTION III PHYSICAL DATA

Boiling Range: High - 469.4 F Low - 237.2 F
Vapor Pressure: See Section II
Vapor Density: Heavier Than Air
Evaporation Rate: Faster than Butyl Acetate
Weight per Gallon : 11.9 VOC : 3.392 Lb/Gl less water
% Volatile by Volume : 46.58 % Volatile by Weight : 28.41
Notes 1: The VOC content is determined by using a percent solids basis, less water and excempt solvents, for adhesives, coatings and inks and the calculations of EPA Reference Method 24 or equivalent ASTM method approved by the executive office.

2. If this product contains ACETONE, the following applies:
The federal EPA has delisted ACETONE as a VOC. Therefore although this product contains ACETONE, the VOC listed above does not include ACETONE in the VOC calculation. Individual states may have other regulations. Check with your state.

Physical State: LIQUID Appearance: WHITE LIQUID
Odor: MODERATE KETONE Odor Threshold: Not available
pH: N/A Freezing Point: Not Estimated
Water Solubility: INSOLUBLE
Coefficient of Water/Oil Distribution: Not available

SECTION IV FIRE AND EXPLOSION HAZARD DATA

Flammability Classification: Class 1B DOT: Flammable Liquid
Lowest Flash Point: 60.0 F
Explosion Level: Lower - 1.0 Upper - 11.4
Auto Ignition Temperature: Not determined

EXTINGUISHING MEDIA:
Use CARBON DIOXIDE, DRY CHEMICALS OR ALCOHOL FOAM.

Based on Section II ingredient(s) # (01,21) Water spray may be useful in minimizing vapors and cooling containers exposed to heat and flame. Avoid spreading burning liquid with water used for cooling purposes.
SPECIAL FIRE FIGHTING PROCEDURES:
Clear fire area of unprotected personnel. Do not enter confined space without helmet, face shield, bunker coat, gloves, rubber boots, and a positive pressure NIOSH-approved self-contained breathing apparatus. Fight fire from a safe distance or a protected location.
HEAT PROTECTION PROCEDURES:
Containers exposed to intense heat from fires should be cooled with water to prevent vapor pressure buildup which could result in container rupture.
UNUSUAL FIRE AND EXPLOSION HAZARD:

****

X-SARA 313 = CHEMICAL IS SUBJECT TO REPORTING REQUIREMENTS OF SECTION 313 OF TITLE III OF S.A.R.A. 40 CFR PART 372

SECTION III - HEALTH INFORMATION

EFFECTS OF SHORT TERM OVEREXPOSURE

SWALLOWING
Can cause gastrointestinal irritation, nausea, and vomiting. Aspiration of material into lung may cause chemical pneumonitis which can be fatal.

INHALATION
May cause nose or throat irritation. High concentrations may cause acute central nervous system depression characterized by headaches, dizziness, nausea and confusion.

EYE
May cause severe eye irritation.

SKIN
Liquid material may be absorbed through the skin in harmful amounts.
May cause severe skin irritation.

EFFECTS OF REPEATED OVEREXPOSURE
Overexposure to xylene may cause injury to the liver, kidneys, and blood.
Repeated overexposure to toluene may cause liver damage.
Exposure to Methyl Ethyl Ketone may inhance the neurotoxicity of n-Hexane and Methyl-n-Butyl Ketone. This synergistic effect has resulted in peripheral neuropathy in humans.
Reports have associated prolonged and repeated occupational overexposure

SECTION III - HEALTH INFORMATION; (CONTINUED)

EFFECTS OF REPEATED OVEREXPOSURE
to solvents with permanent brain and nervous system damage. Intentional misuse by deliberately concentrating and inhaling the contents may be harmful or fatal.

SIGNIFICANT LABORATORY DATA WITH POSSIBLE RELEVANCE TO HUMAN HEALTH.
Toluene has been found to cause kidney, lung and spleen damage in laboratory animals.
Laboratory studies involving rats indicate some evidence that Methyl Ethyl Ketone may be embryotoxic, fetotoxic and teratogenic.

SECTION IV - FIRST AID AND EMERGENCY PROCEDURES

SWALLOWING
If swallowed do not induce vomiting. Call poison control center, hospital emergency room or physician immediately.

INHALATION
Remove to fresh air immediately. If breathing has stopped, give artificial respiration. Keep warm and quiet. Get medical attention immediately.

EYE
Flush with large amounts of water, lifting upper and lower lids occasionally. Continue for at least 15 minutes. Get medical attention.

SKIN
Remove contaminated clothing. Wash affected area with soap and water. Obtain medical attention if irritation persists.

NOTES TO PHYSICIAN
Any treatment that might be required for overexposure should be directed at the control of symptoms and the clinical conditions.

SECTION V - PHYSICAL DATA

BOILING RANGE 175 DEG.F. (79 DEG.C.) TO 284 DEG.F.(140 DEG.C.)

VAPOR DENSITY than air. **% VOLATILE BY VOLUME** 100

EVAPORATION RATE Slower than diethyl ether. **VOC** 7.43 lb/gal less water & NPRS* 892 g/l less water CALCULATED

WEIGHT LB./GAL. 7.4 **VOC** .00 lb/gal solids 0 g/l solids CALCULATED
SPECIFIC GRAVITY 0.9

All Physical data determined at 68 DEG. F. (20 DEG. C.) 760 mm Hg
*** Negligibly Photochemically Reactive Materials**
VOC values reported here are verified by ASTM method D-3960

SECTION VI - FIRE AND EXPLOSION DATA

NFPA FLAMMABILITY CLASSIFICATION FLAMMABLE LIQUID - CLASS IB

FLASHPOINT 24 DEG.F, (-4 DEG.C,) CALCULATED

EXTINGUISHING MEDIA
Use NFPA Class B Fire extinguishers (carbon dioxide, all purpose dry chemical or alcohol foam) designed to extinguish flammable liquid fires. Polymer foam is preferred for large fires.

UNUSUAL FIRE AND EXPLOSION HAZARDS
During emergency conditions, overexposure to decompostion products may cause a health hazard. Symptoms may not be immediately apparent. Obtain medical attention.
WARNING! FLAMMABLE.

SPECIAL FIRE FIGHTING PROCEDURES
Water may be ineffective, but may be used to cool exposed containers to prevent pressure build-up and possible auto-ignition or explosion when exposed to extreme heat. If water is used, fog nozzles are preferable.

SECTION VII - REACTIVITY DATA

STABILITY
Normally stable.

CONDITIONS TO AVOID
Avoid excessive heat (>115 F (46 C) and sources of ignition.

INCOMPATABILITY (MATERIALS TO AVOID)
Strong acids or alkaline materials.
Oxidizing materials.

HAZARDOUS DECOMPOSITION PRODUCTS
Burning, including when heated by welding or cutting, will produce smoke, carbon monoxide and carbon dioxide.

HAZARDOUS POLYMERIZATION
Will not occur

CONDITIONS TO AVOID
None known

SECTION VIII - ENVIRONMENTAL INFORMATION

STEPS TO BE TAKEN IF MATERIAL IS RELEASED OR SPILLED
Keep spectators away. Eliminate all ignition sources (flames, hot surfaces, and sources of electrical, static or frictional sparks). Dike and contain spill with inert material (e.g. sand, earth). Transfer liquids to covered metal containers for recovery or disposal, or remove with inert absorbent. Use only non-sparking tools. Place absorbent diking

SECTION IV - FIRE AND EXPLOSION HAZARD DATA

Flammability Class: FLAMMABLE Flash Point: 80 F Setaflash LEL: Unknown

-EXTINGUISHING MEDIA:
Carbon dioxide, dry chemical or foam.

-SPECIAL FIREFIGHTING PROCEDURES:
Water spray may be ineffective. cool fire exposed containers with water. Fog nozzles are preferrable. Wear NIOSH/MSHA approved self-contained breathing apparatus and protective clothing to prevent contact with skin and eyes.

-UNUSUAL FIRE & EXPLOSION HAZARDS:
Vapors may accumulate in inadequately ventilated or confined areas. Vapors may form explosive mixtures with air. Vapors may travel long distances. Flashback or Flame to the handling site may occur. Closed containers may explode when exposed to extreme heat.

SECTION V - HEALTH HAZARD DATA

-PERMISSIBLE EXPOSURE LEVEL:
See section II (not established for product).

-EFFECTS OF OVEREXPOSURE:

TOXICS EMISSION REPORT FORM

Please copy this form and submit a separate page for each point that has toxic emissions. If the emissions are fugitives then make a copy of the form and enter "Fugitive" for the point name. These estimates should include any amounts greater than 0.1 tons per year.

Any substance listed as a Toxic Air Contaminant in OAC 252:100-41 should be reported. Any substance reported in the Toxics Release Inventory under SARA Title III should also be reported here. Any Hazardous Air Pollutant (HAP) cited in the "list of 187" under Title III of the 1990 Clean Air Act Amendments should be included and should have an asterisk (*) preceding the CAS number.

VOC Toxic emissions should be reported here. They should NOT be reported as VOC criteria pollutants for this point. Any questions relating to toxic reporting should be addressed to Evelina Morales at (405)290-8247.

MATERIAL SAFETY DATA SHEET

1. CHEMICAL PRODUCT AND COMPANY IDENTIFICATION

PRODUCT NAME:	Sodium metabisulfite FCC
HCI PRODUCT ID NUMBER:	02762
SYNONYMS:	Anhydrous sodium pyrosulfite
CHEMICAL FAMILY NAME:	Inorganic, salt
	NFPA HAZARD RATINGS (H-F-R): 2-0-1
	HMIS HAZARD RATINGS (H-F-R): 2-0-1
DISTRIBUTOR:	HCI U.S.A. DISTRIBUTION COMPANIES, INC. TECHNICAL RESOURCE CENTER 6529 S. BROADWAY ST. LOUIS, MO 63111 (314) 353-6500

IN CASE OF EMERGENCY CALL: CHEMTREC 1-800-424-9300

2. COMPOSITION, INFORMATION ON INGREDIENTS

INGREDIENT	CAS No.	PERCENT
Sodium metabisulfite	007681-57-4	95-100

These impurities and additional material names not listed above may also appear in the Regulatory Information Section (Section 15) towards the end of the MSDS. These materials may be listed for local "Right to Know" compliance and for other reasons.

3. HAZARDS IDENTIFICATION

********** EMERGENCY OVERVIEW **********

Caution:
May cause irritation to the skin, eyes, respiratory tract, and gastrointestinal tract.
May be harmful if inhaled or ingested.

Continued

9. PHYSICAL AND CHEMICAL PROPERTIES

PHYSICAL STATE:	Solid
APPEARANCE:	White or cream, powder or granules
ODOR:	Sulfur dioxide
MOLECULAR WEIGHT:	190.13
SPECIFIC GRAVITY:	1.1-1.5
SOLUBILITY (IN WATER):	40% @ 20 C
BOILING POINT:	N/AP
FREEZING POINT:	N/AP
MELTING POINT:	302 F 149.99 C
PRODUCT pH (@ 23 C):	4.3-5 (1% soln)
VAPOR PRESSURE:	N/AP
VAPOR DENSITY:	N/AP
EVAPORATION RATE (BUTYL ACETATE=1):	N/AP
% VOLATILES:	N/AP

10. STABILITY AND REACTIVITY INFORMATION

STABILITY:	Stable
COND. TO AVOID:	Exposure to high temperatures should be minimized. Moisture Air
INCOMPATIBILITY:	Strong oxidizers Acids Water and/or [illegible]
DECOMPOSITION:	Oxides of Sulfur Oxides of Sodium Sodium sulfide residue
POLYMERIZATION:	Polymerization will not occur.

PRODUCT IDENTIFICATION

TRADE NAME:
SULFURIC ACID

CAS NUMBER: 7664-93-9
SYNONYM(S): OIL OF VITRIOL
CHEMICAL FAMILY: MINERAL ACID
MOLECULAR FORMULA: H2SO4
MOLECULAR WEIGHT: 98.07
PRODUCT CODE: ND **HIERARCHY:**

PRODUCT HAZARD SUMMARY

HEALTH DANGER!

MAY BE CORROSIVE TO THE SKIN, EYES AND RESPIRATORY TRACT
ASPIRATION HAZARD IF SWALLOWED-CAN ENTER LUNGS AND CAUSE DAMAGE
CANCER HAZARD
* * SEE SPECIAL TOXIC EFFECTS SECTION FOR MORE INFORMATION

FLAMMABILITY NON-COMBUSTIBLE

REACTIVITY MAY REACT VIOLENTLY WITH WATER

PRODUCT HEALTH HAZARD INFORMATION

INGESTION:
CORROSIVE. May cause painful irritation and burning of the mouth and throat, painful swallowing, labored breathing, burns or perforation of the gastrointestinal tract leading to ulceration and secondary infection. Corrosive damage to the stomach and esophagus may be delayed.

TURCO MATERIAL SAFETY DATA SHEET

TURCO LIQUID SMUT-GO NC

CS No.: 01743

Date: 03/27/92

SECTION I MANUFACTURER'S NAME AND ADDRESS

Manufacturer's Name: TURCO PRODUCTS, INC.
DIVISION OF ATOCHEM NORTH AMERICA

Address: 7300 BOLSA AVENUE
WESTMINSTER, CA 92684

Emergency telephone: (614) 387-6200
For information: (714) 890-3600

SECTION II HAZARD INFORMATION

THE FOLLOWING INGREDIENTS ARE DEFINED TO BE HAZARDOUS PER 29CFR 1910-1200:

NAME (CAS)	CERCLA RQ	RCRA NO	SARA REPORTABLE	%
FERRIC SULFATE (10028-22-5)	1000	NOT LISTED	NO	25
ACGIH TLV: 1 mg/m3 (Fe) OSHA PEL: 1 mg/m3 (Fe)				
SODIUM BIFLUORIDE (1333-83-1)	100	NOT LISTED	NO	<5
ACGIH TLV: 2.5 mg/m3(F) OSHA PEL: 2.5 mg(F)/m3				
NITRIC ACID (7697-37-2)	1000	NOT LISTED	YES	5
ACGIH TLV: 2 ppm OSHA PEL: 2 ppm				

THE FOLLOWING INGREDIENTS ARE NOT REQUIRED TO BE LISTED BY 29CFR 1910-1200, BUT ARE LISTED IN CONFORMANCE WITH THE 'RIGHT-TO-KNOW' LAWS OF CERTAIN STATES, INCLUDING PENNSYLVANIA AND NEW JERSEY:

WATER (7732-18-5), FERROUS SULFATE (7720-78-7)

CARCINOGENS: NONE (AS DEFINED IN 29CFR 1910-1200, APPENDIX A(1)

DOT INFORMATION
PROPER SHIPPING NAME: Corrosive Liquid, n.o.s.
(Ferric Sulfate, Nitric Acid)

HAZARD CLASS: Corrosive material ID NUMBER: UN1760 PG II

SECTION III PHYSICAL PROPERTIES (TYPICAL)

Boiling point: Approx. 212 deg. F.
Vapor pressure: Approx. 20mmHg
Vapor density: <1
(air=1)
Solubility in water: Complete
Appearance and odor:
Dark-brown liquid; acid odor

Specific gravity: 1.33
Volatile, % by volume: Approx. 60
Evaporation rate: <1
(BuAc=1)
pH: Concentrated 1.0

MATERIAL SAFETY DATA

OCEAN NETWORK EMERGENCY PHONE 1-800-OLIN-911

THIS MATERIAL SAFETY DATA SHEET (MSDS) HAS BEEN PREPARED IN COMPLIANCE WITH THE FEDERAL OSHA HAZARD COMMUNICATION STANDARD,29 CFR 1910.1200.THIS PRODUCT MAY BE CONSIDERED TO BE A HAZARDOUS CHEMICAL UNDER THAT STANDARD.(REFER TO THE OSHA CLASSIFICATION IN SEC.I.)THIS INFORMATION IS REQUIRED TO BE DISCLOSED FOR SAFETY IN THE WORKPLACE.THE EXPOSURE TO THE COMMUNITY,IF ANY,IS QUITE DIFFERENT.

I. PRODUCT IDENTIFICATION

REVISION NO : 9
REVISION DATE : 1/22/93
PRODUCT CODE : HPE880121
FILE NUMBER : HPE00029.0001
PRODUCT NAME: HYDROFLUORIC ACID

SYNONYMS: Hydrogen fluoride, fluorohydric acid
CHEMICAL FAMILY: Inorganic acid
FORMULA: HF (Solution in water)
DESCRIPTION: Acid
OSHA HAZARD CLASSIFICATION: Corrosive, skin and eye hazard, lung toxin

II. COMPONENT DATA

PRODUCT COMPOSITION
CAS or CHEMICAL NAME: Hydrofluoric acid
CAS NUMBER: 7664-39-3
PERCENTAGE RANGE: 0.5-55.0%
HAZARDOUS PER 29 CFR 1910.1200: Yes
EXPOSURE STANDARDS:

	OSHA(PEL)		ACGIH(TLV)		OLIN	
	ppm	mg/cubic-meter as F:	ppm	mg/cubic-meter as F:	ppm	mg/cubic-meter
TWA:	3			None		None
CEILING:		None	3	2.5		None
STEL:	6			None		None

CAS or CHEMICAL NAME: Water
CAS NUMBER: 7732-18-5
PERCENTAGE RANGE: 45-99.5%
HAZARDOUS PER 29 CFR 1910.1200: No
EXPOSURE STANDARDS: None Established

III. PRECAUTIONS FOR SAFE HANDLING AND STORAGE

DO NOT TAKE INTERNALLY. AVOID CONTACT WITH SKIN, EYES AND CLOTHING. UPON CONTACT WITH SKIN OR EYES, WAS OFF WITH WATER.
STORAGE CONDITIONS: Store in a cool, dry, well ventilated area.
DO NOT STORE AT TEMPERATURES ABOVE: 38 Deg.C (100 Deg.F)
PRODUCT STABILITY AND COMPATIBILITY:
SHELF LIFE LIMITATIONS: 1 Year in polyethylene bottles
INCOMPATIBLE MATERIALS FOR PACKAGING: Glass
INCOMPATIBLE MATERIALS FOR STORAGE OR TRANSPORT: Refer to Incompatible Materials, Section VII.

IV. PHYSICAL DATA

APPEARANCE: Colorless liquid
FREEZING POINT: < 0 Deg.C (<32 Deg.F)
BOILING POINT: 95-115 Deg.C (203-239 Deg.F)
DECOMPOSITION TEMPERATURE: No Data
SPECIFIC GRAVITY: 1.002-1.153
BULK DENSITY: 1.002-1.153 (g/cc)
pH @ 25 DEG.C: < 2 (1% Solution)
VAPOR PRESSURE @ 25 DEG.C: No Data
SOLUBILITY IN WATER: Complete
VOLATILES, PERCENT BY VOLUME: 100%
EVAPORATION RATE: No Data
VAPOR DENSITY: No Data
MOLECULAR WEIGHT: 20.01 (Active ingredient)
ODOR: Irritating
COEFFICIENT OF OIL/WATER DISTRIBUTION: No Data

V. PERSONAL PROTECTIVE EQUIPMENT REQUIREMENTS

PERSONAL PROTECTION FOR ROUTINE USE OF PRODUCT:
RESPIRATORY PROTECTION: Wear a NIOSH/MSHA approved respirator if any exposure occurs.

VENTILATION: Use local exhaust ventilation to maintain levels to below the TLV.

SKIN PROTECTIVE EQUIPMENT: Wear gloves, boots, apron and a face shield with safety glasses. A full impermeable suit is recommended if exposure is possible to large portion of body.

OTHER: Emergency eye wash and safety showers must be provided in the immediate work area.

3. HAZARDS IDENTIFICATION

********** EMERGENCY OVERVIEW **********

Danger!
Liquid is corrosive to eyes and skin.
Harmful if inhaled.
Harmful or fatal if swallowed.

Continued

9. PHYSICAL AND CHEMICAL PROPERTIES

PHYSICAL STATE:	Liquid
APPEARANCE:	Clear, colorless, fuming
ODOR:	Sharp & pungent
MOLECULAR WEIGHT:	N/AV
SPECIFIC GRAVITY:	1.4 @ 60 F
SOLUBILITY (IN WATER):	Soluble
BOILING POINT:	250 F 121.1 C
FREEZING POINT:	N/AV
MELTING POINT:	N/AV
PRODUCT pH (@ 23 C):	N/AV
VAPOR PRESSURE:	5.5mmHg @ 20 C
VAPOR DENSITY:	1.7
EVAPORATION RATE (BUTYL ACETATE=1):	< ether
% VOLATILES:	<40%

10. STABILITY AND REACTIVITY INFORMATION

STABILITY: Stable

COND. TO AVOID: None known

INCOMPATIBILITY: Organic materials, reducing agents, strong alkalies

DECOMPOSITION: Combustion generates acid vapors.
Combustion generates toxic oxides of nitrogen.

POLYMERIZATION: Polymerization will not occur.

11. TOXICOLOGICAL INFORMATION

IMMEDIATE EFFECTS

This material is highly toxic by inhalation
Medical conditions aggravated include respiratory problems, skin disorders and allergies.
LC50: 49 ppm/4 hour(s) - inhalation - rat
LC50: 2500 ppm/1 hour(s) - inhalation - rat
LD50: 50-500 mg/kg - oral - unspecified species
LDLo: 430 mg/kg - oral - human
LDLo: 110 mg/kg - unreported - man
TCLo: 1071 ug/m3/24 hour(s)-84 day(s) continuous inhalation - rat

IV. FIRE AND EXPLOSION HAZARDS

FLASH POINT F (C): N/A (N/A) METHOD USED: N/A
EXTINGUISHING MEDIA:
As required to extinguish surrounding fire.

SPECIAL FIRE FIGHTING PROCEDURES:
Wear positive pressure self-contained breathing apparatus and full protective clothing.

UNUSUAL FIRE & EXPLOSION HAZARDS:
Clothing contaminated with the chemical is dangerously flammable. Immediately remove and rinse thoroughly with water. Contact with combustible material may cause fire. Under conditions of extreme heat and fire potassium ferricyanide may emit toxic cyanide fumes.

V. REACTIVITY DATA

STABILITY:
Stable

CONDITIONS TO AVOID:
None Expected.

INCOMPATIBILITY (MATERIALS TO AVOID):
Organic materials, paint thinners or reducing agents.

Keep separate from alkalies.
HAZARDOUS DECOMPOSITION:
Thermal decomposition may produce hydrogen fluoride.
May form hydrocyanic gas.

HAZARDOUS POLYMERIZATION: Will Not Occur

Re: Amendment to Disposal Plan 728097

Dear Mr. Coulter:

Enclosed are changes to disposal plan 728097:

1. Waste stream 15189: TSD facility ARD981057870 has been added; changed monthly amount produced to 481 lbs. month.
2. Waste stream 15251: TSD facilities ARD981057870 and ARD069748192 have been added.
3. Waste stream 15252: TSD facility ARD981057870 has been added

DEQ FORM 605-006
Sept. 5, 2011

Oklahoma Department of Environmental Quality
Annual Comprehensive Site Compliance Evaluation Report for Industrial Facilities (ACSCER)

Submission of this Comprehensive Site Compliance Evaluation Report, Part B, provides notice that the party identified in Section I of this form is not required to conduct Benchmark Monitoring for storm water discharges associated with industrial activities under the OPDES program. This Annual Comprehensive Site Compliance Evaluation Report is required for all authorized industrial facilities.

All Requested Information Must Be Provided on This Form (Part A) and the ACSCER Form (Part B).
See Instructions On Page 4 of The Form.

Section I.
OPDES Permit Authorization Number: OKR050659

Section II. Facility Operator Information

Name: Limco-Airepair, Inc. Phone: (918) 445-4300

Address: 5304 South Lawton Ave.

City: Tulsa County: Tulsa Zip Code: 74107

Section III. Facility Location

Name: Limco-Airepair, Inc. Phone: (918) 445-4300

Address: 5304 South Lawton Ave.

City: Tulsa County: Tulsa Zip Code: 74107

Latitude: 39.0516 N Longitude: 96.0003 W

Section IV. Certification

I certify under penalty of law that I have read and understand the requirements for filing this Comprehensive Site Compliance Evaluation Report, which is to be filed by March 1 st of each year beginning in 2007.

This report is also to be retained as part of the SWP3 for at least three (3) years from the date permit coverage expires or is terminated and will be made available to any State or Federal Inspector visiting this facility. All records of actions taken in accordance with 4.10 of this permit as part of the Storm Water Pollution Prevention Plan will be retained for at least three (3) years from the date permit coverage expires or is terminated. I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gathered and evaluated the information submitted. Based upon my inquiry of the person or persons who manage the system, or those persons directly involved in gathering the information, the information submitted is to the best of my knowledge and belief true, accurate, and complete. I am aware there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Annual Comprehensive Compliance Site Evaluation Report - Part B
Page 1.

Reporting Period: 2013

✓ How many routine facility inspections did you perform during the reporting period? 4

✓ How many corrective actions (Part 4.2.17.3) to remove the original violation and document these actions according to corrective action deadlines?

Date	Deficiencies	Corrected (Y or N)	Date Corrected
1-29-13	None		
4-2-13	NONE		
8-12-13	NONE		
10-30-13	NONE		

✓ What must you do to correct the deficiencies that remain uncorrected?

✓ Were all BMPs you indicated you would be using in your SWP3 (Part 4.2.8) including good housekeeping practices, actually being implemented at the time of the annual Comprehensive Site Compliance Evaluation?
Yes ☒ No ☐

✓ If one or more BMPs were not being implemented, were corrective actions taken after the FIRST inspection to find the problem?
Yes ☐ No ☐ All BMPs were being implemented ☒

✓ Was/were the same failure(s) to implement a BMP deficiency(ies) noted in more than one inspection?
Yes ☐ No ☐ No deficiencies noted in any inspection ☒

✓ Did any of your routine facility inspections find that one or more of your BMPs was not effective in controlling the pollutant source for which it was designed?
Yes ☐ No ☐ All BMPs were effective ☒

✓ If you found one or more ineffective BMPs, have they all been replaced with an alternative or modified BMP?
Yes ☐ No ☐ All BMPs were being effective ☒

✓ Is there additional BMPs needed to address any conditions requiring corrective action?
Yes ☐ No ☒

✓ At any time during the reporting period, did you discover any previously unidentified illicit discharges from your facility or previously unidentified pollutants in the existing discharges?
Yes ☐ No ☒

✓ Have all illicit discharges (including any discovered in previous years) been eliminated or permitted?
Yes ☐ No ☐ Permit applied for ☐ No known illicit discharges ☒

✓ Have any significant spills or leaks occurred at your facility during the reporting period?
Yes ☐ No ☒

✓ If any significant spills or leaks occurred, did they result in either a dry weather discharge or an actual discharge of the spilled or leaked material commingled with storm water (as opposed to the spilled material being washed away by storm water?)
Yes ☐ No ☒

Part B. Page 2

✓ If any significant spills or leaks occurred, did they result in more than the minimum amounts of material being discharged in storm water? Base your answer on your knowledge of the material you spilled or that leaked. The minimum amounts could vary with the nature (toxicity, oxygen demand, pH, etc.) of the spilled or leaked material from amounts left after normal "sweeping" type cleanup to the point at which even trace amounts left after cleanup could cause an environmental problem.

Yes ☐ No ☐ No spills or leaks occurred ☒

✓ Have all known spills or leaks been cleaned up or otherwise prevented from contaminating storm water that would be discharged under the authority of this permit?

Yes ☐ No ☐ No spills or leaks occurred ☒

✓ How many times did you visually monitor all your storm water discharges at all the facilities during the reporting year, and document the condition of and around the outfalls, including flow dissipation measures to prevent scouring? (Count only those done in accordance with the procedures at Part 5.1 - Quarterly Visual Monitoring)

Yes ☐ No ☐ Number 3

✓ Would the results of your visual monitoring indicate that there are pollutants in your storm water discharges that are not adequately controlled by your current BMPs?

Yes ☐ No ☒

✓ If the results of your visual monitoring indicated a potential problem, was it due to one or more of the following? 5 - N/A

1. New pollutant source (including exposure of previously unexposed material).
2. Failure to implement or maintain an existing BMP.
3. Less than expected performance from a BMP.
4. No BMP was selected to deal with that problem.
5. N/A (No problems identified)

✓ If your visual monitoring indicated a potential problem, what have you done to resolve the problem? 6 - N/A

1. Eliminated exposure or pollutant source.
2. Modified existing BMPs.
3. Added a new BMP.
4. Plan to address problem by end of current reporting year.
5. Nothing planned.
6. N/A (No problems identified).

✓ Did any analysis of any element tested during any previous discharge monitoring period exceed the numeric limitation value?

Yes ☐ No ☒

✓ If your answer to the previous question was "Yes", please name the element and the test results.

Element	Test Results	Element	Test Results
N/A	N/A	N/A	N/A

✓ Is there any required revisions to the SWP3 resulting from the inspection?

Yes ☐ No ☒

DEQ FORM 605-006 Sept. 5, 2011

OKLAHOMA DEPARTMENT OF ENVIRONMENTAL QUALITY

Oklahoma Department of Environmental Quality
Annual Comprehensive Site Compliance Evaluation Report for Industrial Facilities (ACSCER)

Submission of this Comprehensive Site Compliance Evaluation Report, Part B, provides notice that the party identified in Section I of this form is not required to conduct Benchmark Monitoring for storm water discharges associated with industrial activities under the OPDES program. This Annual Comprehensive Site Compliance Evaluation Report is required for all authorized industrial facilities.

All Requested Information Must Be Provided on This Form (Part A) and the ACSCER Form (Part B).

See Instructions On Page 4 of The Form.

Section I.

OPDES Permit Authorization Number: OKR051059

Section II. Facility Operator Information

Name: Limco-Airepair, Inc. Phone: (918) 445-4300

Address: 5304 South Lawton Ave.

City: Tulsa County: Tulsa Zip Code: 74107

Section III. Facility Location

Name: Limco-Airepair, Inc. Phone: (918) 445-4300

Address: 5304 South Lawton Ave.

City: Tulsa County: Tulsa Zip Code: 74107

Latitude: 39.0516 N Longitude: 96.0003 W

Section IV. Certification

I certify under penalty of law that I have read and understand the requirements for filing this Comprehensive Site Compliance Evaluation Report, which is to be filed by March 1 st of each year beginning in 2007.

This report is also to be retained as part of the SWP3 for at least three (3) years from the date permit coverage expires or is terminated and will be made available to any State or Federal Inspector visiting this facility. All records of actions taken in accordance with 4.10 of this permit as part of the Storm Water Pollution Prevention Plan will be retained for at least three (3) years from the date permit coverage expires or is terminated. I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gathered and evaluated the information submitted. Based upon my inquiry of the person or persons who manage the system, or those persons directly involved in gathering the information, the information submitted is to the best of my knowledge and belief true, accurate, and complete. I am aware there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Annual Comprehensive Compliance Site Evaluation Report - Part B
Page 1.

Reporting Period: 2015

✓ How many routine facility inspections did you perform during the reporting period? 4

✓ How many corrective actions (Part 4.2.17.3) to remove the original violation and document these actions according to corrective action deadlines?

Date	Deficiencies	Corrected (Y or N)	Date Corrected
	None		

✓ What must you do to correct the deficiencies that remain uncorrected?

✓ Were all BMPs you indicated you would be using in your SWP3 (Part 4.2.8) including good housekeeping practices, actually being implemented at the time of the annual Comprehensive Site Compliance Evaluation?
Yes ☒ No ☐

✓ If one or more BMPs were not being implemented, were corrective actions taken after the FIRST inspection to find the problem?
Yes ☐ No ☐ All BMPs were being implemented ☒

✓ Was/were the same failure(s) to implement a BMP deficiency(ies) noted in more than one inspection?
Yes ☐ No ☐ No deficiencies noted in any inspection ☒

✓ Did any of your routine facility inspections find that one or more of your BMPs was not effective in controlling the pollutant source for which it was designed?
Yes ☐ No ☐ All BMPs were effective ☒

✓ If you found one or more ineffective BMPs, have they all been replaced with an alternative or modified BMP?
Yes ☐ No ☐ All BMPs were being effective ☒

✓ Is there additional BMPs needed to address any conditions requiring corrective action?
Yes ☐ No ☒

✓ At any time during the reporting period, did you discover any previously unidentified illicit discharges from your facility or previously unidentified pollutants in the existing discharges?
Yes ☐ No ☒

✓ Have all illicit discharges (including any discovered in previous years) been eliminated or permitted?
Yes ☐ No ☐ Permit applied for ☐ No known illicit discharges ☒

✓ Have any significant spills or leaks occurred at your facility during the reporting period?
Yes ☐ No ☒

✓ If any significant spills or leaks occurred, did they result in either a dry weather discharge or an actual discharge of the spilled or leaked material commingled with storm water (as opposed to the spilled material being washed away by storm water?)
Yes ☐ No ☒

Part B. Page 2

✓ If any significant spills or leaks occurred, did they result in more than the minimum amounts of material being discharged in storm water? Base your answer on your knowledge of the material you spilled or that leaked. The minimum amounts could vary with the nature (toxicity, oxygen demand, pH, etc.) of the spilled or leaked material from amounts left after normal "sweeping" type cleanup to the point at which even trace amounts left after cleanup could cause an environmental problem.

Yes ☐ No ☐ No spills or leaks occurred ☒

✓ Have all known spills or leaks been cleaned up or otherwise prevented from contaminating storm water that would be discharged under the authority of this permit?

Yes ☐ No ☐ No spills or leaks occurred ☒

✓ How many times did you visually monitor all your storm water discharges at all the facilities during the reporting year, and document the condition of and around the outfalls, including flow dissipation measures to prevent scouring? (Count only those done in accordance with the procedures at Part 5.1 - Quarterly Visual Monitoring)

Yes ☐ No ☐ Number 4

✓ Would the results of your visual monitoring indicate that there are pollutants in your storm water discharges that are not adequately controlled by your current BMPs?

Yes ☐ No ☒

✓ If the results of your visual monitoring indicated a potential problem, was it due to one or more of the following? 5 - N/A

1. New pollutant source (including exposure of previously unexposed material).
2. Failure to implement or maintain an existing BMP.
3. Less than expected performance from a BMP.
4. No BMP was selected to deal with that problem.
5. N/A (No problems identified)

✓ If your visual monitoring indicated a potential problem, what have you done to resolve the problem? 6 - N/A

1. Eliminated exposure or pollutant source.
2. Modified existing BMPs.
3. Added a new BMP.
4. Plan to address problem by end of current reporting year.
5. Nothing planned.
6. N/A (No problems identified).

✓ Did any analysis of any element tested during any previous discharge monitoring period exceed the numeric limitation value?

Yes ☐ No ☒

✓ If your answer to the previous question was "Yes", please name the element and the test results.

Element	Test Results	Element	Test Results
N/A	N/A	N/A	N/A

✓ Is there any required revisions to the SWP3 resulting from the inspection?

Yes ☐ No ☒

Re: Amendment to Waste Stream 15189

Dear Mr. Coulter:

Enclosed is a waste stream modification to waste stream 15189, disposal plan 728097. Please feel free to give me a call at (918) 445-4300. The only change involves EPA waste codes being added/modified to the waste stream to be more inclusive of other solvents that could be inadvertently added to the trichloroethylene waste stream.

Sincerely,

Bill Williams
Facility Manager

Bill Williams
Executive Director

Dear Mr. Williams:

Thank you for your request for information pursuant to the Freedom of Information Act, which was received by this office on [illegible]. Your request has been assigned tracking number [illegible] and we will respond to it as soon as possible.

Please be aware that due to the large volume of requests we receive, it may take us some time to process your request. We appreciate your patience.

Sincerely,

[illegible]
Records Management Officer

State: OK **Country:** US **Zip Code:** 74107

B. Name of Site's Operator: Limco Airepair, Inc. **Date Became Operator:** 10/01/1995
Type: ☒ Private ☐ County ☐ District ☐ Federal ☐ Indian ☐ Municipal ☐ State ☐ Other

10. Type of Regulated Waste Activity
Mark "Yes" or "No" for all current activities (as of the date submitting the form); complete any additional boxes as instructed.

A. Hazardous Waste Activities; Complete all parts 1-7.

Y☒ N☐ **1. Generator of Hazardous Waste**
If Yes, choose only one of the following - a, b, or c.

- ☒ a. LQG: Generates, in any calendar month, 1,000 kg/mo (2,200 lbs./mo.) or more of hazardous waste; or Generates, in any calendar month, or accumulates at any time, more than 1 kg/mo (2.2 lbs./mo) of acute hazardous waste; or Generates, in any calendar month, or accumulates at any time, more than 100 kg/mo (220 lbs./mo) of acute hazardous spill cleanup
- ☐ b. SQG:. 100 to 1,000 kg/mo (220 - 2,200 lbs./mo.) of non-acute hazardous waste; or
- ☐ c. CESQG: Less than 100 kg/mo (220 lbs./mo.) of non-acute hazardous waste

If "Yes" above, Indicate other generator activities.

Y☐ N☒ 2 Short-Term Generator (generate from a short-term or onetime event and not from on-going processes). If "Yes", provide an explanation in the Comments

Y☐ N☒ 3. United States Importer of Hazardous Waste

Y☐ N☒ 4. Mixed Waste (hazardous and radioactive) Generator

Y☐ N☒ **5. Transporter of Hazardous Waste**
If Yes, mark all that apply.

- ☐ a. Transporter
- ☐ b. Transfer Facility (at your site)

Y☐ N☒ **6. Treater, Storer, or Disposer of Hazardous Waste (at your site)**
Note: A hazardous waste permit is required for this activity.

Y☐ N☒ **7. Recycler of Hazardous Waste (at your site)**

Y☐ N☒ **8. Exempt Boiler and/or Industrial Furnace**
If Yes, mark each that applies.

- ☐ a. Small Quantity On-site Burner Exemption
- ☐ b. Smelting, Melting, and Refining Furnace Exemption

Y☐ N☒ **9. Underground Injection Control**

Y☐ N☒ **10. Receives Hazardous Waste from Off-site**

B. Universal Waste Activities; Complete all parts 1-2.

Y☐ N☒ **1. Large Quantity Handler of Universal Waste (accumulate 5,000 kg or more) [refer to your State regulations to determine what is regulated]. Indicate types of universal waste managed at your site.**
If "Yes", mark all boxes that apply:

- a. Batteries ☐
- b. Pesticides ☐
- c. Mercury containing equipment ☐
- d. Lamps ☐
- e. Other (specify) _____ ☐
- f. Other (specify) _____ ☐
- g. Other (specify) _____ ☐

Y☐ N☒ **2. Destination Facility for Universal Waste**
Note: A hazardous waste permit may be required for this

C. Used Oil Activities; Complete all parts 1-4.

Y☐ N☒ **1. Used Oil Transporter**
If Yes, mark each that applies.

- ☐ a. Transporter
- ☐ b. Transfer Facility

Y☐ N☒ **2. Used Oil Processor and/or Re-refiner**
If Yes, mark each that applies.

- ☐ a. Processor
- ☐ b. Re-refiner

Y☐ N☒ **3. Off-Specification Used Oil Burner**

Y☐ N☒ **4. Used Oil Fuel Marketer**
If Yes, mark each that applies.

- ☐ a. Marketer Who Directs Shipment of Off-Specification Used Oil to Off-Specification Used Oil Burner
- ☐ b. Marketer Who First Claims the Used Oil Meets the Specifications

D. **Eligible Academic Entities with Laboratories-Notification for opting into or withdrawing from managing laboratory hazardous wastes pursuant to 40 CFR Part 262 Subpart K**

You must check with your State to determine if you are eligible to manage laboratory hazardous wastes pursuant to 40 CFR Part 262 Subpart K

☐ 1. Opting into or currently operating under 40 CFR Part 262 Subpart K for the management of hazardous wastes in laboratories
See the item-by-item Instructions for definitions of types of eligible academic entities. Mark all that apply:

- ☐ a. College or University
- ☐ b. Teaching Hospital that is owned by or has a formal written affiliation agreement with a college or university
- ☐ c. Non-profit Institute that is owned by or has a formal written affiliation agreement with a college or university

☐ 2. Withdrawing from 40 CFR Part 262 Subpart K for the management of hazardous wastes in laboratories

11. Description of Hazardous Wastes

A. Waste Codes for Federally Regulated Hazardous Wastes.

Please list the waste codes of the Federal hazardous wastes handled at your site. List them in the order they are presented in the regulations (e.g., D001, D003, F007, U112). Use an additional page if more spaces are needed.

D001, D002, D003, D004, D006, D007, D035, D040, F001, F003, F005

B. Waste Codes for State-Regulated (i.e., non-Federal) Hazardous Wastes.

Please list the waste codes of the State-regulated hazardous wastes handled at your site. List them in the order they are presented in the regulations. Use an additional page if more spaces are needed for waste codes.

EPA ID Number: OKR000000612

12. Notification of Hazardous Secondary Material (HSM) Activity

Y☐ N☒ Are you notifying under 40 CFR 260.42 that you will begin managing, are managing, or will stop managing hazardous secondary material under 40 CFR 261.2(a)(2)(ii), 40 CFR 261.4(a)(23), (24), or (25)?

If "Yes", you must fill out the Addendum to the Site Identification Form: Notification for Managing Hazardous Secondary Material.

13. Comments

14. Certification

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

DEQ QUARTERLY REPORT FORM

CORRECTED

RECEIVED

APR 28 2016

LAND PROTECTION DIVISION
DEPARTMENT OF ENVIRONMENTAL QUALITY

OKLAHOMA
DEPARTMENT OF ENVIRONMENTAL QUALITY
...for a clean, attractive, prosperous Oklahoma

To be completed by Oklahoma generators of hazardous waste as required by 27A O.S. Supp. 1994, §2-7-103 and §2-7-105, and the rules and regulations promulgated thereto. This report is to be received by the Oklahoma Department of Environmental Quality, Land Protection Division, no later than sixty (60) days after the end of the quarter.

See the attached pages for instruction on how to complete this form.

CERTIFIED MAIL, RETURN RECEIPT REQUESTED

Mr. Bill Williams
EH&S Manager
5304 S. Lawton Ave
Tulsa, Oklahoma 74107

Re: **Limco Airepair Inc., and Aeroduct, 5304 S Lawton Ave. Facility**
Closure of Enforcement Case #4685

Dear Mr. Williams,

On November 18, 2008, The Oklahoma Department of Environmental Quality (Department) conducted an on-site evaluation at Limco Airepair Inc. (Facility) in Tulsa, Oklahoma. It was discovered during a record review and physical tour that the Facility was not keeping proper records and conducting monitoring as required in Operating Permit #99-026-O (M-2) and the National Emissions Standards for Hazardous Air Pollutants for Source Categories (NESHAP), 40 CFR 63, Subpart T, Standards for Halogenated Solvent Cleaning.

A compliance plant submitted to the Department was received on January 23, 2009 and approved by the Department. The Department received the Annual Report & Annual Solvent Emissions Report and the Semiannual Exceedance Report on February 24, 2009. No violations or deviations were noted.

On July 22, 2009, a partial compliance evaluation (PCE) focusing on the vapor degreaser was conducted at the Facility to review records and monitoring. The Department found all records and monitoring are being conducted daily on the first shift. The Operator records the required data on a log sheet.

After review of the records and a physical evaluation of the vapor degreaser, the Facility appears to be in compliance with Permit #99-026-O (M-2) and NESHAP Subpart T. If at any time in the future, the Facility adds equipment and/or processes that may increase the emission, the Department may require a review of the Facility. The Department appreciates your cooperation in resolving this matter, and considers Enforcement Case #4685 closed.

If you have any questions, contact Helen King of the Department at (918) 293-1612.

Sincerely,

Rhonda Jeffries, Environmental Programs Manager
Compliance and Enforcement Group -- ROAT

April 9, 2008

Mr. Andrei Dessiatov
Sales Manager
Lobo Holdings Company
P.O. Box 1228
Owasso, OK 74055-1228

Subject: December 18, 2007 – Full Compliance Evaluation
February 7, 2008 – Alternative Enforcement Letter

Dear Mr. Dessiatov:

This letter is to inform you that the Department of Environmental Quality ("DEQ") considers the enforcement case involving the maintenance of hours of operation, fuel usage, pressure drop, maintenance logs, complaint logs and wet suppression records to be closed as of today. On March 5, 2008, Lobo submitted the daily production tracking records for February 2008, demonstrating that the facility has started to maintain the required records. Accordingly, Lobo has addressed all of the issues of concern in the Alternative Enforcement Letter. If you have any questions; please feel free to contact David Youngman at (918) 293-1618.

Sincerely,

Rhonda Jeffries
Environmental Programs Manager
Air Quality Division
Department of Environmental Quality

CC: David Youngman, Environmental Programs Specialist

MEMORANDUM

DATE: April 9, 2008

TO: Rhonda Jeffries, Environmental Programs Manager
Regional Office at Tulsa

Cc: Becky Whitecotton, Environmental Programs Specialist

FROM: David Youngman, Environmental Programs Specialist
Regional Office at Tulsa

SUBJECT: Lobo Holdings Company – Closure Memorandum
Enforcement Case 4279

On December 18, 2007, an unannounced full compliance evaluation was conducted at Lobo Asphalt, located at 13737 E. 46th Street North, Tulsa, OK 74117. As a result of the evaluation an Alternative Enforcement Letter, dated February 7, 2008, was sent to the facility.

Issue #1
The Department alleged that Lobo Holdings failed to maintain records of the hours of operation, fuel usage, pressure drop records, maintenance logs, complaint logs, or wet suppression logs.

On March 5, 2008, Lobo Asphalt provided copies of the February 2008 Daily Production Tracking documents that contain the required records. No other compliance measures are required for the purposes of this enforcement case and it is recommended for closure. There are no emission reductions for this enforcement case.

RE: **Lobo Asphalt Plant,**
March 3, 2008 - Enforcement Conference

Dear Mr. Dessiatov:

This letter is to confirm matters discussed during the enforcement conference held at the Department of Environmental Quality (DEQ), Regional Office at Tulsa on March 3, 2008. The purpose of the conference was to discuss the violations set forth in the Alternative Enforcement Letter dated February 7, 2008. The key issues discussed were the record keeping violations and the compliance plant Lobo submitted on February 12, 2008. Mr. Dessiatov explained how the facility has already corrected the record keeping deficiencies and agreed to provide the DEQ with copies of the daily compliance log for the last two weeks of February 2008. Finally, the DEQ representatives explained the process of resolving the enforcement case.

Within 30 days of receipt of this letter, as agreed in the meeting, please provide the following information:

1. A copy of the daily compliance log from February 17, 2008, through February 29, 2008.

Please forward the requested information to:

Attention: David Youngman
Oklahoma Department of Environmental Quality
Regional Office at Tulsa
3105 East Skelly Drive, Suite 200
Tulsa, Oklahoma 74105

The DEQ appreciates your cooperation in this matter. If you have any questions, please phone either David Youngman at (918) 293-1618 or Robert Singletary at (405) 702-7173.

Sincerely,

Rhonda Jeffries
Environmental Program Manager
Regional Office at Tulsa

Re: Air Quality Full Compliance Evaluation at Lobo Asphalt Plant, Tulsa County

Dear Mr. Youngman:

Thank you for taking time to conduct full air quality compliance evaluation of our new facility. Lobo Holdings, Inc. would like to accept your offer of an alternative option to resolve the noncompliance issues. The purpose of this letter is to provide compliance plan and proposal for resolution of the violations.

Immediately after compliance evaluation we modified our daily production tracking form (attached) to include: hours of operation, fuel usage, pressure drop records and maintenance activities. Also, we established a complaint log. Eric Jones our Plant Manager is taking responsibility-overseeing administration of daily production tracking form. Further, we have gathered available information from various sources in efforts to re-establish deficient records.

Lobo Holdings, Inc always endeavors to comply with all applicable regulations and it unfortunate that compliance issues have been identified. However, we took action quickly to satisfy requirements of the General Permit.

Please let us know if you need additional information.

Sincerely,

Andrei Dessiatov
Sales Manager

Re: Air Quality Full Compliance Evaluation at Lobo Asphalt Plant, Tulsa County

Dear Mr. Dessiatov:

The Oklahoma Department of Environmental Quality, Air Quality Division (Department) conducted a full compliance evaluation at the above referenced facility on December 18, 2007. A copy of the final report is attached for your review. Please note that compliance issues have been identified in the summary section of the report.

The purpose of this letter is to offer Lobo an alternative option to resolve the non-compliance issue(s) other than traditional enforcement including the issuance of a Notice of Violation. If Lobo elects to pursue this option, contact David Youngman at (918) 293-1618 within ten (10) calendar days of receipt of this letter. Within twenty (20) calendar days after contacting the inspector, provide a written compliance plan and schedule, and a proposal for resolution of the violations. If it is necessary to conduct a meeting to discuss the issues, the Department will contact you after review of the compliance plan. If there are factual errors (i.e. transposed numbers, misreading of a record, etc), the facility may provide proof of the error in the compliance plan; however, this process will not include a dispute of the issue(s) of noncompliance. If Lobo wishes to dispute the findings alleged in the report, the issue(s) will be addressed through the traditional enforcement process following the issuance of a Notice of Violation.

If you have any questions, please contact David Youngman of the Department at (918) 293-1618.

Mr. Dessiatov
Lobo Holdings Company

SUBJECT: Full Compliance Evaluation (FCE) at **Lobo Holdings, Inc.**
Lobo Asphalt Plant
13737 E. 46th Street North
Tulsa, Oklahoma 74117
AIRS ID Number 143-00085
FCE ID Number 3622

Introduction

On December 18, 2007, from 15:00 until 16:40, an unannounced full air quality compliance evaluation was conducted at the above-referenced facility. David Youngman, an Environmental Programs Specialist with the Oklahoma Department of Environmental Quality (Department), Air Quality Division, conducted the evaluation. Credentials were properly presented upon arrival. Andrei Dessiatov, Sales Manager, Eric Jones, Plant Manager, and Jim Dykes, Operator, represented the facility throughout the evaluation. The facility was inspected to document the compliance status of the facility with federal and state air quality regulations as well as Permit No. 2006-273-O.

History and Process Description

Lobo Holdings Inc., owns and operates an asphalt plant in Tulsa County (SIC 2951). The facility originally operated a Boeing Model MS600 and associated equipment under Permit No. 96-002-O. In January of 2007 the facility received a construction permit for an Astec drum mix asphalt plant. The Astec plant has replaced the Boeing plant and is solely used for production. The Boeing plant is still located at the facility, but has been dismantled and is for sale.

Emissions/Source Classification

The facility is a Synthetic Minor Source for PM_{10}. Emissions inventories for 2004, 2005, and 2006 were reviewed during this evaluation. The reported emissions and percent changes are as follows:

	2004	% Change	2005	% Change	2006
Carbon Monoxide	13.3	*25.26*	16.66	*-25.57*	12.4
Nitrogen Oxides	5.52	*25.18*	6.91	*-22.72*	5.34
PM-Coarse	1.77	*7.91*	1.91	*-9.95*	1.72
PM-Fine	0.25	*24.00*	0.31	*-22.58*	0.24
Sulfur Oxides	1.1	*25.45*	1.38	*-22.46*	1.07
VOC	2.14	*32.71*	2.84	*-27.11*	2.07
Benzene	0.04	*25.00*	0.05	*-20.00*	0.04
Ethylbenzene	0.22	*27.27*	0.28	*-25.00*	0.21
Formaldehyde	0.44	*20.45*	0.53	*1.89*	0.54
Toluene	0.1	*30.00*	0.13	*-23.08*	0.1
Xylenes	0.27	*25.92*	0.34	*-23.53*	0.26

The facility had an increase in production during 2005, causing the emissions to increase for that year, followed by a decrease in production which returned the emissions to a level similar to 2004.

State and Federal Regulatory Applicability

OAC 252:100-5 (Registration, Emissions Inventory, and Annual Operating Fees)
Subchapter 5 requires sources of air contaminants to register with Air Quality, file emission inventories annually, and pay annual operating fees based upon total annual emissions of regulated pollutants.

The facility has submitted the emission inventory for the past three years.

OAC 252:100-7 (Permits for Minor Sources)
Subchapter 7 sets forth the permit application fees and the basic substantive requirements of permits for minor facilities.

The facility is a Synthetic Minor Source operating under Permit No. 2006-273-C.

OAC 252:100-25 (Visible Emissions and Particulates)
This subchapter states that no discharge of greater than 20% opacity is allowed except for short-term occurrences, which consist of not more than one six-minute period in any consecutive 60 minutes, not to exceed three such periods in any consecutive 24 hours. In no case shall the average of any six-minute period excess 60% opacity.

No visible emissions were observed.

OAC 252:100-29 (Fugitive Dust)
No person shall cause or permit the discharge of any visible fugitive dust emissions beyond the property line on which the emissions originate in such a manner as to damage or to interfere with the use of adjacent properties, or cause air quality standards to be exceeded, or interfere with the maintenance of air quality standards.

No fugitive dust was observed discharging beyond the property line at this facility.

OAC 252:100-43 (Testing, Monitoring, and Recordkeeping)
This subchapter provides general requirements for testing, monitoring, and recordkeeping and applies to any testing, monitoring or recordkeeping activity conducted at any stationary source.

The facility provided copies of the daily and monthly production and the sulfur content of the fuel oil (Attachments A & B). However, the facility was unable to provide records of the hours of operation or fuel usage, pressure drop records, maintenance logs, complaint logs or wet suppression logs.

NSPS, 40 CFR Part 60
Subpart I (Asphalt Concrete Plants) affects hotmix asphalt plants which commence construction or modification after June 11, 1973. The following facilities in a hotmix asphalt plant are affected: dryers; systems for screening, handling, storing, and weighing hot aggregate; systems for loading, transferring, and storing mineral filler, systems for mixing hot mix asphalt; and the loading, transfer, and storage systems associated with emissions control systems. Subpart I prohibits discharge into the atmosphere of gases which contain 0.04 gr/dscf of particulate matter and gases which exhibit 20% opacity or greater. NSPS specifies performance testing on affected facilities. The following reference methods are specified in Subpart I: Method 9 and Method 5. Section 60.11 specifies opacity testing shall be done by Method 9 for a minimum of 30 six-minute averages.

During the onsite evaluation no opacity was observed. The facility conducted a performance test on August 23, 2007, which measured total PM_{10} emissions of 0.0038 gr/dscf and opacity of 0% for the average of three runs.

Evaluation/Enforcement History
A Full compliance evaluation was conducted at the facility on May 5, 2003. As a result of the evaluation an enforcement case was opened to address permit violations of Specific Conditions 1 and 6 of Permit No. 96-002-O, and an opacity violation of NSPS Subpart I. Two additional

enforcement cases have been opened as a result of complaint based evaluations that found the facility again in violation of the opacity requirements of NSPS Subpart I. All three of these enforcement cases were addressed and resolved through the issuance of Consent Orders. Enforcement Case 971 was closed on February 20, 2004, Case 1387 was closed on September 2, 2004, and Case 2209 was closed on July 21, 2006.

Annual Compliance Certifications/Semiannual Reports
The facility is a Synthetic Minor Source and is not required to submit an ACC or SAR.

Excess Emissions
The facility has reported two excess emission events, one of the excess emissions was reported for August 10, 2005, and one for September 7, 2004. A 10-day report and demonstration of cause was submitted for the excess emission event from August 10, 2005, however, the 10-day report was one day late. The excess emissions from August 10, 2005, were addressed through enforcement case 2209. For the September 7, 2004, excess emission, the Department received a written report and a demonstration of cause on September 22, 2004, one day late for the written report. The facility claimed that there was a malfunction of the damper on the asphalt mix. The excess emission lasted for 30 minutes and upon completion of the asphalt run the plant stopped operations until repairs were made. This is the only excess emission associated with the damper reported by the facility, it did not occur as a result of operator error or improper operation of the facility, and it therefore appears to meet the requirements for malfunction.

Evaluation
A physical evaluation was made at the facility to further document the compliance status of the facility with federal and state air quality regulations along with Permit No. 2006-273-O. Upon arrival at the facility the inspector presented proper credentials and was introduced to Andrei Dessiatov the Sales Manager. The inspector explained the purpose of the evaluation and discussed the records required by the permit. Mr. Dessiatov was able to provide sulfur content of the fuel oil and the daily and monthly asphalt production. Mr. Dessiatov then escorted the inspector on a tour of the facility. The old Boeing Model MS 600 hot mix asphalt plant that is covered under Permit No. 96-002-O is now disassembled and for sale. The old plant was decommissioned in February of 2007 and only two feeder bins from the old plant are being used with the new plant. The facility grounds had stock piles of aggregate materials, no opacity was observed coming from the stockpiles and no fugitive dust was observed being discharged beyond the property line. The Astec drum mix asphalt plant was observed next. The equipment was verified and the evaluation party entered the control room. Mr. Eric Jones, Plant Manager, and Mr. Jim Dykes, Operator, were introduced to the inspector. The plant was not operating at that time so the baghouse pressure and opacity from the baghouse were not observed. Mr. Dessiatov then escorted the inspector back to the main office and the evaluation concluded at 16:40.

Permit No. 2006-273-O, Specific Conditions
Except as otherwise prohibited or limited by the Permit or this Authorization, the permittee is hereby authorized to operate the following emission sources and/or conduct the following activities at the referenced site, described in the application received on November 3, 2006. The Evaluation Memorandum, dated January 30, 2007, explains the derivation of applicable permit

requirements and estimates of emissions; however, it does not contain operating limitations or permit requirements. Continuing operations under this permit constitutes acceptance of, and consent to, the conditions contained herein:

I. Emission Units and Numerical Limitations

Emission limitations are hereby established for all regulated pollutants as a facility-wide cap. Emissions from all emission units at the facility shall not equal or exceed major source thresholds, i.e., 100 TPY of any regulated pollutant, 10 TPY of any single HAP, or 25 TPY of a combination of HAP.

Compliance with these emission limitations shall be determined on a monthly rolling basis. The estimate shall be annualized using a monthly average during the first 11 months following issuance of this Authorization. However, any facility with actual emissions of each regulated air pollutant less than 80% of the major source thresholds may make this determination annually. The facility throughput shall be maintained at such a level so as to not exceed the annual facility-wide emission limitations.

Emissions inventories for 2004, 2005, and 2006 were reviewed during this evaluation. The reported emissions and percent changes are as follows:

	2004	% Change	2005	% Change	2006
Carbon Monoxide	13.3	*25.26*	16.66	*-25.57*	12.4
Nitrogen Oxides	5.52	*25.18*	6.91	*-22.72*	5.34
PM-Coarse	1.77	*7.91*	1.91	*-9.95*	1.72
PM-Fine	0.25	*24.00*	0.31	*-22.58*	0.24
Sulfur Oxides	1.1	*25.45*	1.38	*-22.46*	1.07
VOC	2.14	*32.71*	2.84	*-27.11*	2.07
Benzene	0.04	*25.00*	0.05	*-20.00*	0.04
Ethylbenzene	0.22	*27.27*	0.28	*-25.00*	0.21
Formaldehyde	0.44	*20.45*	0.53	*1.89*	0.54
Toluene	0.1	*30.00*	0.13	*-23.08*	0.1
Xylenes	0.27	*25.92*	0.34	*-23.53*	0.26

The facility had an increase in production during 2005, causing the emissions to increase for that year, followed by a decrease in production which returned the emissions to a level similar to 2004. All of the reported emissions appear to be under the Major Source threshold required by the permit, indicating compliance with this condition.

II. Monitoring and Recordkeeping Requirements

The permittee shall demonstrate continued compliance with any emission limitations or any operational conditions as specified in the permit (summarized in TABLE 14 of the Evaluation Memorandum).

