GEO-REFERENCED GRAPHICS

Section 1- Geo-Referenced Graphics

The existing interchange on I-40 at Douglas Boulevard in Midwest City, Oklahoma in Oklahoma County is a full cloverleaf interchange constructed in 1960. It currently services Midwest City with a population of 55,427, Tinker AFB, Saint Anthony Healthplex, a car dealership, assorted restaurants and retail, and Oklahoma City, population 591,967.

Figure 1.1 and **Figure 1.2** shows the location map, ownerships, and the study area for the I-40 and Douglas Boulevard interchange.

Figure 1.3 through **Figure 1.5** provides plan and profile sheets of existing Douglas Boulevard, and existing I-40.

Figure 1.6 through **Figure 1.8** are USGS maps of the area for drainage determinations.

Figure 1.9 is a local map of the area.

THIS AGREEMENT is made this 7th day of August, 2007, by and between the Department of the Air Force (hereinafter AIR FORCE) and the State of Oklahoma, by its Department of Transportation (hereinafter STATE).

WHEREAS, Air Force owns the North 102.66 feet of Lot One (1) Block One (1) (hereinafter Tract 1); all of Lots Nine (9) through Twenty-Three (23) Block One (1); and all of Lots Nine (9) through Twenty-Five (25) Block Two (2) (hereinafter Tract 2); and all that portion of Oak Street adjacent to the identified lots and blocks in AVALON ADDITION REPLATTED to the City of Oklahoma City, Oklahoma County, State of Oklahoma; and

WHEREAS, State owns the South 55.00 feet of Lot One (1) Block One (1); all of Lots Two (2) through Eight (8) Block One (1); and all of Lots One (1) through Eight (8) Block Two (2) (hereinafter Tract 3); and all that portion of Oak Street adjacent to the identified lots and blocks in AVALON ADDITION REPLATTED to the City of Oklahoma City, Oklahoma County, State of Oklahoma; and

WHEREAS, the State owned property described above encompasses Interstate Highway No. 40 as the same passes through the platted area and this Agreement is not intended and shall have no effect on the ownership of Interstate Highway No. 40; and

WHEREAS, Air Force and State being the sole owners of AVALON ADDITION REPLATTED to the City of Oklahoma City, Oklahoma County, State of Oklahoma, being a part of the W $\frac{1}{2}$ W $\frac{1}{2}$ NE $\frac{1}{4}$ of Section 14, T11N, R2W of the Indian Meridian, desire to vacate the plat of Avalon Addition Replatted including all of Oak Street as platted therein and as the same is shown at Book 29, at Page 21 of the Book of Plats in the Office of the County Clerk of Oklahoma County, State of Oklahoma;

NOW THEREFORE, in consideration of the good and valuable consideration Air Force and State are to receive by this action, the receipt and sufficiency of which is hereby acknowledged, Air Force and State, pursuant to Title 11 O.S. §42-106, do hereby vacate all of the AVALON ADDITION REPLATTED, including Oak Street as platted therein, as the same is shown in Book 29, at Page 21 of the Book of Plats in the Office of the County Clerk of Oklahoma County, State of Oklahoma.

FURTHER, pursuant to Title 11 O.S. §42-107, Air Force does hereby provide a metes and bounds legal description of the lands owned by Air Force following the vacation of the plat:

THIS AGREEMENT is made this 7th day of August, 2007, by and between the Department of the Air Force (hereinafter AIR FORCE) and the State of Oklahoma, as to the Department of Transportation (hereinafter STATE).

WHEREAS, Air Force owns the North 102.66 feet of Lot One (1) Block One (1) (hereinafter Tract 1); all of Lots Nine (9) through Twenty-Three (23) Block One (1); and all of Lots Nine (9) through Twenty-Five (25) Block Two (2) (hereinafter Tract 2); and all that portion of Oak Street adjacent to the identified lots and blocks in AVALON ADDITION REPLATTED to the City of Oklahoma City, Oklahoma County, State of Oklahoma; and

WHEREAS, State owns the South 55.00 feet of Lot One (1) Block One (1); all of Lots Two (2) through Eight (8) Block One (1); and all of Lots One (1) through Eight (8) Block Two (2) (hereinafter Tract 3); and all that portion of Oak Street adjacent to the identified lots and blocks in AVALON ADDITION REPLATTED to the City of Oklahoma City, Oklahoma County, State of Oklahoma; and

WHEREAS, the State owned property described above encompasses Interstate Highway No. 40 as the same passes through the platted area and this Agreement is not intended and shall have no effect on the ownership of Interstate Highway No. 40; and

WHEREAS, Air Force and State being the sole owners of AVALON ADDITION REPLATTED to the City of Oklahoma City, Oklahoma County, State of Oklahoma, being a part of the W $\frac{1}{2}$ W $\frac{1}{2}$ NE $\frac{1}{4}$ of Section 14, T11N, R2W of the Indian Meridian, desire to vacate the plat of Avalon Addition Replatted including all of Oak Street as platted therein and as the same is shown at Book 29, at Page 21 of the Book of Plats in the Office of the County Clerk of Oklahoma County, State of Oklahoma;

NOW THEREFORE, in consideration of the good and valuable consideration Air Force and State are to receive by this action, the receipt and sufficiency of which is hereby acknowledged, Air Force and State, pursuant to Title 11 O.S. §42-106, do hereby vacate all of the AVALON ADDITION REPLATTED, including Oak Street as platted therein, as the same is shown in Book 29, at Page 21 of the Book of Plats in the Office of the County Clerk of Oklahoma County, State of Oklahoma.

FURTHER, pursuant to Title 11 O.S. §42-107, Air Force does hereby provide a metes and bounds legal description of the lands owned by Air Force following the vacation of the plat:

TRUSTEE'S DEED

THIS INDENTURE, made this 2nd day of July, 1997, between The Trust Company of Oklahoma, Successor Trustee of the Sam K. Viersen, Jr. Revocable Trust dated September 9, 1986, as amended and restated May 11, 1994, hereinafter called Grantor, and Viersen Oil & Gas Co., an Oklahoma Corporation, hereinafter called Grantee.

WITNESSETH, that in consideration of the sum of Thirty-Two Thousand Two Hundred Fifty Dollars (\$32,250) and other good and valuable consideration, the receipt of which is hereby acknowledged, said party does hereby grant, bargain, sell, convey, transfer, assign and deliver, to said party Grantee, their heirs and assigns the following described real estate situated in the County of Oklahoma, State of Oklahoma, to wit:

That part of the E/2 W/2 NW/4 and W/2 W/2 W/2 E/2 NW/4 of Section 13, Township 11 North, Range 2 West of 1.M., lying South of the South right-way line of Interstate Highway No. 40 in Oklahoma County, Oklahoma.

TO HAVE AND TO HOLD the above described real estate to the said Grantee and said Grantee's successors and assigns forever, and Grantor, as such Trustee, and not for themselves individually, covenants that said premises are free of any encumbrances made or suffered by said Grantor except taxes and assessment, and that said Grantor and its successors shall warrant and defend the same to said Grantee and said Grantee's successors and assigns forever, against the lawful claims and demands of all persons claiming by, though or under the said Grantor but against none other.

IN WITNESS THEREOF, the said Grantor has hereunto subscribed its name, The Trust Company of Oklahoma, Successor Trustee of the Sam K. Viersen, Jr. Revocable Trust dated September 9, 1986, as amended and restated May 11, 1994, by its proper officers, they thereunto duly authorized, the day and year above written.

HYDROLOGICAL DATA

Section 6- Existing Bridge Condition and Hydrological Data

6.01 Five bridges are located within the extents of the study area. Bridge Inspection Reports were obtained from ODOT Bridge Division. Please see Figure x for Bridge Inspection Reports.

6.02 The drainage areas associated with each bridge are as follows:

NBI No. 15559

Total Area: N/A

NRCS Controlled Area: N/A

Effective Area: N/A

Bridge NBI No. 15559 is located over I-40, and is not located over a hydrologic point of interest.

NBI No. 15560

Total Area: N/A

NRCS Controlled Area: N/A

Effective Area: N/A

Bridge NBI No. 15560 is located over I-40, and is not located over a hydrologic point of interest.

NBI No. 15573

Total Area: N/A

NRCS Controlled Area: N/A

Effective Area: N/A

Bridge NBI No. 15573 is located over I-40, and is not located over a hydrologic point of interest.

NBI No. 15468

Total Area: 1,132.8 Acres (1.77 sq. miles)

NRCS Controlled Area: 0 Acres (0 sq. miles)

Effective Area: 1,132.8 Acres (1.77 sq. miles)

NBI No. 15552

Total Area: N/A

NRCS Controlled Area: N/A

Effective Area: N/A

Bridge NBI No. 15552 is located over I-40 and is not located over a hydrologic point of interest.

FEMA FIRMETTE maps are provided below showing each bridge. USGS Stream Stats have also been provided for Soldier Creek through Bridge NBI No. 15468.

Structure / Inspection Notes

G Hines inspection comments - 10/22/2012

PX - erosion along the SW & NW slopewalls is causing cavities to develop under them * PX - The approach railings should be updated to meet current standards * PX - Fair to poor concrete approach roadway (top) - the North approach is 2-3 inches low with a sharp transition of asphalt & a large spall at the deck edge is settled *

Additional Elements

Elem.	Element Notes (Include Size and Location of Deterioration)
38	PX - LOTS of scaling & spalling along the East curb. One moderate spall along the North edge near the centerline. Approximately 15% of the total area is affected. Numerous popouts noted. Needs an overlay in the near future. Also see SF #358.
205	PX - The 3rd, 4th, & 5th columns in bent #1 are spalled with rebar exposed. The 5th column in bent #3 is cracked & deeply spalled (2008 photos). On bent #2 there is a moderate spall on the 5th column & a small spall present on the 4th column. Minor cracking noted on the 1st & 2nd columns in bent #1. Minor spalls on #1 thru #4 columns all in bent #3. Needs repair in the near future.
215	FX - Some light vertical cracking noted on each abutment. Moderate spalling above the South abutment seat behind the 5th & 6th beams (2010 photo). Moderate to heavy horizontal cracking on the South with delaminations below 5-6, 7-8, 10-12, & the 15th pedestals. Heavy cracking on the NE behind the 20th roller into & above the seat. Still stable at this time.
234	Tiny delamination noted on the SW end of the 3rd cap. One light crack on SW corner of the 2nd cap. Minor defects noted at the East end of the 1st cap.
311	FX - All of the rollers on the North abutment are rotated back @ 20 degrees & need re-positioned (2006 photo). Light to moderate exfoliation noted on most on the North as well. Surface rust is present on the lower areas of most of the South abutment bearings with rust under the mortar plates stressing the anchors.
321	PX - The South slab is broken & buckled from curb to curb about 3' from the deck; there is a moderate crack in the North slab. Some leveling has been attempted but needs more. The North slab also has a large spall that needs repair soon.
330	Light freckle rust is developing in all areas.
331	One post each on the East & West has a minor spall. Minor weathering overall.
358	PX - Lots of light to moderate cracks of moderate to heavy density are present in each span. Every square foot in the traffic lanes has some degree of cracking present.
659	Less than 2% of the total area has minor discoloration - mainly the fascia areas. Some light cracks noted without staining or efflorescence.
909	FX - Moderate deterioration of the sealant over the abutments with some seepage evident below.
968	PX - erosion along the SW & NW slopewalls is causing cavities to develop under them
970	The SE, SW, & NE wing are cracked at the junction point up to 1/4" - no loose of fill yet.

Structure / Inspection Notes

* THE W.B. CLEARANCE SIGN IS OK OVER THE THRU ROUTE BUT THE CLEARANCE ABOVE THE ON-RAMP LANE IS 1' LESS! (ANNEX NOTIFIED).
* (THE E.B. SIGNS HAVE BEEN CHANGED).
* MAXIMUM HORIZONTAL UNDERCLEARANCE: EB = 43', WB = 46'.

