#### C. SOLICITATION SPECIFICATIONS

#### C.1. Overview

The State of Oklahoma Office of Management and Enterprise Services (OMES) Information Services Division (ISD) is currently accepting proposals from qualified suppliers to provide a Commercial off the Shelf software (COTS) solution with the ability for customization, modification, configuration, tuning, and enhancement to replace the current system. The proposed solution will have the capability to support data communication, transformation, matching, loading, and data validation to all independent school district student information systems utilizing the Schools Interoperability Framework (SIF) 2.0r1 standard. OMES provides this data messaging to support Oklahoma's Student Information System centralized data store and data warehouse (known as the Wave) for the Oklahoma State Department of Education.

The proposed solution must include professional implementation services for the installation, design configuration, tuning, enhancement, and customization of all software components necessary to support the existing data collections, validations, and data storage. The proposed solution must include maintenance, support, upgrades, training and documentation.

The State of Oklahoma seeks a software solution that its internal staff can administer, configure, support, and expand to its needs within the software's framework. It is the intent of the State of Oklahoma to be the primary application and system administrators after implementation, while utilizing the supplier for escalation, break-fix support, training and knowledge transfer.

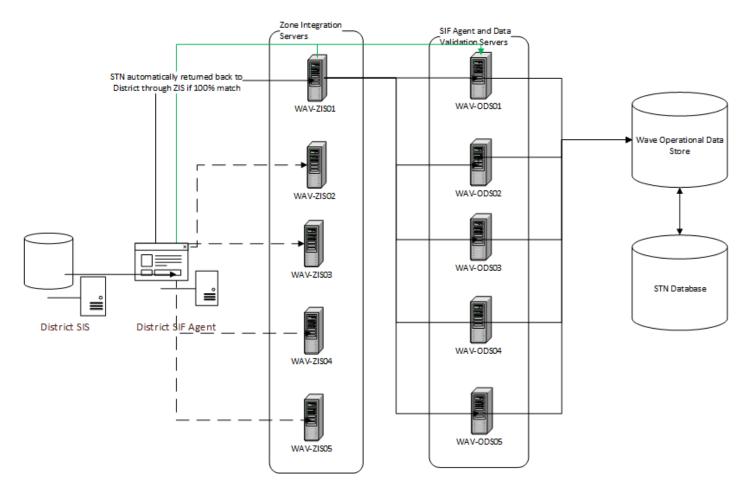

#### C.2. Background

In 2006, the State of Oklahoma began implementing a data communications, reporting, and storage system to support student data collection for all Oklahoma public independent school districts. Goals for this environment include validation, storage, aggregation, reporting, and analysis of data on students in public, independent school districts throughout Oklahoma, for the purposes of Federal reporting, State funding calculations to districts, empowerment of classroom educators, State assessment and accountability, and to ease inter-district communication for transfers and longitudinal data. The State collects this data in an automated fashion from school district Student Information System utilizing an Oklahoma customization of the SIF 2.0r1 standard.

#### C.3. Current Environment

Currently there are eleven different Student Information Systems being used by various school districts around the State. All districts are required to maintain a student information system from a vendor that supports Oklahoma's SIF 2.0r1 standards. These systems connect via a local SIF compliant and certified agent to the State's Zone Integration Servers, where the State's internal SIF agent and tools validate, match, store, and update the data in Microsoft SQL-based databases. Data validation includes custom rules for data quality maintained by internal staff. Student matching algorithms include processes designed to identify students and provide a Statewide ID to students for internal purposes and State assessments (referred to as a Student Testing Number, or STN).

There are approximately 2100 Primary and Secondary schools in 514 independent school districts, each utilizing one of 143 different student information systems (primarily provided by third-party vendors) and 30-40 charter and non-independent school districts in the State of Oklahoma, serving approximately 700,000 students taught by 52,000 certified educators.

#### C.4. Specifications/Requirements

Mandatory requirements are the minimum capabilities, features, and/or technical standards that must be met by the proposed solution to be determined responsive. The Oklahoma Wave Data Requirements are located at the following link: http://ok.gov/sde/wave-system.
- **C.4.1.3.** The software must provide configurable or modifiable scripts, software, tools, or systems that support the conversion of the SIF-based data from the SIF Agent to a State-level operational data store.

## Voluntary Product Accessibility Template Instructions

The Voluntary Product Accessibility Template is a tool to assist in making preliminary assessments regarding the availability of electronic and information technology products and services with features that support accessibility.

The VPAT provides a summary view of criteria specific to various types of technologies identified in the Oklahoma Information Technology Accessibility Standards. There are three sections in each table. Section one of the Summary Table describes each section of the Standards. The second section describes the supporting features of the product or refers you to the corresponding detailed table, "e.g., equivalent facilitation." The third section contains any additional remarks and explanations regarding the product.

#### **Oklahoma EITA Procurement Clause:**

Pursuant to Title 74, Section 85.7d and OAC 580:15-6-21 electronic and information technology procurements, agreements, and contracts shall comply with applicable Oklahoma Information Technology Accessibility Standards issued by the Oklahoma Office of State Finance.