The facility provided copies of the daily and monthly production and the sulfur content of the fuel oil (Attachments A & B). However, the facility was unable to provide records of the hours of operation or fuel usage, pressure drop records, maintenance logs, complaint logs or wet suppression logs.

III. Equipment Additions/Authorization Modifications

Construction of additional emission units (as provided by the Hot Mix Asphalt Facility General Permit), or operational changes (e.g., changes in tank contents to another organic liquid or increases in throughput), may be allowed over the life of this Authorization without obtaining another Authorization to Operate so long as facility-wide emissions do not exceed that amount which would cause the facility to be classified as a major source.

Written notification of intent to construct, or to make operational changes (e.g., changes in tank contents or increases in throughput), must be provided to DEQ within 7 days of the start of operation. Neither an Authorization to Construct nor a new Authorization to Operate is required for these changes.

Operation of additional emission units authorized under an individual construction permit (e.g., those requiring a site-specific determination) requires issuance of a new Authorization to Operate for the facility (see Part 4, section II.C of the permit). The permittee shall make application for a new Authorization to Operate within 60 days of commencing operation of such additional emission units.

The facility has not modified, added or changed any equipment since the issuance of this permit, indicating compliance with this condition.

IV. Previous Permits

The facility has been operating under Permit No. 96-002-O.

Permit No. 96-002-O is for the old Boeing Model MS600 plant that has been disassembled and is currently for sale. The facility has no plans to ever use this plant in the future.

V. Equipment List

The inventory listed in Table A shows those emission units currently located at the facility.

Table A - Emission Units of the existing Boeing plant

EU ID#	**Description**	**Capacity/ Throughput**	Mfg. Date	NSPS

				Subpart
D-1	Boeing MS600 Drum Mix Asphalt Plant	600 TPH and 124 MMBTUH	1976	I
H-1	Electric A/C tank heating	N/A	1996	NA
T-1	Asphalt cement tank	17,000 gallons	1996	NA
T-2	Asphalt cement tank	17,000 gallons	1996	NA
T-3	Diesel	8,809 gallons	1996	NA
T-4	Diesel	8,809 gallons	1996	NA
T-5	Diesel	8,809 gallons	1996	NA
T-6	Diesel	9,982 gallons	1996	NA
UNLOAD	Unloading to 6 Feeder Bins	400 TPH	--	NA

- Two feeder bins from the existing plant will be used with the new plant.

Onsite inspection indicates that the facility has not changed out any equipment from the above list, indicating compliance with this condition.

Exit Interview/Summary

Based on the information gathered as a result of the onsite evaluation, the following deviations were noted:

1. The facility submitted late Excess Emission 10-day reports, indicating a violation of OAC 252:100-9-3.1(b).
2. The facility was unable to provide records of the hours of operation or fuel usage, pressure drop records, maintenance logs, complaint logs or wet suppression logs, indicating a violation of General Permit No. 2006-273-O, Part 2, Section II(D), Section III(A), Section IV(C), Section VII(G), and Appendix A (D and E).

CERTIFIED MAIL, RETURN RECEIPT REQUESTED

Mr. Bill Williams
EH&S Manager
5304 S. Lawton Ave
Tulsa, Oklahoma 74107

Re: **Limco Airepair Inc., and Aeroduct, 5304 S Lawton Ave. Facility Closure of Enforcement Case #4685**

Dear Mr. Williams,

On November 18, 2008, The Oklahoma Department of Environmental Quality (Department) conducted an on-site evaluation at Limco Airepair Inc. (Facility) in Tulsa, Oklahoma. It was discovered during a record review and physical tour that the Facility was not keeping proper records and conducting monitoring as required in Operating Permit #99-026-O (M-2) and the National Emissions Standards for Hazardous Air Pollutants for Source Categories (NESHAP), 40 CFR 63, Subpart T, Standards for Halogenated Solvent Cleaning.

A compliance plant submitted to the Department was received on January 23, 2009 and approved by the Department. The Department received the Annual Report & Annual Solvent Emissions Report and the Semiannual Exceedance Report on February 24, 2009. No violations or deviations were noted.

On July 22, 2009, a partial compliance evaluation (PCE) focusing on the vapor degreaser was conducted at the Facility to review records and monitoring. The Department found all records and monitoring are being conducted daily on the first shift. The Operator records the required data on a log sheet.

After review of the records and a physical evaluation of the vapor degreaser, the Facility appears to be in compliance with Permit #99-026-O (M-2) and NESHAP Subpart T. If at any time in the future, the Facility adds equipment and/or processes that may increase the emission, the Department may require a review of the Facility. The Department appreciates your cooperation in resolving this matter, and considers Enforcement Case #4685 closed.

If you have any questions, contact Helen King of the Department at (918) 293-1612.

Sincerely,

_____

Rhonda Jeffries, Environmental Programs Manager

OKLAHOMA DEPARTMENT OF ENVIRONMENTAL QUALITY
AIR QUALITY DIVISION

MEMORANDUM

July 22, 2009

TO: Files

THROUGH: J. Trevor Hammons, Environmental Attorney
Office of the General Counsel

THROUGH: Kendal Stegmann, Senior Environmental Manager
Compliance and Enforcement Group

THOUGH: Rhonda Jeffries, Environmental Programs Manager
Compliance and Enforcement Group -- ROAT

FROM: Helen King, Environmental Programs Specialist
Compliance and Enforcement Group – ROAT

SUBJECT: Limco Airepair Inc., 5304 South Lawton Avenue, Tulsa
Closure Memo (Enforcement Case #4685)

Enforcement Case Summary
This enforcement case was opened on November 20, 2008 after a full compliance evaluation was conducted at the facility on November 18, 2008. During the record review it was discovered that Limco had failed to keep records required by Operating Permit #99-026-O (M-2) Specific Conditions #1 through #5. The facility was in non-compliance with NESHAP, 40 CFR 63, Subpart T, Standards for Halogenated Solvent Cleaning. The critical issue of the enforcement case was the operation and maintenance of the vapor degreaser. This vapor degreaser used trichloroethylene solvent. The facility failed to keep proper records according to Subpart T.
A compliance plan was received on January 23, 2009 and approved by the Department. The Department received the Annual Report & Annual Solvent Emissions Report, plus the Semiannual Exceedance Report on February 24, 2009. This report was in compliance with Subpart T.
On July 22, 2009, a partial compliance evaluation (PCE) was conducted at the facility to review records and monitoring of the vapor degreaser. All records and monitoring are being conducted daily on the first shift. The facility has replaced the hoist with a slower calibrated hoist. The facility appears to be in compliance with all of the requirements of the permit and Subpart T.

Penalty Summary
No penalty was assessed.

July 22, 2009

Re: **Limco Airepair Inc., and Aeroduct, 5304 S Lawton Ave. Facility**
Closure of Enforcement Case #4685

Dear Mr. Williams,

On November 18, 2008, The Oklahoma Department of Environmental Quality (Department) conducted an on-site evaluation at Limco Airepair Inc. (Facility) in Tulsa Oklahoma. It was discovered during record review and the physical tour, the Facility was not keeping proper records and conducting monitoring as required in Operating Permit #99-026-O (M-2) and the National Emissions Standards for Hazardous Air Pollutants for Source Categories (NESHAP), 40 CFR 63, Subpart T, Standards for Halogenated Solvent Cleaning.

A compliance plant submitted to the Department was received on January 23, 2009 and approved by the Department. The Department received the Annual Report & Annual Solvent Emissions Report and the Semiannual Exceedance Report on February 24, 2009. No violations or deviations were noted.

On July 22, 2009, a partial compliance evaluation (PCE) focusing on the vapor degreaser was conducted at the Facility to review records and monitoring. The Department found all records and monitoring are being conducted daily on the first shift. The Operator records the required data on a log sheet.

After review of the records and a physical evaluation of the vapor degreaser, the Facility appears to be in compliance with Permit #99-026-O (M-2) and NESHAP Subpart T. If at any time in the future, the Facility adds equipment and/or processes that may increase the emission, the Department may require a review of the Facility. The Department appreciates your cooperation in resolving this matter, and considers Enforcement Case #4685 closed.

If you have any questions, contact Helen King of the Department at (918) 293-1612.

Sincerely,

_____

Re: Air Quality Full Compliance Evaluation at Limco Airepair Inc.

Dear Mr. Craft,

The Oklahoma Department of Environmental Quality, Air Quality Division (Department) conducted a compliance evaluation at the above referenced facility on November 18, 2008. A copy of the final report is attached for your review. Please note that compliance issues have been identified in the summary section of the report.

The purpose of this letter is to offer Limco an alternative option to resolve the non-compliance issues other than traditional enforcement including the issuance of a Notice of Violation. If Limco elects to pursue this option, please call Helen King at (918) 293-1612 within ten (10) calendar days of receipt of this letter. Within twenty (20) calendar days after contacting the inspector, provide a written compliance plan and schedule, and a proposal for resolution of the violations. If it is necessary to conduct a meeting to discuss the issues, the Department will contact you after review of the compliance plan. If there are factual errors (i.e., transposed numbers, misreading of a record, etc.), the facility may provide proof of the error in the compliance plan; however, this process will not include a dispute of the issues of non-compliance. If Limco wishes to dispute the findings alleged in the report, the issues will be addressed through the traditional enforcement process following the issuance of a Notice of Violation.

If you have any questions, please contact Helen King of the Department at (918) 293-1612 or Email helen.king@deq.ok.us.

Sincerely,

Rhonda Jeffries, Environmental Programs Manager
Regional Office at Tulsa
Air Quality Division

Certified Mail Provides:

- A mailing receipt
- A unique identifier for your mailpiece
- A record of delivery kept by the Postal Service for two years

Important Reminders:

- Certified Mail may ONLY be combined with First-Class Mail® or Priority Mail®.
- Certified Mail is *not* available for any class of international mail.
- NO INSURANCE COVERAGE IS PROVIDED with Certified Mail. For valuables, please consider Insured or Registered Mail.
- For an additional fee, a *Return Receipt* may be requested to provide proof of delivery. To obtain Return Receipt service, please complete and attach a Return Receipt (PS Form 3811) to the article and add applicable postage to cover the fee. Endorse mailpiece "Return Receipt Requested". To receive a fee waiver for a duplicate return receipt, a USPS® postmark on your Certified Mail receipt is required.
- For an additional fee, delivery may be restricted to the addressee or addressee's authorized agent. Advise the clerk or mark the mailpiece with the endorsement *"Restricted Delivery"*.
- If a postmark on the Certified Mail receipt is desired, please present the article at the post office for postmarking. If a postmark on the Certified Mail receipt is not needed, detach and affix label with postage and mail.

IMPORTANT: Save this receipt and present it when making an inquiry.

PS Form 3800, August 2006 *(Reverse)* PSN 7530-02-000-9047

SENDER: *COMPLETE THIS SECTION*

- Complete items 1, 2, and 3. Also complete item 4 if Restricted Delivery is desired.
- Print your name and address on the reverse so that we can return the card to you.
- Attach this card to the back of the mailpiece, or on the front if space permits.

Re: 2008 Degreaser Annual Reports/ Exceedance Report

Enclosed are annual reports required for vapor degreasers (Annual Report & Annual Solvent Emissions Report) and the semiannual exceedance report. Also enclosed is a calculation worksheet that is now being used to keep the 3-month rolling totals. The enclosed reports are also in response to compliance evaluation #04057 conducted by Helen King.

Please feel free to contact me if there are any questions regarding these reports.

Sincerely,

Bill Williams
Facilities Manager

ANNUAL REPORT

FOR BATCH VAPOR OR IN-LINE HALOGENATED SOLVENT CLEANING MACHINES

Machines Complying with the **Equipment Standard** (40 CFR § 63.463)
(Applicable Rule: 40 CFR Part 63, Subpart T)

Owner/Operator/ Title	Limco Airepair, Inc.					
Mailing Address	5304 S. Lawton Ave.					
City	Tulsa		State	Oklahoma	Zip	74107

CERTIFIED MAIL, RETURN RECEIPT REQUESTED

Mr. Dan Craft
Senior Vice President
Limco Airepair Inc. and Aeroduct
5304 S. Lawton Ave.
Tulsa, Oklahoma 74107

Re: Air Quality Full Compliance Evaluation at Limco Airepair Inc.

Dear Mr. Craft,

The Oklahoma Department of Environmental Quality, Air Quality Division (Department) conducted a compliance evaluation at the above referenced facility on November 18, 2008. A copy of the final report is attached for your review. Please note that compliance issues have been identified in the summary section of the report.

The purpose of this letter is to offer Limco an alternative option to resolve the non-compliance issues other than traditional enforcement including the issuance of a Notice of Violation. If Limco elects to pursue this option, please call Helen King at (918) 293-1612 within ten (10) calendar days of receipt of this letter. Within twenty (20) calendar days after contacting the inspector, provide a written compliance plan and schedule, and a proposal for resolution of the violations. If it is necessary to conduct a meeting to discuss the issues, the Department will contact you after review of the compliance plan. If there are factual errors (i.e., transposed numbers, misreading of a record, etc.), the facility may provide proof of the error in the compliance plan; however, this process will not include a dispute of the issues of non-compliance. If Limco wishes to dispute the findings alleged in the report, the issues will be addressed through the traditional enforcement process following the issuance of a Notice of Violation.

If you have any questions, please contact Helen King of the Department at (918) 293-1612 or Email helen.king@deq.ok.us.

LIMCO AIREPAIR INC. CORRECTIVE ACTION PLAN
FOR ODEQ AIR QUALITY FULL COMPLIANCE EVALUATION

Item #	Finding	Standard	Corrective Action	Implementation Date/Due Date
		MONITORING PROCEDURES		
1)	This facility provided the set temperature of 214 °F and the actual temperature of 181 °F. No records or daily log sheets were provided to show compliance.	63.466 (a) ---**shall conduct monitoring and record the results on a weekly basis for the control devices (a)(1)** If a freeboard refrigeration device is used to comply with these standards, the owner or operator shall use a thermometer or thermocouple to measure the temperature at the center of the air blanket during the idling mode.	**Monitor Temperature Initially, document each day during operation** Monitor temperature and document on a log sheet each day of use.	**Immediately** Completed L&L sheet made
2)	The vapor degreaser was properly covered	63.466 (b)—**conduct monitoring and record the results on a monthly basis for the control devices as appropriate 63.466 (b)(1)**If a cover is used to comply with these standards, the owner shall conduct visual inspection to determine if the cover is opening and closing properly, completely covers the cleaning machine openings when closed, and is free of crack, holes, and other defects.	**Keep Cover Properly Closed and Operating, document Monthly** Document monthly (when the vapor degreaser is in operation) on a log sheet that the cover is in compliance with proper operation, proper opening/closing, and that it completely covers the cleaning machine, free of cracks, holes and other defects.	**Immediately**
3)	The facility has never tested to determine dwell time to comply with NESHAP, 40 CFR 63.465(d) standards.	63.466 (b)—**conduct monitoring and record the results on a monthly basis for the control devices as appropriate** 63.466 (b)(2) If a dwell is used, **determine the actual dwell time** by measuring the period of time that parts are held within the freeboard area of the solvent cleaning machine after cleaning using the procedure specified in	**Measure Dwell Time initially, document Monthly** Document monthly (when the vapor degreaser is in operation) on a log sheet that the dwell has been tested and is appropriate.	**Immediately**

SUBJECT: Full Compliance Evaluation (FCE) at **Limco Airepair Inc.**
5304 S. Lawton Ave.
Tulsa, Tulsa County, Oklahoma
Section 35, T19N, and R12E
Directions: Taking Hwy 75 south. Exit on I-44 East; take the first access road exit before margining onto I-44. Turn right on the access road and the first street you come to is South Lawton. Turn left onto Lawton, and the plant is at the end of the street on the right.
AIRS ID #143-00155
FCE #04057

Introduction

On Tuesday November 18, 2008, between the hours of 0800 and 1050, an unannounced full compliance evaluation was conducted at the above referenced facility. Helen King, Environmental Programs Specialist, with the Oklahoma Department of Environmental Quality --- Air Quality Division in Tulsa conducted the evaluation. Mr. Bill William, Facility Manager and Mr. Dan Craft, Chief Operating Office, represented the facility. This facility was evaluated to determine its compliance with state and federal regulations and its State of Oklahoma Air Quality Permit **#99-026-O (M-2)** issued on May 24, 2004. The inspector provided proper credentials before entering the facility.

History and Process Description

Limco manufactures, repairs various sizes of heat exchangers, and repair various sized air ducts for commercial, military, and private aircraft (SIC 3728). Processes include but not limited to manufacturing, welding/soldering, sizing/shaping, coating, cleaning, and testing. The facility is equipped with a 12' x 12' paint booth using a high volume low pressure Finishline spray gun, a 400-gallon dipping tank containing a silicon/aluminum dip solution, five (5) natural gas ovens, and one trichloroethylene vapor degreaser.
The facility operates two (2) eight (8) hour shifts and employs 150 employees. The facility was established in 1946 and was originally named Long Island Metal Company.

Permit No.	Date Issued	Reason
99-026-O	01/14/2000	Initial Operating Permit
99-026-O (M-1)	10/31/2001	Combined two operating facilities into one
99-026-O (M-2)	05/24/2004	Modify emissions limits and update material

Emissions/Source Classification

This facility is classified a "synthetic minor" source for volatile organic compounds (VOCs) and hazardous air pollutants (HAPs). The HAPs are mostly trichloroethylene and toluene.

Reported Emissions**

Pollutant	2005 TPY	% Change	2006 TPY	% Change	2007 TPY
Volatile Organic Compounds (Non-HAP)	8.576	**-17.44**	7.08	**8.18**	7.711
Methyl isobutyl ketone	0.042	**-80.95**	0.008	**73.33**	0.03
Toluene	4.831	**-14.51**	4.13	**9.03**	4.54
Trichloroethylene	2.66	**7.00**	2.86	**4.67**	3.0
Xylenes (mixed isomers)	0.02	**81.48**	0.108	**-35.19**	0.07

**Data from annual emission inventories (Attachment B).
Decrease and increase in emissions for xylenes and methyl isobutyl ketone (MIBK) are the result of work practices.

State/Federal Regulatory Applicability

Oklahoma Air Pollution Control Rules

OAC 252:100-39 (VOC in Nonattainment and Former Nonattainment Areas)
Part 7, Section 46 concerns coating of metals parts and products.
OAC 252:100-39-47
Per 49-46 (h), this facility is not subject to these rules because the VOC emissions from surface coating and cleaning do not exceed 10 TPY.

Federal Regulations

NESHAP, 40 CFR Part 63
Subpart T, (Halogenated Solvent Cleaners)
§63.460 Applicability and designation of source.

(a) The provisions of this subpart apply to each individual batch vapor, in-line vapor, in-line cold, and batch cold solvent cleaning machine that uses any solvent containing methylene chloride, perchloroethylene, trichloroethylene, 1,1,1-trichloroethane, carbon tetrachloride, or chloroform, or any combination of these halogenated HAP solvents, in a total concentration greater than 5 percent by weight, as a cleaning and/or drying agent.

The vapor degreaser at this facility uses trichloroethylene as a solvent.

§63.466 Monitoring procedures

(a)(1) If a free board refrigeration device is used to comply with these standards, the owner or operator shall use a thermometer or thermocouple to measure the temperature at the center of the air blanket during the idling mode.

This facility provided the set temperature of 214°F and the actual temperature of 181°F. No records or daily log sheets were provided to show compliance.

(b)(1) If a cover (working-mode, downtime-mode, and /or idling-mode cover) is used to comply with these standards, the owner or operator shall conduct a visual inspection to determine if the cover is opening and closing properly, completely covers the cleaning machine openings when closed, and is free of cracks, holes, and other defects.

The vapor degreaser was not in operation at the time of this evaluation but was properly covered. Mr. Tom Weyley demonstrated the opening and closing of the cover to the inspector.

(b)(2) If a dwell is used, the owner or operator shall determine the actual dwell time by measuring the period of time that parts are held within the freeboard area of the solvent cleaning machine after cleaning.

The facility has never measured dwell time.

(c)(1) The owner or operator shall determine the hoist speed by measuring the time it takes for the hoist to travel a measured distance. The speed is equal to the distance in meters divided by the time in minutes (meters per minute).

The facility has determined the hoist speed at sixteen (16) fpm (feet per minute) (Attachment D). The facility could not provide records or daily logs recording hoist speed.

(c)(2) The monitoring shall be conducted monthly. If after the first year, no exceedances of the hoist speed are measured, the owner or operator may begin monitoring the hoist speed quarterly.

The facility does not monitor the hoist speed monthly or quarterly per this permit.

§63.467 Recordkeeping requirements.

(a) Each owner or operator of a batch vapor or in-line solvent cleaning machine complying with the provisions of §63.463 shall maintain records in written or electronic form specified in paragraphs (a)(1) through (7) of this section for the lifetime of the machine.

This facility does not maintain records for the batch vapor degreaser. An operating manual and MSDS are kept onsite for the operator. The facility did not provide copies of the manual or MSDS to the inspector.

(a)(1) Owner's manuals, or if not available, written maintenance and operating procedures, the solvent cleaning machine and control equipment.

Mr. Weyley showed the inspector the maintenance and operating manual for the vapor degreaser. It is located at the equipment area along with the MSDS for trichloroethylene. The facility did not provide any records to the inspector.

(a)(3) If a dwell is used to comply with these standards, records of the tests required in §63.465(d) to determine an appropriate dwell time for each part or parts basket.

The facility has never tested to determine dwell time to comply with these standards.

(a)(5) Records of the halogenated HAP solvent content for each solvent used in a solvent cleaning machine subject to the provisions of this subpart.

The facility keeps records of monthly addition and removal of solvent from the cleaning machine (Attachment E). The records were incomplete.

(c)(1) The dates and amounts of solvent that are added to the solvent cleaning machine.

The facility does keep records of solvent addition to the cleaning machine (Attachment E).

(c)(2) The solvent composition of wastes removed from cleaning machines as determined using the procedure described in §63.465(c)(2).

The facility contracts with Reinco Environmental to transport and dispose of the solvent waste from the machine. The facility could not provide any test results for the waste.

(c)(3) Calculation sheets showing how monthly emissions and the rolling 3-month average emissions from the solvent cleaning machine were determined, and the results of all calculations.

The facility cannot provide a calculation sheet showing how monthly and rolling 3-month average emissions are calculated.

§63.468 Reporting Requirements

(f) Each owner or operator of a batch vapor or in-line solvent cleaning machine complying with the provisions of §63.463 shall submit an annual report by February 1 of the year following the one for which the reporting is being made. This report shall include the requirements specified in paragraphs (f)(1) through (f)(3) of this section.

This facility has not submitted an annual report since January 26, 2005.

(f)(1) A signed statement from the facility owner or his designee stating that, "All operators of solvent cleaning machines have received training on the proper operation of solvent cleaning machines and their control devices sufficient to pass the test required in §63.463(d)(1)."

The inspector spoke with Mr. Tom Weyley, the only operator for the cleaning machine. Mr. Weyley stated he was properly trained to operate the machine and showed the inspector the operating procedure in a binder on the desk.

(f)(2) An estimate of solvent consumption or each solvent cleaning machine during the reporting period.

The facility does not report this.

(f)(3) The reports required under paragraphs (f) and (g) of this section can be combined into a single report for each facility.

The facility does not submit a report for MACT Subpart N.

(g) Each owner or operator of a batch vapor or in-line solvent cleaning machine complying with the provisions of §63.464 shall submit a solvent emission report every year. This solvent emission report shall contain the requirements specified in paragraphs (g)(1) through (g)(4) of this section.

The facility does not submit a solvent emission report annually.

(g)(1) The size and type of each unit subject to this subpart (solvent/air interface area or cleaning capacity).

The facility did not provide manufactures data for the cleaning machine to the inspector.

(g)(2) The average monthly solvent consumption for the solvent cleaning machine in kilograms per month.

The facility could not provide documentation of monthly solvent consumption.

(g)(3) The 3-month monthly rolling average solvent emission estimates calculated each month using the method as described in §63.465(c).

The facility could not provide the 3-monthly rolling average solvent emissions.

(g)(4) The reports required under paragraphs (f) and (g) of this section can be combined into a single report for each facility.

The facility does not submit this report to the Department.

(h) Each owner or operator of a batch vapor or in-line solvent cleaning machine shall submit an exceedance report to the Administrator semiannually except when, the Administrator determines on a case-by-case basis that more frequent reporting is necessary to accurately assess the compliance status of the source or, an exceedance occurs. Once an exceedance has occurred the owner or operator shall follow a quarterly reporting format until a request to reduce reporting frequency under paragraph (i) of this section is approved. Exceedance reports shall be delivered or postmarked by the 30th day following the end of each calendar half or quarter, as appropriate. The exceedance report shall include the applicable information in paragraphs (h)(1) through (3) of this section.

This facility has not submitted a semiannual exceedance report for the solvent cleaning machine since January 26, 2005.

(h)(1) Information on the actions taken to comply with §63.463 (e) and (f). this information shall include records of written or verbal orders for replacement parts, a description of the repairs made, and additional monitoring conducted to demonstrate that monitored parameters have returned to accepted levels.

The facility stated maintenance and repair has been done on the cleaning machine but not reported to the Department.

(h)(2) If an exceedance has occurred, the reason for the exceedance and a description of the actions taken.

This facility has not reported an exceedance.

(h)(3) If no exceedances of a parameter have occurred, or a piece of equipment has not been inoperative, out of control, repaired, or adjusted, such information shall be stated in the report.

This facility does not submit a report to the Department.

(i)An owner or operator who is required to submit an exceedance report on a quarterly (or more frequent) basis may reduce the frequency of reporting to semiannual if the conditions in paragraphs (i0(1) through (i)(3) of this section are met.

This facility has not submitted an exceedance report since January 26, 2006.

(i)(1) The source has demonstrated a full year of compliance without an exceedance.

The inspector did not receive or review any documentation showing a full year of compliance.

(i)(2) The owner or operator continues to comply with all relevant recordkeeping and monitoring requirements specified subpart A (General Provisions) and in this subpart.

This facility is in non-compliance for all recordkeeping and monitoring of equipment specified in subpart A and subpart T.

(i)(3) The Administrator does not object to a reduced frequency of reporting for the affected source as provided in paragraph (e)(3)(iii) of subpart A (General Provisions).

The Administrator never received a letter from the facility requesting reduce frequency of reporting.

Evaluation/Enforcement History

FCE #01293 conducted on 12/30/03. No violations found.
PCE #00042 conducted on 10/24/01. Initial compliance evaluation.

Enforcement Case #422, opened 04/26/99 and closed 09/13/2000, was for operating without a permit.

Annual Compliance Certifications/Semiannual Reports

This facility is not subject to ACCs or SARs. They are subject to a semiannual report for NESHAP Subpart T.

Excess Emissions

No excess emissions have been reported from this facility.

On-Site Evaluation

The inspector was greeted in the lobby of the facility by Mr. Williams and escorted to a conference area. Mr. Craft joined us for the discussion of the permit and subpart T. The inspector explained the purpose of the evaluation and requested to review records. This facility has not been evaluated since 2003 and Mr. Williams and Mr. Craft were unaware of the required records or reporting. Mr. Craft stated the facility has tried a non-solvent degreaser called EnSolv but found it didn't work as well so the facility went back to using trichloroethylene. Mr. Craft also stated the facility plans to upgrade the vapor degreaser next year and try using a non-solvent degreaser again. On November 20, 2008, the inspector spoke with Mr. Greg Steele, Consultant for the facility. Mr. Steele was under the impression the facility had changed to a non-solvent cleaner and was no longer required to submit Subpart T reports. The facility does submit annual emission inventories with trichloroethylene listed as a pollutant (Attachment B). Mr. Williams and Mr. Craft escorted the inspector on the physical tour of the facility. The paint booth is a 12'X 12" enclosed room. The filtering system is two stages. The paint booth was operating with the door shut. No spraying was being conducted in the booth. The pressure magnehilic showed 0.10 inches of H_20 through the filters. A Finishline HPLV spray gun is used when coating. The filters look clean and new. Mr. Williams stated the facility contracts with Red Bud filtering company to monitor and change the filters. No rags or solvent containers were exposed to the atmosphere. All paint and solvent containers were locked in yellow chemical storage cabinets. Different parts depending on the metal alloy are cleaned either by handwipe or by degreaser. The metal alloy determines how long the part(s) are in the degreaser. The degreaser was not in operation at the time of this inspection. The inspector observed the cover was closed and properly attached to the unit. The area was clean of any solvent. The inspector spoke with Mr.

Tom Weyley, degreaser operator concerning record keeping. Mr. Weyley showed the inspector the record logs for parts to be cleaned. Maintenance and operating manual are kept in the area along with the MSDS for trichloroethylene. Solvent usage is reported for inventory purposes. The degreaser was equipped with a chiller, correct freeboard, hoist and emergency power switch. After cleaning the parts are dried in natural gas ovens. The inspector observed the cleaning tanks containing different chemicals for cleaning and etching. The parts are rinsed with water and dried in ovens before coating processes. A small enclosed room contains the dip tank. The 400-gallon dip tank is used to coat parts with silicone/aluminum and left to dry over the dip tank. The parts are left to dry over the dip tank. This room vents to the outside with fresh air vented back in. The recordkeeping and reporting issues were discussed before the inspector left the facility.

Specific Condition for Permit #99-026-O (M-2)

1. Points of emission include the cleaning, degreasing, painting, and other coating areas. The significant emissions from all sources are listed below.

Table No.1

USE	**POLLUTANT**	**Permit Limits**	
		PPH	**TPY**
Dip Coat	Toluene	2.40	5.1
	Xylene	0.19	0.40
	805 Resin	0.20	0.43
Degreaser	Trichloroethylene	1.50	3.20
Wipe	MEK	3.20	6.80
Testing	Mineral Spirits	0.53	1.20
Wipe	IPA	0.82	1.80
Paint	Various	0.22	0.50

Reported Emissions*

Emission Points	**Pollutant**	**2005 TPY**	**2006 TPY**	**2007 TPY**
Wipedown	Volatile Organic (non-HAPs)	7.76	4.90	4.77
Vapor Degreaser	Tricholoethylene	2.66	2.86	3.0
	Volatile Organics (non-HAP)	-0-	-0-	2.2
Paint Booth	Volatile Organic (non-HAPs)	0.316	0.31	0.091
	Toluene	0.051	0.03	0.03
	Xylene	NR**	0.03	0.03
	Methyl isobutyl ketone	0.042	0.008	0.03
Dip Coating	Toluene	4.78	4.10	4.51

	Volatile Organics (non-HAP)	-0-	-0-	0.06
Testing	Volatile Organics (non-HAP)	0.5	1.87	0.59
	Xylenes	0.02	0.078	0.04

*Data taken from annual emission inventories (Attachment B)
NR --- Not Reported
Annual emission inventories submitted to the Department show the facility to be in compliance with emission permit limits.

The emissions shown in the preceding table will not be exceeded under normal operating conditions provided the facility's use of materials shown in the following table is not exceeded.

Table No. 2

Materials	GPD (1)	GPY
Toluene	5.4	1,400
Xylene	0.43	110
805 Resin	0.60	157
Trichloroethylene	2.00	520
MEK	7.70	2,000
Mineral Spirits	1.37	355
IPA	2.04	530
Paints, various	0.39	100

(1) These gallons/day are work-week averages.

The facility could not provide material usage records to the inspector for the period requested.

2. Alternate products and production quantities can be varied under the following conditions.

   a. Emissions do not exceed 10 TPY for a single HAP or 25 TPY of the HAPs aggregate.
   b. A change in either production or products is permitted provided there would be no increase in the quantity of the resulting emissions. Additionally, the use of alternate products shall not cause the total of each toxic to exceed the de minimis levels or the MAAC established by OAC 252:100-41.
   c. The facility shall notify the DEQ in writing 30 days before making any operational changes that would cause significant air emissions.
   d. Maintain written documentation to show compliance with all current Federal, State and Local Regulations, Rules, and Codes, including modeling where compliance with a MAAC may be in question.

The facility is in non-compliance for failure to maintain written documentation to show compliance.

3. The degreaser is subject to NESHAP (40 CFR 63) Subpart T, Standards for Halogenated Solvent Cleaning, as published in the Federal Register on December 2, 1994, and shall be in compliance with this federal NESHAP, specifically with Option 1 of Table 1 of 40 CFR 63.463. All required reports shall be sent to the DEQ regional Office at Tulsa.

The facility does not keep proper records for the degreaser. Subpart T compliance and exceedance semiannual reports DEQ Forms #100-432, #100-435, #100-436 and #100-437 have not been submitted to the Department since January 26, 2006.

4. The permittee shall comply with the following outlined provisions for operation of the degreaser, which are further detailed in OAC 252:100-39-42(b).

    a. The degreaser "working mode cover" shall operate easily and cause minimum disturbance to the vapor zone.
    b. The unit shall have safety switches to shut off sump heat if the coolant is not circulating or exceeds the recommended level.
    c. Since Limco, has chosen Option 1 for Halogenated Degreasers shown in 40 CFR 63, Subpart T, the unit shall have a freeboard ratio no less than 1.0, a solvent super heater which shall maintain the solvent to a temperature no less than 10 degrees F above the boiling point of the solvent, and have a working mode cover. If, in the future, Limco decides one of the other options available in this subpart would be a better choice, Limco shall submit a written request describing their plan to the DEQ local office, and will not begin any change without written permission.
    d. Limco will properly train each person who will operate the degreaser before they are allowed to use the machine. The written syllabus used for training will be readily available to each trained operator.

The degreaser was not in operation at the time of this inspection therefore the inspector was unable to determine compliance with Specific Condition #4 (a)(b), and (c).

5. All records necessary to demonstrate compliance with permit conditions shall be maintained on-site or at a readily accessible location for a period of at least two years following the date of recording and shall be available for review by regulatory personnel during normal business hours. Such records include, but are not necessarily limited to, the following.

    a. Records sufficient to demonstrate that the weekly average of the product usages do not exceed those shown in Specific Condition #1, Table No. 2 (exclusive of the vapor degreaser). If any of the GPD quantities in Table No. 2 are exceeded than compliance with that pollutant's MAAC must be demonstrated.

The facility was unable to provide records sufficient to demonstrate weekly average of product usage. The inspector was unable to determine compliance with Specific #1.

b. Degreaser records required by Specific Condition #3.
The facility keeps some maintenance and operation procedures on site.

c. Material usages (monthly and 12-month rolling totals).
The facility does not keep records of material usage (monthly and 12-month rolling totals.

6. This permit supersedes all previous permits for this facility, which are now null and void.

Exit Interview and Summary
The inspector reviewed the necessary records for the facility to the gentlemen. The facility did provide an MSDS for "EnSolv-GCS Degreaser Solvent" (Attachment C). This is a non-trichloroethylene solvent tested in the degreaser but not used.

Based on the information provided or obtained during this evaluation, the following violations or deviations were discovered during this evaluation.

- The facility is in non-compliance with the specific conditions #1 thru #5 of permit #99-026-O (M-2).

- The facility is in non-compliance with National Emissions Standards for Hazardous Air Pollutants for Source Categories (NESHAP), 40 CFR 63, Subpart T, Standards for Halogenated Solvent Cleaning.

An alternative enforcement letter will be sent to the facility along with this FCE report.

OKLAHOMA DEPARTEMENT OF ENVIRONMENTAL QUALITY
AIR QUALITY DIVISION

MEMORANDUM **May 24, 2004**

TO: Dawson F. Lasseter, P.E., Chief Engineer, Air Quality

THROUGH: Richard Kienlen, P.E., Engr. Mgr. II, New Source Permits Section

THROUGH: Hal Wright, Regional Office At Tulsa

FROM: Jennifer Tyler, Regional Office At Tulsa

SUBJECT: Evaluation of Permit Application No. **99-026-O (M-2)**
Limco-Airepair, Inc. (LA)
5304 S. Lawton Ave.
Tulsa, Tulsa County, OK
Section 35, Township 19N, Range 12E
Directions: Taking Hwy 75 south you exit on I-44 East, take the first access road exit before merging onto I-44. Turn right on the access road and the first street you come to is South Lawton. Turn left onto Lawton, and the plant is at the end of the street on your right.

INTRODUCTION

Limco-Airepair, Inc. (LA) is requesting a modification of their current Operating Permit No. 99-026-O (M-1). The modification will include adding Xylene to Table No. 2 to correlate with Table No. 1, changing the wording of perchloroethylene to read trichloroethylene, and increasing the use of toluene, mineral spirits, IPA, and various paints.

PROCESS DESCRIPTION

In general, the plant has three product activities, i.e., the manufacture of different sizes of heat exchangers, the repair of various sizes of heat exchangers, and the repair of various sized aircraft air ducts.

Manufacturing Process

All ovens used for drying and soldering have a combined heat rate of 0.80 MMBTUH.

First, LA buys thin sheets of aluminum and stainless steel to use in the manufacture and repair of various products.

The steps in the manufacture of the heat exchangers are: material is cut, shaped, cleaned, welded/assembled, pressure tested, cleaned, heat dried, and coated. LA is required to test most of

the heat exchangers that are of a new design. The new units are performance tested for flow vs pressure drop of both the cooling medium (air) over the outside of the heat exchanger, and the medium to be cooled (engine lube oil, hydraulic fluid, etc.) which is on the inside of the exchanger. They are also tested for their heat transfer capabilities.

The steps in the repair of the heat exchangers are: inspected for flaws, repaired as necessary, pressure tested, cleaned, heat dried, and coated.

The steps in the repair of the air ducts are: inspected for flaws, cleaned, heat dried, repairs made, cleaned, and coated.

WELDING/SOLDERING

Various types of welding are used by LA, i.e., MIG, TIG, etc.

The soldering is done by placing assembled, "tinned" parts in natural gas fired ovens. Tinning is a process where the part is coated with the required amount of solder/flux on each joint to be soldered. The part is then heated to a temperature just above the melting point of the solder to allow the solder to melt and flow into the joint to be soldered. The part is then cooled to room temperature in ambient air.

SIZING/SHAPING

This is done with conventional sheet metal shears, sheet metal brakes, stamping machines, etc.

COATING

All products are cleaned and heat dried before coating.

The parts may get some combination of four types of coatings, i.e. paint, alodine, anodize, or silicone aluminum dip. Anodizing is done by an outside contractor; all others are done by LA.

Less than 10% of all products are spray-painted. The painting is done in a totally enclosed 12' x 12' x 8' high paint booth using a high volume low pressure spraying rig. The paint over-spray is sucked through a 95% efficient dry type filter at 3,500 acfm and exhausts 8 feet above grade through a 12-inch diameter duct.

The alodine process is done by soaking the part in a bath of nitric/chromic acid, which results in the desired surface getting a coat of aluminum oxide. This process does not use heat or electric current.

Silicone/Aluminum Dip solution consists of 8.4 gallons of Toluene, 1.0 gallon of Dow #805 silicone resin, and 1.6 pounds of aluminum powder. 61.5 gallons of this solution is placed in a 400-gallon dipping tank that is located in a totally enclosed room (10 ft x 12 ft x 10 ft high) within the shop. After the part is dipped (the part is completely coated) it is hung over the tank to drip and dry. The result is the part gets a thin coat of aluminum filled silicone. The air in the dipping room

is exhausted to the outside by a 22,000 acfm fan through a dry type filter in a 14 inch diameter duct at 10 ft above grade.

Anodizing is a process where a surface on the part gets a coating of aluminum by an electrolysis process. The part is made an anode as part of an electric circuit in a bath of acid, and as a result aluminum is deposited on the part's surface.

CLEANING

Parts are cleaned by different chemicals at different stages in the manufacturing/repair processes. The parts can be cleaned by hand wiping with solvents, acid, or caustic bath followed by water rinse or trichloroethylene degreaser.

The parts are dried after the cleaning process by electric heated ovens or natural gas fired ovens.

The facility operates 16 hours per day, 5.5 days per week, and 22 days a month, or 4,224 hours per year.

EMISSIONS

The significant air emissions are from the hand wiping of parts with solvents and coating. The air emissions from parts drying (combustion of natural gas), welding, and metal sizing/shaping are negligible, and will not be included in the following emissions analysis.

Purchases of acids and caustics used in the clean lines have been tabulated in the application. The replacement numbers are below any *de minimis* threshold. Much of the material is consumed in the cleaning operations, either through chemical combination with materials presented or through action as a flocculent. Potential emissions are negligible.

Limco estimates the use of trichloroethylene for the degreaser to be 520 gallons per year, which is shown in the following emission table. This includes material that was collected for reclamation. The emissions shown are the net amounts. The vapor degreaser holds 110 gallons of trichloroethylene and has a freeboard ratio of 1.3.

Materials used in cleaning and wipe down of the parts include 2,000 gallons per year (GPY) of MEK and 530 GPY of isopropyl alcohol. The use of mineral spirits in pressure testing is estimated to be 355 GPY. The facility uses 95 gallons of ten different primers, topcoats and solvents.

The following tables show the total facility VOC and HAPs emissions.

FACILITY TOTAL EMISSIONS [2]

USE	POLLUTANT	CAS NO.	HAP	CAT	De minimis		Permit limits	
					PPH	TPY	PPH	TPY
Dip Coat	Toluene	108883	Y	C	5.60	6.00	2.40	5.10
	Xylene	133027	Y	C	5.60	6.00	0.19	0.40
Degreaser	Trichloroethylene	79016	Y	A	0.57	0.60	1.50	3.20
Wipe	MEK	108101	N	C	5.60	6.00	3.20	6.80 [3]
Testing	Mineral Spirits	64742887	N	C	5.60	6.00	0.53	1.20
Wipe	IPA	67630	N	C	5.60	6.00	0.82	1.80
Paint [1]	Various	Various	NA	NA	(2)	(2)	0.22	0.50
TOTAL VOC								**19.00**
TOTAL HAPS								**8.70**

(1) If all the paint VOCs were Cat. A the de minimis would not be exceeded. (2) Does not include combustion emission pollutants, which are negligible. (3) EPA Screen3 modeling shows a maximum ground level concentration of 1,259 micrograms per cubic meter (ug/m^3) for an emission rate of 3.2 pounds per hour as compared to an allowable maximum acceptable ambient concentration (MAAC) of 59,000 ug/m^3.

The following table shows the VOC emission data comparison between the new permit and the existing permit in TPY.

Pollutant	Existing	New	Change
Paint	0.56	0.50	-0.06
Trichloroethylene	3.00	3.20	+0.20
Cleaning	7.50	6.80	-0.70
Testing	2.50	1.20	-1.30
Dip: Toluene	5.00	5.10	+0.10
Xylene	0.36	0.40	+0.04
Total	**18.92**	**17.20**	**-1.72**

OKLAHOMA AIR POLLUTION CONTROL RULES

OAC 252:100-1 (General Provisions) [Applicable]
Subchapter 1 includes definitions but there are no regulatory requirements.

OAC 252:100-3 (Air Quality Standards and Increments) [Applicable]
Subchapter 3 enumerates the primary and secondary ambient air quality standards and the significant deterioration increments. At this time, all of Oklahoma is in "attainment" of these standards.

OAC 252:100-4 (New Source Performance Standards) [Not Applicable]
Federal regulations in 40 CFR Part 60 are incorporated by reference as they exist on July 1, 2002, except for the following: Subpart A (Sections 60.4, 60.9, 60.10, and 60.16), Subpart B, Subpart C, Subpart Ca, Subpart Cb, Subpart Cc, Subpart Cd, Subpart Ce, Subpart AAA, and Appendix G. These requirements are addressed in the "Federal Regulations" section.

OAC 252:100-5 (Registration, Emission Inventory and Annual Operating Fees) [Applicable]
Subchapter 5 requires sources of air contaminants to register with Air Quality, file emission inventories annually, and pay annual operating fees based upon total annual emissions of regulated pollutants. An emission inventory was submitted and fees paid for previous years as required.

OAC 252:100-7 (Permits for Minor Facilities) [Applicable]
Subchapter 7 sets forth the permit application fees and the basic substantive requirements of permits for minor facilities. Since criteria pollutant emissions are less than 100 TPY for each pollutant, and emissions of HAPs will not exceed 10 TPY for any one HAP or 25 TPY for any aggregate of HAPs, the facility is defined as a minor source. As such, BACT is not required.

OAC 252:100-9 (Excess Emissions Reporting Requirements) [Applicable]
In the event of any release which results in excess emissions, the owner or operator of such facility shall notify the Air Quality Division as soon as the owner or operator of the facility has knowledge of such emissions, but no later than 4:30 p.m. the next working day. Within ten (10) working days after the immediate notice is given, the owner or operator shall submit a written report describing the extent of the excess emissions and response actions taken by the facility.

OAC 252:100-13 (Prohibition of Open Burning) [Applicable]
Open burning of refuse and other combustible material is prohibited except as authorized in the specific examples and under the conditions listed in this subchapter.

OAC 252:100-19 (Particulate Matter (PM)) [Applicable]
Section 19-4 regulates emissions of PM from new and existing fuel-burning equipment. AP-42 (7/98) Table 1.4 -1 lists natural gas TPM emissions to be 7.6 lbs/million scf or about 0.0076 lbs/MMBTU, which is in compliance.

OAC 252:100-25 (Visible Emissions and Particulates) [Applicable]
No discharge of greater than 20% opacity is allowed except for short-term occurrences that consist of not more than one six-minute period in any consecutive 60 minutes, not to exceed three such periods in any consecutive 24 hours. In no case shall the average of any six-minute period exceed 60% opacity. Based on past experience with this facility, the potential for violating the standards is negligible.

OAC 252:100-29 (Fugitive Dust) [Applicable]
No person shall cause or permit the discharge of any visible fugitive dust emissions beyond the property line on which the emissions originated in such a manner as to damage or to interfere with the use of adjacent properties, or cause air quality standards to be exceeded, or to interfere with the maintenance of air quality standards. Under normal operating conditions, this facility

has negligible potential to violate this requirement; therefore it is not necessary to require specific precautions to be taken.

OAC 252:100-31 (Sulfur Compounds) [Applicable]
Fuel-burning equipment at this facility uses commercial natural gas. The AP-42 (2/98), Table 1.4-2 emission factor of 0.6 pounds of SO_2 per million cubic feet equates to approximately 0.0006 lbs/MMBTU. This is well below the new equipment standard of 0.2 lbs/MMBTU for gas fuel.

OAC 252:100-33 (Nitrogen Oxides) [Not Applicable]
This subchapter limits new gas-fired fuel-burning equipment with rated heat input greater than or equal to 50 MMBTUH to emissions of 0.2 lbs of NO_x per MMBTU, three-hour average. There are no equipment items that exceed the 50 MMBTUH threshold.

OAC 252:100-35 (Carbon Monoxide) [Not Applicable]
None of the following affected processes are located at this facility: gray iron cupola, blast furnace, basic oxygen furnace, petroleum catalytic cracking unit, or petroleum catalytic reforming unit.

OAC 252:100-37 (Volatile Organic Compounds) [Not Applicable]
-15 Storage of VOCs. This facility does not store any hydrocarbon liquids, and is not an affected source under this section.
-36 Fuel-Burning Equipment. Under this section Limco is required to adjust the burners for essentially complete fuel combustion. Limco-Airepair burns only commercial-grade natural gas in the combustion units, which promotes compliance. The facility anticipates remaining in compliance under normal operations.
-25 This section limits the VOC content of coating used in coating lines or operations for any facility with VOC emissions in excess of 100 lbs/day. Coating parts operations will consume less than 50 pounds of VOC per day, so the facility is exempt.

OAC 252:100-39 (VOC in Nonattainment and Former Nonattainment Areas) [Applicable]
Part 7, Sections 46 concerns coating of metal parts and products. Per 39-46 (h), Limco is exempt as the VOC emissions from surface coating and cleaning do not exceed 10 TPY.

OAC 252:100-41 (Hazardous Air Pollutants and Toxic Air Contaminants) [Applicable]
Part 3 addresses hazardous air contaminants. NESHAP, as found in 40 CFR Part 61, are adopted by reference as they exist on July 31, 2002, with the exception of Subparts B, H, I, K, Q, R, T, W and Appendices D and E, all of which address radionuclides. In addition, General Provisions as found in 40 CFR Part 63, Subpart A, and the Maximum Achievable Control Technology (MACT) standards as found in 40 CFR Part 63, Subparts F, G, H, I, J, L, M, N, O, Q, R, S, T, U, W, X, Y, AA, BB, CC, DD, EE, GG, HH, II, JJ, KK, LL, MM, OO, PP, QQ, RR, SS, TT, UU, VV, WW, XX, YY, CCC, DDD, EEE, GGG, HHH, III, JJJ, LLL, MMM, NNN, OOO, PPP, QQQ, RRR, TTT, UUU, VVV, XXX, CCCC, GGGG, HHHH, NNNN, SSSS, TTTT, UUUU, VVVV, and XXXX are hereby adopted by reference as they exist on July 31, 2002. These standards apply to both existing and new sources of HAPs. These requirements are covered in the "Federal Regulations" section.

Part 5 is a **state-only** requirement governing toxic air contaminants. New sources (constructed after March 9, 1987) emitting any category "A" pollutant above de minimis levels must perform a BACT analysis, and if necessary, install BACT. All sources are required to demonstrate that emissions of any toxic air contaminant that exceed the de minimis level do not cause or contribute to a violation of the maximum acceptable ambient concentration (MAAC). There are two toxics that exceed their de minimis, MEK and Trichloroethylene. Trichloroethylene is a HAP and Category A toxic generated by the vapor degreaser, which is subject to a Maximum Achievable Control Technology (MACT) standard, 40 CFR Part 63, Subpart T. As such, Trichloroethylene is exempt from this part per §41-43(a)(3). Screen3 modeling for MEK has a ground-level concentration of 1,259 $\mu g/m^3$ as compared to a MAAC of 59,000 $\mu g/m^3$. This facility is in compliance.

OAC 252:100-43 (Testing, Monitoring, and Recordkeeping) [Applicable]
This subchapter provides general requirements for testing, monitoring and recordkeeping and applies to any testing, monitoring or recordkeeping activity conducted at any stationary source. To determine compliance with emissions limitations or standards, the Air Quality Director may require the owner or operator of any source in the state of Oklahoma to install, maintain and operate monitoring equipment or to conduct tests, including stack test, of the air contaminant source. All required testing must be conducted by methods approved by the Air Quality Director and under the direction of qualified personnel. A notice-of-intent to test and a testing protocol shall be submitted to Air Quality at least 30 days prior to any EPA Reference Method stack tests. Emissions and other data required to demonstrate compliance with any federal or state emission limit or standard, or any requirement set forth in a valid permit shall be recorded, maintained, and submitted as required by this subchapter, an applicable rule, or permit requirement. Data from any required testing or monitoring not conducted in accordance with the provisions of this subchapter shall be considered invalid. Nothing shall preclude the use, including the excusive use, or any credible evidence or information relevant to whether a source would have been in compliance with applicable requirements if the appropriate performance or compliance test or procedure had been performed.

FEDERAL REGULATIONS

PSD, 40 CFR Part 52 [Not Applicable]
PSD does not apply. Final total emissions are less than the threshold of 250 TPY of any single regulated pollutant and the facility is not one of the 26 specific industries with a threshold of 100 TPY.

NSPS, 40 CFR Part 60 [Not Applicable]
There are no sources or facilities at this site affected by any NSPS subpart.

NESHAP, 40 CFR Part 61 [Not Applicable]
There are no emissions of any of the regulated pollutants: arsenic, asbestos, benzene, beryllium, coke oven emissions, mercury, radionuclides, or vinyl chloride.

NESHAP, 40 CFR Part 63 [Subpart T Applicable]

Subpart T (Halogenated Solvent Cleaners). This standard was published in the Federal Register on December 2, 1994, and compliance by new degreasers was required immediately upon startup. The facility is an area source subject to Subpart T, and has complied with the initial notification requirement. A yearly report is required to be sent to the local DEQ office and an additional report concerning any emergency operation which was not in compliance, also sent to the local DEQ office. The first annual report was due on January 15, 2001, and every 12 months thereafter. The applicant has selected Option 1 from Table 1 of §63.463 to demonstrate compliance. This option requires a combination of a working-mode cover, freeboard ratio of 1.0, and superheated vapor. The applicant is in compliance.

Subpart GG (Aerospace Manufacturing and Rework Facilities). The facility engages in the type of activity described in paragraph 63.741 (a), but the facility does not qualify as a major source under the definition in 40 CFR 63.2. In addition, the subassemblies involved are not critical to structural integrity or flight performance, so the activities would also be excluded under §63.741(f). The facility is not an affected source and is not subject to this subpart.

Chemical Accident Prevention Provisions, 40 CFR Part 68 [Not Applicable]

This facility does not process or store more than the threshold quantity of any regulated substance (Section 112r of the Clean Air Act 1990 Amendments). More information on this federal program is available on the web page: www.epa.gov/ceppo.

Stratospheric Ozone Protection, 40 CFR Part 82 [Not Applicable]

This facility does not produce, consume, recycle, import, or export any controlled substances or controlled products as defined in this part, nor does this facility perform service on motor (fleet) vehicles that involves ozone-depleting substances. Therefore, as currently operated, this facility is not be subject to these requirements. To the extent that the facility has air-conditioning units that apply, the permit requires compliance with Part 82.

COMPLIANCE

Tier Classification and Public Review

This application has been classified as **Tier I** based on the request for an operating permit for an existing minor source. The status of all permit actions is available to the public in the Air Quality section of the DEQ Web Page at page: www.deq.state.ok.us

The applicant has submitted an affidavit that they are not seeking a permit for land use or for any operation upon land owned by others without their knowledge. The affidavit certifies that the applicant owns the real property.

Inspection

No inspection was performed on this facility because the facility did not remove or construct any new equipment. The modification requested was an increase in usage and a change in wording only.

Fee Paid

Permit modification fee of $500 was paid on February 20, 2004.

SUMMARY

There are no active Air Quality compliance or enforcement issues that would affect the issuance of this permit. Issuance of the modified operating permit is recommended.

PERMIT TO OPERATE
AIR POLLUTION CONTROL FACILITY
SPECIFIC CONDITIONS

Limco-Airepair **Permit No. 99-026-O (M-2)**
Aircraft Subassembly Manufacturing and Repair

The permittee is authorized to operate in conformity with the specifications submitted to Air Quality on February 20, 2004. The Evaluation Memorandum dated May 24, 2004, explains the derivation of applicable permit requirements and estimates of emissions; however, it does not contain operating limitations or permit requirements. Continuing operations under this permit constitutes acceptance of, and consent to, the conditions contained herein.

1. Points of emission include the cleaning, degreasing, painting, and other coating areas. The significant emissions from all sources are listed below.

Table No.1

USE	POLLUTANT	Permit Limits	
		PPH	TPY
Dip Coat	Toluene	2.40	5.1
	Xylene	0.19	0.40
	805 Resin	0.20	0.43
Degreaser	Trichloroethylene	1.50	3.20
Wipe	MEK	3.20	6.80
Testing	Mineral Spirits	0.53	1.20
Wipe	IPA	0.82	1.80
Paint	Various	0.22	0.50

The emissions shown in the preceding table will not be exceeded under normal operating conditions provided the facility's use of materials shown in the following table is not exceeded.

Table No. 2

Materials	GPD (1)	GPY
Toluene	5.4	1,400
Xylene	0.43	110
805 Resin	0.60	157
Trichloroethylene	2.00	520
MEK	7.70	2,000
Mineral Spirits	1.37	355
IPA	2.04	530
Paints, various	0.39	100

(1) These gallons/day are work-week averages.

2. Alternate products and production quantities can be varied under the following conditions.

   a. Emissions do not exceed 10 TPY for a single HAP or 25 TPY of the HAPs aggregate.
   b. A change in either production or products is permitted provided there would be no increase in the quantity of the resulting emissions. Additionally, the use of alternate products shall not cause the total of each toxic to exceed the de minimis levels or the MAAC established by OAC 252:100-41.
   c. The facility shall notify the DEQ in writing 30 calendar days before making any operational changes that would cause significant air emissions.
   d. Maintain written documentation to show compliance with all current Federal, State and Local Regulations, Rules, and Codes, including modeling where compliance with a MAAC may be in question.

3. The degreaser is subject to NESHAP (40 CFR 63) Subpart T, Standards for Halogenated Solvent Cleaning, as published in the Federal Register on December 2, 1994, and shall be in compliance with this federal NESHAP, specifically with Option 1 of Table 1 of 40 CFR 63.463. All required reports shall be sent to the DEQ Regional Office at Tulsa.

4. The permittee shall comply with the following outlined provisions for operation of the degreaser, which are further detailed in OAC 252:100-39-42(b).

   a. The degreaser "working mode cover" shall operate easily and cause minimum disturbance to the vapor zone.

   b. The unit shall have safety switches to shut off sump heat if the coolant is not circulating or exceeds the recommended level.

   c. Since Limco has chosen Option 1 for Halogenated Degreasers shown in 40 CFR 63, Subpart T, the unit shall have a freeboard ratio not less than 1.0, a solvent super heater which shall maintain the solvent to a temperature no less than 10 degrees F above the boiling point of the solvent, and have a working mode cover. If, in the future, Limco decides one of the other options available in this subpart would be a better choice, Limco shall submit a written request describing their plan to the DEQ local office, and will not begin any change without written permission.

   d. Limco will properly train each person who will operate the degreaser before they are allowed to use the machine. The written syllabus used for training will be readily available to each trained operator.

5. All records necessary to demonstrate compliance with permit conditions shall be maintained on-site or at a readily accessible location for a period of at least two years following the date of recording and shall be available for review by regulatory personnel during normal business hours. Such records include, but are not necessarily limited to, the following.

    a. Records sufficient to demonstrate that the weekly averages of the product usages do not exceed those shown in Specific Condition #1, Table No.2 (exclusive of the vapor degreaser). If any of the GPD quantities in Table No. 2 are exceeded then compliance with that pollutant's MAAC must be demonstrated.
    b. Degreaser records required by Specific Condition #3.
    c. Material usages (monthly and 12-month rolling totals).

6. This permit supercedes all previous permits for this facility, which are now null and void.

PERMIT

AIR QUALITY DIVISION
STATE OF OKLAHOMA
DEPARTMENT OF ENVIRONMENTAL QUALITY
707 N. ROBINSON STREET, SUITE 4100
P.O. BOX 1677
OKLAHOMA CITY, OKLAHOMA 73101-1677

Issuance Date: _____ Permit Number: 99-026-O (M-2)

Limco-Airepair, Inc.,

having complied with the requirements of the law, is hereby granted permission to operate the facility to manufacture and repair aircraft parts at 5304 S. Lawton Avenue, Tulsa County, Oklahoma,

subject to the following conditions, attached:

[X] Standard Conditions dated October 31, 2003

[X] Specific Conditions

_____ Chief Engineer, Air Quality Division

Mr. Michael Lowther, Operations Manager
Limco-Airepair, Inc.
5304 S. Lawton Ave.
Tulsa, OK 74107

Re: Operating Permit No. **99-026-O (M-2)**
Limco-Airepair, Inc.

Dear Mr. Lowther:

Enclosed is the permit authorizing operation of the referenced facility. Please note that this permit is issued subject to standard and specific conditions, which are attached. These conditions must be carefully followed since they define the limits of the permit and will be confirmed by periodic inspections.

Also note that you are required to annually submit an emissions inventory for this facility. An emissions inventory must be completed on approved AQD forms and submitted (hardcopy or electronically) by March 1st of every year. Any questions concerning the form or submittal process should be referred to the Emissions Inventory staff at 405-702-4100.