G Hines inspection comments - 10/19/2012

The roadway above is gated off due to security changes at Tinker AFB - the ADT is basically zero (the South gate is open at this time but the roadway on the South 100' away is a dead end) *
PX - There is heavy erosion on the SE & SW slopes near the slopewalls * Safety below = 1111 * Satisfactory side drains

Additional Elements

Elem.	Element Notes (Include Size and Location of Deterioration)
38	Lots of small popouts overall - some scaling along the East curb. Also see SF #358.
205	FX - One moderate spall noted on the 3rd column in bent #3 & #2 in bent #1(both near the ground). Minor delamination present on #3 in bent #1 with cracking. Still solid overall.
215	Several light vertical cracks with efflorescence are present on the North abutment with a few on the South. Some discoloration noted.
234	The NE end of the 3rd cap has a small impending spall. Light cracking present on the 2nd cap near the 2nd column. Small crack noted on each end of the 1st cap with a small delamination at the NE area. Two cracks visible on the North face of bent #2.
301	PX - The sealant in each joint is deteriorated & failing and allowing water to pass through to the abutments. There is up to a 3 inch gap at some areas.
310	There is a single full-width pad on bent #2.
311	Some moderate surface rust is present on all rollers on the South abutment. Some lateral movement noted - ears on a few ears are partially sheared off.
321	North slab has moderate cracking & the South slab has minor cracking.
330	FX - One section in span #4 is weakened due to spalling on the posts. Minor to moderate surface rust is present otherwise on the steel portion of the railing.
331	The concrete portion (posts) of the railing has superficial weathering overall. One post on the west side of span #3 is chipped at the top, another in span #4 is spalled at the top weakening the steel portion. There are 2 other posts with light cracking at the curb junction.
358	PX - The deck has pattern cracking in all areas approximately every 4 to 8 inches (2010 photo). The cracks are light to heavy in size. The deck needs a high density overlay or epoxy flood coat soon.
659	Some minor deterioration noted mainly on the fascia areas. Less than 2% of the total area is affected.

Additional Elements

Elem.	Element Notes (Include Size and Location of Deterioration)
38	PX - The deck has some minor patches with some scaling and spalling is present - mainly along the outer curb areas (2006 photo). One newer asphalt patch noted in the SB lane of span #3. Lots of minor popouts noted as well. Approximately 25% of the total area is affected.
205	PX - At bent #1 the 1st column is spalled with rebar exposed (2006 photo). The 6th & 7th columns in bent #1 have smaller spalls mainly near the bottom with cracking present on #2 & 3. Some minor scaling is also present on the 6th & 7th columns. *At bent #2 there is a tiny spall on the 1st & 4th columns with small delaminations noted on the 2nd & 6th columns. *At bent #3 there is a spall on the 5th column. *Moderate spalls noted on the 3rd & 4th columns in bent #4 with delamination at the bottom of #5. *The 5th column in bent #5 has moderate spalling (2010 photo). Still solid overall.
215	PX - Large spall is present at the NW corner. Lots of small spalls on the East third of the North abutment. Light to moderate horizontal cracking with scaling are present on both abutments. Stable at this time.
234	FX - One moderate spall on the South face of the 3rd cap above the 7th column. Small spall present at the SW corner of the 4th cap & the North face below the 4th beam. Rebar chair stains noted on the 2nd cap between the 6th & 7th columns. Small delaminations present on the 1st cap; one at the South face above the 4th column & at the NE area. On the 2nd cap there are delaminations at the East & North areas of bent #2. Minor cracking noted on the NE area of 4th cap, SE area of 3rd cap, & both ends of 2nd cap. Satisfactory condition overall.
301	PX - The sealant over the abutments has lost most of it's adhesion and is allowing debris and water to pass through. There is some minor chipping of the deck present along the abutment joints. Each joint needs completely redone. There is a full-length joint down the median that needs to be sealed also.
310	There is one solid pad end to end on bent #3 (w/o steel element). Supplement bearings have been removed at the abutments.
311	FX - ALL ABUTMENT ROLLERS HAVE BEEN REPLACED BY THE PERRY BRIDGE CREW (PHOTOS). THE SOUTH ABUTMENT BEARING STILL NEED TO BE PAINTED. ALSO, THE UPPER 'EARS' DON'T LINE UP WITH THE ORIGINAL HOLES DUE TO DECK ROTATION.
321	PX - The NW approach slab is badly broken with areas of upheaval (2006 photo). The NW & NE slabs also have deep spalling along the bridge deck (5/2011 photo @ NE). The SE & SW slabs have minor to moderate cracking - all 4 have minor wear. PX - The SW slab has shoved about 4 inches from the bridge deck causing erosion to develop under the slab *
330	FX - The steel portion of the railing has moderate freckle rust overall. Two sections on the East are weakened due to post condition (see element #331).
331	FX - The 8th post from the NE is cracked loose at the sidewalk level. Still attached well by the rebar system. The remaining concrete portions have minor weathering overall.
358	PX - The deck is entirely covered with pattern cracking - the cracks are of minor to severe in size & density. There is not a 6" X 6" area that does not have a crack of some size. The deck really needs a high-density overlay or epoxy flood coat soon.
659	There are 5 longitudinal construction joints in each span. Most have some minor seepage with stains & light efflorescence started. The fascia areas have some discoloration & light cracking. Less than 10% of the total area is affected.
970	PX - The SW wing is completely broken away from the abutment & leaning badly (2008 photo). It is no longer being held up by the exposed rebar. Some loss of fill is causing settlement along the grassy shoulder area. The NE wing leans badly as well but is still attached via the rebar. The SE & NW wings are cracked (CS 2) but still functioning as intended. The SW & NE needs attention soon.

Structure / Inspection Notes

*BARREL LENGTH ALONG THE SKEW IS 258'.
 *TOTAL HORIZONTAL CLEARANCE IS NOW 85' FOR W.B. TRAFFIC & >100' FOR E.B. TRAFFIC DUE TO CABLE BARRIER RAIL ON THE MEDIAN.
 G Hines inspection comments - 10/19/2012
 PX - Erosion is cutting behind the SE & SW wings * There is an un-improved dirt road near the South headwall (still on the R-O-W) * The channel is clean - needs re-aligned on the North *
 Open grassy median between the E.B. & W.B. lanes with cable barrier rail *

Elem.	Element Notes (Include Size and Location of Deterioration)
241	There is minor separation started at each joint in each barrel. The water level was down in 2008 permitting access into the RCB. Minor abrasion & scaling of the lower wall areas noted. Good condition overall.
330	The South rail is rusty & leaning -none on the North.
333	Briffen cable system has been mounted on the median.
965	There is 2.5' to 3.5' of silt in each barrel full length. No drift noted.

Additional Elements

Elem.	Element Notes (Include Size and Location of Deterioration)
38	The deck was redone with a latex-modified overlay in 2008 - looks good. The curbs were redone as well. Also see SF #358.
205	Small spall w/o rebar noted on the upper West faces of the bent #1 & #3 columns.
215	Some minor scale, popouts, & cracking noted on the outer areas.
234	PX - There is a group of small spalls on the bottom of the 1st cap at the West end (2006 photo). One tiny spall each noted at the same location on the 2nd & 3rd caps and one also at the NE end of 1st Cap. Spalls noted at the lower East & NE areas of the 3rd cap. Minor scale on outer areas - still solid overall.
310	< none >
331	Light scaling, popouts, & cracking on most areas. Still solid at this time.
358	Some light cracking noted.
659	The soffit has some areas with discoloration & efflorescence - mainly on the fascia. Less than 10% of the total area is affected.
909	There is a longitudinal joint down the centerline - no problems noted.

SECTION 7

CULTURAL RESOURCES

Section 7- Cultural Resources

A cultural resource reconnaissance review was conducted by the Oklahoma Department of Transportation's Cultural Resources Program. The results of that review are summarized in the following sections of text. Please see the attached Project Reconnaissance Review for additional information.

7.1 Historic Properties/Structures

Four (4) structures were identified within the reconnaissance area with a low potential for NRHP eligibility. These structures are pre-1968 commercial buildings located in the northwest quadrant of the I-40/Douglas Boulevard intersection, immediately south of S.E. 29th Street.

NOTE: A concrete memorial marker was identified in the southwest quadrant of the I-40/Douglas Boulevard intersection, located in the area between the eastbound I-40 lanes, the eastbound I-40 off-ramp to southbound Douglas Boulevard, and the eastbound I-40 on-ramp from southbound Douglas Boulevard. While memorial markers are considered to be not NRHP eligible, it is recommended that ODOT attempt to identify ownership in order to coordinate relocation of the memorial marker.

7.2 Archaeological Sites

The following potential archaeological sites with low NRHP potential were identified within the reconnaissance area:

- Subsurface features associated with 17 residences identified from 1941 aerial photography, located in the southwest quadrant of the I-40/Douglas Boulevard intersection; and
- A commercial venture located in the northeast quadrant of the I-40/Douglas Boulevard intersection, immediately south of S.E. 29th Street.

7.3 Historic Cemeteries

No cemeteries were identified within the reconnaissance area.

**ODOT CULTURAL RESOURCES PROGRAM
PROJECT RECONNAISSANCE REVIEW**

County: Oklahoma
Project No:
J/P No: 29254(23)
Project Description: Bridge and roadway modifications along I-40 between S. Post Rd. and Arnold St. in Midwest City, OK.

Reconnaissance Corridor Description: Two miles long following I-40 extending 270 feet south and 710 feet north of existing centerline east of Douglas Blvd. transitioning to 350 south and 100 feet north of existing centerline west of Douglas Blvd. with various dimensional eccentricities at the Douglas Blvd. intersection accommodating proposed alignment and interchange alterations.

Topographic Quadrangle: Midwest City (1986); Choctaw (1956; photorev. 1969 / 1975)

Prepared By: M. McKay
Date of File Review: 09 September 2013
Date of Field Reconnaissance: 19 September 2013

1 File Review (Previously Identified Cultural Resources in the Reconnaissance Corridor):

- State Archeological Site Files at Oklahoma Archeological Survey
- SHPO's NRHP list and Determination of Eligibility (DOE) list
- Oklahoma Historic Bridge Survey
- Archived Maps or Aerial Photographs: Midwest City (1956) topographic map; Choctaw (1956) topographic map; USGS Soil Conservation Service (SCS) Aerial Photograph (1941); Google Earth Timeline (1995 -- 2012)

2 Results of File Review:

NRHP Eligibility of Existing Bridge(s) in Reconnaissance Corridor:

- None
NRHP Status: NRHP eligible Assessed not NRHP eligible Non-Assessed

Comments: There are (6) bridges and bridge-class culverts constructed between 1960 and 1962 included within the delineated recon corridor. All are on the Interstate Highway System and, according to a February 2005 Advisory Council on Historic Preservation (ACHP) exemption and pursuant to provisions within the Safe, Accountable, Flexible, Efficient Transportation Equity Act: A Legacy for Users (SAFETEA-LU, Public Law 109-59, Sec. 6007), do not require documenting and review;

ODOT Structure #55N3160E1090005 / NBI #16827 -- 1967 Concrete Slab Bridge
 In accordance with the November 2012 ACHP Program Comment Concerning Post-1945 Concrete and Steel Bridges, this bridge is of a design type that is considered to be exempt from documenting and review.

SHPO NRHP/DOE listed Properties in Reconnaissance Corridor:

- None

Archeological Sites in Reconnaissance Corridor:

- None

Potential Cultural Resources in Reconnaissance Corridor:

Non-recorded, non-NRHP assessed cultural resources, identified during archival file review that may be present in recon corridor.

None

Comment: Much of the recon corridor covers former suburban residential and outlying commercial zones reclaimed by the DoD and Tinker AFB in the 1970's and 1980's to provide a safety buffer along aircraft low-altitude flight corridors. Use of the georeferenced 1941 USDA / SCS aerial photograph of the recon corridor compared with recent aerial photographs taken between 1995 and the present indicates that at least (20) possible sites associated with pre-1968 residences within these reclaimed housing developments may be present within the recon area. In addition to the possible house and business sites, numerous derelict roadways serving these early neighborhoods are still extant.

Previous Cultural Resources Surveys in Reconnaissance Corridor:

Surveys identified during archival file review and the quantity, type, and NRHP assessment of cultural resources defined.

None

3 Windshield Assessment of Corridor:

Potential NRHP Eligibility of Non-Assessed Existing Bridge(s):

None

Low potential for eligibility

Moderate potential for eligibility

High potential for eligibility

Comments: **ODOT Structure #55N3160E1090005 / NBI #16827** is a 1967 Concrete Slab Bridge that is of a design type considered to be exempt from documenting and review according to the November 2012 ACHP Program Comment;

According to a February 2005 ACHP exemption in addition to the SAFETEA-LU provisions of August 2005, the (6) bridges and bridge-class culverts on that portion of the Interstate Highway System located within the recon corridor do not require documenting and review;

The study area also includes (4) large concrete box culverts, (1) medium-sized concrete culvert with a box-inlet drop structure, (1) small concrete culvert with a box-inlet drop structure, (3) small concrete drainpipes, and (2) small corrugated metal pipes. No construction date marks or maker's marks were noted on any of these drainage structures. These ancillary properties are not of bridge-class dimensions and do not have NBI data so do not need to be documented.

