Oklahoma School Testing Program / College- and Career-Readiness Assessment

Grades 3–8, 11

2023–24 Technical Report

Part I—Technical Report through Appendix L

Prepared by Cognia and

the Oklahoma Department of Education

Acknowledgments

The following individuals from the *Oklahoma State Department of Education Office of Assessments* are recognized for their dedication and contribution to the work being reported:

- Catherine Boomer, Program Director, State Assessments
- Samantha Sheppard, Project Manager, Science Assessments
- Alyssa Tyra, Project Manager, English Language Arts Assessments
- Corinne Beasler, Project Manager, Math Assessments
- Caroline Misner, Project Manager, OAAP

CHAPTER 1. INTRODUCTION TO THE OSTP/CCRA

1.1 Purpose and Uses of the Oklahoma School Testing Program

The Oklahoma School Testing Program (OSTP) assessments are state-mandated, criterion-referenced tests that measure student proficiency in specific content areas. Each test measures the student's knowledge relative to the Oklahoma Academic Standards (OAS) Oklahoma's content standards for public schools (Appendix A). OSTP assessments are also used for state and federal accountability and reporting. In spring 2024, the OSTP assessments were administered to all eligible students in grades 3–8 and grade 11. The OSTP included mathematics and English language arts (ELA) for grades 3–8 and science for grades 5 and 8. The OSTP also included the College- and Career-Readiness Assessment (CCRA) in science and U.S. history for grade 11. Test forms included operational tests (OP), breach forms (replacement forms used in cases of large-scale security breaches or cheating), Braille forms, and large-print forms, which were administered when such accommodations were needed. Spanish forms were also available online.

The Oklahoma State Department of Education (SDE) contracted Cognia to develop and administer the OSTP.

1.2 Intended OSTP and CCRA Score Interpretations and Uses

The OSTP is designed, developed, and implemented to support six primary intended score interpretations and uses. All are described in the following sections. Appendix B provides a glossary of commonly used assessment terms found throughout the remainder of this report.

1.2.1 Primary Intended OSTP and CCRA Score Interpretations

OSTP scores provide reliable and valid information about student knowledge relative to the Oklahoma Academic Standards (OAS) in grade-level mathematics and English language arts for students in grades 3–8 and 11, science for students in grades 5, 8, and 11, and U.S. history for students in grade 11.

CCRA scores provide reliable and valid information about student knowledge in science and U.S. history predictive of college- and career-readiness for students in grade 11.

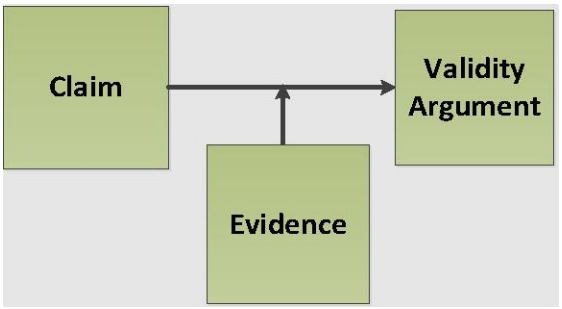
1.2.2 Primary Intended OSTP and CCRA Score Uses

- OSTP and CCRA scores provide instructionally useful information to teachers and students with appropriate detail and timely reporting.
- Teachers can use OSTP and CCRA scores to support future curricular planning and identifying instructional needs within student subgroups.
- Parents and students can use OSTP and CCRA scores to monitor academic achievement and progress toward college- and career-readiness.
- The state and districts can use OSTP and CCRA scores to support evaluation and enhancement of curricula and programs.
- The state uses OSTP and CCRA scores for comparison to national assessments such as National Assessment of Educational Progress (NAEP) and ACT.
- The OSTP and CCRA meet reporting requirements set by federal and state governments for their use in making accountability decisions.
- OSTP and CCRA scores can be used as a point-in-time indicator of student knowledge, skills, and abilities of the Oklahoma Academic Standards.

1.3 Validity Arguments for the OSTP and CCRA

This technical report describes several procedural and psychometric processes of the OSTP and CCRA. These processes contribute to the accumulation of validity evidence supporting the score interpretations that, in turn, support the intended uses of the OSTP and CCRA assessments. Because tests themselves are only validated in terms of score interpretability for their intended uses, this report presents gathered evidence of the validity of the intended interpretations and uses of the OSTP and CCRA test scores (AERA, APA, & NCME, 2014, p. 11). Each chapter in this report contributes important information about the OSTP and CCRA: test design and development, test administration, scoring, reliability, performance levels, and reporting. The information to support validity arguments for intended OSTP and CCRA score interpretations and uses, summarized in the last section of each chapter and then compiled and fully summarized in Chapter 10, is formed as claims: elements that underlie the interpretations and uses articulated within the validity argument. Strength of the validity argument is established by providing evidence supporting each of these claims. The logic of the validity argument structure is shown in Figure 1-1.

Figure 1-1. Logic of Validity Arguments for Tests



The phrase "intended score interpretations for uses" appears several times in the *Standards for Educational and Psychological Testing* (AERA et al., 2014) and is the core of the field's views on validity and validation. For the OSTP and CCRA (and assessment programs more generally), the phrase refers broadly to test scores (e.g., total test scale scores, aggregations of test scores, the percentage of students at or above a given level), and other test performance information elements (e.g., the definition of a given level in the performance level descriptors). The *Standards for Educational and Psychological Testing* also provides a framework for describing sources of evidence that should be considered when constructing a validity argument. These sources include evidence based on the following five areas: test content, response processes, internal structure, relationship to other variables, and consequences of testing. These sources address different aspects of supporting evidence for validity arguments but are not considered distinct types of validity. Instead, each contributes to a body of evidence about the individual validity argument and overall arguments for the validity of intended score interpretations and uses. Moreover, these sources represent only a partial list of potential sources of evidence from the OSTP and CCRA design, development, test administration, analysis, and reporting processes that are relevant to the overall validity arguments for intended interpretations and uses of the OSTP and CCRA scores and related information.

Validity arguments for the OSTP and CCRA are crafted to not just provide evidence that all steps in the test design, development, and implementation process are done correctly, but that they are working together to ensure that the resulting scores validly support intended interpretations and uses. The arguments and the logical inferential steps they provide are structured based upon the framework developed by Chapelle (2020) and can be summarized as follows:

1.1 Description Inference: Item sampling from the domain is appropriate such that high-quality forms can be produced. (Domain to Item)

1.2 Evaluation Inference: Form sampling from the items is appropriate such that observed scores reflective of the domain can be produced. (Item to Form)

1.3 Generalization Inference: Observed scores from individual forms are reliable such that they are reflective of expected scores across forms. (Form to Score)

1.4 Explanation Inference: Expected scores are associated with classification cuts such that classification decisions are interpretable. (Score to Classification)

1.5 Extrapolation Inference: Classification decisions are accurate such that intended interpretations correspond to other valid metrics of knowledge, skills, and ability. (Classification to Interpretation)

1.6–1.10 Utilization Inferences: Interpretations of scores and classifications are used as intended and only in ways considered appropriate and fair. (Interpretation to Use)

Note: It is important for the gathering of information in support of the Generalization Inference (1.3) to define what is meant by the term "form" in this context. A test form, in the context of the validity argument, is not just the set of items on which the score is based, but the structure of the exam in terms of all elements that can affect an individual's performance. This can include, among other things, the raters scoring an exam, the occasion on which the exam is administered, and the setting in which it is administered. Generalization from observed to expected score is optimized when all sources of potential variability of test scores are identified and accounted for such that observed scores maximally reflect a student's ability and not the influence of unwanted sources of variance.

1.4 Excerpts from the Assessment System and Assessment Requirements Report

For the full report, go to: Assessment System and Assessment Requirements Full Report.

1.4.1 From the Executive Summary

The Oklahoma Legislature directed the State Board of Education (OSBE) to evaluate Oklahoma's current state assessment system and make recommendations for its future. As a result, the Oklahoma State Department of Education (OSDE) held regional meetings across the state and convened the Oklahoma Assessment and Accountability Task Force to deliberate over many technical, policy, and practical issues associated with implementing an improved assessment system. The 95 Task Force members met four times between August 4 and October 18, 2016. The results of those deliberations were presented in the form of recommendations from the OSDE to the OSBE.

1.4.2 House Bill 3218

In June 2016, Oklahoma Governor Mary Fallin signed House Bill 3218 (HB 3218), which relates to the adoption of a statewide system of student assessments. HB 3218 required the OSBE to study and develop assessment recommendations for the statewide assessment system. The House Bill specifically tasks the OSBE, in consultation with representatives from the Oklahoma State Regents for Higher Education, the Commission for Educational Quality and Accountability, the State Board of Career and

Technology Education, and the Secretary of Education and Workforce Development, to study and develop assessment requirements. Additionally, HB 3218 requires the State Board to address accountability requirements under the Every Student Succeeds Act (ESSA,) which is presented in a separate report for accountability. This report focuses specifically on the assessment requirements of HB 3218, which include the degree to which the Oklahoma assessment:

- aligns to the Oklahoma Academic Standards (OAS);
- provides a measure of comparability among other states;
- yields both norm-referenced and criterion-referenced scores;
- has a track record of statistical reliability and accuracy; and
- provides a measure of future academic performance for assessments administered in high school.

1.4.3 Collecting Feedback from Regional Engage Oklahoma Meetings and the Oklahoma Task Force

Prior to convening Oklahoma's Assessment and Accountability Task Force, the OSDE held regional meetings in Broken Arrow, Sallisaw, Durant, Edmond, Woodward, and Lawton. These meetings yielded responses to various questions addressing the desired purposes and types of assessments. This regional feedback was incorporated in the discussions with the Oklahoma Assessment and Accountability Task Force. The Task Force included 95 members who represented districts across the state, educators, parents, business and community leaders, tribal leaders, and lawmakers. Additionally, members from the Oklahoma State Regents for Higher Education, the Commission for Educational Quality and Accountability, the State Board of Career and Technology Education, and the Secretary of Education and Workforce Development were also represented on the Task Force. For a complete list of Task Force members, refer to Appendix A of the Assessment System and Assessment Requirements Full Report.

On four occasions, the members of the Task Force met with experts in assessment and accountability to consider each of the study requirements and provide feedback to improve the state's assessment and accountability systems. Two of those experts also served as the primary facilitators of the Task Force: Juan D'Brot, Ph.D., from the National Center for the Improvement of Educational Assessment (NCIEA) and Marianne Perie, Ph.D., from the University of Kansas' Achievement and Assessment Institute. These meetings occurred on August 4 and 5, September 19, and October 18, 2016. At each meeting, the Task Force discussed the elements of HB 3218, research and best practices in assessment and accountability development, and feedback addressing the requirements of HB 3218. This feedback was subsequently incorporated into OSDE's recommendations to the OSBE.

1.4.4 Key Summative Assessment Recommendations

Oklahoma's Assessment and Accountability Task Force and the OSDE recognized that assessment design is a case of optimization under constraints[1]. In other words, there may be many desirable purposes, uses, and goals for assessment, but they may be in conflict. Any given assessment can serve only a limited number of purposes well. Finally, assessments always have some type of restrictions (e.g., legislative requirements, time, and cost) that must be weighed in finalizing recommendations. Therefore, a critical early activity of the Task Force was to identify and prioritize desired characteristics and intended uses for a new Oklahoma statewide summative assessment for OSDE to consider.

Upon consolidating the uses and characteristics, the facilitators returned to the Task Force with draft goals for the assessment system. The Task Force provided revisions and input to these goals. Facilitators then presented the final goals to the Task Force. Once goals were defined, the desired uses and characteristics were clarified within the context of the Task Force's goals. The members of the Task Force agreed to the following goals for OSDE to consider for Oklahoma's assessment system:

1. Provide instructionally useful information to teachers and students with appropriate detail (i.e., differing grain sizes for different stakeholder groups) and timely reporting;
2. Provide clear and accurate information to parents and students regarding achievement and progress toward college- and career-readiness using an assessment that is meaningful to students;
3. Provide meaningful information to support evaluation and enhancement of curriculum and programs; and
4. Provide information to appropriately support federal and state accountability decisions.

Following discussion of the Oklahoma assessment system's goals, the Task Force worked with the facilitators to articulate feedback for the grade 3–8 and high school statewide summative assessments. This feedback was subsequently incorporated into the OSDE's recommendations to the OSBE. These recommendations are separated into those for grades 3–8 and those for high school.

1.4.5 Recommendations for Assessments in Grades 3–8

The feedback provided by the Task Force and subsequently incorporated by the OSDE for grades 3–8 can be grouped into four categories: Content Alignment and Timing, Intended Purpose and Use, Score Interpretation, and Reporting and State Comparability. The OSDE's recommendations are as follows:

1.4.5.1 CONTENT ALIGNMENT AND TIMING

- Maintain the focus of the new assessments on the Oklahoma Academic Standards (OAS) and continue to administer them at the end of grades 3 through 8; and

1 *See Braun (in press).*

- Include an adequate assessment of writing to support coverage of the Oklahoma English Language Arts (ELA) standards.

1.4.5.2 INTENDED PURPOSE AND USE

- Ensure the assessment can support calculating growth for students in at least grades 4–8 and explore the potential of expanding growth to high school depending on the defensibility of the link between grade 8 and high school assessments and intended interpretations; and
- Ensure the assessment demonstrates sufficient technical quality to support the intended purposes and current uses of student accountability (e.g., promotion in grade 3 based on reading).

1.4.5.3 SCORE INTERPRETATION

- Provide a measure of performance indicative of being on track to college- and career-readiness, which can inform preparation for the Oklahoma high school assessment;
- Support criterion-referenced interpretations (i.e., performance against the OAS) and report individual claims including, but not limited to, scale score[2], content cluster[3], and growth[4] performance; and
- Provide normative information to help contextualize the performance of students statewide, such as intra-state percentiles.

1.4.5.4 REPORTING AND STATE COMPARABILITY

- Support aggregate reporting on claims including, but not limited to, scale score, content cluster, and growth performance at appropriate levels of grain size (e.g., grade, subgroup, teacher, building/district administrator, state); and
- Utilize the existing NAEP data to establish statewide comparisons at grades 4 and 8. NAEP data should also be used during standard-setting[5] activities to ensure the CCRA cut score is set using national and other state data.

1.4.6 Recommendations for Assessments in High School

The feedback provided by the Task Force and subsequently incorporated by the OSDE can be grouped into four categories: Content Alignment and Timing, Intended Purpose and Use, Score Interpretation, and Reporting and State Comparability. The OSDE's recommendations are presented below.

1.4.6.1 CONTENT ALIGNMENT AND TIMING

- Use a commercial off-the-shelf college-readiness assessment (e.g., SAT, ACT) in lieu of state-developed high school assessments in ELA and mathematics; and

---

2 A scale score (or scaled score) is a raw score that has been transformed through a customized set of mathematical procedures (i.e., scaling and equating) to account for differences in difficulty across multiple forms and to enable the score to represent the same level of difficulty from one year to the next.

3 A content cluster may be a group of items that measures a similar concept in a content area on a given test.

4 Growth can be conceptualized as the academic performance of the same student over two or more points in time. This is different from improvement, which is change in performance over time as groups of students matriculate or when comparing the same collection of students across time (e.g., grade 3 students in 2022 and grade 3 students in 2023).

5 The process through which subject matter experts set performance standards, or cut scores, on an assessment or series of assessments.

- Consider how assessments measuring college readiness can still adequately address assessment peer review requirements, including, but not limited to, alignment.

1.4.6.2 INTENDED PURPOSE AND USE

- Ensure the assessment demonstrates sufficient technical quality to support the need for multiple and differing uses of assessment results;
- Explore the possibility of linking college-readiness scores to information of value to students and educators (e.g., readiness for post-secondary, prediction of STEM readiness, remediation risk);
- Maintain a focus on rigorous expectations of college- and career-readiness; and
- Ensure that all students in the state of Oklahoma can be provided with a reliable, valid, and fair score, regardless of accommodations provided or the amount of time needed for a student to take the test.

1.4.6.3 SCORE INTERPRETATION

- Support criterion-referenced interpretations (i.e., performance against the OAS) and report individual claims appropriate for high school students;
- Provide evidence to support claims of college- and career-readiness. These claims should be (1) supported using theoretically related data in standard-setting activities (e.g., measures of college readiness and other nationally available data) and (2) validated empirically using available postsecondary data linking to performance on the college- readiness assessment; and
- Provide normative information to help contextualize the performance of students statewide, such as intra-state percentiles.

1.4.6.4 REPORTING AND STATE COMPARABILITY

- Support aggregate reporting on claims at appropriate levels of grain size for high school assessments (e.g., grade, subgroup, teacher, building/district administrator, state); and
- Support the ability to provide norm-referenced information based on other states that may be administering the same college-ready assessments, as long as unreasonable administration constraints do not inhibit those comparisons.

1.4.7 Key Considerations for Summative Assessment Recommendations

While the Task Force addressed a targeted set of issues stemming from HB 3218, the facilitators were intentional in informing Task Force members of three key areas that must be considered in large-scale assessment development and/or selection:

1. **Technical quality**, which serves to ensure the assessment is reliable, valid for its intended use, and fair for all students;
2. **Peer Review**, which serves as a means to present evidence of technical quality; and
3. **Accountability**, which forces the issue of intended purpose and use.

In the time allotted, the Task Force was not able to consider all the constraints and requirements necessary to fully expand upon their feedback to the OSDE. The facilitators worked to inform the Task

Force that the desired purposes and uses reflected in their feedback would be optimized to the greatest extent possible in light of technical- and policy-based constraints. As historically demonstrated, we can expect that the OSDE will continue to prioritize fairness, equity, reliability, and validity as the agency moves forward in maximizing the efficiency of Oklahoma's assessment system. A more detailed explanation of the context and considerations for adopting OSDE's recommendations is provided in the full report.

1.5 Meeting Results

The conversations that occurred among Task Force members, assessment and accountability experts, and the OSDE resulted in a cohesive set of goals for an aligned comprehensive assessment system that includes state and locally selected assessments designed to meet a variety of purposes and uses. These goals are listed on page 9 of the full report (Assessment System and Assessment Requirements Full Report). The feedback provided by the Task Force and the recommendations presented by the OSDE, however, are focused only on Oklahoma's statewide summative assessments.

While the OSDE's recommendations can be grouped into the four categories of (1) Content Alignment and Timing, (2) Intended Purpose and Use, (3) Score Interpretation, and (4) Reporting and State Comparability, it is important to understand how these recommendations address the overarching requirements outlined in HB 3218.

1.5.1 Alignment to the OAS

Summative assessments used for accountability are required to undergo peer review to ensure the assessments are reliable, fair, and valid for their intended uses. One such use is to measure student progress against Oklahoma's college- and career-ready standards. The Task Force and OSDE believe it is of vital importance that students have the opportunity to demonstrate their mastery of the state's standards. However, there is also a perceived need to increase the relevance of assessments, especially in high school. The Task Force and OSDE believe a state-developed set of assessments for grades 3–8 and a college-readiness assessment in high school would best support teaching and learning efforts in the state.

1.5.1.1 COMPARABILITY WITH OTHER STATES

Throughout feedback sessions, Task Force meetings, and OSDE deliberations, the ability to compare Oklahoma performance with that of other states was considered a valuable feature of the assessment system. However, there are tensions among administration constraints, test design requirements, and the strength of the comparisons that may make direct comparisons difficult. Currently, Oklahoma can make comparisons using statewide aggregated data (e.g., NAEP scores in grades 4 and 8, college-readiness scores in grade 11) but is unable to support comparisons at each grade. Task Force feedback and OSDE recommendations suggest leveraging available national comparison data beyond its current use and

incorporating it into assessment standard-setting activities. This will allow the OSDE and its stakeholders to determine college- and career-readiness cut scores on the assessment that reflect nationally competitive expectations.

1.5.1.2 NORM-REFERENCED AND CRITERION-REFERENCED SCORES

Based on Task Force feedback, the OSDE confirmed that reported information supporting criterion-referenced interpretations (e.g., scale score, content cluster, and growth performance) are valuable and should continue to be provided in meaningful and accessible ways. Additional feedback and OSDE's recommendations note that norm-referenced interpretations would enhance the value of statewide summative assessment results by contextualizing student learning and performance. By working with a prospective vendor, the OSDE should be able to supplement the information provided to stakeholders with meaningful normative data based on the performance of other Oklahoma students.

1.5.1.3 STATISTICAL RELIABILITY AND ACCURACY

The technical quality of an assessment is an absolute requirement for tests intended to communicate student grade-level mastery and for use in accountability. The *Standards for Educational and Psychological Testing* (AERA et al., 2014) present critical issues that test developers and test administrators must consider during assessment design, development, and administration. While custom state-developed assessments require field testing and operational administration to accumulate evidence of statistical reliability and accuracy, the quality of the processes used to develop those assessments can be easily demonstrated by prospective vendors and the state. In contrast, off-the-shelf assessments should already have evidence of this, and the state can generalize their technical quality if the assessment is given under the conditions defined for the assessment. Thus, the technical quality of an assessment is a key factor in ensuring assessment results are reliable, valid, and fair.

1.5.1.4 FUTURE ACADEMIC PERFORMANCE FOR ASSESSMENTS ADMINISTERED IN HIGH SCHOOL

As noted earlier in this report, there is a clear value in high school assessment results being able to predict future academic performance. Based on OSDE's recommendation of using a college-readiness assessment in high school, the state and its prospective vendor should be able to determine the probability of success in early post-secondary academics based on high school assessments.

However, the state and its prospective vendor should amass additional Oklahoma-specific evidence that strengthens the claims of likely postsecondary success. This can be supported both through standard-setting activities and empirical analyses that examine high school performance based on postsecondary success. The recommendations made to the OSDE in the previous section offer relatively fine-grain suggestions that can be interpreted through the lens of the HB 3218 requirements. These recommendations also reflect the Task Force's awareness of the three areas of technical quality, peer review requirements, and accountability uses, which were addressed throughout deliberations. Through regional meetings and in-depth conversations with the Task Force, the OSDE was able to critically

examine the feedback provided and present recommendations to support a strong statewide summative assessment that examines the requirements of HB 3218 and seeks to maximize the efficiency of the Oklahoma assessment system in support of preparing students for college and careers.

1.5.1.5 ISSUES IN SUBSCORE REPORTING

Subscores serve as achievement reports on subsets of the full set of knowledge and skills represented by a total score. For example, many ELA summative assessments produce a total score for ELA, subscores for at least reading and writing, and often finer grained subscores for topics such as informational and literary reading. Similarly, a mathematics test typically yields an overall mathematics score and potential subscores in topics such as numbers and operations, algebraic reasoning, measurement and geometry, and data and probability. One of the greatest challenges in current large-scale summative assessment design is to create tests that are no longer than necessary to produce a very reliable total score while yielding adequately reliable subscores to help educators and others gain more instructionally relevant information than gleaned from just the total score.

Unfortunately, there is a little-known aspect of educational measurement (outside of measurement professionals) that large-scale tests are generally designed to report scores on a "unidimensional" scale. This means the grade 5 mathematics test, for example, is designed to report overall mathematics performance, but not to tease out differences in performance on things like geometry or algebra, because the only questions that survive the statistical review processes are those that relate strongly to the total score of overall mathematics. If the test were designed to include questions that better distinguish among potential subscores, the reliability (consistency) of the total score would be diminished. There are "multidimensional" procedures that can be employed to potentially produce reliable and valid subscores, but these are much more expensive and complicated to implement to ensure the comparability of these subscores and the total score across years. The National Assessment of Educational Progress (NAEP) is the one example of a well-known assessment designed to produce meaningful results at the subscore level, but NAEP has huge samples to work with and more financial resources and psychometric capacity at its disposal than any state assessment. In other words, it is not realistic at this time to consider moving away from a unidimensional framework for Oklahoma's next statewide summative assessment, which means the subscores will unfortunately be much less reliable estimates of the total score than useful content-based reports. This is true for essentially all commercially available interim assessments as well, so despite user reports that they like assessment X or Y because it produces fine grain subscores useful for instructional planning, any differences in subscores are likely much more due to measurement error rather than to anything educationally meaningful. Neither summative assessments nor comprehensive-blueprint interim assessments are designed to guide detailed instructional planning; their design and structure supports aggregate and program level evaluations.