Thank you for your cooperation in this matter. If we may be of further service, please contact our office at (918) 293-1600. Air Quality personnel are located in the DEQ Regional Office at Tulsa, 3105 East Skelly Drive, Suite 200, Tulsa, Oklahoma, 74105.

Sincerely,

Jennifer Tyler
AIR QUALITY DIVISION

ATTACHMENT C

Material Safety Data Sheet

Material Name: TURCO 5668 **ID: 238799**

* * * Section 1 - Chemical Product and Company Identification * * *

Product Trade Name TURCO 5668

Manufacturer Information

Henkel Surface Technologies
Henkel Corporation
32100 Stephenson Highway
Madison Heights, MI 48071

Contact Phone: (248) 583-9300

Chemtrec Emergency # (800) 424-9300

* * * Section 2 - Composition / Information on Ingredients * * *

CAS #	Component	Percent
872-50-4	N-Methyl-2-pyrrolidone	30-60
64742-52-5	Petroleum distillates, hydrotreated heavy naphthenic	10-30
141-43-5	Ethanolamine	10-30
Proprietary	Toluene sulfonamide mixture	1-10
1310-58-3	Potassium hydroxide	1-10

* * * Section 3 - Hazards Identification * * *

Emergency Overview:

DANGER! May cause severe irritation or burns to the eyes, skin, gastrointestinal tract, and respiratory system. Long-term exposure can cause liver and kidney damage. Excessive exposure can cause dizziness and central nervous system depression.

Potential Health Effects:

Inhalation and skin contact are expected to be the primary routes of occupational exposure to this material. Based on its composition, it is anticipated to be severely irritating to the eyes, skin and respiratory tract. Prolonged or repeated contact may remove oils from the skin and may dry skin and cause irritation, redness and rash. High vapor concentrations may be irritating to the eyes and respiratory tract, and may result in central nervous system (CNS) effects such as headache, dizziness, nausea, drowsiness and, in severe exposures, loss of consciousness and death. Precautions should be taken to limit aerosolization or misting of this material, as repeated exposure to high concentrations of mineral oil mist may cause lipoid pneumonia. Mild to severe lung injury may occur if this material is drawn into the lungs (aspirated) during swallowing, or during vomiting after swallowing. Symptoms of injury may include increased breathing and heart rate, coughing and related signs of respiratory distress. Animal studies on a component of this material have produced liver and kidney changes.

* * * Section 4 - First Aid Measures * * *

Eye Contact:

In case of contact with the eyes, rinse immediately with plenty of water for 15 minutes, and seek immediate medical attention.

Skin Contact:

For skin contact flush with large amounts of water while removing contaminated clothing. Get Medical Attention. Discard any shoes or clothing items that cannot be decontaminated.

Ingestion:

If the material is swallowed, get immediate medical attention or advice -- Do not induce vomiting. Give one to two glasses of water or milk. Never give anything by mouth to a victim who is unconscious or is having convulsions.

Inhalation:

If mist or vapor of this product is inhaled, remove person immediately to fresh air. Seek medical attention if symptoms develop or persist.

* * * Section 5 - Fire Fighting Measures * * *

Material Safety Data Sheet

Material Name: TURCO 5668 **ID: 238799**

Flash Point:	> 200 F	**Method Used:**	PMCC	**Flammability Classification:**	
Upper Flammable Limit (UFL):	NE	**Lower Flammable Limit (LFL):**	NE		

Fire & Explosion Hazards:

This product is an aqueous mixture which will not burn. If evaporated to dryness, the solid residue may pose a moderate fire hazard.

Extinguishing Media:

Use any media suitable for the surrounding fires.

Fire-Fighting Instructions:

Use water spray to cool containers exposed to fire. Fire fighters and others who may be exposed to products of combustion should wear full fire fighting turn out gear (full Bunker Gear) and self-contained breathing apparatus (pressure demand NIOSH approved or equivalent). Fire fighting equipment should be thoroughly decontaminated after use.

* * * Section 6 - Accidental Release Measures * * *

Clean-Up Procedures:

Collect spilled material with an inert absorbent such as sand or vermiculite. Place in properly labeled closed container. Flush area with water to remove trace residue. Dispose of collected material according to regulation.

Spill or Leak

Contain spill. Stop leak at source if this can be done safely. Ventilate area. Nonessential personnel should leave the area until cleanup is completed. Pump liquid into DOT-approved drums for disposal. Absorb remaining liquid onto inert absorbent and place in DOT approved drums for disposal. Wash area with water. Keep concentrate and wash water from entering sewers or waterways.

* * * Section 7 - Handling and Storage * * *

Handling Procedures:

Do not get in eyes, on skin or clothing. Avoid breathing vapor or mist. Keep container closed. Use only with adequate ventilation. Wash thoroughly after handling. Keep away from heat, sparks and flame. Use explosion proof equipment. Empty container may contain hazardous residues.

Storage Procedures:

Store in a cool, dry place. Avoid excessive heat. Store out of direct sunlight in a cool, well-ventilated place.

* * * Section 8 - Exposure Controls / Personal Protection * * *

Component Exposure Limits

Ethanolamine (141-43-5)

ACGIH: 3 ppm TWA
6 ppm STEL
OSHA: 3 ppm TWA; 6 mg/m3 TWA
6 ppm STEL; 15 mg/m3 STEL
NIOSH: 3 ppm TWA; 8 mg/m3 TWA
6 ppm STEL; 15 mg/m3 STEL

Potassium hydroxide (1310-58-3)

ACGIH: C 2 mg/m3
NIOSH: C 2 mg/m3

Engineering Controls:

Ventilation should effectively remove and prevent buildup of any vapor or mist generated from the handling of this product.

PERSONAL PROTECTIVE EQUIPMENT

As prescribed in the OSHA Standard for Personal Protective Equipment (29 CFR 1910.132), employers must

Material Safety Data Sheet

Material Name: TURCO 5668 **ID:** 238799

perform a Hazard Assessment of all workplaces to determine the need for, and selection of, proper protective equipment for each task performed.

Eyes/Face Protective Equipment:

Wear chemical goggles; face shield (if splashing is possible).

Skin Protection:

Use impervious gloves. Use of impervious apron and boots are recommended.

Respiratory Protection:

If ventilation is not sufficient to effectively prevent buildup of aerosols or vapors, appropriate NIOSH/MSHA respiratory protection must be provided.

* * * Section 9 - Physical & Chemical Properties * * *

Physical State:	Liquid	**Appearance:**	Light brown
Odor:	Amine	**Vapor Pressure:**	0.35 MM HG @ 20 F
Vapor Density:	> 1.0	**Boiling Point:**	> 200 F
Melting Point:	NA	**Specific Gravity:**	0.99
pH:	12.0 (1% solution)	**Viscosity:**	
VOC:	70 - 75 %	**Solubility Water:**	Soluble
Percent Volatile:	NIL VOL %	**Percent Solids:**	>60

* * * Section 10 - Chemical Stability & Reactivity Information * * *

Chemical Stability:

This material is chemically stable under normal and anticipated storage and handling conditions.

Incompatibility:

Avoid contact with strong acids and oxidizers. Avoid flames, sparks, and ignition sources. Contains organic amine compounds. Nitrite based materials should not be added due to possible nitrosoamine.

Decomposition Products:

Oxides of carbon, nitrogen compounds.

Hazardous Polymerization:

Hazardous polymerization is not known to occur.

* * * Section 11 - Toxicological Information * * *

Acute Toxicity:

A: General Product Information

No information available for the product.

B: Component Analysis - LD50/LC50

N-Methyl-2-pyrrolidone (872-50-4)
Oral LD50 Rat : 3914 mg/kg
Oral LD50 Mouse : 5130 mg/kg
Dermal LD50 Rabbit : 8 gm/kg

Ethanolamine (141-43-5)
Oral LD50 Rat : 1720 mg/kg
Oral LD50 Mouse : 700 mg/kg
Dermal LD50 Rabbit : 1 mL/kg

Potassium hydroxide (1310-58-3)
Oral LD50 Rat : 273 mg/kg

Component Carcinogenicity

None of this product's components are listed by ACGIH, IARC, OSHA, NIOSH, or NTP.

Material Safety Data Sheet

Material Name: TURCO 5668 **ID: 238799**

Chronic Toxicity
No information available for the product.

Epidemiology:
No information available for the product.

Neurotoxicity:
No information available for the product.

Mutagenicity:
No information available for the product.

Teratogenicity:
No information available for the product.

* * * Section 12 - Ecological Information * * *

Ecotoxicity:

A: General Product Information

No information available for the product.

B: Component Analysis - Ecotoxicity - Aquatic Toxicity

N-Methyl-2-pyrrolidone (872-50-4)

Test & Species		Conditions
LC50 (96 hr) rainbow trout	5104 mg/L.	
LC50 (96 hr) fathead minnow	4518.27 mg/L.	
LC50 (96 hr) bluegill	5656 mg/L.	
LC50 (96 hr) water flea	3135 mg/L.	

Ethanolamine (141-43-5)

Test & Species		Conditions
LC50 (96 hr) goldfish	170.0 mg/L.	
EC50 (30 min) Photobacterium phosphoreum	13.7 mg/L Microtox test.	

Potassium hydroxide (1310-58-3)

Test & Species		Conditions
LC50 (24 hr) mosquito fish	80.0 mg/L	

Environmental Fate:
No data is available concerning the environmental fate, biodegradation or bioconcentration for this product.

* * * Section 13 - Disposal Considerations * * *

US EPA Waste Numbers & Descriptions:

A: General Product Information

Recover, reclaim or recycle when practical. Dispose of in accordance with federal, state and local regulations. Note: Chemical additions to, processing of, or otherwise altering this material may make this waste management information incomplete, inaccurate, or otherwise inappropriate. Furthermore, state and local waste disposal requirements may be more restrictive or otherwise different from federal laws and regulations.

B: Component Waste Numbers

No EPA Waste Numbers are applicable for this product's components.

* * * Section 14 - Transportation Information * * *

US DOT Information

Shipping Name: Please refer to the container label for transportation information.

* * * Section 15 - Regulatory Information * * *

Material Safety Data Sheet

Material Name: TURCO 5668 **ID:** 238799

US Federal Regulations

A: General Product Information

This product is considered hazardous under 29 CFR 1910.1200 (Hazard Communication).

B: Component Analysis

This material contains one or more of the following chemicals required to be identified under SARA Section 302 (40 CFR 355 Appendix A), SARA Section 313 (40 CFR 372.65) and/or CERCLA (40 CFR 302.4).

N-Methyl-2-pyrrolidone (872-50-4)

SARA 313 form R reporting required for 1.0% de minimis concentration

Potassium hydroxide (1310-58-3)

CERCLA final RQ = 1000 pounds (454 kg)

SARA 311/312: **Acute:** Y **Chronic:** Y **Fire:** N **Pressure:** N **Reactive:** N

State Regulations

A: General Product Information

No additional information available.

B: Component Analysis - State

The following components appear on one or more of the following state hazardous substances lists:

Component	CAS #	CA	FL	MA	MN	NJ	PA
N-Methyl-2-pyrrolidone	872-50-4	No	Yes	Yes	Yes	No	Yes
Ethanolamine	141-43-5	Yes	Yes	Yes	Yes	Yes	Yes
Potassium hydroxide	1310-58-3	Yes	Yes	Yes	Yes	Yes	Yes

Other Regulations

A: General Product Information

All components are on the U.S. EPA TSCA Inventory List.

B: Component Analysis - Inventory

Component	CAS #	TSCA	DSL	EINECS
N-Methyl-2-pyrrolidone	872-50-4	Yes	Yes	Yes
Petroleum distillates, hydrotreated heavy naphthenic	64742-52-5	Yes	Yes	Yes
Ethanolamine	141-43-5	Yes	Yes	Yes
Potassium hydroxide	1310-58-3	Yes	Yes	Yes

C: Component Analysis - WHMIS IDL

The following components are identified under the Canadian Hazardous Products Act Ingredient Disclosure List:

Component	CAS #	Minimum Concentration
Ethanolamine	141-43-5	1%; English Item 1096; French Item 1170
Potassium hydroxide	1310-58-3	1%; English Item 1335; French Item 996

* * * Section 16 - Other Information * * *

NFPA Ratings: **Health:** 3 **Fire:** 0 **Reactivity:** 0
Hazard Scale: 0 = Minimal 1 = Slight 2 = Moderate 3 = Serious 4 = Severe
HMIS Ratings: **Health:** 3 **Fire:** 0 **Reactivity:** 0
Hazard Scale: 0 = Minimal 1 = Slight 2 = Moderate 3 = Serious 4 = Severe * = Chronic hazard

ARDROX

MATERIAL SAFETY DATA SHEET

I. PRODUCT IDENTIFICATION

Trade Name (as labeled) Tracer T-Ex 8599-C

Chemical Names, Common Names Developer

Manufacturer's Name Ardrox Inc.

Address 16961 Knott Avenue, La Mirada, CA 90638

Emergency Phone 1-800-424-9300 Name of Preparer Abayomi I. Owei

Business Phone 714 739-2821 Date Prepared June 9, 1986

II. HAZARDOUS INGREDIENTS

CHEMICAL NAMES	CAS NUMBERS	APPROXIMATE PERCENT	EXPOSURE LIMITS IN AIR ACGIH (TLV)	OSHA (PEL)	OTHER
1,1,1, Trichloroethane	71-55-6	Over 80	350 ppm	350 ppm	
Amorphous Silica % Mass	7631869				20 mppcf

III. PHYSICAL PROPERTIES

Vapor Density (Air=1) 4.55

Specific Gravity 1.32

Solubility in Water 0.78/100 gm.

Vapor Pressure, mmHg at 20°C 100

Evaporation Rate (butyl acetate =1) Over 5

Melting Point or Range, °F. N/A

Boiling Point or Range, °F. 165°F. Approx.

Appearance and Odor White powder suspended in colorless liquid: Pleasant ether like or chlorinated solvent odor.

HOW TO DETECT THIS SUBSTANCE (Warning properties of substance as a gas, vapor, dust, or mist)

Appearance, odor, solubility test and the utilization of other physical properties.

Hazardous decomposition products (including combustion products):

Hydrogen chloride, phosgene and other toxic substances may be produce.

Hazardous Polymerization: ____May occur x Will not occur

Conditions to Avoid:

VII. SPILL, LEAK AND DISPOSAL PROCEDURES

Spill response procedures (include employee protection measures):
Spills should be contained immediately. Remove spills by soaking it up with absorbent materials, placed in closed containers, labeled, store and disposed properly. Wear protective clothing and self-contained breathing apparatus when performing this job.

Preparing wastes for disposal (container types, neutralization, etc.):
This product is recyclable normally. If conditions prevent recycling, dispose of it in accordance with all federal, state and local health and pollution regulations.

Note: Dispose of all wastes in accordance with federal, state and local regulations.

VIII. SPECIAL HANDLING INFORMATION

Ventilation and engineering controls Use adequate ventilation (local or general) to keep down mist or vapor concentration below applicable standards.

Respiratory protection NIOSH approved organic vapor respirator.

Eye Protection (Type) Safety glasses or face shield.

Gloves (specify material) Neoprene or chemical resistant gloves.

Other Clothing and Equipment Aprons and overalls if necessary.

Work practices, hygienic practices Wash hands before touching any food for consumption. Avoid prolonged or repeated breathing of vapors. Avoid repeated exposure or contact with skin.

Other handling and storage requirements Store away from heat, open flames and oxidizing agents. Store in a well ventilated area.

Protective measures during maintenance of contaminated equipment Exercise safety precautions for contaminated clothing and material. Treat empty containers as if they were full and don't fill them with anything else.

IX. LABELING

Labeling (precautionary statements) Please read and understand warning label(s) before using product or opening product containers.

D.O.T. Label Compound Cleaning Liquid Corrosive

IV. FIRE AND EXPLOSION

Flash Point, °F. (give method) None at conventional closed tester at ordinary room temperatures.

Autoignation Temperature, °F. 998°F.

Flammable Limits in air, volume %: Lower 7.5 Upper 12.5

Fire Extinguishing Materials:

x Water Spray — x Carbon Dioxide — Other:

x Foam — x Dry Chemical

Special Firefighting Procedures: Use water spray to keep fire - exposed containers cool. Water spray may be utilized to flush spills away from exposures. Wear self-contained breathing apparatus.

Unusual Fire and Explosion Hazards: Very high temperatures may pose fire and explosion hazards even though it is classified as non-flammable under conventional closed tester at ordinary room temperatures.

V. HEALTH HAZARD INFORMATION

SYMPTOMS or OVEREXPOSURE for each potential route of exposure.

Inhaled: Vapor may cause headache, dizziness and stupor, nausea and vomiting. Very severe over-exposure may cause muscular incoordination.

Contact with Skin or Eyes: Skin: moderate irritation with burning sensation. Repeated or prolonged exposure may cause dermatitis.

Eyes: moderate irritation, causing pain, lacrimation and general inflammation. No corneal injury.

Absorbed through Skin: It is not readily absorbed through the skin, however exercise safety measure when handling this product.

Swallowed: May irritate gastrointestinal tract. Chemical pneumonia if vomiting results in aspiration into lungs.

HEALTH EFFECTS OR RISKS FROM EXPOSURE. Explain in lay terms. Attach extra page if more space is needed.

Acute: Irritation to skin, eyes and respiratory system.

Chronic: Dermatitis.

FIRST AID: EMERGENCY PROCEDURES

Eye Contact: Immediately flush eyes with large amounts of water for at least 15 minutes. Seek medical attention immediately.

Skin Contact: Wash exposed skin with soap and water for at least 15 minutes. Remove contaminated clothing and footwear. Wash contaminated clothing before reuse. Seek medical help if necessary.

Inhaled: Remove patient to fresh air. If breathing has stopped, give artificial respiration. Call a physician immediately.

Swallowed: Do not induce vomiting, but give 3-4 glasses of milk to dilute poison. Never give anything by mouth to an unconscious person. Obtain medical help immediately.

SUSPECTED CANCER AGENT?

__x__ NO: This product's ingredients are not found in the lists below.
YES: ____Federal OSHA ____NTP ____IARC ____Cal/OSHA (See note)

NOTE: California employers using Cal/OSHA-regulated carcinogens must register with Cal/OSHA.

MEDICAL CONDITIONS AGGRAVATED BY EXPOSURE

Skin and eye diseases could be aggravated by repeated exposure.

RECOMMENDATIONS TO PHYSICIAN

There is no specific antidote. Treatment should be directed at clinical condition and symptoms control. Over exposure can produce elevated carboxyhemoglobin levels.

VI. REACTIVITY DATA

Stability: __x__ Stable ____Unstable

Conditions to avoid: Temperature extremes especially excessive heat.

Incompatibility (materials to avoid) Avoid contact with oxidizing agents, alkali metals, open flames and electric arcs.

MISC, CWI

Toluene
Material Safety Data Sheet

CITGO Petroleum Corporation
1701 Golf Road, Suite 1-1101
Rolling Meadows, IL 60008-4295

MSDS No. 07307
Revision Date 01/19/2004

IMPORTANT: Read this MSDS before handling or disposing of this product and pass this information on to employees, customers and users of this product.

Hazard Rankings

	HMIS	NFPA
Health Hazard	* 2	2
Fire Hazard	3	3
Reactivity	0	0

* = Chronic Health Hazard

Emergency Overview

Physical State Liquid
Color Clear **Odor** Aromatic, characteristic solvent odor

WARNING:
Flammable liquid; vapor may cause flash fire.
Harmful or fatal if swallowed - Can enter lungs and cause damage.
Mist or vapor can irritate the respiratory tract.
Liquid contact can cause eye or skin irritation.
Overexposure can cause central nervous system (CNS) depression and/or other target organ effects.
Breathing high concentrations can cause irregular heartbeats which may be fatal.

Protective Equipment

Minimum Recommended
See Section 8 for Details

SECTION 1. PRODUCT IDENTIFICATION

Trade Name	Toluene	**Technical Contact**	(800) 967-7601 (8am - 4pm CT M-F)
Product Number	07307	**Medical Emergency**	(918) 495-4700
CAS Number	108-88-3	**CHEMTREC Emergency (United States Only)**	(800) 424-9300
Product Family	Petroleum hydrocarbon solvent		
Synonyms	Toluol; C7 Alkylbenzene; C7 Aromatic Hydrocarbon Solvent; High-purity Toluene; Methylbenzene; Reagent-grade Toluene (meets ASTM D-841 "Nitration Grade" Specifications); TDI-grade Toluene; Former CITGO Product Code: 2170		

SECTION 2. COMPOSITION

Component Name(s)	CAS Registry No.	Concentration (%)
Toluene	108-88-3	> 99

Toluene

OSHA Hazard Classification is indicated by an "X" in the box adjacent to the hazard title. If no "X" is present, the product does not exhibit the hazard as defined in the OSHA Hazard Communication Standard (29 CFR 1910.1200).

OSHA Health Hazard Classification				OSHA Physical Hazard Classification					
Irritant	X	Sensitizer		Combustible		Explosive		Pyrophoric	
Toxic		Highly Toxic		Flammable	X	Oxidizer		Water-reactive	
Corrosive		Carcinogenic		Compressed Gas		Organic Peroxide		Unstable	

SECTION 4. FIRST AID MEASURES

Take proper precautions to ensure your own health and safety before attempting rescue or providing first aid. For more specific information, refer to Exposure Controls and Personal Protection in Section 8 of this MSDS.

Inhalation

Immediately move victim to fresh air. If victim is not breathing, immediately begin rescue breathing. If heart has stopped, immediately begin cardiopulmonary resuscitation (CPR). If breathing is difficult, 100 percent humidified oxygen should be administered by a qualified individual. Seek medical attention immediately.

Eye Contact

Check for and remove contact lenses. If irritation or redness develops, flush eyes with cool, clean, low-pressure water for at least 15 minutes. Hold eyelids apart to ensure complete irrigation of the eye and eyelid tissue. Do not use eye ointment. Seek medical attention immediately.

Skin Contact

Remove contaminated shoes and clothing. Flush affected area with large amounts of water. If skin surface is damaged, apply a clean dressing and seek medical attention. Do not use ointments. If skin surface is not damaged, clean affected area thoroughly with mild soap and water. Seek medical attention if tissue appears damaged or if pain or irritation persists.

Ingestion

Do not induce vomiting. If spontaneous vomiting is about to occur, place victim's head below knees. If victim is drowsy or unconscious, place on the left side with head down. Never give anything by mouth to a person who is not fully conscious. Do not leave victim unattended. Seek medical attention immediately.

Notes to Physician

INHALATION: Inhalation overexposure can produce toxic effects. Monitor for respiratory distress. If cough or difficulty in breathing develops, evaluate for upper respiratory tract inflammation, bronchitis, and pneumonitis. Administer supplemental oxygen with assisted ventilation, as required.

This material (or a component) sensitizes the heart to the effects of sympathomimetic amines. Epinephrine and other sympathomimetic drugs may initiate cardiac arrhythmias in individuals exposed to this material. Administion of sympathomimetic drugs should be avoided.

INGESTION: If ingested, this material presents a significant aspiration and chemical pneumonitis hazard. Induction of emesis is not recommended. Consider activated charcoal and/or gastric lavage. If patient is obtunded, protect the airway by cuffed endotracheal intubation or by placement of the body in a Trendelenburg and left lateral decubitus position.

SECTION 5. FIRE FIGHTING MEASURES

NFPA Flammability Classification	NFPA Class-IB flammable liquid.
Flash Point	Closed cup: 4°C (40°F). (Tagliabue.)
Lower Flammable Limit	AP 1 % **Upper Flammable Limit** AP 7 %
Autoignition Temperature	536°C (997°F)
Hazardous Combustion Products	Carbon dioxide, carbon monoxide, smoke, fumes, unburned hydrocarbons, aldehydes and other products of incomplete combustion.
Special Properties	Flammable Liquid! This material releases vapors at or below ambient temperatures. When mixed with air in certain proportions and exposed to an ignition source, its vapor can cause a flash fire. Use only with adequate ventilation. Vapors are heavier than air and may travel long distances along the ground to an ignition source and flash back. A vapor and air mixture can create an explosion hazard in confined spaces such as sewers. If container is not properly cooled, it can rupture in the heat of a fire.
Extinguishing Media	SMALL FIRE: Use dry chemicals, carbon dioxide, foam, water fog, or inert gas (nitrogen). LARGE FIRE: Use foam, water fog, or water spray. Water fog and spray are effective in cooling containers and adjacent structures. However, water can cause frothing and/or may not extinguish the fire. Water can be used to cool the external walls of vessels to prevent excessive pressure, autoignition or explosion. DO NOT use a solid stream of water directly on the fire as the water may spread the fire to a larger area.
Protection of Fire Fighters	Firefighters must use full bunker gear including NIOSH-approved positive pressure self-contained breathing apparatus to protect against potential hazardous combustion or decomposition products and oxygen deficiencies. Evacuate area and fight the fire from a maximum distance or use unmanned hose holders or monitor nozzles. Cover pooling liquid with foam. Containers can build pressure if exposed to radiant heat; cool adjacent containers with flooding quantities of water until well after the fire is out. Withdraw immediately from the area if there is a rising sound from a venting safety device or discoloration of vessels, tanks, or pipelines. Be aware that burning liquid will float on water. Notify appropriate authorities if liquid enter sewers or waterways.

SECTION 6. ACCIDENTAL RELEASE MEASURES

Take proper precautions to ensure your own health and safety before attempting spill control or clean-up. For more specific information, refer to the Emergency Overview on Page 1, Exposure Controls and Personal Protection in Section 8 and Disposal Considerations in Section 13 of this MSDS.

Flammable Liquid! Release causes an immediate fire or explosion hazard. Evacuate all non-essential personnel from immediate area and establish a "regulated zone" with site control and security. A vapor-suppressing foam may be used to reduce vapors. Eliminate all ignition sources. All equipment used when handling this material must be grounded. Stop the leak if it can done without risk. Do not touch or walk through spilled material. Remove spillage immediately from hard, smooth walking areas. Prevent spilled material from entering waterways, sewers, basements, or confined areas. Absorb or cover with dry earth, sand, or other non-combustible material and transfer to appropriate waste containers. Use clean, non-sparking tools to collect absorbed material.

For large spills, secure the area and control access. Prevent spilled material from entering sewers, storm drains, other drainage systems, and natural waterways. Dike far ahead of a liquid spill to ensure complete collection. Water mist or spray may be used to reduce or disperse vapors; but, it may not prevent ignition in closed spaces. This material will float on

water and its run-off may create an explosion or fire hazard. Verify that responders are properly HAZWOPER-trained and wearing appropriate respiratory equipment and fire-resistant protective clothing during cleanup operations. In an urban area, cleanup spill as soon as possible; in natural environments, cleanup on advice from specialists. Pick up free liquid for recycle and/or disposal if it can be accomplished safely with explosion-proof equipment. Collect any excess material with absorbant pads, sand, or other inert non-combustible absorbent materials. Place into appropriate waste containers for later disposal. Comply with all laws and regulations.

SECTION 7. HANDLING AND STORAGE

Handling

A spill or leak can cause an immediate fire or explosion hazard. Keep containers closed and do not handle or store near heat, sparks, or any other potential ignition sources. Do not contact with oxidizable materials. Do not breathe vapor. Use only with adequate ventilation and personal protection. Never siphon by mouth. Avoid contact with eyes, skin, and clothing. Prevent contact with food and tobacco products. Do not take internally.

When performing repairs and maintenance on contaminated equipment, keep unnecessary persons away from the area. Eliminate all potential ignition sources. Drain and purge equipment, as necessary, to remove material residues. Use gloves constructed of impervious materials and protective clothing if direct contact is anticipated. Provide ventilation to maintain exposure potential below applicable exposure limits. Promptly remove contaminated clothing. Wash exposed skin thoroughly with soap and water after handling.

Empty containers may contain material residues which can ignite with explosive force. Misuse of empty containers can be dangerous if used to store toxic, flammable, or reactive materials. Cutting or welding of empty containers can cause fire, explosion, or release of toxic fumes from residues. Do not pressurize or expose empty containers to open flame, sparks, or heat. Keep container closed and drum bungs in place. All label warnings and precautions must be observed. Return empty drums to a qualified reconditioner. Consult appropriate federal, state and local authorities before reusing, reconditioning, reclaiming, recycling, or disposing of empty containers and/or waste residues of this material.

Storage

Store and transport in accordance with all applicable laws. Keep containers tightly closed and store in a cool, dry, well-ventilated place, plainly labeled, and out of closed vehicles. Keep away from all ignition sources. Ground all equipment containing this material. Containers should be able to withstand pressures expected from warming and cooling in storage. This flammable liquid should be stored in a separate safety cabinet or room. A refrigerated room is preferable for materials with a flash point temperature lower than 70°F (21°C). All electrical equipment in areas where this material is stored or handled should be installed in accordance with applicable regulatory requirements and the National Electrical Code.

SECTION 8. EXPOSURE CONTROLS AND PERSONAL PROTECTION

Engineering Controls

Provide exhaust ventilation or other engineering controls to keep the airborne concentrations of vapor or mists below the applicable workplace exposure limits indicated below. All electrical equipment should comply with the National Electric Code. An emergency eye wash station and safety shower should be located near the work-station.

Personal Protective Equipment

Personal protective equipment should be selected based upon the conditions under which this material is used. A hazard assessment of the work area for PPE requirements should be conducted by a qualified professional pursuant to OSHA regulations. The following pictograms represent the minimum requirements for personal protective equipment. For certain operations, additional PPE may be required.

Toluene

Eye Protection	Safety glasses equipped with side shields are recommended as minimum protection in industrial settings. Chemical goggles should be worn during transfer operations or when there is a likelihood of misting, splashing, or spraying of this material. Suitable eye wash water should be readily available.
Hand Protection	Avoid skin contact. Use gloves (e.g., disposable PVC, neoprene, nitrile, vinyl, or PVC/NBR). Wash hands with plenty of mild soap and water before eating, drinking, smoking, use of toilet facilities or leaving work. DO NOT use gasoline, kerosene, solvents or harsh abrasives as skin cleaners.
Body Protection	Avoid skin contact. Wear long-sleeved fire-retardant garments (e.g., Nomex®) while working with flammable and combustible liquids. Additional chemical-resistant protective gear may be required if splashing or spraying conditions exist. This may include an apron, boots and additional facial protection. If product comes in contact with clothing, immediately remove soaked clothing and shower. Promptly remove and discarded contaminated leather goods.
Respiratory Protection	For unknown vapor concentrations use a positive-pressure, pressure-demand, self-contained breathing apparatus (SCBA). For known vapor concentrations above the occupational exposure guidelines (see below), use a NIOSH-approved organic vapor respirator if adequate protection is provided. Protection factors vary depending upon the type of respirator used. Respirators should be used in accordance with OSHA requirements (29 CFR 1910.134).
General Comments	Warning! Use of this material in spaces without adequate ventilation may result in generation of hazardous levels of combustion products and/or inadequate oxygen levels for breathing. Odor is an inadequate warning for hazardous conditions.

Occupational Exposure Guidelines

Substance	**Applicable Workplace Exposure Levels**
Toluene	**ACGIH (United States). Skin** TWA: 50 ppm 8 hour(s). **OSHA (United States).** TWA: 200 ppm 8 hour(s). CEIL: 300 ppm PEAK: 500 ppm

SECTION 9. PHYSICAL AND CHEMICAL PROPERTIES (TYPICAL)

Physical State	Liquid.	**Color**	Clear.	**Odor**	Aromatic, characteristic solvent odor.
Specific Gravity	0.872 (Water = 1)	**pH**	Not Applicable.	**Vapor Density**	AP 3 (Air = 1)
Boiling Range	AP 111° C (AP 231° F)			**Melting/Freezing Point**	AP -95°C (AP -139°F)
Vapor Pressure	3.2 kPa (24 mmHg) (at 20°C)			**Volatility**	872 g/l VOC (W/V)
Solubility in Water	Very slightly soluble in cold water. (<0.1 % w/w)			**Viscosity (cSt @ 40°C)**	<3
Additional Properties					

Toluene

Paraffin, Isoparaffin and Cycloparaffin Hydrocarbons Content = <1 Wt.% (ASTM D-1319);
Aromatic Hydrocarbon Content = >99 Wt. % (ASTM D-1319);
Average Density at 60°F = 7.26 lbs./gal. (Calculated via ASTM D-287);
Aniline Cloud Point Temperature = 48°F (8.9°C) (ASTM D-611);
Kauri-Butanol (KB) Value = 105 (ASTM D-1133);
Dry Point Temperature = 231°F (111°C) (ASTM D-86, D-850 or D-1078);
Evaporation Rate = 1.9 (n-Butyl acetate = 1.0);
Heat Value = 18,314 Btu per pound;
Flash Point = 40° F (4° C) (TCC);
Odor Threshold = 2 to 5 ppm in air

SECTION 10. STABILITY AND REACTIVITY

Chemical Stability	Stable.	**Hazardous Polymerization**	Not expected to occur.
Conditions to Avoid	Keep away from heat, sparks and flame.		
Materials Incompatibility	Strong acids, alkalies, and oxidizers such as liquid chlorine, other halogens, hydrogen peroxide and oxygen.		
Hazardous Decomposition Products	No additional hazardous decomposition products were identified other than the combustion products identified in Section 5 of this MSDS.		

SECTION 11. TOXICOLOGICAL INFORMATION

For other health-related information, refer to the Emergency Overview on Page 1 and the Hazards Identification in Section 3 of this MSDS.

Toxicity Data

Toluene:
Effects from Acute Exposure:
Deliberate inhalation of toluene at high concentrations (e.g., glue sniffing and solvent abuse) has been associated with adverse effects on the liver, kidney and nervous system and can cause CNS depression, cardiac arrhythmias and death. Case studies of persons abusing toluene suggest isolated incidences of adverse effects on the fetus including birth defects.

Effects from Repeated or Prolonged Exposure:
Studies of workers indicate long-term exposure may be related to impaired color vision and hearing. Some studies of workers suggest long-term exposure may be related to neurobehavioral and cognitive changes. Some of these effects have been observed in laboratory animals following repeated exposure to high levels of toluene. Several studies of workers suggest long-term exposure may be related to small increases in spontaneous abortions and changes in some gonadotropic hormones. However, the weight of evidence does not indicate toluene is a reproductive hazard to humans. Studies in laboratory animals indicate some changes in reproductive organs following high levels of exposure, but no significant effects on mating performance or reproduction were observed. Case studies of persons abusing toluene suggest isolated incidences of adverse effects on the fetus including birth defects. Findings in laboratory animals were largely negative. Positive findings include small increases in minor skeletal and visceral malformations and developmental delays following very high levels of maternal exposure. Studies of workers indicate long-term exposure may be related to effects on the liver, kidney and blood, but these appear to be limited to changes in serum enzymes and decreased leukocyte counts. Studies in laboratory animals indicate some evidence of adverse effects on the liver, kidney, thyroid, and pituitary gland following very high levels of exposure. The relevance of these findings to humans is not clear at this time.

SECTION 12. ECOLOGICAL INFORMATION

Ecotoxicity Toxic to aquatic organisms, may cause long-term adverse effects in the aquatic environment.

Environmental Fate This product is not expected to bioaccumulate through food chains in the environment.

SECTION 13. DISPOSAL CONSIDERATIONS

Hazard characteristic and regulatory waste stream classification can change with product use. Accordingly, it is the responsibility of the user to determine the proper storage, transportation, treatment and/or disposal methodologies for spent materials and residues at the time of disposition.

Maximize material recovery for reuse or recycling. If discarded, Toluene is regulated by US EPA as a listed hazardous waste (U220). Recovered non-usable material may be regulated by US EPA as a hazardous waste due to its ignitibility (D001) and/or its toxic (D018) characteristics. Conditions of use may cause this material to become a "hazardous waste", as defined by federal or state regulations. It is the responsibility of the user to determine if the material is a RCRA "hazardous waste" at the time of disposal. Transportation, treatment, storage and disposal of waste material must be conducted in accordance with RCRA regulations (see 40 CFR 260 through 40 CFR 271). State and/or local regulations may be more restrictive. Contact the RCRA/Superfund Hotline at (800) 424-9346 or your regional US EPA office for guidance concerning case specfic disposal issues.

SECTION 14. TRANSPORT INFORMATION

The shipping description below may not represent requirements for all modes of transportation, shipping methods or locations outside of the United States.

US DOT Status A U.S. Department of Transportation (DOT) regulated material.

Proper Shipping Name RQ, Toluene, 3, UN1294, PG II

Hazard Class 3

Packing Group(s) II

UN/NA Number UN1294

Reportable Quantity RQ 1000 lbs. [Based upon maximum Toluene concentration of 100% and an RQ of 1000 lbs.]

Placard(s)

Emergency Response Guide No. 130

HAZMAT STCC No. 49 093 05

MARPOL III Status Not a DOT "Marine Pollutant" per 49 CFR 171.8.

SECTION 15. REGULATORY INFORMATION

TSCA Inventory This product and/or its components are listed on the Toxic Substances Control Act (TSCA) inventory.

SARA 302/304 Emergency Planning and Notification	The Superfund Amendments and Reauthorization Act of 1986 (SARA) Title III requires facilities subject to Subparts 302 and 304 to submit emergency planning and notification information based on Threshold Planning Quantities (TPQs) and Reportable Quantities (RQs) for "Extremely Hazardous Substances" listed in 40 CFR 302.4 and 40 CFR 355. No components were identified.
SARA 311/312 Hazard Identification	The Superfund Amendments and Reauthorization Act of 1986 (SARA) Title III requires facilities subject to this subpart to submit aggregate information on chemicals by "Hazard Category" as defined in 40 CFR 370.2. This material would be classified under the following hazard categories: Fire, Acute (Immediate) Health Hazard, Chronic (Delayed) Health Hazard
SARA 313 Toxic Chemical Notification and Release Reporting	This product contains the following components in concentrations above de minimis levels that are listed as toxic chemicals in 40 CFR Part 372 pursuant to the requirements of Section 313 of SARA: Toluene [CAS No.: 108-88-3] Concentration: >99%
CERCLA	The Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (CERCLA) requires notification of the National Response Center concerning release of quantities of "hazardous substances" equal to or greater than the reportable quantities (RQ's) listed in 40 CFR 302.4. As defined by CERCLA, the term "hazardous substance" does not include petroleum, including crude oil or any fraction thereof which is not otherwise specifically designated in 40 CFR 302.4. Chemical substances present in this product or refinery stream that may be subject to this statute are: Toluene [CAS No.: 108-88-3] RQ = 1000 lbs. (453.6 kg) Concentration: >99% Benzene [CAS No.: 71-43-2] RQ = 10 lbs. (4.536 kg) Concentration: <0.1%
Clean Water Act (CWA)	This material is classified as an oil under Section 311 of the Clean Water Act (CWA) and the Oil Pollution Act of 1990 (OPA). Discharges or spills which produce a visible sheen on waters of the United States, their adjoining shorelines, or into conduits leading to surface waters must be reported to the EPA's National Response Center at (800) 424-8802.
California Proposition 65	This material may contain the following components which are known to the State of California to cause cancer, birth defects or other reproductive harm, and may be subject to the requirements of California Proposition 65 (CA Health & Safety Code Section 25249.5): Toluene: >99% Benzene: <0.1%
New Jersey Right-to-Know Label	For New Jersey R-T-K labeling requirements, refer to components listed in Section 2.
Additional Regulatory Remarks	Federal Hazardous Substances Act, related statutes, and Consumer Product Safety Commission regulations, as defined by 16 CFR 1500.14(b)(3) and 1500.83(a)(13): This product contains Toluene which may require special labeling if distributed in a manner intended or packaged in a form suitable for use in the household or by children. Precautionary label dialogue should display the following: **DANGER: Contains Toluene! Harmful or fatal if swallowed! Call Physician Immediately. Vapor Harmful! KEEP OUT OF REACH OF CHILDREN!**

SECTION 16. OTHER INFORMATION

Refer to the top of Page 1 for the HMIS and NFPA Hazard Ratings for this product.

REVISION INFORMATION

* This chemical is subject to the reporting requirements of Section 313 of SARA TITLE III.

Section III — PHYSICAL DATA

BOILING RANGE 100 - 315°F VAPOR DENSITY [X] HEAVIER [ ] LIGHTER THAN AIR

EVAPORATION RATE [ ] FASTER [X] SLOWER THAN ETHER PERCENT VOLATILE BY VOLUME 87.8 WEIGHT PER GALLON 7.30

Section IV — FIRE AND EXPLOSION HAZARD DATA

FLAMMABILITY CLASSIFICATION Flammable Liquid FLASH POINT TCC 62°F LEL

EXTINGUISHING MEDIA Foam, CO_2 Dry Chemical, Water Fog

UNUSUAL FIRE AND EXPLOSION HAZARDS Flammable vapors may cuase explosive mixtures with air. Vapors are heavier than air and may travel along ground and be ignited by pilot lights, sparks, heaters, smoking, electric motors and other ignition sources.

SPECIAL FIRE FIGHTING PROCEDURES Self-contained breathing apparatus with a full facepiece operated in pressure demand or other positive pressure mode. Water streams will only spread burning material. Use water fog to cool containers exposed to fire to reduce internal pressure.

Section V — HEALTH HAZARD DATA

THRESHOLD LIMIT VALUE

EFFECTS OF OVEREXPOSURE
Eyes: Can cause irritation, redness tearing and blurred vision.
Skin: Can cause irritation, defatting, dermatitis.
Breathing: Can cause irritation, dizziness, fatigue, nausea, headache, possible unconsciousness.

EMERGENCY AND FIRST AID PROCEDURES
Eyes: FLush with large amounts of water, lifting upper & lower lids, get medical attention.
Skin: Wash exposed area with soap and water. Remove and launder contaminated clothing.
Swallowed: Do not induce vomiting. Keep warm and quiet and get medical attention.
Breathed: Remove to fresh air. Administer oxygen if breathing is difficult, call physician.

Section VI — REACTIVITY DATA

STABILITY [ ] UNSTABLE [X] STABLE CONDITIONS TO AVOID

INCOMPATABILITY (Materials to Avoid) Strong oxidizing agents.

HAZARDOUS DECOMPOSITION PRODUCTS Carbon monoxide

HAZARDOUS POLYMERIZATION [ ] MAY OCCUR [X] WILL NOT OCCUR

CONDITIONS TO AVOID Heat, sparks, open flame and fire.

Section VII — SPILL OR LEAK PROCEDURES

STEPS TO BE TAKEN IN CASE MATERIAL IS RELEASED OR SPILLED Wipe up and safely discard absorbants. In the event of a large spill, dike the area and pump material to a waste tank.

WASTE DISPOSAL METHOD In accordance with Federal, State and local regulations.

Section VIII — SPECIAL PROTECTION INFORMATION

RESPIRATORY PROTECTION NIOSH/MESA approved for organic vapors. If airborne concentration exceeds TLV, use self-contained breathing apparatus or respirator.

VENTILATION Sufficient to maintain airborne concentration less than TLV.

PROTECTIVE GLOVES Buna

EYE PROTECTION Chemical safety goggles or face shield.

OTHER PROTECTIVE EQUIPMENT

Section IX — SPECIAL PRECAUTIONS

PRECAUTIONS TO BE TAKEN IN HANDLING AND STORING Use with adequate ventilation. Avoid prolonged breathing of vapors. Avoid prolonged or repeated skin contact.

DOL STORAGE CATEGORY

OTHER PRECAUTIONS Do not use near sparks, open flame, electric equipment, smoking, welding operations or other sources of ignition. Emptied containers may contain residual material suffieient to pose a fire or explosion hazard.

OKLAHOMA DEPARTMENT OF ENVIRONMENTAL QUALITY
AIR QUALITY DIVISION

MEMORANDUM: January 20, 2004

TO: Inspection Files

THROUGH: Rhonda Jeffries, Environmental Program Manager

FROM: Terry Joyner, Environmental Program Specialist

SUBJECT: Air Quality Complaint Inspection
Limco Airepair, Inc.
Tulsa, Oklahoma
FCE No. 01293
AIRS ID 143-00155

On December 30, 2003, an annual compliance inspection was conducted at the above referenced facility from 3:00 PM to 4:15 PM. Present for the inspection was Terry Joyner, Environmental Program Specialist with the Department of Environmental Quality, Air Quality Division (AQD). The facility was represented by Michael Lowther, Operations Manager. This facility was inspected to determine compliance with the state air quality regulations and its State of Oklahoma Evaluation of Permit to Operate No. 99-026-O (M-1)(attached).

FACILITY DESCRIPTION
The facility manufactures different sizes of heat exchangers, repairs various sizes of heat exchangers, and repairs variety of aircraft air ducts.

FACILITY INSPECTION
I arrived at the facility at approximately 3:00 PM. I met Mr. Lowther in the lobby area where proper credentials were presented. Mr. Lowther escorted me to his office where I explained the purpose of the inspection. I informed Mr. Lowther that I would be requesting various operational records and would need to take a physical tour of the facility. I requested the following operation records for 2003: weekly averages of product usage, degreaser records, and material usage. I informed Mr. Lowther that the records were due January 6, 2004. When then proceeded to the physical inspection. Mr. Lowther escorted me to the OEM area. In this are the facility manufactures heat exchangers. There were various metal presses, welding, and cutting machines in the area. Mr. Lowther then escorted me to the Paintbooth. The booth did not have a pressure drop gauge to measure the airflow across the filters. Mr. Lowther informed me that the filters were changed approximately once per month. It also appeared that the facility uses conventional spray guns. We then continued to the vapor degreaser. The chemical in the vapor degreaser is Trichloroethylene but on the operating permit it indicates that chemical in the degreaser is perchloroethylene. Mr. Lowther informed me that there was an error in the permit and he would request that it be changed. We then continued on to the Clean Line area. In this area

parts are dipped in various solutions for cleaning purposes. This area included a Chromatic Acid tank. The tank is heated to 90 degrees. I requested a MSDS for the Chromatic Acid. We then continued back to Mr. Lowther's office where I reconfirmed the date the records were due. I left the facility at approximately 4:15 PM.

FACILITY EMISSIONS

Limco Airepair Inc. reported the following emissions for 2002:

Pollutant	TPY
Isopropanol	.59
MEK	7.41
MIK	.02
MNK	.01
Mineral Spirits	1.05
Toluene	3.82
Trichloroethylene	1.28
Xylene	.21

The emission inventory is attached.

REGULATIONS

NESHAP, 40 CFR Part 63

Subpart T (Halogenated Solvent Cleaners) This standard was published in the Federal Register on December 2, 1994, and compliance by new degreasers was required immediately upon startup. Applicant is subject to Subpart T, has complied with the initial notification procedure, and has done all required reporting. Applicant has selected Option 1 from Table 1 of §63.463 to demonstrate compliance. This option requires a combination of a working-mode cover, freeboard ratio of 1.0, and superheated vapor. Applicant appears to be in compliance.

OAC 252:100-1 (General Provisions)

Subchapter 1 includes definitions but there are no regulatory requirements.

OAC 252:100-3 (Air Quality Standards and Increments)

Primary Standards are in Appendix E and Secondary Standards are in Appendix F of the Air Pollution Control Rules. At this time, all of Oklahoma is in attainment of these standards.

OAC 252:100-5 (Registration, Emission Inventory and Annual Fees)

This subchapter requires potential sources of air contaminants to register with the Air Quality Division. The facility has submitted a 2002 emission inventory and it is attached.

OAC 252:100-7 (Permits for Minor Facilities)

This facility has a minor source permit since total emissions of each criteria pollutant do not exceed 100 TPY and HAP emissions do not exceed the 10/25 TPY thresholds. As

such, modeling, BACT, and public review are not necessary. The facility appears to be non-compliant with their operating permit.

OAC 252:100-9 (Excess Emission Reporting Requirements)
In the event of any release which results in excess emissions, the owner or operator of such facility shall notify the Air Quality Division as soon as practical during normal office hours and no later than 4:30 pm the next working day following the malfunction or release. Further written notice containing specific details of the incident shall be submitted within ten (10) business days. The facility did not report any excess emissions.

OAC 252:100-13 (Open Burning)
Open burning of refuse and other combustible material is prohibited except as authorized in the specific examples and under the conditions listed in this Subchapter. There was no open burning seen during the inspection.

OAC 252:100-19 (Particulate Matter)
Section 19-4 limits particulate emissions from new and existing fuel-burning equipment. AP-42 (7/98) Table 1.4-1 lists natural gas TPM emissions to be 7.6 lb/million scf or about 0.0076 lb/MMBTU, which is in compliance.

OAC 252:100-25 (Visible Emissions and Particulates)
No discharge of greater than 20% opacity is allowed except for short-term occurrences which consist of not more than one six-minute period in any consecutive 60 minutes, not to exceed three such periods in any consecutive 24 hours. In no case shall the average of any six-minute period exceed 60% opacity. There was no opacity seen during the inspection.

OAC 252:100-29 (Fugitive Dust)
No person shall cause or permit the discharge of any visible fugitive dust emissions beyond the property line on which the emissions originate in such a manner as to damage or to interfere with the use of adjacent properties, or cause air quality standards to be exceeded, or interfere with the maintenance of air quality standards. There was no fugitive dust seen during the inspection.

OAC 252:100 –31 (Sulfur Compounds)
Because the driers burn commercial grade natural gas exclusively they are in compliance with the requirements of this Subchapter.

OAC 252:100-39 (Volatile Organic Compounds in Nonattainment Areas)
Part 7, Section 39-46 concerns coating of metal parts and products. Limco is exempt as the VOC emissions from surface coating and cleaning will not exceed 10 TPY.

SPECIFIC CONDITIONS
Permit No. 99-026-O(M-1)

1. Points of emission include the cleaning, degreasing, painting, and other coating areas. The significant emissions from all sources are listed below.

Table No.1

USE	POLLUTANT	Permit limits	
		TPY Limit	TPY Reported
Dip Coat	Toluene	5.0	*6.24
	Xylene	0.36	.35
Degreaser	Perc	3.0	**5.04
Wipe	MEK	7.50	5.10
Testing	MinSprts	2.50	1.01
Wipe	IPA	2.00	1.88
Paint (1)	Various	0.56	.14
TOTAL VOC		20.9	19.56
TOTAL HAPS		8.36	*16.61

The emissions shown in the preceding table will not be exceeded under normal operating conditions provided the facility's use of materials shown in the following table is not exceeded.

Table No. 2

Materials	GPD(1) Limit	GPD Reported	GPY Limit	GPY Reported
Toluene	5.1	4.49	1320	*1,727
805 Resin	0.60	.20	157	55
Perc	0.20	**1.22	520	**833
MEK	7.70	5.06	2000	1,587
MinSprts	1.15	1.22	300	327.50
IPA	2.00	1.84	520	*585
Paints, various	0.31	*.45	80	*.86

(1) These GPD are work weekly averages.

*Exceedance of limitation

** The facility uses Trichloroethylene (Trich) instead of Perc.

The above emissions and material usage are reported in 12 month rolling totals. The facility exceeded the following limitations: TPY of Toluene, TPY of Haps, GPY of Toluene, GPY of IPA, GPD of Paint, GPY of Paint. The facility uses Trich instead of Perc for their degreaser. The levels of Trich emissions exceed the Perc limitation as well as the GPD and GPY.

2. Alternate products and production quantities can be varied under the following conditions.

a. Emissions do not exceed 10 TPY for a single HAP or 25 TPY of the HAPs aggregate.
b. A change in either production or products is permitted provided there would be no increase in the quantity or a decrease in the quality of the resulting emissions. Additionally the use of alternate products shall not cause the total of each toxic to exceed the de minimis levels or the MAAC established by OAC252:100-41.
c. LA shall notify the DEQ in writing 30 calendar days before making any operational changes that would cause significant air emissions.
d. Maintain written documentation to show compliance with all current Federal, State and Local Regulations, Rules, and Codes, including modeling where compliance with a MAAC may be in question.

The facility has submitted records that indicate that the facility has increased usages and emissions. The records are attached.

3. The degreaser is subject to NESHAP (40 CFR 63) Subpart T, Standards for Halogenated Solvent Cleaning, as published in the Federal Register on December 2, 1994 and shall be in compliance with this federal NESHAP, specifically with Option 1 of Table 1 of 40 CFR 63.463. All required reports shall be sent to the DEQ Regional Office at Tulsa. The facility has submitted 2001 and 2002 reports. The facility appears to be in compliance.

4. The permittee shall comply with the following outlined provisions for operation of the degreaser, which are further detailed in OAC 252:100-39-42(b).

a) The degreaser "working mode cover" shall operate easily and cause minimum disturbance to the vapor zone.

b) The unit shall have safety switches to shut off sump heat if the coolant is not circulating or exceeds the recommended level.

c) Since Limco has chosen Option one for Halogenated Degreasers shown in 40 CFR 63, Subpart T, the unit shall have a freeboard ratio not less than 1.0, a solvent super heater which shall maintain the solvent to a temperature no less than 10 degrees F above the boiling point of the solvent, and have a working mode cover. If, in the future, Limco decides one of the other options available in this Subpart would be a better choice Limco shall submit a written request describing their plan to the DEQ local office, and will not begin any change without written permission.

d) Limco will properly train each person that will operate the degreaser before they allowed using the machine. The written syllabus used to in training will be readily available to each trained operator.

The facility appears to be in compliance with the above terms.

5. All records necessary to demonstrate compliance with permit conditions shall be maintained on site or at a readily accessible location for a period of at least two years following the date of recording and shall be available for review by regulatory personnel during normal business hours. Such records include, but are not necessarily limited to, the following.

a) Records sufficient to demonstrate the weekly averages of the product usages do not exceed those shown in SC#1, Table No.2 (exclusive of the vapor degreaser). If any of the GPD quantities in table No. 2 are exceeded then compliance with that pollutant's MAAC must be demonstrated.
b) Degreaser records required by Specific Condition #3.
c) Material usages (monthly and 12-month rolling totals).

The facility has exceeded their limitations in Table 2 and has not provided calculations that show that they are in compliance with the MAAC standards.

6. This permit supercedes all previous permits, which are now null and void.

SUMMARY
Limco has submitted records that appear to have exceeded usage and emission limits. The facility also has not submitted calculations that show compliance with the MAAC standards.

OKLAHOMA DEPARTMENT OF ENVIRONMENTAL QUALITY
AIR QUALITY DIVISION

MEMORANDUM **October 31, 2001**

TO: Dawson Lasseter, P.E., Chief Engineer, Air Quality

THROUGH: Phillip Fielder, P.E., New Source Permits Unit

THROUGH: Peer Review

FROM: Jack Fly, DEQ Regional Office at Tulsa

SUBJECT: Evaluation of Permit Application No. 99-026-O (M-1)
Limco-Airepair, Inc (LA)
Air Permit Modification
Aircraft Component Manufacturing/Repair Facility (SIC 3728)
5304 Lawton Ave
Tulsa County, Tulsa, Oklahoma 74121

INTRODUCTION

In the past, LA had two similar facilities located in Tulsa. On March 30, 2001, LA closed the facility located at 4250 South 76 East Avenue, Tulsa. The Lawton Ave plant is the only LA facility in Tulsa, and will take the workload of both facilities.

The applicant has requested a modification to the existing air permit No. 99-026-O to add another coating process plus increase the use of paints, degreaser solvent, parts cleaning solvents, and pressure testing fluid. The facility manufactures and repairs non-structural parts for the aerospace industry. This facility commenced operations in 1995. LA will remain a synthetic minor facility after the new operations commence.

Since the modification to the facility requested by LA increases the actual emissions by more than 5 tons per year (TPY) and is adding a new piece of equipment, a construction permit and modified operating permit are required per OAC 252:100-7. The fees associated with the permits are $1,500.

When issued Permit 99-026-O (M-1) will cover the entire facility, and all other LA air permits are void.

PROCESS DESCRIPTION

In general, the plant has three product activities i.e., the manufacture of different sizes of heat exchangers, the repair of various sizes of heat exchangers, and the repair of various sized aircraft air ducts.

Manufacturing Process

All the ovens used for drying and soldering have a combined heat rate of 0.80 MMBTUH

First, LA buys thin sheets of aluminum and stainless steel to use in the manufacture and repair of all three products.

The steps in the manufacture of the heat exchangers are: material is cut, shaped, cleaned, welded/assembled, pressure tested, cleaned, heat dried, and coated. LA is required to test most of the heat exchangers that are of a new design. The new units are performance tested for flow vs pressure drop of both the cooling medium (air) over the outside of the heat exchanger, and the medium to be cooled (engine lube oil, hydraulic fluid, etc) which is on the inside of the exchanger. They are also tested for its heat transfer capabilities.

The steps in the repair of the heat exchangers are: inspected for flaws, repaired as necessary, pressure tested, cleaned, heat dried, and coated.

The steps in the repair of the air ducts are: inspection for flaws, cleaning, heat dried, repairs made, cleaned, and coated.

WELDING/SOLDERING

Various types of welding are used by LA i.e., MIG, TIG, etc.

The soldering is done by placing assembled, "tinned" parts in natural gas fired ovens. Tinning is a process where the part is coated with the required amount of solder/flux on each joint to be soldered. The part is then heated to a temperature just above the melting point of the solder to allow the solder to melt and flow into the joint to be soldered. The part is then cooled to room temperature in ambient air.

SIZING/SHAPING

This is done with conventional sheet metal shears, sheet metal brakes, stamping machines, etc.

COATING

All products are cleaned and heat dried before coating.

The parts may get some combination of four types of coatings i.e. paint, alodine, anodize, or silicone aluminum dip. Anodizing is done by an outside contractor; all others are done by LA.

Less than 10% of all products are spray-painted. The painting is done in a totally enclosed 12' x 12' x 8' high paint booth using a high volume low pressure spraying rig. The paint over spray is sucked through a 95% efficient dry type filter at 3,500 acfm and exhausts 8 feet above grade through a 12-inch diameter duct.

The alodine process is done by soaking the part in a bath of nitric/chromic acid, which results in the desired surface getting a coat of aluminum oxide. This process does not use heat or electric current.

The new coating process is called Silicone/Aluminum Dip. The dip solution consists of 8.4 gallons of Toluene, 1.0 gallons of Dow #805 silicone resin, and 1.6 pounds of aluminum powder. 61.5 gallons of this solution is placed in a 400-gallon dipping tank that is located in a totally enclosed room (10 ft x 12 ft x 10 high) within the shop. This basically means that the part to be coated is dipped in the solution as opposed to spraying/brushing/etc. After the part is dipped (the part is completely coated) it is hung over the tank to drip and dry. The result is the part gets a thin coat of aluminum filled silicone. The air in the dipping room is exhausted to the outside by a 22,000 acfm fan through a dry type filter in a 14 inch diameter duct to 10 ft above grade. This air that is exhausted is replaced by room air.

Anodizing is a process where a surface on the part gets a coating of aluminum by an electrolysis process. The part is made an anode as part of an electric circuit in a bath of acid, and as a result aluminum is deposited on the part's surface.

CLEANING

Parts are cleaned by different chemicals at different stages in the manufacturing/repair processes. The parts can be cleaned by hand wiping with solvents, acid, or caustic bath followed by water rinse or trichloroethylene degreaser.

The parts are dried after the cleaning process by electric heated ovens or natural gas fired ovens.

The facility operates 16 hours per day, 6 days per week, and 52 weeks per year, or 4,992 hours per year.

EMISSIONS

The significant air emissions are from the hand wiping of parts with solvents and coating. The air emissions from parts drying (combustion of natural gas), welding, and metal sizing/shaping are insignificant, and will not be included in the following emissions analysis.