By Potential for NRHP Eligibility, Total Number of Structures 45 Years or Older Present in Recon Corridor:

None

4 Low potential for eligibility

 Moderate potential for eligibility

 High potential for eligibility

 NRHP District Potential

Comment: All are pre-1968 commercial buildings located along the south side of SE 29th St. west of the S. Douglas Blvd. intersection;

A concrete memorial marker dedicated to Randy "Mud Cat" Essman (1947 - 1993) is

located between the eastbound lanes of I-40, the southbound off-ramp accessing S. Douglas Blvd., and the west end of the on-ramp cloverleaf accessing I-40 eastbound from S. Douglas Blvd. There is no ownership identification on the marker but it reflects the vintage design of 1930's through 1960's roadway concrete post-and-beam railing endposts. Memorial markers are considered to be not NRHP eligible; it is recommended that ODOT attempt to identify ownership in order to coordinate relocation of the marker.

Potential Archaeological Sites Observed:

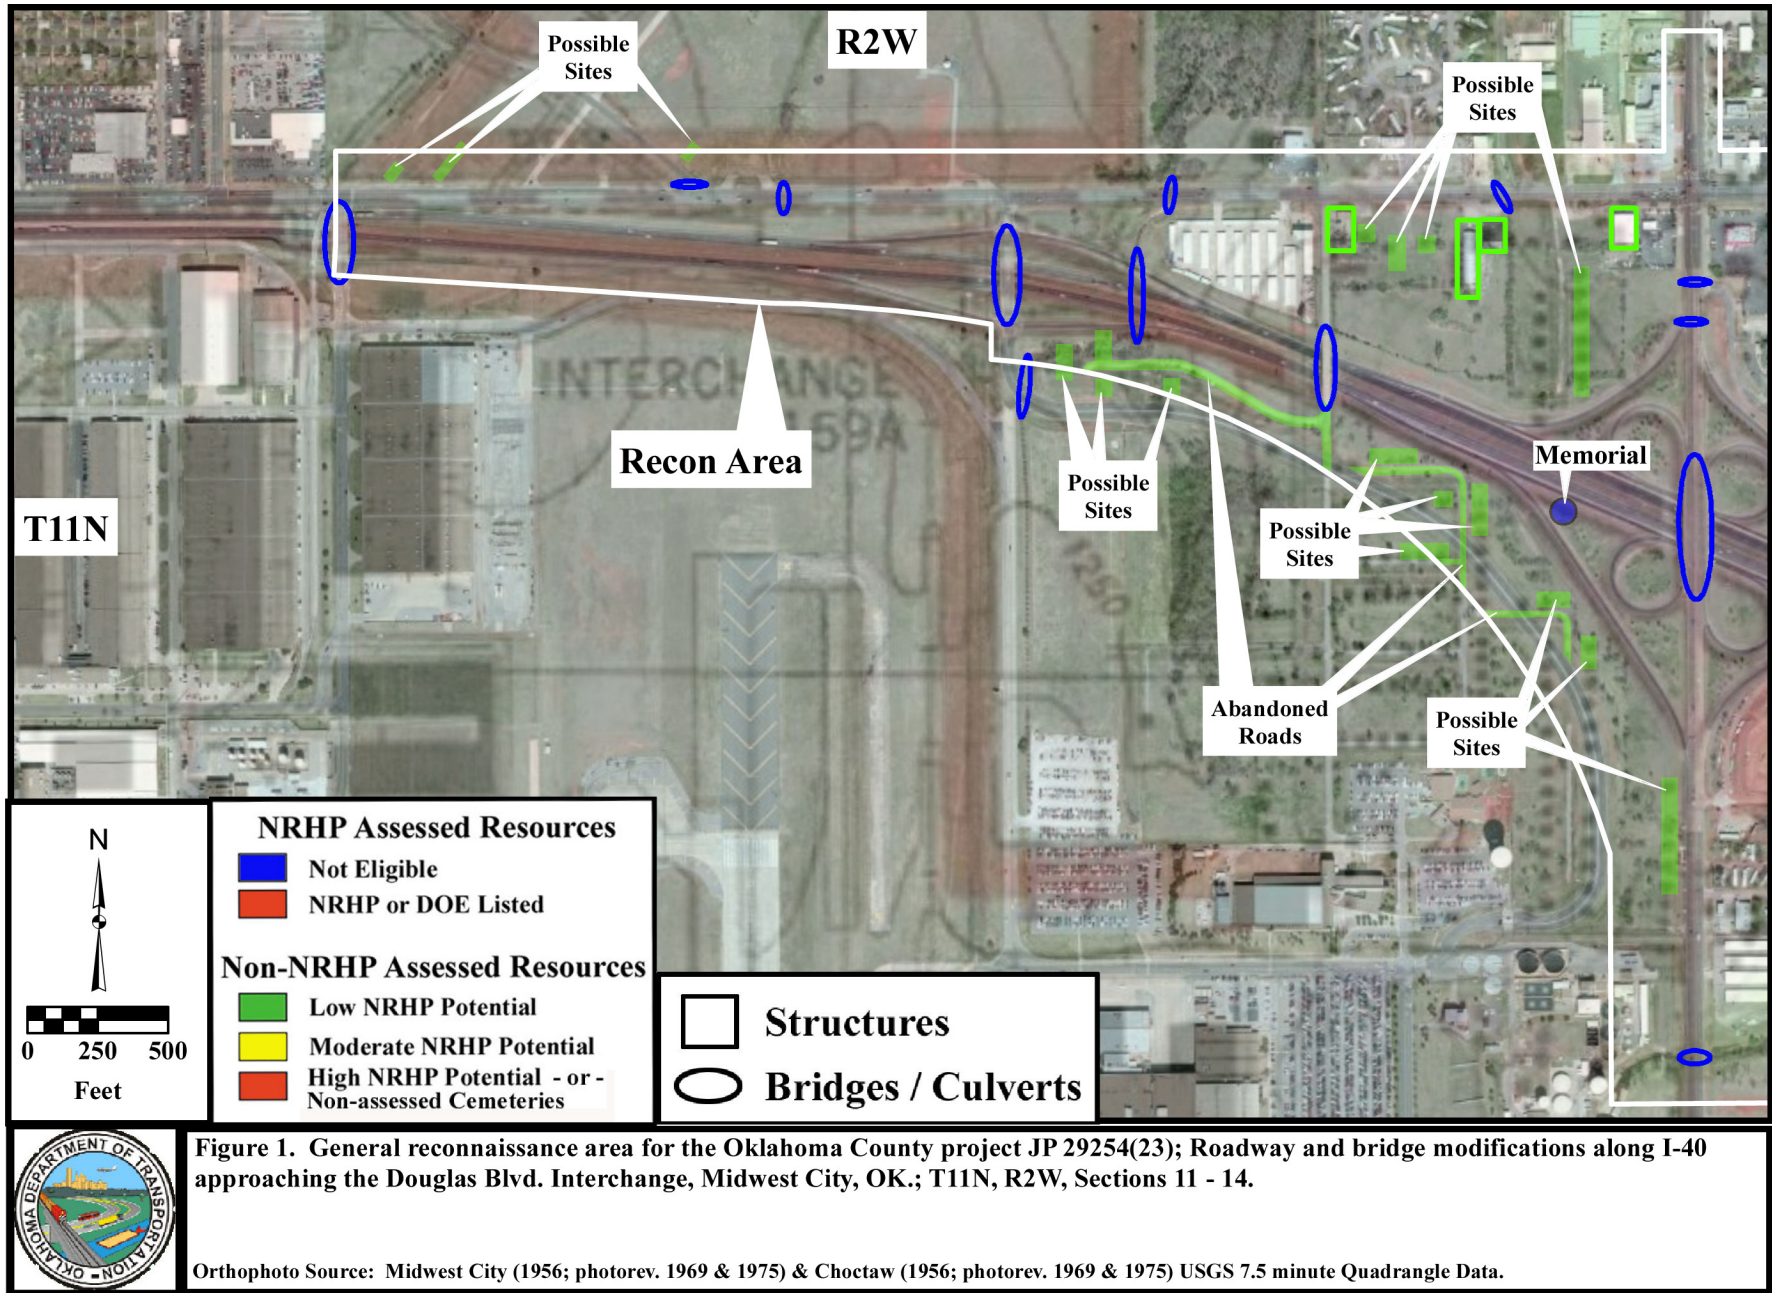

None
Type: Prehistoric 20th Century 19th Century Other

Comment: Although no surface features or artifacts were noted during windshield assessment and topical field review, ground disturbance indicates that there may yet be intact subsurface features associated with (17) residences at locations identified through georeferenced comparison with the 1941 USDA aerial photograph of the recon corridor; Many of the derelict roadways that previously served the two non-extant housing developments recovered by the DoD and Tinker AFB can presently be observed along the northern and northeastern periphery of Tinker AFB, south of existing I-40 centerline;

A possible site associated with a commercial venture was observed at the northeastern periphery of the recon corridor immediately south of existing SE 29th St. centerline and east of S. Douglas Blvd.

Areas Potentially Supporting Prehistoric Archaeological Sites:

Comments: The likelihood of extant archaeological sites within the recon corridor is minimal due to the extensive urban residential, commercial, and municipal development that has taken place throughout.

SECTION 8

HAZARDOUS WASTE/LUST SITES

Section 8- Hazardous Waste/LUST Sites

8.1 Hazardous Waste Sites

8.1 Hazardous Waste Sites

Based upon a review of available environmental records by Environmental Data Resources Inc. (EDR), the following known hazardous waste management sites were identified within the proximity of the reconnaissance area (using ASTM E 1527-00 radius guidelines):

Tinker Air Force Base was listed on the following federal records:

- National Priority List (NPL)
- Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS)
- RCRA Corrective Action Activity (CORRACTS)
- RCRA Hazardous Waste Treatment, Storage, or Disposal Permit (RCRA-TSDF)
- RCRA Hazardous Waste Large Quantity Generator (RCRA-LQG)
- Sites with Engineering Controls in Place (US ENG CONTROLS)
- Federally Owned Lands administered by the Department of Defense (DOD)
- Record of Decision Mandating a Permanent Remedy at a NPL Site (ROD)
- PCB Generator, Transporter, Commercial Storer and/or Broker, and Disposer of PCBs (PADS)
- Aerometric Information Retrieval System (US AIRS)
- Potentially Responsible Parties (PRP)
- RCRA Corrective Action (2020 COR ACTION)
- List of Hazardous Waste from Generator through Transporters to a TSD Facility (NY MANIFEST and WI MANIFEST)
- List of Permitted AIRS Facility Locations (OK AIRS)

In addition to Tinker Air Force Base, the following sites were identified:

One (1) site was listed as RCRA Hazardous Waste Conditionally Exempt Small Quantity Generators (RCRA-CESQG).

Five (5) sites were listed as no longer generating hazardous waste (RCRA NonGen/NLR).

One (1) site was listed in Emergency Response Notification System records has having reported a release of oil and hazardous substances (ERNS).

Six (6) sites were listed on the Facility Index System (FINDS).

Four (4) sites were listed as facilities which store hazardous materials and submit a chemical inventory report (OK TIER 2).

A total of 18 sites were listed as potential gas station/filling station/service stations (EDR US HIST AUTO STAT).

Four (4) sites were listed as potential dry cleaner sites (EDR US HIST CLEANERS).

Please see the attached EDR DataMap and Report for further details.

8.2 AST, UST, LUST Sites and Oil Wells within 1/8th of a Mile

Based upon a review of available environmental records by Environmental Data Resources Inc. (EDR), the following aboveground storage tank (AST), underground storage tank (UST), and leaking underground storage tank (LUST) sites were identified within the proximity of the reconnaissance area (using ASTM E 1527-00 radius guidelines):

One (1) site was listed on the Aboveground Storage Tank database (OK AST).

A total of 11 sites were listed on the Underground Storage Tank database (OK UST).

A total of 13 sites were listed on the historic underground storage tank list (OK HIST UST).

A total of 9 sites were listed on the Leaking Underground Storage Tank Incident Reports list (OK LUST).