Despite this widely held knowledge by measurement professionals, every state assessment designer knows they need to produce scores beyond the total score; otherwise, stakeholders would complain they

are not getting enough from the assessment. Producing very reliable total scores is critical for accountability uses of statewide assessments and, all things being equal, the reliability is related to the number of questions (or score points) on a test.

Therefore, most measurement experts recommend having at least 10 score points for each subscore to achieve at least some minimal level of reliability, so statewide summative tests tend to get longer to accommodate subscore reporting. Therefore, one way to lessen the time required on the statewide summative assessment is to focus the summative assessment on reporting the total score and use optional modules for districts that would like more detailed and accurate information about particular aspects of the content domain.

CHAPTER 2. OVERVIEW OF THE OSTP AND CCRA

2.1 History of the Oklahoma School Testing Program

On July 1, 2016, a new Oklahoma legislative bill HB 3218 went into effect that made several changes to Oklahoma's student assessment and accountability system, including high school graduation requirements. The most significant change is that it is no longer a state requirement for Oklahoma students to pass End-of-Instruction exams to graduate with a standard high school diploma. HB 3218 directed the Oklahoma State Board of Education (OSBE) to establish a new system of assessments that students who entered grade 9 in 2017–2018 would be required to take to graduate with a standard diploma. The End-of-Instruction (EOI) exams and Achieving Classroom Excellence (ACE) graduation requirements were repealed as of July 1, 2016. During the 2016–17 academic year, students in grade 10 took assessments in ELA, mathematics, and science. Beginning with the 2017–18 school year, grade 10 assessments were no longer administered. In addition, grade 11 students took either the ACT or the SAT and a grade 11 science content assessment to determine college- and career-readiness and high school accountability. In 2019, a grade 11 U.S. history content assessment was also added.

The U.S. history content assessment was field tested in 2019, 2021, and 2022. U.S. history standard setting occurred in June 2022. U.S. history cut scores were approved as of August 2022. Changes in the Oklahoma Academic Standards (OAS) for science grade 8 were implemented in Fall 2022, and standard setting occurred in June 2023 while science grade 8 cut scores were approved in July of 2023). Standards for OSTP ELA and mathematics grades 3–8 changed in 2021 and 2022, respectively, and standard setting for the OSTP assessments occurred in June 2024. OSTP ELA and mathematics grades 3–8 cut scores were approved as of July 2024. Also refer to sections 7.3 and 7.4 of this document for additional information related to changes in the performance standards and, consequently, associations with the reporting scales.

In addition, the United States Department of Education Office of Elementary and Secondary Education issued a determination letter based on OSDE's March 2020 Title I Assessment Peer Review submission. According to the July 2020 determination letter issued by Frank T. Brogan, Assistant Secretary for Elementary and Secondary Education, OSDE's assessment system "substantially meets requirements" for OSTP 3–8 reading/language and mathematics, OSTP science general assessments in grades 5 and 8, and the CCRA science general assessment in grade 11 in accordance with section 1111(b)(1) and (3) of the Elementary and Secondary Education Act (ESEA).

2.2 OSTP AND CCRA PARTICIPATION

The OSTP assessments are administered to all public-school students in grades 3–8, while the CCRA assessments are administered in grade 11. The OSTP includes mathematics and ELA testing for grades 3–8 and science testing for grades 5 and 8. The CCRA includes the College- and Career-Readiness Assessment (CCRA) in science and U.S. history for grade 11 students.

CHAPTER 3. TEST CONTENT AND DEVELOPMENT

3.1 GRADES 3–8 OSTP ELA ASSESSMENTS

3.1.1 Develop/Review/Approve Test Blueprints with DOK Percentages

All items on the OSTP ELA tests for grades 3–8 were developed specifically for Oklahoma and are directly aligned to the Oklahoma Academic Standards (OAS). The standards are the basis for the reporting categories developed for each content area and are used to help guide the development of test items. Each item was designed to measure a specific standard and objective. The test blueprints were developed by the OSDE, and test specifications were done in collaboration between Cognia, OSDE, and Oklahoma educators.

The test blueprints identify the amount of content covered on the tests and are based on the importance and coverage of the OAS in Oklahoma schools. The ideal test blueprints developed by the OSDE are provided in Appendix C and at the OSDE website: https://sde.ok.gov/assessment-material.

The distribution of emphasis for grades 3–8 ELA content standards is shown in Tables 3-1 and 3-2. As indicated in the tables, the actual distribution of OAS ELA standards fall within the ideal distribution on each OSTP test for all grade levels. The ideal percentage of items aligned to each group of standards can be found in Appendix C.

Table 3-1. Distribution of Emphasis in Terms of Target Percentage of Test by Grade—Grades 3–5 OAS ELA Standards, 2023–24

	Grade 3		Grade 4		Grade 5	
Standard	Ideal Percentage	Actual Percentage	Ideal Percentage	Actual Percentage	Ideal Percentage	Actual Percentage
2: Reading and Writing Process	38–42%	40%	30–34%	32%	30–34%	30%
3: Critical Reading and Writing	12–18%	12%	18–22%	20%	22–26%	22%
4: Vocabulary	22–26%	24%	22–26%	22%	18–22%	22%
5: Language	12–18%	12%	12–18%	14%	12–18%	12%
6: Research	12–18%	12%	12–18%	12%	12–18%	14%
Total	**100%**	**100%**	**100%**	**100%**	**100%**	**100%**

Table 3-2. Distribution of Emphasis in Terms of Target Percentage of Test by Grade—Grades 6–8 OAS ELA Standards, 2023–24

Standard	Grade 6		Grade 7		Grade 8	
	Ideal Percentage	Actual Percentage	Ideal Percentage	Actual Percentage	Ideal Percentage	Actual Percentage
2: Reading and Writing Process	34–38%	36%	34–38%	34%	24–30%	26%
3: Critical Reading and Writing	18–22%	18%	18–22%	22%	24–30%	30%
4: Vocabulary	18–22%	20%	14–20%	16%	14–20%	18%
5: Language	12–18%	14%	12–18%	14%	12–18%	12%
6: Research	12–18%	12%	12–18%	14%	12–18%	14%
Total	**100%**	**100%**	**100%**	**100%**	**100%**	**100%**

Each item on the OSTP ELA tests for grades 3–8 was assigned a Depth of Knowledge (DOK) level according to the cognitive demand of the item. DOK is not synonymous with difficulty. The DOK level rates the complexity of the mental processing a student must use to answer the question. Items at each DOK level can be found in the Test and Item Specifications documents at https://sde.ok.gov/assessment-material.

DOK 1—RECALL AND REPRODUCTION: This level requires students to recall, observe, question, or represent facts, simple skills, or abilities. It requires only surface understanding of text, often verbatim recall. Level 1 activities include supporting ideas by reference to details in the text; using a dictionary to find meaning; identifying figurative language in a passage; and identifying the correct spelling or meaning of words.

DOK 2—SKILLS AND CONCEPTS: This level requires processing beyond recall and observation; requires both comprehension and subsequent processing of text; and involves ordering and classifying text, as well as identifying patterns, relationships, and main points. Level 2 activities include using context to identify unfamiliar words; predicting logical outcomes; identifying and summarizing main points; applying knowledge of conventions of Standard American English; composing accurate summaries; and making general inferences and predictions for a portion of a text.

DOK 3—STRATEGIC THINKING: This level requires students to go beyond the text; requires students to explain, generalize, and connect ideas; involves inferencing, predicting, elaborating, and summarizing; and requires students to support positions using prior knowledge and to manipulate themes across passages. Level 3 activities include determining the effect of the author's purpose on text elements; summarizing information from multiple sources; critically analyzing literature; composing focused,

organized, coherent, and purposeful prose; and making explanatory and descriptive inferences and interpretations across an entire passage.

Tables 3-3 and 3-4 show that for each DOK level, the actual percentages of items on the test mostly fell within the recommended range for each grade level.

Table 3-3. ELA DOK Levels by Grade—Form A, 2023–24

	DOK 1		DOK 2		DOK 3	
Grade	Recommended	Actual	Recommended	Actual	Recommended	Actual
3	15–30%	20%	65–80%	70%	5–10%	10%
4	10–20%	20%	65–75%	70%	5–15%	10%
5	5–15%	16%	70–85%	74%	5–20%	10%
6	5–15%	8%	70–85%	78%	5–20%	14%
7	5–15%	12%	70–85%	78%	5–20%	10%
8	5–10%	10%	60–75%	70%	20–30%	20%

Table 3-4. ELA DOK Levels by Grade—Breach Form, 2023–24

	DOK 1		DOK 2		DOK 3	
Grade	Recommended	Actual	Recommended	Actual	Recommended	Actual
3	15–30%	20%	65–80%	70%	5–10%	10%
4	10–20%	20%	65–75%	68%	5–15%	12%
5	5–15%	16%	70–85%	72%	5–20%	12%
6	5–15%	12%	70–85%	70%	5–20%	18%
7	5–15%	14%	70–85%	76%	5–20%	10%
8	5–10%	10%	60–75%	70%	20-30%	20%

3.1.2 Test and Item Specification Development

Multiple-choice items were administered in grades 3–8 ELA assessments. Multiple-choice items require students to demonstrate a wide range of knowledge and skills. Each item requires approximately one minute for most students to answer. This item type affords efficient use of limited testing time and allows coverage of a wide range of knowledge and skills. In addition, technology-enhanced items (TEIs) were developed for grades 3–8. TEIs are used to address some aspects of the OAS performance expectations more authentically and/or to provide more opportunity for students to construct rather than select their response. Interaction types are drag-and-drop and drop-down. Each TEI contains only one interaction type per item. For grades 3, 4, 6, and 7, short constructed-response items were also included, providing students with the opportunity to respond to items in their own words. A typical response is 1–3 sentences. For grades 5 and 8, the writing portion of the ELA tests included extended responses that were associated with reading passages. Responses were scored with rubrics that assessed ideas and development; organization, unity, and coherence; word choice; sentences and paragraphs; and grammar,

usage, and mechanics. Examples of test items for public use are provided by the OSDE in the Test and Item Specifications documents at http://sde.ok.gov/sde/assessment-material.

The test framework for each ELA assessment is based on the OAS. Each test item is designed to measure a specific standard and objective. The measure of Oklahoma students' level of proficiency responding to a variety of items linked to grade-level ELA content standards are identified in the OAS. The five assessable content standards in the OAS are shown in Table 3-5.

Table 3-5. OAS ELA Assessable Content Standards

Grades 3–8
Standard 2 Reading and Writing Process
Standard 3 Critical Reading and Writing
Standard 4 Vocabulary
Standard 5 Language
Standard 6 Research

3.1.3 Passage Development

The OSTP ELA passages contain identifiable key concepts with relevant supporting details. Each passage is appropriate for determining the purpose for reading, such as analyzing character traits; comparing and contrasting; problem-solving and deriving solutions; interpreting; application; analyzing; synthesizing; drawing conclusions; making an inference; determining relationships in vocabulary analogies; and other relevant reading tasks as defined by the OAS for the specific grade level.

The passages have a variety of sentence types and lengths, may include dialogue, reflect Oklahoma's cultural diversity, and possess sufficient structural integrity to allow the passages to be self-contained.

The passages reflect a balance of genres from literary to expository texts, as shown in Table 3-6. Most passages selected for the ELA assessments include authentic literature; a minor portion have been selected from commissioned works.

The passages were reviewed by both OSDE and Cognia not only for content, but also to eliminate cultural or other forms of bias that might disadvantage any group(s) of students. Further, passages were reviewed by teacher committees who had received bias and sensitivity training. The passages avoid subject matter that might prompt emotional distress. Permissions to use selections from copyrighted material were obtained, as necessary.

The readability level of all passages was evaluated using recognized readability formulas. The formulas chosen for each grade varied according to the purpose for which the formula was developed. Appropriate readability formulas for the passages included the Flesch-Kincaid Rating, the Dale-Chall Readability Formula, and other formulas considered reliable.

In addition, sentence structure, length, vocabulary, content, visuals, and organization were reviewed when selecting appropriate grade-level passages for the ELA assessments. The teacher panel that reviewed the passages provided the final evaluation used to decide on the readability of a passage.

The vocabulary words tested in OSTP ELA assessments come directly from the passage content. Words used for vocabulary items have sufficient surrounding context clues for the reader to determine the meaning. Students may encounter words in the text that are not tested but are above the student's grade placement. In grades 3–5, these challenging words and their definitions may appear in a word box above the story or article. In grades 6–8, the definitions of challenging words may appear in footnotes.

Since there is no single source available to determine the reading level of individual words, the appropriateness and difficulty of vocabulary words were determined in different ways. Vocabulary words were checked in the following sources: *EDL Core Vocabularies in Reading, Mathematics, Science, and Social Studies* (Taylor, 1989); or other reliable readability sources. In addition, each vocabulary item was approved by Oklahoma's Content Review Committee. The committee, composed of Oklahoma educators from across the state, reviewed proposed vocabulary items for grade-level appropriateness. For ELA, the tested vocabulary is at grade level (and 1–2 grades above when assessing context clues); in the tests for all other subject areas, the vocabulary level is below the grade being tested, except for content words. Grades 3–4 are one grade level below, and grades 5–8 are two grade levels below.

New passages were identified to develop field-test items for the 2023–24 ELA administration. Grades 3–5 each had a single narrative and informational passage. Grade 6 had a narrative pair and a single informational passage. Grades 7–8 each had a narrative pair and an informational pair. All the passages were individually selected to eliminate cultural or other forms of bias that might disadvantage any group(s) of students.

Table 3-6. Grades 3–8 ELA and Eligible Passage Types

Grades	Literary	Expository
3–5	contemporary realistic fiction, historical fiction, modern fantasy, poetry, drama, and traditional stories (legends, myths, fairy tales, and fables)	informational, biography, autobiographies, and functional text
6–7	short story, novel excerpt, drama, poetry, fable, folktale, mystery, and myth	informational, biography, autobiographies, and functional text
8	short story, novel excerpt, drama, lyric poetry, historical fiction, fable, folktale, mystery, myth, limericks, tall tales, and plays	informational, biography, autobiographies, and functional text

3.1.4 Item Development

In preparation for the 2023–24 OSTP ELA administration, a gap analysis of the existing Oklahoma item bank was conducted. The purpose of this analysis was to identify any deficits for particular standards and objectives, and item counts were determined to address those deficits during development.

3.1.5 Spring 2024 Test Design and Development

The 2023–24 OSTP ELA test forms were structured using both operational items (designated to contribute to the student's score) and embedded field-test items (not designated to contribute to the student's score). Operational items were taken by all students in a given grade level. Across the operational and breach forms that were constructed, there were common linking items that both forms

shared, and unique items associated with each particular form. Student scores were based only on operational items. Breach forms were rebuilt in grades 3–8 so that they met psychometric requirements. The percentages of common linking items for the 2023–24 OSTP ELA tests for grades 3–8 are shown in Table 3-7.

Table 3-7. Percentages of Common Linking Items Across Operational and Breach Forms, 2023–24

Content	Grade	Common Linking Items across Operational and Breach Forms
ELA	3	72%
	4	74%
	5	78%
	6	68%
	7	66%
	8	72%

In the 2023–24 administration, each form in grades 3, 4, 6, and 7 included 60 items: 50 operational items contributed to the student's score and 10 were field-test items (did not contribute to the student's score). In grades 5 and 8, each form included 61 items: 51 operational items contributed to the student's score and 10 were field-test items (did not contribute to the student's score).

The student experience for the 2023–24 OSTP ELA tests for grades 3–8 is shown in Tables 3-8 through 3-10. In grades 3–8, all students experienced 60 items (50 operational items and 10 field-test items) addressing either single or paired passages. Students in grades 5 and 8 experienced 60 multiple-choice items and experienced a writing prompt related to a paired passage. Students in grades 3, 4, 6, and 7 experienced 56 multiple-choice items and four constructed-response items.

Table 3-8. ELA Grades 3–8 Student Test Experience: Operational Items Across Forms, 2023–24

	WP		MC		CR		TEI/ PE		Total	
Grades	Items	Pts	Items	Pts	Items	Pts	Items	Points	Items	Pts
3–4	0	0	48	48	2	4	**0**	**0**	**50**	**52**
5	1	4	50	50	0	0	**0**	**0**	**51**	**54**
6	0	0	46	46	2	4	**2**	**2**	**50**	**52**
7	0	0	47	47	2	4	**1**	**1**	**50**	**52**
8	1	4	50	50	0	0	**0**	**0**	**51**	**54**

WP = Writing Prompt, MC = Multiple Choice, CR = Constructed Response, TEI = Technology-Enhanced Item, PE = Paper Equivalent

Table 3-9. ELA Grades 3–8 Student Test Experience: Field-Test Items Across Forms, 2023–24

	WP		MC		CR		TEI/ PE		Total	
Grades	Items	Pts	Items	Pts	Items	Pts	Items	Points	Items	Pts
3–4	0	0	6	6	2	4	**2**	**2**	**10**	**12**
5	0	0	8	8	0	0	**2**	**2**	**10**	**10**
6–7	0	0	6	6	2	4	**2**	**2**	**10**	**12**
8	0	0	8	8	0	0	**2**	**2**	**10**	**10**

WP = Writing Prompt, MC = Multiple Choice, CR = Constructed Response, TEI = Technology-Enhanced Item, PE = Paper Equivalent.

Table 3-10. ELA Grades 3–8 Student Test Experience: Combined Operational and Field-Test Items Across Forms, 2023–24

	WP		MC		CR		TEI/ PE		Total	
Grades	Items	Pts	Items	Pts	Items	Pts	Items	Points	Items	Pts
3–4	0	0	56	56	4	8	2	2	60	64
5	1	4	60	60	0	0	2	2	61	64
6	0	0	52	52	4	8	4	4	60	64
7	0	0	53	53	4	8	3	3	60	64
8	1	4	58	58	0	0	4	2	61	64

WP = Writing Prompt, MC = Multiple Choice, CR = Constructed Response, TEI = Technology-Enhanced Item, PE = Paper Equivalent

3.1.6 Writing (Grades 5 and 8)

Student essays in grades 5 and 8 were assessed according to a holistic writing rubric on a 1–4 scale, with 4 as the highest score. All student responses were scored using grade-specific rubrics that assessed idea development, organization (including unity and coherence), word choice, sentence structure, grammar, usage, and mechanics. Students were asked to demonstrate these skills by integrating them in producing a unified essay. The final score represents the overall writing performance to a mode-specific prompt and its associated passages; students were expected to address the task appropriately and incorporate ideas from the passages to connect with the audience. To help guide students, a reference sheet that contained a writer's checklist was provided (https://oklahoma.onlinehelp.cognia.org/writers-checklist/). Examples of student responses to previous test items released for public use are available in the Extended Constructed Response/Writing Resources for Grades 5 & 8 section at http://sde.ok.gov/sde/ assessment-material.

3.1.7 Reading Sufficiency Act

The purpose of the Reading Sufficiency Act (RSA) is to ensure that all Oklahoma students are reading at grade level at the end of third grade (a critical juncture that occurs when students go from learning to read, to reading to learn). As part of meeting the requirements of the RSA, student performance on a subset of 32 items on the OSTP ELA will be used as one of the criteria to determine student readiness to be promoted to the fourth grade. These 32 items measure ELA Standard 2 (Reading and Writing Process) and Standard 4 (Vocabulary). Separate performance level descriptors (PLDs), provided in Appendix D, were developed to support standard setting and score reporting for RSA requirements as follows:

- **Meets RSA Criteria**—Third-grade students meeting the RSA criteria are performing at or above grade level on the reading portion of the grade 3 OSTP ELA assessment.
- **Does Not Meet RSA Criteria**—Third-grade students not meeting the RSA criteria are performing below grade level on the reading portion of the grade 3 OSTP ELA assessment.

3.1.8 Data Review

A conference call/Zoom meeting between the OSDE and Cognia was conducted to review the content of spring 2024 ELA field-test items that were flagged due to psychometric criteria. Table 3-11 shows the criteria used for reviewing the flagged items.

Table 3-11. ELA Flagged Item Criteria

Statistic	Flagging for Dichotomous Items	Flagging for Polytomous Items
Item Difficulty (*p*-value)	Below 0.2 may be too difficult; above 0.9 may be too easy.	Below 0.2 may be too difficult; above 0.9 may be too easy.
Item Discrimination (corrwtotal)	Generally, 0.20 or higher is desired; must be >0.10; negative or zero values should not be used. For values between 0.10 and 0.20, difference between corrwtotal and any distractor option correlation value must be ≥ 0.09.	Must be ≥ 0.40.
Differential Item Functioning (DIF)	Values +/-C are serious DIF that must be looked at closely; +/-B values indicate moderate DIF that may warrant inspection.	Values +/-C are serious DIF that must be looked at closely; +/-B values indicate moderate DIF that may warrant inspection.

Statistics for flagged field-test items were reviewed by considering item difficulty (*p*-value), item discrimination (corrwtotal), and differential item functioning (DIF). (Section 6.2 drills down into the DIF statistical testing.) Decisions were made whether flagged items should be included in the Oklahoma item bank for future operational use. A total of 17 ELA items were flagged for review in the Data Review meeting due to psychometric criteria, with 35% of the flagged items being accepted for future operational use in spring 2025 and beyond. The summary results of 2024 field testing are presented in Table 3-12, showing the final adjudication of all 20 field-test items in each grade, inclusive of both the acceptable and flagged items.

Table 3-12. ELA Data Review Results for 2023–24

Grade	Accepted	Rejected	Revise & reFT	Total
3	19	1	0	20
4	20	0	0	20
5	18	2	0	20
6	17	3	0	20
7	18	2	0	20
8	17	3	0	20
Total	**109**	**11**	**0**	**120**

3.1.9 Item Types

ELA item types include: MS1 (machine-scored, 1 point), CR (open-ended response, 2 points), Writing prompt ER (open-ended response, 4 points).

Most items are arranged in item clusters; a few items are presented as stand-alone items. Presenting the items in item clusters allows for better alignment to the breadth and depth of the standards in the OAS-ELA. Examples of test items for public use are provided by the OSDE in the Test and Item Specifications documents at https://sde.ok.gov/assessment-material.

3.2 GRADES 3–8 OSTP MATHEMATICS ASSESSMENTS

3.2.1 Develop/Review/Approve Test Blueprints with DOK Percentages

All items on the OSTP mathematics tests for grades 3–8 were developed specifically for Oklahoma and are directly aligned to the Oklahoma Academic Standards (OAS). The standards are the basis for the reporting categories developed for each content area and are used to help guide the development of test items. Each test item was designed to measure a specific standard and objective. The test blueprints were developed by the OSDE, and test specifications were done in collaboration between Cognia and the OSDE.

The test blueprints identify the amount of content covered on the tests and are based on the importance and coverage of the OAS in Oklahoma schools. The ideal test blueprints developed by the OSDE are provided in Appendix C and at the OSDE website: https://sde.ok.gov/assessment-material.

The distribution of emphasis for grades 3–8 mathematics content standards is shown in Tables 3-13 and 3-14. As indicated in the tables, the actual distribution of OAS mathematics standards fall within the ideal distribution on each OSTP test for all grade levels. The ideal percentage of items aligned to each group of standards can be found in Appendix C.

Table 3-13. Distribution of Emphasis in Terms of Target Percentage of Test by Grade—Grades 3–5 OAS Mathematics Standards, 2023–24

Standard	Grade 3		Grade 4		Grade 5	
	Ideal Percentage	Actual Percentage	Ideal Percentage	Actual Percentage	Ideal Percentage	Actual Percentage
Number and Operations	44–48%	46%	42–46%	44%	42–46%	42%
Algebraic Reasoning	12–18%	1%	12–18%	18%	14-20%	18%

Each item on the OSTP mathematics tests for grades 3–8 was assigned a DOK level according to the cognitive demand of the item. DOK ranges are based on the DOK of the OAS. As discussed earlier, DOK is not synonymous with difficulty. Instead, the DOK level rates the complexity of the mental processing a student must use to answer the question. Items at each DOK level can be found in the Test and Item Specifications documents at https://sde.ok.gov/assessment-material.