Purchases of acids and caustics used in the clean lines have been tabulated in the application. The replacement numbers are below any *de minimis* threshold. Much of the material is consumed in the cleaning operations, either through chemical combination with materials presented or through action as a flocculent. Potential emissions are negligible.

Limco estimates the use of trichloroethylene (Perc) for the degreaser to be 520 gallons per year which is shown in the following emission table. This includes material that was collected for reclamations. The emissions shown are the net amounts. The vapor degreaser holds 110 gallons of Perc and has a freeboard ratio of 1.3.

Materials used in cleaning and wipe down of the parts include 2,000 gallons per year (GPY) of MEK and 520 GPY of isopropyl alcohol. The use of mineral spirits in pressure testing is estimated to be 300 GPY. The facility plans to use 95 gallons of ten different primers, topcoats and solvents. A "supercoat" was created by assuming the worst polluting characteristic of each coating. Using this supercoat to represent all coating performed at the facility yields 0.31 TPY of VOC, with a maximum toxic solvent emission of 0.08 TPY of MEK. Assuming transfer and filter efficiencies of zero, a total of 0.36 TPY of particulates are emitted, with a maximum toxic particulate emission of 0.15 TPY of polymeric HDI.

The following tables show the total all facility VOC and HAPs emissions.

FACILITY TOTAL EMISSIONS[2]

USE	POLLUTANT	CAS NO.	HAP	CAT	De minimis		Permit limits	
					PPH	TPY	PPH	TPY
Dip Coat	Toluene	108883	Y	C	5.60	6.00	1.60	5.0
	Xylene	133027	Y	C	5.60	6.00	0.12	0.36
Degreaser	Perc	79016	Y	A	0.57	0.60	0.96	3.0[3]
Wipe	MEK	108101	N	C	5.60	6.00	2.35	7.5[4]
Testing	MinSprts	64742887	N	C	5.60	6.00	0.80	2.50
Wipe	IPA	67630	N	C	5.60	6.00	0.64	2.00
Paint [1]	Various	Various	NA	NA	(2)	(2)	0.24	0.56
TOTAL VOC								20.92
TOTAL HAPS								8.36

(1) If all the paint VOCs were Cat A the de minimis would not exceeded. (2) Does not include combustion emissions pollutants which were calculated to be less than 1.0 TPY. (3) The emissions of the perc are exempt from the Subchapter 41, Part 5 toxic rules since it is under the NESHAP Subpart T. (4) EPA Screen 3 modeling shows a maximum ground level concentration of 592.6 micrograms per cubic meter (ug/m3) for an emission rate of 2.35 pounds per hour as compared to an allowable maximum acceptable ambient concentration (MAAC) of 59,000ug/m3.

The following table shows the VOC emission data comparison between the new permit and the existing permit. This somewhat large increase in emissions is the result of this facility doing the work of two.

Pollutant	Existing	New	Increase
Paint	0.31	0.56	0.25
Perc	1.0	3.0	2.0
Cleaning	3.29	7.37	4.08
Testing	1.12	2.50	1.38
Dip: Toluene	0.0	5.0	5.0
Xylene	0.0	0.36	0.36
Total	5.72	18.79	13.07

FEDERAL REGULATIONS

PSD, 40 CFR 52 [Not Applicable]
Final total emissions are less than the threshold of 250 TPY of any single regulated pollutant and the facility is not one of the 26 specific industries with a threshold of 100 TPY.

NSPS, 40 CFR Part 60 [Not Applicable]
There are no affected facilities or sources under any Subpart.

NESHAP, 40 CFR 61 [Not Applicable]
No benzene, arsenic, mercury, beryllium, vinyl chloride, coke oven emissions, asbestos or radionuclides are emitted.

NESHAP, 40 CFR Part 63 [T Applicable]
Subpart T (Halogenated Solvent Cleaners) This standard was published in the Federal Register on December 2, 1994, and compliance by new degreasers was required immediately upon startup. Applicant is subject to Subpart T, and has complied with the initial notification requirement. Now, a yearly report is required to be sent to the local DEQ office and an additional report concerning any emergency operation which was not in compliance, also sent to the local DEQ office. The first annual report was due on January 15, 2001, and every 12 months thereafter. Applicant has selected Option 1 from Table 1 of §63.463 to demonstrate compliance. This option requires a combination of a working-mode cover, freeboard ratio of 1.0, and superheated vapor. Applicant is in compliance.
Subpart GG (Aerospace Manufacturing and Rework Facilities). The facility engages in the type of activity described in paragraph 63.741 (a), but the facility does not qualify as a major source under the definition in 40 CFR 63.2. In addition, the subassemblies involved are not critical to structural integrity or flight performance, so the activities would also be excluded under §63.741(f). The facility is not an affected source and is not subject to this Subpart.

Chemical Accident Prevention Provisions, 40 CFR Part 68 [Not Applicable]
This facility does not process or store more than the threshold quantity of any regulated substance (Section 112r of the Clean Air Act 1990 Amendments). More information on this federal program is available on the web page: www.epa.gov/ceppo

OKLAHOMA AIR POLLUTION CONTROL RULES

OAC 252:100-1 (General Provisions) [Applicable]
Subchapter 1 includes definitions but there are no regulatory requirements.

OAC 252:100-3 (Air Quality Standards and Increments) [Applicable]
Primary Standards are in Appendix E and Secondary Standards are in Appendix F of the Air Pollution Control Rules. At this time, all of Oklahoma is in attainment of these standards.

OAC 252:100-4 (New Source Performance Standards) [Not Applicable]
Federal regulations in 40 CFR Part 60 are incorporated by reference as they exist on July 1, 2000, except for the following: Subpart A (Sections 60.4, 60.9, 60.10, and 60.16), Subpart B, Subpart C, Subpart Ca, Subpart Cb, Subpart Cc, Subpart Cd, Subpart Ce, Subpart AAA, and Appendix G.

OAC 252:100-5 (Registration, Emission Inventory and Annual Fees) [Applicable]
This subchapter requires potential sources of air contaminants to register with the Air Quality Division. An emission inventory was submitted and fees paid for previous years as required.

OAC 252:100-7 (Permits for Minor Facilities) [Applicable]
This facility qualifies as a minor source since total emissions of each criteria pollutant do not exceed 100 TPY and HAP emissions do not exceed the 10/25 TPY thresholds. As such, modeling, BACT, and public review are not necessary.

OAC 252:100-8 (Permits for Part 70 Sources) [Applicable]
This facility was originally permitted as a synthetic minor and this permit modification does not alter its permit status. Therefore this facility is not an affected source under this Subchapter.

OAC 252:100-9 (Excess Emission Reporting Requirements) [Applicable]
In the event of any release which results in excess emissions, the owner or operator of such facility shall notify the Air Quality Division as soon as practical during normal office hours and no later than **4:30 pm** the next working day following the malfunction or release. Further written notice containing specific details of the incident shall be submitted within ten (10) business days.

OAC 252:100-13 (Open Burning) [Applicable]
Open burning of refuse and other combustible material is prohibited except as authorized in the specific examples and under the conditions listed in this Subchapter.

OAC 252:100-19 (Particulate Matter) [Applicable]
Section 19-4 limits particulate emissions from new and existing fuel-burning equipment. AP-42 (7/98) Table 1.4-1 lists natural gas TPM emissions to be 7.6 lb/million scf or about 0.0076 lb/MMBTU, which is in compliance.

OAC 252:100-25 (Visible Emissions and Particulates) [Applicable]
No discharge of greater than 20% opacity is allowed except for short-term occurrences which consist of not more than one six-minute period in any consecutive 60 minutes, not to exceed three such periods in any consecutive 24 hours. In no case shall the average of any six-minute period exceed 60% opacity. Based on past experience with this facility, the potential for violating the standards are negligible.

OAC 252:100-29 (Fugitive Dust) [Applicable]
No person shall cause or permit the discharge of any visible fugitive dust emissions beyond the property line on which the emissions originate in such a manner as to damage or to interfere with the use of adjacent properties, or cause air quality standards to be exceeded, or interfere with the maintenance of air quality standards. Under normal operating conditions, this facility will not cause a problem in this area; therefore it is not necessary to require specific precautions to be taken.

OAC 252:100 –31 (Sulfur Compounds) [Applicable]
Because the driers burn commercial grade natural gas exclusively they are in compliance with the requirements of this Subchapter.

OAC 252:100-33 (Nitrogen Oxides) [Not Applicable]
These total maximum heat rate of combustion devices combined are rated at less than 1.0 MMBTUH and therefore is not an affected source under this Subchapter

OAC 252:100-35 (Carbon Monoxide) [Not Applicable]
This facility has none of the affected sources: foundry cupola, blast furnace, basic oxygen furnace, catalytic cracking unit, or catalytic reforming unit.

OAC 252:100-37 (Organic Materials) [Not Applicable]
-15 Storage of VOCs. This facility does not store any hydrocarbon liquids, and is not an affected source under this section.
-36 Fuel Burning Equipment. Under this Section Limco is required to adjust the fuel combustion for complete fuel combustion. LA burns only commercial grade natural gas in the combustion units which promotes compliance. The facility is anticipated to remain in compliance under normal operations.
-25 The coating of parts operations will consume less than 50 pounds of VOCs per day which is less than 100 pounds per day, and will therefore be exempt from this Subchapter.

OAC 252:100-39 (Volatile Organic Compounds in Nonattainment Areas) [Applicable]
Part 7, Section 39-46 concerns coating of metal parts and products. Limco is exempt as the VOC emissions from surface coating and cleaning will not exceed 10 TPY.

OAC 252:100-41 (Hazardous and Toxic Air Contaminants) [Not Applicable- **State Only]**
Part 3 addresses hazardous air contaminants. NESHAPs, as found in 40 CFR 61, are adopted by reference as they exist on July 1, 2000, with the exception of Subparts B, H, I, K, Q, R, T and W, and Appendices D and E, all of which address radionuclides. In addition, General Provisions as found in 40 CFR Part 63 Subpart A, and the Maximum Achievable Control Technology (MACT) standards as found in 40 CFR 63 Subparts F, G, H, I, L, M. N, O, Q, R, S, T, U, W, X, Y, CC, DD, EE, GG, HH, II, JJ, KK, LL, OO, PP, QQ, RR, SS, TT, UU, VV, WW, YY, CCC, DDD, EEE, GGG, HHH, III, JJJ, LLL, MMM, NNN, OOO, PPP, RRR, TTT, VVV, and XXX are adopted by reference as they exist on July 1, 2000. As noted above, this facility is not an affected source.

Part 5 is a state-only requirement governing toxic air contaminants. New sources (constructed after March 9, 1987) emitting any category A pollutant in amounts greater than the Category A de minimis level must be reviewed for the application of BACT. All sources are required to demonstrate that emissions of any toxic air contaminant do not cause or contribute to a violation of the MAAC. There are two toxics that exceed their de minimis, MEK and Perc. Perc is a HAP and also a Cat A toxic which is exempt from this Subchapter (it is under NESHAP, Subchapter T). Screen modeling for MEK has a GLC of 592.6 ug/m3 as compared to a MAAC of 59,000 ug/m3. The facility is in compliance.

Limco is not an affected source with respect to the following rules.

OAC 252:100-15	Mobile Sources	Not in source category
OAC 252:100-17	Incinerators	Not type of emission unit
OAC 252:100-21	PM from Wood waste Burning	Not type of emission unit
OAC 252:100-23	Cotton Gins	Not type of emission unit
OAC 252:100-24	Grain Elevators	Not in source category
OAC 252:100-33	Nitrogen Oxides	Exempted by size
OAC 252:100-35	Carbon Monoxide	Not in source category
OAC 252:100-43	Part 3 - Specific Methods	Not in source category
OAC 252:100-47	Landfills	Not in source category

INSPECTION

DEQ permit writer Jack Fly accompanied by Bob Johnson, Limco Plant Mgr, inspected the facility on September 24, 2001. The following table shows the VOC use after 9 months of operation, the quantities that were disposed of, the permit limits and the projected 12 months quantities used. The projected quantities show that under normal operating conditions the facility will not exceed the permit limits or the Toxic category, except the Perc which is exempt from Subchapter 41, Part 5 (as stated in Part 3 exemptions) requirements since Perc is a HAP and is subject to NESHAP, Subpart T.

Pollutant	Used, 9mos, 55gal drums	Disposed, 55gal drums	Pound/ Gallon	Tons Used, 9mos[1]	Projected Tons, 12 Mos	Permit Limits, Tons	Cat/ HAP	PPH	De Minimis	
									PPH	TPY
Toluene	18	0	6.9	3.41	4.53	5.0	C/Y	1.60	5.60	6.00
Perc	13	8	12.1	1.66	2.20	3.0	A/Y	0.96	0.57	0.60
MEK	34	4	6.7	5.53	7.37	7.5	C/N	2.35	5.60	6.00
MinSprts	8	4	6.3	0.70	0.93	2.50	C/N	0.80	5.60	6.00
IPA	11	4	6.5	1.25	1.66	2.00	C/N	0.64	5.60	6.00
VOC/PAINT	NA	NA	NA	0.14	0.19	0.19	A/Y	0.08	0.57	0.60

(1) Tons used is a net quantity i.e., purchased minus disposal.
Specifically the degreaser is operated infrequently, and was not in use at the time of this inspection. Certain recordkeeping requirements had not been met and a discussion as to how to meet these requirements ensued. All records and appropriate labeling of the degreaser were in place as of December 3, 1999.

TIER CLASSIFICATION AND PUBLIC REVIEW

This application has been classified as Tier I based on the request for an operating permit for an existing minor source. The status of all permit actions is available to the public in the Air Quality section of the DEQ Web Page at page: www.deq.state.ok.us

The applicant has submitted an affidavit that they are not seeking a permit for land use or for any operation upon land owned by others without their knowledge. The affidavit certifies that the applicant owns the real property.

FEES PAID

Permit fees of $1500 was paid; $1000 for construction and $500 for operating.

SUMMARY

The applicant has demonstrated compliance with the applicable air quality rules and regulations. Ambient air quality standards are not threatened at this site. There are no active Compliance or Enforcement Air Quality issues concerning this facility. Issuance of the permit is recommended.

PERMIT TO OPERATE
AIR POLLUTION CONTROL FACILITY
SPECIFIC CONDITIONS

LIMCO Airepair **Permit No. 99-026-O(M-1)**
Aircraft Subassembly Manufacturing and Repair

The permittee is authorized to operate in conformity with the specifications submitted to Air Quality on June 5, 2001, with supplemental information received October 19, 2001. The Evaluation Memorandum dated October 31, 2001 explains the derivation of applicable permit requirements and estimates of emissions; however, it does not contain operating limitations or permit requirements. Continuing operations under this permit constitutes acceptance of, and consent to, the conditions contained herein.

1. Points of emission include the cleaning, degreasing, painting, and other coating areas. The significant emissions from all sources are listed below.

Table No.1

USE	POLLUTANT	Permit limits	
		PPH	TPY
Dip Coat	Toluene	1.60	5.0
	Xylene	0.12	0.36
Degreaser	Perc	0.96	3.0
Wipe	MEK	2.35	7.50
Testing	MinSprts	0.80	2.50
Wipe	IPA	0.64	2.00
Paint (1)	Various	0.24	0.56
TOTAL VOC			20.9
TOTAL HAPS			8.36

The emissions shown in the preceding table will not be exceeded under normal operating conditions provided the facility's use of materials shown in the following table is not exceeded.

Table No. 2

Materials	GPD(1)	GPY
Toluene	5.1	1320
805 Resin	0.60	157
Perc	0.20	520
MEK	7.70	2000
MinSprts	1.15	300
IPA	2.00	520
Paints, various	0.31	80

(1) These GPD are work weekly averages.

2. Alternate products and production quantities can be varied under the following conditions.
   a. Emissions do not exceed 10 TPY for a single HAP or 25 TPY of the HAPs aggregate.
   b. A change in either production or products is permitted provided there would be no increase in the quantity or a decrease in the quality of the resulting emissions. Additionally the use of alternate products shall not cause the total of each toxic to exceed the de minimis levels or the MAAC established by OAC252:100-41.
   c. LA shall notify the DEQ in writing 30 calendar days before making any operational changes that would cause significant air emissions.
   d. Maintain written documentation to show compliance with all current Federal, State and Local Regulations, Rules, and Codes, including modeling where compliance with a MAAC may be in question.

3. The degreaser is subject to NESHAP (40 CFR 63) Subpart T, Standards for Halogenated Solvent Cleaning, as published in the Federal Register on December 2, 1994 and shall be in compliance with this federal NESHAP, specifically with Option 1 of Table 1 of 40 CFR 63.463. All required reports shall be sent to the DEQ Regional Office at Tulsa.

4. The permittee shall comply with the following outlined provisions for operation of the degreaser, which are further detailed in OAC 252:100-39-42(b).

   a) The degreaser "working mode cover" shall operate easily and cause minimum disturbance to the vapor zone.

   b) The unit shall have safety switches to shut off sump heat if the coolant is not circulating or exceeds the recommended level.

   c) Since Limco has chosen Option one for Halogenated Degreasers shown in 40 CFR 63, Subpart T, the unit shall have a freeboard ratio not less than 1.0, a solvent super heater which shall maintain the solvent to a temperature no less than 10 degrees F above the boiling point of the solvent, and have a working mode cover. If, in the future, Limco decides one of the other options available in this Subpart would be a better choice Limco shall submit a written request describing their plan to the DEQ local office, and will not begin any change without written permission.

   d) Limco will properly train each person that will operate the degreaser before they allowed using the machine. The written syllabus used to in training will be readily available to each trained operator.

5. All records necessary to demonstrate compliance with permit conditions shall be maintained on site or at a readily accessible location for a period of at least two years following the date of recording and shall be available for review by regulatory personnel during normal business hours. Such records include, but are not necessarily limited to, the following.

a) Records sufficient to demonstrate the weekly averages of the product usages do not exceed those shown in SC#1, Table No.2 (exclusive of the vapor degreaser). If any of the GPD quantities in table No. 2 are exceeded then compliance with that pollutant's MAAC must be demonstrated.
b) Degreaser records required by Specific Condition #3.
c) Material usages (monthly and 12-month rolling totals).

6. This permit supercedes all previous permits, which are now null and void.

MATERIAL SAFETY DATA SHEET

DATE: 06/09/94

234115

I. MATERIAL IDENTIFICATION

PRODUCT TRADE NAME: ALODINE® 1200

TECHNICAL CONTACT: Regulatory Affairs Department
TELEPHONE NUMBER: (810) 583-9300 EMERGENCY NUMBER: (800) 424-9300

II. HAZARDOUS INGREDIENTS

MATERIAL	CAS NO.	TLV/ACGIH	PEL/OSHA	% Weig
Sodium Fluoborate	13755-29-8	**	**	30 - 6(
*Chromic Acid, Dry	01333-82-0	See below	See below	20 - 5(
Potassium Fluozirconate	16923-95-8	See below	See below	5 - 1:
Potassium Ferricyanide	13746-66-2	None	None	10 - 3(

* Refer to Section XII
**TLV/PEL = 2.5 mg/m^3 for fluorides, as F.

Chromic Acid: TLV = 0.5 m/m^3
PEL = C 0.1 mg/m^3

Potassium Fluozirconate: TLV = 2.5 mg/m^3 for F.
5 mg/m^3 for Zr, STEL = 10 mg/m^3

PEL = 2.5 mg/m^3 for F.
5 mg/m^3 for Zr, STEL = 10 mg/m^3

EMERGENCY OVERVIEW: Orange powder. Contact causes eye and skin burns.
Carcinogen - contains chromic acid.

III. PHYSICAL PROPERTIES

APPEARANCE & ODOR: Orange powder; bland odor.
SPECIFIC GRAVITY: N/A
BOILING POINT F (C): N/A (N/A)
EVAPORATION RATE: N/A

Continued

pH:	N/A
VAPOR DENSITY (AIR = 1):	N/A
SOLUBILITY IN WATER:	Appreciable
VAPOR PRESSURE:	N/D
VOC:	N/A

N/A = Not Applicable
N/D = Not Determined

IV. FIRE AND EXPLOSION HAZARDS

FLASH POINT F (C): N/A (N/A) METHOD USED: N/A
EXTINGUISHING MEDIA:
As required to extinguish surrounding fire.

SPECIAL FIRE FIGHTING PROCEDURES:
Wear positive pressure self-contained breathing apparatus and full protective clothing.

UNUSUAL FIRE & EXPLOSION HAZARDS:
Clothing contaminated with the chemical is dangerously flammable. Immediately remove and rinse thoroughly with water. Contact with combustible material may cause fire. Under conditions of extreme heat and fire potassium ferricyanide may emit toxic cyanide fumes.

V. REACTIVITY DATA

STABILITY:
Stable

CONDITIONS TO AVOID:
None Expected.

INCOMPATIBILITY (MATERIALS TO AVOID):
Organic materials, paint thinners or reducing agents.

Keep separate from alkalies.
HAZARDOUS DECOMPOSITION:
Thermal decomposition may produce hydrogen fluoride.
May form hydrocyanic gas.

HAZARDOUS POLYMERIZATION: Will Not Occur

VI. HEALTH HAZARD INFORMATION

Continued

EYES:
Eye contact may result in loss of vision with severe burns.

SKIN CONTACT:
Chromic acid may be absorbed through skin, especially if skin is damaged. Fatal kidney damage was reported in a person who evidently absorbed chromium trioxide into the body.

Contact with skin can cause burns.

SKIN ABSORPTION:
Please refer to Skin Contact.

INHALATION:
Inhalation of dust can cause injury (burns) to the entire respiratory tract.

INGESTION:
Can result in gastrointestinal damage; burns of the digestive tract. Chromic acid is considered very toxic. (As sodium dichromate, oral-rat LD50: 51.10 +/- 5.93 mg/kg.)

CHRONIC EFFECTS:
Prolonged or repeated skin contact may cause "chrome sores". Long-term exposure can cause liver damage, kidney damage and dermatitis. Prolonged or repeated inhalation of mist may cause ulceration and performation of the nasal septum. Contains fluorides. Exposure to fluorides over years may cause fluorosis.

MEDICAL CONDITIONS AGGRAVATED:
Persons with a history of asthma, allergies or known sensitizations to chromic acid or chromates.

OTHER:
POSSIBLE CANCER HAZARD: There is laboratory evidence that aqueous sodium dichromate administered directly into the lung, at the highest tolorated dose, over the lifetime of rats, causes a significantly increased incidence of lung cancer. It is expected that if chromic acid was tested in this manner as aqueous sodium dichromate, it would give similar response.
Reference: National Toxicology Program, Annual Report on Carcinogens.
International Agency for Research on Cancer.

VII. RECOMMENDED FIRST AID PROCEDURES

Continued

EYES:
Immediately flush eyes in a stream of water for at least 15 minutes while forcibly holding eyelids apart to ensure thorough rinsing of all eye and lid tissue. GET MEDICAL ATTENTION.

SKIN:
Immediately remove and discard contaminated clothing and shoes. Flush skin thoroughly with water for at least 15 minutes. If irritation persists, GET MEDICAL ATTENTION.

INHALATION:
Remove to fresh air and remove contaminated clothing. If breathing is difficult, administer oxygen. If respiration stops, give mouth to mouth resuscitation. GET MEDICAL ATTENTION.

INGESTION:
DO NOT INDUCE VOMITING. Drink large quantities of water. If vomiting occurs, drink more water. GET MEDICAL ATTENTION. Never give anything by mouth to an unconscious person.

VIII. PERSONAL PROTECTION

VENTILATION:
Provide sufficient mechanical (general and/or local exhaust) ventilation to maintain exposure below TLV(s).

RESPIRATORY PROTECTION:
MSHA/NIOSH dust filter mask or respirator if dusting occurs.

SKIN PROTECTION:
Chemical resistant gloves such as butyl rubber. Impervious protective clothing such as rubber aprons, boots should be used as necessary to prevent skin contact.

EYE PROTECTION:
Chemical goggles or face shield.

OTHER:
Eye wash facility and emergency shower should be in close proximity.

IX. SPILL PROCEDURES & WASTE DISPOSAL

Continued

SPILL PROCEDURES:

Wear respiratory protection.

Sweep up or otherwise collect and store in a suitable container.

WASTE TREATMENT:
This chemical contains chromium compounds and fluoride compounds. Waste treatment and neutralization may be required prior to discharge to a sewer.

Hazardous Waste Characteristic: EP Toxicity, Title 40, Code of Federal Regulations, 261.24, Hazardous Waste Number D007.

Dispose of in compliance with all applicable federal, state and local regulations.

X. STORAGE AND HANDLING PROCEDURES

SPECIAL PRECAUTIONS AND STORAGE:
Keep seperate from organic materials and reducing agents. Do not breathe dust or get in eyes or on skin.

DO NOT GET IN EYES, ON SKIN OR ON CLOTHING.

DO NOT BREATHE DUST.
For industrial use only.
Contact with combustible material may cause fire.

XI. DOT SHIPPING INFORMATION

PROPER SHIPPING NAME:
Effective September 13, 1993, the current HM-181 shipping information is listed on the product label.

XII. ADDITIONAL REGULATORY INFORMATION

SUPERFUND AMENDMENT AND REAUTHORIZATION ACT OF 1986 (SARA):
Section 302 Extremely Hazardous Substance: no

This product may be reportable under section 311/312 reporting requirements.

* This product contains (a) chemical(s) subject to the reporting requirements of section 313, Title III of SARA, part 372. See Section II for ingredient listing.

Continued

TOXIC SUBSTANCES CONTROL ACT (TSCA):
Components of this product are listed on the TSCA Inventory.

XIII. OTHER INFORMATION

HAZARD RANKING	NFPA	HMIS
HEALTH	3 High	3 Serious
FIRE	0 Insignificant	0 Minimal
REACTIVITY	1 Slight	1 Slight
OTHER	OX	

Warning: This product contains a chemical known to the State of California to cause cancer.

PREPARED BY: S. Whitney DATE: 06/09/94

Chemical Emergency Telephone 1-800-424-9300

Conditions: although the information presented herein is to the best of our knowledge true and accurate, no warranty or guarantee, express or implied, whether of merchantability, fitness for any particular purpose or otherwise, is made regarding the information or the performance of any product. In each case we strongly recommend that purchasers before using any product in full production make their individual test to verify to their own satisfaction whether the product is of acceptable quality and is suited for their specific purposes under their own manufacturing conditions. Further, no representative of ours has any authority to waive or change the foregoing provisions. However, subject to such provisions, our technical personnel are available to assist purchasers in modifying our products for use consistent with their needs and conditions in existence in their business. Nothing contained herein shall be construed as recommendation to use a product in infringement of any existing patent, and we assume no responsibility or liability for operations which do infringe any such patents. We assume no liablility for incidental, consequential or direct damages of any kind, no matter what the cause, including negligence. The above includes confidential and proprietary information of Parker + Amchem and is furnished to you for your use solely on products or process supplied by us to you and should not be otherwise used or disclosed.

1 PRODUCT AND COMPANY IDENTIFICATION

Turco Products Department
2000 Market Street

Philadelphia, PA 19103

EMERGENCY PHONE NUMBERS:
Chemtrec: (800) 424-9300 (24hrs) or (703) 527-3887
Medical: Rocky Mountain Poison Control Center
(303) 623-5716 (24Hrs)

Information Telephone Numbers	Phone Number	Available Hrs
Product Information	800-848-0085	8:00 - 4:00 Eastern Time

Product Name	TURCO LIQUID SMUT GO N.C.
Product Synonym(s)	
Chemical Family	
Chemical Formula	N/A-mixture
Chemical Name	
EPA Reg Num	
Product Use	Liquid deoxidizer and desmutter

2 COMPOSITION / INFORMATION ON INGREDIENTS

Ingredient Name	CAS RegistryNumber	Typical Wt. %	OSHA
Water	7732-18-5	60-70%	N
Ferric sulfate	10028-22-5	15-23%	Y
Nitric acid	7697-37-2	4-6%	Y
Sodium bifluoride	1333-83-1	<5%	Y

The substance(s) marked with a "Y" in the OSHA column, are identified as hazardous chemicals according to the criteria of the OSHA Communication Standard (29 CFR 1910.1200)

This material is classified as hazardous under Federal OSHA regulation.

The components of this product are all on the TSCA inventory list.

3 HAZARDS IDENTIFICATION

Emergency Overview
Dark - brown liquid; acid odor
DANGER!
CAUSES EYE, SKIN AND RESPIRATORY TRACT BURNS. MAY CAUSE BLINDNESS.
MAY CAUSE CENTRAL NERVOUS SYSTEM EFFECTS
CAN CAUSE LIVER AND KIDNEY DAMAGE

Potential Health Effects

Inhalation and skin contact are expected to be the primary routes of occupational exposure to this material. Based on its composition, it is anticipated to be corrosive to skin and eyes. Overexposure to concentrated vapor may cause severe irritation to the eyes and respiratory tract including tearing, blurred vision, coughing, chest pains, shortness of breath, pulmonary edema (accumulation of fluid in the lungs) and, with severe or prolonged exposure, death. If swallowed, this material may cause burns of the mouth, throat and digestive tract and can cause stomach pain, nausea, vomiting, bloody vomit, diarrhea and, in severe cases, stomach bleeding and effects on cardiovascular circulation, central nervous system (CNS), liver and kidneys and death. Severe or repeated exposure may cause

liver and kidney damage or bone effects including joint pain, tooth erosion and discoloration. Medical conditions aggravated by exposure to this material include kidney or lung disease or limited respiratory capacity.

4 FIRST AID MEASURES

IF IN EYES, immediately flush with plenty of water for at least 15 minutes. Get medical attention immediately.

IF ON SKIN, immediately flush with plenty of water. Remove contaminated clothing and shoes. Get medical attention. Wash clothing before reuse. Destroy contaminated shoes.

IF SWALLOWED, do NOT induce vomiting. Give water to drink. Get medical attention immediately. NEVER GIVE ANYTHING BY MOUTH TO AN UNCONSCIOUS PERSON.

IF INHALED, remove to fresh air. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. Get medical attention immediately.

5 FIRE FIGHTING MEASURES

Fire and Explosive Properties

Auto-Ignition Temperature	N/A	
Flash Point	Nonflammable	Flash Point Method
Flammable Limits- Upper	N/A	
Lower	N/A	

Extinguishing Media

Use extinguishing media appropriate to surrounding fire conditions.

Fire Fighting Instructions

Fire fighters and others who may be exposed to products of combustion should wear full fire fighting turn out gear (full Bunker Gear) and self-contained breathing apparatus (pressure demand NIOSH approved or equivalent). Fire fighting equipment should be thoroughly decontaminated after use.

Fire and Explosion Hazards

Contact with metal can form hydrogen gas. Hydrogen is extremely flammable and can form explosive mixtures with air.

6 ACCIDENTAL RELEASE MEASURES

In Case of Spill or Leak

Contain spill. Stop leak at source if this can be done safely. Ventilate area. Nonessential personnel should leave the area until cleanup is completed. Pump liquid into DOT-approved drums for disposal. Absorb remaining liquid onto inert absorbent and place in DOT approved drums for disposal. Wash area with water. Keep concentrate and wash water from entering sewers or waterways. Consult a regulatory specialist to determine appropriate state or local reporting requirements, for assistance in waste characterization and/or hazardous waste disposal and other requirements listed in pertinent environmental permits.

7 HANDLING AND STORAGE

7 HANDLING AND STORAGE

Handling

Do not taste or swallow. Do not get in eyes, on skin or clothing. Avoid breathing vapor or mist. Keep container closed. Use only with adequate ventilation. Wash thoroughly after handling. Empty container may contain hazardous residues.

Storage

Store in a cool, dry place. Avoid excessive heat. Store out of direct sunlight in a cool, well-ventilated place.

8 EXPOSURE CONTROLS / PERSONAL PROTECTION

Engineering Controls

Investigate engineering techniques to reduce exposures below airborne exposure limits. Provide ventilation if necessary to control exposure levels below airborne exposure limits (see below). If practical, use local mechanical exhaust ventilation at sources of air contamination such as open process equipment. Consult ACGIH ventilation manual or NFPA Standard 91 for design of exhaust systems.

Eye / Face Protection

Where there is potential for eye contact, wear a face shield, chemical goggles, and have eye flushing equipment immediately available.

Skin Protection

Wear appropriate chemical resistant protective clothing and chemical resistant gloves to prevent skin contact. Consult glove manufacturer to determine appropriate type glove material for given application. Wear chemical goggles, a face shield, and chemical resistant clothing such as a rubber apron when splashing may occur. Rinse immediately if skin is contaminated. Remove contaminated clothing promptly and wash before reuse. Clean protective equipment before reuse. Provide a safety shower at any location where skin contact can occur. Wash skin thoroughly after handling.

Respiratory Protection

Avoid breathing vapor or mist. When airborne exposure limits are exceeded (see below), use NIOSH approved respiratory protection equipment appropriate to the material and/or its components. Consult respirator manufacturer to determine appropriate type equipment for given application. Observe respirator use limitations specified by NIOSH or the manufacturer. For emergency and other conditions where exposure limit may be significantly exceeded, use an approved full face positive-pressure, self-contained breathing apparatus or positive-pressure airline with auxiliary self-contained air supply. Respiratory protection programs must comply with 29 CFR § 1910.134.

Airborne Exposure Guidelines for Ingredients

Exposure Limit		Value
Nitric acid		
ACGIH CEILING	-	10 mg/m3 4 ppm
ACGIH TWA	-	2 ppm 5.2 mg/m3
OSHA TWA PEL	-	2 ppm 5 mg/m3

-Only those components with exposure limits are printed in this section.
-Skin contact limits designated with a "Y" above have skin contact effect. Air sampling alone is insufficient to accurately quantitate exposure. Measures to prevent significant cutaneous absorption may be required.
-ACGIH Sensitizer designator with a value of "Y" above means that exposure to this material may cause allergic reactions.

9 PHYSICAL AND CHEMICAL PROPERTIES

Appearance/Odor	Dark - brown liquid; acid odor
pH	conc. 1.0
Specific Gravity	1.33
Vapor Pressure	(including water)@ 20 mm Hg
Vapor Density	<1
Melting Point	NE
Freezing Point	NE
Boiling Point	>200 F
Solubility In Water	Complete

10 STABILITY AND REACTIVITY

Stability

This material is chemically stable under normal and anticipated storage and handling conditions.

Hazardous Polymerization

Hazardous polymerization is not known to occur.

Incompatibility

Contact with strong acids, strong alkalis or reactive metals.

Hazardous Decomposition Products

Heating may evolve corrosive and toxic fumes of hydrogen fluoride.

11 TOXICOLOGICAL INFORMATION

Toxicological Information

Data on this material and/or its components are summarized below.

Ferric Sulfate

Single exposure (acute) studies indicate that this material is slightly toxic to rats if swallowed (LD50 1,480 mg/kg). Human case reports indicate that swallowing this material may cause iron poisoning. Symptoms of iron poisoning include digestive tract irritation, nausea, CNS depression, metabolic acidosis and cardiovascular symptoms in the early phase, and in the second phase, gastrointestinal perforation, circulatory collapse, cyanosis, and pulmonary edema may precede death. Long term ingestion of iron causes hemosiderosis, a condition marked by increased iron in the body tissues with possible fibrosis in the liver and spleen. This material has produced genetic changes in standard tests using bacterial cells but not in tests using animal cells.

Nitric Acid

Single exposure (acute) studies indicate that this material is slightly toxic to rats if inhaled (1-hr exposure, LC50 6.25 mg/l [2500 ppm]). Upon inhalation nitric acid was moderately toxic to rats (30-min. exposure, LC50 0.8 mg/l). Reports of workplace experience with this material have shown that it produces corrosive damage to the skin and eyes upon contact with concentrated vapor or liquid. Eye damage can be severe and permanent corneal scarring and visual impairment including blindness may occur. Inhalation of high concentration of the fume of this material has caused numerous fatalities. Generally, death is delayed several

11 TOXICOLOGICAL INFORMATION

days and results from acute pulmonary edema. Ingestion of 30-40 ml of concentrated this material has caused fatalities resulting from corrosion of the mouth, throat, and stomach. Workers exposed to vapor of this material have shown increased incidence of dental erosion and chronic bronchitis; however, these findings are confounded by concurrent exposure to other acids such as sulfuric acid. Studies with human volunteers exposed to 0.5 mg/m3 for four hours with moderate exercise did not show effects on pulmonary function or evidence of lung injury. No correlation between airborn levels of this material and reported respiratory symptoms among an asthmatic population was observed in a recent human study.

Application of concentrated material to over 25% of the skin area in rats caused increases in blood methemoglobin levels and levels of this material. Dogs exposed to 1% of this material by inhalation for four weeks showed pulmonary damage including inflammation and slight fibrosis of the airways and decreased pulmonary function. Exposure of rats to aerosol concentrations of 0.013-0.049 mg/l of this material for 375-650 days did not show adverse effects.

Sodium Bifluoride
Aqueous solutions of 1-3% of this material are moderately irritating to rabbit skin (3.0-4.17/8.0). A mixture of 70% of this material/30% sodium fluoride produced positive results in a mouse lymphoma assay.

12 ECOLOGICAL INFORMATION

Ecotoxicological Information

Data on this material and/or its components are summarized below.

Ferric Sulfate
Materials of this type are slightly toxic to brown shrimp (96-hr LC50 33-100 mg/l) and practically non-toxic to European cockle (96-hr LC50 100-330 mg/l). This material is practically non-toxic to mosquitofish (96-hr LC50 133 mg/l).

Nitric Acid
Generally, dilute nitric acid is slightly to practically non-toxic to aquatic organisms. If spilled in concentrated volumes, acidification may occur and data from studies with rainbow trout and bluegill sunfish indicate that pH in the range of 3.5-4.0 causes lethality in approximately 50% of the adult organisms. This material is slightly toxic to freshwater invertebrates such as Daphnia magna (LC50 107 mg/l). It is also practically non-toxic to various saltwater invertebrates such as the starfish, pugge, shore crab and cockle (LC50 100-1000 mg/l).

Chemical Fate Information

No data are available.

13 DISPOSAL CONSIDERATIONS

Waste Disposal

Recover, reclaim or recycle when practical. Dispose of in accordance with federal, state and local regulations. Note: Chemical additions to, processing of, or otherwise altering this material may make this waste management information incomplete, inaccurate, or otherwise inappropriate. Furthermore, state and local waste disposal requirements may be more restrictive or otherwise different from federal laws and regulations.

14 TRANSPORT INFORMATION

DOT Name	Corrosive liquid, acidic, inorganic, n.o.s.
DOT Technical Name	(Ferric sulfate, nitric acid)

Open drums carefully to avoid spurting.

ATOFINA Chemicals, Inc. believes that the information and recommendations contained herein (including data and statements) are accurate as of the date hereof. NO WARRANTY OF FITNESS FOR ANY PARTICULAR PURPOSE, WARRANTY OF MERCHANTABILITY, OR ANY OTHER WARRANTY, EXPRESSED OR IMPLIED, IS MADE CONCERNING THE INFORMATION PROVIDED HEREIN. The information provided herein relates only to the specific product designated and may not be valid where such product is used in combination with any other materials or in any process. Further, since the conditions and methods of use are beyond the control of ATOFINA Chemicals, ATOFINA Chemicals expressly disclaims any and all liability as to any results obtained or arising from any use of the product or reliance on such information.

Material Safety Data Sheet

Material Name: TURCO LIQUID SMUT-GO NC **ID: 239357**

Engineering Controls:

Investigate engineering techniques to reduce exposures below airborne exposure limits. Provide ventilation if necessary to control exposure levels below airborne exposure limits (see below). If practical, use local mechanical exhaust ventilation at sources of air contamination such as open process equipment. Consult ACGIH ventilation manual or NFPA Standard 91 for design of exhaust systems.

PERSONAL PROTECTIVE EQUIPMENT

As prescribed in the OSHA Standard for Personal Protective Equipment (29 CFR 1910.132), employers must perform a Hazard Assessment of all workplaces to determine the need for, and selection of, proper protective equipment for each task performed.

Eyes/Face Protective Equipment:

Where there is potential for eye contact, wear a face shield, chemical goggles, and have eye flushing equipment immediately available.

Skin Protection:

Wear appropriate chemical resistant protective clothing and chemical resistant gloves to prevent skin contact. Consult glove manufacturer to determine appropriate type glove material for given application. Wear chemical goggles, a face shield, and chemical resistant clothing such as a rubber apron when splashing may occur. Rinse immediately if skin is contaminated. Remove contaminated clothing promptly and wash before reuse. Clean protective equipment before reuse. Provide a safety shower at any location where skin contact can occur. Wash skin thoroughly after handling.

Respiratory Protection:

Avoid breathing vapor or mist. When airborne exposure limits are exceeded (see below), use NIOSH approved respiratory protection equipment appropriate to the material and/or its components. Consult respirator manufacturer to determine appropriate type equipment for given application. Observe respirator use limitations specified by NIOSH or the manufacturer. For emergency and other conditions where exposure limit may be significantly exceeded, use an approved full face positive-pressure, self-contained breathing apparatus or positive-pressure airline with auxiliary self-contained air supply. Respiratory protection programs must comply with 29 CFR § 1910.134.

The components of this product are all on the TSCA inventory list.

3 HAZARDS IDENTIFICATION

Emergency Overview
Clear, to slightly, hazy, amber fluid
DANGER!
CAUSES EYE AND SKIN BURNS. MAY CAUSE BLINDNESS.
CAUSES RESPIRATORY TRACT IRRITATION.
HARMFUL IF SWALLOWED.
HARMFUL IF INHALED.

Potential Health Effects

N-Methyl-2-pyrrolidone

Inhalation and skin contact are expected to be the primary routes of occupational exposure to this material. Based on single exposure animal tests, this material is considered to be slightly toxic if swallowed or inhaled, practically non-toxic if absorbed through skin, slightly to moderately irritating to skin and moderately irritating to eyes. This material

is rapidly absorbed through the skin and repeated or prolonged contact may cause redness, blistering and cracking of skin. Overexposure to vapors may cause slight eye and respiratory irritation. If swallowed, this material may result in irritation of the digestive tract, nausea and vomiting.

Ethanolamine

Skin contact and inhalation are expected to be the primary routes of occupational exposure to this material. Direct contact of liquid with eyes or skin may cause severe irritation or corrosive chemical burns. Repeated or prolonged contact may result in absorption of the material and systemic effects, such as liver or kidney injury. Overexposure to vapors and mists has produced eye and respiratory tract irritation, chest pain and coughing. Other symptoms of overexposure reported following chemical spills include headache, nausea, dizziness, and upper extremity numbness. Accidental swallowing of this material may cause burns of the mouth, throat, esophagus and stomach and symptoms of gastrointestinal distress. It is considered, on the basis of single exposure animal tests, to be slightly to moderately toxic by the inhalation route. In studies with animals that have been exposed by inhalation or oral dosing of high amounts, liver and kidney changes have been observed. Due to the potential for this material to cause injury to these organs, workers with liver or kidney disease or diminished function of these organs should have limited exposure to this material.

Severely hydrotreated heavy naphthenic petroleum distillates

Inhalation and skin contact are expected to be the primary routes of occupational exposure to this material. Based on single exposure animal tests on similar materials, it is anticipated to be practically non-toxic if swallowed, no more than slightly toxic if absorbed through skin, and slightly irritating to eyes and skin. Hydrocarbons of this type may remove oils from the skin and because of this drying nature, produce moderate irritation, redness, swelling and rash (dermatitis) with repeated or prolonged contact. Mineral oils generally have a low vapor pressure at room temperature and are not expected to present a significant inhalation hazard under ambient conditions. However, precautions should be taken to limit aerosolization or misting of this material, as repeated exposure to high concentrations of mineral oil mist has been reported to pose some risk of lipoid pneumonia.

Potassium hydroxide

Inhalation and skin contact are expected to be the primary routes of occupational exposure to this material. This material is corrosive to all body tissues with which it comes in contact. Contact with liquid to skin rapidly causes severe skin burns. Some delay between contact and irritant sensation may occur. Contact of liquid with eyes may cause severe burns with tissue damage and possible blindness. Inhalation exposure of mists of this material may cause eye and upper respiratory tract irritation and, in severe cases, delayed pulmonary edema and death. Repeated overexposure by inhalation is usually self-limited by sneezing, coughing and respiratory discomfort; however, lesions of the nasal septum have been reported from workplace exposure. This material is considered, based on single exposure (acute) tests to be moderately toxic after ingestion. Accidental ingestion may cause severe burns and tissue perforation of the mucous membranes of the mouth, throat, esophagus and stomach.

4 FIRST AID MEASURES

IF IN EYES, Speed is essential. immediately flush with plenty of water for at least 15 minutes. Get medical attention immediately.

IF ON SKIN, Speed is essential. immediately wash with soap and plenty of water. Remove contaminated clothing and shoes. Get medical attention if symptoms occur. Wash clothing before reuse. Destroy contaminated shoes.

IF SWALLOWED, do NOT induce vomiting. Give water to drink. Get medical attention immediately. NEVER GIVE ANYTHING BY MOUTH TO AN UNCONSCIOUS PERSON.

IF INHALED, remove to fresh air. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. Get medical attention.

5 FIRE FIGHTING MEASURES

Fire and Explosive Properties

Auto-Ignition Temperature	NE		
Flash Point	201 deg F (90 Deg. C)	Flash Point Method	PMCC
Flammable Limits- Upper	NE		
Lower	NE		

Extinguishing Media

Use carbon dioxide or dry chemical

Fire Fighting Instructions

Fire fighters and others who may be exposed to products of combustion should wear full fire fighting turn out gear (full Bunker Gear) and self-contained breathing apparatus (pressure demand NIOSH approved or equivalent). Fire fighting equipment should be thoroughly decontaminated after use.

Fire and Explosion Hazards

Closed containers may explode when heated or contents contaminated with water.

6 ACCIDENTAL RELEASE MEASURES

In Case of Spill or Leak

Isolate hazard area and deny entry to unnecessary or unprotected personnel. Contain spilled liquid with sand or earth. Clean up spill immediately, observing precautions in the Personal Protection section of MSDS. Avoid runoff into storm sewers and ditches which lead to waterways.

7 HANDLING AND STORAGE

Handling

Do not breathe mist. Do not breathe vapor. Do not get in eyes, on skin or clothing. Wash thoroughly after handling. Keep container tightly closed. Empty container may contain hazardous residues. Keep away from heat, sparks and flames. Use explosion proof equipment.

Storage

Store in a cool, dry place. Avoid excessive heat. Store out of direct sunlight in a cool, well-ventilated place.

8 EXPOSURE CONTROLS / PERSONAL PROTECTION

Engineering Controls

Investigate engineering techniques to reduce exposures. Provide ventilation if necessary to minimize exposures. If practical, use local mechanical exhaust ventilation at sources of air contamination such as open process equipment. Consult ACGIH ventilation manual or NFPA Standard 91 for design of exhaust systems.

Eye / Face Protection

Where there is potential for eye contact, wear a face shield, chemical goggles, and have eye flushing equipment immediately available.

Skin Protection

Use Neoprene or Nitrile gloves should be worn when handling this material. Wear chemical goggles, a face shield, and chemical resistant clothing such as a rubber apron when splashing may occur. Rinse immediately if skin is contaminated. Remove contaminated clothing promptly and wash before reuse. Clean protective equipment before reuse. Provide a safety shower at any location where skin contact can occur. Wash skin thoroughly after handling.

Respiratory Protection

Do not breathe mist. Do not breathe vapor. Where airborne exposure is likely, use NIOSH approved respiratory protection equipment appropriate to the material and/or its components. If exposures cannot be kept at a minimum with engineering controls, consult respirator manufacturer to determine appropriate type equipment for a given application. Observe respirator use limitations specified by NIOSH or the manufacturer. For emergency and other conditions where there may be a potential for significant exposure, use an approved full face positive-pressure, self-contained breathing apparatus or positive-pressure airline with auxiliary self-contained air supply. Respiratory protection programs must comply with 29 CFR § 1910.134.

Airborne Exposure Guidelines for Ingredients

Exposure Limit		Value
Potassium hydroxide		
ACGIH STEL	-	2 mg/m3
Ethanolamine		
ACGIH CEILING	-	15 mg/m3 6 ppm
ACGIH TWA	-	3 ppm 7.5 mg/m3
OSHA TWA PEL	-	3 ppm 6 mg/m3
Severely hydrotreated heavy naphthenic petroleum distillates		
ACGIH STEL	-As oil mist, mineral	10 mg/m3
ACGIH TWA	-As oil mist, mineral	5 mg/m3
N-Methyl-2-pyrrolidone		
WEEL TWA	-	10 ppm 40 mg/m3
WEEL TWA Skin Designator	-	Y

-Only those components with exposure limits are printed in this section.
-Skin contact limits designated with a "Y" above have skin contact effect. Air sampling alone is insufficient to accurately quantitate exposure. Measures to prevent significant cutaneous absorption may be required.
-ACGIH Sensitizer designator with a value of "Y" above means that exposure to this material may cause allergic reactions.

9 PHYSICAL AND CHEMICAL PROPERTIES

Appearance/Odor	Clear, to slightly, hazy, amber fluid
pH	
Specific Gravity	1.05
Vapor Pressure	NE
Vapor Density	>1.0
Melting Point	NA
Freezing Point	NE
Boiling Point	>200 deg F
Solubility In Water	Soluble
Percent Volatile	NE

10 STABILITY AND REACTIVITY

Stability

This material is chemically stable under specified conditions or storage, shipment and/or use. See HANDLING AND STORAGE section of this MSDS for specified conditions.

Hazardous Polymerization

Hazardous polymerization is not known to occur.

Incompatibility

Strong acids, strong oxidizers, sparks, and ignition sources

Hazardous Decomposition Products

Thermal - oxides of carbon, nitrogen and sulfur compounds

11 TOXICOLOGICAL INFORMATION

Toxicological Information

Data on this material and/or its components are summarized below.

N-Methyl-2-pyrrolidone

Single exposure (acute) studies indicate that this material is slightly toxic to rats if swallowed (LD50 3,900-4,300 mg/kg) or inhaled (4-hr exposure, ALC 1.7 mg/l), practically non-toxic to rabbits if absorbed through skin (LD50 4,000-8,000 mg/kg), slightly to moderately irritating to rabbit skin, and moderately irritating to rabbit eyes. No skin allergy was observed in humans or guinea pigs following repeated exposure to this material; however, workplace experience indicates that repeated or prolonged contact may cause severe dermatitis including blistering, cracking, or swelling of skin. Headaches and eye irritation have been reported in workers exposed to low levels (0.7 ppm) of this material while levels from 49-83 ppm were extremely irritating.

Repeated oral administration to rats and dogs produced no adverse effects while rabbits showed effects on the heart, liver, kidneys and gastrointestinal tract. Repeated administration of this material in the feed of mice showed kidney effects, while rats showed decreased body weight and weight gain and blood effects. Effects on bone marrow, testes and thymus were also seen but were considered to be secondary to nutritional and body weight effects. Repeated inhalation by rats produced focal pneumonia, bone marrow hyperplasia, degeneration of spleen, thymus and testes, and increases in white blood cells. Long-term exposure of rats to vapor resulted in reduced body weight at the high dose level, but no systemic or carcinogenic effects. No

11 TOXICOLOGICAL INFORMATION

carcinogenic effects were observed in dermal initiation promotion studies or by repeated subcutaneous injection to mice. Birth defects were observed in the offspring of rats exposed by inhalation and skin application during pregnancy, but only at levels which produced adverse effects on the mothers. Oral administration to pregnant rats, mice and rabbits produced developmental effects and birth defects on the offspring, but only at maternally toxic doses. No reproductive effects were observed in rats exposed prior to and during mating and during pregnancy. This material generally produced no genetic changes in standard tests using bacterial and animal cells. It has produced genetic changes in yeast. Metabolism studies have shown that this material is readily excreted in the urine with 75% eliminated within 12 hours.

Ethanolamine
Single exposure (acute) studies indicate that this material is slightly toxic if swallowed (rat LD50 1,100-3,300 mg/kg) or absorbed through skin (rat LD50 2,460 mg/kg), no more than slightly toxic if inhaled (guinea pig 1-hr LC50 0.58 mg/l; cat and dog 7-hr LC50 >2.47 mg/l, no lethalities occurred), and corrosive to rabbit eyes and skin. Repeated application in controlled skin contact studies with human volunteers has shown this material to be a cumulative skin irritant, but did not show evidence for allergic skin reactions. This material did not produce allergic skin reactions in guinea pigs. Acute inhalation exposure of mice, rats, rabbits and guinea pigs at up to 1250 ppm caused damage to the liver, kidney and lungs. Continuous 24-hour exposure of dogs, guinea pigs and rats to 6 ppm of this material resulted in skin irritation and animals exposed at up to 102 ppm showed inflammation of the lungs, liver and kidney damage, and changes in blood parameters. Repeated skin application of this material in rats at 4 mg/kg/day produced effects in the liver, heart and lung. Subchronic administration of this material in the diet (up to 1280 mg/kg/day) caused damage to liver and kidneys in rats. No birth defects were noted in rats given skin applications of this material during pregnancy, even at levels (225 mg/kg/day) which produced adverse effects in the mothers (decreased weight gain and skin irritation) and delayed development of offspring. Birth defects and embryolethality were observed in rats given this material orally during pregnancy at doses of 50-500 mg/kg/day. No adverse treatment-related effects on reproductive performance were observed in male and female rats given this material at dietary concentrations up to 7500 ppm. This material has generally produced no genetic changes in standard tests using bacterial or animal cells.

Severely hydrotreated heavy naphthenic petroleum distillates
Single exposure (acute) studies indicate that this material is practically non-toxic if swallowed (rabbit LD50 >5000 mg/kg), no more than slightly toxic if absorbed through skin (rabbit LD50 >3000 mg/kg) and slightly irritating to rabbit eyes and skin. No skin allergy was observed in guinea pigs following repeated exposure. In one study, chronic dermal application of this material to mice did not result in an increase in skin tumors. Other studies have shown an increase in skin tumor formation from application of this material. This material has generally not produced genetic changes in standard bacterial and mammalian cell assays.

Potassium Hydroxide
Single exposure (acute) studies indicate that this material is moderately toxic to rats if swallowed (LD50 333 mg/kg) and corrosive to rabbit skin. Solutions of this material are highly alkaline and are able to rapidly dissolve and destroy tissue upon contact. There are numerous reports of accidental or suicidal ingestion of this material. Death results from shock, perforation of the esophagus, pneumonitis and infection. There are also reports of accidental splashes to the eyes and skin causing corrosive tissue damage. Repeated overexposure by inhalation is usually self-limited by sneezing, coughing and respiratory discomfort; however, lesions of the nasal septum have been reported from workplace exposure. Chronic application of a solution of this material to the skin of mice has resulted in increased skin tumor formation.

12 ECOLOGICAL INFORMATION

12 ECOLOGICAL INFORMATION

Ecotoxicological Information

Data on this material and/or its components are summarized below.

N-Methyl-2-pyrrolidone
This material is highly toxic to Daphnia magna (LC50 10-100 ug/l) and slightly toxic to fathead minnow (LC50 65.6 mg/l).

Ethanolamine
This material is generally non-toxic to fish such as rainbow trout, bluegill, goldfish, and fathead minnow with LC50 values greater than 100 mg/l. It has also been shown to be non-toxic to invertebrates such as Daphnia magna and blue green algae with LC50 values of 250 mg/l or 6300 mg/l, respectively. This material has a low octanol/water partition coefficient and would not be expected to bioaccumulate in aquatic species or food chains.

Potassium Hydroxide
This material is sightly toxic to gambusia (LC50 80 mg/l).

Chemical Fate Information

Data on this material and/or its components are summarized below.

N-Methyl-2-pyrrolidone
Biodegradation studies in semi-continuous activated sludge testing and in a river die-away test show that this material is readily biodegradable with 95% degradation in 1-2 weeks.

Ethanolamine
This material is readily degraded biologically, showing high theoretical utilization in both chemical and biological oxidation demand testing.

13 DISPOSAL CONSIDERATIONS

Waste Disposal

Recover, reclaim or recycle when practical. Dispose of in accordance with federal, state and local regulations.

14 TRANSPORT INFORMATION

2 COMPOSITION / INFORMATION ON INGREDIENTS

Ingredient Name	CAS RegistryNumber	Typical Wt. %	OSHA
Distillates (petroleum), hydrotreated middle	64742-46-7	100%	Y

The substance(s) marked with a "Y" in the OSHA column, are identified as hazardous chemicals according to the criteria of the OSHA Communication Standard (29 CFR 1910.1200)

This material is classified as hazardous under Federal OSHA regulation.

The components of this product are all on the TSCA inventory list.

3 HAZARDS IDENTIFICATION

Emergency Overview
Straw colored, thin liquid
CAUTION!
PROLONGED OR REPEATED CONTACT MAY DRY SKIN AND CAUSE IRRITATION.
MAY CAUSE EYE IRRITATION.
MAY CAUSE RESPIRATORY TRACT IRRITATION.
PROLONGED EXPOSURE TO HIGH VAPOR CONCENTRATIONS CAN CAUSE CENTRAL NERVOUS SYSTEM DEPRESSION INCLUDING HEADACHE, DIZZINESS, WEAKNESS, CONFUSION, NAUSEA, AND LOSS OF CONSCIOUSNESS.

Potential Health Effects

Inhalation and skin contact are expected to be the primary routes of occupational exposure to this material. Hydrocarbons of this type may remove oils from the skin and, because of their drying nature, produce irritation, redness and rash (dermatitis) with repeated or prolonged contact. Hydrocarbons of this type may also be slightly irritating to the eyes and respiratory tract and may produce anesthetic-like effects. Overexposure to high atmospheric concentrations of hydrocarbon vapors may result in central nervous system (CNS) depression, with possible effects such as headache, dizziness, weakness, confusion, nausea, unconsciousness and, in extreme cases, death. Precautions should be taken to limit aerosolization or misting of this material, as repeated exposure to high concentrations of

mineral oil mist may cause lipoid pneumonia. While swallowing of this material is unlikely in the industrial setting, if swallowed there may be severe lung injury if the material is drawn into the lungs during swallowing or during spontaneous or induced vomiting after swallowing. Symptoms of injury may include increased breathing and heart rate, coughing and related signs of respiratory distress.

4 FIRST AID MEASURES

IF IN EYES, immediately flush with plenty of water. Get medical attention if irritation persists.

IF ON SKIN, immediately wash with soap and plenty of water. Remove contaminated clothing and shoes. Get medical attention if symptoms occur. Wash clothing before reuse. Thoroughly clean shoes before reuse.

IF SWALLOWED, do NOT induce vomiting. Give water to drink. Get medical attention immediately. NEVER GIVE ANYTHING BY MOUTH TO AN UNCONSCIOUS PERSON.

IF INHALED, remove to fresh air. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. Get medical attention.

5 FIRE FIGHTING MEASURES

Fire and Explosive Properties

Auto-Ignition Temperature	> 500 F		
Flash Point	> 420 F	Flash Point Method	COC
Flammable Limits- Upper	NE		
Lower	NE		

Extinguishing Media

Use carbon dioxide, dry chemical or foam

Fire Fighting Instructions

Use water spray to cool containers exposed to fire. Fire fighters and others who may be exposed to products of combustion should wear full fire fighting turn out gear (full Bunker Gear) and self-contained breathing apparatus (pressure demand NIOSH approved or equivalent). Fire fighting equipment should be thoroughly decontaminated after use.

Fire and Explosion Hazards

Container may explode if heated due to resulting pressure rise.