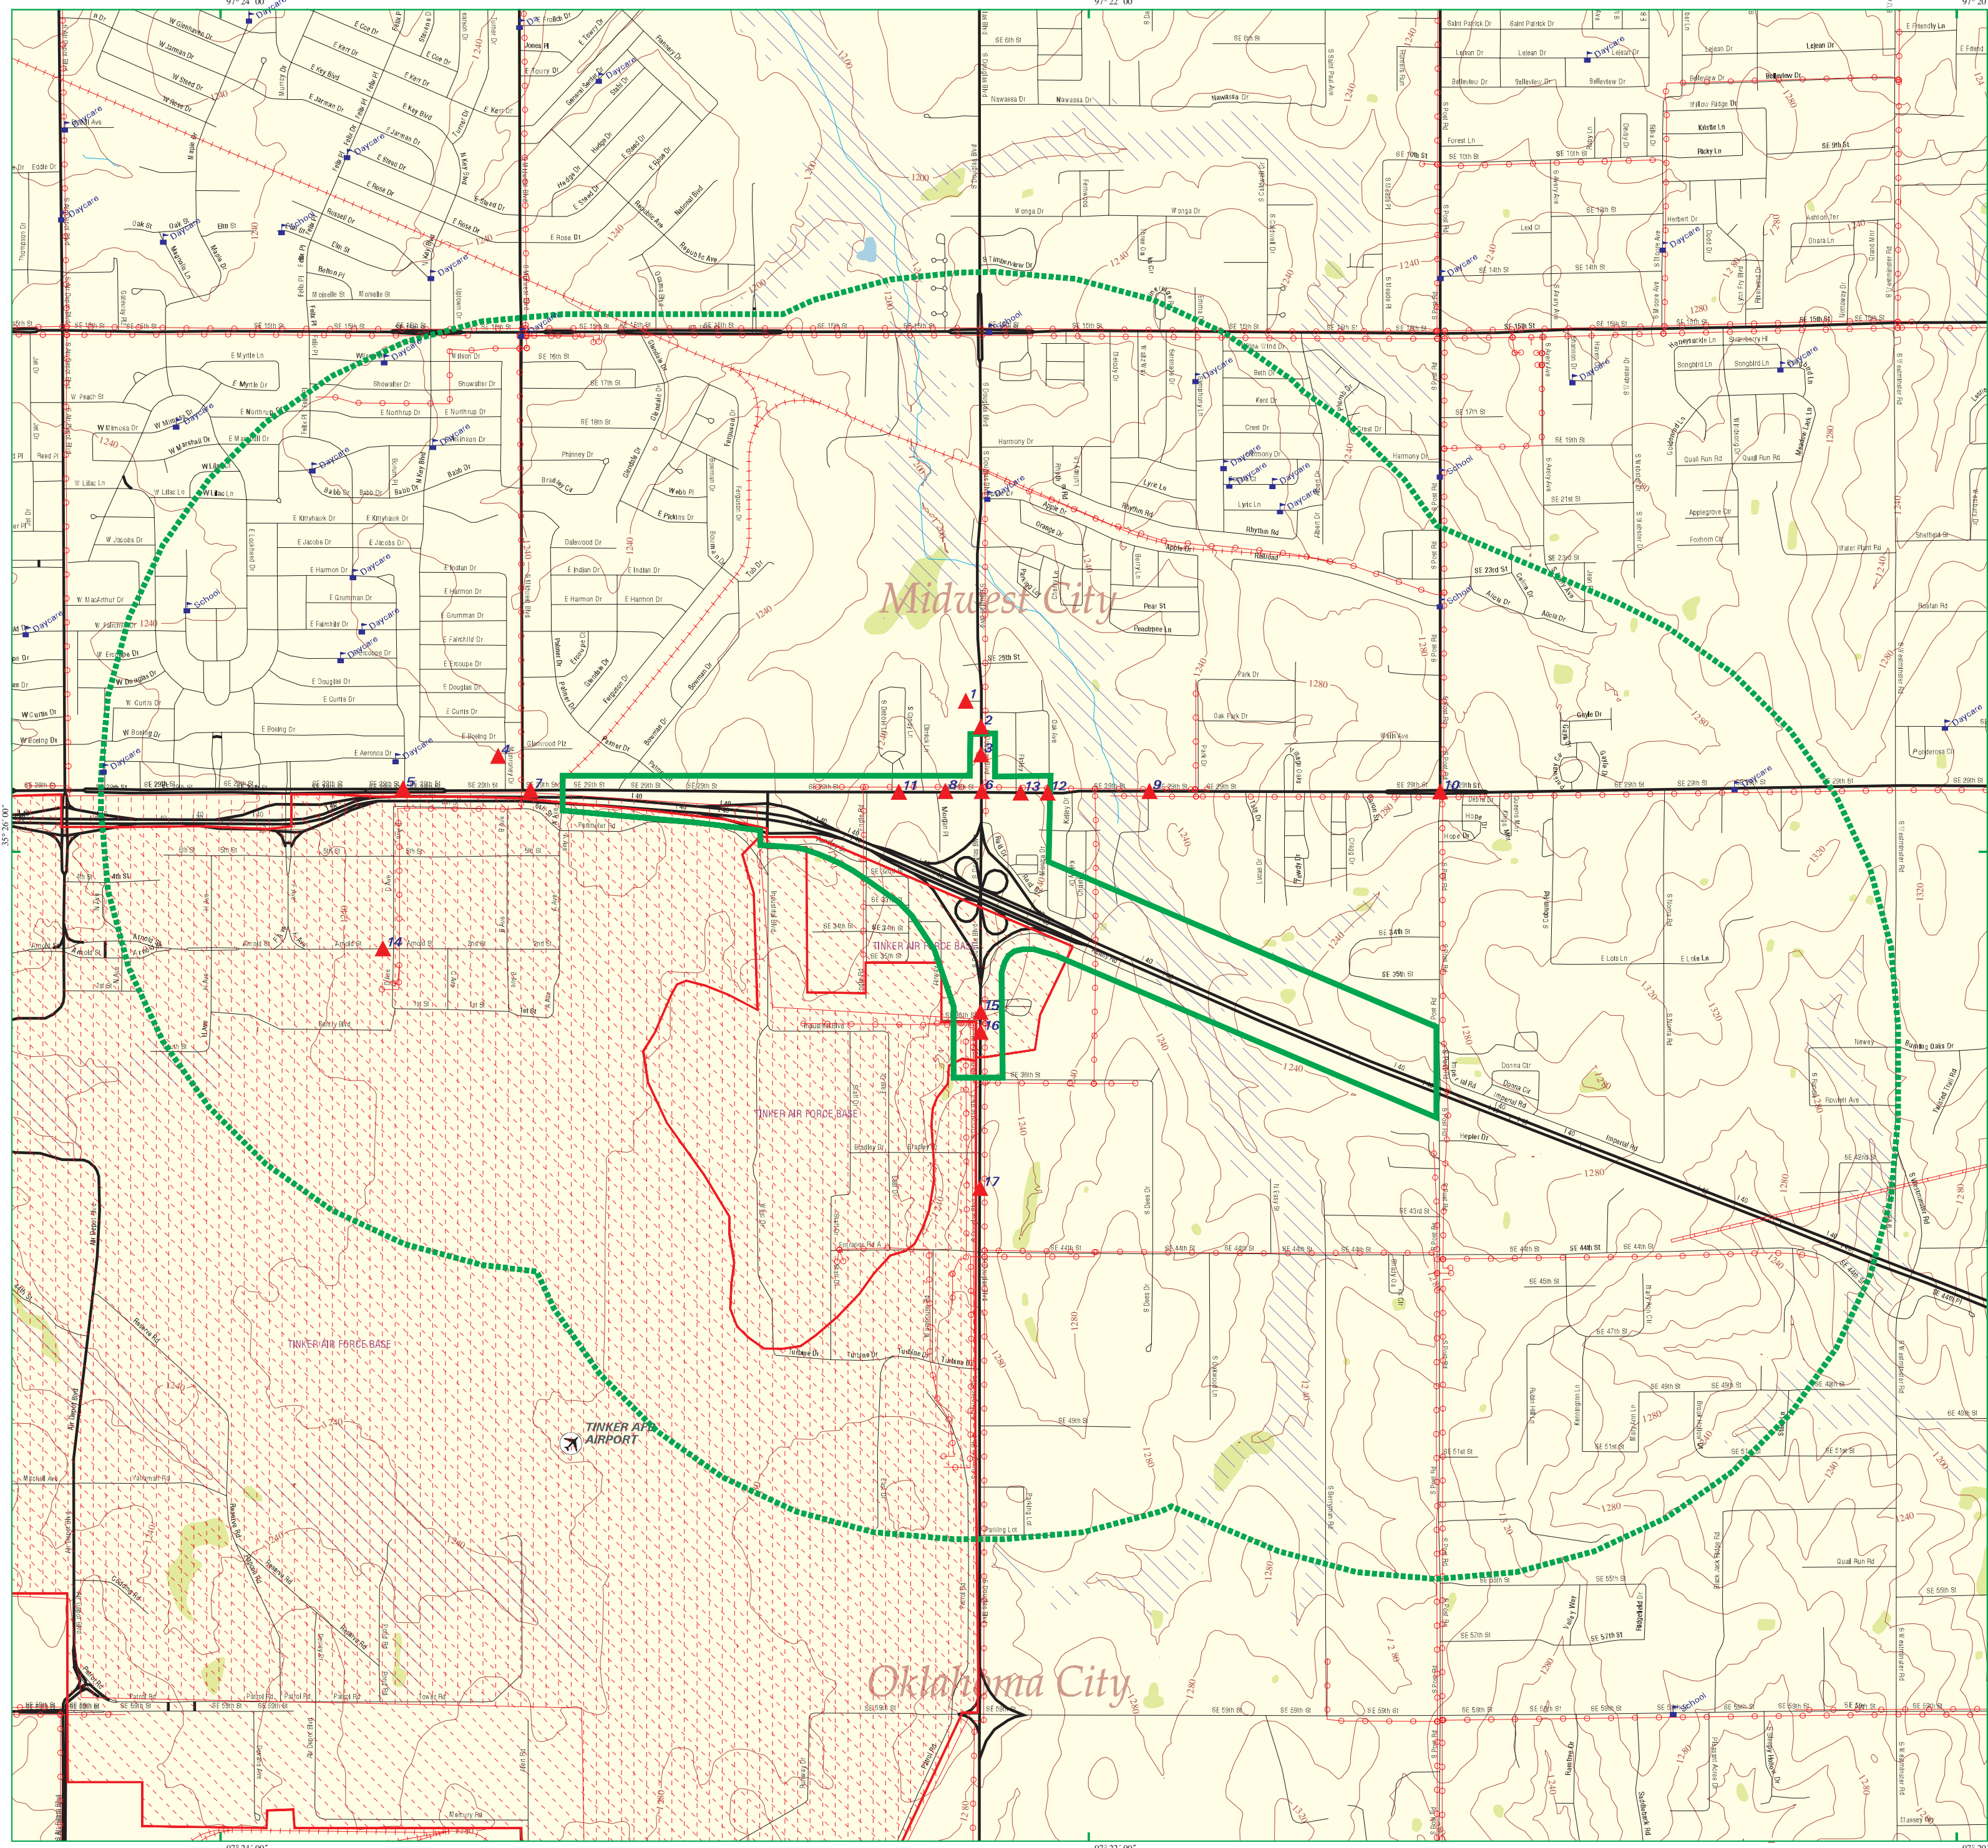

Review of the IHS US Data Online Service well and activity database indicated no oil and gas wells located within 1/8th of a mile of the reconnaissance area.

8.3 Current and Abandoned Coal Mines

No current or abandoned coal mines were identified within the reconnaissance area.

FEDERAL RECORDS

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 04/26/2013 has revealed that there is 1 NPL site within the searched area.

EXECUTIVE SUMMARY

CERCLIS: The Comprehensive Environmental Response, Compensation and Liability Information System contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the CERCLIS list, as provided by EDR, and dated 04/26/2013 has revealed that there is 1 CERCLIS site within the searched area.

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 06/18/2013 has revealed that there is 1 RCRA-TSDF site within the searched area.

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 06/18/2013 has revealed that there is 1 RCRA-LQG site within the searched area.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 06/18/2013 has revealed that there is 1 RCRA-CESQG site within the searched area.

The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/18/2013 has revealed that there are 5 RCRA NonGen / NLR sites within the searched area.

EXECUTIVE SUMMARY

US AIRS: The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

2020 COR ACTION: The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

A review of the 2020 COR ACTION list, as provided by EDR, and dated 11/11/2011 has revealed that there is 1 2020 COR ACTION site within the searched area.

EDR US Hist Auto Stat: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Auto Stat list, as provided by EDR, has revealed that there are 18 EDR US Hist Auto Stat sites within the searched area.