EIT Standards may be found at <a href="www.ok.gov/DCS/Central\_Purchasing/index.html">www.ok.gov/DCS/Central\_Purchasing/index.html</a> or <a href="http://www.ok.gov/OSF/documents/isd">http://www.ok.gov/OSF/documents/isd</a> itas.doc.

- For Information Technology or Communications Products, Systems and Applications not requiring development and/or customization. The Contractor shall provide a description of conformance with the applicable Oklahoma Information Technology Accessibility Standards for the proposed product, system or application by means of either a Voluntary Product Accessibility Template (VPAT) or other comparable document, upon request.
  - The Contractor shall indemnify and hold harmless the State of Oklahoma and any Oklahoma Government entity purchasing the products, systems, or applications not requiring development and/or customized by the Contractor from any claim arising out of the Contractor's failure to comply with applicable Oklahoma Information Technology Accessibility Standards subsequent to providing certification of compliance to such Standards.
- 2) For Information Technology or Communications Products, Systems or Applications requiring development and/or customization. The Contractor shall provide a description of conformance with the applicable Oklahoma Information Technology Accessibility Standards for the proposed product, system, or application developed and/or customized by means of either a Voluntary Product Accessibility Template (VPAT) or other comparable document, upon request. Additional requirements and documentation may be required and compliance will be necessary on the Contractor's part. Such requirements will be stated in documents such as State Bids, Request for Proposals, Contracts, Agreements, Purchase Orders, and Amendments.

The Contractor shall indemnify and hold harmless the State of Oklahoma and any Oklahoma Government entity purchasing the products, systems, or applications from the Contractor, from any claim arising out of the Contractor's failure to comply with applicable Oklahoma Information Technology Accessibility Standards subsequent to providing certification of compliance to such Standards. However, the Contractor shall no longer have an obligation to indemnify the State for liability resulting from products, systems or applications developed and/or customized that are not in compliance with applicable Oklahoma Information Technology Accessibility Standards ("Standards") after the State has tested and confirmed that the product, system or application meets the accessibility requirements in the Standards.

#### How to Get Started - Begin with your product's specification or a list of its known features:

- 1. Determine which subsection(s) of the Oklahoma Information Technology Accessibility Standards (IT Standards) apply to your product. Document the product's ability to meet the standards in the applicable areas, such as software, operating system, and so on.
- 2. For each standard in the applicable area(s), determine if the product meets or supports the standard.
  - If the product appears to meet or support the standard, then you have the option of providing examples of features that are accessible or of specific accessibility features that exist.
  - o If the product appears to not meet the standard, remember that the OK Information Technology Accessibility Standards allow for alternative products provided that they result in substantially equivalent or greater access. The product can meet the standard as long as the feature performs in the same manner as it does for any other user. This is called "functional equivalency."

#### **Solicitation**

- 3. When the VPAT draft is complete, translate the technical language into language that will be understood by a state agency procurement officer. We encourage use of suggested language noted in the section "Suggested Language for Filling out the VPAT".
- 4. Suggested Language for filling out the VPAT Suggested language below has been developed for use when filling out a VPAT. All or some of the language may be used. You are encouraged to use consistent language in VPATs throughout the form.

Supporting F	<u>eatures</u>
Supports	Use this language when you determine the product fully meets the letter and intent of the criteria.
Supports with Exceptions	Use this language when you determine the product does not fully meet the letter and intent of the criteria, but provides some level of access relative to the criteria.
Supports through Equivalent Facilitation	Use this language when you have identified an alternate way to meet the intent of the criteria or when the product does not fully meet the intent of the criteria.
Supports when combined with Compatible AT	Use this language when you determine the product fully meets the letter and intent of the criteria when used in combination with compatible AT. For example, many software programs can provide speech output when combined with a compatible screen reader (commonly used assistive technology for people who are blind).
Does not Support	Use this language when you determine the product does not meet the letter or intent of the criteria.
Not Applicable	Use this language when you determine that the criteria do not apply to the specific product.
Not Applicable - Fundamental Alteration Exception Applies	Use this language when you determine a fundamental alteration of the product would be required to meet the criteria (see the IT Standards for the definition of "fundamental alteration").

#### Remarks & Explanations (third section on VPAT)

Providing further explanation regarding features and exceptions is especially helpful. Use this section to detail how the product addresses the standard or criteria by:

- Listing accessibility features or features that are accessible;
- Detailing where in the product an exception occurs; and
- Explaining equivalent methods of facilitation (See Section 3.5 of the IT Standards for definition of "equivalent facilitation").

## Software Applications and Operating Systems VPAT

The following VPAT provides a sample format used to evaluate IT Standards applicable to Software Applications and Operating Systems established in Section 4.2 of the official IT Standards. The standards in this section provide for improved access and usability for people with vision, motor and/or cognitive disabilities. For example, one provision requires alternative keyboard navigation, which is essential for people who are blind or have low vision or for people with motor or dexterity disabilities who cannot rely on pointing devices, such as a mouse. Other provisions address animated displays, color and contrast settings, flash rate which can affect epileptic seizures and electronic forms, among others.

Responses to "Meet Standard and How" and "Not Applicable and Why" should be completed in detail. Simple "yes" or "comply" answers provide insufficient information necessary to conduct an informed assessment.