6 ACCIDENTAL RELEASE MEASURES

In Case of Spill or Leak

Contain spill. Stop leak at source if this can be done safely. Ventilate area. Nonessential personnel should leave the area until cleanup is completed. Pump liquid into DOT-approved drums for disposal. Absorb remaining liquid onto inert absorbent and place in DOT approved drums for disposal. Wash area with water. Keep concentrate and wash water from entering sewers or waterways. Consult a regulatory specialist to determine appropriate state or local reporting requirements, for assistance in waste characterization and/or hazardous waste disposal and other requirements listed in pertinent environmental permits.

7 HANDLING AND STORAGE

7 HANDLING AND STORAGE

Handling

Do not get in eyes, on skin or clothing. Avoid breathing vapor or mist. Keep container closed. Use only with adequate ventilation. Wash thoroughly after handling. Keep away from heat, sparks and flame.

Storage

Store in a cool, dry place. Avoid excessive heat. Store out of direct sunlight in a cool, well-ventilated place.

8 EXPOSURE CONTROLS / PERSONAL PROTECTION

Engineering Controls

Investigate engineering techniques to reduce exposures. Provide ventilation if necessary to minimize exposures. If practical, use local mechanical exhaust ventilation at sources of air contamination such as open process equipment. Consult ACGIH ventilation manual or NFPA Standard 91 for design of exhaust systems.

Eye / Face Protection

Where there is potential for eye contact, wear chemical goggles and have eye flushing equipment available.

Skin Protection

Neoprene or Nitrile gloves should be worn when handling this material. Wear face shield and chemical resistant clothing such as a rubber apron when splashing may occur. Wash contaminated clothing and clean protective equipment before reuse. Rinse contaminated skin promptly. Wash skin thoroughly after handling.

Respiratory Protection

Avoid breathing vapor or mist. Where airborne exposure is likely, use NIOSH approved respiratory protection equipment appropriate to the material and/or its components. If exposures cannot be kept at a minimum with engineering controls, consult respirator manufacturer to determine appropriate type equipment for given application. Observe respirator use limitations specified by NIOSH or the manufacturer. For emergency and other conditions where there may be a potential for significant exposure, use an approved full face positive-pressure, self-contained breathing apparatus or positive-pressure airline with auxiliary self-contained air supply. Respiratory protection programs must comply with 29 CFR § 1910.134.

Airborne Exposure Guidelines for Ingredients

The components of this product have no established Airborne Exposure Guidelines

-Only those components with exposure limits are printed in this section.
-Skin contact limits designated with a "Y" above have skin contact effect. Air sampling alone is insufficient to accurately quantitate exposure. Measures to prevent significant cutaneous absorption may be required.
-ACGIH Sensitizer designator with a value of "Y" above means that exposure to this material may cause allergic reactions.

9 PHYSICAL AND CHEMICAL PROPERTIES

Appearance/Odor	Straw colored, thin liquid
pH	
Specific Gravity	0.90
Vapor Pressure	NE
Vapor Density	< 1.0
Melting Point	NA
Freezing Point	< 30 F
Boiling Point	> 400 F
Solubility In Water	Negligible

10 STABILITY AND REACTIVITY

Stability

This material is chemically stable under normal and anticipated storage and handling conditions.

Hazardous Polymerization

Hazardous polymerization is not known to occur.

Incompatibility

Avoid contact with strong acids, alkalis, and oxidizers. Avoid flames.

Hazardous Decomposition Products

Oxides of carbon.

11 TOXICOLOGICAL INFORMATION

Toxicological Information

Data on this material and/or its components are summarized below.

Distillates (petroleum), hydrotreated middle

Early mortality, amyloidosis (infiltration of the liver, spleen, kidneys and other tissues with a starchlike substance) and irritation were observed in mice dermally treated with this material for 177 days. Lifetime application of this material to the skin of mice produced tumors in 5 of 50 animals. Petroleum distillates of this type have produced genetic changes in a standard test using bacteria; but not in animals.

12 ECOLOGICAL INFORMATION

Ecotoxicological Information

No data are available.

Chemical Fate Information

No data are available.

13 DISPOSAL CONSIDERATIONS

Waste Disposal

Recover, reclaim or recycle when practical. Dispose of in accordance with federal, state and local regulations. Note: Chemical additions to, processing of, or otherwise altering this material may make this waste management information incomplete, inaccurate, or otherwise inappropriate. Furthermore, state and local waste disposal requirements may be more restrictive or otherwise different from federal laws and regulations.

OKLAHOMA DEPARTMENT OF ENVIRONMENTAL QUALITY
AIR QUALITY DIVISION

MEMORANDUM: April 15, 1999

TO: Files

THROUGH: Rhonda Jeffries, Environmental Specialist Supervisor

FROM: Roxanne Roberts, Sr. Environmental Specialist

SUBJECT: **Limco Airepair, Inc. & Aeroduct**
5304 South Lawton Ave.
Tulsa, Oklahoma 74107

TEAM ID# 02151
AIRS New

Limco Airepair, Inc. & Aeroduct (LIMCO) operates a Federal Aviation Administration Certified ~~Flight Service~~ REPAIR Station, Certificate #CZ2R760. Three main divisions and a small minor division operate inside the facility. Some welding areas, the cleaning/alodine lines, paint booth, testing areas, and hazardous waste storage areas are shared by all the divisions. The SIC code for LIMCO's operation is 3728, Aircraft Parts and Equipment. The Airepair Division repairs aviation heat exhangers. Minor repairs primarily involve testing, flushing and cleaning operations. Major repairs involve testing, recoring and welding operations. The Aeroduct Division repairs aircraft ventilation duct systems with similar major and minor job classifications. DUCTS

FACILITY DESCRIPTION

Limco and Airoduct and Aerepair merged TO form a manufacturing and repair facility for aircraft cooling units. Limco represents the manufacturing side. Their clients include major airlines, Bell Helicopters, American Airlines and Commercial and Federal aviation facilities. The company is owned by TAT Industries by Shaul Mene of Televive, Israel. Bob Johnson is the CFO in the Tulsa office. Mr. Frank McGurer is the new facility manager having been in the position since January, 1999. The previous facility manager is said to have quit. A complaint was lodged against Limco in January, 1999 and Mr. John Smith of the DEQ Hazardous Waste division performed an inspection. During that inspection he suggested to Mr. Johnson that LIMCO should submit information to the air quality division (AQD) for an applicability PERMIT

determination (AD). As of April 7, 1999 an AD had not been received by the AQD and I inspected the facility. The facility operates from 7:00 am to 3:30 pm with a nightshift consisting of a skeleton crew performing primarily prep work and grinding. The facility consists of various areas consisting of repair or manufacturing operations.

FACILITY INSPECTION

On April 7, 1999 an Air Quality compliance inspection was conducted by Roxanne Roberts, Sr. Environmental Specialist, for the division. Mr. Frank McGurer, Facility Manager, represented LIMCO. I arrived at the facility at approximately 2:05 pm, entered the facility and presented proper identification. I requested to see Mr. Johnson, however he was not in. Mr. McGurer was summoned and arrived in Mr. Johnson's place. I conducted a brief entrance interview with Mr. McGurer and explained the nature of my visit. I requested to inspect the entire facility. The following represents observations and comments made during the inspection:

We proceeded through the shop area which I was told was for manufacturing and repair. I was told there are two welding areas. The first welding area consisted of five welding machines and four welders. There is 1 CNC Mill Machine in this area and an Electric Discharge Machine (EDM) which cuts with electric arc fluid (EDM) which I was told is similar to kerosene. There were testing tanks filled with water to test the cooling units for leaks. A vacuum furnace used for drying the parts after leak testing discharges moisture outside the furnace.

I inspected the Fin room which is an area with two machines that creates fins for the cooling units by feeding raw stock of aluminum, stainless and copper through a machine that stamps them. This creates the various types of fins used in the cooling units.

We then proceeded to the stacking room where all parts from the clean line are located. Personnel wearing white gloves assemble the fins and various parts fabricating the core which is then sent to a bench mechanic.

The final stacked pieces are heated in an electric vacuum furnace to 2,160 degrees F for stainless and 1,100 degrees F for aluminum which solders all the parts together. There is a cooling tower associated with the furnace to cool it through water jackets. Once the core unit leaves this area it goes to another welding unit for finishing touches such as end caps, etc.

Some of the sheet metal is formed by an extremely large press called a Cincinnati Hydroform 20-10-10. This machine presses the sheet metal at 8,000 lbs. of pressure which effectively cuts out thin slivers of sheet metal. The pieces are used in the final product. This equipment is located in the wastewater treatment room and hazardous waste and unused chemical storage area. Drums observed in the hazardous and unused chemical storage area were EDM fluid – Vacmul 3A honing oil, DTE 26 – hydraulic oil used on the big press, Alodine 22 Toner, Caustic Soda, Sulfuric Acid (both used in wastewater treatment), Isoprep 44, Toluene and Kerosene.

I inspected the testing areas where cores are tested under normal conditions and increased temperatures. Oil is heated to 200-275 degrees F, the units are covered, flushed and leak tested.

The clean line operation consists of various acid and rinse tanks. There appeared to be 2 Alodine tanks labeled 1200 (which was stated to be stronger) and 600 (which is seldom used), 3 acid tanks (2 nitric and 1 HF/Nitric mix), 2 caustic tanks, 7 water rinse tanks, 1 pH rinse tank containing deionized water, 1 tank labeled "Turco" which was to remove the remainder of the unwanted constituents off and was compared to paint stripper, and 1 pH boiling tank which was to boil the salts off, then silver nitrate is dropped in. This line was not operational during the inspection.

The vapor degreaser was not operating during the inspection. The manager of the area, David Custer, was not present. There are several closed red tubs setting around which was said to contain MEK used to soak parts. One open container was observed which Mr. McGurer stated was mineral spirits. There was no original chemical container present so this could not be confirmed. The degreaser does have a lid installed however, it is a top loaded machine and the lid is very bulky and would not be easily removed and replaced throughout the day. There are safety switches on the outside of the equipment. There is a hand spray mechanism to spray parts in the tank, and the vapor degreaser has a refrigerated chiller utilizing natural water. The equipment is a batch vapor machine with no available specification data available. The actual dip area is estimated to be 20x48x48. There are none of the required instructions placarded on the equipment. The vapor degreaser contains TCE and should be inspected again (as well as the clean line) at a later date.

There are 4 heat treating ovens stated to be electrically operated. Their purpose is to relieve the internal stress put on parts from assembly or repair, ie. if one part is heated during the process the other portions of the whole unit are not under uniform stress. As they are heated uniformly and cooled uniformly stress is relieved.

I inspected the paint area as certain cores are provided coatings. The paint booth was of the three sided open type, and I was told the filters are changed when there is not enough flow to paint well. There are no pressure gauges with which to monitor pressure drop across the filters. The filters did not appear to be in good condition during the inspection. I observed a total of 6 open containers, ie. 2 open containers of Toluene, a drum of paint waste with no funnel cap, and a horizontal Xylene drum with an open drip bucket one-half full. I was told that the general solvent used for clean-up was DX590. I observed the following coatings:

Trailchem Corp.	X75351 Glear Gloss Epoxy Baking Enamel
Milspeck Paint	Yellow Primer 7962 VOC content of 5.15 lb/gal.
Milspec Varnish	MIL-V-173C

LIMCO also operates 3 bead blasting machines in two sheds outside. The equipment utilizes glass beads and filters them through the system for reuse. I observed bags of unused glass beads in one of the sheds.

I also inspected an area in which I was told fluid service carts are built. There are none on site at this time and none ordered.

During the exit interview I explained that my concerns are with the painting area, not being able to conduct a thorough inspection of the degreaser or clean line, and the fact that LIMCO did not submit for an AD. I also stated that I would need to clarify the definitions of anodizing as they relate to the Federal Regulations in Subpart N for Chromium Electroplating and Anodizing Facilities. When asked if they had emissions inventories or the appropriate notification to the EPA regarding the degreasing unit Mr. McGrurer did not know and called his consultant, Bob Sherwin of SherWill Environmental (SherWill). I spoke to SherWill at length and found they have been LIMCO's consultant for more than 2 ½ years. SherWill stated that emissions inventories have been done over that time but not submitted to the AQD because the emissions are less than 5 tons per year when calculated for the TCE, paints and clean line. I was told the 1997 TCE emissions were 9,773 pounds (4.9 TPY). I explained that this would not include emissions from the entire facility and that LIMCO may be over the 5 TPY limit when the other emissions were included. SherWill was requested to supply the 1998 emissions and the EPA notification for the vapor degreaser which was done the following Monday, April 12, 1999. The emissions were submitted in tabular form and not on an AQD Turnaround Document. The information submitted states that LIMCO had total HAP emissions of 11,219 lbs (5.6 TPY), total NON-HAP emissions of 2,259 lbs (1.1 TPY), or total 6.7 TPY.

POLLUTION CONTROL EQUIPMENT

This facility has no actual GASEOUS pollution control equipment.

SUMMARY

From this inspection the entire compliance status of the company cannot be determined. LIMCO has many processes that may or may not require permitting and should be evaluated by the AQD. On April 8, 1999 I contacted Toni Allen of the EPA and discussed chromium anodizing at length. After various discussions we agreed that, because LIMCO does not perform chromium anodizing by an electrically induced process they are exempt from the Federal NESHAP.

SherWill delivered documentation of LIMCO's notification to the EPA regarding the vapor degreaser (Attachment I) and LIMCO's 1998 Emissions Spreadsheet (Attachment II). It appears that LIMCO's 1998 emissions were 6.7 tons. SherWill also submitted an April 9, 1999 letter to me clarifying various issues and "misgiven" information that was provided during the inspection (Attachment III). I informed SherWill that LIMCO should submit information required for an

AD to let the AQD evaluate the facility. I then called Mr. Bob Johnson, CEO of LIMCO and explained the same and followed this with a FAX (Attachment IV) officially requesting the information within 15 days. The AQD received the information on April 23, 1999 and the data is being evaluated. The following conclusions were derived from the inspection and subsequently submitted information:

1. It appears from the application data that LIMCO had emissions above the 5 TPY level that would require emissions inventory reporting. Although I was told by SherWill that the 1998 Turnaround Document had been filed with the State, Jeff Davidson in the Emissions Inventory group informed me that they do not find this in their files. The requirement to file emissions inventories has been discussed with LIMCO and its consultant.
2. It appears that LIMCO will require a permit and an application for a construction/operating permit has been received by the AQD.
3. LIMCO has paints that may exceed the VOS limitations stated in Subchapter 39 however, they may be exempt from the rule if the AQD verifies that they are under the 10 tons per year emissions limit necessary to take advantage of the exemption.
4. Once the permitting group has evaluated the information submitted a closer look at LIMCO's compliance status can be taken.
5. An unannounced follow-up inspection should be completed to determine compliance with the vapor degreaser regulations and to re-inspect their painting operations.

Dallas, TX 75202-2733

Attn: John Hepola (6EN-A)

Reference: 40CFR Part 63.468

Dear Mr. Hepola:

This letter is written to comply with the conditions set forth in 40 CFR Part 63.468, "Reporting requirements" for vapor degreasing machines. LIMCO-Airepair, Inc. currently operates one (1) such vapor degreasing machine at their facility. This letter serves as an initial notification report, as called for in Part 63.468(a). The following is requested in that Part:

1. **Name and address of the owner or operator.**

TAT Industries Ltd.
Bnei Ayish Ind. Zone
P.O. Box 80,
Gedera 70750
Israel

2. **Address (physical location) of the solvent cleaning machine.**

LIMCO-Airepair, Inc.
5304 South Lawton Avenue
Tulsa, OK 74107

See attached map for the physical location of the degreaser within the facility.

3. **Brief description of each solvent cleaning machine including type (batch vapor, batch cold, vapor inline or cold inline), solvent/air interface area, and existing controls.**

The vapor degreaser in use at LIMCO Airepair, Inc. is a batch vapor machine, using 1,1,1 Trichloroethylene as the degreasing agent. The solvent/air interface area is 1,268.5 square inches; the tank capacity is 110 gallons; temperature at the center of the air blanket was 86 degrees F; and the freeboard ratio is 1.0. Existing controls include: a primary condenser for controlling the vapor blanket, sump heating coils to heat the liquid solvent, an idling-mode cover, and reduced room draft (the machine is located against the back south wall across the aisleway from the Clean-Line Operations). Safety shut-down controls include overtemperature, and low sump level alarms.

4. **The date of installation for each solvent cleaning machine or a letter certifying that the solvent cleaning machine was installed prior to, or after, November 29, 1993.**

LIMCO-Airepair, Inc. moved the vapor degreasing tank/operations from their New York facility. This system was installed at their current location in January 1995.

5. **The anticipated compliance approach for each solvent cleaning machine.**

LIMCO-Airepair, Inc. intends to follow the guidelines set forth in 40 CFR Part 63.463, "Batch vapor and in-line cleaning machine standards," in all aspects of operating this vapor degreasing machine. Appropriate control combinations, monitoring, training, and recordkeeping requirements will be met. The Facility Manager or his/her designee is responsible for ensuring that all requirements of this Part are met.

6. **An estimate of annual halogenated HAP (hazardous air pollutant) solvent consumption for each solvent cleaning machine.**

Current estimates indicate that the degreaser used 1,080 gallons of 1,1,1 Trichloroethylene from January to December of 1995.

If there is anything further required of us at this time, you may contact me at the address above, by calling (918) 445-4300.

Sincerely,

Karl Kruger
Facility Manager

Re: Air Emission Inventory 1998 for LIMCO-Airepair, Inc.

SherWill, Inc.
10388 E. 21st Street
Tulsa, OK 74129

Answ. Serv: (918) 660-5103
Office/Fax (918) 622-2782

Dear Roxanne:

This letter is in response to your request that LIMCO-Airepair, Inc. submit the data on what their air emissions for 1998. We have attached a copy of the 1998 Emission Inventory. Also, we have attached a copy of the notification letter submitted to EPA as part of Subpart T.

The different processes that generate the VOC's are well below the limits that would require an air permit. The only exception will be the vapor degreaser operations that utilizes 1,1,1 Trichloroethylene. In accordance with EPA directive, we are not required to submit for a Title V Permit for the Vapor Degreaser operations until the fall of 2000. This permit will be specific for only that operation and not for any other types of operations. The other operations, i.e., paint booth, clean-out of test product from checking different aircraft components in the test stand department and clean-line operations are well below the 5 ton limit criteria for VOC's before an Air Permit is required. Also, we only used 95 gallons of paint in 1998. None of paints used where above the 55 gallon limits, for each paint that is over the 3.5 lbs/voc limit, that is required in Tulsa County.

We want to clarify some misgiven information about the Alodine process (wrong information was presented during your inspection by an employee who is not aware of this particular process). Alodine process is an alternative to anodizing a part through electroplating. Alodine process is not covered under Subpart N, whereas anodizing and electroplating processes are regulated. If you need to discuss this particular issue further, please don't hesitate and call David Custer; Supervisor over the Clean-Line Operations for LIMCO-Airepair, Inc., at 445-4300.

If you have any questions or need additional information, please don't hesitate and call me at 622-2782.

Sincerely,

Robert E. Sherwin Jr.

VIA FAX

Mr. Bob Johnson
LIMCO Airepair, Inc. & Aeroduct
5304 S. Lawton Ave.
Tulsa, Oklahoma 74107

Dear Mr. Johnson:

This letter is to document our telephone conversation on April 12, 1999. I called you at approximately 3:30 pm to discuss permitting issues discovered during the inspection I conducted at LIMCO on April 7, 1999.

During our conversation I requested that LIMCO submit the appropriate information to facilitate an Applicability Determination for an Air Quality Permit through our agency. I further requested that the information be submitted to the Tulsa Air Quality Division within fifteen (15) days of receipt of this letter. You asked that the letter be faxed to your office. A FAX confirmation will serve to document your receipt time.

Please call me at 461-7415 should you have any questions.

Sincerely,

Roxanne Roberts

FCE No. 5888

Introduction

On Tuesday August 28, 2012, between the hours of 0910 and 1000, an unannounced air quality full compliance evaluation was conducted at the above referenced facility. Helen King, Environmental Programs Specialist, with the Oklahoma Department of Environmental Quality – Air Quality Division in Tulsa conducted the evaluation. Mr. Bill Williams, Director of Facilities, represented the facility. This facility was evaluated to determine its compliance with state and federal regulations and it State of Oklahoma Air Quality Permit No. **99-026-O (M-2)** (Attachment A) issued on May 24, 2004.

History/Process Description

Permit History

Permit No.	Date Issued	Permit Application or Modification
99-026-O	01/14/2000	Original Operating Permit
99-026-O (M-1)	10/31/2001	Install new coating process and increase the usage of paint, solvents, degreaser solvent, hand wiping solvent, and pressure testing fluids.
99-026-O (M-2)	05/24/2004	Modification to include adding Xylene to Table No. 2 to correlate with Table No. 1, changing the wording of perchloroethylene to trichloroethylene, and increasing the use of toluene, mineral spirits, IPA, and various paints.

The facility conducted three (3) different activities such as the manufacture of different sizes of heat exchangers, the repair of various sizes of heat exchangers, and the repair of various sized aircraft air ducts.
The steps in manufacturing process of the heat exchangers are: material is cut, shaped, cleaned, welded/assembled, pressure tested, cleaned, heat dried, and coated. The heat exchangers are tested. The steps in the repair of the heat exchangers are: inspected for flaws, repaired as necessary, pressure tested, cleaned, heat dried, and coated. The steps in the repair of the air ducts are: inspected for flaws, cleaned, heat dried, repairs made, cleaned, and coated.

Emissions /Source Classification

This facility is classified as a "Synthetic Minor (SM)" for permitted limits of 19.0 TPY for volatile organic compounds (VOCs), 6.8 TPY of methyl ethyl ketone (2-Butanone), and 8.7 TPY for total hazardous air pollutants (HAPS).

Reported Emissions (Attachment B)

Pollutant	2009 (TPY)	% Change	2010 (TPY)	% Change	2011 (TPY)
Volatile Organic Compounds (VOCs) (non-HAP)	8.67	**11.88**	9.70	**-12.34**	8.503
Methyl isobutyl ketone	0.04	**-75.00**	0.01	**70.00**	0.017
Toluene	2.81	**-7.117**	2.61	**45.594**	3.80
Trichloroethylene	0.90	**-33.33**	0.60	**0.333**	0.602
Xylenes	0.079	**51.899**	0.12	**8.33**	0.13

The explanation for the increase in emissions between 2010 and 2011 was from an increase in production for the military.

State/Federal Regulatory Applicability

Oklahoma Air Pollution Control Rules (Applicable)

OAC 252:100-1 (General Provisions)
OAC 252:100-3 (Air Quality Standards and Increments)

OAC 252:100-5	(Registration, Emission Inventory, and Annual Operating Fees)
OAC 252:100-7	(Permits for Minor Facilities)
OAC 252:100-9	(Excess Emissions Reporting Requirements)
OAC 252:100-13	(Prohibition of Open Burning)
OAC 252:100-19	(Particulate Matter (PM))

OAC 252:100-29	(Fugitive Dust)
OAC 252:100-31	(Sulfur Compounds)
OAC 252:100-39	(VOC in Nonattainment and Former Nonattainment Areas)
OAC 252:100-42	(Control of Toxic Air Contaminants)
OAC 252:100-43	(Testing, Monitoring, and Recordkeeping)

Federal Regulations

NESHAP, 40 CFR Part 63
Subpart T (Halogenated Solvent Cleaners). This standard applies to all new, existing, and/or reconstructed vapor degreasers that use a halogenated solvent. This facility is an area source and is subject to Subpart T. A yearly report is required to be sent to the local DEQ Office and an additional report concerning any emergency operation which was not in compliance (Attachment C). The facility has selected Option 1 from Table 1 of §63.463 to demonstrate compliance. This option requires a combination of a working-mode cover, freeboard ratio of 1.0, and superheated vapor.
The facility does conduct inspection and keeps records for the requirements of this subpart (Attachment C). Subpart T is discussed in Specific Condition No. 3 of this report.

Evaluation/Enforcement History

FCE

FCE No.	Date Conducted	Compliance Status
04057	11/18/2008	No violations found.
01293	12/30/2003	No violations found.

Enforcement case no. 4685 was a self-disclosure opened on November 20, 2008 and closed on July 22, 2009. The facility failed to keep records for the vapor degreaser and to submit an annual report required by Subpart T. All issues were addressed and corrected.

Annual Compliance Certifications/Semiannual Reports
This facility is not classified as a Part 70/Title V Major Source and is not required to submit annual compliance certifications and semiannual reports.

Excess Emissions
No excess emissions have been reported from this facility.

On-site Evaluation

The inspector was met at the facility by Mr. Williams. The inspector explained the purpose of the evaluation and discussed records. Mr. Williams escorted the inspector on the physical tour of the facility starting with the vapor degreaser. The inspector observed the degreaser was in use and the cover was on. The facility employs and has trained two (2) technicians to operate this unit properly. The inspector reviewed all required records kept at the unit and the operating/maintenance manual is attached to the unit. A copy of the degreaser log was made for the inspector (Attachment C). Mr. Williams stated the degreaser still uses trichloroethylene and the facility has considered purchasing a new degreaser unit to replace the one on-site. The new unit would be the same size as the old one to avoid any increase in emissions and to comply with the facility's air quality permit. The facility paint booth was on but no paint spraying was being conducted. The pressure was observed at 0.20 w.c. The booth was equipped with a two stage filtering system and the filters had been recently changed. All solvent containers, paint cans, and solvent rag disposal were all covered in the paint booth. Mr. Williams pointed out the new draft test area which was still under construction at the time of this evaluation. The dip coating area is totally isolated from the rest of the facility and is equipped with positive pressure filtering system and a fire depressant equipment. The dip coating unit was not in operation at the time of this evaluation. The dip coating unit uses toluene in it formulation but no odor was noticed in this area. A smaller paint booth is located in the back of the building and is used for storage at this time.

Specific Conditions for Permit No. 99-026-O (M-2)

1. Points of emission include the cleaning, degreasing, painting, and other coating areas. The significant emissions from all sources are listed below.

Table No.1

USE	POLLUTANT	Permit Limits	
		PPH	TPY
Dip Coat	Toluene	2.40	5.1
	Xylene	0.19	0.40
	805 Resin	0.20	0.43
Degreaser	Trichloroethylene	1.50	3.20
Wipe	MEK	3.20	6.80
Testing	Mineral Spirits	0.53	1.20
Wipe	IPA	0.82	1.80
Paint	Various	0.22	0.50

Reported Emissions

Emission Points	Pollutant	2009 (TPY)	2010 (TPY)	2011 (TPY)
Dip Coat	Toluene	2.77	2.80	3.75
	Xylene	-0-	-0-	-0-
Degreaser	Trichloroethylene	0.90	0.60	0.602
Wipe Down*	VOCs (non-HAP)	8.26	8.60	7.50

Testing	VOCs (non-HAP)	0.331	0.95	0.851
	Xylenes	0.049	0.09	0.09
Paint Booth	Various	0.188	0.20	0.259

Wipe down reported value is the combination of wipe down (MEK) and wipe down (IPA) which has a total of 8.60 TPY for permit limits.

The emissions shown in the preceding table will not be exceeded under normal operating conditions provided the facility's use of materials shown in the following table is not exceeded.

Table No. 2

Materials	GPD (1)	GPY
Toluene	5.4	1,400
Xylene	0.43	110
805 Resin	0.60	157
Trichloroethylene	2.00	520
MEK	7.70	2,000
Mineral Spirits	1.37	355
IPA	2.04	530
Paints, various	0.39	100

(1) These gallons/day are work-week averages.

Records show the facility has not exceeded the material usage listed above (Attachment E).

2. Alternate products and production quantities can be varied under the following conditions.

a. Emissions do not exceed 10 TPY for a single HAP or 25 TPY of the HAPs aggregate.

Records show emissions for alternate products did not exceed 10 TPY (Attachment E).

b. A change in either production or products is permitted provided there would be no increase in the quantity of the resulting emissions. Additionally, the use of alternate products shall not cause the total of each toxic to exceed the de minimis levels or the MAAC established by OAC 252:100-41.

There has been no change in production or products resulting in an emissions increase since the last FCE.

c. The facility shall notify the DEQ in writing 30 calendar days before making any operational changes that would cause significant air emissions.

No operational changes have been made that would cause significant increase in air emissions.

d. Maintain written documentation to show compliance with all current Federal, State, and Local Regulations, Rules, and Codes, including modeling where compliance with a MAAC may be in question.

The facility does maintain all required records and documentation.

3. The degreaser is subject to NESHAP (40 CFR 63) Subpart T, Standards for Halogenated Solvent Cleaning, as published in the Federal Register on December 2, 1994, and shall be in compliance with this federal NESHAP, specifically with Option 1 of Table 1 of 40 CFR 63.463. All required reports shall be sent to the DEQ Regional Office in Tulsa.

§63.463 Batch vapor and in-line cleaning machine standards.
(a)(1) Each cleaning machine shall be designed or operated to meet the control equipment or technique requirements in paragraph (a)(1)(i) or (a)(1)(ii) of this section.

(i) An idling and downtime mode cover, as described in §63.463(d)(1)(i), that may be readily opened or closed, that completely covers the cleaning machine opening when in place, and is free of cracks, holes, and other defects.

The degreaser unit is equipped with a properly sealed cover.

(2) Each cleaning machine shall have a free board ratio of 0.75 or greater.
The facility does comply with Table 1 of this Subpart by maintaining a free board ratio of 1.0.

(3) Each cleaning machine shall have an automated parts handling system capable of moving parts or pars baskets at a speed of 3.4 meters per minute (11 feet per minute) or less from the initial loading of parts through removal of cleaned parts.
The facility has determines the hoist speed for the unit is sixteen (16) feet per minute (fpm).

(4) Each vapor cleaning machine shall be equipped with a device that shuts off the sump heat if the sump liquid solvent levels drop to the sump heater coils. This requirement does not apply to a vapor cleaning machine that uses steam to heat the solvent.
The degreaser unit is equipped with an automatic shut off when the solvent levels drops too low.

(5) Each vapor cleaning machine shall be equipped with a vapor level control device that shuts off sump heat if the vapor level in the vapor cleaning machine rises above the height of the primary condenser.
The degreaser unit is equipped with a vapor level control switch.

(6) Each vapor cleaning machine shall have a primary condenser.
The degreaser unit is equipped with a primary condenser.

(b) Except as provided in §63.646, each owner or operator of an existing or new batch vapor cleaning machine shall comply with either paragraph (b)(1) or (b)(2) of this section.
(1) Each owner or operator of a batch vapor cleaning machine with a solvent/air interface area of 1.21 square meters (13 square feet) or less shall comply with the requirements specified in either paragraph (b)(1)(i) or (b)(1) (ii) of this section.

(i) Employ one of the control combinations listed in table 1 of this subpart or other equivalent methods of control as determined using the procedure in §63.469, equivalent methods of control.

Table 1 –Control Combinations for Batch Vapor Solvent Cleaning

Machines with a Solvent/Air Interface Area of 1.21 Square Meters (13 Square Feet) or less

Option	Control combinations
1	Working-mode cover, freeboard ratio of 1.0, superheated vapor.
2	Freeboard refrigeration device, superheated vapor.
3	Working-mode cover, freeboard refrigeration device.
4	Reduced room draft, freeboard ratio of 1.0, superheated vapor.
5	Freeboard refrigeration device, reduced room draft.
6	Freeboard refrigeration device, freeboard ratio of 1.0.
7	Freeboard refrigeration device, dwell
8	Reduced room draft, swell, freeboard ratio of 1.0.
9	Freeboard refrigeration device, carbon adsorber.
10	Freeboard ratio of 1.0, superheated vapor, carbon adsorber.

The facility has opted to use Option 1 of the control combinations.

4. The permitee shall comply with the following outlined provisions for operation of the degreaser, which are further detailed in OAC 252:100-39-42(b).

a. The degreaser "working mode cover" shall operate easily and cause minimum disturbance to the vapor zone.

The degreaser is equipped with a working mode cover. The operator of the unit demonstrated the covers were easy to remove.

b. The unit shall have safety switches to shut off sump heat if the coolant is not circulating or exceeds the recommended level.

The degreaser unit is equipped with safety switches.

c. Since LIMCO has chosen Option 1 for Halogenated Degreasers shown in 40 CFR 63, Subpart T, the unit shall have a freeboard ratio no less than 1.0, a solvent super heater which shall maintain the solvent to a temperature no less than 10 degrees F above the boiling point of the solvent, and have a working mode cover. If, in the future, LIMCO decides one of the other options available in this subpart would be a better choice, LIMCO shall submit a written request describing their plan to the DEQ local office, and will not begin any change without written permission.

The degrease unit maintains a freeboard ratio no less than 1.0. The set temperature of for the unit using a super heater is 214°F. The boiler point of trichloroethylene is 188°F. The requirement is for no less than 188°F plus 10°F = 198°F.

d. LIMCO will properly train each person who will operate the degreaser before they are allowed to use the machine. The written syllabus used for training will be readily available to each trained operator.

The facility employs two (2) operators for the degreaser. One for each shift operated, the operators are the only personnel allowed to operate the degreaser. Training manuals are kept on-site.

5. All records necessary to demonstrate compliance with permit conditions shall be maintained on-site or at a readily accessible location for a period of at least two years following the date of recording and shall be available for review by regulatory personnel during normal business hours. Such records include, but are not necessarily limited to, the following.

a. Records sufficient to demonstrate that the weekly averages of the product usages do not exceed those shown in Specific Conditions #1, Table No .2 (exclusive of the vapor degreaser). If any of the GPD quantities in Table No. 2 are exceeded than compliance with that pollutant's MAAC must be demonstrated.

The facility does submit a semiannual exceedance report to the DEQ (Attachment D).

b. Degreaser records required by Specific Condition #3.

The facility does keep all requires required for 40 CFR Part 63 Subpart T and the Specific Conditions of this permit (Attachment C)

c. Material usages (monthly and 12-month rolling totals).

The facility does keep records of all material usages (Attachment E).

6. This permit supersedes all previous permits for this facility, which are now null and void.

Exit Interview/Summary

The inspector discussed the findings of the evaluation with Mr. Williams before leaving the facility.

Based on the information provided or obtained during this evaluation, no violations, or deviations were observed at the Facility.

OKLAHOMA DEPARTEMENT OF ENVIRONMENTAL QUALITY
AIR QUALITY DIVISION

MEMORANDUM **May 24, 2004**

TO: Dawson F. Lasseter, P.E., Chief Engineer, Air Quality

THROUGH: Richard Kienlen, P.E., Engr. Mgr. II, New Source Permits Section

THROUGH: Hal Wright, Regional Office At Tulsa

FROM: Jennifer Tyler, Regional Office At Tulsa

SUBJECT: Evaluation of Permit Application No. **99-026-O (M-2)**
Limco-Airepair, Inc. (LA)
5304 S. Lawton Ave.
Tulsa, Tulsa County, OK
Section 35, Township 19N, Range 12E
Directions: Taking Hwy 75 south you exit on I-44 East, take the first access road exit before merging onto I-44. Turn right on the access road and the first street you come to is South Lawton. Turn left onto Lawton, and the plant is at the end of the street on your right.

INTRODUCTION

Limco-Airepair, Inc. (LA) is requesting a modification of their current Operating Permit No. 99-026-O (M-1). The modification will include adding Xylene to Table No. 2 to correlate with Table No. 1, changing the wording of perchloroethylene to read trichloroethylene, and increasing the use of toluene, mineral spirits, IPA, and various paints.

PROCESS DESCRIPTION

In general, the plant has three product activities, i.e., the manufacture of different sizes of heat exchangers, the repair of various sizes of heat exchangers, and the repair of various sized aircraft air ducts.

Manufacturing Process

All ovens used for drying and soldering have a combined heat rate of 0.80 MMBTUH.

First, LA buys thin sheets of aluminum and stainless steel to use in the manufacture and repair of various products.

The steps in the manufacture of the heat exchangers are: material is cut, shaped, cleaned, welded/assembled, pressure tested, cleaned, heat dried, and coated. LA is required to test most of

the heat exchangers that are of a new design. The new units are performance tested for flow vs pressure drop of both the cooling medium (air) over the outside of the heat exchanger, and the medium to be cooled (engine lube oil, hydraulic fluid, etc.) which is on the inside of the exchanger. They are also tested for their heat transfer capabilities.

The steps in the repair of the heat exchangers are: inspected for flaws, repaired as necessary, pressure tested, cleaned, heat dried, and coated.

The steps in the repair of the air ducts are: inspected for flaws, cleaned, heat dried, repairs made, cleaned, and coated.

WELDING/SOLDERING

Various types of welding are used by LA, i.e., MIG, TIG, etc.

The soldering is done by placing assembled, "tinned" parts in natural gas fired ovens. Tinning is a process where the part is coated with the required amount of solder/flux on each joint to be soldered. The part is then heated to a temperature just above the melting point of the solder to allow the solder to melt and flow into the joint to be soldered. The part is then cooled to room temperature in ambient air.

SIZING/SHAPING

This is done with conventional sheet metal shears, sheet metal brakes, stamping machines, etc.

COATING

All products are cleaned and heat dried before coating.

The parts may get some combination of four types of coatings, i.e. paint, alodine, anodize, or silicone aluminum dip. Anodizing is done by an outside contractor; all others are done by LA.

Less than 10% of all products are spray-painted. The painting is done in a totally enclosed 12' x 12' x 8' high paint booth using a high volume low pressure spraying rig. The paint over-spray is sucked through a 95% efficient dry type filter at 3,500 acfm and exhausts 8 feet above grade through a 12-inch diameter duct.

The alodine process is done by soaking the part in a bath of nitric/chromic acid, which results in the desired surface getting a coat of aluminum oxide. This process does not use heat or electric current.

Silicone/Aluminum Dip solution consists of 8.4 gallons of Toluene, 1.0 gallon of Dow #805 silicone resin, and 1.6 pounds of aluminum powder. 61.5 gallons of this solution is placed in a 400-gallon dipping tank that is located in a totally enclosed room (10 ft x 12 ft x 10 ft high) within the shop. After the part is dipped (the part is completely coated) it is hung over the tank to drip and dry. The result is the part gets a thin coat of aluminum filled silicone. The air in the dipping room

is exhausted to the outside by a 22,000 acfm fan through a dry type filter in a 14 inch diameter duct at 10 ft above grade.

Anodizing is a process where a surface on the part gets a coating of aluminum by an electrolysis process. The part is made an anode as part of an electric circuit in a bath of acid, and as a result aluminum is deposited on the part's surface.

CLEANING

Parts are cleaned by different chemicals at different stages in the manufacturing/repair processes. The parts can be cleaned by hand wiping with solvents, acid, or caustic bath followed by water rinse or trichloroethylene degreaser.

The parts are dried after the cleaning process by electric heated ovens or natural gas fired ovens.

The facility operates 16 hours per day, 5.5 days per week, and 22 days a month, or 4,224 hours per year.

EMISSIONS

The significant air emissions are from the hand wiping of parts with solvents and coating. The air emissions from parts drying (combustion of natural gas), welding, and metal sizing/shaping are negligible, and will not be included in the following emissions analysis.

Purchases of acids and caustics used in the clean lines have been tabulated in the application. The replacement numbers are below any *de minimis* threshold. Much of the material is consumed in the cleaning operations, either through chemical combination with materials presented or through action as a flocculent. Potential emissions are negligible.

Limco estimates the use of trichloroethylene for the degreaser to be 520 gallons per year, which is shown in the following emission table. This includes material that was collected for reclamation. The emissions shown are the net amounts. The vapor degreaser holds 110 gallons of trichloroethylene and has a freeboard ratio of 1.3.

Materials used in cleaning and wipe down of the parts include 2,000 gallons per year (GPY) of MEK and 530 GPY of isopropyl alcohol. The use of mineral spirits in pressure testing is estimated to be 355 GPY. The facility uses 95 gallons of ten different primers, topcoats and solvents.

The following tables show the total facility VOC and HAPs emissions.

FACILITY TOTAL EMISSIONS [2]

USE	POLLUTANT	CAS NO.	HAP	CAT	De minimis		Permit limits	
					PPH	TPY	PPH	TPY
Dip Coat	Toluene	108883	Y	C	5.60	6.00	2.40	5.10
	Xylene	133027	Y	C	5.60	6.00	0.19	0.40
Degreaser	Trichloroethylene	79016	Y	A	0.57	0.60	1.50	3.20
Wipe	MEK	108101	N	C	5.60	6.00	3.20	6.80 [3]
Testing	Mineral Spirits	64742887	N	C	5.60	6.00	0.53	1.20
Wipe	IPA	67630	N	C	5.60	6.00	0.82	1.80
Paint [1]	Various	Various	NA	NA	(2)	(2)	0.22	0.50
TOTAL VOC								**19.00**
TOTAL HAPS								**8.70**

(1) If all the paint VOCs were Cat. A the de minimis would not be exceeded. (2) Does not include combustion emission pollutants, which are negligible. (3) EPA Screen3 modeling shows a maximum ground level concentration of 1,259 micrograms per cubic meter (ug/m^3) for an emission rate of 3.2 pounds per hour as compared to an allowable maximum acceptable ambient concentration (MAAC) of 59,000 ug/m^3.

The following table shows the VOC emission data comparison between the new permit and the existing permit in TPY.

Pollutant	Existing	New	Change
Paint	0.56	0.50	-0.06
Trichloroethylene	3.00	3.20	+0.20
Cleaning	7.50	6.80	-0.70
Testing	2.50	1.20	-1.30
Dip: Toluene	5.00	5.10	+0.10
Xylene	0.36	0.40	+0.04
Total	**18.92**	**17.20**	**-1.72**

OKLAHOMA AIR POLLUTION CONTROL RULES

OAC 252:100-1 (General Provisions) [Applicable]
Subchapter 1 includes definitions but there are no regulatory requirements.

OAC 252:100-3 (Air Quality Standards and Increments) [Applicable]
Subchapter 3 enumerates the primary and secondary ambient air quality standards and the significant deterioration increments. At this time, all of Oklahoma is in "attainment" of these standards.

OAC 252:100-4 (New Source Performance Standards) [Not Applicable]
Federal regulations in 40 CFR Part 60 are incorporated by reference as they exist on July 1, 2002, except for the following: Subpart A (Sections 60.4, 60.9, 60.10, and 60.16), Subpart B, Subpart C, Subpart Ca, Subpart Cb, Subpart Cc, Subpart Cd, Subpart Ce, Subpart AAA, and Appendix G. These requirements are addressed in the "Federal Regulations" section.

OAC 252:100-5 (Registration, Emission Inventory and Annual Operating Fees) [Applicable]
Subchapter 5 requires sources of air contaminants to register with Air Quality, file emission inventories annually, and pay annual operating fees based upon total annual emissions of regulated pollutants. An emission inventory was submitted and fees paid for previous years as required.

OAC 252:100-7 (Permits for Minor Facilities) [Applicable]
Subchapter 7 sets forth the permit application fees and the basic substantive requirements of permits for minor facilities. Since criteria pollutant emissions are less than 100 TPY for each pollutant, and emissions of HAPs will not exceed 10 TPY for any one HAP or 25 TPY for any aggregate of HAPs, the facility is defined as a minor source. As such, BACT is not required.

OAC 252:100-9 (Excess Emissions Reporting Requirements) [Applicable]
In the event of any release which results in excess emissions, the owner or operator of such facility shall notify the Air Quality Division as soon as the owner or operator of the facility has knowledge of such emissions, but no later than 4:30 p.m. the next working day. Within ten (10) working days after the immediate notice is given, the owner or operator shall submit a written report describing the extent of the excess emissions and response actions taken by the facility.

OAC 252:100-13 (Prohibition of Open Burning) [Applicable]
Open burning of refuse and other combustible material is prohibited except as authorized in the specific examples and under the conditions listed in this subchapter.

OAC 252:100-19 (Particulate Matter (PM)) [Applicable]
Section 19-4 regulates emissions of PM from new and existing fuel-burning equipment. AP-42 (7/98) Table 1.4 -1 lists natural gas TPM emissions to be 7.6 lbs/million scf or about 0.0076 lbs/MMBTU, which is in compliance.

OAC 252:100-25 (Visible Emissions and Particulates) [Applicable]
No discharge of greater than 20% opacity is allowed except for short-term occurrences that consist of not more than one six-minute period in any consecutive 60 minutes, not to exceed three such periods in any consecutive 24 hours. In no case shall the average of any six-minute period exceed 60% opacity. Based on past experience with this facility, the potential for violating the standards is negligible.

OAC 252:100-29 (Fugitive Dust) [Applicable]
No person shall cause or permit the discharge of any visible fugitive dust emissions beyond the property line on which the emissions originated in such a manner as to damage or to interfere with the use of adjacent properties, or cause air quality standards to be exceeded, or to interfere with the maintenance of air quality standards. Under normal operating conditions, this facility

has negligible potential to violate this requirement; therefore it is not necessary to require specific precautions to be taken.

OAC 252:100-31 (Sulfur Compounds) [Applicable]
Fuel-burning equipment at this facility uses commercial natural gas. The AP-42 (2/98), Table 1.4-2 emission factor of 0.6 pounds of SO_2 per million cubic feet equates to approximately 0.0006 lbs/MMBTU. This is well below the new equipment standard of 0.2 lbs/MMBTU for gas fuel.

OAC 252:100-33 (Nitrogen Oxides) [Not Applicable]
This subchapter limits new gas-fired fuel-burning equipment with rated heat input greater than or equal to 50 MMBTUH to emissions of 0.2 lbs of NO_x per MMBTU, three-hour average. There are no equipment items that exceed the 50 MMBTUH threshold.

OAC 252:100-35 (Carbon Monoxide) [Not Applicable]
None of the following affected processes are located at this facility: gray iron cupola, blast furnace, basic oxygen furnace, petroleum catalytic cracking unit, or petroleum catalytic reforming unit.

OAC 252:100-37 (Volatile Organic Compounds) [Not Applicable]
-15 Storage of VOCs. This facility does not store any hydrocarbon liquids, and is not an affected source under this section.
-36 Fuel-Burning Equipment. Under this section Limco is required to adjust the burners for essentially complete fuel combustion. Limco-Airepair burns only commercial-grade natural gas in the combustion units, which promotes compliance. The facility anticipates remaining in compliance under normal operations.
-25 This section limits the VOC content of coating used in coating lines or operations for any facility with VOC emissions in excess of 100 lbs/day. Coating parts operations will consume less than 50 pounds of VOC per day, so the facility is exempt.

OAC 252:100-39 (VOC in Nonattainment and Former Nonattainment Areas) [Applicable]
Part 7, Sections 46 concerns coating of metal parts and products. Per 39-46 (h), Limco is exempt as the VOC emissions from surface coating and cleaning do not exceed 10 TPY.

OAC 252:100-41 (Hazardous Air Pollutants and Toxic Air Contaminants) [Applicable]
Part 3 addresses hazardous air contaminants. NESHAP, as found in 40 CFR Part 61, are adopted by reference as they exist on July 31, 2002, with the exception of Subparts B, H, I, K, Q, R, T, W and Appendices D and E, all of which address radionuclides. In addition, General Provisions as found in 40 CFR Part 63, Subpart A, and the Maximum Achievable Control Technology (MACT) standards as found in 40 CFR Part 63, Subparts F, G, H, I, J, L, M, N, O, Q, R, S, T, U, W, X, Y, AA, BB, CC, DD, EE, GG, HH, II, JJ, KK, LL, MM, OO, PP, QQ, RR, SS, TT, UU, VV, WW, XX, YY, CCC, DDD, EEE, GGG, HHH, III, JJJ, LLL, MMM, NNN, OOO, PPP, QQQ, RRR, TTT, UUU, VVV, XXX, CCCC, GGGG, HHHH, NNNN, SSSS, TTTT, UUUU, VVVV, and XXXX are hereby adopted by reference as they exist on July 31, 2002. These standards apply to both existing and new sources of HAPs. These requirements are covered in the "Federal Regulations" section.

Part 5 is a **state-only** requirement governing toxic air contaminants. New sources (constructed after March 9, 1987) emitting any category "A" pollutant above de minimis levels must perform a BACT analysis, and if necessary, install BACT. All sources are required to demonstrate that emissions of any toxic air contaminant that exceed the de minimis level do not cause or contribute to a violation of the maximum acceptable ambient concentration (MAAC). There are two toxics that exceed their de minimis, MEK and Trichloroethylene. Trichloroethylene is a HAP and Category A toxic generated by the vapor degreaser, which is subject to a Maximum Achievable Control Technology (MACT) standard, 40 CFR Part 63, Subpart T. As such, Trichloroethylene is exempt from this part per §41-43(a)(3). Screen3 modeling for MEK has a ground-level concentration of 1,259 $\mu g/m^3$ as compared to a MAAC of 59,000 $\mu g/m^3$. This facility is in compliance.

OAC 252:100-43 (Testing, Monitoring, and Recordkeeping) [Applicable]
This subchapter provides general requirements for testing, monitoring and recordkeeping and applies to any testing, monitoring or recordkeeping activity conducted at any stationary source. To determine compliance with emissions limitations or standards, the Air Quality Director may require the owner or operator of any source in the state of Oklahoma to install, maintain and operate monitoring equipment or to conduct tests, including stack test, of the air contaminant source. All required testing must be conducted by methods approved by the Air Quality Director and under the direction of qualified personnel. A notice-of-intent to test and a testing protocol shall be submitted to Air Quality at least 30 days prior to any EPA Reference Method stack tests. Emissions and other data required to demonstrate compliance with any federal or state emission limit or standard, or any requirement set forth in a valid permit shall be recorded, maintained, and submitted as required by this subchapter, an applicable rule, or permit requirement. Data from any required testing or monitoring not conducted in accordance with the provisions of this subchapter shall be considered invalid. Nothing shall preclude the use, including the excusive use, or any credible evidence or information relevant to whether a source would have been in compliance with applicable requirements if the appropriate performance or compliance test or procedure had been performed.

FEDERAL REGULATIONS

PSD, 40 CFR Part 52 [Not Applicable]
PSD does not apply. Final total emissions are less than the threshold of 250 TPY of any single regulated pollutant and the facility is not one of the 26 specific industries with a threshold of 100 TPY.

NSPS, 40 CFR Part 60 [Not Applicable]
There are no sources or facilities at this site affected by any NSPS subpart.

NESHAP, 40 CFR Part 61 [Not Applicable]
There are no emissions of any of the regulated pollutants: arsenic, asbestos, benzene, beryllium, coke oven emissions, mercury, radionuclides, or vinyl chloride.

NESHAP, 40 CFR Part 63 [Subpart T Applicable]
Subpart T (Halogenated Solvent Cleaners). This standard was published in the Federal Register on December 2, 1994, and compliance by new degreasers was required immediately upon startup. The facility is an area source subject to Subpart T, and has complied with the initial notification requirement. A yearly report is required to be sent to the local DEQ office and an additional report concerning any emergency operation which was not in compliance, also sent to the local DEQ office. The first annual report was due on January 15, 2001, and every 12 months thereafter. The applicant has selected Option 1 from Table 1 of §63.463 to demonstrate compliance. This option requires a combination of a working-mode cover, freeboard ratio of 1.0, and superheated vapor. The applicant is in compliance.
Subpart GG (Aerospace Manufacturing and Rework Facilities). The facility engages in the type of activity described in paragraph 63.741 (a), but the facility does not qualify as a major source under the definition in 40 CFR 63.2. In addition, the subassemblies involved are not critical to structural integrity or flight performance, so the activities would also be excluded under §63.741(f). The facility is not an affected source and is not subject to this subpart.

Chemical Accident Prevention Provisions, 40 CFR Part 68 [Not Applicable]
This facility does not process or store more than the threshold quantity of any regulated substance (Section 112r of the Clean Air Act 1990 Amendments). More information on this federal program is available on the web page: www.epa.gov/ceppo.

Stratospheric Ozone Protection, 40 CFR Part 82 [Not Applicable]
This facility does not produce, consume, recycle, import, or export any controlled substances or controlled products as defined in this part, nor does this facility perform service on motor (fleet) vehicles that involves ozone-depleting substances. Therefore, as currently operated, this facility is not be subject to these requirements. To the extent that the facility has air-conditioning units that apply, the permit requires compliance with Part 82.

COMPLIANCE

Tier Classification and Public Review

This application has been classified as **Tier I** based on the request for an operating permit for an existing minor source. The status of all permit actions is available to the public in the Air Quality section of the DEQ Web Page at page: www.deq.state.ok.us

The applicant has submitted an affidavit that they are not seeking a permit for land use or for any operation upon land owned by others without their knowledge. The affidavit certifies that the applicant owns the real property.

Inspection

No inspection was performed on this facility because the facility did not remove or construct any new equipment. The modification requested was an increase in usage and a change in wording only.

Fee Paid

Permit modification fee of $500 was paid on February 20, 2004.

SUMMARY

There are no active Air Quality compliance or enforcement issues that would affect the issuance of this permit. Issuance of the modified operating permit is recommended.

5. All records necessary to demonstrate compliance with permit conditions shall be maintained on-site or at a readily accessible location for a period of at least two years following the date of recording and shall be available for review by regulatory personnel during normal business hours. Such records include, but are not necessarily limited to, the following.

    a. Records sufficient to demonstrate that the weekly averages of the product usages do not exceed those shown in Specific Condition #1, Table No.2 (exclusive of the vapor degreaser). If any of the GPD quantities in Table No. 2 are exceeded then compliance with that pollutant's MAAC must be demonstrated.
    b. Degreaser records required by Specific Condition #3.
    c. Material usages (monthly and 12-month rolling totals).

6. This permit supercedes all previous permits for this facility, which are now null and void.

PERMIT

AIR QUALITY DIVISION
STATE OF OKLAHOMA
DEPARTMENT OF ENVIRONMENTAL QUALITY
707 N. ROBINSON STREET, SUITE 4100

Material Safety Data Sheet
Trichloroethylene MSDS

Section 1: Chemical Product and Company Identification

Product Name: Trichloroethylene

Catalog Codes: SLT3310, SLT2590

CAS#: 79-01-6

RTECS: KX4560000

TSCA: TSCA 8(b) inventory: Trichloroethylene

CI#: Not available.

Synonym:

Chemical Formula: C2HCl3

Contact Information:

Section 2: Composition and Information on Ingredients

Composition:

Name	CAS #	% by Weight
Trichloroethylene	79-01-6	100

Toxicological Data on Ingredients: Trichloroethylene: ORAL (LD50): Acute: 5650 mg/kg [Rat]. 2402 mg/kg [Mouse]. DERMAL (LD50): Acute: 20001 mg/kg [Rabbit].

Section 3: Hazards Identification

Potential Acute Health Effects: Hazardous in case of skin contact (irritant, permeator), of eye contact (irritant), of ingestion, of inhalation.

Potential Chronic Health Effects:
CARCINOGENIC EFFECTS: Classified + (PROVEN) by OSHA. Classified A5 (Not suspected for human.) by ACGIH. MUTAGENIC EFFECTS: Not available. TERATOGENIC EFFECTS: Not available. DEVELOPMENTAL TOXICITY: Not available. The substance is toxic to kidneys, the nervous system, liver, heart, upper respiratory tract. Repeated or prolonged exposure to the substance can produce target organs damage.

Section 4: First Aid Measures

Eye Contact:

Check for and remove any contact lenses. Immediately flush eyes with running water for at least 15 minutes, keeping eyelids open. Cold water may be used. Do not use an eye ointment. Seek medical attention.

Skin Contact:
After contact with skin, wash immediately with plenty of water. Gently and thoroughly wash the contaminated skin with running water and non-abrasive soap. Be particularly careful to clean folds, crevices, creases and groin. Cover the irritated skin with an emollient. If irritation persists, seek medical attention. Wash contaminated clothing before reusing.

Serious Skin Contact:
Wash with a disinfectant soap and cover the contaminated skin with an anti-bacterial cream. Seek medical attention.

Inhalation: Allow the victim to rest in a well ventilated area. Seek immediate medical attention.

Serious Inhalation:
Evacuate the victim to a safe area as soon as possible. Loosen tight clothing such as a collar, tie, belt or waistband. If breathing is difficult, administer oxygen. If the victim is not breathing, perform mouth-to-mouth resuscitation. Seek medical attention.

Ingestion:
Do not induce vomiting. Loosen tight clothing such as a collar, tie, belt or waistband. If the victim is not breathing, perform mouth-to-mouth resuscitation. Seek immediate medical attention.

Serious Ingestion: Not available.

Section 5: Fire and Explosion Data

Flammability of the Product: May be combustible at high temperature.

Auto-Ignition Temperature: 420°C (788°F)

Flash Points: Not available.

Flammable Limits: LOWER: 8% UPPER: 10.5%

Products of Combustion: These products are carbon oxides (CO, CO2), halogenated compounds.

Fire Hazards in Presence of Various Substances: Not available.

Explosion Hazards in Presence of Various Substances:
Risks of explosion of the product in presence of mechanical impact: Not available. Risks of explosion of the product in presence of static discharge: Not available.

Fire Fighting Media and Instructions:
SMALL FIRE: Use DRY chemical powder. LARGE FIRE: Use water spray, fog or foam. Do not use water jet.

Special Remarks on Fire Hazards: Not available.

Special Remarks on Explosion Hazards: Not available.

Section 6: Accidental Release Measures

Small Spill: Absorb with an inert material and put the spilled material in an appropriate waste disposal.

Large Spill:
Absorb with an inert material and put the spilled material in an appropriate waste disposal. Be careful that the product is not present at a concentration level above TLV. Check TLV on the MSDS and with local authorities.

Section 7: Handling and Storage

Precautions:
Keep locked up Keep away from heat. Keep away from sources of ignition. Empty containers pose a fire risk, evaporate the residue under a fume hood. Ground all equipment containing material. Do not ingest. Do not breathe gas/fumes/ vapour/

spray. Wear suitable protective clothing In case of insufficient ventilation, wear suitable respiratory equipment If ingested, seek medical advice immediately and show the container or the label. Avoid contact with skin and eyes

Storage:
Keep container dry. Keep in a cool place. Ground all equipment containing material. Carcinogenic, teratogenic or mutagenic materials should be stored in a separate locked safety storage cabinet or room.

Section 8: Exposure Controls/Personal Protection

Engineering Controls:
Provide exhaust ventilation or other engineering controls to keep the airborne concentrations of vapors below their respective threshold limit value. Ensure that eyewash stations and safety showers are proximal to the work-station location.

Personal Protection:
Splash goggles. Lab coat. Vapor respirator. Be sure to use an approved/certified respirator or equivalent. Gloves.

Personal Protection in Case of a Large Spill:
Splash goggles. Full suit. Vapor respirator. Boots. Gloves. A self contained breathing apparatus should be used to avoid inhalation of the product. Suggested protective clothing might not be sufficient; consult a specialist BEFORE handling this product.

Exposure Limits:
TWA: 50 STEL: 200 (ppm) from ACGIH (TLV) TWA: 269 STEL: 1070 (mg/m3) from ACGIH Consult local authorities for acceptable exposure limits.

Section 9: Physical and Chemical Properties

Physical state and appearance: Liquid.

Odor: Not available.

Taste: Not available.

Molecular Weight: 131.39 g/mole

Color: Clear Colorless.

pH (1% soln/water): Not available.

Boiling Point: 86.7°C (188.1°F)

Melting Point: -87.1°C (-124.8°F)

Critical Temperature: Not available.

Specific Gravity: 1.4649 (Water = 1)

Vapor Pressure: 58 mm of Hg (@ 20°C)

Vapor Density: 4.53 (Air = 1)

Volatility: Not available.

Odor Threshold: 20 ppm

Water/Oil Dist. Coeff.: The product is equally soluble in oil and water; log(oil/water) = 0

Ionicity (in Water): Not available.