4,277 acres adjacent to Oklahoma City, Oklahoma County, Oklahoma. The base is within the North Canadian River drainage basin and drains into Crutcho and Soldier Creeks. It overlies the Garber-Wellington Formation. This NPL site is bounded by 59th Street, Douglas Boulevard, Building 3001, and the base boundary to the north. Building 3001 is used for aircraft maintenance and jet engine rebuilding. Organic solvents, including trichloroethylene (TCE), tetrachloroethylene, and 1,2-dichloroethylene, were used for degreasing and aircraft maintenance. In the past, waste oils, solvents, paint sludges, and plating waste generated from maintenance activities were disposed in Industrial Waste Pits Numbers 1 and 2, located about 1 mile south of Soldier Creek and Building 3001. Current waste is disposed off-site at landfills permitted under the Resource Conservation and Recovery Act (RCRA) or the State. The base acquired Interim Status under RCRA Subtitle C when it filed an application for a permit to store hazardous wastes. Tests conducted by a contractor to the Air Force detected TCE in a water supply well located within Building 3001. The Air Force has taken this well out of service. The municipal water system serving 55,400 customers in Midwest City draws water from the contaminated aquifer within 3 miles of the base. The Air Force has detected heavy metals (chromium, nickel, cadmium) in Soldier Creek at Douglas Boulevard. The Air Force is participating in the Installation Restoration Program, established in 1978. Under this program, the Department of Defense seeks to identify, investigate, and clean up contamination from hazardous materials. The Air Force has completed Phase I (records search) and is currently involved in Phase II (problem confirmation). Status July 22, 1987): Phase IV (Operations Phase) is underway, and work on Phase II continues. Phase IV includes installation of additional cover at a landfill thought to be contributing contamination to a private well. Within the boundaries of this Federal facility, there are areas subject to the Subtitle C corrective action authorities of RCRA. However, no such areas were included in scoring this specific site. Therefore, this Federal facility site is being placed on the Federal section of the NPL under the NPL/RCRA policy announced on September 8, 1983 (48 FR 40662).

Site Description: Tinker Air Force Base (AFB) is located in central Oklahoma within the southeastern corporate limits of Oklahoma City. The Base is bounded on the west by Sooner Road, on the east by Douglas Boulevard, on the north by I-40 and on the south by Southeast 74th Street. The surrounding area is a mixture of commercial and residential properties. Communities located in the immediate vicinity of the Base include Midwest City to the north, Del City to the west

and Oklahoma City to the south and east. Tinker AFB is a major industrial complex for overhauling, modifying and repairing military aircraft, aircraft engines and accessory items. Base operations began in 1942 and activities employing hazardous materials resulted in the generation of hazardous wastes. Some of these wastes contained chlorinated solvents identical to contaminants detected in groundwater underlying the Base. Results of an investigation of contaminated groundwater in and around Building 3001, an aircraft and jet engine repair and overhaul facility located in the northeast quadrant of the Base, placed the Building 3001/Soldier Creek Site on the National Priorities List (NPL) in July 1987. In the description of the Tinker AFB NPL Site, EPA geographically delineated (by streets and other physical boundaries) those portions of Tinker AFB and surrounding property that were placed on the NPL. This was and is the geographical delineation of the official CERCLA NPL Site. In addition, in at least one instance [the Industrial Wastewater Treatment Plant (IWTP)] the regulatory scheme (CERCLA or the Resource Conservation and Recovery Act [RCRA]) depends on whether the contamination within this geographical area is in the soil or the groundwater. The Tinker AFB NPL Site is, therefore, defined as all CERCLA-contaminated areas within the geographical area delineated by EPA, plus any other locations where that contamination has come to be located. Except as defined, the rest of Tinker AFB (generally to the south and west) is not included in the NPL Site. On December 9, 1988, the Air Force, EPA, and the Oklahoma State Department of Health (OSDH) (the Parties) signed the Federal Facilities Agreement (FFA), which defined the roles and responsibilities of the Parties with respect to the conduct of response actions at the Site. The FFA also established a procedural framework and schedule for developing, implementing and monitoring response actions at the Site in accordance with CERCLA and the National Contingency Plan (NCP). Tinker AFB is an active industrial facility and public access is restricted. A variety of institutional controls and land use controls are used at the Base to control access to surficial and subsurface contamination. The controls include fences, guards, signs and permits on any excavation activity. Aircraft operations and maintenance land use have developed adjacent to the flight line with few unrelated facilities occupying this prime real estate. Industrial land uses are consolidated in a few contiguous areas on-base; the largest area is in the Northside Industrial district where several warehouse facilities are located between Arnold Street and the northern Base boundary. Administrative land uses are located along Arnold Street with additional areas located in other land use classifications throughout the Base. Family housing is located in the West Community District, separate from noise-generating activities, but convenient to community service facilities. Land use in the northeast quadrant of Tinker AFB is primarily industrial. The principal industrial activity conducted in the area involves overhauling, modifying and repairing aircraft in Building 3001. The IWTP is located in this area. In addition to the Building 3001 and IWTP industrial operations, the Defense Megacenter is located just to the north of Building 3001. The Megacenter operates computer systems for the Base and supports many other bases throughout the U.S. The land immediately north of the northeast quadrant of the Base and south of I-40 is unoccupied and serves as part of the security buffer zone surrounding Tinker AFB. The area immediately east of the Base is currently zoned for residential use; however, a portion of the area (approximately 370 acres) is being developed for construction of a large multi-million dollar aircraft maintenance, repair and overhaul facility. As part of a unified regional development plan for Oklahoma, Cleveland, Canadian and Logan Counties, the Association of Central Oklahoma Governments has standardized and defined how land use classifications are applied. The Tinker AFB General Plan includes a discussion of how those districts relate to off-base land uses within a 3-mile radius of Tinker AFB. A brief summary of the

predominant land use classifications is provided here. Single-Family Land Use (15,155 acres) consists of Rural Residential, Urban Single-Family, Mobile Home Park and Subdivision and Urban Duplexes. The area surrounding Tinker AFB contains primarily single-family dwellings. The Multi-Family Land Use (445 acres) is defined as three- and four-family residential and multiple-family residential style dwellings. The predominant concentrations of this land use are to the north and west of the Base. Commercial/Mixed Land Uses (1,353 acres) included distribution, sale or rental of goods and other commercial services. This land use is dominant north of Tinker AFB along the major arterial road network and in some isolated concentrations along I-240 south of the Base. Industrial Land Use (6,422 acres) involves warehousing activities; light, moderate and heavy industry; transportation; utilities; mining; landfills and water treatment facilities. This land classification forms the dominant use along I-240 (west of Tinker AFB), at the intersection of I-40 and I-35 (northwest of Tinker AFB), and in isolated pockets north and east of the Base. Parks and Open Spaces (7,610 acres) include active and passive outdoor recreational areas, lakes, waterways, floodways and open space. These land uses are scattered throughout the 3-mile study area. Tinker AFB is expected to remain as a government-owned and -operated facility for the foreseeable future. Land use plans that may affect future development at Tinker AFB are outlined in the Tinker AFB General Plan. The areas south and southwest of Tinker AFB will continue to be industrial with the General Motors Plant anchoring this land use classification. Areas to the west are identified for urban-suburban development. Areas to the south and southeast of Tinker AFB and surrounding Lake Stanley Draper are reserved for environmental conservation. The area east of Douglas Avenue is placed in an industrial reserve. Currently, no plans or bond issues are pending that will negatively impact Tinker AFB or the surrounding area. Operable Unit (OU) 3: The Soldier Creek Groundwater OU (OU3) addresses groundwater north of the groundwater flow divide and is the focus of this Record of Decision (ROD). Most of OU3 occurs off-base to the north and east of Tinker AFB. Activities from private and business concerns unrelated to Tinker AFB have occurred in areas off-base within OU3, several of which have been identified as potential sources of contamination in the Remedial Investigation (RI) report. No Contaminants of Concern (COCs) attributable to Tinker AFB were identified in the RI, Baseline Risk Assessment, Feasibility Study (FS) completed in 2000, nor as a result of a supplemental assessment for OU3 completed in 2007. In 1990, an RI and risk assessment were conducted at Soldier Creek to evaluate the nature and extent of the threat posed by the potential release of hazardous substances. Analytical results of sediment and surface water samples collected during the investigation indicated that volatile organic compounds (VOCs), semivolatile organic compounds and metals were present at various locations along Soldier Creek. The associated baseline risk assessment found that sediment and surface water did not pose a threat to human health in excess of acceptable risk based on exposure levels established by EPA. In September 1993, a ROD for the Soldier Creek Sediment and Surface Water OU (OU2) was signed. Primary elements of the selected remedy included a 5-year environmental monitoring program of Soldier Creek sediment and surface water and an ecological investigation to determine the effects of existing contaminant concentrations on the biological environment of the creek. The remedy excluded groundwater associated with Soldier Creek because sufficient data had not been collected to adequately characterize the vertical and horizontal extent of contamination, and contributions from off-base sources to site contamination were not completely understood. Because of its proximity to the Soldier Creek Groundwater OU (OU3) and the groundwater flow divide, impacted groundwater beneath the IWTP was evaluated as a potential pathway for migration of contamination into OU3. The IWTP was identified as a possible source of groundwater contamination because it treated industrial

wastewater generated at the Base, including electroplating, chemical cleaning and paint-stripping operations. These operations generate wastewater containing oil, grease, metals and organic solvents. Soldier Creek was evaluated as a pathway of groundwater contamination because the IWTP discharged into East Soldier Creek in the past and infiltration of the creek surface water into the groundwater could occur along segments of the creek. Treated wastewater from the IWTP was discharged into Soldier Creek under a National Pollutant Discharge Elimination System (NPDES) permit until April 1996, at which time the Base permanently diverted discharge to the Oklahoma City wastewater collection system. In addition, contaminated sediment was removed from on-base segments of Soldier Creek in the vicinity of the IWTP during two separate interim remedial actions. In 1986, excavation activities were conducted along East and West Soldier Creeks. Approximately 7,500 cubic yards of contaminated sediment were removed. In addition, more than 14 Underground Storage Tanks (USTs) and solvent pits were excavated and removed or filled and abandoned in place in the vicinity of Soldier Creek during the early 1990s. The upper saturated zone (USZ), lower saturated zone (LSZ) and producing zone (PZ) form part of the Central Oklahoma Aquifer, which underlies about 3,000 square miles of central Oklahoma. In the northeast quadrant of Tinker AFB, the Central Oklahoma Aquifer is classified as a Class IIA aquifer by the state of Oklahoma, indicating that it provides groundwater from a major unconfined basin that is capable of being used as a drinking water supply with little or no treatment. Groundwater from the USZ and the LSZ is not used on-base for drinking water because alternate sources of water are available from surrounding municipal or Base water supplies. In general, USZ groundwater in the vicinity of Tinker AFB is not a good source of potable water due to low water yields and high naturally occurring chloride and sulfate concentrations. Tinker AFB obtains a portion of its water supply from wells in the PZ. These wells range from roughly 700 to 900 feet in finished depth. Beneficial uses for surface water in East Soldier Creek, which is a listed water body in the Oklahoma Water Quality Standards, include: - Fish and Wildlife Propagation/Warm Water Aquatic Community (i.e., water bodies capable of sustaining species development through all life stages), - Agriculture/Livestock and Irrigation (i.e., toxicity will not inhibit continued ingestion by livestock or irrigation of crops), - Industrial and Municipal Process and Cooling Water (i.e., process and cooling water quality criteria will be protected by application of the criteria for other beneficial uses), - Secondary Body Contact Recreation, and - Aesthetics (i.e., water is aesthetically enjoyable by being free from floating materials and suspended substances that produce objectionable color and turbidity). Because Tinker AFB is expected to remain as a government-owned and -operated facility for the foreseeable future, it is reasonably anticipated that future uses of groundwater and surface water resources will be consistent with current uses. A ROD addressing OU3 was completed in January 2008.

Hazardous Waste Summary:

Waste code: D001
 Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
 Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A

CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D003
 Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Hazardous Waste Summary:

Waste code: D001
 Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: F005
 Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
 Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D003
 Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Waste code: F001
 Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE, AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

Hazardous Waste Summary:

Waste code: D001
 Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
 Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Hazardous Waste Summary:
 Waste code: D001
 Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
 Waste code: F003
 Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

FEDERAL RECORDS

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

LIENS 2: CERCLA Lien Information

A Federal CERCLA ('Superfund') lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. These monies are spent to investigate and address releases and threatened releases of contamination. CERCLIS provides information as to the identity of these sites and properties.

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

BROWNFIELDS: Brownfield Sites

Brownfields are defined by Oklahoma law as abandoned, idled or under used industrial or commercial facilities or other real property at which expansion or redevelopment of the real property is complicated by environmental contamination caused by regulated substances. This program provides a means for private parties and government entities to voluntarily investigate and if warranted, clean up properties that may be contaminated with hazardous wastes. The formal Brownfields Program provides specific state liability relief and protects the property from federal Superfund actions.

EDR PROPRIETARY RECORDS

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR US Hist Auto Stat: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

NATURAL RESOURCES

Section 9- Natural Resources

9.1 Designated Critical Habitats

According to the U.S. Fish & Wildlife Service, no designated critical habitats are noted within the reconnaissance area.

9.2 Potential Jurisdictional Wetlands

Four (4) mapped unnamed intermittent tributary to Soldier Creek are located within the reconnaissance area. These four (4) waterways are likely to be considered jurisdictional by the United States Army Corps of Engineers.

One (1) palustrine unconsolidated shore wetlands and one palustrine unconsolidated bottom wetlands are located within the reconnaissance area and are likely to be considered jurisdictional by the United States Army Corps of Engineers. One grouping of man-made ponds located within the reconnaissance area is unlikely to be considered jurisdictional.