DOK 1—RECALL AND REPRODUCTION: This level requires the student to recall facts, terms, definitions, or simple procedures, and to perform simple algorithms or apply formulas. One-step, well-defined, or straight algorithmic procedures should be included at this level.

DOK 2—SKILLS AND CONCEPTS: This level requires the student to make some decisions as to how to approach the problem or activity. Level 2 activities include making observations and collecting data; classifying, comparing, and organizing data; and organizing and displaying data in tables, charts, and graphs.

DOK 3—STRATEGIC THINKING: This level requires reasoning, planning, using evidence, and a higher level of thinking. Level 3 activities include making conjectures, drawing conclusions from observations, citing evidence, and developing a logical argument for concepts, explaining phenomena in terms of concepts, and using concepts to solve non-routine problems.

The distribution of DOK levels in the OSTP mathematics tests is shown in Tables 3-15 and 3-16. The tables show that for each grade level, the actual percentage of items at each DOK level fell within the recommended range, except for the DOK 3 level in the grade 8 breach form. Note the recommended DOK distributions shift to reflect that as students continue through the grades, the standards increase grade-level expectations and rigor and set expectations for students to be college- and career-ready.

Table 3-15. Mathematics DOK Levels by Grade—Form A, 2023–24

	DOK 1		DOK 2		DOK 3	
Grade	Recommended	Actual	Recommended	Actual	Recommended	Actual
3	40–50%	44%	45–55%	46%	5–10%	10%
4	20–30%	24%	65–75%	68%	5–15%	8%
5	20–30%	22%	65–75%	70%	5–15%	8%
6	15–25%	22%	65–75%	68%	10–20%	10%
7	15–25%	22%	65–75%	66%	10–20%	12%
8	10–20%	18%	65–75%	66%	15–25%	16%

Table 3-16. Mathematics DOK Levels by Grade—Breach, 2023–24

	DOK 1		DOK 2		DOK 3	
Grade	Recommended	Actual	Recommended	Actual	Recommended	Actual
3	40–50%	44%	45–55%	50%	5–10%	6%
4	20–30%	26%	65–75%	68%	5–15%	6%
5	20–30%	22%	65–75%	68%	5–15%	10%
6	15–25%	20%	65–75%	68%	10–20%	12%
7	15–25%	20%	65–75%	68%	10–20%	12%
8	10–20%	18%	65–75%	66%	15–25%	16%

3.2.2 Test and Item Specification Development

Multiple-choice items were administered in grades 3–8 mathematics assessments. Multiple-choice items require students to demonstrate a wide range of knowledge and skills. Each item requires approximately one minute for most students to answer. This item type affords efficient use of limited testing time and allows coverage of a wide range of knowledge and skills. In addition, technology-enhanced items (TEIs) were administered for grades 3–8. TEIs are used to address some aspects of the OAS performance expectations more authentically and/or to provide more opportunity for students to construct rather than select their response. Interaction types include matching, hot-spot, drag-and-drop, number line, bar graph, line plot, and drop-down. Each TEI contains only one interaction type per item. Examples of test items for public use are provided by the OSDE in the Test and Item Specifications documents at https://sde.ok.gov/assessment-material.

The test framework for each mathematics assessment is based on the OAS. Each test item is designed to measure a specific standard and objective. The measure of Oklahoma students' level of proficiency in responding to a variety of items linked to grade-level mathematics content standards are identified in the OAS. The mathematics standards are organized into four content strands:

Table 3-17. OAS Mathematics Assessable Content Standards

Grades 3–8
Number and Operations
Algebraic Reasoning and Algebra
Geometry and Measurement
Data and Probability

3.2.3 Item Development

New items were developed for this administration. In preparation for the 2023–24 OSTP mathematics administration, a gap analysis of the existing Oklahoma item bank was conducted to identify any deficits in particular standards and objectives and to determine item counts needed to address those deficits during development.

3.2.4 Spring 2024 Test Design and Development

The 2023–24 OSTP mathematics test forms were structured using both operational items (designated to contribute to a student's score) and embedded field-test items (not designated to contribute to a student's score). Operational items were taken by all students in a given grade level. Across the operational and breach forms that were constructed, there were common linking items that both forms shared, and unique items associated with each particular form. Student scores were based only on operational items. Operational items and field-test items were not distinguishable to students.

In the 2023–24 administration, each form included 60 items: 50 operational items contributed to the student's score and 10 were field-test items (did not contribute to the student's score). Breach forms were rebuilt in grades 3–8 so that they met psychometric requirements. The percentages of common linking items for the 2023–24 OSTP mathematics tests for grades 3–8 are shown in Table 3-18.

Table 3-18. Percentages of Common Linking Items Across Operational and Breach Forms, 2023–24

Content	Grade	Common Linking Items Across Operational and Breach Forms
Mathematics	3	42%
	4	32%
	5	34%
	6	38%
	7	28%
	8	46%

The student experience for the 2023–24 OSTP mathematics tests for grades 3–8 is shown in Tables 3-19 through 3-21. In grades 3–5, all students experienced 58 multiple-choice items and 2 technology-enhanced items. In grades 6–8, all students experienced 55 multiple-choice items and 5 technology-enhanced items.

Table 3-19. Mathematics Grades 3–8 Student Test Experience: Operational Items Across Forms, 2023–24

	MC		TEI/ PE		Total	
Grades	Items	Pts	Items	Pts	Items	Pts
3–5	49	49	1	1	50	50
6–8	47	47	3	3	50	50

MC = Multiple Choice, TEI = Technology-Enhanced Item, PE = Paper Equivalent

Table 3-20. Mathematics Grades 3–8 Student Test Experience: Field-Test Items Across Forms, 2023–24

	MC		TEI/ PE		Total	
Grades	Items	Pts	Items	Pts	Items	Pts
3–5	9	9	1	2	10	11
6–8	8	8	2	3	10	11

MC = Multiple Choice, TEI = Technology-Enhanced Item, PE = Paper Equivalent

Table 3-21. Mathematics Grades 3–8 Student Test Experience: Combined Operational and Field-Test2 Items Across Forms, 2023–24

	MC		TEI/ PE		Total	
Grades	Items	Pts	Items	Pts	Items	Pts
3–5	58	58	2	3	60	61
6–8	55	55	5	6	60	61

MC = Multiple Choice, TEI = Technology-Enhanced Item, PE = Paper Equivalent

3.2.5 Data Review

A conference call/Zoom meeting between the OSDE and Cognia was conducted to review the content of spring 2024 mathematics field-test items that were flagged due to psychometric criteria. Table 3-22 shows the criteria used for reviewing the flagged items.

Table 3-22. Mathematics Flagged Item Criteria

Statistic	Flagging for Dichotomous Items	Flagging for Polytomous Items
Item Difficulty (*p*-value)	Below 0.2 may be too difficult; above 0.9 may be too easy.	Below 0.2 may be too difficult; above 0.9 may be too easy.
Item Discrimination (corrwtotal)	Generally, 0.20 or higher is desired; must be >0.10; negative or zero values should not be used. For values between 0.10 and 0.20, difference between corrwtotal and any distractor option correlation value must be ≥ 0.09.	Must be ≥ 0.40.
Differential Item Functioning (DIF)	Values +/-C are serious DIF that must be looked at closely; +/-B values indicate moderate DIF that may warrant inspection.	Values +/-C are serious DIF that must be looked at closely; +/-B values indicate moderate DIF that may warrant inspection.

Statistics for flagged field-test items were reviewed by considering item difficulty (*p*-value), item discrimination (corrwtotal), and DIF. Decisions were made whether flagged items should or should not be included in the Oklahoma item bank for future operational use. A total of 29 mathematics items were flagged for review in the Data Review meeting due to psychometric criteria, with 85.86% of the flagged items being accepted for future operational use in spring 2025 and beyond. The summary results of 2024 field testing are presented in Table 3-23, showing the final adjudication of all field-test items in each grade, inclusive of both the acceptable and flagged items.

Table 3-23. Mathematics Data Review Results 2023–24

Grade	Accepted	Rejected	Revise & reFT	Total
3	16	3	1	20
4	19	1	0	20
5	19	1	0	20
6	16	3	1	20
7	16	3	1	20
8	17	2	1	20
Total	103	13	4	120

3.2.6 Use of Calculators and Reference Sheets

Approved calculators were allowed for the OSTP mathematics assessments for grades 6–8. Reference sheets were provided to students in grades 6–8 during the test. For approved calculators, see the calculator policy posted on the OSDE website at https://sde.ok.gov/sites/default/files/documents/files/FINAL_Calculator%20Policy%202017.

3.3 Grades 5 and 8 OSTP Science Assessments

3.3.1 Develop/Review/Approve Test Blueprints

All items on the OSTP science tests for grades 5 and 8 were developed specifically for Oklahoma and are directly aligned to the Oklahoma Academic Standards (OAS). The standards are the basis for the reporting categories developed for each content area and are used to help guide the development of test items. Each item was designed to measure a specific standard. The test blueprints were developed by the OSDE, and test specifications were completed via collaboration between Cognia and the OSDE, with additional stakeholder input from district administrators and teachers.

The test blueprints identify the amount of content covered on the tests and are based on the importance and coverage of the OAS in Oklahoma schools. The ideal test blueprints developed by the OSDE are provided in Appendix C and at the OSDE website: https://sde.ok.gov/assessment-material.

The distribution of emphasis for grades 5 and 8 assessable content standards is shown in Table 3-24. As indicated in the table, the ideal distribution of OAS science standards and the actual distribution on each OSTP test match reasonably for each grade level. The ideal percentage of items aligned to each group of standards can be found in Appendix C.

Table 3-24. Distribution of Emphasis in Terms of Target Percentage of Test by Grade—Grades 5 and 8 OAS-Science Standards, 2023–24

Standards	Grade 5		Grade 8	
Domain	Ideal Percentage	Actual Percentage	Ideal Percentage	Actual Percentage
Physical Sciences	27–33%	33.3%	33–40%	33.3%
Life Sciences	27–33%	26.7%	40–46%	46.7%
Earth and Space Sciences	33–40%	40%	21–27%	20%
Total	100%	100%	100%	100%

3.3.2 Item Development

The OSTP science tests consist of clusters of items. A cluster is a set of items linked to a common stimulus. No new on-grade multiple choice (MC) clusters were developed for the grade 5 or grade 8 science assessment for field testing in 2024. Field-test positions on the 2024 grade 5 and grade 8 were utilized to test items to release for instructional use in the OAS-Science frameworks.

3.3.3 Spring 2024 Test Design and Development

The 2023–24 OSTP science test forms were structured using both operational items (designated to contribute to a student's score) and embedded field-test items (not designated to contribute to the student's score). The items used on the OSTP science tests for grades 5 and 8 were written as clusters of items aligned to the OAS science standards.

Operational items (or equivalent items in the paper form for technology-enhanced items in the online form for grade 8 science) were taken by all students at a given grade level. One operational form and one breach form were constructed for each grade level. Across the operational and breach forms, 37% of the grade 5 science items and 63% of the grade 8 science items were common linking items; the rest of each form contained unique items. There was a total of 15 operational clusters (45 operational items) on each form.

Field-test items for a range of science standards were tested to continue building an item bank that will support an appropriate sampling of the assessable standards each year. Field-test items were embedded in each form. Four online forms were administered for each of grades 5 and 8, with a paper form as an accommodation in each grade level. Each form contained three field-test clusters (nine field-test items in total). Field-test items were not distinguishable to students. Student scores were based only on the operational items. Breach forms were rebuilt in grades 5 and 8 so that they met psychometric requirements.

The student experience for the 2023–24 OSTP science tests for grades 5 and 8 is shown in Tables 3-25 through 3-27.

Table 3-25. Science Clusters in Core/Operational Items Across Forms, 2023–24

	Stimulus	MC		TEI/ PMC		Total	
Grade	Single	Items	Pts	Items	Pts	Items	Pts
5	15	45	45	0	0	45	45
8	15	42	42	3	6	45	48

MC = Multiple Choice, TEI = Technology-Enhanced Item, PMC = Paired Multiple Choice

Table 3-26. Science Clusters to Field Test/Field-Test Items Across Forms, 2023–24

	Stimulus	MC		TEI/ PMC		Total	
Grade	Single	Items	Pts	Items	Pts	Items	Pts
5	3	8	8	1	2	9	10
8	3	8	8	1	2	9	10

MC = Multiple Choice, TEI = Technology-Enhanced Item, PMC = Paired Multiple Choice

Table 3-27. Science Clusters in Combined Test/Operational and Field-Test Items Across Forms, 2023–24

	Stimulus	MC		TEI/ PMC		Total	
Grade	Single	Items	Pts	Items	Pts	Items	Pts
5	18	53	53	1	2	54	55
8	18	50	50	4	8	54	58

MC = Multiple Choice, TEI = Technology-Enhanced Item, PMC = Paired Multiple Choice

3.3.4 Data Review

A conference call/Zoom meeting between the OSDE and Cognia was conducted to review the content of spring 2024 grades 5 and 8 science field-test items that were flagged due to psychometric criteria. Table 3-28 shows the criteria used for reviewing the flagged items.

Table 3-28. Science Flagged Item Criteria

Statistic	Flagging for Dichotomous Items	Flagging for Polytomous Items
Item Difficulty (*p*-value)	Below 0.2 may be too difficult; above 0.9 may be too easy.	Below 0.2 may be too difficult; above 0.9 may be too easy
Item Discrimination (corrwtotal)	Generally, 0.20 or higher is desired; must be >0.10; negative or zero values should not be used. For values between 0.10 and 0.20, difference between corrwtotal and any distractor option correlation value must be ≥ 0.09.	Must be ≥ 0.40.
Differential Item Functioning (DIF)	Values +/-C are serious DIF that must be looked at closely; +/-B values indicate moderate DIF that may warrant inspection.	Values +/-C are serious DIF that must be looked at closely; +/-B values indicate moderate DIF that may warrant inspection.

Statistics for flagged field-test items were reviewed by considering item difficulty (*p*-value), item discrimination (corrwtotal), and DIF. Decisions were made whether flagged items should or should not be included in the Oklahoma item bank for future operational use. A total of 13 grade 5 and 8 science items were flagged for review in the Data Review meeting due to psychometric criteria, with 23% of the flagged items being accepted for future operational use in spring 2024 and beyond (in addition to the items not flagged and automatically accepted). The summary results of 2024 field testing are presented in Table 3-29, showing the final adjudication of all field-test items in each grade, inclusive of both the acceptable and flagged items.

Table 3-29. Science Data Review Results for 2023–24

Grade	Accept	Reject	Re-Field Test	Total
5	29	0	3	32
8	25	2	5	32
Total	**54**	**2**	**8**	**64**

3.3.5 Standards

The test framework for each science assessment is based on the OAS-Science. Test items are developed within clusters, and each cluster/item is designed to measure a specific standard in the OAS-Science. The science standards for grade 5 and grade 8 science are organized across three content domains: Physical Sciences (PS), Life Sciences (LS), and Earth and Space Sciences (ESS).

3.3.6 Item Types

The grade 5 science test consists of clusters of multiple-choice items. Some item clusters with two multiple-choice items and a technology-enhanced item linked with a common stimulus were introduced in the field-test portion of the test only. The grade 8 science test consists of item clusters that are either a set of three multiple-choice items linked with a common stimulus or a set of two multiple-choice items and a technology-enhanced item linked with a common stimulus, across both core and field-test portions of the test. On the accommodated paper form, the technology-enhanced items are replaced by paired multiple-choice items.

All items are arranged in item clusters; no items are presented as stand-alone items. Presenting the items in clusters allows for better alignment to the breadth and depth of the standards in the OAS-Science. Examples of test items for public use are provided by the OSDE in the Test and Item Specifications documents at sde.ok.gov/sde/assessment-material.

3.3.7 Cognitive Complexity

The OSTP science assessments consist of items within a cluster structured to assess a range of skills and knowledge applications within a standard. Clusters require sense-making and problem-solving using the three dimensions of the standards (Science & Engineering Practices, Disciplinary Core Ideas, and Crosscutting Concepts). Sense-making happens when students must apply, via science and engineering practices, their understanding of core ideas and crosscutting concepts to address the uncertainty associated with a scenario. The degree of sense-making required to complete an item is directly correlated to the level of cognitive complexity the student must engage with, as described in Figure 3-1. The Reference Guide first provides definitions to identify the level of engagement of the student (full, partial, n/a) for each dimension, and then provides definitions to identify the level of sense-making that is required of the student (low, medium, high) to answer each item.

Figure 3-1. OSTP Levels of Cognitive Complexity

Alignment and Cognitive Complexity Evaluation Tool

Use this screener tool to evaluate the items independently and then the cluster overall.

Alignment to the dimensions

To what extent does the item require the student to engage with the dimension (low, medium, and high).
We first evaluate the SEP, CCC, and DCI individually as part of assigning a cognitive complexity ranking to the item. The below scale is used to evaluate individual dimensions. If an item is lacking a dimension (Oklahoma requires a minimum of two dimensions be present in any one item) indicate that with N/A in the box.

SEP (SCIENCE AND ENGINEERING PRACTICE)	
Questions to help determine how students' use of the SEP contributes to cognitive complexity/sense-making in the item: • How is the SEP being used to explore/understand the phenomenon? • How much scaffolding is provided for students to use the SEP? • Is the SEP used independently of any occurrence in the DCI or CCC? (No double counting)	
Low	• Students only need to use the SEP in a simple, straightforward way that is absent of or minimally uses sense-making • Large amounts of scaffolding are supplied to help the students apply the SEP • Isolated component of SEP is used
Medium	• Students must apply the SEP to make sense of the phenomenon • Typically some scaffolding is provided that helps students apply the SEP
High	• Students must apply the SEP to make sense of the phenomenon (e.g., synthesis to perform more connections. SEP elements are used in combination, such as having to combine data, produce a new graph or model as evidence, etc.) • Often little to no scaffolding is in place to help students apply the SEP • The SEP is used in sense-making that bridges across diverse contexts

DCI (DISCIPLINARY CORE IDEA)	
Questions to help determine how students' use of the DCI contributes to cognitive complexity/sense-making in the item: • How do the DCIs contribute to sense-making as the student engages with the phenomenon? • How much scaffolding is provided for students to use the DCI? • Is the DCI used independently of any occurrence in the SEP or CCC? (No double counting)	
Low	• Students use the DCI in a simple, straightforward way (e.g., little to no application or reasoning) • Often a large amount of scaffolding that helps students apply the DCI • Producing previously learned ideas and conceptual procedures in routine, well-practiced ways
Medium	• Students must apply or reason with DCI concepts to make sense of the phenomenon • Supported applications of science ideas in typical contexts • Some scaffolding that helps students apply the DCI

High	• Students must apply and connect DCI concepts in a sophisticated way to make sense of the phenomenon, e.g.,
	  ○ application of science ideas (often multiple ideas) in new ways or combinations
	  ○ knowledge transfer to construct new understanding, make sense of novel phenomena
	• Often little to no scaffolding that helps students apply the DCI
	• There is some uncertainty associated with the outcome of the scenario

CCC (CROSSCUTTING CONCEPT)	
Question to help determine how students' use of the CCC contributes to cognitive complexity/sense-making in the item: • How is the lens of the CCC used to understand the phenomenon? • How much scaffolding is provided for students to use the CCC? • Is the CCC used independently of any occurrence in the SEP or DCI? (No double counting)	
Low	• CCCs are implicitly part of the task, but they are not required in service of sense-making
Medium	• Students use the CCC in a general way (e.g., item includes and/or could have students use the general CCC concept) • Used for minimal sense making
High	• Students use the CCC in an in-depth way (e.g., drawing on the understandings of the CCC sub-bullet detail to make sense of the phenomenon) • Used in part or fully to bridge a gap in DCI knowledge and/or sense making

Stimulus Question
Can the questions of the task be answered without using information provided by the task scenario or context? **Yes ! or No**

Cognitive Complexity Table

Category	Description
Scripted	• Only one dimension is present, or two dimensions are present but only one is used in application or reasoning for sense-making. • Heavy scaffolding ○ Scripted, "cookbook like" instructions • Little to no sense making required
Moderate Support	• 2-3 dimensions are evident, but only one is heavily used in sense-making while the other may be used minimally • Moderate scaffolding ○ Students have to apply ideas and practices, however they are often told which ones to engage with and supported in using them • Low to medium degree of sense making

Low Support	• 2-3 dimensions are evident with at least two being used in application or reasoning for sense-making.
	• Minimal scaffolding
	  ○ Students are cued and guided to pursue certain lines of thinking, but have to make some decisions about how and what to engage with
	• Medium to high degree of sense making
	  ○ High = students must connect multiple pieces of information in a novel (new) way

Doing*	• The three dimensions are used together to engage in sense-making to a high degree throughout the task
	• Limited to no scaffolding
	  ○ Student designed explorations uses various scientific practices to be able to develop or deepen an understanding of a scientific idea or problem as they explore a phenomenon
	  ○ Student has to develop a model, explanation, or argument from raw data or information

*rarely achievable on state-level summative assessments

Note: These descriptions are adapted from Achieve

3.3.8 Use of Calculators and Reference Sheets

Approved calculators were allowed for the grade 8 OSTP science test. No other resource materials or reference sheets could be used by students during the test. See - https://sde.ok.gov/sites/default/files/Calculator%20Policy%20Updated%20SY%2024-25%20%281%29.pdf.

3.4 GRADE 11 CCRA SCIENCE & U.S. HISTORY

3.4.1 Develop/Review/Approve Test Blueprints

Science

All items on the CCRA science test for grade 11 were developed specifically for Oklahoma and are directly linked to the Oklahoma Academic Standards for Science (OAS-Science). The standards are the basis for the reporting categories developed for each content area and are used to help guide the development of test items. Each item was designed to measure a specific standard. The test blueprints were developed by the OSDE, and test specifications were completed via collaboration between Cognia and the OSDE, with additional stakeholder input from district administrators and teachers.

The test blueprints identify the amount of content covered on the tests and are based on the importance and coverage of the OAS-Science in Oklahoma schools. The ideal test blueprints developed by the OSDE are provided in Appendix C and at the OSDE website: https://sde.ok.gov/assessment-material.

The distribution of emphasis for the CCRA science assessable standards is shown in Table 3-30. The actual distributions of standards on each assessment fall within the ideal percentages defined. The ideal percentage of items aligned to each group of standards can be found in Appendix C.

Table 3-30. Distribution of Emphasis in Terms of Target Percentage of Test by Grade—Grade 11 OAS-Science Standards, 2023–24

Standards Domain	Grade 11 Ideal Percentage	Grade 11 Actual Percentage
Physical Sciences	45–55%	50%
Life Sciences	45–55%	50%
Total	100%	100%

U.S. History

All items on the CCRA U.S. history test for grade 11 were developed specifically for Oklahoma and are directly linked to the Oklahoma Academic Standards. The standards are the basis for the reporting categories developed for each content area and are used to help guide the development of test items. Each item was designed to measure a specific standard and objective. The test blueprints were developed by the OSDE, and test specifications were completed via collaboration between Cognia and the OSDE.

The test blueprints identify the amount of content covered on the tests and are based on the importance and coverage of the OAS in Oklahoma schools. The ideal test blueprints developed by the OSDE are provided in Appendix C and at the OSDE website: https://sde.ok.gov/assessment-material.

The distribution of emphasis for the U.S. history assessable content standards is shown in Table 3-31. As indicated in the table, the actual distribution of OAS U.S. history standards meets the ideal distribution of OAS U.S. history standards. The ideal percentage of items aligned to each group of standards can be found in the test blueprints in Appendix C.