Dispersion Properties: See solubility in water, methanol, diethyl ether, acetone.

Solubility:
Easily soluble in methanol, diethyl ether, acetone. Very slightly soluble in cold water.

Section 10: Stability and Reactivity Data

Stability: The product is stable.

Instability Temperature: Not available.

Conditions of Instability: Not available.

Incompatibility with various substances: Not available.

Corrosivity:
Extremely corrosive in presence of aluminum. Non-corrosive in presence of glass.

Special Remarks on Reactivity: Not available.

Special Remarks on Corrosivity: Not available.

Polymerization: No.

Section 11: Toxicological Information

Routes of Entry: Dermal contact. Eye contact. Inhalation. Ingestion.

Toxicity to Animals:
Acute oral toxicity (LD50): 2402 mg/kg [Mouse]. Acute dermal toxicity (LD50): 20001 mg/kg [Rabbit].

Chronic Effects on Humans:
CARCINOGENIC EFFECTS: Classified + (PROVEN) by OSHA. Classified A5 (Not suspected for human.) by ACGIH. The substance is toxic to kidneys, the nervous system, liver, heart, upper respiratory tract.

Other Toxic Effects on Humans: Hazardous in case of skin contact (irritant, permeator), of ingestion, of inhalation.

Special Remarks on Toxicity to Animals: Not available.

Special Remarks on Chronic Effects on Humans: Passes through the placental barrier in human. Detected in maternal milk in human.

Special Remarks on other Toxic Effects on Humans: Not available.

Section 12: Ecological Information

Ecotoxicity: Not available.

BOD5 and COD: Not available.

Products of Biodegradation:
Possibly hazardous short term degradation products are not likely. However, long term degradation products may arise.

Toxicity of the Products of Biodegradation: The products of degradation are more toxic.

Special Remarks on the Products of Biodegradation: Not available.

Section 13: Disposal Considerations

Waste Disposal:

Section 14: Transport Information

DOT Classification: CLASS 6.1: Poisonous material.

Identification: : Trichloroethylene : UN1710 PG: III

Special Provisions for Transport: Not available.

Section 15: Other Regulatory Information

Federal and State Regulations:
California prop. 65: This product contains the following ingredients for which the State of California has found to cause cancer, birth defects or other reproductive harm, which would require a warning under the statute: Trichloroethylene California prop. 65: This product contains the following ingredients for which the State of California has found to cause cancer which would require a warning under the statute: Trichloroethylene Pennsylvania RTK: Trichloroethylene Florida: Trichloroethylene Minnesota: Trichloroethylene Massachusetts RTK: Trichloroethylene New Jersey: Trichloroethylene TSCA 8(b) inventory: Trichloroethylene CERCLA: Hazardous substances.: Trichloroethylene

Other Regulations: OSHA: Hazardous by definition of Hazard Communication Standard (29 CFR 1910.1200).

Other Classifications:

WHMIS (Canada):
CLASS D-1B: Material causing immediate and serious toxic effects (TOXIC). CLASS D-2B: Material causing other toxic effects (TOXIC).

DSCL (EEC):
R36/38- Irritating to eyes and skin. R45- May cause cancer.

HMIS (U.S.A.):

Health Hazard: 2

Fire Hazard: 1

Reactivity: 0

Personal Protection: h

National Fire Protection Association (U.S.A.):

Health: 2

Flammability: 1

Reactivity: 0

Specific hazard:

Protective Equipment:
Gloves. Lab coat. Vapor respirator. Be sure to use an approved/certified respirator or equivalent. Wear appropriate respirator when ventilation is inadequate. Splash goggles.

Section 16: Other Information

References: Not available.

Other Special Considerations: Not available.

SUBJECT: Full Compliance Evaluation (FCE) at **Limco Airepair Inc.**
5304 S. Lawton Ave.
Tulsa, Tulsa County, Oklahoma
Section 35, T19N, and R12E
Directions: Taking Hwy 75 south. Exit on I-44 East; take the first access road exit before margining onto I-44. Turn right on the access road and the first street you come to is South Lawton. Turn left onto Lawton, and the plant is at the end of the street on the right.
AIRS ID #143-00155
FCE #04057

Introduction

On Tuesday November 18, 2008, between the hours of 0800 and 1050, an unannounced full compliance evaluation was conducted at the above referenced facility. Helen King, Environmental Programs Specialist, with the Oklahoma Department of Environmental Quality --- Air Quality Division in Tulsa conducted the evaluation. Mr. Bill William, Facility Manager and Mr. Dan Craft, Chief Operating Office, represented the facility. This facility was evaluated to determine its compliance with state and federal regulations and its State of Oklahoma Air Quality Permit #**99-026-O (M-2)** issued on May 24, 2004. The inspector provided proper credentials before entering the facility.

History and Process Description

Limco manufactures, repairs various sizes of heat exchangers, and repair various sized air ducts for commercial, military, and private aircraft (SIC 3728). Processes include but not limited to manufacturing, welding/soldering, sizing/shaping, coating, cleaning, and testing. The facility is equipped with a 12' x 12' paint booth using a high volume low pressure Finishline spray gun, a 400-gallon dipping tank containing a silicon/aluminum dip solution, five (5) natural gas ovens, and one trichloroethylene vapor degreaser.
The facility operates two (2) eight (8) hour shifts and employs 150 employees. The facility was established in 1946 and was originally named Long Island Metal Company.

Permit No.	**Date Issued**	**Reason**
99-026-O	01/14/2000	Initial Operating Permit
99-026-O (M-1)	10/31/2001	Combined two operating facilities into one
99-026-O (M-2)	05/24/2004	Modify emissions limits and update material

Emissions/Source Classification

This facility is classified a "synthetic minor" source for volatile organic compounds (VOCs) and hazardous air pollutants (HAPs). The HAPs are mostly trichloroethylene and toluene.

Reported Emissions**

Pollutant	**2005 TPY**	**% Change**	**2006 TPY**	**% Change**	**2007 TPY**
Volatile Organic Compounds (Non-HAP)	8.576	**-17.44**	7.08	**8.18**	7.711
Methyl isobutyl ketone	0.042	**-80.95**	0.008	**73.33**	0.03
Toluene	4.831	**-14.51**	4.13	**9.03**	4.54
Trichloroethylene	2.66	**7.00**	2.86	**4.67**	3.0
Xylenes (mixed isomers)	0.02	**81.48**	0.108	**-35.19**	0.07

**Data from annual emission inventories (Attachment B).
Decrease and increase in emissions for xylenes and methyl isobutyl ketone (MIBK) are the result of work practices.

State/Federal Regulatory Applicability

Oklahoma Air Pollution Control Rules

OAC 252:100-39 (VOC in Nonattainment and Former Nonattainment Areas)
Part 7, Section 46 concerns coating of metals parts and products.
OAC 252:100-39-47
Per 49-46 (h), this facility is not subject to these rules because the VOC emissions from surface coating and cleaning do not exceed 10 TPY.

Federal Regulations

NESHAP, 40 CFR Part 63
Subpart T, (Halogenated Solvent Cleaners)
§63.460 Applicability and designation of source.

(a) The provisions of this subpart apply to each individual batch vapor, in-line vapor, in-line cold, and batch cold solvent cleaning machine that uses any solvent containing methylene chloride, perchloroethylene, trichloroethylene, 1,1,1-trichloroethane, carbon tetrachloride, or chloroform, or any combination of these halogenated HAP solvents, in a total concentration greater than 5 percent by weight, as a cleaning and/or drying agent.

The vapor degreaser at this facility uses trichloroethylene as a solvent.

§63.466 Monitoring procedures

(a)(1) If a free board refrigeration device is used to comply with these standards, the owner or operator shall use a thermometer or thermocouple to measure the temperature at the center of the air blanket during the idling mode.

This facility provided the set temperature of 214°F and the actual temperature of 181°F. No records or daily log sheets were provided to show compliance.

(b)(1) If a cover (working-mode, downtime-mode, and /or idling-mode cover) is used to comply with these standards, the owner or operator shall conduct a visual inspection to determine if the cover is opening and closing properly, completely covers the cleaning machine openings when closed, and is free of cracks, holes, and other defects.

The vapor degreaser was not in operation at the time of this evaluation but was properly covered. Mr. Tom Weyley demonstrated the opening and closing of the cover to the inspector.

(b)(2) If a dwell is used, the owner or operator shall determine the actual dwell time by measuring the period of time that parts are held within the freeboard area of the solvent cleaning machine after cleaning.

The facility has never measured dwell time.

(c)(1) The owner or operator shall determine the hoist speed by measuring the time it takes for the hoist to travel a measured distance. The speed is equal to the distance in meters divided by the time in minutes (meters per minute).

The facility has determined the hoist speed at sixteen (16) fpm (feet per minute) (Attachment D). The facility could not provide records or daily logs recording hoist speed.

(c)(2) The monitoring shall be conducted monthly. If after the first year, no exceedances of the hoist speed are measured, the owner or operator may begin monitoring the hoist speed quarterly.

The facility does not monitor the hoist speed monthly or quarterly per this permit.

§63.467 Recordkeeping requirements.

(a) Each owner or operator of a batch vapor or in-line solvent cleaning machine complying with the provisions of §63.463 shall maintain records in written or electronic form specified in paragraphs (a)(1) through (7) of this section for the lifetime of the machine.

This facility does not maintain records for the batch vapor degreaser. An operating manual and MSDS are kept onsite for the operator. The facility did not provide copies of the manual or MSDS to the inspector.

(a)(1) Owner's manuals, or if not available, written maintenance and operating procedures, the solvent cleaning machine and control equipment.

Mr. Weyley showed the inspector the maintenance and operating manual for the vapor degreaser. It is located at the equipment area along with the MSDS for trichloroethylene. The facility did not provide any records to the inspector.

(a)(3) If a dwell is used to comply with these standards, records of the tests required in §63.465(d) to determine an appropriate dwell time for each part or parts basket.

The facility has never tested to determine dwell time to comply with these standards.

(a)(5) Records of the halogenated HAP solvent content for each solvent used in a solvent cleaning machine subject to the provisions of this subpart.

The facility keeps records of monthly addition and removal of solvent from the cleaning machine (Attachment E). The records were incomplete.

(c)(1) The dates and amounts of solvent that are added to the solvent cleaning machine.

The facility does keep records of solvent addition to the cleaning machine (Attachment E).

(c)(2) The solvent composition of wastes removed from cleaning machines as determined using the procedure described in §63.465(c)(2).

The facility contracts with Reinco Environmental to transport and dispose of the solvent waste from the machine. The facility could not provide any test results for the waste.

(c)(3) Calculation sheets showing how monthly emissions and the rolling 3-month average emissions from the solvent cleaning machine were determined, and the results of all calculations.

The facility cannot provide a calculation sheet showing how monthly and rolling 3-month average emissions are calculated.

§63.468 Reporting Requirements

(f) Each owner or operator of a batch vapor or in-line solvent cleaning machine complying with the provisions of §63.463 shall submit an annual report by February 1 of the year following the one for which the reporting is being made. This report shall include the requirements specified in paragraphs (f)(1) through (f)(3) of this section.

This facility has not submitted an annual report since January 26, 2005.

(f)(1) A signed statement from the facility owner or his designee stating that, "All operators of solvent cleaning machines have received training on the proper operation of solvent cleaning machines and their control devices sufficient to pass the test required in §63.463(d)(1)."

The inspector spoke with Mr. Tom Weyley, the only operator for the cleaning machine. Mr. Weyley stated he was properly trained to operate the machine and showed the inspector the operating procedure in a binder on the desk.

(f)(2) An estimate of solvent consumption or each solvent cleaning machine during the reporting period.

The facility does not report this.

(f)(3) The reports required under paragraphs (f) and (g) of this section can be combined into a single report for each facility.

The facility does not submit a report for MACT Subpart N.

(g) Each owner or operator of a batch vapor or in-line solvent cleaning machine complying with the provisions of §63.464 shall submit a solvent emission report every year. This solvent emission report shall contain the requirements specified in paragraphs (g)(1) through (g)(4) of this section.

The facility does not submit a solvent emission report annually.

(g)(1) The size and type of each unit subject to this subpart (solvent/air interface area or cleaning capacity).

The facility did not provide manufactures data for the cleaning machine to the inspector.

(g)(2) The average monthly solvent consumption for the solvent cleaning machine in kilograms per month.

The facility could not provide documentation of monthly solvent consumption.

(g)(3) The 3-month monthly rolling average solvent emission estimates calculated each month using the method as described in §63.465(c).

The facility could not provide the 3-monthly rolling average solvent emissions.

(g)(4) The reports required under paragraphs (f) and (g) of this section can be combined into a single report for each facility.

The facility does not submit this report to the Department.

(h) Each owner or operator of a batch vapor or in-line solvent cleaning machine shall submit an exceedance report to the Administrator semiannually except when, the Administrator determines on a case-by-case basis that more frequent reporting is necessary to accurately assess the compliance status of the source or, an exceedance occurs. Once an exceedance has occurred the owner or operator shall follow a quarterly reporting format until a request to reduce reporting frequency under paragraph (i) of this section is approved. Exceedance reports shall be delivered or postmarked by the 30th day following the end of each calendar half or quarter, as appropriate. The exceedance report shall include the applicable information in paragraphs (h)(1) through (3) of this section.

This facility has not submitted a semiannual exceedance report for the solvent cleaning machine since January 26, 2005.

(h)(1) Information on the actions taken to comply with §63.463 (e) and (f). this information shall include records of written or verbal orders for replacement parts, a description of the repairs made, and additional monitoring conducted to demonstrate that monitored parameters have returned to accepted levels.

The facility stated maintenance and repair has been done on the cleaning machine but not reported to the Department.

(h)(2) If an exceedance has occurred, the reason for the exceedance and a description of the actions taken.

This facility has not reported an exceedance.

(h)(3) If no exceedances of a parameter have occurred, or a piece of equipment has not been inoperative, out of control, repaired, or adjusted, such information shall be stated in the report.

This facility does not submit a report to the Department.

(i)An owner or operator who is required to submit an exceedance report on a quarterly (or more frequent) basis may reduce the frequency of reporting to semiannual if the conditions in paragraphs (i0(1) through (i)(3) of this section are met.

This facility has not submitted an exceedance report since January 26, 2006.

(i)(1) The source has demonstrated a full year of compliance without an exceedance.

The inspector did not receive or review any documentation showing a full year of compliance.

(i)(2) The owner or operator continues to comply with all relevant recordkeeping and monitoring requirements specified subpart A (General Provisions) and in this subpart.

This facility is in non-compliance for all recordkeeping and monitoring of equipment specified in subpart A and subpart T.

(i)(3) The Administrator does not object to a reduced frequency of reporting for the affected source as provided in paragraph (e)(3)(iii) of subpart A (General Provisions).

The Administrator never received a letter from the facility requesting reduce frequency of reporting.

Evaluation/Enforcement History

FCE #01293 conducted on 12/30/03. No violations found.
PCE #00042 conducted on 10/24/01. Initial compliance evaluation.

Enforcement Case #422, opened 04/26/99 and closed 09/13/2000, was for operating without a permit.

Annual Compliance Certifications/Semiannual Reports

This facility is not subject to ACCs or SARs. They are subject to a semiannual report for NESHAP Subpart T.

Excess Emissions

No excess emissions have been reported from this facility.

On-Site Evaluation

The inspector was greeted in the lobby of the facility by Mr. Williams and escorted to a conference area. Mr. Craft joined us for the discussion of the permit and subpart T. The inspector explained the purpose of the evaluation and requested to review records. This facility has not been evaluated since 2003 and Mr. Williams and Mr. Craft were unaware of the required records or reporting. Mr. Craft stated the facility has tried a non-solvent degreaser called EnSolv but found it didn't work as well so the facility went back to using trichloroethylene. Mr. Craft also stated the facility plans to upgrade the vapor degreaser next year and try using a non-solvent degreaser again. On November 20, 2008, the inspector spoke with Mr. Greg Steele, Consultant for the facility. Mr. Steele was under the impression the facility had changed to a non-solvent cleaner and was no longer required to submit Subpart T reports. The facility does submit annual emission inventories with trichloroethylene listed as a pollutant (Attachment B). Mr. Williams and Mr. Craft escorted the inspector on the physical tour of the facility. The paint booth is a 12'X 12" enclosed room. The filtering system is two stages. The paint booth was operating with the door shut. No spraying was being conducted in the booth. The pressure magnehilic showed 0.10 inches of H_20 through the filters. A Finishline HPLV spray gun is used when coating. The filters look clean and new. Mr. Williams stated the facility contracts with Red Bud filtering company to monitor and change the filters. No rags or solvent containers were exposed to the atmosphere. All paint and solvent containers were locked in yellow chemical storage cabinets. Different parts depending on the metal alloy are cleaned either by handwipe or by degreaser. The metal alloy determines how long the part(s) are in the degreaser. The degreaser was not in operation at the time of this inspection. The inspector observed the cover was closed and properly attached to the unit. The area was clean of any solvent. The inspector spoke with Mr.

Tom Weyley, degreaser operator concerning record keeping. Mr. Weyley showed the inspector the record logs for parts to be cleaned. Maintenance and operating manual are kept in the area along with the MSDS for trichloroethylene. Solvent usage is reported for inventory purposes. The degreaser was equipped with a chiller, correct freeboard, hoist and emergency power switch. After cleaning the parts are dried in natural gas ovens. The inspector observed the cleaning tanks containing different chemicals for cleaning and etching. The parts are rinsed with water and dried in ovens before coating processes. A small enclosed room contains the dip tank. The 400-gallon dip tank is used to coat parts with silicone/aluminum and left to dry over the dip tank. The parts are left to dry over the dip tank. This room vents to the outside with fresh air vented back in. The recordkeeping and reporting issues were discussed before the inspector left the facility.

Specific Condition for Permit #99-026-O (M-2)

1. Points of emission include the cleaning, degreasing, painting, and other coating areas. The significant emissions from all sources are listed below.

Table No.1

USE	**POLLUTANT**	**Permit Limits**	
		PPH	**TPY**
Dip Coat	Toluene	2.40	5.1
	Xylene	0.19	0.40
	805 Resin	0.20	0.43
Degreaser	Trichloroethylene	1.50	3.20
Wipe	MEK	3.20	6.80
Testing	Mineral Spirits	0.53	1.20
Wipe	IPA	0.82	1.80
Paint	Various	0.22	0.50

Reported Emissions*

Emission Points	**Pollutant**	**2005 TPY**	**2006 TPY**	**2007 TPY**
Wipedown	Volatile Organic (non-HAPs)	7.76	4.90	4.77
Vapor Degreaser	Tricholoethylene	2.66	2.86	3.0
	Volatile Organics (non-HAP)	-0-	-0-	2.2
Paint Booth	Volatile Organic (non-HAPs)	0.316	0.31	0.091
	Toluene	0.051	0.03	0.03
	Xylene	NR**	0.03	0.03
	Methyl isobutyl ketone	0.042	0.008	0.03
Dip Coating	Toluene	4.78	4.10	4.51

	Volatile Organics (non-HAP)	-0-	-0-	0.06
Testing	Volatile Organics (non-HAP)	0.5	1.87	0.59
	Xylenes	0.02	0.078	0.04

*Data taken from annual emission inventories (Attachment B)
NR -- Not Reported
Annual emission inventories submitted to the Department show the facility to be in compliance with emission permit limits.

The emissions shown in the preceding table will not be exceeded under normal operating conditions provided the facility's use of materials shown in the following table is not exceeded.

Table No. 2

Materials	GPD (1)	GPY
Toluene	5.4	1,400
Xylene	0.43	110
805 Resin	0.60	157
Trichloroethylene	2.00	520
MEK	7.70	2,000
Mineral Spirits	1.37	355
IPA	2.04	530
Paints, various	0.39	100

(1) These gallons/day are work-week averages.

The facility could not provide material usage records to the inspector for the period requested.

2. Alternate products and production quantities can be varied under the following conditions.

   a. Emissions do not exceed 10 TPY for a single HAP or 25 TPY of the HAPs aggregate.
   b. A change in either production or products is permitted provided there would be no increase in the quantity of the resulting emissions. Additionally, the use of alternate products shall not cause the total of each toxic to exceed the de minimis levels or the MAAC established by OAC 252:100-41.
   c. The facility shall notify the DEQ in writing 30 days before making any operational changes that would cause significant air emissions.
   d. Maintain written documentation to show compliance with all current Federal, State and Local Regulations, Rules, and Codes, including modeling where compliance with a MAAC may be in question.

The facility is in non-compliance for failure to maintain written documentation to show compliance.

3. The degreaser is subject to NESHAP (40 CFR 63) Subpart T, Standards for Halogenated Solvent Cleaning, as published in the Federal Register on December 2, 1994, and shall be in compliance with this federal NESHAP, specifically with Option 1 of Table 1 of 40 CFR 63.463. All required reports shall be sent to the DEQ regional Office at Tulsa.

The facility does not keep proper records for the degreaser. Subpart T compliance and exceedance semiannual reports DEQ Forms #100-432, #100-435, #100-436 and #100-437 have not been submitted to the Department since January 26, 2006.

4. The permittee shall comply with the following outlined provisions for operation of the degreaser, which are further detailed in OAC 252:100-39-42(b).

    a. The degreaser "working mode cover" shall operate easily and cause minimum disturbance to the vapor zone.
    b. The unit shall have safety switches to shut off sump heat if the coolant is not circulating or exceeds the recommended level.
    c. Since Limco, has chosen Option 1 for Halogenated Degreasers shown in 40 CFR 63, Subpart T, the unit shall have a freeboard ratio no less than 1.0, a solvent super heater which shall maintain the solvent to a temperature no less than 10 degrees F above the boiling point of the solvent, and have a working mode cover. If, in the future, Limco decides one of the other options available in this subpart would be a better choice, Limco shall submit a written request describing their plan to the DEQ local office, and will not begin any change without written permission.
    d. Limco will properly train each person who will operate the degreaser before they are allowed to use the machine. The written syllabus used for training will be readily available to each trained operator.

The degreaser was not in operation at the time of this inspection therefore the inspector was unable to determine compliance with Specific Condition #4 (a)(b), and (c).

5. All records necessary to demonstrate compliance with permit conditions shall be maintained on-site or at a readily accessible location for a period of at least two years following the date of recording and shall be available for review by regulatory personnel during normal business hours. Such records include, but are not necessarily limited to, the following.

    a. Records sufficient to demonstrate that the weekly average of the product usages do not exceed those shown in Specific Condition #1, Table No. 2 (exclusive of the vapor degreaser). If any of the GPD quantities in Table No. 2 are exceeded than compliance with that pollutant's MAAC must be demonstrated.

The facility was unable to provide records sufficient to demonstrate weekly average of product usage. The inspector was unable to determine compliance with Specific #1.

b. Degreaser records required by Specific Condition #3.
The facility keeps some maintenance and operation procedures on site.

c. Material usages (monthly and 12-month rolling totals).
The facility does not keep records of material usage (monthly and 12-month rolling totals.

6. This permit supersedes all previous permits for this facility, which are now null and void.

Exit Interview and Summary
The inspector reviewed the necessary records for the facility to the gentlemen. The facility did provide an MSDS for "EnSolv-GCS Degreaser Solvent" (Attachment C). This is a non-trichloroethylene solvent tested in the degreaser but not used.

Based on the information provided or obtained during this evaluation, the following violations or deviations were discovered during this evaluation.

- The facility is in non-compliance with the specific conditions #1 thru #5 of permit #99-026-O (M-2).

- The facility is in non-compliance with NESHAP 40 CFR 63 Subpart T, National Emissions Standards for Hazardous Air Pollutants for Source Categories.

An alternative enforcement letter will be sent to the facility along with this FCE report.

OKLAHOMA DEPARTEMENT OF ENVIRONMENTAL QUALITY
AIR QUALITY DIVISION

MEMORANDUM **May 24, 2004**

TO: Dawson F. Lasseter, P.E., Chief Engineer, Air Quality

THROUGH: Richard Kienlen, P.E., Engr. Mgr. II, New Source Permits Section

THROUGH: Hal Wright, Regional Office At Tulsa

FROM: Jennifer Tyler, Regional Office At Tulsa

SUBJECT: Evaluation of Permit Application No. **99-026-O (M-2)**
Limco-Airepair, Inc. (LA)
5304 S. Lawton Ave.
Tulsa, Tulsa County, OK
Section 35, Township 19N, Range 12E
Directions: Taking Hwy 75 south you exit on I-44 East, take the first access road exit before merging onto I-44. Turn right on the access road and the first street you come to is South Lawton. Turn left onto Lawton, and the plant is at the end of the street on your right.

INTRODUCTION

Limco-Airepair, Inc. (LA) is requesting a modification of their current Operating Permit No. 99-026-O (M-1). The modification will include adding Xylene to Table No. 2 to correlate with Table No. 1, changing the wording of perchloroethylene to read trichloroethylene, and increasing the use of toluene, mineral spirits, IPA, and various paints.

PROCESS DESCRIPTION

In general, the plant has three product activities, i.e., the manufacture of different sizes of heat exchangers, the repair of various sizes of heat exchangers, and the repair of various sized aircraft air ducts.

Manufacturing Process

All ovens used for drying and soldering have a combined heat rate of 0.80 MMBTUH.

First, LA buys thin sheets of aluminum and stainless steel to use in the manufacture and repair of various products.

The steps in the manufacture of the heat exchangers are: material is cut, shaped, cleaned, welded/assembled, pressure tested, cleaned, heat dried, and coated. LA is required to test most of

the heat exchangers that are of a new design. The new units are performance tested for flow vs pressure drop of both the cooling medium (air) over the outside of the heat exchanger, and the medium to be cooled (engine lube oil, hydraulic fluid, etc.) which is on the inside of the exchanger. They are also tested for their heat transfer capabilities.

The steps in the repair of the heat exchangers are: inspected for flaws, repaired as necessary, pressure tested, cleaned, heat dried, and coated.

The steps in the repair of the air ducts are: inspected for flaws, cleaned, heat dried, repairs made, cleaned, and coated.

WELDING/SOLDERING

Various types of welding are used by LA, i.e., MIG, TIG, etc.

The soldering is done by placing assembled, "tinned" parts in natural gas fired ovens. Tinning is a process where the part is coated with the required amount of solder/flux on each joint to be soldered. The part is then heated to a temperature just above the melting point of the solder to allow the solder to melt and flow into the joint to be soldered. The part is then cooled to room temperature in ambient air.

SIZING/SHAPING

This is done with conventional sheet metal shears, sheet metal brakes, stamping machines, etc.

COATING

All products are cleaned and heat dried before coating.

The parts may get some combination of four types of coatings, i.e. paint, alodine, anodize, or silicone aluminum dip. Anodizing is done by an outside contractor; all others are done by LA.

Less than 10% of all products are spray-painted. The painting is done in a totally enclosed 12' x 12' x 8' high paint booth using a high volume low pressure spraying rig. The paint over-spray is sucked through a 95% efficient dry type filter at 3,500 acfm and exhausts 8 feet above grade through a 12-inch diameter duct.

The alodine process is done by soaking the part in a bath of nitric/chromic acid, which results in the desired surface getting a coat of aluminum oxide. This process does not use heat or electric current.

Silicone/Aluminum Dip solution consists of 8.4 gallons of Toluene, 1.0 gallon of Dow #805 silicone resin, and 1.6 pounds of aluminum powder. 61.5 gallons of this solution is placed in a 400-gallon dipping tank that is located in a totally enclosed room (10 ft x 12 ft x 10 ft high) within the shop. After the part is dipped (the part is completely coated) it is hung over the tank to drip and dry. The result is the part gets a thin coat of aluminum filled silicone. The air in the dipping room

is exhausted to the outside by a 22,000 acfm fan through a dry type filter in a 14 inch diameter duct at 10 ft above grade.

Anodizing is a process where a surface on the part gets a coating of aluminum by an electrolysis process. The part is made an anode as part of an electric circuit in a bath of acid, and as a result aluminum is deposited on the part's surface.

CLEANING

Parts are cleaned by different chemicals at different stages in the manufacturing/repair processes. The parts can be cleaned by hand wiping with solvents, acid, or caustic bath followed by water rinse or trichloroethylene degreaser.

The parts are dried after the cleaning process by electric heated ovens or natural gas fired ovens.

The facility operates 16 hours per day, 5.5 days per week, and 22 days a month, or 4,224 hours per year.

EMISSIONS

The significant air emissions are from the hand wiping of parts with solvents and coating. The air emissions from parts drying (combustion of natural gas), welding, and metal sizing/shaping are negligible, and will not be included in the following emissions analysis.

Purchases of acids and caustics used in the clean lines have been tabulated in the application. The replacement numbers are below any *de minimis* threshold. Much of the material is consumed in the cleaning operations, either through chemical combination with materials presented or through action as a flocculent. Potential emissions are negligible.

Limco estimates the use of trichloroethylene for the degreaser to be 520 gallons per year, which is shown in the following emission table. This includes material that was collected for reclamation. The emissions shown are the net amounts. The vapor degreaser holds 110 gallons of trichloroethylene and has a freeboard ratio of 1.3.

Materials used in cleaning and wipe down of the parts include 2,000 gallons per year (GPY) of MEK and 530 GPY of isopropyl alcohol. The use of mineral spirits in pressure testing is estimated to be 355 GPY. The facility uses 95 gallons of ten different primers, topcoats and solvents.

The following tables show the total facility VOC and HAPs emissions.

FACILITY TOTAL EMISSIONS [2]

USE	POLLUTANT	CAS NO.	HAP	CAT	De minimis		Permit limits	
					PPH	TPY	PPH	TPY
Dip Coat	Toluene	108883	Y	C	5.60	6.00	2.40	5.10
	Xylene	133027	Y	C	5.60	6.00	0.19	0.40
Degreaser	Trichloroethylene	79016	Y	A	0.57	0.60	1.50	3.20
Wipe	MEK	108101	N	C	5.60	6.00	3.20	6.80 [3]
Testing	Mineral Spirits	64742887	N	C	5.60	6.00	0.53	1.20
Wipe	IPA	67630	N	C	5.60	6.00	0.82	1.80
Paint [1]	Various	Various	NA	NA	(2)	(2)	0.22	0.50
TOTAL VOC								**19.00**
TOTAL HAPS								**8.70**

(1) If all the paint VOCs were Cat. A the de minimis would not be exceeded. (2) Does not include combustion emission pollutants, which are negligible. (3) EPA Screen3 modeling shows a maximum ground level concentration of 1,259 micrograms per cubic meter (ug/m^3) for an emission rate of 3.2 pounds per hour as compared to an allowable maximum acceptable ambient concentration (MAAC) of 59,000 ug/m^3.

The following table shows the VOC emission data comparison between the new permit and the existing permit in TPY.

Pollutant	Existing	New	Change
Paint	0.56	0.50	-0.06
Trichloroethylene	3.00	3.20	+0.20
Cleaning	7.50	6.80	-0.70
Testing	2.50	1.20	-1.30
Dip: Toluene	5.00	5.10	+0.10
Xylene	0.36	0.40	+0.04
Total	**18.92**	**17.20**	**-1.72**

OKLAHOMA AIR POLLUTION CONTROL RULES

OAC 252:100-1 (General Provisions) [Applicable]
Subchapter 1 includes definitions but there are no regulatory requirements.

OAC 252:100-3 (Air Quality Standards and Increments) [Applicable]
Subchapter 3 enumerates the primary and secondary ambient air quality standards and the significant deterioration increments. At this time, all of Oklahoma is in "attainment" of these standards.

OAC 252:100-4 (New Source Performance Standards) [Not Applicable]
Federal regulations in 40 CFR Part 60 are incorporated by reference as they exist on July 1, 2002, except for the following: Subpart A (Sections 60.4, 60.9, 60.10, and 60.16), Subpart B, Subpart C, Subpart Ca, Subpart Cb, Subpart Cc, Subpart Cd, Subpart Ce, Subpart AAA, and Appendix G. These requirements are addressed in the "Federal Regulations" section.

OAC 252:100-5 (Registration, Emission Inventory and Annual Operating Fees) [Applicable]
Subchapter 5 requires sources of air contaminants to register with Air Quality, file emission inventories annually, and pay annual operating fees based upon total annual emissions of regulated pollutants. An emission inventory was submitted and fees paid for previous years as required.

OAC 252:100-7 (Permits for Minor Facilities) [Applicable]
Subchapter 7 sets forth the permit application fees and the basic substantive requirements of permits for minor facilities. Since criteria pollutant emissions are less than 100 TPY for each pollutant, and emissions of HAPs will not exceed 10 TPY for any one HAP or 25 TPY for any aggregate of HAPs, the facility is defined as a minor source. As such, BACT is not required.

OAC 252:100-9 (Excess Emissions Reporting Requirements) [Applicable]
In the event of any release which results in excess emissions, the owner or operator of such facility shall notify the Air Quality Division as soon as the owner or operator of the facility has knowledge of such emissions, but no later than 4:30 p.m. the next working day. Within ten (10) working days after the immediate notice is given, the owner or operator shall submit a written report describing the extent of the excess emissions and response actions taken by the facility.

OAC 252:100-13 (Prohibition of Open Burning) [Applicable]
Open burning of refuse and other combustible material is prohibited except as authorized in the specific examples and under the conditions listed in this subchapter.

OAC 252:100-19 (Particulate Matter (PM)) [Applicable]
Section 19-4 regulates emissions of PM from new and existing fuel-burning equipment. AP-42 (7/98) Table 1.4 -1 lists natural gas TPM emissions to be 7.6 lbs/million scf or about 0.0076 lbs/MMBTU, which is in compliance.

OAC 252:100-25 (Visible Emissions and Particulates) [Applicable]
No discharge of greater than 20% opacity is allowed except for short-term occurrences that consist of not more than one six-minute period in any consecutive 60 minutes, not to exceed three such periods in any consecutive 24 hours. In no case shall the average of any six-minute period exceed 60% opacity. Based on past experience with this facility, the potential for violating the standards is negligible.

OAC 252:100-29 (Fugitive Dust) [Applicable]
No person shall cause or permit the discharge of any visible fugitive dust emissions beyond the property line on which the emissions originated in such a manner as to damage or to interfere with the use of adjacent properties, or cause air quality standards to be exceeded, or to interfere with the maintenance of air quality standards. Under normal operating conditions, this facility

has negligible potential to violate this requirement; therefore it is not necessary to require specific precautions to be taken.

OAC 252:100-31 (Sulfur Compounds) [Applicable]
Fuel-burning equipment at this facility uses commercial natural gas. The AP-42 (2/98), Table 1.4-2 emission factor of 0.6 pounds of SO_2 per million cubic feet equates to approximately 0.0006 lbs/MMBTU. This is well below the new equipment standard of 0.2 lbs/MMBTU for gas fuel.

OAC 252:100-33 (Nitrogen Oxides) [Not Applicable]
This subchapter limits new gas-fired fuel-burning equipment with rated heat input greater than or equal to 50 MMBTUH to emissions of 0.2 lbs of NO_x per MMBTU, three-hour average. There are no equipment items that exceed the 50 MMBTUH threshold.

OAC 252:100-35 (Carbon Monoxide) [Not Applicable]
None of the following affected processes are located at this facility: gray iron cupola, blast furnace, basic oxygen furnace, petroleum catalytic cracking unit, or petroleum catalytic reforming unit.

OAC 252:100-37 (Volatile Organic Compounds) [Not Applicable]
-15 Storage of VOCs. This facility does not store any hydrocarbon liquids, and is not an affected source under this section.
-36 Fuel-Burning Equipment. Under this section Limco is required to adjust the burners for essentially complete fuel combustion. Limco-Airepair burns only commercial-grade natural gas in the combustion units, which promotes compliance. The facility anticipates remaining in compliance under normal operations.
-25 This section limits the VOC content of coating used in coating lines or operations for any facility with VOC emissions in excess of 100 lbs/day. Coating parts operations will consume less than 50 pounds of VOC per day, so the facility is exempt.

OAC 252:100-39 (VOC in Nonattainment and Former Nonattainment Areas) [Applicable]
Part 7, Sections 46 concerns coating of metal parts and products. Per 39-46 (h), Limco is exempt as the VOC emissions from surface coating and cleaning do not exceed 10 TPY.

OAC 252:100-41 (Hazardous Air Pollutants and Toxic Air Contaminants) [Applicable]
Part 3 addresses hazardous air contaminants. NESHAP, as found in 40 CFR Part 61, are adopted by reference as they exist on July 31, 2002, with the exception of Subparts B, H, I, K, Q, R, T, W and Appendices D and E, all of which address radionuclides. In addition, General Provisions as found in 40 CFR Part 63, Subpart A, and the Maximum Achievable Control Technology (MACT) standards as found in 40 CFR Part 63, Subparts F, G, H, I, J, L, M, N, O, Q, R, S, T, U, W, X, Y, AA, BB, CC, DD, EE, GG, HH, II, JJ, KK, LL, MM, OO, PP, QQ, RR, SS, TT, UU, VV, WW, XX, YY, CCC, DDD, EEE, GGG, HHH, III, JJJ, LLL, MMM, NNN, OOO, PPP, QQQ, RRR, TTT, UUU, VVV, XXX, CCCC, GGGG, HHHH, NNNN, SSSS, TTTT, UUUU, VVVV, and XXXX are hereby adopted by reference as they exist on July 31, 2002. These standards apply to both existing and new sources of HAPs. These requirements are covered in the "Federal Regulations" section.

Part 5 is a **state-only** requirement governing toxic air contaminants. New sources (constructed after March 9, 1987) emitting any category "A" pollutant above de minimis levels must perform a BACT analysis, and if necessary, install BACT. All sources are required to demonstrate that emissions of any toxic air contaminant that exceed the de minimis level do not cause or contribute to a violation of the maximum acceptable ambient concentration (MAAC). There are two toxics that exceed their de minimis, MEK and Trichloroethylene. Trichloroethylene is a HAP and Category A toxic generated by the vapor degreaser, which is subject to a Maximum Achievable Control Technology (MACT) standard, 40 CFR Part 63, Subpart T. As such, Trichloroethylene is exempt from this part per §41-43(a)(3). Screen3 modeling for MEK has a ground-level concentration of 1,259 $\mu g/m^3$ as compared to a MAAC of 59,000 $\mu g/m^3$. This facility is in compliance.

OAC 252:100-43 (Testing, Monitoring, and Recordkeeping) [Applicable]
This subchapter provides general requirements for testing, monitoring and recordkeeping and applies to any testing, monitoring or recordkeeping activity conducted at any stationary source. To determine compliance with emissions limitations or standards, the Air Quality Director may require the owner or operator of any source in the state of Oklahoma to install, maintain and operate monitoring equipment or to conduct tests, including stack test, of the air contaminant source. All required testing must be conducted by methods approved by the Air Quality Director and under the direction of qualified personnel. A notice-of-intent to test and a testing protocol shall be submitted to Air Quality at least 30 days prior to any EPA Reference Method stack tests. Emissions and other data required to demonstrate compliance with any federal or state emission limit or standard, or any requirement set forth in a valid permit shall be recorded, maintained, and submitted as required by this subchapter, an applicable rule, or permit requirement. Data from any required testing or monitoring not conducted in accordance with the provisions of this subchapter shall be considered invalid. Nothing shall preclude the use, including the excusive use, or any credible evidence or information relevant to whether a source would have been in compliance with applicable requirements if the appropriate performance or compliance test or procedure had been performed.

FEDERAL REGULATIONS

PSD, 40 CFR Part 52 [Not Applicable]
PSD does not apply. Final total emissions are less than the threshold of 250 TPY of any single regulated pollutant and the facility is not one of the 26 specific industries with a threshold of 100 TPY.

NSPS, 40 CFR Part 60 [Not Applicable]
There are no sources or facilities at this site affected by any NSPS subpart.

NESHAP, 40 CFR Part 61 [Not Applicable]
There are no emissions of any of the regulated pollutants: arsenic, asbestos, benzene, beryllium, coke oven emissions, mercury, radionuclides, or vinyl chloride.

NESHAP, 40 CFR Part 63 [Subpart T Applicable]
Subpart T (Halogenated Solvent Cleaners). This standard was published in the Federal Register on December 2, 1994, and compliance by new degreasers was required immediately upon startup. The facility is an area source subject to Subpart T, and has complied with the initial notification requirement. A yearly report is required to be sent to the local DEQ office and an additional report concerning any emergency operation which was not in compliance, also sent to the local DEQ office. The first annual report was due on January 15, 2001, and every 12 months thereafter. The applicant has selected Option 1 from Table 1 of §63.463 to demonstrate compliance. This option requires a combination of a working-mode cover, freeboard ratio of 1.0, and superheated vapor. The applicant is in compliance.
Subpart GG (Aerospace Manufacturing and Rework Facilities). The facility engages in the type of activity described in paragraph 63.741 (a), but the facility does not qualify as a major source under the definition in 40 CFR 63.2. In addition, the subassemblies involved are not critical to structural integrity or flight performance, so the activities would also be excluded under §63.741(f). The facility is not an affected source and is not subject to this subpart.

Chemical Accident Prevention Provisions, 40 CFR Part 68 [Not Applicable]
This facility does not process or store more than the threshold quantity of any regulated substance (Section 112r of the Clean Air Act 1990 Amendments). More information on this federal program is available on the web page: www.epa.gov/ceppo.

Stratospheric Ozone Protection, 40 CFR Part 82 [Not Applicable]
This facility does not produce, consume, recycle, import, or export any controlled substances or controlled products as defined in this part, nor does this facility perform service on motor (fleet) vehicles that involves ozone-depleting substances. Therefore, as currently operated, this facility is not be subject to these requirements. To the extent that the facility has air-conditioning units that apply, the permit requires compliance with Part 82.

COMPLIANCE

Tier Classification and Public Review

This application has been classified as **Tier I** based on the request for an operating permit for an existing minor source. The status of all permit actions is available to the public in the Air Quality section of the DEQ Web Page at page: www.deq.state.ok.us

The applicant has submitted an affidavit that they are not seeking a permit for land use or for any operation upon land owned by others without their knowledge. The affidavit certifies that the applicant owns the real property.

Inspection

No inspection was performed on this facility because the facility did not remove or construct any new equipment. The modification requested was an increase in usage and a change in wording only.

Fee Paid

Permit modification fee of $500 was paid on February 20, 2004.

SUMMARY

There are no active Air Quality compliance or enforcement issues that would affect the issuance of this permit. Issuance of the modified operating permit is recommended.

PERMIT TO OPERATE
AIR POLLUTION CONTROL FACILITY
SPECIFIC CONDITIONS

Limco-Airepair **Permit No. 99-026-O (M-2)**
Aircraft Subassembly Manufacturing and Repair

The permittee is authorized to operate in conformity with the specifications submitted to Air Quality on February 20, 2004. The Evaluation Memorandum dated May 24, 2004, explains the derivation of applicable permit requirements and estimates of emissions; however, it does not contain operating limitations or permit requirements. Continuing operations under this permit constitutes acceptance of, and consent to, the conditions contained herein.

1. Points of emission include the cleaning, degreasing, painting, and other coating areas. The significant emissions from all sources are listed below.

Table No.1

USE	POLLUTANT	Permit Limits	
		PPH	TPY
Dip Coat	Toluene	2.40	5.1
	Xylene	0.19	0.40
	805 Resin	0.20	0.43
Degreaser	Trichloroethylene	1.50	3.20
Wipe	MEK	3.20	6.80
Testing	Mineral Spirits	0.53	1.20
Wipe	IPA	0.82	1.80
Paint	Various	0.22	0.50

The emissions shown in the preceding table will not be exceeded under normal operating conditions provided the facility's use of materials shown in the following table is not exceeded.

Table No. 2

Materials	GPD (1)	GPY
Toluene	5.4	1,400
Xylene	0.43	110
805 Resin	0.60	157
Trichloroethylene	2.00	520
MEK	7.70	2,000
Mineral Spirits	1.37	355
IPA	2.04	530
Paints, various	0.39	100

(1) These gallons/day are work-week averages.

2. Alternate products and production quantities can be varied under the following conditions.

    a. Emissions do not exceed 10 TPY for a single HAP or 25 TPY of the HAPs aggregate.
    b. A change in either production or products is permitted provided there would be no increase in the quantity of the resulting emissions. Additionally, the use of alternate products shall not cause the total of each toxic to exceed the de minimis levels or the MAAC established by OAC 252:100-41.
    c. The facility shall notify the DEQ in writing 30 calendar days before making any operational changes that would cause significant air emissions.
    d. Maintain written documentation to show compliance with all current Federal, State and Local Regulations, Rules, and Codes, including modeling where compliance with a MAAC may be in question.

3. The degreaser is subject to NESHAP (40 CFR 63) Subpart T, Standards for Halogenated Solvent Cleaning, as published in the Federal Register on December 2, 1994, and shall be in compliance with this federal NESHAP, specifically with Option 1 of Table 1 of 40 CFR 63.463. All required reports shall be sent to the DEQ Regional Office at Tulsa.

4. The permittee shall comply with the following outlined provisions for operation of the degreaser, which are further detailed in OAC 252:100-39-42(b).

    a. The degreaser "working mode cover" shall operate easily and cause minimum disturbance to the vapor zone.

    b. The unit shall have safety switches to shut off sump heat if the coolant is not circulating or exceeds the recommended level.

    c. Since Limco has chosen Option 1 for Halogenated Degreasers shown in 40 CFR 63, Subpart T, the unit shall have a freeboard ratio not less than 1.0, a solvent super heater which shall maintain the solvent to a temperature no less than 10 degrees F above the boiling point of the solvent, and have a working mode cover. If, in the future, Limco decides one of the other options available in this subpart would be a better choice, Limco shall submit a written request describing their plan to the DEQ local office, and will not begin any change without written permission.

    d. Limco will properly train each person who will operate the degreaser before they are allowed to use the machine. The written syllabus used for training will be readily available to each trained operator.

5. All records necessary to demonstrate compliance with permit conditions shall be maintained on-site or at a readily accessible location for a period of at least two years following the date of recording and shall be available for review by regulatory personnel during normal business hours. Such records include, but are not necessarily limited to, the following.

    a. Records sufficient to demonstrate that the weekly averages of the product usages do not exceed those shown in Specific Condition #1, Table No.2 (exclusive of the vapor degreaser). If any of the GPD quantities in Table No. 2 are exceeded then compliance with that pollutant's MAAC must be demonstrated.
    b. Degreaser records required by Specific Condition #3.
    c. Material usages (monthly and 12-month rolling totals).

6. This permit supercedes all previous permits for this facility, which are now null and void.

PERMIT

AIR QUALITY DIVISION
STATE OF OKLAHOMA
DEPARTMENT OF ENVIRONMENTAL QUALITY
707 N. ROBINSON STREET, SUITE 4100
P.O. BOX 1677
OKLAHOMA CITY, OKLAHOMA 73101-1677

Issuance Date: _____ **Permit Number:** 99-026-O (M-2)

Limco-Airepair, Inc.,

having complied with the requirements of the law, is hereby granted permission to operate the facility to manufacture and repair aircraft parts at 5304 S. Lawton Avenue, Tulsa County, Oklahoma,

subject to the following conditions, attached:

[X] Standard Conditions dated October 31, 2003

[X] Specific Conditions

_____ Chief Engineer, Air Quality Division

Mr. Michael Lowther, Operations Manager
Limco-Airepair, Inc.
5304 S. Lawton Ave.
Tulsa, OK 74107

Re: Operating Permit No. **99-026-O (M-2)**
Limco-Airepair, Inc.

Dear Mr. Lowther:

Enclosed is the permit authorizing operation of the referenced facility. Please note that this permit is issued subject to standard and specific conditions, which are attached. These conditions must be carefully followed since they define the limits of the permit and will be confirmed by periodic inspections.

Also note that you are required to annually submit an emissions inventory for this facility. An emissions inventory must be completed on approved AQD forms and submitted (hardcopy or electronically) by March 1st of every year. Any questions concerning the form or submittal process should be referred to the Emissions Inventory staff at 405-702-4100.

Thank you for your cooperation in this matter. If we may be of further service, please contact our office at (918) 293-1600. Air Quality personnel are located in the DEQ Regional Office at Tulsa, 3105 East Skelly Drive, Suite 200, Tulsa, Oklahoma, 74105.

Sincerely,

Jennifer Tyler
AIR QUALITY DIVISION

* * * Section 3 - Hazards Identification * * *

Emergency Overview:

DANGER! May cause severe irritation or burns to the eyes, skin, gastrointestinal tract, and respiratory system. Long-term exposure can cause liver and kidney damage. Excessive exposure can cause dizziness and central nervous system depression.

Potential Health Effects:

Inhalation and skin contact are expected to be the primary routes of occupational exposure to this material. Based on its composition, it is anticipated to be severely irritating to the eyes, skin and respiratory tract. Prolonged or repeated contact may remove oils from the skin and may dry skin and cause irritation, redness and rash. High vapor concentrations may be irritating to the eyes and respiratory tract, and may result in central nervous system (CNS) effects such as headache, dizziness, nausea, drowsiness and, in severe exposures, loss of consciousness and death. Precautions should be taken to limit aerosolization or misting of this material, as repeated exposure to high concentrations of mineral oil mist may cause lipoid pneumonia. Mild to severe lung injury may occur if this material is drawn into the lungs (aspirated) during swallowing, or during vomiting after swallowing. Symptoms of injury may include increased breathing and heart rate, coughing and related signs of respiratory distress. Animal studies on a component of this material have produced liver and kidney changes.

* * * Section 4 - First Aid Measures * * *

Eye Contact:

In case of contact with the eyes, rinse immediately with plenty of water for 15 minutes, and seek immediate medical attention.

Skin Contact:

For skin contact flush with large amounts of water while removing contaminated clothing. Get Medical Attention. Discard any shoes or clothing items that cannot be decontaminated.

Ingestion:

If the material is swallowed, get immediate medical attention or advice -- Do not induce vomiting. Give one to two glasses of water or milk. Never give anything by mouth to a victim who is unconscious or is having convulsions.

Inhalation:

If mist or vapor of this product is inhaled, remove person immediately to fresh air. Seek medical attention if symptoms develop or persist.

* * * Section 5 - Fire Fighting Measures * * *

Material Safety Data Sheet

Material Name: TURCO 5668 **ID: 238799**

Flash Point:	> 200 F	**Method Used:**	PMCC	**Flammability Classification:**
Upper Flammable Limit (UFL):	NE	**Lower Flammable Limit (LFL):**	NE	

Fire & Explosion Hazards:

This product is an aqueous mixture which will not burn. If evaporated to dryness, the solid residue may pose a moderate fire hazard.

Extinguishing Media:

Use any media suitable for the surrounding fires.

Fire-Fighting Instructions:

Use water spray to cool containers exposed to fire. Fire fighters and others who may be exposed to products of combustion should wear full fire fighting turn out gear (full Bunker Gear) and self-contained breathing apparatus (pressure demand NIOSH approved or equivalent). Fire fighting equipment should be thoroughly decontaminated after use.

*** Section 6 - Accidental Release Measures ***

Clean-Up Procedures:

Collect spilled material with an inert absorbent such as sand or vermiculite. Place in properly labeled closed container. Flush area with water to remove trace residue. Dispose of collected material according to regulation.

Spill or Leak

Contain spill. Stop leak at source if this can be done safely. Ventilate area. Nonessential personnel should leave the area until cleanup is completed. Pump liquid into DOT-approved drums for disposal. Absorb remaining liquid onto inert absorbent and place in DOT approved drums for disposal. Wash area with water. Keep concentrate and wash water from entering sewers or waterways.

*** Section 7 - Handling and Storage ***

Handling Procedures:

Do not get in eyes, on skin or clothing. Avoid breathing vapor or mist. Keep container closed. Use only with adequate ventilation. Wash thoroughly after handling. Keep away from heat, sparks and flame. Use explosion proof equipment. Empty container may contain hazardous residues.

Storage Procedures:

Store in a cool, dry place. Avoid excessive heat. Store out of direct sunlight in a cool, well-ventilated place.

*** Section 8 - Exposure Controls / Personal Protection ***

Component Exposure Limits

Ethanolamine (141-43-5)

ACGIH:	3 ppm TWA 6 ppm STEL
OSHA:	3 ppm TWA; 6 mg/m3 TWA 6 ppm STEL; 15 mg/m3 STEL
NIOSH:	3 ppm TWA; 8 mg/m3 TWA 6 ppm STEL; 15 mg/m3 STEL

Potassium hydroxide (1310-58-3)

ACGIH:	C 2 mg/m3
NIOSH:	C 2 mg/m3

Engineering Controls:

Ventilation should effectively remove and prevent buildup of any vapor or mist generated from the handling of this product.

PERSONAL PROTECTIVE EQUIPMENT

As prescribed in the OSHA Standard for Personal Protective Equipment (29 CFR 1910.132), employers must

Material Safety Data Sheet

Material Name: TURCO 5668 **ID: 238799**

perform a Hazard Assessment of all workplaces to determine the need for, and selection of, proper protective equipment for each task performed.

Eyes/Face Protective Equipment:

Wear chemical goggles; face shield (if splashing is possible).

Skin Protection:

Use impervious gloves. Use of impervious apron and boots are recommended.

Respiratory Protection:

If ventilation is not sufficient to effectively prevent buildup of aerosols or vapors, appropriate NIOSH/MSHA respiratory protection must be provided.

* * * Section 9 - Physical & Chemical Properties * * *

Physical State:	Liquid	**Appearance:**	Light brown
Odor:	Amine	**Vapor Pressure:**	0.35 MM HG @ 20 F
Vapor Density:	> 1.0	**Boiling Point:**	> 200 F
Melting Point:	NA	**Specific Gravity:**	0.99
pH:	12.0 (1% solution)	**Viscosity:**	
VOC:	70 - 75 %	**Solubility Water:**	Soluble
Percent Volatile:	NIL VOL %	**Percent Solids:**	>60

* * * Section 10 - Chemical Stability & Reactivity Information * * *

Chemical Stability:

This material is chemically stable under normal and anticipated storage and handling conditions.

Incompatibility:

Avoid contact with strong acids and oxidizers. Avoid flames, sparks, and ignition sources. Contains organic amine compounds. Nitrite based materials should not be added due to possible nitrosoamine.

Decomposition Products:

Oxides of carbon, nitrogen compounds.

Hazardous Polymerization:

Hazardous polymerization is not known to occur.

US Federal Regulations

A: General Product Information

This product is considered hazardous under 29 CFR 1910.1200 (Hazard Communication).

B: Component Analysis

This material contains one or more of the following chemicals required to be identified under SARA Section 302 (40 CFR 355 Appendix A), SARA Section 313 (40 CFR 372.65) and/or CERCLA (40 CFR 302.4).

N-Methyl-2-pyrrolidone (872-50-4)

SARA 313: form R reporting required for 1.0% de minimis concentration

Potassium hydroxide (1310-58-3)

CERCLA: final RQ = 1000 pounds (454 kg)

SARA 311/312: Acute: Y Chronic: Y Fire: N Pressure: N Reactive: N

State Regulations

A: General Product Information

No additional information available.

B: Component Analysis - State

The following components appear on one or more of the following state hazardous substances lists:

Component	CAS #	CA	FL	MA	MN	NJ	PA
N-Methyl-2-pyrrolidone	872-50-4	No	Yes	Yes	Yes	No	Yes
Ethanolamine	141-43-5	Yes	Yes	Yes	Yes	Yes	Yes
Potassium hydroxide	1310-58-3	Yes	Yes	Yes	Yes	Yes	Yes

Other Regulations

A: General Product Information

All components are on the U.S. EPA TSCA Inventory List.

B: Component Analysis - Inventory

Component	CAS #	TSCA	DSL	EINECS
N-Methyl-2-pyrrolidone	872-50-4	Yes	Yes	Yes
Petroleum distillates, hydrotreated heavy naphthenic	64742-52-5	Yes	Yes	Yes
Ethanolamine	141-43-5	Yes	Yes	Yes
Potassium hydroxide	1310-58-3	Yes	Yes	Yes

C: Component Analysis - WHMIS IDL

The following components are identified under the Canadian Hazardous Products Act Ingredient Disclosure List:

Component	CAS #	Minimum Concentration
Ethanolamine	141-43-5	1%; English Item 1096; French Item 1170
Potassium hydroxide	1310-58-3	1%; English Item 1335; French Item 996

ARDROX

MATERIAL SAFETY DATA SHEET

I. PRODUCT IDENTIFICATION

Trade Name (as labeled) [redacted]

Chemical Names, Common Names Developer

Manufacturer's Name Ardrox Inc.

Address 16961 Knott Avenue, La Mirada, CA 90638

Emergency Phone 1-800-424-9300 Name of Preparer Abayomi I. Owei

Business Phone 714 739-2821 Date Prepared June 9, 1986

II. HAZARDOUS INGREDIENTS

CHEMICAL NAMES	CAS NUMBERS	APPROXIMATE PERCENT	EXPOSURE LIMITS IN AIR ACGIH (TLV)	OSHA (PEL)	OTHER
1,1,1, Trichloroethane	71-55-6	Over 80	350 ppm	350 ppm	
Amorphous Silica % Mass	7631869				20 mppcf

III. PHYSICAL PROPERTIES

Vapor Density (Air=1) 4.55

Specific Gravity 1.32

Solubility in Water 0.78/100 gm.

Vapor Pressure, mmHg at 20°C 100

Evaporation Rate (butyl acetate =1) Over 5

Melting Point or Range, °F. N/A

Boiling Point or Range, °F. 165°F. Approx.

Appearance and Odor White powder suspended in colorless liquid: Pleasant ether like or chlorinated solvent odor.

HOW TO DETECT THIS SUBSTANCE (Warning properties of substance as a gas, vapor, dust, or mist)

Appearance, odor, solubility test and the utilization of other physical properties.

Hazardous decomposition products (including combustion products):

Hydrogen chloride, phosgene and other toxic substances may be produce.

Hazardous Polymerization: ____May occur x Will not occur

Conditions to Avoid:

VII. SPILL, LEAK AND DISPOSAL PROCEDURES

Spill response procedures (include employee protection measures):
Spills should be contained immediately. Remove spills by soaking it up with absorbent materials, placed in closed containers, labeled, store and disposed properly. Wear protective clothing and self-contained breathing apparatus when performing this job.

Preparing wastes for disposal (container types, neutralization, etc.):
This product is recyclable normally. If conditions prevent recycling, dispose of it in accordance with all federal, state and local health and pollution regulations.

Note: Dispose of all wastes in accordance with federal, state and local regulations.

VIII. SPECIAL HANDLING INFORMATION

Ventilation and engineering controls Use adequate ventilation (local or general) to keep down mist or vapor concentration below applicable standards.

Respiratory protection NIOSH approved organic vapor respirator.

Eye Protection (Type) Safety glasses or face shield.

Gloves (specify material) Neoprene or chemical resistant gloves.

Other Clothing and Equipment Aprons and overalls if necessary.

Work practices, hygienic practices Wash hands before touching any food for consumption. Avoid prolonged or repeated breathing of vapors. Avoid repeated exposure or contact with skin.

Other handling and storage requirements Store away from heat, open flames and oxidizing agents. Store in a well ventilated area.

Protective measures during maintenance of contaminated equipment Exercise safety precautions for contaminated clothing and material. Treat empty containers as if they were full and don' fill them with anything else.

IX. LABELING

Labeling (precautionary statements) Please read and understand warning label(s) before using product or opening product containers.

D.O.T. Label Compound Cleaning Liquid Corrosive

IV. FIRE AND EXPLOSION

Flash Point, °F. (give method) None at conventional closed tester at ordinary room temperatures.