See **Figure 9.2** for details.

9.3 Critical Resource Waters, Section 10 Waters, Scenic Rivers, Major Groundwater Aquifers and Associated Streams

Research performed using the Oklahoma Scenic River Commission website confirms that there are no rivers included in the National Wild and Scenic River System located within the study area. Additionally, there are no Section 10 Navigable Waters within the study area.

The project lies above the Garber-Wellington Aquifer (**Figure 9.3**).

9.4 Soil Series

Soil series exhibited within the area included the Ashport, Darsil, Harrah, Latrass, Littleaxe, Newalla, Stephenville, Renthin, and Tribbey series.

1.0 PROJECT LOCATION AND SETTING

SAIC performed a data reconnaissance of the proposed interchange of Interstate 40 (I-40) and Douglas Boulevard. The reconnaissance area is located in Section 17 of Township 11 North, Range 2 West in Oklahoma County, Oklahoma. The project was evaluated for the presence of waters potentially under the jurisdiction of the United States Army Corps of Engineers (USACE). Section 404 of the federal Clean Water Act (CWA) applies to “Waters of the United States.” Section 404 of the Clean Water Act (33 USC 1344) regulates the discharge of dredged or fill material into waters of the United States. “Waters of the United States” are defined to include non-wetland “Waters” (waterways and streams) and wetlands that have a connection to navigable waters, and tributaries to these waters (Memorandum issued by the U.S. Army Corps of Engineers (USACE, 2001)). In addition to the waters evaluation, a threatened, endangered, and candidate species review was conducted. The evaluations were performed in accordance with Oklahoma Department of Transportation (ODOT) reconnaissance study guidelines.

The reconnaissance area evaluated was roughly 710’ north and 270’ south of existing I-40 east of Douglas Boulevard, 350’ wide centered over existing I-40 west of Douglas Boulevard, and 600’ centered over Douglas Boulevard. A portion of the area was located within the limits of Tinker Air Force Base; therefore, field reconnaissance was not conducted in that portion. The reconnaissance area was evaluated for waterways and waterbodies shown on the United States Fish and Wildlife Service (USFWS) National Wetland Inventory (NWI) maps. The evaluation included a cursory review of potential wetland characteristics from the existing highways and the mapped features. No site specific data was collected from any waterbodies within the reconnaissance area.

The proposed project area is located within the Northern Cross Timbers ecoregion in Oklahoma. The hills, cuestas, and ridges of the Northern Cross Timbers separate the forests of eastern ecoregions from the prairies of drier, western ecoregions. This ecoregion is naturally covered by a mosaic of oak savanna, scrubby oak forest, eastern redcedar, and tall grass prairie. Post oak, blackjack oak, and understory grasses are the native species on the porous, course-textured soils derived from sandstone. Tall grass prairie naturally occurs on fine-textured soils derived from limestone or shale. Recent fire suppression has increased forest density and allowed eastern redcedar to invade many areas. Today, woodland, rangeland, pastureland, and several extensive, but declining, oil fields occur. Abandoned, depleted farmland is common. The remaining cropland is largely restricted to valleys near channelized streams whose degraded habitat supports very poor assemblages of aquatic fauna. Livestock farming is the main land use; cropland is less extensive than in nearby ecoregions, but rangeland is less widespread than in the Flint Hills ecoregion. Soils are highly erodible when disturbed. Large oilfields were developed in the early 20th century; associated brine, drilling mud, and petroleum waste products have increased salinity in many streams. Streams are

typically shallow and have sandy substrates; they are habitat-poor and have lower fish and macroinvertebrate species richness than the Lower Canadian Hills ecoregion. However, some stream reaches have deep pools, riffles, and bedrock, boulder, cobble, or gravel substrates; these reaches have greater species richness and more pollution- and habitat-intolerant species than the shallower streams this same ecoregion (Woods, et al.). It was observed during the site investigation that the proposed project area is generally characterized as commercially and residentially developed with associated infrastructure while upland forest dominated the undeveloped areas. Native vegetation was observed within the undeveloped areas.

2.0 THREATENED & ENDANGERED SPECIES

Threatened and Endangered species information for Oklahoma County was obtained through the U.S. Fish & Wildlife Service. No Designated Critical Habitats are noted within the reconnaissance area. The following are a listing of the federally-listed endangered, threatened, and candidate species which may be present within Oklahoma County:

<u>Species</u>	<u>Classification</u>
Interior Least Tern (<i>Sterna antillarum athalassos</i>)	Endangered
Whooping crane (<i>Grus americana</i>)	Endangered
Piping Plover (<i>Charadrius melodus</i>)	Threatened

3.0 POTENTIAL JURISDICTIONAL WATERS

According to review of available topographic maps, aerial photographs, NWI maps, Natural Resource Conservation Service (NRCS) soil maps and hydric soil lists, and preliminary site reconnaissance, four (4) mapped unnamed intermittent tributaries to Soldier Creek are located within the reconnaissance area (**Figure 1**). These four waterways are likely to be considered jurisdictional by the USACE.

According to the NWI maps and site reconnaissance, one palustrine unconsolidated shore (PUSCh) wetland, one palustrine unconsolidated bottom (PUBFh) wetland, and one grouping of man-made ponds are located within the reconnaissance area (**Figure 1**). The wetlands are likely to be considered jurisdictional by the USACE, with the exception of the man-made ponds.

No hydric soils were mapped within the reconnaissance area. Soil series exhibited within the area included Ashport, Darsil, Harrah, Latrass, Littleaxe, Newalla, Stephenville, Renthin, and Tribbey series.

ATTACHMENT THREATENED AND ENDANGERED SPECIES – OKLAHOMA COUNTY

The **Interior Least Tern** (*Sterna antillarum*) is a small migratory shorebird that breeds in small colonies on exposed salt flats, river sandbars, or reservoir beaches with little vegetation. In Oklahoma, they nest along the major rivers and at the Salt Plains National Wildlife Refuge, and they winter in South America. They arrive at breeding areas from early April to early June, and spend 3 to 5 months on the breeding grounds. The next is a shallow depression in an open, sandy area, gravelly patch, or exposed flat. Nesting habitat of the Interior Least Tern includes bare or sparsely vegetated sand, shell, and gravel beaches, sandbars, islands, and salt flats associated with rivers and reservoirs. The birds prefer open habitat, and tend to avoid thick vegetation and narrow beaches. The breeding season is usually complete by late August. Terns often return to the same breeding site every year. The Interior Least Tern is primarily a fish-eater, feeding in shallow waters of rivers, streams, and lakes. The birds are opportunistic and tend to select any small fish within a certain size range. For feeding, Interior Least Terns need shallow water with an abundance of small fish. Shallow water areas of lakes, ponds, and rivers located close to nesting areas are preferred.

The **Whooping Crane** (*Grus americana*) is the tallest American bird. It is a snowy white, long-necked bird with long, black legs and bill. Whooping Cranes inhabit marshes and prairie potholes in the summer. In winter, they are found in coastal marshes and prairies. The main population breeds in northern Canada and winters along the Texas Gulf Coast, passing through western Oklahoma each spring and fall during migration. Their nest construction begins in late April. Nests are made of bulrush and are located in tall vegetation near water. The Whooping Crane's diet consists of insects, frogs, small birds, rodents, minnows and waste grains. Blue crabs and clams are especially important items on the wintering grounds. The Salt Plains National Wildlife Refuge near Jet, Oklahoma, is a very important migration stopover area. During migration, Whooping Cranes sometimes are sighted elsewhere in Oklahoma along rivers, in grain fields, or in shallow wetlands.

The **Piping Plover** (*Charadrius melodus*), a migratory shorebird species, generally occupies drier portions of broad sandy expanses along rivers and reservoirs with sparse vegetation. While sparse clumps of grass or herbaceous vegetation are important, encroachment of woody vegetation is detrimental to this species. Piping Plovers nest on sandy beaches along the ocean or lakes. Along rivers, Piping Plovers use the bare areas of islands or sandbars. Their diet consists of marine worms, fly larvae, beetles, insects, crustaceans, mollusks and other small invertebrates. Piping Plovers arrive on their breeding grounds along the Atlantic coast in late March and on the prairie breeding grounds in early May. These shorebirds are migratory in northern areas and winter on the coasts of the Gulf of Mexico, the southern Atlantic coast of the United States and the West Indies. The Piping

Plover migrates through Oklahoma in the spring and fall. Sight records of migratory piping plovers exist for many central and eastern Oklahoma counties.

Custom Soil Resource Report for Oklahoma County, Oklahoma

Preface

Soil surveys contain information that affects land use planning in survey areas. They highlight soil limitations that affect various land uses and provide information about the properties of the soils in the survey areas. Soil surveys are designed for many different users, including farmers, ranchers, foresters, agronomists, urban planners, community officials, engineers, developers, builders, and home buyers. Also, conservationists, teachers, students, and specialists in recreation, waste disposal, and pollution control can use the surveys to help them understand, protect, or enhance the environment.

Various land use regulations of Federal, State, and local governments may impose special restrictions on land use or land treatment. Soil surveys identify soil properties that are used in making various land use or land treatment decisions. The information is intended to help the land users identify and reduce the effects of soil limitations on various land uses. The landowner or user is responsible for identifying and complying with existing laws and regulations.

Although soil survey information can be used for general farm, local, and wider area planning, onsite investigation is needed to supplement this information in some cases. Examples include soil quality assessments (<http://soils.usda.gov/sqi/>) and certain conservation and engineering applications. For more detailed information, contact your local USDA Service Center (<http://offices.sc.egov.usda.gov/locator/app?agency=nracs>) or your NRCS State Soil Scientist (http://soils.usda.gov/contact/state_offices/).

Great differences in soil properties can occur within short distances. Some soils are seasonally wet or subject to flooding. Some are too unstable to be used as a foundation for buildings or roads. Clayey or wet soils are poorly suited to use as septic tank absorption fields. A high water table makes a soil poorly suited to basements or underground installations.

The National Cooperative Soil Survey is a joint effort of the United States Department of Agriculture and other Federal agencies, State agencies including the Agricultural Experiment Stations, and local agencies. The Natural Resources Conservation Service (NRCS) has leadership for the Federal part of the National Cooperative Soil Survey.

Information about soils is updated periodically. Updated information is available through the NRCS Soil Data Mart Web site or the NRCS Web Soil Survey. The Soil Data Mart is the data storage site for the official soil survey information.

How Soil Surveys Are Made

Soil surveys are made to provide information about the soils and miscellaneous areas in a specific area. They include a description of the soils and miscellaneous areas and their location on the landscape and tables that show soil properties and limitations affecting various uses. Soil scientists observed the steepness, length, and shape of the slopes; the general pattern of drainage; the kinds of crops and native plants; and the kinds of bedrock. They observed and described many soil profiles. A soil profile is the sequence of natural layers, or horizons, in a soil. The profile extends from the surface down into the unconsolidated material in which the soil formed or from the surface down to bedrock. The unconsolidated material is devoid of roots and other living organisms and has not been changed by other biological activity.

Currently, soils are mapped according to the boundaries of major land resource areas (MLRAs). MLRAs are geographically associated land resource units that share common characteristics related to physiography, geology, climate, water resources, soils, biological resources, and land uses (USDA, 2006). Soil survey areas typically consist of parts of one or more MLRA.

The soils and miscellaneous areas in a survey area occur in an orderly pattern that is related to the geology, landforms, relief, climate, and natural vegetation of the area. Each kind of soil and miscellaneous area is associated with a particular kind of landform or with a segment of the landform. By observing the soils and miscellaneous areas in the survey area and relating their position to specific segments of the landform, a soil scientist develops a concept, or model, of how they were formed. Thus, during mapping, this model enables the soil scientist to predict with a considerable degree of accuracy the kind of soil or miscellaneous area at a specific location on the landscape.

Commonly, individual soils on the landscape merge into one another as their characteristics gradually change. To construct an accurate soil map, however, soil scientists must determine the boundaries between the soils. They can observe only a limited number of soil profiles. Nevertheless, these observations, supplemented by an understanding of the soil-vegetation-landscape relationship, are sufficient to verify predictions of the kinds of soil in an area and to determine the boundaries.

Soil scientists recorded the characteristics of the soil profiles that they studied. They noted soil color, texture, size and shape of soil aggregates, kind and amount of rock fragments, distribution of plant roots, reaction, and other features that enable them to identify soils. After describing the soils in the survey area and determining their properties, the soil scientists assigned the soils to taxonomic classes (units). Taxonomic classes are concepts. Each taxonomic class has a set of soil characteristics with precisely defined limits. The classes are used as a basis for comparison to classify soils systematically. Soil taxonomy, the system of taxonomic classification used in the United States, is based mainly on the kind and character of soil properties and the arrangement of horizons within the profile. After the soil scientists classified and named the soils in the survey area, they compared the

Custom Soil Resource Report

individual soils with similar soils in the same taxonomic class in other areas so that they could confirm data and assemble additional data based on experience and research.