Table 3-31. Distribution of Emphasis in Terms of Target Percentage of Test by Grade—Grade 11 OAS-U.S. History Standards, 2023–24

Standards	Grade 11	
Category	Ideal Percentage	Actual Percentage
U.S. History	45–55%	52%
Civics	45–55%	48%
Total	100%	100%

3.4.2 Item Development

New items were developed for this administration for both grade 11 science and U.S. history. In preparation for the 2023–24 CCRA administration, a gap analysis of the existing Oklahoma item banks was conducted to identify any deficits in particular standards and objectives and to determine item counts needed to address those deficits during development.

3.4.3 Spring 2024 Test Design and Development

Science

The grade 11 CCRA science test forms were structured using both operational items (designated to contribute to a student's score) and embedded field-test items (not designated to contribute to the student's score). Operational items (or equivalent items in the paper form for technology-enhanced items in the online form) were taken by all students in this grade level. One operational form and one breach form were constructed. Across the operational and breach forms, approximately 50% of the items were common linking items; the rest of each form contained unique items. There was a total of 20 operational clusters (60 operational items) on each form.

Field-test items were embedded in each form. In grade 11, ten online forms were administered, with a paper form as an accommodation. Each form contained two field-test clusters (six field-test items in total). Field-test items were not distinguishable to students. Student scores were based only on the operational items.

The student experience for the 2023–24 CCRA science tests for grade 11 is shown in Tables 3-32 through 3-34.

Table 3-32. CCRA Science Clusters in Core/Operational Items Across Forms, 2023–24

	Stimulus	MC		TEI/ PMC		Total	
Grade	Single	Items	Pts	Items	Pts	Items	Pts
11	20	58	58	2	4	60	62

MC = Multiple Choice, TEI = Technology-Enhanced Item, PMC = Paired Multiple Choice

Table 3-33. CCRA Science Clusters to Field Test/Field-Test Items Across Forms, 2023–24

	Stimulus	MC		TEI/ PMC		Total	
Grade	Single	Items	Pts	Items	Pts	Items	Pts
11 (varies	2	6	6	0	0	6	6
per form)	2	5	5	1	2	6	7

MC = Multiple Choice, TEI = Technology-Enhanced Item, PMC = Paired Multiple Choice

	Stimulus	MC		TEI/ PMC		Total	
Grade	Single	Items	Pts	Items	Pts	Items	Pts
11 (varies	22	64	64	2	4	66	68
per form)	22	63	63	3	6	66	69

MC = Multiple Choice, TEI = Technology-Enhanced Item, PMC = Paired Multiple Choice

U.S. History

The grade 11 CCRA U.S. history test forms were structured using both operational and embedded field-test items. Operational items were taken by all students in this grade level. One operational form and one breach form were constructed. The Breach form was a 'scramble' operational form. There was a total of 50 multiple choice operational items on each form.

Field-test items were embedded in each form. In grade 11, four online forms were administered, with a paper form as an accommodation. Each form contained ten field-test items in total of the ten field-test items on each form, there were nine multiple choice items and one technology-enhanced item. Field-test items were not distinguishable to students. Student scores were based only on the operational items.

The student experience for the 2023–24 CCRA U.S. history test for grade 11 is shown in Tables 3-35 through 3-37.

Table 3-35. CCRA U.S. History Items in Core/Operational Items Across Forms, 2023–24

	Cluster Sets	Cluster Items		Standalone Items		Total	
Grade		Items	Pts	Items	Pts	Items	Pts
11	2	8	8	42	42	50	50

Table 3-36. CCRA U.S. History Items to Field Test/Field-Test Items Across Forms, 2023–24

		Items	Pts	Items	Pts	Items	Pts
11	3	12	12	48	48	60	60

3.4.4 Data Review

A conference call/Zoom meeting between the OSDE and Cognia was conducted to review the content of spring 2024 grade 11 CCRA science and U.S. history field-test items that were flagged due to psychometric criteria. Table 3-38 shows the criteria used for reviewing the flagged items.

Table 3-38. Flagged Item Criteria

Statistic	Flagging for Dichotomous Items	Flagging for Polytomous Items
Item Difficulty (*p*-value)	Below 0.2 may be too difficult; above 0.9 may be too easy.	Below 0.2 may be too difficult; above 0.9 may be too easy.
Item Discrimination (corrwtotal)	Generally, 0.20 or higher is desired; must be > 0.10; negative or zero, values should not be used. For values between 0.10 and 0.20, difference between corrwtotal and any distractor option correlation value must be ≥ 0.09.	Must be ≥ 0.40.
Differential Item Functioning (DIF)	Values +/- C are serious DIF that must be looked at closely; +/- B values indicate moderate DIF that may warrant inspection.	Values +/- C are serious DIF that must be looked at closely; +/- B values indicate moderate DIF that may warrant inspection.

Science

Statistics for flagged field-test items were reviewed by considering item difficulty (*p*-value), item discrimination (corrwtotal), and DIF. Decisions were made whether flagged items should or should not be included in the Oklahoma item bank for future operational use. A total of 23 grade 11 science items were flagged for review in the Data Review meeting due to psychometric criteria, with 13% of the flagged items (n=3) being accepted for future operational use in spring 2024 and beyond (along with the other 33 field-test items with acceptable statistics/not flagged), and the other 20 flagged items being rejected or marked for re-field test. The summary results of 2024 field testing are presented in Table 3-39, showing the final adjudication of all field-test items in each grade, inclusive of both the acceptable and flagged items.

Table 3-39. Science Data Review Results for 2023–24

Grade	Accepted	Rejected	Re-Field test	Total
11	36	9	11	56

**This table shows the total number of items field tested. Following acceptance at Data Review, these items are available for operational use in 2023–24 and beyond.*

U.S. History

Statistics for flagged field-test items were reviewed by considering item difficulty (*p*-value), item discrimination (corrwtotal), and DIF. Decisions were made whether flagged items should or should not be

included in the Oklahoma item bank for future operational use. A total of 13 U.S. history items were flagged for review in the Data Review meeting due to psychometric criteria. The summary results of 2024 field testing are presented in Table 3-40, showing the final adjudication of all field-test items in each grade, inclusive of both the acceptable and flagged items.

Table 3-40. U.S. History Data Review Results for 2023–24

Grade	Accepted	Rejected	Re-Field Test	Total
11	27	6	7	40

**This table shows the total number of items field tested. Following acceptance at Data Review, these items are available for operational use in 2023–24 and beyond.*

3.4.5 Standards

Science

The test framework for the grade 11 science assessment is based on the OAS-Science. Test items are developed within clusters, and each cluster/item is designed to measure a specific standard in the OAS-Science. The grade 11 science standards are organized across two content domains: Physical Sciences (PS) and Life Sciences (LS).

U.S. History

The test framework for the grade 11 U.S. history assessment is based on the OAS-U.S. History. Test items include multiple-choice items, technology-enhanced items, and complex stimuli clusters. All U.S. history items are aligned to the OAS-U.S. History standards. The grade 11 U.S. history standards are organized across two content domains: U.S. History and Civics.

3.4.6 Item Types

Science

The grade 11 science test consists of clusters of items. A cluster is either a set of three multiple-choice items linked with a common stimulus or a set of two multiple-choice items and a technology-enhanced item linked with a common stimulus. On the accommodated paper form for grade 11, the technology-enhanced items are replaced by paired multiple-choice items.

All items are arranged in item clusters; no items are presented as standalone items. Presenting the items in item clusters allows for better alignment to the breadth and depth of the standards in the OAS-Science. Examples of CCRA test items for public use are provided by the OSDE in the Test and Item Specifications documents at https://sde.ok.gov/college-and-career-readiness-assessments.

U.S. History

The grade 11 CCRA U.S. history test consists of multiple-choice items, technology-enhanced items, and complex stimuli clusters. The complex stimuli clusters consist of multiple stimuli and primarily multiple-

choice items. However, there was one complex stimuli cluster that contained a combination of multiple-choice items and one technology-enhanced item. The stand-alone items are multiple-choice items or technology-enhanced items. Examples of CCRA test items for public use are provided by the OSDE in the Test and Item Specifications documents at https://sde.ok.gov/college-and-career-readiness-assessments.

3.4.7 Cognitive Complexity and DOK

Science

The CCRA science tests consist of items within a cluster structured to assess a range of skills and knowledge applications within a standard. This is the same item design as used in grades 5 and 8 science; in all grades of science, clusters require sense-making and problem-solving using the three science dimensions. The degree of sense-making required to complete an item is directly correlated to the level of cognitive complexity the student must engage with. The process for determining cognitive complexity for the items within a cluster is the same for grades 5, 8, and 11, and was described in section 3.3.7.

U.S. History

Each item on the CCRA U.S. history test was assigned a DOK level according to the cognitive demand of the item. DOK ranges are based on the DOK of the OAS. As discussed earlier, DOK is not synonymous with difficulty. Instead, the DOK level rates the complexity of the mental processing a student must use to answer the question. Items at each DOK level are provided in the CCRA U.S. History Test and Item Specifications document at https://sde.ok.gov/college-and-career-readiness-assessments.

DOK 1—RECALL: asks the students to recall facts, terms, concepts, and trends or to recognize or identify specific information contained in graphics. This level generally requires students to identify, list, or define. The terms at this level usually ask the student to recall who, what, when, and where. Items that require students to "describe" and/or "explain" could be classified at Level 1 or Level 2, depending on what is to be described and/or explained. A Level 1 "describe and/or explain" would require students to recall, recite, or reproduce information. Items that require students to recognize or identify specific information contained in documents, excerpts, quotations, maps, charts, tables, graphs, or illustrations are generally Level 1.

DOK 2—BASIC REASONING: This level includes the engagement of some mental processing beyond recalling or reproducing a response. Level 2 generally requires students to contrast and compare people, places, events, and concepts; convert information from one form to another; give an example; classify or sort items into meaningful categories; and/or describe, interpret, or explain issues and problems, patterns, reasons, cause and effect, significance or impact, relationships, point of view, or processes. A Level 2 "describe" and/or "explain" would require students to go beyond a description or explanation of recalled information to describe and/or explain a result or "how" or "why."

DOK 3—COMPLEX AND EXTENDED REASONING: This level requires reasoning, using evidence, and a higher level of thinking than Level 1 and Level 2. Students will go beyond explaining or describing "how" and "why" to justifying the "how" and "why" through application and evidence. The cognitive demands at Level 3 are more complex and more abstract than at Level 1 or Level 2. Items at Level 3 include drawing conclusions, citing evidence, applying concepts to new situations, using concepts to solve problems, analyzing similarities and differences in issues and problems, proposing and evaluating solutions to problems, recognizing and explaining misconceptions, or making connections across time and place to explain a concept or "big idea."

For U.S. history, the actual percentage of items at each DOK level fell within the recommended range, as shown below in Tables 3-41 and 3-42.

Table 3-41. U.S. History DOK Levels—Form A, 2023–24

	DOK 1		DOK 2		DOK 3	
Grade	Recommended	Actual	Recommended	Actual	Recommended	Actual
11	10–15%	14%	60–70%	62%	15–25%	24%

Table 3-42. U.S. History DOK Levels—Breach, 2023–24

	DOK 1		DOK 2		DOK 3	
Grade	Recommended	Actual	Recommended	Actual	Recommended	Actual
11	10–15%	14%	60–70%	62%	15–25%	24%

3.4.8 Use of Calculators and Reference Sheets

Approved calculators were allowed for the CCRA grade 11 science test. For approved calculators, see the calculator policy posted on the OSDE website: https://sde.ok.gov/sites/default/files/documents/files/FINAL_Calculator%20Policy%202017-2018_Updated%202020.pdf. Students were also provided a periodic table of elements (see https://oklahoma.onlinehelp.cognia.org/wp-content/uploads/sites/5/2023/03/OK_PeriodicTable_English_ADA.pdf).

3.5 Overall Test Development Process

3.5.1 Item Selection and Operational Test Assembly

In preparation for the item selection meeting, the test developers and psychometricians at Cognia considered the following when selecting sets of items to propose for the common (including items for release) and the embedded field-test items:

- **Content coverage/match to test design:** The test design stipulates a specific number of multiple-choice items from each content area.
- **Item difficulty and complexity:** Item statistics drawn from the data analysis of previously tested items were used to ensure similar levels of difficulty and complexity from year to year, as well as for quality psychometric characteristics.

- **"Cueing" items:** Items were reviewed for any information that might "cue" or provide information that would help students to answer another item.

During assembly of the test forms, the following criteria were considered:

- **Option balance:** Items were balanced among the forms so that each form contained an approximately equal distribution of keys (correct answers).
- **Key patterns:** The sequence of keys was reviewed to ensure that key order appeared random.
- **Page fit:** Item placement was modified to ensure the best fit and arrangement of items on any given page.
- **Facing-page issues:** For multiple items associated with a single stimulus (inquiry task) and multiple-choice items with large graphics, consideration was given to whether those items needed to begin on a left- or a right-hand page and to the nature and amount of material that needed to be placed on facing pages. These considerations serve to minimize the amount of page-flipping required of students.
- **Relationship between forms:** Although equating and field-test items differ across forms, these items must take up the same number of pages in each form so that sessions begin on the same page in every form. Therefore, the number of pages needed for the longest form often determines the layout of each form.
- **Visual appeal:** The visual accessibility of each page of the form was taken into consideration, including such aspects as the amount of white space, the density of the text, and the number of graphics.
- **Psychometric considerations:** Assembled test forms were reviewed for and based on psychometric considerations to ensure similar difficulty across the scale from year to year, while also maximizing reliability.

3.5.2 Item Writer Training

Item writing for the summative assessment is primarily done internally with Senior Specialists overseeing all development.

OSDE and Cognia also hosted an item writing workshop for high school educators in May 2023. High school science and U.S. history educators attended and received training on item writing aligned to the content, structure, and format of CCRA science and U.S. history items. Educators then authored new items through the remainder of the workshop. Completed items are being reviewed by Cognia and OSDE, with the intent of releasing the final items as a resource for educators to use in the classroom to support instruction of the Oklahoma Academic Standards in those subject areas.

3.5.3 Operational Test Draft Review

After the forms were laid out as they would appear in the final test booklets, the forms were again thoroughly reviewed by Cognia editors and test developers to ensure that the items appeared exactly as the state specialists had requested. Finally, all the forms were reviewed by the state specialists for their final approval.

3.5.4 Alternative Presentations

One form of each grade content area was translated into Braille by a subcontractor who specializes in test materials for students who are blind or visually impaired. In addition, this Braille form was also adapted into a large-print version. The Braille vendor reviewed the form concurrently with the OSDE review. This review included looking at items for any potential Braille ability issues. No concerns were identified for the items in the forms.

3.6 Relating Evidence Regarding Test Content and Development to the Validity Arguments

Chapter 3 provides evidence in support of Claims related to Arguments 1.1, 1.2, and 1.3, specifically relating the following evidence regarding test content and development to the validity arguments:

1.1 Argument: Observations of performance on the OSTP reflect the knowledge, skills, and abilities (KSA) articulated in the OAS with appropriate assessment tasks representing the full breadth and depth of the domain as articulated within these standards. (Description Inference)

1.1.1 **Claim:** Expected knowledge, skills, and abilities are thoroughly articulated and considered appropriate to the grade and content area being assessed.

Evidence: The direct link between the OAS and the assessments throughout the test design, development, and implementation processes for all grades and content areas is thoroughly articulated in Chapter 3.

1.1.2 **Claim:** Assessment tasks are developed to provide evidence of the expected knowledge and abilities for each grade and content area being assessed.

Evidence: Subsections 3.x.1 (each 3."x" about a different content area of the OSTP) all explicitly state that OSTP items in the content area and grades being assessed "were developed specifically for Oklahoma and are directly linked to the OAS." Subsection 3.1.3 describes passage development for ELA specifically in terms of how reading passages are selected for alignment to the OAS. Subsections 3.1.4, 3.2.3, 3.3.2, and 3.4.2 describe item development for specific content areas.

1.2 Argument: Each test form, an organized sampling of assessment tasks, results in an observed score that reflects a student's knowledge and abilities in the content area being assessed through appropriate test assembly, administration, and scoring procedures. (Evaluation Inference)

1.2.1 **Claim:** Each form is constructed to draw from available items such that the underlying domain of knowledge and abilities is adequately sampled.

Evidence: Subsections 3.x.1 describe blueprints for identifying the amount of content covered on the test forms, specifically stating that test blueprints "are based on the importance and coverage of [the OAS] in Oklahoma schools." Ideal blueprints are included in Appendix C. For existing assessments (all but CCRA-Science), tables are provided showing that content and Depth of Knowledge distributions on test forms are within the target blueprint ranges for all assessments. The science assessments utilize Cognitive Complexity rather than Depth of Knowledge; this is described in section 3.3.7.

1.2.4 **Claim:** Items on the assessment demonstrate appropriate statistical quality.

> **Evidence:** Subsections 3.1.8, 3.2.5, 3.3.4, and 3.4.4 describe the review process for evaluating items flagged by item analyses.

1.3 Argument: The observed score on any specific test form for a given grade and content area is reflective of the expected score on any form of the test for that grade and content area. (Generalization Inference)

1.3.1 **Claim:** Task specifications adequately inform production or selection of items with similar content and statistical characteristics.

> **Evidence:** Subsections 3.1.2 and 3.2.2 contain some information about item specifications for ELA and mathematics assessments, respectively. It is stated that "each item was designed to measure a specific standard and objective" in the OAS.

1.3.2 **Claim:** Test specifications result in forms of similar length and task distribution.

> **Evidence:** Section 3.5 describes the test development process in detail, specifically outlining item selection, test assembly, and review to ensure the equivalency of forms based on a robust set of criteria. Within Chapter 3, the section for each OSTP content area has a subsection on Test Design and Development for the current year's assessments. These demonstrate the common structure of forms within a given grade and content area. Subsections 3.x.1, which describe blueprint distributions, provide further evidence that the selection of tasks considers and meets content coverage requirements.

1.4 Argument: Expected scores are attributable to proficiency in the target knowledge and abilities. (Explanation Inference)

1.4.3 **Claim:** Characteristics of knowledge expected to affect task difficulty correlate with empirical item difficulty.

> **Evidence:** Subsections 3.1.1, 3.2.1, and 3.4.7 contain Depth of Knowledge (DOK) distributions for OSTP ELA, OSTP mathematics, and CCRA history exams, respectively. Subsections 3.3.1 and 3.3.7 describe how cognitive complexity is captured within the OSTP and CCRA science exams. These are attributes that are incorporated within item development approaches that correlate with expected item difficulty.

CHAPTER 4. TEST ADMINISTRATION

4.1 General Administration Information and Guiding Principles

The testing windows for the 2023–24 administrations of the OSTP and CCRA are shown in Table 4-1.

Table 4-1. Testing Windows for 2023–24

	Grade	Paper-based Testing Window	Computer-based Testing Window	Assessments
OSTP	Grade 3	4/15/24 - 5/1/24	4/15/24 - 5/15/24	ELA and Mathematics
	Grade 4	4/18/24 - 5/1/24	4/18/24 - 5/15/24	ELA and Mathematics
	Grade 5	4/18/24 - 5/1/24	4/18/24 - 5/15/24	ELA, Mathematics, and Science
	Grade 6	4/18/24 - 5/1/24	4/18/24 - 5/15/24	ELA and Mathematics
	Grade 7	4/18/24 - 5/1/24	4/18/24 - 5/15/24	ELA and Mathematics
	Grade 8	4/18/24 - 5/1/24	4/18/24 - 5/15/24	ELA, Mathematics, and Science
CCRA	Grade 11	4/1/24 - 4/12/24	4/1/24 - 4/25/24	Science and U.S. History

Total administration by test mode, of either paper-based tests (PBT) or online computer-based tests (CBT), for each grade and content area is shown in Table 4-2 below. All OSTP assessments for grades 3–8 and 11 are offered as online assessments with paper assessments available only as an accommodation. CBT tests of the OSTP and CCRA may be administered on a variety of device types including different operating systems and displays. Evidence of comparability between groups using different approved CBT device types and online accommodation tools is provided in Appendix E.

Table 4-2. Administration by Grade and Test Mode

Grade	Content Area and Form	Test Mode	Count

4.2 Roles and Responsibilities for Administration

The *2023–24 OSTP Test Administration Manual* indicated that school principals and/or their designated OSTP test coordinators were responsible for the proper administration of the OSTP tests. Uniformity of administration procedures from school to school was ensured by using manuals that contained explicit directions and scripts to be read aloud to students by test administrators and by providing training. The OSDE also conducted site-monitoring visits during the test administration to ensure all guidelines were followed.

4.3 Administration Procedures

Assessment training modules, test administration workshops, prerecorded webinars, and test administration manuals were provided to District Test Coordinators and to other assessment support staff, to give clear direction and support for the test administration for paper-based and computer-based assessments. Refer to section 4.5 for a brief description of the training. The districts' designated OSTP test coordinators were instructed by the OSDE to read the *2023–24 OSTP Test Administration Manual*.

The checklists included in the *2023–24 OSTP Test Administration Manual* outlined tasks to be performed by school staff before, during, and after test administration. In addition to these checklists, the *2023–24 OSTP Test Administration Manual* described the testing material sent to each school and how to inventory it, track it during administration, and return it after testing was complete. An additional focus was on maintaining security of the test materials. The *2023–24 OSTP Test Administration Manual* included checklists for the administrators to use to prepare themselves, their classrooms, and the students for the administration of the tests. The *2023–24 OSTP Test Administration Manual* contained sections that detailed the procedures to be followed for each testing session and instructions for preparing paper-based and computer-based materials before the test coordinator returned them to Cognia.

4.4 Participation Requirements and Documentation

The intent of the OSDE is for all public-school students in grades 3–8 and 11 to participate in the OSTP assessments through a standard administration, an administration with test accommodations , or an alternate assessment (see Appendix F for participation rates). Furthermore, any student who is absent during any session of the assessment is expected to take a make-up test within the testing window. The state of Oklahoma does not recognize OSTP opt-outs. Approximately 98.9% of students in grades 3–8 participated in the 2023–24 OSTP, and approximately 97.0% of students in grade 11 participated in the CCRA.

Because of statutory and rule requirements resulting from the adoption of House Bill 3218, there is no opt-out option offered through the OSDE. Schools were required to return a Student Answer Document for every enrolled student in the grade level, except for students who took an alternate assessment. Students who were alternately assessed in the 2023–24 school year were not required to participate in the 2023–24 OSTP. On those occasions when it was deemed impossible to test a particular student, school personnel were required to inform the OSDE. A summary of participation in the 2023–24 OSTP and CCRA by demographic category and content area is shown in Appendix F.

4.4.1 Students with Disabilities

All students were expected to participate in the 2023–24 OSTP and CCRA unless they completed an alternate assessment during the 2023–24 school year.

4.4.2 English Learners

Students who had received fewer than 12 months of consecutive instruction in a U.S. public school and were designated as English Learners (ELs) were required to take the ELA, mathematics, and science OSTP tests. Spanish versions of mathematics and science tests were provided for computer-based assessments.

4.5 Administrator Training

In addition to distributing the *2023–24 OSTP Test Administration Manual*, the OSDE and Cognia conducted test administration workshops and webinars to inform school personnel about the OSTP tests and to provide training on the policies and procedures regarding administration of the tests. Six virtual trainings were conducted in February 2024. District Test Coordinators were required to attend the trainings, while other support personnel were optional attendees. Approximately twelve hundred people attended the trainings. In addition, an audio PowerPoint test administration workshop presentation was prerecorded and provided to the state for inclusion on the OSDE website. These trainings were geared toward the District Test Coordinators.

Test Administrators and Test Proctors were also required to attend training in their schools or districts prior to administration. These trainings were in the form of online modules. A test was provided at the end of the module requiring a score of at least 80% to pass. Test Administrators and Test Proctors were required to pass this test and provide their Building Test Coordinator with a copy of the certificate that prints upon completion.

4.6 Documentation of Accommodations

A test accommodation is a change in the way a test is administered or in the way a student responds to test questions. Similar to instructional accommodations, test accommodations are intended to offset the effects of a student's disability and to provide him or her with the opportunity to demonstrate knowledge and skills on statewide assessments. The right of a student with a disability to receive allowable accommodations on OSTP tests is protected by both federal and state laws.