Autoignation Temperature, °F. 998°F.

Flammable Limits in air, volume %: Lower 7.5 Upper 12.5

Fire Extinguishing Materials:

x Water Spray — x Carbon Dioxide — Other:

x Foam — x Dry Chemical

Special Firefighting Procedures: Use water spray to keep fire - exposed containers cool. Water spray may be utilized to flush spills away from exposures. Wear self-contained breathing apparatus.

Unusual Fire and Explosion Hazards: Very high temperaturea may pose fire and explosion hazards even though it is classified as non-flammable under conventional closed tester at ordinary room temperatures.

V. HEALTH HAZARD INFORMATION

SYMPTOMS or OVEREXPOSURE for each potential route of exposure.

Inhaled: Vapor may cause headache, dizziness and stupor, nausea and vomiting. Very severe over-exposure may cause muscular incoordination.

Contact with Skin or Eyes: Skin: moderate irritation with burning sensation. Repeated or prolonged exposure may cause dermatitis.

Eyes: moderate irritation, causing pain, lacrimation and general inflammation. No corneal injury.

Absorbed through Skin: It is not readily absorbed through the skin, however exercise safety measure when handling this product.

Swallowed: May irritate gastrointestinal tract. Chemical pneumonia if vomiting results in aspiration into lungs.

HEALTH EFFECTS OR RISKS FROM EXPOSURE. Explain in lay terms. Attach extra page if more space is needed.

Acute: Irritation to skin, eyes and respiratory system.

Chronic: Dermatitis.

FIRST AID: EMERGENCY PROCEDURES

Eye Contact: Immediately flush eyes with large amounts of water for at least 15 minutes. Seek medical attention immediately.

Skin Contact: Wash exposed skin with soap and water for at least 15 minutes. Remove contaminated clothing and footwear. Wash contaminated clothing before reuse. Seek medical help if necessary.

Inhaled: Remove patient to fresh air. If breathing has stopped, give artificial respiration. Call a physician immediately.

Swallowed: Do not induce vomiting, but give 3-4 glasses of milk to dilute poison. Never give anything by mouth to an unconscious person. Obtain medical help immediately.

SUSPECTED CANCER AGENT?

__x__ NO: This product's ingredients are not found in the lists below.
YES: ____Federal OSHA ____NTP ____IARC ____Cal/OSHA (See note)

NOTE: California employers using Cal/OSHA-regulated carcinogens must register with Cal/OSHA.

MEDICAL CONDITIONS AGGRAVATED BY EXPOSURE

Skin and eye diseases could be aggravated by repeated exposure.

RECOMMENDATIONS TO PHYSICIAN

There is no specific antidote. Treatment should be directed at clinical condition and symptoms control. Over exposure can produce elevated carboxyhemoglobin levels.

VI. REACTIVITY DATA

Stability: __x__ Stable ____Unstable

Conditions to avoid: Temperature extremes especially excessive heat.

Incompatibility (materials to avoid) Avoid contact with oxidizing agents, alkali metals, open flames and electric arcs.

Emergency Overview

Physical State Liquid.
Color Clear. **Odor** Aromatic, characteristic solvent odor.

WARNING:
Flammable liquid; vapor may cause flash fire.
Harmful or fatal if swallowed - Can enter lungs and cause damage.
Mist or vapor can irritate the respiratory tract.
Liquid contact can cause eye or skin irritation.
Overexposure can cause central nervous system (CNS) depression and/or other target organ effects.
Breathing high concentrations can cause irregular heartbeats which may be fatal.

SECTION 1. PRODUCT IDENTIFICATION

Trade Name	Toluene	**Technical Contact**	(800) 967-7601 (8am - 4pm CT M-F)
Product Number	07307	**Medical Emergency**	(918) 495-4700
CAS Number	108-88-3	**CHEMTREC Emergency (United States Only)**	(800) 424-9300

Product Family Petroleum hydrocarbon solvent

Synonyms Toluol; C7 Alkylbenzene; C7 Aromatic Hydrocarbon Solvent; High-purity Toluene; Methylbenzene; Reagent-grade Toluene (meets ASTM D-841 "Nitration Grade" Specifications); TDI-grade Toluene; Former CITGO Product Code: 2170

SECTION 2. COMPOSITION

Component Name(s)	CAS Registry No.	Concentration (%)
Toluene	108-88-3	> 99

SECTION 3. HAZARDS IDENTIFICATION

Also see Emergency Overview and Hazard Ratings on the top of Page 1 of this MSDS.

Major Route(s) of Entry Skin contact. Inhalation.

Signs and Symptoms of Acute Exposure

Inhalation	Breathing high concentrations may be harmful. Mist or vapor can irritate the throat and lungs. Breathing this material may cause central nervous system depression with symptoms including nausea, headache, dizziness, fatigue, drowsiness, or unconsciousness. Breathing high concentrations of this material, for example, in an enclosed space or by intentional abuse, can cause irregular heartbeats which can cause death.
Eye Contact	This material can cause eye irritation with tearing, redness, or a stinging or burning feeling. Further, it can cause swelling of the eyes with blurred vision. Effects may become more serious with repeated or prolonged contact.
Skin Contact	May cause mild skin irritation with redness and/or an itching or burning feeling. Effects may become more serious with repeated or prolonged contact. It is likely that this material is able to pass into the body through the skin and may cause similar effects as from breathing or swallowing it.
Ingestion	Swallowing this material may be harmful. Swallowing this material may cause stomach or intestinal upset with pain, nausea, and/or diarrhea. This material can get into the lungs during swallowing or vomiting. Small amounts in the lungs can cause lung damage, possibly leading to chronic lung dysfunction or death. Swallowing this material may cause effects similar to those described in the inhalation section (see "inhalation" above).
Chronic Health Effects Summary	Aspiration into the lungs may cause pneumatocele (lung cavity) formation and chronic lung dysfunction. Altered mental state, drowsiness, peripheral motor neuropathy, irreversible brain damage (so-called Petrol Sniffers Encephalopathy), delirium, seizures, and sudden death have been reported from repeated over-exposure such as gasoline and naphtha abusers. Prolonged or repeated overexposure to toluene has been associated with reproductive effects in experimental animals and in long-term chemical abuse situations. Long-term overexposure to toluene has been associated with impaired color vision. Also, long-term overexposure to toluene in occupational environments have been associated with hearing damage. See Toxicological Information (Section 11)
Conditions Aggravated by Exposure	Disorders of the following organs or organ systems that may be aggravated by significant exposure to this material or its components include: Skin, Respiratory System, Central Nervous System (CNS), Heart (Cardiac), auditory system
Target Organs	This material may cause damage to the following organs: kidneys, liver, mucous membranes, heart, upper respiratory tract, skin, audiometric response, central nervous system (CNS), eye, lens or cornea
Carcinogenic Potential	This product is not known to contain any components at concentrations above 0.1% which are considered carcinogenic by OSHA, IARC or NTP.

Toluene

OSHA Hazard Classification is indicated by an "X" in the box adjacent to the hazard title. If no "X" is present, the product does not exhibit the hazard as defined in the OSHA Hazard Communication Standard (29 CFR 1910.1200).

OSHA Health Hazard Classification				OSHA Physical Hazard Classification					
Irritant	X	Sensitizer		Combustible		Explosive		Pyrophoric	
Toxic		Highly Toxic		Flammable	X	Oxidizer		Water-reactive	
Corrosive		Carcinogenic		Compressed Gas		Organic Peroxide		Unstable	

SECTION 4. FIRST AID MEASURES

Take proper precautions to ensure your own health and safety before attempting rescue or providing first aid. For more specific information, refer to Exposure Controls and Personal Protection in Section 8 of this MSDS.

Inhalation

Immediately move victim to fresh air. If victim is not breathing, immediately begin rescue breathing. If heart has stopped, immediately begin cardiopulmonary resuscitation (CPR). If breathing is difficult, 100 percent humidified oxygen should be administered by a qualified individual. Seek medical attention immediately.

Eye Contact

Check for and remove contact lenses. If irritation or redness develops, flush eyes with cool, clean, low-pressure water for at least 15 minutes. Hold eyelids apart to ensure complete irrigation of the eye and eyelid tissue. Do not use eye ointment. Seek medical attention immediately.

Skin Contact

Remove contaminated shoes and clothing. Flush affected area with large amounts of water. If skin surface is damaged, apply a clean dressing and seek medical attention. Do not use ointments. If skin surface is not damaged, clean affected area thoroughly with mild soap and water. Seek medical attention if tissue appears damaged or if pain or irritation persists.

Ingestion

Do not induce vomiting. If spontaneous vomiting is about to occur, place victim's head below knees. If victim is drowsy or unconscious, place on the left side with head down. Never give anything by mouth to a person who is not fully conscious. Do not leave victim unattended. Seek medical attention immediately.

Notes to Physician

INHALATION: Inhalation overexposure can produce toxic effects. Monitor for respiratory distress. If cough or difficulty in breathing develops, evaluate for upper respiratory tract inflammation, bronchitis, and pneumonitis. Administer supplemental oxygen with assisted ventilation, as required.

This material (or a component) sensitizes the heart to the effects of sympathomimetic amines. Epinephrine and other sympathomimetic drugs may initiate cardiac arrhythmias in individuals exposed to this material. Administion of sympathomimetic drugs should be avoided.

INGESTION: If ingested, this material presents a significant aspiration and chemical pneumonitis hazard. Induction of emesis is not recommended. Consider activated charcoal and/or gastric lavage. If patient is obtunded, protect the airway by cuffed endotracheal intubation or by placement of the body in a Trendelenburg and left lateral decubitus position.

SECTION 5. FIRE FIGHTING MEASURES

NFPA Flammability Classification	NFPA Class-IB flammable liquid.
Flash Point	Closed cup: 4°C (40°F). (Tagliabue.)
Lower Flammable Limit	AP 1 % **Upper Flammable Limit** AP 7 %
Autoignition Temperature	536°C (997°F)
Hazardous Combustion Products	Carbon dioxide, carbon monoxide, smoke, fumes, unburned hydrocarbons, aldehydes and other products of incomplete combustion.
Special Properties	Flammable Liquid! This material releases vapors at or below ambient temperatures. When mixed with air in certain proportions and exposed to an ignition source, its vapor can cause a flash fire. Use only with adequate ventilation. Vapors are heavier than air and may travel long distances along the ground to an ignition source and flash back. A vapor and air mixture can create an explosion hazard in confined spaces such as sewers. If container is not properly cooled, it can rupture in the heat of a fire.
Extinguishing Media	SMALL FIRE: Use dry chemicals, carbon dioxide, foam, water fog, or inert gas (nitrogen). LARGE FIRE: Use foam, water fog, or water spray. Water fog and spray are effective in cooling containers and adjacent structures. However, water can cause frothing and/or may not extinguish the fire. Water can be used to cool the external walls of vessels to prevent excessive pressure, autoignition or explosion. DO NOT use a solid stream of water directly on the fire as the water may spread the fire to a larger area.
Protection of Fire Fighters	Firefighters must use full bunker gear including NIOSH-approved positive pressure self-contained breathing apparatus to protect against potential hazardous combustion or decomposition products and oxygen deficiencies. Evacuate area and fight the fire from a maximum distance or use unmanned hose holders or monitor nozzles. Cover pooling liquid with foam. Containers can build pressure if exposed to radiant heat; cool adjacent containers with flooding quantities of water until well after the fire is out. Withdraw immediately from the area if there is a rising sound from a venting safety device or discoloration of vessels, tanks, or pipelines. Be aware that burning liquid will float on water. Notify appropriate authorities if liquid enter sewers or waterways.

SECTION 6. ACCIDENTAL RELEASE MEASURES

Take proper precautions to ensure your own health and safety before attempting spill control or clean-up. For more specific information, refer to the Emergency Overview on Page 1, Exposure Controls and Personal Protection in Section 8 and Disposal Considerations in Section 13 of this MSDS.

Flammable Liquid! Release causes an immediate fire or explosion hazard. Evacuate all non-essential personnel from immediate area and establish a "regulated zone" with site control and security. A vapor-suppressing foam may be used to reduce vapors. Eliminate all ignition sources. All equipment used when handling this material must be grounded. Stop the leak if it can done without risk. Do not touch or walk through spilled material. Remove spillage immediately from hard, smooth walking areas. Prevent spilled material from entering waterways, sewers, basements, or confined areas. Absorb or cover with dry earth, sand, or other non-combustible material and transfer to appropriate waste containers. Use clean, non-sparking tools to collect absorbed material.

For large spills, secure the area and control access. Prevent spilled material from entering sewers, storm drains, other drainage systems, and natural waterways. Dike far ahead of a liquid spill to ensure complete collection. Water mist or spray may be used to reduce or disperse vapors; but, it may not prevent ignition in closed spaces. This material will float on

water and its run-off may create an explosion or fire hazard. Verify that responders are properly HAZWOPER-trained and wearing appropriate respiratory equipment and fire-resistant protective clothing during cleanup operations. In an urban area, cleanup spill as soon as possible; in natural environments, cleanup on advice from specialists. Pick up free liquid for recycle and/or disposal if it can be accomplished safely with explosion-proof equipment. Collect any excess material with absorbant pads, sand, or other inert non-combustible absorbent materials. Place into appropriate waste containers for later disposal. Comply with all laws and regulations.

SECTION 7. HANDLING AND STORAGE

Handling

A spill or leak can cause an immediate fire or explosion hazard. Keep containers closed and do not handle or store near heat, sparks, or any other potential ignition sources. Do not contact with oxidizable materials. Do not breathe vapor. Use only with adequate ventilation and personal protection. Never siphon by mouth. Avoid contact with eyes, skin, and clothing. Prevent contact with food and tobacco products. Do not take internally.

When performing repairs and maintenance on contaminated equipment, keep unnecessary persons away from the area. Eliminate all potential ignition sources. Drain and purge equipment, as necessary, to remove material residues. Use gloves constructed of impervious materials and protective clothing if direct contact is anticipated. Provide ventilation to maintain exposure potential below applicable exposure limits. Promptly remove contaminated clothing. Wash exposed skin thoroughly with soap and water after handling.

Empty containers may contain material residues which can ignite with explosive force. Misuse of empty containers can be dangerous if used to store toxic, flammable, or reactive materials. Cutting or welding of empty containers can cause fire, explosion, or release of toxic fumes from residues. Do not pressurize or expose empty containers to open flame, sparks, or heat. Keep container closed and drum bungs in place. All label warnings and precautions must be observed. Return empty drums to a qualified reconditioner. Consult appropriate federal, state and local authorities before reusing, reconditioning, reclaiming, recycling, or disposing of empty containers and/or waste residues of this material.

Storage

Store and transport in accordance with all applicable laws. Keep containers tightly closed and store in a cool, dry, well-ventilated place, plainly labeled, and out of closed vehicles. Keep away from all ignition sources. Ground all equipment containing this material. Containers should be able to withstand pressures expected from warming and cooling in storage. This flammable liquid should be stored in a separate safety cabinet or room. A refrigerated room is preferable for materials with a flash point temperature lower than 70°F (21°C). All electrical equipment in areas where this material is stored or handled should be installed in accordance with applicable regulatory requirements and the National Electrical Code.

SECTION 8. EXPOSURE CONTROLS AND PERSONAL PROTECTION

Engineering Controls

Provide exhaust ventilation or other engineering controls to keep the airborne concentrations of vapor or mists below the applicable workplace exposure limits indicated below. All electrical equipment should comply with the National Electric Code. An emergency eye wash station and safety shower should be located near the work-station.

Personal Protective Equipment

Personal protective equipment should be selected based upon the conditions under which this material is used. A hazard assessment of the work area for PPE requirements should be conducted by a qualified professional pursuant to OSHA regulations. The following pictograms represent the minimum requirements for personal protective equipment. For certain operations, additional PPE may be required.

Toluene

Eye Protection	Safety glasses equipped with side shields are recommended as minimum protection in industrial settings. Chemical goggles should be worn during transfer operations or when there is a likelihood of misting, splashing, or spraying of this material. Suitable eye wash water should be readily available.
Hand Protection	Avoid skin contact. Use gloves (e.g., disposable PVC, neoprene, nitrile, vinyl, or PVC/NBR). Wash hands with plenty of mild soap and water before eating, drinking, smoking, use of toilet facilities or leaving work. DO NOT use gasoline, kerosene, solvents or harsh abrasives as skin cleaners.
Body Protection	Avoid skin contact. Wear long-sleeved fire-retardant garments (e.g., Nomex®) while working with flammable and combustible liquids. Additional chemical-resistant protective gear may be required if splashing or spraying conditions exist. This may include an apron, boots and additional facial protection. If product comes in contact with clothing, immediately remove soaked clothing and shower. Promptly remove and discarded contaminated leather goods.
Respiratory Protection	For unknown vapor concentrations use a positive-pressure, pressure-demand, self-contained breathing apparatus (SCBA). For known vapor concentrations above the occupational exposure guidelines (see below), use a NIOSH-approved organic vapor respirator if adequate protection is provided. Protection factors vary depending upon the type of respirator used. Respirators should be used in accordance with OSHA requirements (29 CFR 1910.134).
General Comments	Warning! Use of this material in spaces without adequate ventilation may result in generation of hazardous levels of combustion products and/or inadequate oxygen levels for breathing. Odor is an inadequate warning for hazardous conditions.

Occupational Exposure Guidelines

Substance	**Applicable Workplace Exposure Levels**
Toluene	**ACGIH (United States). Skin** TWA: 50 ppm 8 hour(s). **OSHA (United States).** TWA: 200 ppm 8 hour(s). CEIL: 300 ppm PEAK: 500 ppm

SECTION 9. PHYSICAL AND CHEMICAL PROPERTIES (TYPICAL)

Physical State	Liquid.	**Color**	Clear.	**Odor**	Aromatic, characteristic solvent odor.
Specific Gravity	0.872 (Water = 1)	**pH**	Not Applicable.	**Vapor Density**	AP 3 (Air = 1)
Boiling Range	AP 111° C (AP 231° F)			**Melting/Freezing Point**	AP -95°C (AP -139°F)
Vapor Pressure	3.2 kPa (24 mmHg) (at 20°C)			**Volatility**	872 g/l VOC (W/V)
Solubility in Water	Very slightly soluble in cold water. (<0.1 % w/w)			**Viscosity (cSt @ 40°C)**	<3
Additional Properties					

Toluene

Paraffin, Isoparaffin and Cycloparaffin Hydrocarbons Content = <1 Wt.% (ASTM D-1319);
Aromatic Hydrocarbon Content = >99 Wt. % (ASTM D-1319);
Average Density at 60°F = 7.26 lbs./gal. (Calculated via ASTM D-287);
Aniline Cloud Point Temperature = 48°F (8.9°C) (ASTM D-611);
Kauri-Butanol (KB) Value = 105 (ASTM D-1133);
Dry Point Temperature = 231°F (111°C) (ASTM D-86, D-850 or D-1078);
Evaporation Rate = 1.9 (n-Butyl acetate = 1.0);
Heat Value = 18,314 Btu per pound;
Flash Point = 40° F (4° C) (TCC);
Odor Threshold = 2 to 5 ppm in air

SECTION 10. STABILITY AND REACTIVITY

Chemical Stability	Stable.	**Hazardous Polymerization**	Not expected to occur.
Conditions to Avoid	Keep away from heat, sparks and flame.		
Materials Incompatibility	Strong acids, alkalies, and oxidizers such as liquid chlorine, other halogens, hydrogen peroxide and oxygen.		
Hazardous Decomposition Products	No additional hazardous decomposition products were identified other than the combustion products identified in Section 5 of this MSDS.		

SECTION 11. TOXICOLOGICAL INFORMATION

For other health-related information, refer to the Emergency Overview on Page 1 and the Hazards Identification in Section 3 of this MSDS.

Toxicity Data

Toluene:
Effects from Acute Exposure:
Deliberate inhalation of toluene at high concentrations (e.g., glue sniffing and solvent abuse) has been associated with adverse effects on the liver, kidney and nervous system and can cause CNS depression, cardiac arrhythmias and death. Case studies of persons abusing toluene suggest isolated incidences of adverse effects on the fetus including birth defects.

Effects from Repeated or Prolonged Exposure:
Studies of workers indicate long-term exposure may be related to impaired color vision and hearing. Some studies of workers suggest long-term exposure may be related to neurobehavioral and cognitive changes. Some of these effects have been observed in laboratory animals following repeated exposure to high levels of toluene. Several studies of workers suggest long-term exposure may be related to small increases in spontaneous abortions and changes in some gonadotropic hormones. However, the weight of evidence does not indicate toluene is a reproductive hazard to humans. Studies in laboratory animals indicate some changes in reproductive organs following high levels of exposure, but no significant effects on mating performance or reproduction were observed. Case studies of persons abusing toluene suggest isolated incidences of adverse effects on the fetus including birth defects. Findings in laboratory animals were largely negative. Positive findings include small increases in minor skeletal and visceral malformations and developmental delays following very high levels of maternal exposure. Studies of workers indicate long-term exposure may be related to effects on the liver, kidney and blood, but these appear to be limited to changes in serum enzymes and decreased leukocyte counts. Studies in laboratory animals indicate some evidence of adverse effects on the liver, kidney, thyroid, and pituitary gland following very high levels of exposure. The relevance of these findings to humans is not clear at this time.

SECTION 12. ECOLOGICAL INFORMATION

Ecotoxicity Toxic to aquatic organisms, may cause long-term adverse effects in the aquatic environment.

Environmental Fate This product is not expected to bioaccumulate through food chains in the environment.

SECTION 13. DISPOSAL CONSIDERATIONS

Hazard characteristic and regulatory waste stream classification can change with product use. Accordingly, it is the responsibility of the user to determine the proper storage, transportation, treatment and/or disposal methodologies for spent materials and residues at the time of disposition.

Maximize material recovery for reuse or recycling. If discarded, Toluene is regulated by US EPA as a listed hazardous waste (U220). Recovered non-usable material may be regulated by US EPA as a hazardous waste due to its ignitibility (D001) and/or its toxic (D018) characteristics. Conditions of use may cause this material to become a "hazardous waste", as defined by federal or state regulations. It is the responsibility of the user to determine if the material is a RCRA "hazardous waste" at the time of disposal. Transportation, treatment, storage and disposal of waste material must be conducted in accordance with RCRA regulations (see 40 CFR 260 through 40 CFR 271). State and/or local regulations may be more restrictive. Contact the RCRA/Superfund Hotline at (800) 424-9346 or your regional US EPA office for guidance concerning case specfic disposal issues.

SECTION 14. TRANSPORT INFORMATION

The shipping description below may not represent requirements for all modes of transportation, shipping methods or locations outside of the United States.

US DOT Status A U.S. Department of Transportation (DOT) regulated material.

Proper Shipping Name RQ, Toluene, 3, UN1294, PG II

Hazard Class 3

Packing Group(s) II

UN/NA Number UN1294

Reportable Quantity RQ 1000 lbs. [Based upon maximum Toluene concentration of 100% and an RQ of 1000 lbs.]

Placard(s)

Emergency Response Guide No. 130

HAZMAT STCC No. 49 093 05

MARPOL III Status Not a DOT "Marine Pollutant" per 49 CFR 171.8.

SECTION 15. REGULATORY INFORMATION

TSCA Inventory This product and/or its components are listed on the Toxic Substances Control Act (TSCA) inventory.

Toluene

SARA 302/304 Emergency Planning and Notification	The Superfund Amendments and Reauthorization Act of 1986 (SARA) Title III requires facilities subject to Subparts 302 and 304 to submit emergency planning and notification information based on Threshold Planning Quantities (TPQs) and Reportable Quantities (RQs) for "Extremely Hazardous Substances" listed in 40 CFR 302.4 and 40 CFR 355. No components were identified.
SARA 311/312 Hazard Identification	The Superfund Amendments and Reauthorization Act of 1986 (SARA) Title III requires facilities subject to this subpart to submit aggregate information on chemicals by "Hazard Category" as defined in 40 CFR 370.2. This material would be classified under the following hazard categories: Fire, Acute (Immediate) Health Hazard, Chronic (Delayed) Health Hazard
SARA 313 Toxic Chemical Notification and Release Reporting	This product contains the following components in concentrations above de minimis levels that are listed as toxic chemicals in 40 CFR Part 372 pursuant to the requirements of Section 313 of SARA: Toluene [CAS No.: 108-88-3] Concentration: >99%
CERCLA	The Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (CERCLA) requires notification of the National Response Center concerning release of quantities of "hazardous substances" equal to or greater than the reportable quantities (RQ's) listed in 40 CFR 302.4. As defined by CERCLA, the term "hazardous substance" does not include petroleum, including crude oil or any fraction thereof which is not otherwise specifically designated in 40 CFR 302.4. Chemical substances present in this product or refinery stream that may be subject to this statute are: Toluene [CAS No.: 108-88-3] RQ = 1000 lbs. (453.6 kg) Concentration: >99% Benzene [CAS No.: 71-43-2] RQ = 10 lbs. (4.536 kg) Concentration: <0.1%
Clean Water Act (CWA)	This material is classified as an oil under Section 311 of the Clean Water Act (CWA) and the Oil Pollution Act of 1990 (OPA). Discharges or spills which produce a visible sheen on waters of the United States, their adjoining shorelines, or into conduits leading to surface waters must be reported to the EPA's National Response Center at (800) 424-8802.
California Proposition 65	This material may contain the following components which are known to the State of California to cause cancer, birth defects or other reproductive harm, and may be subject to the requirements of California Proposition 65 (CA Health & Safety Code Section 25249.5): Toluene: >99% Benzene: <0.1%
New Jersey Right-to-Know Label	For New Jersey R-T-K labeling requirements, refer to components listed in Section 2.
Additional Regulatory Remarks	Federal Hazardous Substances Act, related statutes, and Consumer Product Safety Commission regulations, as defined by 16 CFR 1500.14(b)(3) and 1500.83(a)(13): This product contains Toluene which may require special labeling if distributed in a manner intended or packaged in a form suitable for use in the household or by children. Precautionary label dialogue should display the following: **DANGER: Contains Toluene! Harmful or fatal if swallowed! Call Physician Immediately. Vapor Harmful! KEEP OUT OF REACH OF CHILDREN!**

SECTION 16. OTHER INFORMATION

Refer to the top of Page 1 for the HMIS and NFPA Hazard Ratings for this product.

REVISION INFORMATION

Version Number	5.0
Revision Date	01/19/2004
Print Date	Printed on 01/19/2004.

TRADE NAME Clear Gloss Epoxy Baking Enamel

Section II — HAZARDOUS INGREDIENTS

INGREDIENT	PERCENT	TLV PPM	TLV mg/M³	LEL	VAPOR PRESSURE mm Hg@20°C
Aliphatic Petroleum Solvent CAS# 64742-95-6	46.0	Not established		1.0	3.0
* Methyl n-Propyl Ketone CAS# 107-87-9	19.6	200	705	1.6	28.0
* n-Butyl Acetate CAS# 123-86-4	11.7	150	713	1.7	7.8
Aliphatic Hydrocarbon (Stoddard) CAS# 8052-41-3	5.1	100	525	1.0	2.0
1,2,4- Trimethylbenzene CAS# 95-63-6	1.9	Not established			
1,3,5- Trimethylbenzene CAS# 108-67-8	.9	Not established			

* This chemical is subject to the reporting requirements of Section 313 of SARA TITLE III.

Section III — PHYSICAL DATA

BOILING RANGE 100 - 315°F VAPOR DENSITY [X] HEAVIER. [ ] LIGHTER THAN AIR

EVAPORATION RATE [ ] FASTER [X] SLOWER THAN ETHER PERCENT VOLATILE BY VOLUME 87.8 WEIGHT PER GALLON 7.30

Section IV — FIRE AND EXPLOSION HAZARD DATA

FLAMMABILITY CLASSIFICATION Flammable Liquid FLASH POINT TCC 62°F LEL

EXTINGUISHING MEDIA Foam, CO_2 Dry Chemical, Water Fog

UNUSUAL FIRE AND EXPLOSION HAZARDS Flammable vapors may cuase explosive mixtures with air. Vapors are heavier than air and may travel along ground and be ignited by pilot lights, sparks, heaters, smoking, electric motors and other ignition sources.

SPECIAL FIRE FIGHTING PROCEDURES Self-contained breathing apparatus with a full facepiece operated in pressure demand or other positive pressure mode. Water streams will only spread burning material. Use water fog to cool containers exposed to fire to reduce internal pressure.

Section V — HEALTH HAZARD DATA

THRESHOLD LIMIT VALUE

EFFECTS OF OVEREXPOSURE

ACUTE: Eyes: Can cause irritation, redness tearing and blurred vision.
Skin: Can cause irritation, defatting, dermatitis.
Breathing: Can cause irritation, dizziness, fatigue, nausea, headache, possible unconsciousness.

CHRONIC

EMERGENCY AND FIRST AID PROCEDURES Eyes: FLush with large amounts of water, lifting upper & lower lids, get medical attention.
Skin: Wash exposed area with soap and water. Remove and launder contaminated clothing.
Swallowed: Do not induce vomiting. Keep warm and quiet and get medical attention.
Breathed: Remove to fresh air. Administer oxygen if breathing is difficult, call physician.

Section VI — REACTIVITY DATA

STABILITY ☐ UNSTABLE ☒ STABLE CONDITIONS TO AVOID

INCOMPATABILITY (Materials to avoid) Strong oxidizing agents.

HAZARDOUS DECOMPOSITION PRODUCTS Carbon monoxide

HAZARDOUS POLYMERIZATION ☐ MAY OCCUR ☒ WILL NOT OCCUR

CONDITIONS TO AVOID Heat, sparks, open flame and fire.

Section VII — SPILL OR LEAK PROCEDURES

STEPS TO BE TAKEN IN CASE MATERIAL IS RELEASED OR SPILLED Wipe up and safely discard absorbants. In the event of a large spill, dike the area and pump material to a waste tank.

WASTE DISPOSAL METHOD In accordance with Federal, State and local regulations.

Section VIII — SPECIAL PROTECTION INFORMATION

RESPIRATORY PROTECTION NIOSH/MESA approved for organic vapors. If airborne concentration exceeds TLV, use self-contained breathing apparatus or respirator.

VENTILATION Sufficient to maintain airborne concentration less than TLV.

PROTECTIVE GLOVES Buna

EYE PROTECTION Chemical safety goggles or face shield.

OTHER PROTECTIVE EQUIPMENT

Section IX — SPECIAL PRECAUTIONS

PRECAUTIONS TO BE TAKEN IN HANDLING AND STORING Use with adequate ventilation. Avoid prolonged breathing of vapors. Avoid prolonged or repeated skin contact.

DOL STORAGE CATEGORY

OTHER PRECAUTIONS Do not use near sparks, open flame, electric equipment, smoking, welding operations or other sources of ignition. Emptied containers may contain residual material suffieient to pose a fire or explosion hazard.

Re: 2014 Degreaser Annual Report/Annual Solvent Emissions Report/ Exceedance Report

Enclosed are annual/semiannual reports required for vapor degreasers: Annual Report, Annual Solvent Emissions Report and the semiannual exceedance report.

Please feel free to contact me if there are any questions regarding these reports.

Sincerely,

Bill Williams
Facility Manager

ANNUAL REPORT

FOR BATCH VAPOR OR IN-LINE HALOGENATED SOLVENT CLEANING MACHINES

Machines Complying with the **Equipment Standard** (40 CFR § 63.463)
(Applicable Rule: 40 CFR Part 63, Subpart T)

RECEIVED
JAN 14 2015

Re: 2010 Degreaser Annual Report/Annual Solvent Emissions Report/ Exceedance Report

Enclosed are annual/semiannual reports required for vapor degreasers: Annual Report, Annual Solvent Emissions Report and the semiannual exceedance report.

Please feel free to contact me if there are any questions regarding these reports.

Sincerely,

Bill Williams
Facility Manager

ANNUAL REPORT

FOR BATCH VAPOR OR IN-LINE HALOGENATED SOLVENT CLEANING MACHINES

Machines Complying with the **Equipment Standard** (40 CFR § 63.463)
(Applicable Rule: 40 CFR Part 63, Subpart T)

Owner/Operator/ Title	Limco Airepair, Inc.					
Mailing Address	5304 S. Lawton Ave.					
City	Tulsa		State	Oklahoma	Zip	74107
Facility Name	Limco Airepair, Inc.					
Street Address (i.e., Physical Location)	5304 S. Lawton Ave.					
City	Tulsa		State	Oklahoma	Zip	74107
Contact Person	Bill Williams	Title	Facilities Manager		Phone	919-445-4300
List All Applicable Air Quality Permit/Authorization Number(s)			99-026-O (M-2)			
Reporting Period	Beginning Date:	January 1, 2010		Ending Date:	December 31, 2010	

☒ All operators of solvent cleaning machines have received training on the proper operation of solvent cleaning machines and their control devices sufficient to pass the test required in 40 CFR § 63.463(d)(10).

Machine ID#	Machine Type[1]	Estimated Solvent Consumption during the Reporting Period (Indicate kg/yr or lb/yr)
Tally S/N379	Batch, dip	552 kg/yr

Certification: **This notification has been submitted as required by 40 CFR § 63.468(f). Based on information and belief formed after reasonable inquiry, I certify that the statements and information contained in this notification are true, accurate, and complete.**

Re: 2011 Degreaser Annual Report/Annual Solvent Emissions Report/ Exceedance Report

Enclosed are annual/semiannual reports required for vapor degreasers: Annual Report, Annual Solvent Emissions Report and the semiannual exceedance report.

Please feel free to contact me if there are any questions regarding these reports.

Sincerely,

Bill Williams
Facility Manager

LIMCO Airepair, Inc.

Notes and Comments:

The annual reporting requirement as specified in 40 CFR 63.468 (f) requires submittal by February 1 of each year. The report is dated January 28, 2005, but the envelope indicates that it was not mailed until February 4, 2005, and received in Oklahoma City on February 7, 2005. Compliance with the submittal date requirement was not achieved.

The report includes the required items and states that 3027 lb/yr (1.0635 TPY) of solvent (Trichloroethylene) was used during year 2004. The emission limit for Trichloroethylene used in the degreaser listed in Permit 99-023-O (M-2) is 3.2 TPY, therefore compliance with the emission limit appears to have been achieved.

Specific Condition 3 of Permit #99-026-O (M-2) states: "All required reports shall be sent to the DEQ Regional Office at Tulsa." Since the report was sent to the Oklahoma City office, compliance with that permit specific condition was not achieved.

A copy of the report will be sent to the Tulsa office, who will contact the facility

Re: 2010 Degreaser Semiannual Exceedance Report

Enclosed is the semiannual exceedance report for January through June, 2010.

Please feel free to contact me if there are any questions regarding this report.

Sincerely,

Bill Williams
Facilities Manager

EXCEEDANCE REPORT

FOR BATCH VAPOR OR IN-LINE HALOGENATED SOLVENT CLEANING MACHINES

Machines Complying With Either the **Equipment Standard** or the **Alternative Standard**
(Applicable Rule: 40 CFR Part 63, Subpart T)

Owner/Operator/ Title	Limco Airepair, Inc.						
Mailing Address	5304 S. Lawton Ave.						
City	Tulsa			State	Oklahoma	Zip	74107
Facility Name	Limco Airepair, Inc.						
Street Address (i.e., Physical Location)	5304 S. Lawton Ave.						
City	Tulsa			State	Oklahoma	Zip	74107
Contact Person	Bill Williams	Title	Facilities Manager			Phone	919-445-4300
List All Applicable Air Quality Permit/Authorization Number(s)	99-026-O (M-2)						

Reporting Period								
	Semiannual Reporting	X	January – June (Due July 30)		July – December (Due January 30)			
	Quarterly Reporting		Jan – Mar		Apr – Jun		Jul – Sep	Oct – Dec
	Other Reporting Period	Beginning Date:			Ending Date:			

Machine ID#	Machine Type[1]	Has an Exceedance Occurred During the Reporting Period?[2]
Tally S/N379	Batch, dip	No

[1]For each machine, indicate Machine Type as Batch Vapor or In-Line.
[2]For each machine, indicate either "Yes," followed by the number of exceedances, or "No Exceedances" or "Machine Inoperative."

NOTE: List additional machines on Page 2 of this form. Add additional copies of Page 2 as necessary.

X	No exceedance of a parameter occurred during the reporting period, and no piece of equipment was inoperative, out of control, repaired, or adjusted during the reporting period. (Mark the box if this statement is true.)

Description of Exceedance(s), (Including Regulatory Citation[1]), Actions Taken[2], and Results of Actions

Re: Replacement of Vapor Degreaser

Dear Ms. King:

Enclosed are vapor degreaser specifications for a new vapor degreaser that replaced the current vapor degreaser and began operating on January 1, 2013.

Please feel free to contact me if there are any questions regarding the vapor degreaser.

Sincerely,

Bill Williams

QUOTE # 12UL115 REVB

ATTN: Mr. Joshua Given
Joshuag@limcoairepair.com
ATTN: Monty Eddington
Montye@limcoairepair.com

Ultronix hereby agrees to sell to the above Corporation (and/or Division) the apparatus and equipment described in the specifications below. They are to be delivered F.O.B., Hatfield, PA, with all prices firm for 30 days from the quotation date.

GENERAL DESCRIPTION AND SPECIFICATIONS

PROPOSED MODEL: Model HE503035 Vapor Spray Degreaser complete with a 1.5 HP low temperature Zer-O-Coil solvent control system.

PRODUCTION CAPACITY: Basket cleaning from overhead hoist.
(Baskets not include)

DEGREASER DIMENSIONS AND CAPACITY:

Inside vapor dimensions	-	60" Long x 30 Wide x 42" Deep

VAPOR AIR INTERFACE 60" X 30" = 12.5 SQUARE FEET
1.16 SQUARE METERS

Inside boiling dimension	-	48" Long x 30 Wide x 12" Deep
Approx. outside dimensions	-	126" Long x 54" Wide x 80" High**
Boiling sump liquid capacity	-	75 Gallons
Spray sump reservoir	-	10 Gallons
TOTAL SOLVENT REQUIREMENT:		**90 GALLONS**

****Note: Layout is refrigeration on the side of the degreaser, optional locations are available.**

CONSTRUCTION: Tank will be fabricated of 11 gauge, 304 type stainless steel, heliarc welded with structural steel reinforcing, as required. The pipe fittings welded to the tank and solvent collection troughs are type 304 stainless steel. Heated section of tank to be insulated with 1" fiberglass insulation and attractively sheathed with 20 gauge type, 304 stainless steel. All exposed structural steel will be properly prepared, and a coat of machinery gray enamel will be applied and air dried.

WATER SEPARATOR: Water separators are specifically designed for each degreaser solvent condensing system to remove the maximum amount of moisture. The separators are fabricated from type 304 stainless steel, with 304 stainless steel fittings. The separator is supplied with a removable lid. The solvent flowing through the separator returns to the degreasing system through the storage tank (spray reservoir) and back into the boiling sump.

HEATING SYSTEM: 28KW electric heat elements mounted in a large cleanout door in the boiling sump of the degreaser. Modulating energy control to activate standby elements to maintain constant minimum vapor flow.

PRIMARY CONDENSER: Multi passes of stainless tube refrigeration coils around inside perimeter of tank. **The freeboard ratio is 100 percent of working width.**

ZER-O-COIL: Balanced low temperature refrigeration system to control the (length x width) vapor air interface of the degreaser. Multiple passes of finned refrigeration coils around inside perimeter of degreaser directly above the primary condensing system. This system runs continuously without a defrost cycle. If the degreaser water condensing should fail, the refrigeration system will automatically "pump-down" to prevent the system from freezing and bursting the water coils inside the tank.

FREEBOARD REFRIGERATION DEVICE OPERATING AT -10 TO -30 F. TO DEVELOP A COLD AIR BLANKET ABOVE THE VAPOR ZONE IN THE MIDDLE OF THE TANK. MINIMUM TEMPERATURE IS 30 PERCENT OF THE BOILING POINT OF THE SOLVENT.

ELECTRICAL CONTROLS: A general purpose NEMA 12 control panel to furnish all necessary fuses, control transformer, motor starter(s), contactor(s), relays, etc. Prewired to a terminal strip. All machine mounted wiring is rigid conduit and enclosed to N.E.C. standards. Control panel is complete with necessary switches for safe operation. Pilot lights are supplied for all switches, and all safety controls to permit quick diagnosis by maintenance.

UTILITIES: Electrical current: 460 Volt - 3 Phase - 60 Hertz (max. amps 50)
1.4 Gallon per minute of city or well water for cooling (5 GPM if tower water or chilled water is available)

Motors: 1.5 H.P. Zer-O-Coil Compressor
1/3 H.P. Filter/Spray Pump Motor

CONTROLS: All safety and energy controls to meet all Federal, State, and local government regulations are standard equipment. Please refer to the attached list for a more complete description.

SPRAYING SYSTEM: System has a solvent resistant hose with hand-held spray lance. 1" x ¾" centrifugal type close-coupled pump and open drip proof motor, solvent supplied from distillation trough to storage tank. .

PRIMARY CHILLED WATER CONDENSING SYSTEM: 7.5-Ton Portable refrigeration cooling system water chiller package. Air-cooled refrigerated condensing unit supplied with digital set point, controller with constant L.E.D. process water temperature readout. Stainless steel (304-grade) tanks with state of the art brazed plate evaporators built of stainless steel and vacuum brazed with copper for increased heat transfer and surface area. Large full flow "Y" strainers and rugged cast iron head pumps that are thermal or safety fuse protected. Features pump only switch positions for circulation without cooling, low-pressure safety, high-pressure safety, freeze protection safety, internal overload safety. Start assist systems on all single-phase units to assure quick restart on load change. Also features rugged base frames of welded steel channel either anti-corrosion painted or hot dip galvanized.
Power: Available in: 480 VAC, 3 Phase

USED SOLVENT DISTILLATION UNIT: Rebuilt Baron Blakeslee distillation unit electric heated water cooled solvent recovery stills.

Size: 42" front to back, x 22" side to side, x 50" high. Tank should have clearance on the cleanout door side for removal. Approx 12 – 11 gauge stainless steel.

Electrical Requirements: NEMA 12 electric enclosure complete with all safeties and controls for proper operation. 460 Volt - 3 Phase - 60 Hertz. 15 amps for 15 G.P.H. (Optional voltage available)

The top of the distillation unit will be sealed and vented the top of the main distillation tank, and water separator to the degreaser. This will eliminate the possible pressure build up in the still, and residual vapor will be recovered in the degreaser (under the refrigeration unit.) Inspect all the safety controls for proper operation of the still with customer's choice of solvent. The solvent still mounted floor level with the degreaser. Valve and tubing connecting boiling sump of the degreaser and still for gravity supply from degreaser to still sump motor supplied to be installed between the degreaser and still boiling sumps to pump either sumps to holding drum(s) [holding drums not supplied]. . Distillate from still to flow into spray sump of degreaser.

DELIVERY: Based on current conditions at time of quotation, lead time for this unit is 15 to 18 weeks upon receipt of order. **Actual delivery date will be established at time of order and deposit.**

INSTALLATION: The customer is responsible for the installation and placement of the equipment. If you choose Ultronix to install the equipment please contact us for a quote.

Taxes, licenses, fees and permits required by the state and/or local municipality for the installation, connection and inspection of the equipment are the responsibility of the customer.

Shipment: F.O.B. Hatfield, PA.

WARRANTY, TERMS AND CONDITIONS: Please refer to the attached warranty sheet. If terms and conditions are not attached, document is null and void.

ADDITIONALLY LIMCO HAS AN AIR POWERED SLIDING LID. THE LID REMAINS CLOSED UNTIL THE FOOTSWITCH IS PRESSED TO OPEN. AS SOON AS THE OPERATOR WALKS AWAY FROM THE UNIT, THE LID CLOSES.

PRICE:

*****Crating if required will be an additional charge.**

OTHER PERTINENT NOTES

EQUIPMENT WIRED TO N.E.C. AND N.F.P.A. 79 STANDARDS: Deviations from these standards are available upon customer's specific request, which must be referenced in the purchase order. Ultronix cannot be held liable for any wiring, which deviates, from these national standards.

Wiring change requests received by Ultronix after the unit is placed into production will result in additional charges to the customer to cover our costs of rewiring. (Labor to perform rework and parts if applicable.)

CHANGE REQUESTS

CHANGES AFFECTING THIS QUOTATION – PRIOR TO CUSTOMER ORDER BEING RELEASED: Subsequent to quote being rendered to customer, any verbal statements/comments/requests affecting or changing the content, terms or conditions of the quote – by either party – are invalid unless followed up in writing, acknowledged, and agreed to by both parties. These modifications to the quote must take the form of a formal change order and must be specifically referenced in the customer purchase order – at the time the order is released to be valid and in effect.

CHANGE REQUESTS RECEIVED BY ULTRONIX – AFTER CUSTOMER PURCHASE ORDER HAS BEEN RECEIVED: All Customer change requests must be made in writing – faxed and mailed – with Ultronix acknowledging receipt. Should any change so ordered cause rework and/or a material increase in the cost of/or the time required in the manufacture process, an equitable adjustment shall be

made in the order price or time of performance or both. Ultronix shall, unless written instructions to the contrary have been received from buyer, proceed with the work as changed without interruption and without awaiting settlement of any such claim.

Again, thank you for the opportunity to be of service and to quote your equipment specifications. Please contact our sales and engineering department referencing this quote number, should you need additional information, have questions about its contents, or wish to modify the equipment we have proposed.

Sincerely,

Carl Wolf
ULTRONIX, INC.

LIST OF TYPICAL OPERATING & SAFETY CONTROLS AVAILABLE

A. SAFETY VAPOR CONTROL:

If there is inadequate flow or warm water entering the primary condensing coils, the solvent vapor can rise and overflow the degreaser. A thermocouple or sensing bulb is located directly above the primary coils. Solvent vapor reaching the sensor will cause the heat input to the boiling sump to shut off. In most cases, the poor coolant conditions must be rectified before the degreaser can be restarted. The manual reset button on the control must be depressed.

B. LIQUID HIGH TEMPERATURE:

When the boiling solvent becomes contaminated with an excess of oil from the degreasing operation, the temperature of the mixture will rise eventually to a point where degreasing efficiency is impaired. A thermocouple or sensing bulb in the boiling liquid will cause the heat input to shut off at the preset temperature. A digital readout (optional) will allow maintenance to monitor the status of the solvent and schedule solvent replacement.

******TO RESET CONTROLS** – Press & Hold the Set Button until it Resets

DEQ FORM 605-006

OKLAHOMA DEPARTMENT OF ENVIRONMENTAL QUALITY

Oklahoma Department of Environmental Quality
Annual Comprehensive Site Compliance Evaluation Report for Industrial Facilities (ACSCER)

Submission of this Comprehensive Site Compliance Evaluation Report, Part B, provides notice that the party identified in Section I of this form is not required to conduct Benchmark Monitoring for storm water discharges associated with industrial activities under the OPDES program. This Annual Comprehensive Site Compliance Evaluation Report is required for all authorized industrial facilities.

All Requested Information Must Be Provided on This Form (Part A) and the ACSCER Form (Part B).

See Instructions On Page 4 of The Form.

Section I.

OPDES Permit Authorization Number: OKR050659

RECEIVED
FEB 07 2012
DEQ ECLS

Section II. Facility Operator Information

Name: Limco-Airepair, Inc. Phone: (918) 445-4300

Address: 5304 South Lawton Ave.

City: Tulsa County: Tulsa Zip Code: 74107

Section III. Facility Location

Name: Limco-Airepair, Inc. Phone: (918) 445-4300

Address: 5304 South Lawton Ave

City: Tulsa County: Tulsa Zip Code: 74017

Latitude: 39.0516 N Longitude: 96.0003 W

Section IV. Certification

I certify under penalty of law that I have read and understand the requirements for filing this Comprehensive Site Compliance Evaluation Report, which is to be filed by March 1 st of each year beginning in 2007.

This report is also to be retained as part of the SWP3 for at least three (3) years from the date permit coverage expires or is terminated and will be made available to any State or Federal Inspector visiting this facility. All records of actions taken in accordance with 4.10 of this permit as part of the Storm Water Pollution Prevention Plan will be retained for at least three (3) years from the date permit coverage expires or is terminated. I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gathered and evaluated the information submitted. Based upon my inquiry of the person or persons who manage the system, or those persons directly involved in gathering the information, the information submitted is to the best of my knowledge and belief true, accurate, and complete. I am aware there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Annual Comprehensive Compliance Site Evaluation Report - Part B
Page 1.

Reporting Period: 2011.

✓ How many routine facility inspections did you perform during the reporting period? 4

✓ How many total deficiencies in implementing your SWP3 and complying with your permit were noted in any inspection?

Date	Deficiencies	Corrected (Y or N)	Date Corrected
	NONE		

✓ What must you do to correct the deficiencies that remain uncorrected?
NA

✓ Were all BMPs you indicated you would be using in your SWP3 (Part 4.2.8) including good housekeeping practices, actually being implemented at the time of the annual Comprehensive Site Compliance Evaluation?
Yes ☒ No ☐

✓ If one or more BMPs were not being implemented, were corrective actions taken after the FIRST inspection to find the problem?
Yes ☐ No ☐ All BMPs were being implemented ☒

✓ Was/were the same failure(s) to implement a BMP deficiency(ies) noted in more than one inspection?
Yes ☐ No ☐ No deficiencies noted in any inspection ☒

✓ Did any of your routine facility inspections find that one or more of your BMPs was not effective in controlling the pollutant source for which it was designed?
Yes ☐ No ☐ All BMPs were effective ☒

✓ If you found one or more ineffective BMPs, have they all been replaced with an alternative or modified BMP?
Yes ☐ No ☐ All BMPs were being effective ☒

✓ At any time during the reporting period, did you discover any illicit discharges from your facility?
Yes ☐ No ☒

✓ Have all illicit discharges (including any discovered in previous years) been eliminated or permitted?
Yes ☐ No ☐ Permit applied for ☐ No known illicit discharges ☒

✓ Have any significant spills or leaks occurred at your facility during the reporting period?
Yes ☐ No ☒

✓ If any significant spills or leaks occurred, did they result in either a dry weather discharge or an actual discharge of the spilled or leaked material commingled with storm water (as opposed to the spilled material being washed away by storm water?)
Yes ☐ No ☒

Part B. Page 2

✓ If any significant spills or leaks occurred, did they result in more than the minimum amounts of material being discharged in storm water? Base your answer on your knowledge of the material you spilled or that leaked. The minimum amounts could vary with the nature (toxicity, oxygen demand, pH, etc.) of the spilled or leaked material from amounts left after normal "sweeping" type cleanup to the point at which even trace amounts left after cleanup could cause an environmental problem.
Yes ☐ No ☐ No spills or leaks occurred ☒

✓ Have all known spills or leaks been cleaned up or otherwise prevented from contaminating storm water that would be discharged under the authority of this permit?
Yes ☐ No ☐ No spills or leaks occurred ☒

✓ How many times did you visually monitor all your storm water discharges during the reporting year? (Count only those done in accordance with the procedures at Part 5.1 - Quarterly Visual Monitoring)
Number 4

✓ Would the results of your visual monitoring indicate that there are pollutants in your storm water discharges that are not adequately controlled by your current BMPs?
Yes ☐ No ☒

✓ If the results of your visual monitoring indicated a potential problem, was it due to one or more of the following? 5 - N/A

1. New pollutant source (including exposure of previously unexposed material).
2. Failure to implement or maintain an existing BMP.
3. Less than expected performance from a BMP.
4. No BMP was selected to deal with that problem.
5. N/A (No problems identified)

✓ If your visual monitoring indicated a potential problem, what have you done to resolve the problem? 6 - N/A

1. Eliminated exposure or pollutant source.
2. Modified existing BMPs.
3. Added a new BMP.
4. Plan to address problem by end of current reporting year.
5. Nothing planned.
6. N/A (No problems identified).

✓ Did any analysis of any element tested during any previous discharge monitoring period exceed the numeric limitation value?
Yes ☐ No ☒

✓ If your answer to the previous question was "Yes", please name the element and the test results.

Element	Test Results	Element	Test Results
N/A	N/A	N/A	N/A

Instructions for Completing the Annual Comprehensive Site Compliance Evaluation Report Form 605-006, Storm Water Discharges Associated with Industrial Activity

When To File an ACSCER Form:

Permittees who are presently covered under an issued OPDES general permit for storm water discharges associated with industrial activity must submit an Annual Comprehensive Site Compliance Evaluation Report by March 1 st of each year, beginning in 2007. This is in lieu of filing analytical benchmark discharge monitoring reports. If you need assistance or have questions, contact the Storm Water Program of the Environmental Complaints & Local Services of the DEQ at (405) 702-6100.

Section I: Permit Information:

Enter the existing OPDES General Storm Water Multi-Sector Industrial Permit number assigned to the facility identified in Section II.

Section II. Facility Operator Information:

Give the legal name of the person, firm, public organization or any other entity that owns or operates the facility described in this application. The name of the operator may or may not be the same name as the facility. The operator of the facility is the legal entity that controls the facility's operation, rather than the plant or site manager.

Section III: Facility/Site Location Information:

Enter the facility's official or legal name and complete address, telephone, city, state, and ZIP code. If the facility lacks a street address, indicate the latitude and longitude of the facility to the nearest 15 seconds.

Section IV: Certification

The ACSCER form must be signed by a responsible party such as the owner or an officer, such as: president, vice president, secretary, and treasurer of either a corporation, company, trust, partnership, or sole proprietorship by a general partner or the proprietor. For a municipality, state, Federal, or other public facility: by either a principal executive officer or ranking elected official.

How to complete the Comprehensive Site Compliance Evaluation Report Part B (see Section 4.2.15)

1. Inspect all areas where materials or activities are exposed to storm water, and areas where spills and leaks have occurred within the past 3 years.
2. Report industrial material, residue or trash on the ground that could contaminate or be washed away.
3. Prevent leaks or spills from industrial equipment, drums, barrels, tanks, etc.
4. Prevent offsite tracking of industrial material or sediment.
5. Prevent tracking or blowing of raw, final, or waste material from areas of no exposure to exposed areas.
6. Include evidence of, or potential for pollutants entering the drainage system.

Follow-up Actions:

1. Modify your SWP3 as necessary as required by Part 4.
2. Complete revisions to the SWP3 within 14 days following the inspection.
3. Complete modifications to the BMPs before the next anticipated storm event or as soon as practicable.
4. Report the name(s) of the personnel making the inspection, date(s), major observations, and incidents of non-compliance.
5. Complete the certification that the facility is in compliance with the updated Storm Water Pollution Prevention Plan and BMPs.

Reporting is required by March 1 st of the year beginning in 2007.

RE: Limco Airepair Withdrawl

Dear Mr. Williams:

Per our previous conversation, it is my understanding that you no longer wish to continue participation in the Voluntary Cleanup Program. We have started the process of closing the file and reimbursing you the remaining funds left in your account with us. Could you provide a letter confirming your desire to leave the program to finalize this process? Thank you for your assistance in this matter.

Sincerely,

C. Jordan Caldwell

HEARING CLERK

MEMORANDUM OF AGREEMENT AND CONSENT ORDER FOR SITE CHARACTERIZATION

The parties to this case, the Oklahoma Department of Environmental Quality ("DEQ") and Limco Airepair, Inc. ("Respondent") (collectively, "Parties"), agree to this Memorandum of Agreement and Consent Order for Site Characterization ("MACO") in order to resolve certain environmental regulatory issues. At the time of the execution of this MACO, Respondent is entering the DEQ's Voluntary Cleanup Program ("VCP").

FINDINGS OF FACT

1. Respondent is Limco Airepair, Inc.

2. Respondent's real property being characterized pursuant to this MACO ("Site") is located at 5304 South Lawton Avenue, Tulsa, Oklahoma. Respondent is the owner of the Site.

3. Respondent informs the DEQ that historical activities, that are the source of, or may have contributed to the potential contamination being investigated, appear to have been caused by chemicals that were either spilled onto the property incident to manufacturing activities being conducted on the site or that were leaked onto the property from an off-site location.

4. Respondent informs the DEQ that the following environmental permits, registrations, authorizations, orders, enforcement actions or National Priorities List (NPL)

activities are applicable to the respondent or the Site:

Environmental Permits
➢ Tier 2 (State) - A listing of facilities which store or manufacture hazardous materials and submit a chemical inventory report.
➢ TRIS (Federal) – Toxic Chemical Release Inventory System. TRIS identifies facilities which release toxic chemicals to the air, water and land in reportable quantities under SARA Title III Section 313.
➢ AIRS – (State) – Permitted AIRS facility (air permit)
➢ RCRA – LQG (Federal) – Resource Conservation Recovery Act – Large Quantity Generator. RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.
➢ NPDES – National Pollutant Discharge Elimination System.
➢ Storm Water Pollution Prevention Plan (SP3).
➢ EPA Form "R".
Environmental registrations
• The subject site facility, Limco Airepair is reported to be a RCRA-LQG (EPA ID: , OKR000000612). The facility was originally reported to be a Small Quantity Generator in 1995 but changed to a LQG in 2000. The facility generates the following wastes: solvents (lacquer thinner), caustic acid (sodium hydroxide), chromium, trichloroethylene, solvent mixtures (toluene, methyl ethyl ketone), and cadmium. The facility had 19 reported violations in January 1999 and as of July 1999 all 19 violations were in compliance. Two (2) additional violations were reported in January 2007 and were in compliance as of March 9, 2007. The violations consisted of used oil

generators, pre-transport generator and general generators and the 19 violations from 1999 were informal written violations. According to EDR and EPA information, the Limco Airepair facility is currently in compliance.
• The subject site is reported on the Tier 2 database (Facility ID: FATR200724U7GT002YBJ). Since the facility stores certain chemicals on-site, it is required to report those chemicals, the stored quantity, the type of storage container, and location of each chemical. The reported chemicals on the Tier 2 include: Hydrogen Fluoride, Nitric Acid (>40%), and Sulfuric Acid. There have been no reported releases of these chemicals on-site.
• The subject site is reported to be a TRIS facility (Facility ID: 74107LMCRP53). Currently the subject site releases approximate 8,260 pounds of Toluene (TRI Chemical ID: 000108883) from fugitive or non-point air emissions. Any Toluene waste is transferred to an off-site facility for treatment and disposal. The facility previously released Methyl Ethyl Ketone and Trichloroethylene but no longer generates these chemicals. Limco Airepair is currently in compliance with their Air Quality Permit.

5. Respondent informs the DEQ that, to its knowledge, the following

conditions currently exist or have existed in the past at the Site that are or were not in compliance with any environmental laws or regulations:

Compliance Summary
• 01/30/2007 Compliance Evaluation Inspection On-site (Generators Pre-Transport) (achieved compliance on 03/09/2007)
• 01/30/2007 Compliance Evaluation Inspection On-site (Used Oil Generators) (achieved compliance on 03/09/2007)
• 01/19/1999 Compliance Evaluation Inspection On-site (Generators – General) (achieved compliance on 07/06/1999

6. Respondent states that it first notified the DEQ of the environmental conditions that are the subject of this MACO in February, 2009 by written correspondence. Subsequently, on September 2, 2009, a meeting was held at the offices of the DEQ in Oklahoma City, to discuss addressing the contamination through the DEQ VCP and/or Brownfield Programs. Respondent first became aware of the possible contamination in December of 2008. Prior to the execution of this MACO, the DEQ provided assistance to Respondent by informing Respondent of the technical requirements and procedures for participating in the Brownfield Program; and

7. Respondent informs the DEQ that the harm that has resulted or is expected to result from the conditions at the Site is a release, or potential release, of contaminants to soil and groundwater at the Site.

