

All public-school districts are monitored at least once within a five year cycle. School districts are annually scheduled using a random sampling method. Of those districts annually selected, 5.0 percent are randomly selected for On-site Monitoring. The remaining 95.0 percent are monitored using a desk monitoring procedure. In addition, schools may be scheduled for either an On-site or Desk Monitoring based on specific criteria found in 210:10-13-21(c)(2).