The student's current individualized education program (IEP) or 504 plan must specify precisely which test accommodation(s) he or she will receive. In cases where an IEP/504 plan is under development, the IEP/504 team must have already met and agreed upon the necessary accommodation(s) before a student may be provided the accommodation(s).

A student who does not have a documented disability or is not served by a current IEP/504 plan is not eligible to receive accommodations on OSTP tests, except for Emergency Accommodation situations. Scribes may be provided for any student (with or without an IEP/504 plan) who has a short-term medical condition that affects his or her physical dexterity and thus impedes his or her ability to respond to the assessment format. For more detailed information regarding assessment accommodations for students with an IEP/504 plan, see Appendix E or access the *OSTP Accommodations Manual* at https://sde.ok.gov/state-testing-resources.

Large-print versions of the tests were created using Form 1 of the tests at all grade levels for students with visual impairments. At all grades, only the operational items were translated into Braille by American

Printing House for the Blind, a subcontractor that specializes in test materials for students who are blind or who need accommodations due to visual impairments.

For computer-based testing (CBT), the following accommodations were available:

- Color Contrast, where the student can select alternative background colors;
- Screen Zoom, where the entire screen is zoomed up to 300%;
- Text-to-Speech, where the computer reads the text to the student.

The *OSTP Accommodations Manual* provides directions for coding information related to test accommodations and modifications in the Student Answer Document. All accommodations used during any test session were required to be coded by authorized school personnel—not by students—after testing was completed.

See Table 4-3 for the numbers of students tested with and without accommodations. In addition, the number of students who were tested with online testing accommodations are presented by accommodation type in Appendix G.

Table 4-3. Numbers of Students Tested with and Without Accommodations by Content Area and Grade

Tested Grade	Content Area	Number of Students	
		With Accommodations	Without Accommodations
3	ELA	620	49,462
	Mathematics	9,084	40,963
4	ELA	528	48,860
	Mathematics	9,771	39,567
5*	ELA	7,719	41,721
	Mathematics	9,087	40,327
	Science	8,671	40,666
6	ELA	488	48,385
	Mathematics	7,685	41,089
7	ELA	427	48,830
	Mathematics	7,520	41,668
8*	ELA	5,859	44,333
	Mathematics	7,131	43,003
	Science	6,682	43,382
11	Science	2,708	47,841
	U.S. History	2,674	47,883

**For spring 2024 this includes read aloud for the G5 and G8 writing prompt, which does not require OSDE approval.*

4.7 TEST SECURITY

Maintaining test security is critical to the success of the OSTP. The *2023–24 OSTP Test Administration Manual* explains in detail all test security measures and test administration procedures. The OSDE takes the matter of test security very seriously and has implemented stringent procedures to protect the security of the OSTP.

Each District Test Coordinator, Building Test Coordinator, Test Administrator, and Test Proctor was responsible for receiving all secure test materials and for returning all secure test materials (see Section 210:10-13-4 of the Oklahoma Administrative Code available here: https://rules.ok.gov/code?q=). Violation of regulations could result in revocation of a person's teaching, counseling, administrative, and/or other certificates. The tests, and all the materials associated with these tests, were to be considered secure materials. It was important to prevent any student from having access to the tests, and thus, an advantage over other students before the administration of the tests. Prior exposure to the tests or to individual items would invalidate scores. It was expressly forbidden that the materials associated with these tests be photographed, photocopied, or reproduced in any other fashion, including paraphrasing—to do so would be in violation of copyright law. All test items had been copyrighted by the OSDE. In addition, students were not permitted to have cell phones during testing to avoid reproduction or communication of secure test materials.

The *2023–24 OSTP Test Administration Manual* describes in detail the policy and procedures for nondisclosure of test content, securing test materials, use of proctors, use of security forms, test administrator responsibilities, and reporting test irregularities. The OSDE also conducted site visits during test administration to assure compliance with policies. During this administration, 222 sites were selected for desk monitoring and 38 sites for on-site monitoring. On-site monitoring included the following:

1. Assessment monitors checked into the site offices, presenting proper identification. They asked to see the Building Test Coordinator and signed in.
2. If time permitted, prior to the beginning of the testing session, monitors conducted a walkthrough of the testing rooms, observed the location where the secure materials were kept, and checked the copiers for the required signage.
3. When observing assessment activities, monitors practiced the principle of "observation from a distance," with the understanding that the site staff needed to go about performing their job tasks while taking little or no notice of their observers. Monitors must be able to conduct their observation without participating in the administration in any way.
4. Most of the activities on assessment day were easily visible to observers. Before and after the administration, the observer may have walked among the district and site assessment personnel to view their work.
5. The OSDE Office of Assessment observers may have requested access to view documentation for students who were receiving accommodations on the assessments.
6. During the assessment, the monitors attempted to seat themselves where they could observe all assessment activities and complete the observation checklist while maintaining a comfortable distance from students and the site assessment personnel.
7. The observation may have been extended after the conclusion of the assessment so that post-assessment activities could be observed.
8. If district or site staff were not following assessment protocol, this would be noted on the observation checklist. The observer was not to correct site staff or make comments about task performance while in a testing room.

9. If an observation was made that needed immediate attention, monitors were to notify the Office of Assessments and Accountability for additional guidance and permission to invalidate assessments. District Test Coordinators would be notified of the violation and concern.
10. At the end of the visit, observation feedback was submitted to the State Office of Assessments and Accountability using the checklist document (paper-based or electronic versions).
11. The section for Other Comments was available for observers to include their thoughts about administration of the assessment, such as appropriate tone, management, and monitoring of the session; provision for security and confidentiality of test materials; school and student information; any information that might require action during this assessment cycle; and overall impressions of the assessment administration.
12. Completed checklists were to be submitted to the OSDE Office of Assessment in a timely manner, preferably within two days of completing the visit.

Materials were inventoried when returned to Cognia at the end of the test administration. A materials discrepancy report was provided after all secure materials were scanned. Cognia used this report to note and then make all attempts to recover any missing materials. The process for researching any missing materials includes the following directions:

- Contact the District Test Coordinators at schools on the list and have them conduct a search for any missing materials to ensure they were returned. If those materials are located, Cognia arranges for the return of those materials. (Cognia also conducts a physical box search on site at their facilities to search for materials.)
- Maintain a spreadsheet to document the missing materials if materials are not located by Cognia or the District Test Coordinator.

At the end of the secure material discrepancy clean-up period for 2024, there were 40 test booklets that were not recovered. These materials included a combination of test booklets, integrated test booklets, and large-print kits; all those materials are listed in Table 4-4 below.

Table 4-4. Secure Material Discrepancy

Grade	ELA	Mathematics	Science	U.S. History
3	8 Regular Print			
4				
5		1 Regular Print		
6	3 Regular Print			
7	3 Regular Print, 1 Braille	3 Regular Print, 1 Braille		
8	2 Writing LP Kits	2 Math LP Kits	2 Science LP Kits	
11				
Totals	19	17	4	0

Additionally, Cognia uses two statistical methods for detecting possible test security violations: inordinate response similarity analyses and inordinate score gain analyses. Statistical detection findings, provided in Appendix H, are used to indicate whether additional follow-up may be required to determine if a test security violation may have occurred.

4.8 Test and Administration Irregularities

There were no major testing irregularities to report during this administration. The only situation to note was an issue with the writing portion of the Grade 5 and 8 ELA tests during the first few days of operational testing. Due to a setting in the testing platform, the spellcheck button was inadvertently turned on for students to use. Cognia Psychometrics reviewed statistics for students who had the spellcheck available during their writing tests and did not observe any abnormalities in scoring or reporting results.

4.9 Service Center

To provide additional support to schools before, during, and after testing, Cognia operates the OSTP Service Center. The support of a service center is essential to the successful administration of any statewide testing program. The service center provides a centralized location that individuals in the field can call, using a toll-free number or chat feature, to ask specific questions or to report any problems with paper-based testing or computer-based testing. Representatives are responsible for receiving, responding to, and tracking calls, and then routing issues to the appropriate person(s) for resolution. All calls are logged into a database that includes entry for notes regarding the issue and resolution of each call.

The service center is staffed year-round and is available to receive calls Monday through Friday from 7:30 a.m. to 4:30 p.m. CST and 6:00 a.m. to 6:00 p.m. CST during the test administration. The service center is staffed accordingly year-round to meet the OSDE's needs throughout the year. There are three levels of support provided:

- Level 1 Support—Cognia Technical Product Support
- Level 2 Support—Cognia OSTP Program Help Desk
- Level 3 Support—eMetric Support for Computer-Based Testing Issues

Technical Support Figure 4-1 shows the “total contacts” (phone calls + email tickets) during the testing window.

Figure 4-1. Total Contacts (Phone Calls + Email Tickets) During Testing Window

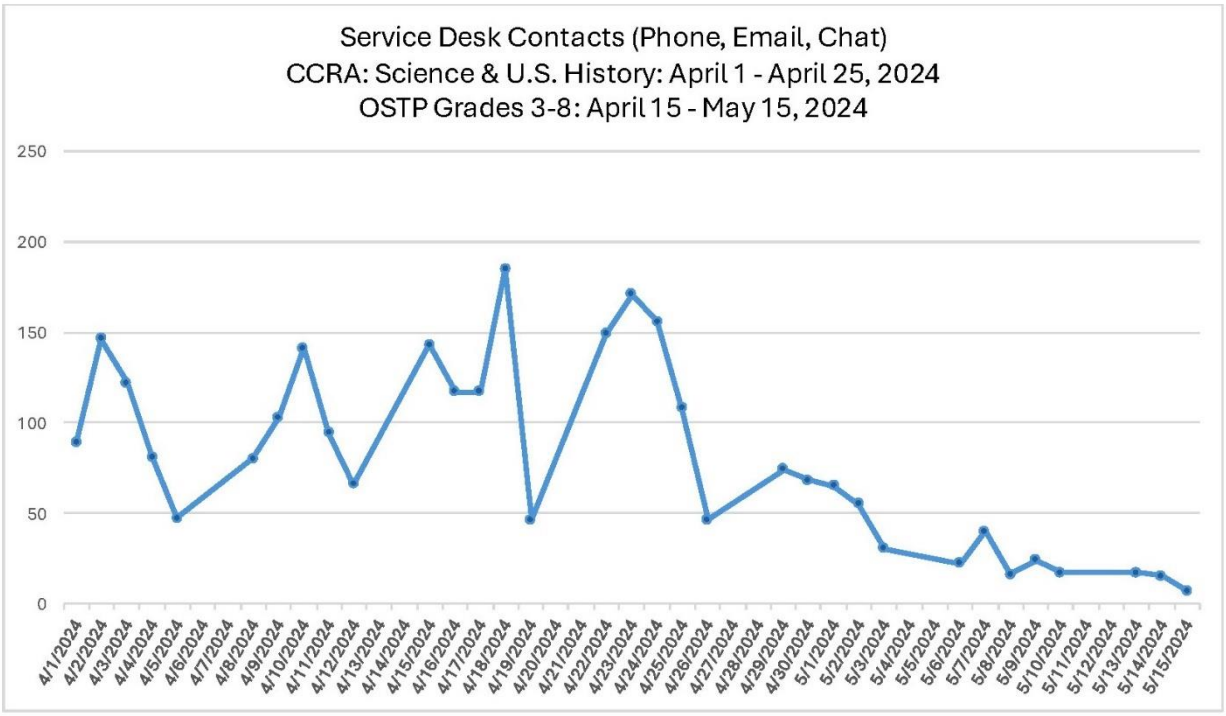

Figure 4-2 shows the summary of "total contacts" (phone calls + email tickets) by category during the testing window.

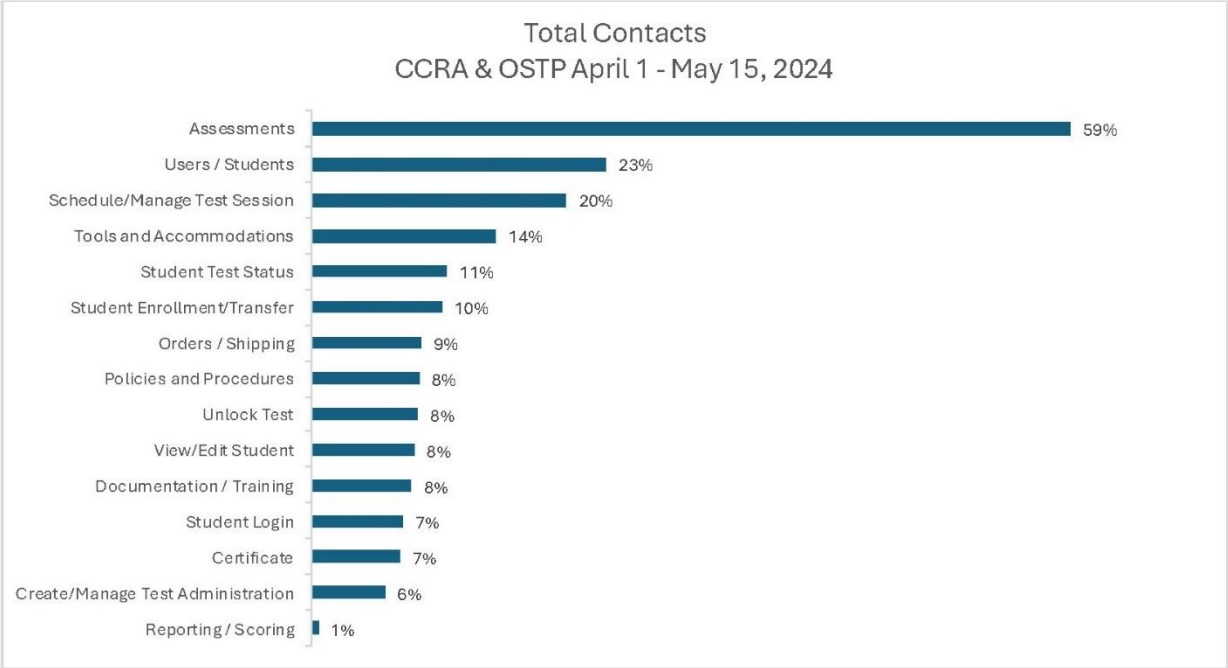
Figure 4-2. Summary of Total Contacts by Category



4.10 Relating Evidence Regarding Test Administration to the Validity Arguments

Chapter 4 provides evidence in support of Argument 1.2, specifically relating the following evidence regarding test administration to this validity argument and related claims:

1.2 Argument: Each test form, an organized sampling of assessment tasks, results in an observed score that reflects a student's knowledge and abilities in the content area being assessed through appropriate test assembly, administration, and scoring procedures. (Evaluation Inference)

1.2.1 Claim: The assessment is administered under appropriate conditions.

> **Evidence:** Chapter 4 describes the administration process for the OSTP assessments. This includes administration modes, procedures, requirements and documentation, training, accommodations, test security, documentation of irregularities, and support provided by the OSTP Service Center. The administration process is described in greater detail in an administration manual. Details about the accommodations are provided in Appendix E.

CHAPTER 5. SCORING

This was the first year of transitioning to Measurement Incorporated (MI) to provide scoring services for OSTP. The scheduling and communication used to coordinate this process was managed by the Cognia Scoring Project Manager. The Cognia Scoring Group Manager also facilitated the transition by providing training materials and consultation, as needed, to ensure a successful transition to MI and a consistent approach to scoring.

Following a handoff from Cognia, MI completed scoring using Project Essay Grade (PEG), an automated scoring engine, and human hand-scoring in MI's secure Virtual Scoring Center (VSC). Responses to be scored are received by MI's IT Project Team and reviewed to ensure all responses are received as expected. Responses are then transferred securely to the VSC system for scoring. After being scored by MI's hand-scoring staff, responses are again reviewed by the IT Project Team to ensure that all records have been scored and exported, and that the scores are aligned with the scoring specification parameters provided by OSDE and Cognia. Once verified, scores are then securely returned to Cognia's reporting team. All paper booklets are received by Cognia and follow the established log-in and scanning processes. Scanned responses were then sent to MI for 100% double-blind hand-scoring since there is no PEG scoring of Paper Based Test (PBT) responses.

5.1 Machine-Scored Items

Multiple-choice responses were compared to scoring keys using item analysis software. Correct answers were assigned a score of 1 point; incorrect answers were given a score of 0 points. Student responses with multiple marks or blank responses were also assigned 0 points.

The hardware elements of the scanners monitored themselves continuously for correct reads, and the software driving these scanners monitored the correct data reads. Standard checks included recognition of a sheet that did not belong or was positioned upside down or backward; identification of missing critical data, including a student ID number or test form that was out of range or missing; and identification of page/document sequence errors. When a problem was detected, the scanner stopped and displayed an error message directing the operator to investigate and correct the situation.

5.2 Scoring Platform and Scoring Positions

All scoring was conducted applying a virtual model. In this model, scorers logged into our training platform at their scheduled time and trained on a pre-recorded lesson module. MI's lesson modules replicate the live training experience as closely as possible, providing guided discussions of the item, prompt, rubric, and annotated anchor sets for each item. Scorers then took a practice set and afterwards watched a narrated review of those responses with true scores and annotations, after which readers took

two qualification sets, needing to achieve a qualifying score of 70% for writing or 80% for constructed responses (with no non-adjacent scores) to be allowed to score that item. In addition to the training materials, the lesson module included critical information scorers would need to train and score live responses, including how to navigate the scoring system, how to communicate with their leadership, how to access the resource library (a repository of all the materials presented in training), and how to handle condition-code and crisis alert responses. Scorers evaluated student work under the supervision of human leadership supplemented by automated monitoring.

- Scorers worked in a non-public setting.
- MI uploaded and shared training materials electronically in the VSC platform to eliminate the possibility of removing or retaining proprietary materials and to reinforce the confidential and proprietary nature of the work.
- Training and all interaction between leadership and scorers occurred within VSC.
- VSC chat was used to facilitate scorer training and individualized coaching, recalibration, and remediation.
- Scorers worked within our locked-down kiosk MI Remote Access (MIRA) without access to other onscreen applications or communication software.
- OSDE had remote access to the scoring system and VSC lessons were provided to observe training sessions.

The following MI staff members were involved with scoring the 2023–24 OSTP responses:

- The *Director for Performance Assessment Scoring* provided guidance, direction, and leadership to Scoring Services.
- The *Program Manager* was responsible for the communication and coordination between Scoring Services and Cognia.
- The *Scoring Manager* served as the liaison between Scoring Services and the Remote Staffing Team to facilitate staffing assignments and handled all matters of logistics.
- The *Scoring Content Lead* prepared the scorer training materials and checked for consistency and accuracy. They facilitated the training of scoring leadership and oversaw all scorer training sessions. They guaranteed the quality and consistency of scoring across all test administrations and items and the timely completion of scoring.
- The *Scoring Director* was responsible for supervising Scorers and Scoring Team Leaders, and for ensuring quality scoring across all test administrations and items.
- The *Scoring Team Leaders (STLs)* provided support and direction to scorers on quality and accuracy.

Per OSTP requirements as expressed in the scoring specifications document, Scoring Supervisors, STLs, and scorers were required to hold a bachelor's degree with coursework related to the content area being scored. All potential scorers and leadership staff submitted documentation (e.g., résumés and/or transcripts) as evidence of meeting the education and experience requirements. Also, each scorer and leadership staff signed a binding non-disclosure/confidentiality agreement. Table 5-1 summarizes the qualifications of the 2023–24 OSTP scoring leadership and scorers.

Table 5-1. Educational Background of Scorers and Scoring Leadership for OSTP

DETAIL	READERS		LEADERSHIP		ALL	
Education	**Number**	**Percent**	**Number**	**Percent**	**Number**	**Percent**
Master's/Doctorate	57	44	4	27	61	42

First season	83	64	0	0	83	58
Total	**130**	**100**	**15**	**100**	**145**	**100**

5.3 Scoring of Writing Prompts

5.3.1 Scope of Work and Scoring Methodology

The writing component for grades 5 and 8 consisted of one item per grade. Responses to all writing prompts were scored on a holistic 1–4 scale. Scorers assigned one of the following codes to those responses that did not meet the criteria of the scoring rubric:

- **Off Topic:** A response that is not related to the task/prompt administered or is not a valid attempt at responding to any task/prompt on the assessment. This also includes responses indicating a refusal by the student to address the prompt or participate in the assessment.
- **Blank:** No deliberate marks in the answer space.
- **Repeats the Prompt:** The response copies all or a portion of the prompt/stimuli materials and offers no attempt to respond to the task/prompt.
- **Non-English:** The response is written in a language other than English or is a mix of English and another language but lacks sufficient English to provide a score.

5.3.2 Leadership Training

Leadership training was held prior to Scorer training to effectively prepare those associates for their role of supervising scoring and conducting read behinds. The Scoring Content Lead and the Scoring Manager trained the Scoring Director on all items. The Team Leader and Scorers were trained through the VSC Training application.

5.3.3 Scorer Training

Prior to the project administration, the Scoring Manager, Content Lead, and Scoring Director assembled lesson modules for each CR item. Lesson modules consist of a combination of text and audio/video

materials. The modules ensure that all scorers receive the same instruction. The lessons guide trained scorers at the item level following this process:

- Brief overview of the assessment program and the training process.
- Review of the student prompt, passage, and the scoring rubric.
- Guided review of the Anchor Set responses.
- Analysis and discussion of each anchor response, its score point assigned at range-finding, as well as its associated, detailed scoring rationale.
- Instruction on using the VSC/MIRA scoring platform.
- Independent review and scoring of responses in the Practice Set to replicate the actual scoring process.
- Discussion of each practice response, revealing the actual score assigned to the student response and explaining the scoring rationale.
- Methodical review of all scoring criteria while paying attention to the fine lines determining cut-points between adjacent score points.
- Administration of two Qualification Sets consisting of 10 pre-scored responses, scored independently, and deployed randomly to each scorer. Scorers who passed the qualification threshold for one of the two sets were admitted to scoring live student responses. All scorers were required to take both Qualification Sets, even if they passed Qualification Set 1. No Scorers failed all three items for which they attempted to qualify.
- Once qualified, Scorers were given instructions on applying condition codes and identifying crisis responses.

5.3.4 Monitoring Scoring Quality

Scorers were required to demonstrate and maintain their ability to score student responses accurately and consistently throughout the scoring process. The VSC system enabled scoring leadership to measure and monitor individual and group performance on each scored item in terms of accuracy and consistency, as well as read rate (scoring speed) and overall production rate on a constant, real-time basis. The VSC scoring tools that measured OSTP scoring quality were as follows:

- Read-behinds and targeted recalibration
- Double-blind scoring
- Validity responses

Read-behinds were conducted daily, and double-blind statistics and validity results were reviewed daily. These multiple monitoring techniques are critical for monitoring scorer accuracy during live scoring.

Each scorer's performance on the above quality measures was monitored by VSC, and scoring leadership daily reviewed data related to the accuracy, consistency, and overall quality of scoring. Scoring leadership was available to answer scorers' questions. They also counseled and retrained scorers as needed to determine whether a scorer should continue scoring. Scorers who demonstrated inaccurate or inconsistent scoring through these quality control measures were retrained/recalibrated. Upon approval by the Scoring Manager or Scoring Director, the scorer could resume scoring. If a scorer's performance warranted removal from scoring, scoring leadership initiated a process through which that scorer's work was invalidated and returned to the scoring queue of unscored responses to be re-scored by those scorers who demonstrated scoring accuracy at or above standard.

Read-Behinds Scoring Procedures

Leadership used inter-rater reliability (IRR) and validity results data as monitoring tools to determine which scorers needed recalibration. This recalibration was achieved using read-behinds. Scorers whose IRR and/or validity results indicated they were drifting from the criteria had some percentage of their packets (scored sets of responses) captured and sent to a read-behinds queue. MI's leadership could adjust read-behinds to capture percentage anywhere from 1% to 100% for any reader on a single item, multiple items, or all items. Leadership reviewed the responses and the scores given by these scorers in these packets. Leadership looked for examples of mis-scored responses and returned these responses and the correct scores for the scorers to review and ask questions on. Through this cycle of targeted feedback and discussion, scorers received specific recalibration on the line(s) where individual drift was evident. Leadership was also able to change incorrect scores during the read-behinds process without returning these responses to the scorers. This was done when there were many mis-scored responses in a packet that contained the same pattern of drift on the scorer's part; in this case, leadership sent the scorer a representative sample of recalibration responses to address the issue and changed scores on the remainder.