8. The parties agree that it is beneficial to resolve these matters promptly and by agreement and, as to this matter, waive the filing of a petition or other pleading, and Respondent waives the right to a hearing.

CONCLUSIONS OF LAW

9. The DEQ has regulatory jurisdiction and authority in this matter, and Respondent is subject to the jurisdiction and authority of the DEQ under Oklahoma law, including but not limited to the Oklahoma Environmental Quality Act, 27A O.S. §1-1-101 *et seq.* and the Oklahoma Environmental Quality Code, specifically 27A Okla. Statutes (O.S.) §§ 2-6-105, 2 –7– 123, 2-10-301(H), and 2-15-101 *et seq.* and applicable rules.

10. The Parties are authorized by 75 O.S. §309(E) and 27A O.S. §2-3-506(B) to resolve this matter by agreement.

11. If the Respondent remediates the Site to risk based standards, Respondent acknowledges that the DEQ shall file a Notice of Remediation in the land records of the county in which the property is located unless said property is remediated to unrestricted use. Respondent shall grant an easement to the DEQ for ingress and egress to assure ongoing protection of the Remedy as provided in the deed notice.

12. The DEQ acknowledges that Respondent has submitted various technical documents for review and comment, including but not limited to the following: Limited Phase I and II Environmental Site Assessments prepared by A&M Engineering Services, Inc.

13. Respondent does not admit any Conclusions of Law.

ORDER

14. Within thirty (30) days of effective date of this MACO, Respondent will submit to the DEQ a Work Plan to characterize the Site in conformance with guidance documents recommended by the DEQ including a Quality Assurance Project Plan (QAPP), a Sampling and Analysis Plan (SAP) and a Health and Safety Plan (HSP) for the site.

15. The SAP must contain schedules for completion of each task and shall not be implemented until after approval of the Work Plan by the DEQ. If the DEQ determines that the results of the SAP indicate the need for additional tasks to be performed by Respondent to properly characterize the Site, Respondent and DEQ shall negotiate an amendment to the SAP that is acceptable to the parties.

16. If either Party believes work needs to be performed prior to completion of the Site Characterization, Respondent or the DEQ may request the performance of a Removal Action (RA) or an Interim Remedial Measure (IRM).

17. Within thirty (30) days after completing the tasks outlined in the Work Plan, Respondent shall submit a Site Characterization Report to the DEQ in accordance with guidance documents provided by the DEQ at its website,

http://www.deq.state.ok.us/ lpdnew/ FactSheets/SiteCharacterizationTemplate.

18. Within thirty (30) days from the effective date of this Order, Respondent shall submit a valid check for $5,000.00. The check shall be mailed to: Comptroller, Administrative Services Division, Department of Environmental Quality, P.O. Box 2036, Oklahoma City, Oklahoma, 73101-2036 and shall reference the case number and case name. The DEQ will establish an account for Respondent with the funds referenced herein above, from which the DEQ will draw to pay its costs necessary for oversight of tasks set forth in this MACO and, if a deed notice is filed by the DEQ, to pay the filing fee pursuant to Oklahoma law. The DEQ oversight costs will include all reasonably-incurred direct costs of the DEQ's oversight arrangement for the investigation including, but not limited to, time and travel costs of DEQ personnel, contractor costs, and the costs of collecting and analyzing split samples. The salary and fringe benefit component of

oversight costs will be charged as direct costs. Indirect costs for on-Site and off-Site oversight will be charged at the current federal percentage rate until a new indirect cost rate is negotiated with the United States Environmental Protection Agency, at which time the negotiated rate will be used. The DEQ will provide a written quarterly accounting to Respondent documenting the receipt and disbursement of the funds referenced herein above. When and if the balance of Respondent's account falls below $500.00, the DEQ will notify Respondent in writing, and Respondent will submit a check for a sum sufficient to bring the account balance back to $5,000.00. Respondent will have the right to audit any accounting submitted by the DEQ at Respondent's expense. The DEQ will promptly credit any overcharges to Respondent's account. Upon completion of the tasks set forth in this MACO the DEQ will promptly return any funds remaining in Respondent's account to Respondent.

19. Respondent must also include a description of the monitoring which is to occur after issuance of the Certificate of Completion or Certificate of No Action Necessary and a summary of a title search document.

20. With the exception of DEQ approved RAs or IRMs, a Consent Order for Remediation will be negotiated and signed by the DEQ and Respondent before remedial work is begun at the Site.

GENERAL PROVISIONS

21. Upon their approval by the DEQ, any final reports, plans, specifications, schedules and attachments required under this MACO are incorporated into it and enforceable under it. Failure of Respondent to respond within a reasonable time to any

errors, deficiencies or other regulatory requirements identified by the DEQ is a violation of this MACO.

22. No informal advice, guidance, suggestions or comments by employees of the DEQ regarding reports, plans, specifications, schedules, and other writings relieve or modify Respondent's obligation to obtain written approval by the DEQ, when required by this MACO.

23. Respondent agrees to allow agents of the DEQ entry onto the site at reasonable times and without advance notice, for the purposes of inspecting, sampling, testing, records review and other authorized activities to assess compliance with this MACO. If Respondent is required to sample or test, Respondent agrees to give the DEQ reasonable notice of the sampling or testing date and time and allow the DEQ to observe and/or split-sample.

24. Nothing in this MACO relieves Respondent of its obligation to comply with all applicable federal, state and local statutes, rules and ordinances.

25. This MACO is enforceable as a final order of the Executive Director of the DEQ. The DEQ will retain jurisdiction of this matter for the purposes of interpreting, implementing and enforcing the terms and conditions of this MACO and for the purpose of resolving disputes.

26. Nothing in this MACO limits the DEQ's right to take enforcement action for violations discovered or occurring after the effective date of this MACO.

27. Respondent and the DEQ agree that the provisions of this MACO should be considered severable, and should a court of competent jurisdiction find any provisions to be

inconsistent with state or federal law and therefore unenforceable, the remaining provisions will remain in full force and effect.

28. The provisions of this MACO apply to and are binding upon Respondent and their officers, directors, employees, agents, successors and assigns. No change in the ownership or corporate status of Respondent will alter Respondent's responsibilities under this MACO.

29. Neither the fact that Respondent and the DEQ have entered into this MACO, nor the Findings of Fact and Conclusions of Law, shall be used for any purpose in this or any other proceeding except the enforcement by the parties of this MACO. As to others who are not parties, nothing contained in this MACO is an admission by Respondent of the Findings of Fact or Conclusions of Law, and entry into this MACO is not an admission by Respondent of liability for conditions at or near the facility or a waiver of any right, cause of action or defense Respondent otherwise has.

30. Respondent and the DEQ agree that the venue of any action in district court for the purposes of interpretation, implementation and enforcement of this MACO will be Oklahoma County, Oklahoma.

31. The requirements of this MACO will be considered satisfied and this MACO terminated when Respondent receives written notice from the DEQ that Respondent has demonstrated that all the terms of the MACO have been completed to the satisfaction of the DEQ.

32. The parties may amend this MACO by mutual consent. Such amendments must be in writing and the effective date of the amendments will be the date on which they are signed by the DEQ.

33. Unless otherwise specified, any report, notice or other communication required under this MACO must be in writing and must be sent by mail or by electronic submission or both to:

Legal:	Andrew T. Harrison, Esq. SNEED LANG HERROLD, P.C. 1700 Williams Center Tower I One West Third Street Tulsa, Oklahoma 74103	Technical:	A&M Engineering Services 10010 East 16th Street Tulsa, Oklahoma 74136

The designated persons may be changed by letter to the signatories and incorporated herein by reference without amending this Order.

34. The individuals signing this MACO certify that they are authorized to sign it and to legally bind the parties they represent.

35. This MACO becomes effective on the date of the signature below of the Executive Director of the DEQ.

RE: Project: FAC-SEMI
Pace Project No.: 60208597

Dear Bill Williams:
Enclosed are the analytical results for sample(s) received by the laboratory on December 03, 2015. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Richard Mannz

QUALIFIERS

Project: FAC-SEMI
Pace Project No.: 60208597

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-K Pace Analytical Services - Kansas City

ANALYTE QUALIFIERS

D6 The relative percent difference (RPD) between the sample and sample duplicate exceeded laboratory control limits.

December 3,2015

Dear Customer:

The following is the proof-of-delivery for tracking number 622858587931.

Delivery Information:

Status:	Delivered	Delivered to:	Shipping/Receiving
Signed for by:	R.WITZ	Delivery location:	LENEXA, KS
Service type:	FedEx Standard Overnight	Delivery date:	Dec 3, 2015 08:57
Special Handling:	Deliver Weekday		

Signature image is available. In order to view image and detailed information, the shipper or payor account number of the shipment must be provided.

Shipping Information:

Tracking number:	622858587931	Ship date:	Dec 2, 2015
		Weight:	73.0 lbs/33.1 kg

Recipient:	Shipper:
LENEXA, KS US	Tulsa, OK US
Reference	Samples

Thank you for choosing FedEx.

RE: Project: LIMCO AIREPAIR
Pace Project No.: 60209946

Dear Taylor Fuller:
Enclosed are the analytical results for sample(s) received by the laboratory on December 19, 2015. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Richard Mannz

QUALIFIERS

Project: LIMCO AIREPAIR
Pace Project No.: 60209946

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-K Pace Analytical Services - Kansas City

BATCH QUALIFIERS

Batch: MSV/73426

[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

ANALYTE QUALIFIERS

HS Results are from sample aliquot taken from VOA vial with headspace (air bubble greater than 6 mm diameter).

pH Post-analysis pH measurement indicates insufficient VOA sample preservation.

RE: Limco Airepair

Dear Mr. Williams:

Our last communication regarding the Limco Airepair site was on July 15, 2011. It was my understanding that site characterization activities were put on hold at that time. I have attached our April 6, 2010 and June 17, 2010 comments on the Site Characterization Work Plan for reference. Please provide an update on the status of the site including any recent sample results or future plans for the site characterization work within 30 days of receipt of this letter.

Sincerely,

Heather Mallory

Tulsa, OK 74107

RE: Limco Airepair Site Characterization Work Plan

Dear Mr. Kraft:

We have reviewed the Site Characterization Work Plan prepared by A & M Engineering and Environmental Services, Inc. and have the following comments. Please update the work plan and resubmit it for our review.

- Subsurface soil should be analyzed for RCRA metals and SVOCs (method 8270) in addition to VOCs.
- Groundwater samples should be analyzed for SVOCs (method 8270) in addition to VOCs and metals.
- Figure 4 shows MW-8 in the legend, but not on the map. Please explain.
- We request a soil sample and groundwater sample immediately south of the flammable drum storage area. We would also like a soil and groundwater sample south or southwest of the Compressor Room. Depending on the results of MW-5 and other wells, additional groundwater delineation may be needed.
- We request a soil sample to be collected in the storm drainage ditch near the S-drum location. The soil sample should be analyzed for SVOCs and metals.
- We would like additional surface soil sampling at the site in areas of exposed soil. We would like to make a site visit to identify areas that need sampling. Possible areas include the debris pile west of the compressor room, south of the debris/empty drum storage area, south of the propane tank/55 gallon diesel drum area, and south of the flammable drum storage.

- Page 5, Task 2: We recommend Photo Ionization Detector (PID) readings be headspace. Please submit a brief SOP for collecting headspace readings. PID readings do not address SVOCs and metals. We request at least one sample from each soil boring.

- Page 6, Task 4 proposes to investigate nearby properties to determine if contamination can be traced off-site. Please provide additional detail.

- Page 7, item 5 indicates site specific cleanup levels will be established. DEQ prefers to see the results of the investigation before we attempt to set site specific cleanup levels. Please see our checklist, copy attached.

- Page 7, Removal Action Design Report – This also would be better discussed after DEQ sees the Site Characterization Report.

- Page 8, Removal Action Plan – This also would be better discussed after DEQ sees the Site Characterization Report.

- Please add EPA Method 8270 (Semi-volatile Organics) under section 3.3 of the sampling analysis plan.

- Please indicate the date that the samples were collected on Tables 1 and 2.

We have the following comments on the QAPP:

Title and Approval Sheet:

- Please provide two original signature pages for the DEQ to sign. One signature page will be retained by the DEQ, the other will be sent back.

A.4 Project/Task Description and Schedule:

- Task 6, Preparation of Site Characterization Report: Specify the location of the project document repository. Specify that all deviations from the Work Plan and/or the QAPP must be documented in the field book and the final report to decision maker(s).

B.2.2.6 Decontamination:

- "Sampling and drilling equipment will be decontaminated utilizing EPA guidelines." Please specify the EPA guidelines that are referenced.

B.2.13 Field Logs:

- The last bullet should be modified to read "Any modifications to or deviation from the site specific work plan *and/or QAPP*."

B.5 Instrument/Equipment Testing, Inspection, and Maintenance & B.6 Instrument/Equipment Calibration and Frequency:

- Both sections indicate that protocols referenced can be found in Appendix G, Appendix G only references the QAPP for the selected laboratory. Please include the instrument testing, inspection, maintenance, calibration, and frequency of the field measurement instruments and equipment that will be used.

B.9 Data Management:

- How will issues in validation and verification be resolved?

Should you have any questions or concerns feel free to call me at (405) 702-5135.

Sincerely,

Heather Mallory

RE: Limco Airepair - June 4, 2010 email and updated map

Copies

Dear Mr. Williams:

I appreciate your time on the June 4, 2010 site visit of the Limco Airepair facility. I have reviewed the updated map that A&M Engineering submitted via email on June 4, 2010. My comments are as follows. I have enclosed a copy of the June 4, 2010 email and attachment and an edited map to highlight the comments below.

During the June 4, 2010 site visit several new surface soil sample and monitor well locations were proposed. Each of the new surface soil sample locations are discussed as follows.

1. Please analyze all surface soil samples for VOCs, SVOCs, RCRA metals, and TPH.

2. During the site visit, stained soil was observed near the former debris pile and surface soil sample SS-1 was added to the site characterization work plan.

3. SS-2 was added to capture any contamination that might exist downgradient of the hazardous waste drum storage area. Please move SS-2 to the east as indicated on the attached map.

4. During the site visit stained soil was noticed between the generator pad and the diesel drum storage pad. Please collect a surface soil sample in the area of stained soil. Also, please move the SS-3 sample to the south of the diesel drum storage as shown on the attached map.

5. SS-4 was added to capture runoff and past spills from the flammable drum storage to the storm drainage ditch. The location of this sample is appropriate.

6. Samples SS-5 and SS-6 were added in the storm drainage ditch to determine if contamination exists in the creek from documented past dumping of hazardous waste into the storm drainage ditch. The location of these samples is appropriate.

7. MW-4 was moved to the southwest corner of the compressor room. The proposed location is acceptable.

8. MW-8 was added to determine if the groundwater is contaminated near the flammable drum storage area. We concur with the proposed location.

Additional Comments:

1. Please add a north arrow to the map.

2. A new ditch has been dug where the debris/empty drum storage was formerly housed. Please collect one sample from the north end of the ditch and one sample from the south end of the ditch. Please analyze the samples for VOCs, SVOCs, RCRA metals, and TPH.

3. New gravel has been spread south of the main building between the ditch and the hazardous waste drum storage area. Please collect a soil sample from below the gravel layer south of the loading dock (see attached map). Please analyze the sample for VOCs, SVOCs, RCRA metals, and TPH.

4. During the site visit an abandoned manhole was observed to contain several feet of soil. The manhole is located south of the flammable drum storage area. Please use a hand auger to collect two soil samples one from the top six inches of soil and one from the bottom of the manhole and analyze them for VOCs, SVOCs, RCRA metals, and TPH.

Please submit an updated map and an addendum to the workplan reflecting the above changes for our review.

Please contact me if you have any questions or concerns at (405) 702-5135.

Sincerely,

Heather Mallory

Heather:
It was a pleasure meeting with you this morning.
I just wanted to forward you the new Proposed Monitoring Well & Surface Soil Location Map.
Let me know if you want to move any locations. I just want to make sure that we've got them in the right locations.
Thanks!

RE: **LIMITED PHASE II ENVIRONMENTAL SITE ASSESSMENT (ESA)**
LIMCO AIREPAIR, INC.
5304 SOUTH LAWTON AVENUE
TULSA, OKLAHOMA
A & M PROJECT NO. 2059-002

Dear Mr. Kraft:

Enclosed are three (3) hard copies and one (1) digital copy of the Limited Phase II Environmental Site Assessment (ESA) that A & M Engineering and Environmental Services, Inc. (A & M Engineering) conducted at the above referenced site in January and February 2009. Conclusions and recommendations are provided in Sections 4.0 and 5.0 of the report.

If you have any other questions or need further assistance with this matter, please call me at (918) 665-6575.

Respectfully Submitted,

Irfan Taner, C.P.G.
Chief Geologist

Abigail L. Gleeson
Project Manager

1.0 INTRODUCTION

A Phase I Environmental Site Assessment (ESA) was conducted at the Limco Airepair Facility in December 2008 and January 2009 by A & M Engineering and Environmental Services, Inc. (A&M Engineering). In order to further evaluate the condition of the subsurface near the floor grates and pits near the Clean Line area and WWTS, further assessment of the soil and groundwater was recommended.

A & M Engineering was contracted by Limco Airepair to drill four (4) borings on-site and collect soil and groundwater samples.

This report documents the soil and groundwater samples and the results for the Limco Airepair facility.

2.0 DRILLING AND SOIL SAMPLING

On January 26, 2009, four (4) borings (TH-1 through TH-4) were drilled at the site. All of the borings were drilled near the main building. No borings were drilled on the leased property located west of the main facility. TH-1 was located north of the main building and employee parking lot and was the upgradient boring. TH-2 was situated approximately 50 feet southeast of the Compressor Room. Figure 1 shows the site location on a Topographic Map and Figure 2 shows boring locations. Both Figures are provided in Appendix A. The boring logs are provided in Appendix B. Photographs are provided in Appendix C.

The borings were drilled with truck-mounted Geoprobe drill rig. Representative samples were obtained by the split-barrel sampling procedure. All four (4) borings were dilled to a depth of approximately 12 to 16 feet.

The upgradient boring encountered approximately two (2) inches of topsoil and grass. From two (2)-inches to six (6) feet, red brown silty clay was encountered. From six (6) to eight (8) feet brown silty clay, from eight (8) to twelve (12) the clay became moist. From twelve (12) to fourteen (14) the soil consisted of light brown sandy silt. Sandy silt with weathered shale was encountered from fourteen (14) to sixteen (16) feet. Weathered shale was encountered at 16 feet.

The remaining borings generally encountered about eight (8) inches of gravel then the soil consisted of brown silty clay to approximately eight (8) feet. Light brown sandy silt was encountered from approximately eight (8) to twelve (12) feet.

No odors were observed in any of the borings.

Soil samples were collected at a depth of between one (1) and two (2 feet) from borings TH-2 (Sample S-2) and TH-3 (Sample S-3).

An additional soil sample (S-Drum) was collected east of the flammable drum storage in a drainage ditch. A visible discolored layer was observed in the soil and the soil sample was collected along that discolored layer.

All of the borings were completed with one (1)-inch diameter screens for groundwater sampling. After letting both borings recharge for groundwater, water samples were collected from TH-1, TH-2, and TH-4. There was no groundwater in TH-3 so no groundwater sample was collected.

After collecting the samples, all four (4) borings were plugged with Bentonite.

The soil and groundwater samples were delivered to Teklab, Inc. in Collinsville, Illinois via Fed-Ex, for analysis. The analytical parameters included:

- Solvent Screen (Method 8260)
- Priority Pollutant Metals (Antimony, Arsenic, Barium, Beryllium, Cadmium, Chromium, Copper, Lead, Mercury, Nickel, Potassium, Selenium, Silver, Sodium, Thallium, and Zinc)
- Nitrate
- Chloride
- Fluoride
- pH
- Conductivity

3.0 ANALYTICAL RESULTS

GROUNDWATER:

The groundwater analytical results (detected) are tabulated in Table 1.

TH-1: Groundwater concentration levels in TH-1 were elevated for Arsenic, Barium, Beryllium, Cadmium, Chromium, Lead, Mercury, and Zinc above the Primary Drinking Water Maximum Contaminant Levels (MCLs).

TH-2: Groundwater concentration levels in TH-2 were elevated for Arsenic, Barium, Beryllium, Cadmium, Chromium, Lead, and Trichloroethylene above MCLs.

TH-3: No groundwater sample was collected from TH-3 since there was no water in the boring.

TH-4: Groundwater concentration levels in TH-4 were elevated for Arsenic, Barium, Beryllium, Cadmium, Chromium, and Lead above MCLs.

The concentrations that are above the MCLs are highest in the upgradient sample (TH-1) (See Table 1). The upgradient TH-1 sample did not have any detected organics, however, TH-2 and TH-4 have some elevated organic parameters (see Table 1). The organic parameters are low in concentration except for the Trichloroethylene in TH-2. Trichloroethylene in TH-2 is 0.202 mg/L and is above the MCL of 0.005 mg/L.

Table 1 - Groundwater Laboratory Results - Limco Airepair - Tulsa, Oklahoma

Parameter	TH-1	TH-2	TH-4	MCL	Unit
Primary Metals					
Antimony	<0.5	<0.25	<0.05	0.006	mg/L

Nitrite	0.15	0.05	0.06	1	mg/L
Conductivity	452	872	605		µmhos/cm
pH	6.77	7.12	7.24	6.5-8.5	S.U.

BOLD indicates concentrations above the MCL (Maximum Contaminant Level) per the EPA National Drinking Water Standards

SOIL:

A total of three (3) soil samples were collected at the site. Two (2) of the samples were collected from the borings TH-2 and TH-3 at a depth of one (1) to two (2) feet deep, below the gravel layer. The third sample (S-Drum) was collected from a visibly discolored layer that was observed in a drainage ditch just east of the flammable drum storage area.

The soil samples were analyzed for volatiles (SW-846 Method 8260), Priority Pollutant Metals, pH, conductivity, Nitrate, Chloride, and Fluoride. The analytical report is provided in Appendix D. The detected analytical parameters are tabulated on Table 2 (soil).

Metals and a few organic parameters were detected in the soil samples, however the detected parameters were in relatively low concentrations. The S-Drum sample showed elevated concentrations levels compared to the other two soil samples for Copper, Selenium, and Zinc. The detected parameter concentration levels were compared to the Risk-Based Screening Levels for Industrial Sites (DAF=1) (See Table 2) and none of the detected parameters exceeded the Risk-Based Screening Levels.

Table 2 - Soil Laboratory Results - Limco Airepair - Tulsa, Oklahoma

Parameter	S-2	S-3	S-Drum	Risk Based Screening Levels for DA F =1 (Industrial)	Unit
Primary Metals					
Antimony	<4.81	<4.81	<5.0	4,100	mg/Kg

Toluene	ND	ND	0.0025	46,000	mg/Kg
Miscellaneous					
Fluoride	3.87	3.15	5.07	61,000	mg/Kg
Nitrate	38.5	21.9	0.5	160,000	mg/Kg
Conductivity	800	654	364		µmhos/cm
pH	8	8.14	8.06		S.U.

4.0 CONCLUSIONS

The Limited Phase II Environmental Site Assessment indicates that the Limco Airepair site underlain by unconsolidated alluvial (mainly clay, silt, and sand) to approximately 12 to 16 feet deep. The groundwater was encountered in three (3) of the (4) borings at a depth of 10 to 11 feet deep.

The soil samples had some detectible metals and organics at relatively low concentrations. One sample S-Drum had slightly elevated concentrations of Copper, Selenium, and Zinc. None of the detected parameters exceeded the Risk-Based Screening Levels for Industrial sites.

The groundwater is encountered at the base of the alluvial unit which has a low yield. The analytical data of groundwater samples from the three (3) borings show metals impact (Arsenic, Barium, Beryllium, Cadmium, Chromium, Lead and Mercury) that exceed the Maximum Contaminant Levels for Primary Drinking Waters Standards. However, the metals impact is not related to the subject site because the upgradient boring (TH-1) has the highest metals concentrations. TH-2 groundwater sample detected Trichloroethylene (TCE) at 0.202 mg/L concentration and TH-4 at 0.001 mg/L. TCE was not detected in TH-1 (upgradient) groundwater sample. Therefore, TCE contamination maybe related to the subject facility. The Trichloroethylene MCL is 0.005 mg/L and TH-2 groundwater exceeded this level.

5.0 RECOMMENDATIONS

A & M Engineering recommends that the impacted soil from the drainage ditch has relatively low concentrations of Zinc, Selenium, and Copper and below screening levels, should be removed and properly disposed off-site. The impacted soil is dark colored and is a one (1) to three (3) inches thick.

A & M Engineering recommends further evaluation to determine the extent of the impact for metals and specifically Trichloroethylene to the groundwater. In addition, the evaluation should be concentrated on verification of the TCE and other organic contaminants to the groundwater.

RE: 2059-002 **WorkOrder:** 09010906

Dear Abby Gleeson:

TEKLAB, INC received 6 samples on 1/28/2009 9:00:00 AM for the analysis presented in the following report.

Samples are analyzed on an as received basis unless otherwise requested and documented. The sample results contained in this report relate only to the requested analytes of interest as directed on the chain of custody. IL ELAP and NELAP accredited fields of testing are indicated by the letters NELAP under the Certification column.

All quality control criteria applicable to the test methods employed for this project have been satisfactorily met and are in accordance with NELAP except where noted. The following report shall not be reproduced, except in full, without the written approval of Teklab, Inc.

If you have any questions regarding these tests results, please feel free to call.

Sincerely,

Richard H. Mannz
Project Manager

Sample Narrative

SW-846 3005A, 6010B, Metals by ICP (Total)

Tl - Elevated reporting limit due to negative interference.
Ag - Elevated reporting limit due to high levels of target and/or non-target analytes.
Sb - Elevated reporting limit due to high levels of target and/or non-target analytes.
Se - Elevated reporting limit due to high levels of target and/or non-target analytes.

AFFIDAVIT OF OLD WELL STATUS

Lease Name/Well No.								API No.	
MCINTOSH 1									143-8380
Location				Sec.		Twp.		Rge.		County	
1/4	1/4	1/4	SW 1/4	26		19N		12E		Tulsa	

The Oklahoma Corporation Commission deems it to be in the best interest of land owners and mineral owners to clear mineral titles where possible for lands where old records show there has been drilled oil and/or gas wells but for which no record has been filed for the plugging of the well. The absence of an official plugging record prevents a clear mineral title in cases of recorded drilling activity.

This document, when properly completed, will serve as a substitute for a plugging record in the Oklahoma Corporation Commission well log record files.

A physical search of the above land was made and the findings are:

[X] (1) No evidence of any well, at the surface

[ ] (2) Evidence of the well and found it to be plugged in accordance with the rules in force at the time of plugging.

[ ] (3) Evidence of unplugged well [ ] Producing [ ] Non-Producing

MCINTOSH 3									143-8382
Location				Sec.		Twp.		Rge.		County	
1/4	1/4	1/4	SW 1/4	26		19N		12E		Tulsa	

The Oklahoma Corporation Commission deems it to be in the best interest of land owners and mineral owners to clear mineral titles where possible for lands where old records show there has been drilled oil and/or gas wells but for which no record has been filed for the plugging of the well. The absence of an official plugging record prevents a clear mineral title in cases of recorded drilling activity.

This document, when properly completed, will serve as a substitute for a plugging record in the Oklahoma Corporation Commission well log record files.

A physical search of the above land was made and the findings are:

[X] (1) No evidence of any well, at the surface

[ ] (2) Evidence of the well and found it to be plugged in accordance with the rules in force at the time of plugging.

[ ] (3) Evidence of unplugged well [ ] Producing [ ] Non-Producing

Attested

SAND OR ZONE RECORDS				CASING RECORDS		
Formation	Content	From	To	Size	Put In	Pulled Out
	New well just drilled-300 ft. of 8¼ casing used, but pulled out.					

Describe in detail the manner in which the well was plugged, indicating where the mud fluid was placed and the methods used in introducing it into the hole. If cement or other plugs were used, state the character of same and depth placed:

Filled up with mud from bottom to top-mud taken from fresh slush pit.

Does the above conform strictly to the oil and gas regulations? yes

The Law requires that adjacent lease, royalty and land-owners be notified; give their names with their address below:

REMARKS: Why plugged? If abandoned oil or gas well, state amount and date of last production

Dry hole just completed.

Correspondence regarding this well should be addressed to Same as above

Address P.O. Box 1643, Tulsa, Okla.

I, the undersigned, being first duly sworn upon oath, stats that this well record is true, correct and complete according to the records of this office and to the best of myknowledge and belief.

Name and title of representative of company

Subscribed and sworn to before me this the 24 day of Feb, 1940

Section 9
Natural Resources Summary
I-44 Corridor from I-244 Junction East to the Arkansas River
Tulsa County JP 32728(04)

9.1 Protected Species and Habitat

Federally-listed threatened, endangered, and candidate species listed by the US Fish and Wildlife Service (USFWS) for the study area in Tulsa County include: the Interior Least Tern, Piping Plover, Red Knot, American Burying Beetle, and Northern Long-eared Bat. No designated critical habitat for these species is located within the study area. Refer to the USFWS species list located in this section.

The study area falls within the Upper Arkansas River watershed (a HUC10 watershed). The Upper Arkansas River watershed is within a federally-listed aquatic dependent species watershed for the Interior Least Tern. Additionally, the study area contains the Arkansas River, which is an occupied water body for the Interior Least Tern. Refer to the USFWS federally-listed aquatic dependent species watershed map located in this section.

Communication with Todd Fagin of the Oklahoma Natural Heritage Inventory revealed the occurrence of the Bald Eagle (*Haliaeetus leucocephalus*), a federally protected species, within the vicinity of the project location. Specifically, the Bald Eagle was listed by the ONHI database for 7 occurrences, one each in Sections 1 and 12 of Township18N Range12E; Sections 7 and 18 of Township18N Range13E; and Sections 14, 25, and 26 of Township19N Range12E in Tulsa County. Additionally, the Oklahoma Natural Heritage Inventory revealed the occurrence of the Interior least tern (*Sternula antillarum athalassos*), a federally listed endangered species, within the vicinity of the project location. Specifically, the Interior Least Tern was listed by the ONHI database for 4 occurrences, one each in Section 18 of Township18N Range13E; and Sections 13, 25, and 36 of Township19N Range12E in Tulsa County.

9.2 Jurisdictional Wetlands

Perennial, jurisdictional waters in the study area include the Arkansas River and Mooser Creek (although the western end of Mooser Creek is mapped as intermittent). In addition, 1 USGS-mapped intermittent stream and 2 ephemeral

to intermittent watercourses, which are potentially jurisdictional, occur within the study area and include unnamed tributaries to Mooser Creek.

According to the National Wetlands Inventory (NWI), 1 PFO1/PSS1 (Palustrine, Forested/Scrub-Shrub, Broad-Leaved Deciduous) wetland, 2 linear PFO1A (Palustrine, Forested, Broad-Leaved Deciduous, Temporarily Flooded) wetlands, and 1 PUBHh (Palustrine, Unconsolidated Bottom, Permanently Flooded, Diked/Impounded) wetland are present in the study area (refer to the NWI map included in this section). The two linear PFO1A wetlands could not be field verified. However, field reconnaissance determined that the single PFO1/PSS1 wetland is separated into two wetlands (one on each side of I-44) and Garver considers each of them to be potentially jurisdictional due to their hydrologic connections to the Arkansas River. The NWI-mapped PUBHh wetland was determined through the site investigation to be no longer present within the study area, as it has been replaced by Mooser Creek. Refer to the composite maps in Section 1 for the locations of the potentially jurisdictional waters and wetland discussed above.

Field reconnaissance identified five additional wetland areas; however, three of these are not considered jurisdictional as they appear isolated and lack surface hydrology connections to USGS-mapped streams. One potentially jurisdictional wetland is a small (approximately 0.11 acre) scrub-shrub wetland in the study area. This wetland is located southwest of the Union Avenue Bridge between I-44 and W Skelly Drive. This wetland is potentially jurisdictional due to its hydrologic connection to one of the ephemeral to intermittent streams that drains into Mooser Creek. The second potentially jurisdictional wetland is a small (approximately 0.03 acre) emergent wetland in the study area. This wetland is located between I-44 and the southern I-44 Access Road. This wetland is potentially jurisdictional due to its hydrologic connection to the Arkansas River. These two additional wetlands are shown in Section 1.

9.3 Soils

The NRCS soils map for the study area is included in this section. According to NRCS soils information, 3.4% (18.3 acres) of the study area is comprised of hydric soil (Radley silt loam, 0-1 percent slopes, frequently flooded). This hydric soil occurs along the banks of Mooser Creek south of I-44.

9.4 Critical Resource Waters, Section 10 Waters, Scenic Rivers and Arbuckle Simpson Aquifer

There are no critical resource waters, Section 10 waters, or scenic rivers in the study area. The Arkansas River, which is located at the east end of the study

area, is listed as a Section 10 water in Muskogee County, but not Tulsa County. The Arbuckle-Simpson Aquifer is not located within the study area.

9.5 Impaired Waters

Mooser Creek is listed in Oklahoma's 2014 303(d) list of impaired waters. Mooser Creek (Water Body ID OK120420010070_00) is impaired for *Escherichia coli* and for warm water aquatic habitat. No Total Maximum Daily Load (TMDL) values have been established for Mooser Creek. The Arkansas River listed in Oklahoma's 2014 303(d) list of impaired waters. The Arkansas River (Water Body ID OK120420010010_00 and OK120420010010_10) is impaired for *Enterococcus* bacteria, cadmium, and for turbidity. The Total Maximum Daily Load (TMDL) value for Enterococcus has been established at 35,669 CFU/day for the Arkansas River. This information was obtained from the Oklahoma Department of Environmental Quality (ODEQ) website (http://www.deq.state.ok.us/wqdnew/305b_303d/).

The City of Tulsa has a Phase I MS4 permit. The entire study area occurs within the boundaries of this permit. Additionally, Tulsa County and Tulsa's urban area each have Phase II Small MS4 permits. The reconnaissance study limits do not fall within any areas with special Total maximum Daily Load (TMDL) Requirements. This information was obtained through ODOT's MS4 Areas and Outfalls Web App (http://okdot.maps.arcgis.com/apps/Viewer/index.html?appid=0b5ac581bb764eb4a2e69ca89f9bd5b0) and through ODEQ's Storm Water Program Information website (http://www.deq.state.ok.us/WQDNew/stormwater/).

9.6 Oklahoma Sensitive Waters and Watersheds Harboring Endangered and Threatened Species and Their Critical Habitat of Concern

According to the OKR10 Stormwater General Construction Permit (dated September 13, 2012), Tulsa County does not contain any Oklahoma Aquatic Resources of Concern (ARC) harboring endangered or threatened species or their critical habitat of concern. This information was obtained from the Oklahoma Department of Environmental Quality website (http://www.deq.state.ok.us/WQDnew/stormwater/OKR10Permit_2012_final%20Review_August.pdf).

United States Department of the Interior

FISH AND WILDLIFE SERVICE
Oklahoma Ecological Services Field Office
9014 EAST 21ST STREET
TULSA, OK 74129
PHONE: (918)581-7458 FAX: (918)581-7467
URL: www.fws.gov/southwest/es/Oklahoma/

Consultation Code: 02EKOK00-2016-SLI-2115 September 21, 2016
Event Code: 02EKOK00-2016-E-02389
Project Name: I-44 Corridor from I-244 Junction East to the Arkansas River

Subject: List of threatened and endangered species that may occur in your proposed project location, and/or may be affected by your proposed project

To Whom It May Concern:

The enclosed species list identifies threatened, endangered, proposed and candidate species, as well as proposed and final designated critical habitat, that may occur within the boundary of your proposed project and/or may be affected by your proposed project. The species list fulfills the requirements of the U.S. Fish and Wildlife Service (Service) under section 7(c) of the Endangered Species Act (Act) of 1973, as amended (16 U.S.C. 1531 *et seq.*).

New information based on updated surveys, changes in the abundance and distribution of species, changed habitat conditions, or other factors could change this list. Please feel free to contact us if you need more current information or assistance regarding the potential impacts to federally proposed, listed, and candidate species and federally designated and proposed critical habitat. Please note that under 50 CFR 402.12(e) of the regulations implementing section 7 of the Act, the accuracy of this species list should be verified after 90 days. This verification can be completed formally or informally as desired. The Service recommends that verification be completed by visiting the ECOS-IPaC website at regular intervals during project planning and implementation for updates to species lists and information. An updated list may be requested through the ECOS-IPaC system by completing the same process used to receive the enclosed list.

The purpose of the Act is to provide a means whereby threatened and endangered species and the ecosystems upon which they depend may be conserved. Under sections 7(a)(1) and 7(a)(2) of the Act and its implementing regulations (50 CFR 402 *et seq.*), Federal agencies are required to utilize their authorities to carry out programs for the conservation of threatened and endangered species and to determine whether projects may affect threatened and endangered species and/or designated critical habitat.

A Biological Assessment is required for construction projects (or other undertakings having similar physical impacts) that are major Federal actions significantly affecting the quality of the human environment as defined in the National Environmental Policy Act (42 U.S.C. 4332(2)(c)). For projects other than major construction activities, the Service suggests that a biological evaluation similar to a Biological Assessment be prepared to determine whether the project may affect listed or proposed species and/or designated or proposed critical habitat. Recommended contents of a Biological Assessment are described at 50 CFR 402.12.

If a Federal agency determines, based on the Biological Assessment or biological evaluation, that listed species and/or designated critical habitat may be affected by the proposed project, the agency is required to consult with the Service pursuant to 50 CFR 402. In addition, the Service recommends that candidate species, proposed species and proposed critical habitat be addressed within the consultation. More information on the regulations and procedures for section 7 consultation, including the role of permit or license applicants, can be found in the "Endangered Species Consultation Handbook" at:

http://www.fws.gov/endangered/esa-library/pdf/TOC-GLOS.PDF

Non-federal entities conducting activities that may result in take of listed species should consider seeking coverage under section 10 of the ESA, either through development of a Habitat Conservation Plan (HCP) or, by becoming a signatory to the General Conservation Plan (GCP) currently under development for the American burying beetle. Each of these mechanisms provides the means for obtaining a permit and coverage for incidental take of listed species during otherwise lawful activities.

Please be aware that bald and golden eagles are protected under the Bald and Golden Eagle Protection Act (16 U.S.C. 668 *et seq.*), and projects affecting these species may require development of an eagle conservation plan (http://www.fws.gov/windenergy/eagle_guidance.html). Additionally, wind energy projects should follow the wind energy guidelines (http://www.fws.gov/windenergy/) for minimizing impacts to migratory birds and bats.

Guidance for minimizing impacts to migratory birds for projects including communications towers (e.g., cellular, digital television, radio, and emergency broadcast) can be found at: http://www.fws.gov/migratorybirds/CurrentBirdIssues/Hazards/towers/towers.htm; http://www.towerkill.com; and http://www.fws.gov/migratorybirds/CurrentBirdIssues/Hazards/towers/comtow.html.

We appreciate your concern for threatened and endangered species. The Service encourages Federal agencies to include conservation of threatened and endangered species into their project planning to further the purposes of the Act. Please include the Consultation Tracking Number in the header of this letter with any request for consultation or correspondence about your project that you submit through our Project Review step-wise process http://www.fws.gov/southwest/es/oklahoma/OKESFO%20Permit%20Home.htm.

Consultation Code: 02EKOK00-2016-SLI-2115
Event Code: 02EKOK00-2016-E-02389

Project Type: TRANSPORTATION

Project Name: I-44 Corridor from I-244 Junction East to the Arkansas River
Project Description: Data reconnaissance project in Tulsa County for a 900 to 1,500-foot wide study area centered along I-44 beginning at the I-244 Interchange and extending approximately 2.9 miles east to the Arkansas River. Additionally, the study area encompasses approximately 1.4 miles of Highway 75. The project is located within Township 19N Range 12E in Sections 25-28 and 33-36; and within Township 18N Range 12E in Section 2.

Please Note: The FWS office may have modified the Project Name and/or Project Description, so it may be different from what was submitted in your previous request. If the Consultation Code matches, the FWS considers this to be the same project. Contact the office in the 'Provided by' section of your previous Official Species list if you have any questions or concerns.

Project Counties: Tulsa, OK

Endangered Species Act Species List

There are a total of 5 threatened or endangered species on your species list. Species on this list should be considered in an effects analysis for your project and could include species that exist in another geographic area. For example, certain fish may appear on the species list because a project could affect downstream species. Critical habitats listed under the **Has Critical Habitat** column may or may not lie within your project area. See the **Critical habitats within your project area** section further below for critical habitat that lies within your project. Please contact the designated FWS office if you have questions.

Birds	**Status**	**Has Critical Habitat**	**Condition(s)**
Least tern *(Sterna antillarum)* Population: interior pop.	Endangered		
Piping Plover *(Charadrius melodus)* Population: except Great Lakes watershed	Threatened	Final designated	
Red Knot *(Calidris canutus rufa)* Population: Wherever found	Threatened		
Insects			
American Burying beetle *(Nicrophorus americanus)* Population: Entire	Endangered		
Mammals			
Northern long-eared Bat *(Myotis septentrionalis)* Population: Wherever found	Threatened		

Critical habitats that lie within your project area

There are no critical habitats within your project area.

Appendix A: FWS National Wildlife Refuges and Fish Hatcheries

There are no refuges or fish hatcheries within your project area.

Appendix B: FWS Migratory Birds

The protection of birds is regulated by the Migratory Bird Treaty Act (MBTA) and the Bald and Golden Eagle Protection Act (BGEPA). Any activity, intentional or unintentional, resulting in take of migratory birds, including eagles, is prohibited unless otherwise permitted by the U.S. Fish and Wildlife Service (50 C.F.R. Sec. 10.12 and 16 U.S.C. Sec. 668(a)). The MBTA has no otherwise lawful activities. For more information regarding these Acts see:
http://www.fws.gov/birds/policies-and-regulations/laws-legislations/migratory-bird-treaty-act.php
http://www.fws.gov/birds/policies-and-regulations/laws-legislations/bald-and-golden-eagle-protection-act.php

All project proponents are responsible for complying with the appropriate regulations protecting birds when planning and developing a project. To meet these conservation obligations, proponents should identify potential or existing project-related impacts to migratory birds and their habitat and develop and implement conservation measures that avoid, minimize, or compensate for these impacts. The Service's Birds of Conservation Concern (2008) report identifies species, subspecies, and populations of all migratory nongame birds that, without additional conservation actions, are likely to become listed under the Endangered Species Act as amended (16 U.S.C 1531 et seq.).

For information about Birds of Conservation Concern, go to:
http://www.fws.gov/birds/management/managed-species/birds-of-conservation-concern.php

For information about conservation measures that help avoid or minimize impacts to birds, please visit:
http://www.fws.gov/birds/management/project-assessment-tools-and-guidance/conservation-measures.php

To search and view summaries of year-round bird occurrence data within your project area, go to the Avian Knowledge Network Histogram Tools at:
http://www.fws.gov/birds/management/project-assessment-tools-and-guidance/akn-histogram-tools.php

Migratory birds that may be affected by your project:

There are 25 birds on your migratory bird list. The list may include birds occurring outside this FWS office jurisdiction.

Species Name	Bird of Conservation Concern (BCC)	Seasonal Occurrence in Project Area
Bachman's sparrow *(Aimophila aestivalis)*	Yes	Breeding
Bald eagle *(Haliaeetus leucocephalus)*	Yes	Year-round
Bell's Vireo *(Vireo bellii)*	Yes	Breeding
Dickcissel *(Spiza americana)*	Yes	Breeding
Fox Sparrow *(Passerella liaca)*	Yes	Wintering
Golden eagle *(Aquila chrysaetos)*	Yes	Wintering
Harris's Sparrow *(Zonotrichia querula)*	Yes	Wintering
Henslow's sparrow *(Ammodramus henslowii)*	Yes	Breeding
Hudsonian Godwit *(Limosa haemastica)*	Yes	Migrating
Kentucky Warbler *(Oporornis formosus)*	Yes	Breeding
Le Conte's Sparrow *(Ammodramus leconteii)*	Yes	Wintering
Least bittern *(Ixobrychus exilis hesperis)*	No	Breeding
Least tern *(Sterna antillarum)*	Yes	Breeding
Little Blue Heron *(Egretta caerulea)*	Yes	Breeding
Loggerhead Shrike *(Lanius ludovicianus)*	Yes	Year-round

Mississippi Kite *(Ictinia mississippiensis)*	Yes	Breeding
Orchard Oriole *(Icterus spurius)*	Yes	Breeding
Painted Bunting *(Passerina ciris)*	Yes	Breeding
Prothonotary Warbler *(Protonotaria citrea)*	Yes	Breeding
Red-headed Woodpecker *(Melanerpes erythrocephalus)*	Yes	Year-round
Rufous-crowned Sparrow *(Aimophila ruficeps)*	Yes	Year-round
Rusty Blackbird *(Euphagus carolinus)*	Yes	Wintering
Scissor-tailed Flycatcher *(Tyrannus forficatus)*	Yes	Breeding
Short-eared Owl *(Asio flammeus)*	Yes	Wintering
Swainson's hawk *(Buteo swainsoni)*	Yes	Breeding

Appendix C: NWI Wetlands

The U.S. Fish and Wildlife Service is the principal Federal agency that provides information on the extent and status of wetlands in the U.S., via the National Wetlands Inventory Program (NWI). In addition to impacts to wetlands within your immediate project area, wetlands outside of your project area may need to be considered in any evaluation of project impacts, due to the hydrologic nature of wetlands (for example, project activities may affect local hydrology within, and outside of, your immediate project area). It may be helpful to refer to the USFWS National Wetland Inventory website. The designated FWS office can also assist you. Impacts to wetlands and other aquatic habitats from your project may be subject to regulation under Section 404 of the Clean Water Act, or other State/Federal Statutes. Project Proponents should discuss the relationship of these requirements to their project with the Regulatory Program of the appropriate U.S. Army Corps of Engineers District.

The Service's objective of mapping wetlands and deepwater habitats is to produce reconnaissance level information on the location, type and size of these resources. The maps are prepared from the analysis of high altitude imagery. Wetlands are identified based on vegetation, visible hydrology and geography. A margin of error is inherent in the use of imagery; thus, detailed on-the-ground inspection of any particular site may result in revision of the wetland boundaries or classification established through image analysis.

The accuracy of image interpretation depends on the quality of the imagery, the experience of the image analysts, the amount and quality of the collateral data and the amount of ground truth verification work conducted. Metadata should be consulted to determine the date of the source imagery used and any mapping problems.

Wetlands or other mapped features may have changed since the date of the imagery and/or field work. There may be occasional differences in polygon boundaries or classifications between the information depicted on the map and the actual conditions on site.

Exclusions - Certain wetland habitats are excluded from the National mapping program because of the limitations of aerial imagery as the primary data source used to detect wetlands. These habitats include seagrasses or submerged aquatic vegetation that are found in the intertidal and subtidal zones of estuaries and nearshore coastal waters. Some deepwater reef communities (coral or tuberficid worm reefs) have also been excluded from the inventory. These habitats, because of their depth, go undetected by aerial imagery.

Precautions - Federal, state, and local regulatory agencies with jurisdiction over wetlands may define and describe wetlands in a different manner than that used in this inventory. There is no attempt, in either the design or products of

this inventory, to define the limits of proprietary jurisdiction of any Federal, state, or local government or to establish the geographical scope of the regulatory programs of government agencies. Persons intending to engage in activities involving modifications within or adjacent to wetland areas should seek the advice of appropriate federal, state, or local agencies concerning specified agency regulatory programs and proprietary jurisdictions that may affect such activities.

The following NWI Wetland types intersect your project area in one or more locations. To understand the NWI Classification Code, see https://ecos.fws.gov/ipac/wetlands/decoder. To view the National Wetlands Inventory on a map go to http://www.fws.gov/wetlands/Data/Mapper.html.

IPaC Trust Resources Report

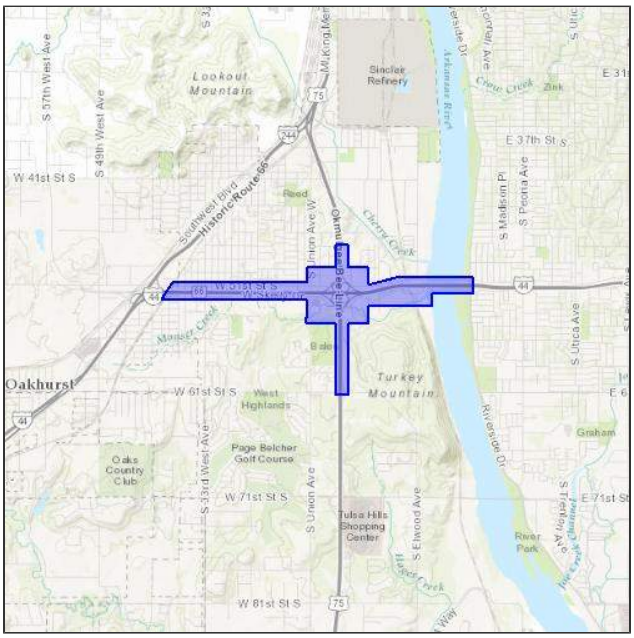
NAME

I-44 Corridor from I-244 Junction East to the Arkansas River

LOCATION

Tulsa County, Oklahoma

DESCRIPTION



The project is located within Township 19N Range 12E in Sections 25-28 and 33-36; and within Township 18N Range 12E in Section 2.

IPAC LINK

https://ecos.fws.gov/ipac/project/A3LME-FR35Z-EYTP6-OPPXZ-FFBF4M

U.S. Fish & Wildlife Service Contact Information

Trust resources in this location are managed by:

Oklahoma Ecological Services Field Office
9014 East 21st Street
Tulsa, OK 74129-1428
(918) 581-7458

Endangered Species

Proposed, candidate, threatened, and endangered species are managed by the Endangered Species Program of the U.S. Fish & Wildlife Service.

This USFWS trust resource report is for informational purposes only and should not be used for planning or analyzing project level impacts.

For project evaluations that require USFWS concurrence/review, please return to the IPaC website and request an official species list from the Regulatory Documents section.

Section 7 of the Endangered Species Act **requires** Federal agencies to "request of the Secretary information whether any species which is listed or proposed to be listed may be present in the area of such proposed action" for any project that is conducted, permitted, funded, or licensed by any Federal agency.

A letter from the local office and a species list which fulfills this requirement can only be obtained by requesting an official species list either from the Regulatory Documents section in IPaC or from the local field office directly.

The list of species below are those that may occur or could potentially be affected by activities in this location:

Birds

Least Tern Sterna antillarum — Endangered

CRITICAL HABITAT

No critical habitat has been designated for this species.

http://ecos.fws.gov/tess_public/profile/speciesProfile.action?spcode=B07N

Piping Plover Charadrius melodus — Threatened

CRITICAL HABITAT

There is **final** critical habitat designated for this species.

http://ecos.fws.gov/tess_public/profile/speciesProfile.action?spcode=B079

Red Knot Calidris canutus rufa — Threatened

CRITICAL HABITAT

No critical habitat has been designated for this species.

http://ecos.fws.gov/tess_public/profile/speciesProfile.action?spcode=B0DM

Insects

American Burying Beetle Nicrophorus americanus — Endangered

CRITICAL HABITAT

No critical habitat has been designated for this species.

http://ecos.fws.gov/tess_public/profile/speciesProfile.action?spcode=I028

Mammals

Northern Long-eared Bat Myotis septentrionalis — Threatened

CRITICAL HABITAT

No critical habitat has been designated for this species.

http://ecos.fws.gov/tess_public/profile/speciesProfile.action?spcode=A0JE

Critical Habitats

There are no critical habitats in this location

Migratory Birds

Birds are protected by the Migratory Bird Treaty Act and the Bald and Golden Eagle Protection Act.

Any activity that results in the take of migratory birds or eagles is prohibited unless authorized by the U.S. Fish & Wildlife Service.[1] There are no provisions for allowing the take of migratory birds that are unintentionally killed or injured.

Any person or organization who plans or conducts activities that may result in the take of migratory birds is responsible for complying with the appropriate regulations and implementing appropriate conservation measures.

The following species of migratory birds could potentially be affected by activities in this location:

Bachman's Sparrow Aimophila aestivalis — Bird of conservation concern
Season: Breeding
http://ecos.fws.gov/tess_public/profile/speciesProfile.action?spcode=B07F

Bald Eagle Haliaeetus leucocephalus — Bird of conservation concern
Season: Year-round
http://ecos.fws.gov/tess_public/profile/speciesProfile.action?spcode=B008

Bell's Vireo Vireo bellii — Bird of conservation concern
Season: Breeding
http://ecos.fws.gov/tess_public/profile/speciesProfile.action?spcode=B0JX

Dickcissel Spiza americana — Bird of conservation concern
Season: Breeding

Fox Sparrow Passerella iliaca — Bird of conservation concern
Season: Wintering

Golden Eagle Aquila chrysaetos — Bird of conservation concern
Season: Wintering
http://ecos.fws.gov/tess_public/profile/speciesProfile.action?spcode=B0DV

Harris's Sparrow Zonotrichia querula — Bird of conservation concern
Season: Wintering

Henslow's Sparrow Ammodramus henslowii — Bird of conservation concern
Season: Breeding
http://ecos.fws.gov/tess_public/profile/speciesProfile.action?spcode=B09D

Hudsonian Godwit Limosa haemastica — Bird of conservation concern
Season: Migrating

Kentucky Warbler Oporornis formosus — Bird of conservation concern
Season: Breeding

Le Conte's Sparrow Ammodramus leconteii — Bird of conservation concern
Season: Wintering

Least Bittern Ixobrychus exilis
Season: Breeding
http://ecos.fws.gov/tess_public/profile/speciesProfile.action?spcode=B092

Least Tern Sterna antillarum — Bird of conservation concern
Season: Breeding

Little Blue Heron Egretta caerulea — Bird of conservation concern
Season: Breeding

Loggerhead Shrike Lanius ludovicianus — Bird of conservation concern
Season: Year-round
http://ecos.fws.gov/tess_public/profile/speciesProfile.action?spcode=B0FY

Mississippi Kite Ictinia mississippiensis — Bird of conservation concern
Season: Breeding

Orchard Oriole Icterus spurius — Bird of conservation concern
Season: Breeding

Painted Bunting Passerina ciris — Bird of conservation concern
Season: Breeding

Prothonotary Warbler Protonotaria citrea — Bird of conservation concern
Season: Breeding

Red-headed Woodpecker Melanerpes erythrocephalus — Bird of conservation concern
Season: Year-round

Rufous-crowned Sparrow Aimophila ruficeps — Bird of conservation concern
Season: Year-round
http://ecos.fws.gov/tess_public/profile/speciesProfile.action?spcode=B0MX

Rusty Blackbird Euphagus carolinus — Bird of conservation concern
Season: Wintering

Scissor-tailed Flycatcher Tyrannus forficatus — Bird of conservation concern
Season: Breeding

Short-eared Owl Asio flammeus — Bird of conservation concern

Season: Wintering
http://ecos.fws.gov/tess_public/profile/speciesProfile.action?spcode=B0HD

Swainson's Hawk Buteo swainsoni — Bird of conservation concern

Season: Breeding
http://ecos.fws.gov/tess_public/profile/speciesProfile.action?spcode=B070

Wildlife refuges and fish hatcheries

There are no refuges or fish hatcheries in this location

Wetlands in the National Wetlands Inventory

Impacts to NWI wetlands and other aquatic habitats may be subject to regulation under Section 404 of the Clean Water Act, or other State/Federal statutes.

For more information please contact the Regulatory Program of the local U.S. Army Corps of Engineers District.

DATA LIMITATIONS

The Service's objective of mapping wetlands and deepwater habitats is to produce reconnaissance level information on the location, type and size of these resources. The maps are prepared from the analysis of high altitude imagery. Wetlands are identified based on vegetation, visible hydrology and geography. A margin of error is inherent in the use of imagery; thus, detailed on-the-ground inspection of any particular site may result in revision of the wetland boundaries or classification established through image analysis.

The accuracy of image interpretation depends on the quality of the imagery, the experience of the image analysts, the amount and quality of the collateral data and the amount of ground truth verification work conducted. Metadata should be consulted to determine the date of the source imagery used and any mapping problems.

Wetlands or other mapped features may have changed since the date of the imagery or field work. There may be occasional differences in polygon boundaries or classifications between the information depicted on the map and the actual conditions on site.

DATA EXCLUSIONS

Certain wetland habitats are excluded from the National mapping program because of the limitations of aerial imagery as the primary data source used to detect wetlands. These habitats include seagrasses or submerged aquatic vegetation that are found in the intertidal and subtidal zones of estuaries and nearshore coastal waters. Some deepwater reef communities (coral or tuberficid worm reefs) have also been excluded from the inventory. These habitats, because of their depth, go undetected by aerial imagery.

DATA PRECAUTIONS

Federal, state, and local regulatory agencies with jurisdiction over wetlands may define and describe wetlands in a different manner than that used in this inventory. There is no attempt, in either the design or products of this inventory, to define the limits of proprietary jurisdiction of any Federal, state, or local government or to establish the geographical scope of the regulatory programs of government agencies. Persons intending to engage in activities involving modifications within or adjacent to wetland areas should seek the advice of appropriate federal, state, or local agencies concerning specified agency regulatory programs and proprietary jurisdictions that may affect such activities.

This location overlaps all or part of the following wetlands:

Freshwater Forested/shrub Wetland

PFO1/SS1A

Freshwater Pond

R2USC

A full description for each wetland code can be found at the National Wetlands Inventory website: http://107.20.228.18/decoders/wetlands.aspx

Federally-Listed Aquatic Dependent Species Watersheds of Oklahoma

These watersheds were delineated using 11 digit Hydrologic Unit Code (HUC) watersheds. All watersheds adjacent to water bodies occupied by federally-listed species are included in the delineation, as well as those 11 digit HUC watersheds within 10 miles of the occupied water body. Please note that not all 11 digit HUC watersheds that feed into sensitive occupied water bodies are included in this delineation and effects to those watersheds outside of this delineation could impact sensitive water bodies.

OBS Ref. 2016-423-BUS-GAR

Dear Ms. Schmidt, Sep. 21, 2016

We have reviewed occurrence information on federal and state threatened, endangered or candidate species, as well as non-regulatory rare species and ecological systems of importance currently in the Oklahoma Natural Heritage Inventory database for the following location you provided:

Sec. 2-T18N-R12E and Sec. 25, 26, 27, 28, 33, 34, 35, and 36-T19N-R19N-R12E, Tulsa County

We found 11 occurrence(s) of relevant species within the vicinity of the project location as described.

Bald Eagle (*Haliaeetus leucocephalus*), a federally protected species, seven occurrences, one each in Sec. 1 and 12-T18N-R12E, Sec. 7 and 18-T18N-R13E, and Sec. 14, 25, and 26-T19N-R12E, Tulsa County.

Interior Least Tern (*Sternula antillarum athalassos*), a federally listed endangered species, four occurrences, one each in Sec. 18-T18N-R13E and Sec. 13, 25, and 36-T19N-R12E, Tulsa County.

Additionally, absence from our database does not preclude such species from occurring in the area.

If you have any questions about this response, please send me an email, or call us at the number given below.

Although not specific to your project, you may find the following links helpful.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:12,000.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL: http://websoilsurvey.nrcs.usda.gov
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Tulsa County, Oklahoma
Survey Area Data: Version 10, Sep 11, 2015

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Mar 10, 2011—Jul 20, 2014

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.
