Linux Server Standard

Introduction
In an effort to streamline Linux server operations, leverage volume purchasing discounts and take advantage of available technological interoperability advancements, OMES Information Services is standardized on a single Linux server distribution. To manage supportability, OMES limits the number of Linux distributions supported in the server environment.

Purpose
This document establishes the OMES Linux server distribution standard.

Definitions
Linux – An open-source operating system based on Unix.

Standard
The OMES standard is to use SUSE Linux Enterprise Server. In the event that SUSE Linux Enterprise Server is not an appropriate solution, an acceptable alternative is Red Hat Enterprise Linux. Exceptions include vendor supplied and maintained appliances.

Compliance
This standard shall take effect upon publication and is made pursuant to Title 62 O.S. §§ 34.11.1 and 34.12 and Title 62 O.S. § 35.8. OMES IS may amend and publish the amended standards policies and standards at any time. Compliance is expected with all published policies and standards, and any published amendments thereof. Employees found in violation of this standard may be subject to disciplinary action, up to and including termination.

Rationale
To coordinate and require central approval of state agency information technology purchases and projects to enable the chief information officer to assess the needs and capabilities of state agencies as well as streamline and consolidate systems to ensure the state delivers essential public services to its citizens in the most efficient manner at the lowest possible cost to taxpayers.

Revision history
This standard is subject to periodic review to ensure relevancy.