Double-Blind Scoring

All computer-based test (CBT) operational student responses were 100% double-blind scored by the PEG engine first, then a human scorer second. All paper-based test (PBT) operational and all CBT field-test student responses were 100% double-blind scored by human scorers only. (PBT field-test responses were not scored.) In double-blind scoring, the situation may have arisen that the score assigned by the first reader did not match the score assigned by the second reader. If there was a discrepancy (a difference greater than one score point) between two scores assigned to the same student response, it was placed into a resolution queue. Resolution responses were reviewed by scoring leadership (Scoring Team Leader or Scoring Director) who assigned the final score. If the first and second readings were adjacent (a difference of one score point), then the second score became the final score. For operational items, this was the human score.

Validity Responses

MI's main tool for monitoring readers was validity responses. Validity responses are those that have been prescored by MI's Managers, Content Scoring Managers, and/or Scoring Directors. Validity responses are seeded into packets of live responses—typically at a rate of 5%—to provide a "test" of the readers' accuracy over the course of the project. Validity responses look just like live responses, and scorers had no idea their scores were being evaluated against scores that had been pre-determined by project leadership. If validity data showed that a scorer was drifting, that scorer was sent a message informing that their accuracy was either below average or unsatisfactory, that their Team Leader would be working with them to help improve their accuracy, and that they should proactively take some time to pause scoring and review their training materials. Any scorer whose validity results were judged "unsatisfactory"

had their scores reset (voided) until such time as the scorer improved their accuracy. Scorers who failed to improve despite targeted feedback and one-on-one assistance from leadership were removed from the item(s) on which they were struggling, though they were allowed to continue scoring other items where their validity results were satisfactory.

Scoring Reports

VSC generated multiple reports used by scoring leadership to measure and monitor scorers for scoring accuracy, consistency, and productivity. These reports included inter-rater reliability, score-point distribution, and validity results reports. Samples of these reports are provided in Appendix I.

5.3.5 Inter-rater Reliability

Inter-rater reliability reports indicate agreement rates between readers and provide a picture of readers' scoring patterns. During scoring, the inter-rater reliability reports can help to determine team or reader drift and team leader influence. The supervisor can re-anchor readers or teams with live responses, relevant training materials, and scoring guidelines. Overall inter-rater statistics are presented here as evidence for the reliability of the scoring results for ELA grades 5 and 8. Only responses that received numeric scores are included. CBT and PBT results are combined in the same row. These results demonstrate the agreement between scores assigned by the first reader, primarily the PEG engine for CBT responses, and the human rater serving as the second rater. The qualification threshold was set at 70% exact and 100% exact or adjacent agreement for the writing prompts in grades 5 and 8.

Various statistics are employed to evaluate inter-rater consistency or reliability, such as the percentage of exact agreement, and percentage of adjacent agreement. The percentage of responses that required a third score is also included to quantify the discrepancy resolution between the PEG engine and the human rater when their scores are not adjacent. Table 5-2 presents a summary of inter-rater reliability statistics for the items in grades 5 and 8, excluding those that appeared only on a breach test form.

Table 5-2. Summary of Inter-rater Reliability

Content	Grade	Administration	Item Number	Score Categories	Included Scores	Percent Exact	Percent Adjacent	Percent Third Read
Writing	5	OP	761899	1	1-4	70.1	28.1	1.8
Writing	8	OP	762511	1	1-4	67.3	31.3	1.4

On average, the PEG engine and the human rater for the item in grade 5 agreed exactly (i.e., both modes of scoring independently rated the responses with the same score) 70.1% of the time and in grade 8 67.3% of the time. In the few instances of disagreement of more than one score point between the AI score and the human score, the responses were automatically routed to a third rater to resolve the discrepancy and mitigate the impact of the disparity.

5.4 Scoring of Constructed-Response Items

5.4.1 Scope of Work

The OSTP test administration for ELA also consisted of two operational constructed-response (CR) items and four field-test constructed-response items each in grades 3, 4, 6, and 7.

5.4.2 Benchmarking Meetings

Benchmarking meetings were held virtually between the MI Scoring Content Specialist, the Cognia Content Development Specialist, and the OSDE Content Specialist to discuss the way the students engaged with each item and to review the suggested scores assigned to the benchmarked materials. Each of the 16 field-test items across grades 3, 4, 6, and 7 was reviewed to determine its scorability and to set the scoring standards using exemplar student responses. As per standard protocol and best practice, OSDE representatives officially approved the responses and their respective scores for their use in scorer training.

5.4.3 Quality Control Tools and Inter-rater Reliability

The scoring of the constructed-response questions mostly followed the same scoring specifications and parameters as the grade 5 and 8 writing prompts. Compared to the qualification threshold set at 70% exact and 100% adjacent agreement for the writing prompts in grades 5 and 8, the scorer qualification threshold for the CR items in grades 3, 4, 6, and 7 was 80% exact and 100% exact or adjacent. The double-blind rate for the two CBT operational items per grade was 100% with the first score provided by PEG, and the second score provided by human scorers. The double-blind rate for the two PBT operational items and the four field-test items per grade was 100% with both scores provided by a human scorer. The same quality control tools were used for the CR items as for the writing items in grades 5 and 8 and as described in section 5.3.4.

Table 5-3 shows a summary of inter-rater reliability statistics for the CR items in grades 3, 4, 6, and 7, excluding those that appeared only on a breach test form. Only responses that received numeric scores are included. Operational and field-test items are included. Results for CBT and PBT responses are combined in the same row for operational items.

Table 5-3. Summary of Inter-rater Reliability Statistics for Grades 3, 4, 6, and 7 CR Items—Reading

Grade	Administration	Item Number	Score Categories	Included Scores	Percent Exact	Percent Adjacent	Percent Third Read
3	OP	627921	1	0-2	78.8	20.9	0.3
	OP	628835	1	0-2	79.2	20.7	0.2

	OP	836871	1	0-2	78.1	21.8	0.1
	FT	863072	1	0-2	88.7	10.2	1.1
	FT	863094	1	0-2	71.8	25.9	2.3
	FT	865604	1	0-2	80.1	19.6	0.4
	FT	865660	1	0-2	76.2	20.1	3.7
7	OP	630510	1	0-2	80.3	19	0.7
	OP	630545	1	0-2	79.1	20.5	0.4
	FT	867091	1	0-2	88	11.7	0.4
	FT	867093	1	0-2	74.2	24.7	1.1
	FT	863050	1	0-2	79.8	18.1	2.2
	FT	861670	1	0-2	85.4	14.1	0.4

5.5 Relating Evidence Regarding Scoring to the Validity Arguments

Chapter 5 provides evidence in support of Claim 1.2, specifically relating the following evidence regarding scoring to the validity arguments:

1.2 Argument: Each test form, an organized sampling of assessment tasks, results in an observed score that reflects a student's knowledge and abilities in the content area being assessed through appropriate test assembly, administration, and scoring procedures. (Evaluation Inference)

1.2.3 **Claim:** The scoring procedures and models produce scores accurately reflective of targeted knowledge and abilities.

> **Evidence:** Chapter 5 has detailed sections describing the scoring process for the OSTP and CCRA assessments, including processes for machine scoring multiple-choice responses on paper-based tests, online scoring of computer-based tests, scoring of writing prompts, field-testing procedures for constructed-response items, and methodology for scoring polytomous items.

CHAPTER 6. CLASSICAL ITEM ANALYSIS

As noted in the *Principles of Educational and Psychological Testing* (Brown, 1983), "A test is only as good as the items it contains." A complete evaluation of a test's quality must include an evaluation of each item. Both *Standards for Educational and Psychological Testing* (AERA et al., 2014) and *Code of Fair Testing Practices in Education* (Joint Committee on Testing Practices, 2004) include standards for identifying quality items. Items should assess only knowledge or skills that are identified as part of the domain being tested and should avoid assessing irrelevant factors. Items should also be unambiguous and free of grammatical errors, potentially insensitive content or language, and other confounding characteristics. In addition, items must not unfairly disadvantage students, particularly racial, ethnic, or gender groups.

Both qualitative and quantitative analyses have been conducted to ensure that OSTP and CCRA items meet these standards. Qualitative analyses are described in earlier chapters of this report; this chapter focuses on quantitative evaluations. Statistical evaluations are presented in four parts: (1) difficulty indices, (2) item-test correlations, (3) differential item functioning (DIF) statistics, and (4) dimensionality analyses. The item analyses presented here are based on the statewide administration of the OSTP and CCRA in spring 2024. Note that the information presented in this chapter is based on operational items (the items on which student scores are calculated). Item analyses were also performed for field-test items; the statistics were used during the item review process and form assembly for future administrations.

6.1 Classical Difficulty and Discrimination Indices

All multiple-choice items were evaluated in terms of item difficulty according to standard classical test theory practices. Difficulty is defined as the average proportion of points achieved on an item and is measured by obtaining the average score on an item and dividing it by the maximum possible score for the item. Multiple-choice items are scored dichotomously (correct vs. incorrect); for these items, the difficulty index is simply the proportion of students who correctly answered the item. Although this index is traditionally described as a measure of difficulty, it is properly interpreted as an *easiness* index, because larger values indicate easier items. An index of 0.0 indicates that all students received no credit for the item, and an index of 1.0 indicates that all students received full credit for the item.

Items that are answered correctly by almost all students provide little information about differences in student abilities, but they do indicate knowledge or skills that have been mastered by most students. Similarly, items that are correctly answered by very few students provide little information about

differences in student abilities, but they may indicate knowledge or skills that have not yet been mastered by most students. In general, to provide the best measurement, difficulty indices should range from near-chance performance (0.25 for four-option multiple-choice items) to 0.90, with most items generally falling between around 0.4 to 0.7. However, on a standards-referenced assessment such as the OSTP and CCRA, it may be appropriate to include some items with very low or very high item difficulty values to ensure sufficient content coverage.

A desirable characteristic of an item is for higher-ability students to perform better on the item than lower-ability students do. The correlation between student performance on a single item and total test score is a commonly used measure of this characteristic of the item. Within classical test theory, the item-test correlation is referred to as the item's discrimination because it indicates the extent to which successful performance on an item discriminates between high and low scores on the test. The theoretical range of these statistics is –1.0 to +1.0, with a typical observed range from 0.2 to 0.6.

Discrimination indices can be thought of as measures of how closely an item assesses the same knowledge and skills assessed by other items contributing to the criterion total score. That is, the discrimination index can be thought of as a measure of construct consistency.

A summary of the item difficulty and item discrimination statistics for each content area and grade combination is presented in Table 6-1. Note that the statistics are presented for all multiple-choice items. The mean difficulty and discrimination values shown in the table are within the generally acceptable and expected ranges, with mean difficulties (*p*-values) between 0.41 and 0.68 and mean discriminations between 0.36 and 0.45.

Table 6-1. Summary of Item Difficulty and Discrimination Statistics of Multiple-Choice Items by Content Area and Grade

Content Area	Grade	Number of Items	*p*-Value				Discrimination			
			Mean	Standard Deviation	Min	Max	Mean	Standard Deviation	Min	Max
ELA	3	56	0.54	0.16	0.26	0.93	0.44	0.12	0.13	0.66
	4	62	0.58	0.14	0.25	0.91	0.43	0.11	0.11	0.58
	5	60	0.68	0.13	0.31	0.95	0.43	0.07	0.19	0.62
	6	55	0.56	0.15	0.21	0.82	0.42	0.08	0.19	0.60
	7	59	0.53	0.14	0.28	0.81	0.41	0.11	0.12	0.58
	8	66	0.59	0.17	0.22	0.93	0.38	0.10	0.11	0.58
Mathematics	3	53	0.65	0.17	0.27	0.96	0.45	0.10	0.16	0.64
	4	53	0.64	0.16	0.26	0.87	0.45	0.09	0.22	0.62
	5	53	0.60	0.18	0.21	0.92	0.44	0.08	0.23	0.59
	6	58	0.51	0.20	0.16	0.90	0.41	0.10	0.20	0.60
	7	57	0.41	0.17	0.15	0.80	0.42	0.10	0.15	0.57
	8	55	0.44	0.15	0.20	0.72	0.40	0.10	0.19	0.60
Science	5	45	0.57	0.16	0.33	0.86	0.39	0.08	0.22	0.55
	8	49	0.53	0.14	0.25	0.76	0.39	0.08	0.19	0.50
	11	77	0.42	0.10	0.23	0.70	0.36	0.11	0.13	0.62
U.S. History	11	55	0.51	0.12	0.26	0.83	0.41	0.10	0.15	0.56

A comparison of indices across grade levels is complicated because these indices are population-dependent. Direct comparisons would require that either the items or the students were common across groups. Since that is not the case, it cannot be determined whether differences in performance across grade levels are due to differences in student abilities, differences in item difficulties, or both. With this caveat in mind, it appears generally that for mathematics and science, students in higher grades found their items more difficult than did students in lower grades, while in ELA difficulty values are more constant across grades.

In addition to the item difficulty and discrimination summaries presented above, item level classical statistics and item level score distributions were also calculated. Item-level classical statistics are provided in Appendix J with item difficulty and discrimination values listed for each item. The item difficulty and discrimination indices are within generally desirable ranges. Very few items were answered correctly at near-chance or near-perfect rates. Similarly, the positive discrimination indices indicate that students who performed well on individual items tended to perform well overall. There were a small number of items that had near-zero discrimination indices.

6.2 Differential Item Functioning (DIF) Analysis

Code of Fair Testing Practices in Education (2004) explicitly states that subgroup differences in performance should be examined when sample sizes permit, and that actions should be taken to ensure that differences in performance are due to construct-relevant, rather than irrelevant, factors. *Standards for Educational and Psychological Testing* (AERA et al., 2014) includes similar guidelines. As part of the effort to identify such problems, all 2023–24 OSTP and CCRA assessment items (operational and field-test items) were evaluated in terms of differential item functioning (DIF) statistics.

Following the classical item analyses, the DIF analyses were performed. One goal of test development is to assemble a set of items that provides an estimate of student ability that is as fair and accurate as possible for all groups within the population. DIF statistics are used to identify items in which focal groups (e.g., Females, African Americans, Hispanics) of students with the same underlying level of ability have different probabilities than those of reference groups (e.g., Males, Whites) of answering correctly. If the item is more difficult or easier for an identifiable focal subgroup, the item may be measuring something different from the intended construct.

For the 2023–24 OSTP and CCRA, 10 demographic subgroup comparisons were evaluated for DIF:

- Male versus Female
- White versus Hispanic or Latino
- White versus Black/African American
- White versus American Indian/Alaskan Native
- White versus Pacific Islander

- White versus two or more races
- Non-EL versus EL (English Learner)
- Non-IEP versus IEP (Individualized Education Program)
- Non-Economically Disadvantaged versus Economically Disadvantaged

For the OSTP and CCRA, the standardization DIF procedure (Dorans & Kulick, 1986) was employed to evaluate subgroup differences. The standardization DIF procedure is designed to identify items for which subgroups of interest perform differently, beyond the impact of differences in overall achievement. The DIF procedure calculates the difference in item performance for two groups of students (at a time) matched for achievement on the total test. Specifically, average item performance is calculated for students at every total score. Then an overall average is calculated, weighting the total score distribution so that it is the same for the two groups.

When differential performance between two groups occurs on an item (i.e., a DIF index in the "low" or "high" categories, explained below), it may or may not be indicative of item bias. Course-taking patterns or differences in school curricula can lead to DIF, but for construct-relevant reasons. On the other hand, if subgroup differences in performance could be traced to differential experience (such as geographical living conditions or access to technology), the inclusion of such items should be reconsidered.

Computed DIF indices have a theoretical range from –1.0 to 1.0 for multiple-choice items. Dorans and Holland (1993) suggested that index values between –0.05 and 0.05 should be considered negligible. Dorans and Holland further stated that items with values between –0.10 and –0.05 or between 0.05 and 0.10 (i.e., "low" DIF) should be inspected to ensure that no possible effect is overlooked and that items with values outside the [–0.10, 0.10] range (i.e., "high" DIF) are more unusual and should be examined very carefully.[6]

Generally, the number of high DIF items was low for most tests. Most tests had zero items flagged for any of the subgroup comparisons, with the remaining tests having four or fewer items flagged. These differences typically result from subgroup comparisons with small focal groups (e.g., White versus Pacific Islander). Notably, no items were flagged for high DIF based on Economic Disadvantage. With so few items flagged, no other patterns are evident. The tables in Appendix K present the number of items classified as either "low" or "high" DIF, overall and by group favored.

[6] *It should be pointed out here that DIF for items is evaluated initially at the time of field-testing. If an item displays high DIF, it is flagged for review by a Cognia content specialist. The content specialist consults with the OSDE to determine whether to include the flagged item in a future operational test administration.*

6.3 Dimensionality Analysis

Because tests are constructed with multiple content area subcategories and their associated knowledge and skills, the potential exists for many dimensions to be invoked beyond the common primary dimension. Generally, the subcategories are highly correlated with each other; therefore, the primary dimension they share typically explains an overwhelming majority of variance in test scores (Roussos & Ozbek, 2006). In fact, the presence of just such a dominant primary dimension is the psychometric assumption that provides the foundation for the unidimensional item response theory (IRT) models that are used for calibrating, linking, scaling, and equating the 2023–24 OSTP and CCRA test forms.

The purpose of dimensionality analyses is to investigate whether violation of the assumption of test unidimensionality is statistically detectable and, if so, (1) the degree to which unidimensionality is violated and (2) the nature of the multidimensionality. Findings from dimensionality analyses performed on the 2023–24 OSTP and CCRA common items for mathematics, ELA, science, and U.S. history are reported in Table 6-2. (Note: Only common and operational items were analyzed because they are used for score reporting.)

The dimensionality analyses were conducted using the nonparametric IRT-based methods DIMTEST (Stout, 1987; Stout, Froelich, & Gao, 2001) and DETECT (Zhang & Stout, 1999). Both methods use as their basic statistical building block the estimated average conditional covariances for item pairs. A conditional covariance is the covariance between two items conditioned on total score for the rest of the test, and the average conditional covariance is obtained by averaging overall possible conditioning scores. When a test is strictly unidimensional, all conditional covariances are expected to take on values within random noise of zero, indicating statistically independent item responses for examinees with equal expected scores. Nonzero conditional covariances are essentially violations of the principle of local independence, and local dependence implies multidimensionality. Thus, nonrandom patterns of positive and negative conditional covariances are indicative of multidimensionality.

DIMTEST is a hypothesis-testing procedure for detecting violations of local independence. The data are first randomly divided into a training sample and a cross-validation sample. Then an exploratory analysis of the conditional covariances is conducted on the training sample data to find the cluster of items that displays the greatest evidence of local dependence. The cross-validation sample is then used to test whether the conditional covariances of the selected cluster of items displays local dependence, conditioning on total score on the non-clustered items. The DIMTEST statistic follows a standard normal distribution under the null hypothesis of unidimensionality.

DETECT is an effect-size measure of multidimensionality. As with DIMTEST, the data are first randomly divided into a training sample and a cross-validation sample (these samples are drawn independently of those used with DIMTEST). The training sample is used to find a set of mutually exclusive and collectively exhaustive clusters of items that best fit a systematic pattern of positive conditional covariances for pairs

of items from the same cluster and negative conditional covariances from different clusters. Next, the clusters from the training sample are used with the cross-validation sample data to average the conditional covariances: within-cluster conditional covariances are summed; from this sum the between-cluster conditional covariances are subtracted; this difference is divided by the total number of item pairs, and this average is multiplied by 100 to yield an index of the average violation of local independence for an item pair. DETECT values less than 0.2 indicate very weak multidimensionality (or near unidimensionality), values of 0.2 to 0.4 indicate weak to moderate multidimensionality, values of 0.4 to 1.0 indicate moderate to strong multidimensionality, and values greater than 1.0 signify very strong multidimensionality (Roussos & Ozbek, 2006).

DIMTEST and DETECT were applied to the 2023–24 OSTP and CCRA, which consisted of 16 different combinations of grade levels and content areas (six in mathematics, six in ELA, three in science, and one in U.S. history). Because DIMTEST software has an upper limit of 24,000 students, the training and cross-validation samples for all test forms were limited to 12,000 each and were randomly sampled from the total sample. DETECT, on the other hand, has an upper limit of 500,000 students, so every training sample and cross-validation sample used all the available data. After randomly splitting the data into training and cross-validation samples, DIMTEST was applied to each dataset to see if the null hypothesis of unidimensionality would be rejected. Next, DETECT was applied to each dataset for which the DIMTEST null hypothesis was rejected, to estimate the effect size of the multidimensionality.

Because of the large sample sizes, DIMTEST would be sensitive even to quite small violations of unidimensionality, and the null hypothesis was strongly rejected for nearly every dataset with most *p*-values being less than 0.01 (see Table 6-2). Strong rejection of the null hypothesis of unidimensionality is not surprising because strict unidimensionality is an idealization that almost never holds exactly for a given dataset. Thus, it was important to use DETECT to estimate the effect size of the violations of local independence found by DIMTEST. Table 6-2 shows the multidimensional effect-size estimates from DETECT.

Table 6-2. Multidimensionality Effect Sizes by Content Area and Grade

Content Area	Grade	DIMTEST *p*-value	DETECT Effect Size
ELA	3	<.001	0.18
	4	<.001	0.13
	5	<.001	0.09
	6	<.001	0.11
	7	<.001	0.11
	8	.001	0.11
Mathematics	3	<.001	0.14
	4	<.001	0.17
	5	<.001	0.24
	6	<.001	0.17
	7	<.001	0.18
	8	<.001	0.24
Science	5	<.001	0.15
	8	<.001	0.19
	11	<.001	0.21
U.S. History	11	<.001	0.19

All the DETECT values for 2023–24 indicated very weak to weak multidimensionality. The average DETECT values for three of the four content areas were 0.12 for ELA, 0.19 for mathematics, and 0.18 for science. In addition, the calculated DETECT value for U.S. history was 0.19. The violations of local independence, as evidenced by the DETECT effect sizes, were very weak (DETECT Effect Size < 0.20), with three exceptions (grades 5 and 8 in mathematics, and grade 11 U.S. history), which were still weak (DETECT Effect Size = 0.24 and 0.21), and do not suggest deviations from unidimensionality, which would warrant changes in test design or scoring.

6.4 Relating Evidence Regarding Classical Item Analysis to the Validity Arguments

Chapter 6 provides evidence in support of Claim 1.2, specifically relating the following evidence regarding classical item analysis to the validity arguments:

1.2 Argument: Each test form, an organized sampling of assessment tasks, results in an observed score that reflects a student's knowledge and abilities in the content area being assessed through appropriate test assembly, administration, and scoring procedures. (Evaluation Inference)

1.2.4 **Claim:** Items on the assessment demonstrate appropriate statistical quality.

Evidence: Chapter 6 describes the classical item analysis procedures conducted to ensure that all items meet the standards of quality outlined by the *Standards for Educational and Psychological Testing* (AERA et al., 2014) and *Code of Fair Testing Practices in Education* (Joint Committee on Testing Practices, 2004).

CHAPTER 7. ITEM RESPONSE THEORY SCALING AND EQUATING

In addition to the classical test theory item analyses previously described, the 2023–24 OSTP and CCRA were analyzed according to item response theory (IRT) models. IRT analyses were used to place all 2023–24 forms on the same scale; details on the IRT calibration and equating procedures for the assessment are described in this chapter. IRT calibration and equating results are provided in the *OSTP and CCRA 2023–24 Equating Reports* (provided as Appendix L), which was shared with members of the OSDE and reviewed with Cognia psychometricians on May 7, 2024, for CCRA and May 28, 2024, for OSTP. The Equating Reports present information about the psychometric activities and results in support of calibration and equating for the 2023–24 OSTP Science assessments in grades 5 and 8, and grade 11 CCRA science and U.S. history. Note that OSTP ELA and mathematics grades 3–8 were not included in the calibration and equating process due to the resetting of standards.