The objective of soil mapping is not to delineate pure map unit components; the objective is to separate the landscape into landforms or landform segments that have similar use and management requirements. Each map unit is defined by a unique combination of soil components and/or miscellaneous areas in predictable proportions. Some components may be highly contrasting to the other components of the map unit. The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The delineation of such landforms and landform segments on the map provides sufficient information for the development of resource plans. If intensive use of small areas is planned, onsite investigation is needed to define and locate the soils and miscellaneous areas.

Soil scientists make many field observations in the process of producing a soil map. The frequency of observation is dependent upon several factors, including scale of mapping, intensity of mapping, design of map units, complexity of the landscape, and experience of the soil scientist. Observations are made to test and refine the soil-landscape model and predictions and to verify the classification of the soils at specific locations. Once the soil-landscape model is refined, a significantly smaller number of measurements of individual soil properties are made and recorded. These measurements may include field measurements, such as those for color, depth to bedrock, and texture, and laboratory measurements, such as those for content of sand, silt, clay, salt, and other components. Properties of each soil typically vary from one point to another across the landscape.

Observations for map unit components are aggregated to develop ranges of characteristics for the components. The aggregated values are presented. Direct measurements do not exist for every property presented for every map unit component. Values for some properties are estimated from combinations of other properties.

While a soil survey is in progress, samples of some of the soils in the area generally are collected for laboratory analyses and for engineering tests. Soil scientists interpret the data from these analyses and tests as well as the field-observed characteristics and the soil properties to determine the expected behavior of the soils under different uses. Interpretations for all of the soils are field tested through observation of the soils in different uses and under different levels of management. Some interpretations are modified to fit local conditions, and some new interpretations are developed to meet local needs. Data are assembled from other sources, such as research information, production records, and field experience of specialists. For example, data on crop yields under defined levels of management are assembled from farm records and from field or plot experiments on the same kinds of soil.

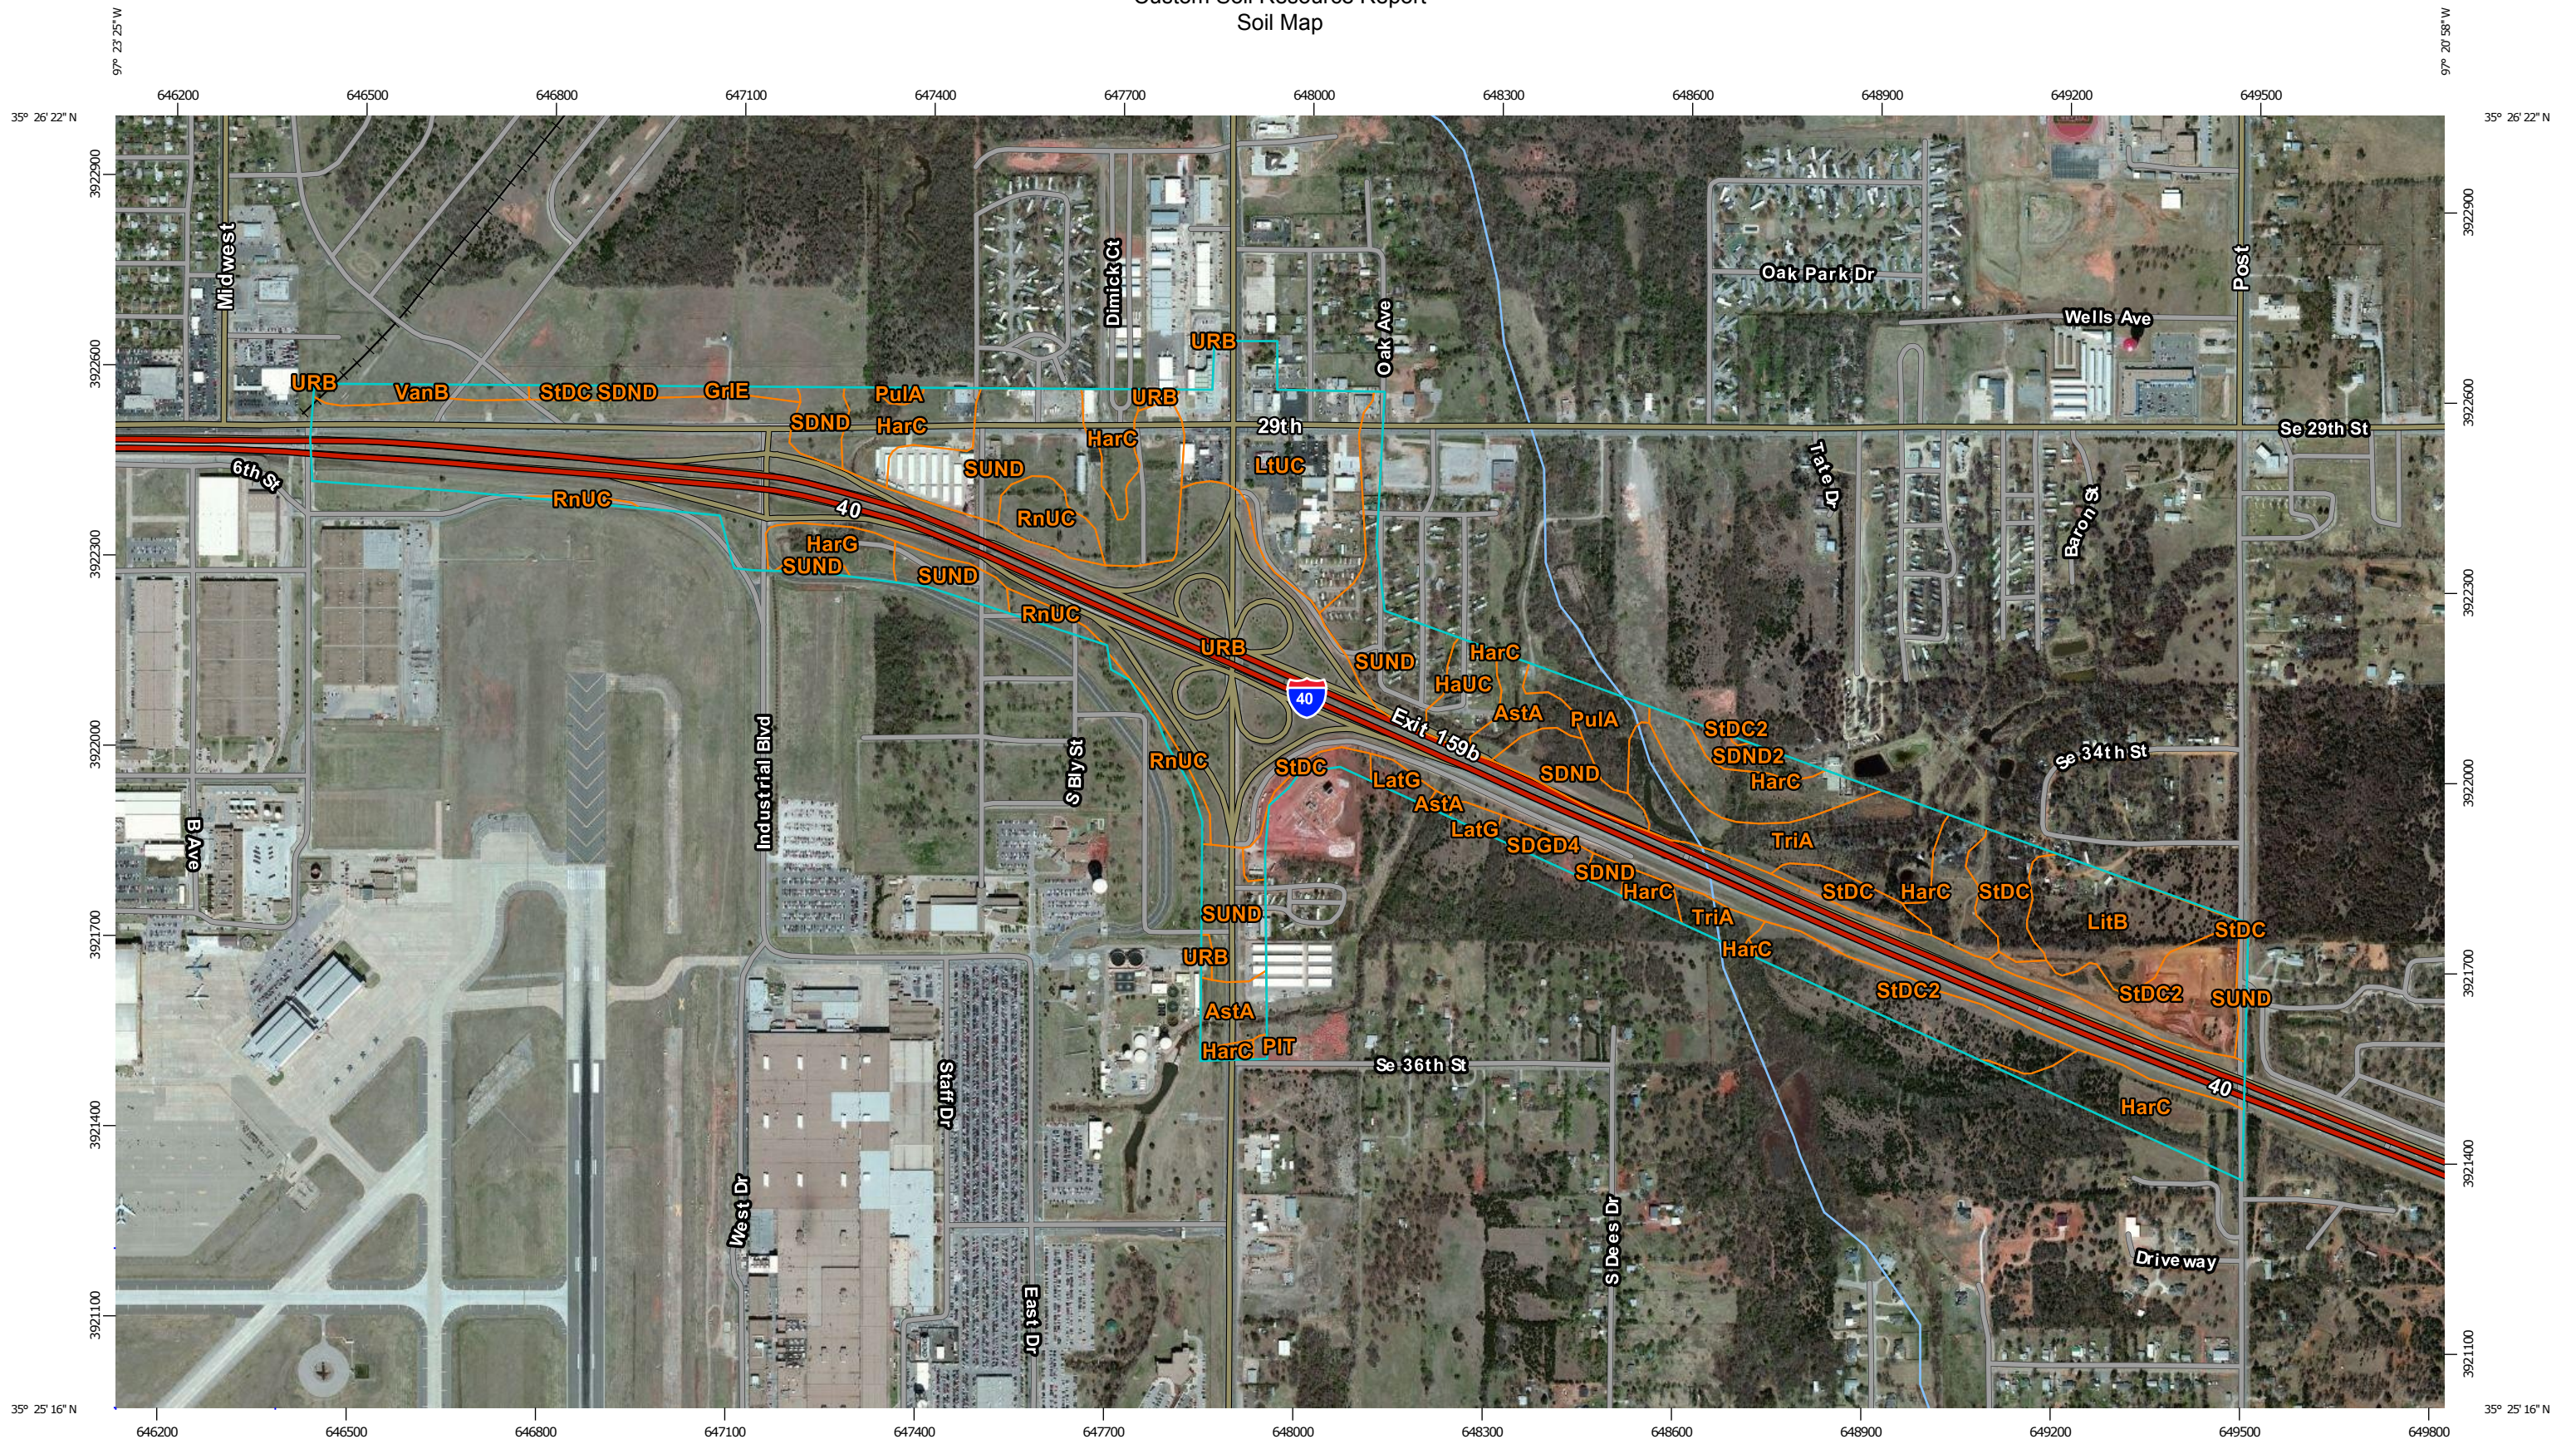

Predictions about soil behavior are based not only on soil properties but also on such variables as climate and biological activity. Soil conditions are predictable over long periods of time, but they are not predictable from year to year. For example, soil scientists can predict with a fairly high degree of accuracy that a given soil will have a high water table within certain depths in most years, but they cannot predict that a high water table will always be at a specific level in the soil on a specific date.

