

Network Routing and Switching Standard

Introduction

In an effort to streamline network operations and take advantage of available technological interoperability advancements, OMES Information Services utilizes a single network equipment vendor for all networking segments, rather than attempting to support a multi-vendor solution. These segments include core, data center, WAN and edge.

Purpose

This document formalizes the network team's decision to standardize on a single routing and switching platform.

Standard

Juniper Networks is the designated network equipment vendor.

No device platforms or models are exclusively reserved for use only within a specific segment, as platforms and models are individually selected based on their availability and the identified requirements of the project at hand.

Compliance

This standard shall take effect upon publication and is made pursuant to Title 62 O.S. §§ 34.11.1 and 34.12 and Title 62 O.S. § 35.8. OMES IS may amend and publish the amended standards policies and standards at any time. Compliance is expected with all published policies and standards, and any published amendments thereof. Employees found in violation of this standard may be subject to disciplinary action, up to and including termination.

Rationale

To coordinate and require central approval of state agency information technology purchases and projects to enable the chief information officer to assess the needs and capabilities of state agencies as well as streamline and consolidate systems to ensure that the state delivers essential public services to its citizens in the most efficient manner at the lowest possible cost to taxpayers.

Revision history

This standard is subject to periodic review to ensure relevancy.