7.1 Item Response Theory Calibration

All 2023–24 OSTP and CCRA items were calibrated using IRT, which uses mathematical models to define a relationship between an unobserved measure of student performance, usually referred to as theta (θ), and the probability (p) of getting a dichotomous item correct or of getting a particular score on a polytomous item. In IRT, it is assumed that all items are independent measures of the same construct (i.e., of the same θ). Another way to think of θ is as a mathematical representation of the latent trait of interest. Several common IRT models are used to specify the relationship between θ and p (Hambleton & van der Linden, 1997; Hambleton & Swaminathan, 1985). The process of determining the specific mathematical relationship between θ and p is called item calibration. After items are calibrated, they are defined by a set of parameters that specify a nonlinear, monotonically increasing relationship between θ and p. Once the item parameters are known, an estimate of θ for each student can be calculated. This estimate, $\hat{\theta}$, is an estimate of the student's true score or a general representation of student performance. It has characteristics that are preferable to those of raw scores for equating purposes.

For the 2023–24 OSTP and CCRA tests, the three-parameter logistic (3PL) model was used for dichotomous items. The graded response model (GRM) was used for polytomous items (Nering & Ostini, 2010), including polytomously scored multipart items and open-response items.

The 3PL model for dichotomous items can be defined as follows:

(Equation 1)

$$P_i(\theta_j) = c_i + (1 - c_i)\frac{\exp\left[Da_i(\theta_j - b_i)\right]}{1 + \exp\left[Da_i(\theta_j - b_i)\right]}$$

where
i indexes the items,
j indexes students,
a represents item discrimination,
b represents item difficulty,
c is the pseudo-guessing parameter, and
D is a normalizing constant equal to 1.701.

In the GRM for polytomous items, an item is scored in k + 1 graded categories that can be viewed as a set of k dichotomies. At each point of dichotomization (i.e., at each threshold), a two-parameter model can be used to model the probability that a student's response falls at or above a particular ordered category, given θ. This implies that a polytomous item with k + 1 categories can be characterized by k item category threshold curves (ICTCs) of the two-parameter logistic form:

(Equation 2)

$$P_{ik}^{*}(\theta_j) = P(U_i \geq k|\theta_j) = \frac{\exp\left[Da_i(\theta_j - b_i + d_{ik})\right]}{1 + \exp\left[Da_i(\theta_j - b_i + d_{ik})\right]}$$

where
U indexes the scored response on an item,
i indexes the items,
j indexes students,
k indexes threshold,
θ is the student ability,
a represents item discrimination,
b represents item difficulty,
d represents threshold, and
D is a normalizing constant equal to 1.701.

After computing k ICTCs in the GRM, k + 1 item category characteristic curves (ICCCs), which indicate the probability of responding to a particular category given θ, are derived by subtracting adjacent ICTCs:

(Equation 3)

$$P_{ik}(\theta_j) = P(U_i = \mathrm{k}|\theta_j) = P_{ik}^{*}(\theta_j) - P_{i(k+1)}^{*}(\theta_j)$$

where
i indexes the items,
j indexes students,
k indexes threshold,
θ is the student ability,
P_{ik} represents the probability that the score on item *i* falls in category k, and
P_{ik}^{*} represents the probability that the score on item *i* falls at or above the threshold k ($P_{i0}^{*} = 1$ and $P_{i(m+1)}^{*} = 0$).

The GRM is also commonly expressed as follows:

(Equation 4)

$$P_{ik}(\theta_j) = \frac{\exp\left[Da_i\left(\theta_j - b_i + d_{ik}\right)\right]}{1 + \exp\left[Da_i\left(\theta_j - b_i + d_{ik}\right)\right]} - \frac{\exp\left[Da_i\left(\theta_j - b_i + d_{ik+1}\right)\right]}{1 + \exp\left[Da_i\left(\theta_j - b_i + d_{ik+1}\right)\right]}$$

Test characteristic curves (TCCs) display the expected (average) raw score associated with each θ_j value between -3.0 and 3.0. Mathematically, the TCC is computed by summing the item characteristic curves (ICCs) of all items that contribute to the raw score. The expected raw score at a given value of θ_j is as follows:

(Equation 5)

$$E\left(X|\theta_j\right) = \sum_{i=1}^{n} P_i\left(\theta_j\right)$$

where
i indexes the items (and *n* is the number of items contributing to the raw score),
j indexes students (here, θ_j runs from –4 to 4), and
$E\left(X|\theta_j\right)$ is the expected raw score for a student of ability θ_j.

The expected raw score monotonically increases with θ_j, consistent with the notion that students of high ability tend to earn higher raw scores than students of low ability. Most TCCs are "S-shaped," as they are flatter at the ends of the distribution and steeper in the middle.

The test information function (TIF) displays the amount of statistical information that the test provides at each value of θ_j. Information functions depict test precision across the entire latent trait continuum. There is an inverse relationship between the information of a test and its standard error of measurement (SEM). For long tests, the SEM at a given θ_j is approximately equal to the inverse of the square root of the statistical information at θ_j (Hambleton, Swaminathan, & Rogers, 1991), as follows:

(Equation 6)

$$SEM\left(\theta_j\right) = \frac{1}{\sqrt{I\left(\theta_j\right)}}$$

Compared to the tails, TIFs are often higher near the middle of the distribution, where most students are located and where most items are sensitive by design.

For more information about item calibration and determination, the reader is referred to Lord and Novick (1968), Hambleton and Swaminathan (1985), or Baker and Kim (2004).

7.1.1 IRT Results

PARSCALE v4.1 (Muraki & Bock, 2003) software was used to perform all IRT analyses for the OSTP and CCRA. Each item occupied only one block in the calibration run, and the 1.701 normalizing constant was used for three-parameter logistic (3PL) items. A default convergence criterion of 0.001 was used. Further details about calibration settings are provided in the OSTP and CCRA Equating Reports, Section 1.3. The number of Newton cycles required for convergence for each grade and content area during the IRT analysis can be found in Table 1.3.1 of each Equating Report. The number of cycles required fell within acceptable ranges (less than 150) for all tests.

Table 1.3.2 in each Equating Report lists items that were flagged based on the quality control checks implemented during the calibration process. Three items were flagged for OSTP (two for science grade 5 and one for science grade 8) and CCRA (two for science and one for U.S. history). All items were flagged because of the equating procedures; those results are described in the Equating section.

The tables in Section 2.5 of each Equating Report (see Appendix L) give the IRT item parameters of all dichotomous and polytomous items on the 2023–24 OSTP science tests and the CCRA science and U.S. history tests by content area and grade.

7.2 EQUATING

The purpose of equating is to ensure that scores obtained from different forms of a test are equivalent to each other. Equating may be used if multiple test forms are administered in the same year, as well as to equate one year's forms to those given in the previous year. Equating ensures that students are not given an unfair advantage or disadvantage because the test form they took is easier or harder than those taken by other students.

The 2023–24 administration of the OSTP and CCRA tests used a raw score-to-theta equating procedure in which test forms were equated to the theta scale established on the reference form (i.e., the form used in the most recent standard setting). This is accomplished through the chained linking design, in which every new form is equated back to the theta scale of the previous year's test form. It can therefore be assumed that the theta scale of every new test form is the same as the theta scale of the reference form since this is where the chain originated.

The groups of students who took the equating items on the 2023–24 OSTP and CCRA tests are not equivalent to the groups who took them in the reference year. IRT is particularly useful for equating

scenarios that involve nonequivalent groups (Allen & Yen, 1979). Equating for OSTP and CCRA uses the anchor-test-nonequivalent-groups design described by Petersen, Kolen, and Hoover (1989). In this equating design, no assumption is made about the equivalence of the examinee groups taking different test forms (that is, naturally occurring groups are assumed). Comparability is instead evaluated by utilizing a set of anchor items (also called equating items). However, the equating items are designed to mirror the operational test in terms of item types and distribution of emphasis. In the OSTP and CCRA tests, every operational item is treated as an equating item.

Item parameter estimates for the 2023–24 OSTP tests were placed on the 2017–18 scale by using the method of Stocking and Lord (1983), which is based on the IRT principle of item parameter invariance.

According to this principle, the equating items for both the 2017–18 and 2023–24 OSTP tests should have the same item parameters. After the item parameters for each 2023–24 test were estimated using PARSCALE (Muraki & Bock, 2003), the Stocking and Lord method was employed to find the linear transformation (slope and intercept) that adjusted the equating items' parameter estimates such that the 2023–24 OSTP tests' TCC for the equating items was as close as possible to that of the 2017–18 OSTP tests.

Note the method described above was also used to place the item parameter estimates for 2023–24 CCRA science grade 11 test on the 2018–19 scale, as standard setting for CCRA science grade 11 took place in the summer of 2019. Additionally, the method was used to place parameter estimates for the CCRA U.S. history grade 11 test on the 2021–22 scale and for the OSTP science grade 8 test on the 2022–23 scale, since standard settings took place in the summer of 2022 and 2023, respectively, for these tests.

7.2.1 Equating Results

Prior to calculating the Stocking and Lord transformation constants, a variety of evaluations of the equating items were conducted. Equating items that were flagged for evaluation as a result of these procedures are listed in Table 1.3.2 of each Equating Report (Appendix L). These items were scrutinized, and a decision was made as to whether to include the item as an equating item or to exclude it. The procedures used to evaluate the equating items are described below. In total, 3 items were excluded from equating for the 2023–24 OSTP science tests; two items were excluded in grade 8 science while one item was excluded from equating in grade 5 science. In addition, three items were excluded from equating for the 2023–24 CCRA tests; two items were excluded from CCRA science, and one item was excluded from U.S. history.

Delta analysis results are provided graphically in Section 2.1 of each Equating Report and tabled in Section 2.3 of the report. The delta procedure was used to evaluate adequacy of equating items; the discard status presented in the appendix indicates whether the item was flagged as potentially inappropriate for use in equating. Finally, *a-a* plots and *b-b* plots, which show the IRT parameters for

2023–24 equating items plotted against their previous values are presented in Section 2.1 of each Equating Report. Any items that appeared as outliers in the plots were evaluated in terms of suitability for use as equating items.

Once all evaluations of the equating items were complete, the Stocking and Lord method of equating was used to place the item parameters onto the previous year's scale, as described above. The Stocking and Lord transformation constants are presented in Table 7-1. Note that no constants are provided for the OSTP ELA and mathematics grades 3–8 assessments as a standard setting occurred during June 2024.

Table 7-1. Stocking and Lord Constants

Content Area	Grade	Slope	Intercept
Science	5	0.96	-0.11
	8	1.03	-0.16
	11	0.94	0.23
U.S. History	11	0.98	0.02

7.3 PERFORMANCE STANDARDS

The CCRA standards to establish performance level cut scores in science grade 11 and U.S. history grade 11 were established in the summers of 2019 and 2022, respectively. Details of these standard-setting procedures can be found in the CCRA Science (Appendix M) and CCRA U.S. History (Appendix N) Standard Setting Reports. The OSTP science grade 8 standards were set in the summer of 2023 (Appendix O). In addition, standards were reset in the summer of 2024 for OSTP ELA and mathematics grades 3–8 and details of these standard-setting procedures can be found in the *OSTP ELA and Math Standard Setting Report* provided as Appendix P. Note that the performance level cut scores in science for grade 5 were established in the summer of 2017 and relevant details for the standard setting can be found by referring to Appendix M in the 2022–23 Technical Report.

The cuts on the theta scale that were established via standard setting are presented in Table 7-2. Also shown in the table are the cut points on the reporting score scale (described below). These cut points will remain fixed throughout the assessment program unless standards are reset for any reason.

The tables in Appendix Q show performance level distributions for 2023–24 by content area and grade.

Table 7-2. Cut Scores on the Theta Metric and Reporting Scale by Content Area and Grade

Content Area	Grade	Theta			Scaled Score				
		Cut 1	Cut 2	Cut 3	Min	Cut 1	Cut 2	Cut 3	Max
ELA	RSA	-0.92	--	--	--	--	--	--	--
	3	-0.89	-0.2882	0.9491	200	286	300	329	399
	4	-0.83	-0.2253	0.9407	200	286	300	327	399
	5	-0.79	-0.1812	0.9353	200	286	300	326	399
	6	-0.77	-0.1321	1.2222	200	285	300	332	399
	7	-0.68	-0.1049	1.3413	200	286	300	335	399

	7	-0.33	0.3144	1.0609	200	283	300	320	399
	8	-0.19	0.4165	1.1206	200	283	300	319	399
Science	5	-0.91	0.1757	1.3221	200	272	300	330	399
	8	-0.78	0.0873	1.2695	200	279	300	330	399
	11	0.17	0.8021	1.5289	200	278	300	327	399
U.S. History	11	-0.26	0.1396	1.2955	200	292	300	337	399

** Note that only a single cut point was set for grade 3 RSA and no scaled scores were reported.*

7.4 OKLAHOMA PERFORMANCE INDEX SCORES

Because the θ scale used in IRT calibrations is not readily understood by most stakeholders. Reporting scales were developed for the OSTP and CCRA, and the reporting scales are known as Oklahoma Performance Index scores. The reporting scales are simple linear transformations of the underlying θ scale, which were developed to range from 200 through 399. The lowest scaled score required to achieve Proficient is fixed at 300 for each content area and grade level. Students' total test scores were reported as OPI scale scores derived using item response theory (as described in previous sections of this chapter) and pattern scoring procedures.

There are essentially two ways of scoring a test: number-correct or item-pattern scoring. Number-correct scoring considers how many test items a student answered correctly in determining that student's total raw score. In contrast, the item-pattern scoring method is based on an IRT model. Item-pattern scoring considers not only a student's total raw responses, but also the psychometric characteristics of test items.

Two students with exactly the same total raw scores will get the same test scores in number-correct scoring. It is highly likely, however, that even though they have the same total raw scores, the actual items they answered correctly were different, and their different sets of correctly answered items could

have different item characteristics. In such a case, the students will very likely get different reported test scores in item-pattern scoring. With item-pattern scoring, a student who correctly answers a number of more difficult items will get a higher score than one who answers the same number of easier items. This would be applicable to both total test scores and subscore category scores reported using item-pattern scoring.

Item-pattern scoring has been found to produce smaller standard errors of measurement (SEM) than number-correct scoring. The smaller the SEM, the more confidence we have about the precision of the test results. In addition, test reliability is higher with item-pattern scoring than with number-correct scoring (Yen & Candell, 1991), which means that fewer questions are needed in item-pattern scoring than in number-correct scoring for equivalent scoring accuracy. For these reasons, both total scores and the reported performance levels in the subcategories of the OSTP and CCRA tests are based on item-pattern scoring procedures and reported as OPI scaled scores.

By providing information that is more specific about the position of a student's results, scaled scores supplement performance-level scores. Student scores on the 2023–24 OSTP and CCRA were translated to scaled scores using a data analysis process called scaling. Scaling simply converts data from one scale to another.

Scaled scores offer the advantage of simplifying result reporting across content areas and subsequent years. Because the standard-setting process typically results in different cut scores across content areas on a raw score basis, it is useful to transform these raw cut scores to a scale that is more easily interpretable and consistent. For the OSTP and CCRA, a score of 300 is the cut score determining proficiency in ELA, mathematics, science, and U.S. history. Using scaled scores greatly simplifies the task of understanding how a student performed. The psychometric advantage of scaled scores over raw scores is that they are linear transformations of θ. Since the θ scale is used for equating, scaled scores are comparable from one year to the next. Raw scores are not.

The scaled scores are obtained by a simple translation of ability estimates ($\hat{\theta}$) using the linear relationship between threshold values on the θ metric and their equivalent values on the scaled-score metric. Scaled scores are calculated using the linear equation as follows:

(Equation 7)

$$SS = m\hat{\theta} + b$$

where

m is the slope, and

b is the intercept.

A separate linear transformation is used for each grade and content area combination. Table 7-3 shows the slope and intercept terms used to calculate the scaled scores for each grade, content area, and performance level. Note that the values in Table 7-3 will not change unless the standards are reset.

Table 7-3. Scaled Score Slope and Intercept by Content Area and Grade

Content Area	Grade	*m*-Slope	*b*-Intercept
ELA	3	23.0868	306.6529
	4	23.4305	305.2780
	5	23.6776	304.2894
	6	23.9586	303.1654
	7	24.1172	302.5311
	8	23.5338	304.8647
Mathematics	3	25.1021	298.5915
	4	25.3333	297.6669
	5	25.6545	296.3819
	6	25.7024	296.1906
	7	26.8613	291.5548
	8	27.6264	288.4945
Science	5	25.8871	295.4516
	8	26.6128	292.5487
	11	35.8776	271.2213
U.S. History	11	25.9553	296.3760

Graphs of the scaled score cumulative frequency distributions for 2023–24 are presented in each Equating Report Section 2.1.

7.4.1 Standard Setting and the Oklahoma Performance Index

As mentioned in the previous section, performance standards for CCRA science, CCRA U.S. history, OSTP science grade 8, and OSTP ELA and mathematics grades 3–8 were reset in the summers of 2019, 2022, 2023, and 2024, respectively. In each case new performance level cut scores were established for the relevant grades and content areas and therefore the associated scales were reset. As described at the beginning of this section, the reporting scale (i.e., the Oklahoma Performance Index) is simply a linear transformation of the underlying IRT scale. The Oklahoma State Department of Education elected to keep the same reporting scale range (i.e., 200–399, with proficient at 300) for all grades and content areas after their respective standard settings. While the OPI scale score range remained the same, it is important to note that the meaning and interpretation of the scale scores are different from those prior to each standard setting. Appropriate interpretations of the scale scores are interpretations relevant to the newly established standards, performance level descriptors, and performance level cut scores.

7.5 Relating Evidence Regarding IRT Scaling and Equating to the Validity Arguments

Chapter 7 provides evidence in support of Claims 1.2, 1.3, and 1.4, specifically relating the following evidence regarding IRT scaling and equating to the validity arguments:

1.2 Argument: Each test form, an organized sampling of assessment tasks, results in an observed score that reflects a student's knowledge and abilities in the content area being assessed through appropriate test assembly, administration, and scoring procedures. (Evaluation Inference)

1.2.3 **Claim:** The scoring procedures and models produce scores accurately reflective of targeted knowledge and abilities.

> **Evidence:** Section 7.1 describes the scoring models used for dichotomous and polytomous items, describing the models used in detail and citing the references that establish the appropriateness of these models for placing student performances on a common scale for scoring purposes.

1.2.4 **Claim:** Items on the assessments demonstrate appropriate statistical quality.

> **Evidence:** Subsection 7.1.1 describes IRT results referring to tables within the equating report (Appendix L) that describe quality control checks on items and procedures for making interventions based on items being flagged during these checks.

1.3 Argument: The observed score on any specific test form for a given grade and content area is reflective of the expected score on any form of the test for that grade and content area. (Generalization Inference)

1.3.4 **Claim:** Equating and scaling methods accurately place scores from different forms onto a common scale.

> **Evidence:** Section 7.2 describes equating procedures in detail, Section 7.3 summarizes equating results, and Appendix L provides a full report of equating results. These sections demonstrate a high level of rigor in selection, application, and interpretation of equating results.

1.4 Argument: Expected scores are attributable to proficiency in the target knowledge and abilities. (Explanation Inference)

1.4.1 **Claim:** Cut scores are established through defensible standard-setting methods.

> **Evidence:** Section 7.4 summarizes standard-setting procedures and results, and Appendices M, N, O, and P provide a full report of standard-setting procedures and results. These demonstrate rigorous adherence to well-accepted standard-setting procedures.

CHAPTER 8. RELIABILITY

Although an individual item's performance is an important focus for evaluation, a complete evaluation of an assessment must also address the way items function together and complement one another. Tests that function well provide a dependable assessment of the student's level of ability. Unfortunately, no test can do this perfectly. A variety of factors can contribute to a given student's score being either higher or lower than his or her true ability. For example, a student may misread an item or mistakenly fill in the wrong bubble when he or she knew the answer. Collectively, extraneous factors that impact a student's score are referred to as measurement error. Any assessment includes some amount of measurement error; that is, no measurement is perfect. This is true of all academic assessments—some students will receive scores that underestimate their true ability, and other students will receive scores that overestimate their true ability.

When tests have a high amount of measurement error, student scores are very unstable. Students with high ability may get low scores or vice versa. Consequently, one cannot reliably measure a student's true level of ability with such a test. Assessments that have less measurement error (i.e., errors made are small on average and student scores on such a test will consistently represent his or her ability) are described as more reliable.

There are several ways to estimate an assessment's reliability. One possible approach is to give the same test to the same students at two time points that are close to each other. If students receive the same scores on each test, then the extraneous factors affecting performance are small and the test is reliable. This is referred to as "test-retest reliability." A potential problem with this approach is that students may remember items from the first administration or may have gained (or lost) knowledge or skills in the interim between the two administrations. A solution to the "remembering items" problem is to give a different but parallel test at the second administration. If student scores on each test correlate highly, the test is considered reliable. This is known as "alternate-forms reliability," because an alternate form of the test is used in each administration. This approach, however, does not address the problem that students may have gained (or lost) knowledge or skills in the interim between the two administrations. In addition, the practical challenges of developing and administering parallel forms generally preclude the use of parallel forms reliability indices.

One way to address the latter problem is to split the test in half and then correlate students' scores on the two half-tests; this in effect treats each half-test as a complete test. By doing this, the problems associated with an intervening time interval and of creating and administering two parallel forms of the test are alleviated. This estimate is known as a "split-half reliability." If the two half-test scores correlate highly, items on the two half-tests must be measuring very similar knowledge or skills. This is evidence

that the items complement one another and function well as a group. This also suggests that measurement error will be minimal.

The split-half method requires psychometricians to select items that contribute to each half-test score. This decision may have an impact on the resulting correlation since each different possible split of the test halves will result in a different correlation. Another problem with the split-half method of calculating reliability is that it underestimates reliability, because test length is cut in half. All else being equal, a shorter test is less reliable than a longer test. Cronbach (1951) provided a statistic, α (alpha), that eliminates the problem of the split-half method by comparing individual item variances to total test variance. Cronbach's α was used to assess the reliability of the 2023–24 OSTP and CCRA as follows:

(Equation 8)

$$\alpha \equiv \frac{n}{n-1}\left[1 - \frac{\sum_{i=1}^{n} \sigma^2_{(Y_i)}}{\sigma_x^2}\right]$$

where
i indexes the item,
n is the total number of items,
$\sigma^2_{(Y_i)}$ represents individual item variance, and
σ_x^2 represents the total test variance.

8.1 Reliability and Standard Errors of Measurement

All reliability calculations (i.e., Cronbach's alpha and SEM) were based on the final sets of common and unique items that passed data review and were retained for operational scoring. Average values and ranges of Cronbach's α coefficient and raw score standard errors of measurement (SEMs) for each content area and grade based on the overall population of students who took the 2023–24 OSTP and CCRA tests are presented in Table 8-1. Additionally, Appendix R presents descriptive statistics for raw scores and reliability results.