After soil scientists located and identified the significant natural bodies of soil in the survey area, they drew the boundaries of these bodies on aerial photographs and identified each as a specific map unit. Aerial photographs show trees, buildings, fields, roads, and rivers, all of which help in locating boundaries accurately.

Soil Map

The soil map section includes the soil map for the defined area of interest, a list of soil map units on the map and extent of each map unit, and cartographic symbols displayed on the map. Also presented are various metadata about data used to produce the map, and a description of each soil map unit.

Map Unit Descriptions

The map units delineated on the detailed soil maps in a soil survey represent the soils or miscellaneous areas in the survey area. The map unit descriptions, along with the maps, can be used to determine the composition and properties of a unit.

A map unit delineation on a soil map represents an area dominated by one or more major kinds of soil or miscellaneous areas. A map unit is identified and named according to the taxonomic classification of the dominant soils. Within a taxonomic class there are precisely defined limits for the properties of the soils. On the landscape, however, the soils are natural phenomena, and they have the characteristic variability of all natural phenomena. Thus, the range of some observed properties may extend beyond the limits defined for a taxonomic class. Areas of soils of a single taxonomic class rarely, if ever, can be mapped without including areas of other taxonomic classes. Consequently, every map unit is made up of the soils or miscellaneous areas for which it is named and some minor components that belong to taxonomic classes other than those of the major soils.

Most minor soils have properties similar to those of the dominant soil or soils in the map unit, and thus they do not affect use and management. These are called noncontrasting, or similar, components. They may or may not be mentioned in a particular map unit description. Other minor components, however, have properties and behavioral characteristics divergent enough to affect use or to require different management. These are called contrasting, or dissimilar, components. They generally are in small areas and could not be mapped separately because of the scale used. Some small areas of strongly contrasting soils or miscellaneous areas are identified by a special symbol on the maps. If included in the database for a given area, the contrasting minor components are identified in the map unit descriptions along with some characteristics of each. A few areas of minor components may not have been observed, and consequently they are not mentioned in the descriptions, especially where the pattern was so complex that it was impractical to make enough observations to identify all the soils and miscellaneous areas on the landscape.

The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The objective of mapping is not to delineate pure taxonomic classes but rather to separate the landscape into landforms or landform segments that have similar use and management requirements. The delineation of such segments on the map provides sufficient information for the development of resource plans. If intensive use of small areas is planned, however, onsite investigation is needed to define and locate the soils and miscellaneous areas.

An identifying symbol precedes the map unit name in the map unit descriptions. Each description includes general facts about the unit and gives important soil properties and qualities.

Soils that have profiles that are almost alike make up a *soil series*. Except for differences in texture of the surface layer, all the soils of a series have major horizons that are similar in composition, thickness, and arrangement.

Soils of one series can differ in texture of the surface layer, slope, stoniness, salinity, degree of erosion, and other characteristics that affect their use. On the basis of such differences, a soil series is divided into *soil phases*. Most of the areas shown on the detailed soil maps are phases of soil series. The name of a soil phase commonly

Custom Soil Resource Report

indicates a feature that affects use or management. For example, Alpha silt loam, 0 to 2 percent slopes, is a phase of the Alpha series.

Some map units are made up of two or more major soils or miscellaneous areas. These map units are complexes, associations, or undifferentiated groups.

A *complex* consists of two or more soils or miscellaneous areas in such an intricate pattern or in such small areas that they cannot be shown separately on the maps. The pattern and proportion of the soils or miscellaneous areas are somewhat similar in all areas. Alpha-Beta complex, 0 to 6 percent slopes, is an example.

An *association* is made up of two or more geographically associated soils or miscellaneous areas that are shown as one unit on the maps. Because of present or anticipated uses of the map units in the survey area, it was not considered practical or necessary to map the soils or miscellaneous areas separately. The pattern and relative proportion of the soils or miscellaneous areas are somewhat similar. Alpha-Beta association, 0 to 2 percent slopes, is an example.

An *undifferentiated group* is made up of two or more soils or miscellaneous areas that could be mapped individually but are mapped as one unit because similar interpretations can be made for use and management. The pattern and proportion of the soils or miscellaneous areas in a mapped area are not uniform. An area can be made up of only one of the major soils or miscellaneous areas, or it can be made up of all of them. Alpha and Beta soils, 0 to 2 percent slopes, is an example.

Some surveys include *miscellaneous areas*. Such areas have little or no soil material and support little or no vegetation. Rock outcrop is an example.

SECTION 10
EXISTING FACILITY DATA

Section 10- Existing Facility Data

10.01 Functional Classification

- 10.01.1 Area Type: Urban
- 10.01.2 Terrain Type: ODOT has identified the terrain type to be Level/Flat.
- 10.01.3 Access Control: Controlled Access
- 10.01.4 Highway Type: Interstate Highway

10.02 Traffic Data

- 10.02.1 I-40 Current Average Daily Traffic (AADT): 50,900
Douglas Blvd. Current Average Daily Traffic (AADT): 20,436
- 10.02.2 I-40 2043 Projected Average Daily Traffic (AADT): 92,198
Douglas Blvd. 2043 Projected Average Daily Traffic (AADT): 37,017
- 10.02.3 I-40 Percent Truck Traffic: 35%
Douglas Blvd. Percent Truck Traffic: 10%

10.03 Roadway Characteristics

- 10.03.1 Number and Width of Lanes:
 - I-40 - 2 lanes per direction 12' wide lanes
 - Douglas Blvd. - 5 lanes 12' wide lanes
 - Industrial Blvd. - 2 lanes 12' wide lanes
- 10.03.2 Shoulder Widths:
 - I-40 - 10' outside shoulders & 4' inside shoulders
 - Douglas Blvd. - curbed section with no shoulders.
 - Industrial Blvd. - curbed section with no shoulders.
- 10.03.3 Open Section, Curb and Gutter, Divided:
 - I-40 - Divided Open Section
 - Douglas Blvd. - Divided curbed section
 - Industrial Blvd. - Curbed section
- 10.03.4 Pavement and Shoulder Material type and Condition:
 - I-40- Asphalt
 - Douglas Blvd. - Concrete
 - Industrial Blvd. - Concrete
- 10.03.5 Storm Sewer Identification and Condition:
 - I-40- drop inlets and Cross drains in an unspecified condition
 - Douglas Blvd. - Curb and Gutter in an unspecified condition
 - Industrial Blvd. - Curb and Gutter in an unspecified condition

- 10.3.6 Sidewalk Identification and Width:
 - I-40 (N/A)
 - Douglas (N/A)
 - Industrial (N/A)

10.04 **Bridge Characteristics**

NBI No. 15559

- 10.04.1 Feature Intersected: Interstate 40
- 10.04.2 NBI and Location Numbers: NBI No. 15559, 5568 0585 X
- 10.04.3 Span and Material Description: 4 Span Concrete Continuous Slab
- 10.04.4 Sufficiency Rating, with SD/FO Designation: 67.8, Functionally Obsolete
- 10.04.5 Year Built: 1962
- 10.04.6 Bridge Width and Length: 48' wide x 199' long (out to out width 52.9' wide)
- 10.04.7 Horizontal & Vertical Clearance:
 - Horizontal Measured: 52'
 - Horizontal Posted: Not Posted
 - Vertical Measured: 18'-06"
 - Vertical Posted: 17'-11"
- 10.04.8 Health Index: 59.6

NBI No. 15560

- 10.04.1 Feature Intersected: Interstate 40
- 10.04.2 NBI and Location Numbers: NBI No. 15560, 5568 0608 X
- 10.04.3 Span and Material Description: 4 Span Concrete Continuous Slab
- 10.04.4 Sufficiency Rating, with SD/FO Designation: 79.6, Functionally Obsolete
- 10.04.5 Year Built: 1962
- 10.04.6 Bridge Width and Length: 26' wide x 206' long (out to out width 33.9' wide)
- 10.04.7 Horizontal & Vertical Clearance:
 - Horizontal Measured: 52.5'
 - Horizontal Posted: Not Posted
 - Vertical Measured: 16'-08"
 - Vertical Posted: 15'-05"
- 10.04.8 Health Index: 78.7

NBI No. 15573

- 10.04.1 Feature Intersected: Interstate 40
- 10.04.2 NBI and Location Numbers: NBI No. 15573, 5568 0634 X
- 10.04.3 Span and Material Description: 6 Span Concrete Continuous Slab
- 10.04.4 Sufficiency Rating, with SD/FO Designation: 77, Structurally Deficient
- 10.04.5 Year Built: 1962
- 10.04.6 Bridge Width and Length: 80' Wide x 303' long (out to out width 88' wide)
- 10.04.7 Horizontal & Vertical Clearance:
 - Horizontal Measured: 52'
 - Horizontal Posted: Not Posted
 - Vertical Measured: 17'-10"
 - Vertical Posted: 16'-8"
- 10.04.8 Health Index: 67.0

NBI No. 15468

- 10.04.1 Feature Intersected: Soldier Creek
- 10.04.2 NBI and Location Numbers: NBI No. 15468, 5568 0686 X
- 10.04.3 Span and Material Description: 3-8'x7'x209' R.C. Box Skewed 60 Deg. Rt. fwd.
- 10.04.4 Sufficiency Rating, with SD/FO Designation: 83, Not Deficient
- 10.04.5 Year Built: 1962
- 10.04.6 Bridge Width and Length: 3-8'x7'x209' R.C. Box Skewed 60 Deg. Rt. fwd.
- 10.04.7 Horizontal & Vertical Clearance:
 - Horizontal Measured: 99.9
 - Horizontal Posted: Not Posted
 - Vertical Measured: 9999
 - Vertical Posted: Not Posted
- 10.04.8 Health Index: 67.0

NBI No. 15552

- 10.04.1 Feature Intersected: Interstate 40
- 10.04.2 NBI and Location Numbers: NBI No. 15552, 5568 0743 X
- 10.04.3 Span and Material Description: 4 Span Concrete Continuous Slab
- 10.04.4 Sufficiency Rating, with SD/FO Designation: 59.4, Functionally Obsolete
- 10.04.5 Year Built: 1962
- 10.04.6 Bridge Width and Length: 28' wide x 184' long (out to out width 33' wide)
- 10.04.7 Horizontal & Vertical Clearance:
 - Horizontal Measured: 52'
 - Horizontal Posted: Not Posted
 - Vertical Measured: 16'-11"
 - Vertical Posted: 16'-4"
- 10.04.8 Health Index: 92.1

10.05 **Alternative Agency Impacts Associated with the Study Area**

- 10.05.1 Identify all Metropolitan Planning Organizations (MPO's) Associated with the study area:
 - The study area does lie within the jurisdiction of the Association of Central Oklahoma Governments (ACOG).
 - The study does lie within the jurisdiction of the City of Midwest City.
 - The study area does lie within the jurisdiction of Tinker AFB, and is a STRAHNET route.
 - The study area does not lie within the jurisdiction of the Indian Nations Council of Governments (INCOG)
 - The study area does not lie within the jurisdiction of the Lawton Metropolitan Planning Organization (LMPO).
 - The study area does not lie within the jurisdiction of the Frontier Metropolitan Planning Organization (Frontier).
 - The study area lies within the jurisdiction of the Central Oklahoma Economic Development District.
- 10.05.2 The project study area does not lie within the jurisdiction of the Oklahoma Turnpike Authority:
- 10.05.3 The project does not lie within the jurisdiction of any other agencies.