Table 8-1. Summary of Reliability and SEM Results by Content Area and Grade

Content Area	Grade	Number of Students	Max	Raw Score Mean	Standard Deviation	Alpha	Standard Error
ELA	3	48,954	48	26.29	9.45	0.90	3.02
	4	49,144	52	30.15	10.60	0.91	3.10
	5	41,645	55	37.63	9.75	0.91	3.00
	6	48,730	52	29.04	10.68	0.92	3.08
	7	49,087	52	27.16	10.24	0.90	3.18
	8	44,283	57	33.99	9.74	0.89	3.16
Mathematics	3	40,874	50	33.60	10.06	0.92	2.80
	4	39,432	50	31.55	10.14	0.92	2.90
	5	40,157	50	30.12	10.15	0.92	2.93
	6	40,957	50	27.57	9.38	0.90	2.99
	7	41,549	50	21.58	10.02	0.91	3.06
	8	42,838	50	22.41	10.13	0.91	3.11
Science	5	40,623	45	25.45	8.08	0.87	2.95
	8	43,303	48	25.76	9.07	0.88	3.11
	11	47,712	62	27.83	11.16	0.90	3.56
U.S. History	11	47,745	50	26.13	10.61	0.91	3.12

Appendix R also presents reliabilities for various subgroups of interest. Subgroup Cronbach's α's were calculated using the formula defined on the preceding page, based only on the members of the subgroup in question in the computations. Values are calculated only for subgroups with 10 or more students. For several reasons, these results should be interpreted with caution. First, inherent differences between grades and content areas preclude making valid inferences about the quality of a test based on statistical comparisons with other tests. Second, reliabilities are dependent not only on the measurement properties of a test but also on the statistical distribution of the studied subgroup. For example, it can be readily seen that the subgroup sample sizes vary considerably, which results in natural variation in reliability coefficients. Additionally, Cronbach's α, a type of correlation coefficient, may be artificially depressed for subgroups with little variability (Draper & Smith, 1998). Third, there is no industry standard to interpret the strength of a reliability coefficient, and this is particularly true when the population of interest is a single subgroup.

Of more interest are reliabilities for the reporting categories within OSTP and CCRA content areas as described in Chapter 3. Cronbach's α coefficients for reporting categories were calculated with the same formula defined previously using just the items of a given subcategory in the computations. Again, these results are presented in Appendix R. Because results are based on a subset of items rather than the full test, computed reporting category reliabilities were lower (sometimes substantially so) than overall test reliabilities approximately to the degree one would expect based on classical test theory; interpretations should take this into account. Of specific note is grades 5 and 8 ELA Reporting Category 6 (Writing): having only one item (a writing prompt), values for Cronbach's α could not be calculated. Qualitative differences between grades and content areas once again preclude valid inferences about the quality of the full test based on statistical comparisons among reporting categories.

8.2 Reliability of Performance Level Categorization

While related to reliability, the accuracy and consistency of classifying students into performance categories are even more important statistics in a standards-based reporting framework (Livingston and Lewis, 1995). After the performance levels were specified and students were classified into those levels, empirical analyses were conducted to determine the statistical accuracy and consistency of the classifications. For the OSTP and CCRA, students are classified into one of four performance levels: Below Basic, Basic, Proficient, or Advanced. This section of the report explains the methodologies used to assess the reliability of classification decisions.

Accuracy refers to the extent to which decisions based on test scores match decisions that would have been made if the scores did not contain any measurement error. Accuracy must be estimated because errorless test scores do not exist. Consistency measures the extent to which classification decisions based on test scores match the decisions based on scores from a second, parallel form of the same test. Consistency can be evaluated directly from actual responses to test items if two complete and parallel forms of the test are given to the same group of students. In operational test programs, however, such a design is usually impractical.

However, techniques have been developed to estimate both the accuracy and consistency of classification decisions based on a single administration of a test. The Rudner (2001, 2005) technique can easily be applied to data that are scored on the IRT theta metric or any linear transformation of this metric, such as scale scores. The applicability of the Rudner technique to IRT-based metrics distinguishes this method from methods based on observed scores, such as the Lewis and Livingston (1995) method.

The Rudner (2001, 2005) technique was utilized for the 2023–24 OSTP and CCRA as a method to estimate the decision accuracy and consistency of classification decisions with respect to scale scores. Using an examinee's estimated scale score and standard error, assuming a normal probability distribution, the method first calculates for all examinees at a fixed value of true scale score, the expected proportion whose observed scale score is in an interval $[a,b]$. Then, by summing over all examinees whose true scale scores are in an interval $[c,d]$, the method yields the expected proportion of all examinees whose true scale score is in $[c,d]$ and whose observed scale score is in $[a,b]$. By setting $[a,b]$ and $[c,d]$ to correspond to the true score intervals defined by the cut scores yields the elements of a classification table that shows the expected proportion of all examinees with observed and true scale scores in each cell. These proportions can then be used to calculate both classification accuracy and classification consistency estimates.

For the classification accuracy tables, cell $[i, j]$ represents the estimated proportion of students whose true scale score fell into classification i (where i = 1 to 4, for the four achievement levels) and whose observed

scale score fell into classification j (where j = 1 to 4). The sum of the diagonal entries (i.e., the proportion of students whose true and observed classifications matched) signified overall accuracy.

Another way to measure consistency is to use Cohen's (1960) coefficient κ (kappa), which assesses the proportion of consistent classifications after removing the proportion of consistent classifications that would be expected by chance. It is calculated using the following formula:

(Equation 9)

$$\kappa = \frac{(\text{Observed agreement}) - (\text{Chance agreement})}{1 - (\text{Chance agreement})} = \frac{\sum_i C_{ii} - \sum_i C_{i.} C_{.i}}{1 - \sum_i C_{i.} C_{.i}}$$

where

C_i Is th e proportion of students whose observed performance level would be Level I (where I = 1–4) on the first hypothetical parallel form of the test;

C_i is th e proportion of students whose observed performance level would be Level I (where I = 1–4) on the second hypothetical parallel form of the test; and

C_{ii} is the proportion of students whose observed performance level would be Level I (where I = 1–4) on both hypothetical parallel forms of the test.

Because κ is corrected for chance, its values are lower than are those of other consistency estimates.

8.3 Accuracy and Consistency Results

The results based on the accuracy and consistency analyses described above are provided in Table 8-2. The table includes overall accuracy and consistency indices, including kappa. Accuracy and consistency values conditional on performance level are also given. For these calculations, the denominator is the proportion of students associated with a given performance level. For example, the conditional accuracy value is 0.83 for the Proficient level in grade 3 ELA. This value indicates that among the students whose true scores placed them in this classification, 83% would be expected to be in this classification when categorized according to their observed scores. Similarly, again for grade 3 ELA, a consistency value of 0.78 indicates that 78% of students with observed scores in the Proficient level would be expected to score in this classification again if a second, parallel test forms were used.

Table 8-2. Summary of Decision Accuracy (and Consistency) Results by Content Area and Grade, Overall and Conditional on Performance Level

Content Area	Grade	Overall	Kappa	Conditional on Performance Level			
				Below Basic	Basic	Proficient	Advanced
ELA	3	0.82 (0.74)	0.64	0.90 (0.85)	0.65 (0.53)	0.83 (0.78)	0.81 (0.71)
	4	0.81 (0.74)	0.63	0.91 (0.86)	0.66 (0.54)	0.82 (0.76)	0.78 (0.65)
	5	0.81 (0.74)	0.63	0.91 (0.87)	0.69 (0.57)	0.81 (0.74)	0.77 (0.64)
	6	0.83 (0.76)	0.65	0.91 (0.87)	0.68 (0.56)	0.84 (0.79)	0.75 (0.59)
	7	0.82 (0.75)	0.62	0.90 (0.86)	0.61 (0.49)	0.84 (0.78)	0.75 (0.60)
	8	0.82 (0.76)	0.64	0.91 (0.87)	0.62 (0.50)	0.84 (0.79)	0.76 (0.59)
Mathematics	3	0.82 (0.74)	0.65	0.92 (0.88)	0.77 (0.67)	0.74 (0.64)	0.81 (0.72)
	4	0.82 (0.75)	0.66	0.90 (0.86)	0.77 (0.68)	0.78 (0.70)	0.83 (0.75)
	5	0.82 (0.75)	0.65	0.90 (0.86)	0.75 (0.65)	0.80 (0.72)	0.83 (0.74)
	6	0.81 (0.74)	0.63	0.90 (0.86)	0.68 (0.56)	0.78 (0.69)	0.85 (0.75)
	7	0.83 (0.76)	0.64	0.90 (0.87)	0.68 (0.56)	0.78 (0.67)	0.87 (0.80)
	8	0.85 (0.79)	0.66	0.92 (0.90)	0.71 (0.58)	0.78 (0.68)	0.86 (0.78)
Science	5	0.81 (0.73)	0.61	0.86 (0.81)	0.79 (0.70)	0.79 (0.71)	0.77 (0.62)
	8	0.80 (0.72)	0.60	0.86 (0.81)	0.7 (0.60)	0.82 (0.74)	0.80 (0.67)
	11	0.85 (0.79)	0.66	0.93 (0.90)	0.71 (0.60)	0.79 (0.68)	0.85 (0.76)
U.S. History	11	0.82 (0.75)	0.64	0.89 (0.86)	0.53 (0.41)	0.86 (0.79)	0.82 (0.73)

For some testing situations, the greatest concern may be making decisions around level thresholds. For example, if a college gave credit to students who achieved an Advanced Placement test score of 4 or 5 but not to students with scores of 1, 2, or 3, one might be interested in the accuracy of the dichotomous decision below 4 versus 4 or above. For the 2023–24 OSTP and CCRA, Appendix S provides accuracy and consistency estimates at each cut point, as well as false positive and false negative decision rates. (A false positive is the proportion of students whose observed scores were above the cut and whose true scores were below the cut. A false negative is the proportion of students whose observed scores were below the cut and whose true scores were above the cut). Accuracy and consistency estimates at each cut point were 0.87 or higher across all content areas and grades for 2023–24 OSTP and CCRA. Further, false positive and false negative rates were at the nominal level (0.05) or lower, indicating that student classification according to true scores is in agreement with observed score classification.

8.4 Relating Evidence of Reliability to the Validity Arguments

Chapter 8 provides evidence in support of Claims 1.3 and 1.4, specifically relating the following evidence regarding IRT scaling and equating to the validity arguments:

1.3 Argument: The observed score on any specific test form for a given grade and content area is reflective of the expected score on any form of the test for that grade and content area. (Generalization Inference)

1.3.3 **Claim:** Statistical analyses of observed scores on specific forms show that they are good predictors of expected scores on other forms.

Evidence: Section 8.1 describes the process for analyzing the reliability of OSTP forms and the results of these analyses. These analyses establish the reliability of each form. Subject to the accuracy of equating and scaling methods, adequate reliability of individual forms establishes them as good predictors of expected scores.

1.4 Argument: Expected scores are attributable to proficiency in the target knowledge and abilities. (Explanation Inference)

1.4.2 **Claim:** Tests are assembled with adequate precision near cut points.

Evidence: Section 8.2 describes decision consistency analysis procedures and results. Appendix S describes the results in further detail. Accuracy and consistency rates were reported as being adequately high while false positive and negatives demonstrated strong agreement between true score and observed score classification decisions.

CHAPTER 9. SCORE REPORTING

The OSTP and CCRA are designed to measure student performance against Oklahoma's content standards. Consistent with this purpose, results for the OSTP and CCRA are reported in terms of four performance levels that describe student performance in relation to these established state standards: Below Basic, Basic, Proficient, and Advanced. Students receive a separate performance-level classification (based on overall scaled score) for each content area assessed in the student's grade. All OSTP and CCRA tests were primarily administered online, with paper forms provided as an accommodation. In 2024 standard setting meetings were held for OSTP ELA and mathematics. As a result, new performance level descriptors (PLDs) and cuts were determined and approved by OSDE. These new PLDs were reported on the OSTP student reports.

Results were generated at the student, school, and district levels. Results reported on the student's report depend on the student's grade. Students in grades 5 and 8 are assessed in ELA, mathematics, and science. Students in grades 3, 4, 6, and 7 are assessed in ELA and mathematics. Grade 11 students taking CCRA are assessed in U.S. history and science. In addition to these subjects, the CCRA reports contain ACT results. The student reports and student results labels were printed and mailed to the districts for distribution to the schools. In addition to the paper reports, an online reporting tool was provided for school, district, and state users to dynamically generate their own reports and review the student and summary results of each test. The details of each report are presented in the sections that follow. Samples of the reports are included in Appendix T. As part of the reporting tools, the Parent Portal provides families with an online portal to access their student's results.

9.1 BUSINESS REQUIREMENTS

To ensure that reported results for the OSTP and CCRA are accurate relative to collected data and other pertinent information, the Reporting Business Requirements document is prepared prior to each reporting year. The document describes the requirements used in the analyses of OSTP and CCRA test data and in reporting content area results. These requirements also guide data analysts in identifying students to be excluded from school-, district-, and state-level summary computations where applicable. A copy of the Reporting Business Requirements document is included in Appendix U. Each year, edits are made to the requirements document based on OSDE changes to the programs or reports. The document is approved by OSDE. Any changes or additions after approval are documented in the Addenda of the document.

9.2 STATIC REPORTS

The following reporting deliverables were produced for the operational tests:

- Student Report
- Student Results Label

The student reports and student results labels (for all tested grades) were printed and shipped to the districts for distribution to the schools. In addition, the school, district, and state users also had access to the eMetric Data Interaction reporting tool. Printed and online materials are available in both English and Spanish. Each of these reporting deliverables is described in the following sections.

9.2.1 Student Report

The student report created for each student in grades 3–8 is a double-sided color folio report printed on 11 x 17-inch paper. The report provides scaled score, performance level, and reporting category results for each tested content area, as well as a state level breakdown of student performance by performance level for each content area. (See Appendix T for an example.) Students receive a report with information on each content area tested at that grade. One copy of the report is produced for schools to send home to parents/guardians. Schools were provided with instruction on how to pull information from the eMetric portal if paper copies were needed for the student's file.

The CCRA student report is a double-sided color folio report printed on 8 ½ x 11-inch paper. A resource page is printed for all students and provides resources for parents and students. The report provides results for science, U.S. history, ELA, and mathematics. In 2023, U.S. history standards setting was conducted. After approval of the U.S. history cuts, the new scales were used to report scaled scores and performance levels on the student report.

The front page of each report begins by providing the following identifying demographics about the student:

- Student name
- Local ID
- State ID
- Date of birth
- Grade
- School name
- District name
- Code (district and school code)

The top section of the front page presents a letter from the State Superintendent of Public Instruction. Following the letter is a graphical display of the student's scaled score and the earned performance level for each content area tested. Below that information there is a graphical display of the student's test results in that content area over the last three years if that information is available. Historical scores are only available for ELA and mathematics in grades 4–8. Two prior year results are reported if available. If scores are not available a note "No Score Available" is printed. For grade 3 ELA tests, there is also a

statement about whether a student did or did not meet the RSA Criteria based upon Standard 2 (Reading and Writing Process) and Standard 4 (Vocabulary).

The middle section of the folio provides detailed information on how families can support students in each content area. The top sections provide the performance level descriptor information pertaining to the performance level achieved by the student in each performance level. Next, each content area is broken down into reporting categories and shows an indication of how many points the student earned in each category out of the total points possible. Alongside each reporting category are the normative performance comparisons for that category and ways in which families can support their student's continued growth. In 2024, symbols were introduced to represent the reporting category indicators. A Warning signal (yellow triangle with exclamation mark) was used to represent Approaching Expectations, an equal sign was used to represent Near/At Expectations, and a checkmark with green background was used to represent Achieving Expectations. In CCRA student reports, the Ways to Support text is not included. The writing composite score and performance level were reported on the OSTP student reports. Beneath that section, the student results in each content area tested are compared to the school and district performance in a bar graph. In 2024, Lexile measures (for reading) and Quantile measures (for mathematics) were removed from the OSTP student reports.

The back page of the report provides additional information for families looking to gather more information about the report or their student's performance in school. There is a section to assist families with using the report when meeting with the student's teacher or school. There is also a list of resources and links to family guides to further support student growth and achievement, as well as a short Glossary of Terms.

9.2.2 Student Results Label

A student results label was generated for each student. Each student label is two by four inches and provides the following student information:

- Student name
- State Student ID
- Date of birth
- Gender
- Grade
- School name
- District name

The label provides the student's scaled score and performance level for each content area tested at the grade level. If a student did not earn a scaled score, the score column contains the abbreviation of the not tested reason and the performance level column contains the expanded not tested reason text. The label also indicates if the student was administered the read-aloud accommodation. In the content-area column

of the label, there is an indication of whether the student took a Braille or Equivalent Form in that content area.

9.3 Interactive Reports

Data Interaction, eMetric's web-based reporting solution, features a range of report types that allow analysis across years from the group level to the individual student level. Each report type may be customized to include or exclude fields and attributes to meet the OSDE's specific needs. Report types include the following:

- Roster Report
- Group Summary Report
- Graphical Summary Report
- Longitudinal Roster Report
- Quick Reports
- Individual Student Report

9.3.1 Roster Report

The Roster Report includes individual student scores and demographics for each content area and single administration. Users can select to view, search, and filter by organization (school, district, or entire state, depending on the user's access level) and a variety of demographic data and score data. Drill-down features allow users to directly access individual student results.

9.3.2 Group Summary Report (Performance Levels)

The Group Summary Report provides a comparison of school, district, and state group performance over various summary statistics. Statistics include the number of students tested, mean scaled score, and number and percentage of students at each performance level. Users can customize the display by selecting different content areas, statistics, multiple administrations, demographic variables, and report views, resulting in powerful and flexible ways to create dynamic reports. Drill-down features allow users to disaggregate by subgroup or directly access individual student results for a selected subgroup.

9.3.3 Group Summary Report (Standards and Objectives)

The Group Summary Report for Standards and Objectives creates reports by school or district with results of standards and objectives by content area for one administration. The data can be filtered and disaggregated by score and demographic data. Drill-down features allow users to disaggregate by subgroup or to directly access individual student results. This is a report any school can run out of the eMetric platform. It is important to note that this is a legacy report that is only available when viewing data from the former OCCT assessment for the years 2015 and 2016.

9.3.4 Graphical Summary Report (Performance Levels)

The Graphical Summary Report provides a visual alternative to analyze group data through the use of graphs and other visualization tools. Summary statistics include percentage of students in each performance level, percentage of students at or above Proficient, percentage of students below Proficient, and RSA status level. Graphs include bar charts, pie charts, and histograms. Users can customize their graphs by selecting different content areas, statistics, multiple administrations, demographic variables, and views. Drill-down features allow users to disaggregate by subgroup or to directly access individual student results. This too is a report any school can run out of the eMetric platform. It is also a legacy report that is only available when viewing data from the former OCCT assessment for the years 2015 and 2016.

9.3.5 Longitudinal Roster Report

The Longitudinal Roster Report displays results of individual student scores and demographics by content area in multiple administrations. Users can select to view, search, and filter by organization (school, district, or entire state, depending on the user's access level) and a variety of demographic data and score data. Drill-down features allow users to directly access individual student results.

9.3.6 Quick Reports

Six quick reports are provided. These are the same summary or roster reports outlined above with specific preselected filters requested by the client that provide the most commonly used report data. Quick Reports provided are as follows:

- Summary Report of Total Tested (by organization, administration, and subject)
- Roster: All Selections (with all scores preselected)
- Group Summary PL: All Selections (with all scores and disaggregate variables preselected)
- Longitudinal Roster: All Selections (with all scores preselected)

9.3.7 Parent Portal

Families have been provided with an online portal to access individual student reports. The Oklahoma Parent Portal is designed to provide students and parents/guardians with online access to a student's state assessment scores. This portal will assist students and parents/guardians with tracking assessment information throughout the student's academic career.

The portal provides scores from the OSTP 2022–23 and 2023–24 assessments.

9.4 Quality Assurance

The Software Quality Assurance (SQA) team worked together with the data processing and data analysis teams to ensure quality data was captured and delivered accurately. Using multiple software tools, quality control checks were performed by the data processors and data analysts as the data was handed off.

These quality checks initialized the accuracy of the data being ingested into the database and subsequent tables and columns.

The SQA team developed a test plan that included previously agreed upon report designs and the Reporting Business Requirements document. Test cases housed in internal test cases repository software were then executed, including, but not limited to, the following:

- testing data counts of data imported;
- testing data quality of individual fields for valid values, such as gender, ethnicity, etc.;
- validating scripts developed by the software developers to ensure they match business requirements and technical specifications.

Included in this testing effort to ensure the quality of the data, the SQA team used a sample of schools and districts, which were selected based on multiple criteria. A few criteria are identified below:

- students' unique testing records
- students' complete testing
- invalidated student tests

Working closely with the data processing and data analysis teams allowed a timely and precise turnaround if any data anomalies were found. Test cases were tied to tickets outlining required work to allow for full transparency and cohesive teamwork in validation of the data.

Later, the SQA team executed test cases validating student printed reports and student labels to ensure that they met the specifications.

When all the test cases were passed, the SQA team notified the Cognia State Services department for final sign-off.

9.5 Additional Resources

In addition to the resources provided within the reports, the OSDE provides many supplemental materials to assist students, families, teachers, administrators, and other stakeholders to interpret the meanings of test scores and apply their interpretations toward appropriate and valid uses of the test results. Most of these resources are available through stakeholder-specific web pages within the OSDE website; the list below provides a good starting point.

Oklahoma State Department of Education Website

OSDE Assessment Guidance

Supplemental Materials for Families

Parent Portal Toolkit provides not only access information, but also information regarding how schools use test scores, how families can apply test scores to support student learning, and some basic information for interpreting the score information provided within the portal.

Family Guides

OSDE Educator's Page provides a wide range of educator resources, including links to several assessment-specific tools and guides.

OSDE Assessment Materials includes links to test blueprints, test and item specifications, Depth of Knowledge definitions, and performance level descriptor definitions.

9.6 Relating Evidence Regarding Score Reporting to the Validity Arguments.

Chapter 9 provides evidence in support of Claims 1.6, 1.7, 1.8, and 1.10 specifically relating the following evidence regarding Score Reporting to the validity arguments:

1.6 Argument: OSTP and CCRA score reports provide educators with classification and score information that is useful, fair, and appropriate for making decisions regarding student subgroups. It should be noted that the state assessment data should be used in conjunction with district and classroom assessments to monitor progress and overall achievement.

1.6.1 **Claim:** Educators understand the meaning of scores and classifications, appropriate uses and interpretations of those scores and classifications, and any limits on their interpretability, as applied to curricular planning and identification of instructional needs.

> **Evidence:** Subsection 9.5 describes resources available to educators that provide explanations of scores and classifications, underlying interpretations in terms of knowledge and ability based on those classifications, and applications of those interpretations within the classroom.

1.6.2 **Claim:** Interpretations of scores and classifications are genuinely useful to educators for the purposes of curricular planning and identification of instructional needs.

> **Evidence:** Subsection 9.5 describes resources available to educators that provide specific guidance to educators for applying test scores and interpretations based on those scores to their instruction.

1.6.3 **Claim:** Curricular planning and instructional decisions that educators make based on scores are fair and just to students and classes.

> **Evidence:** Subsection 9.5 describes resources available to educators that provide tools for maintaining equity in the classroom. The resources, in combination with a test designed to produce scores in a fair and just way, allow educators to make fair and just decisions in the classroom.

1.7 Argument: OSTP score reports provide students and their families with classification and score information that is useful, fair, and appropriate for monitoring academic achievement and progress toward college- and career-readiness. (Utilization Inference)

1.7.1 **Claim:** Students and their families understand the meaning of scores and classifications, appropriate uses and interpretations of those scores and classifications, and any limits on their interpretability, as applied to monitoring academic achievement and progress toward college- and career-readiness.

Evidence: Chapter 9, which describes score reporting efforts, and Appendix T, which provides a sample of the report provided to parents and students, demonstrates the effort to present information within the report in an understandable way.

Subsection 9.5 describes resources available to students and their families that provide instructions for accessing the Parent Portal and explanations of scores and classifications, how to interpret those scores and classifications, and application of those interpretations when discussing test results with educators.

1.7.2 **Claim:** Interpretations of scores and classifications are genuinely useful to parents and students for the purposes of monitoring academic achievement and progress toward college- and career-readiness.

Evidence: Subsection 9.2.1 refers to sections of the score reports that parents and students receive that include "detailed information on how families can support students," and "ways in which families can support their student's continued growth," assistance "using the report when meeting with the student's teacher or school," and "a list of resources and links to family guides to further support student growth and achievement." This demonstrates considerable effort in providing courses of action to parents and students based on scores and classifications.

Subsection 9.5 describes resources available to students and their families that explain ways that they can use score reporting information to take positive actions toward furthering students' education and college- and career-readiness.

1.7.3 **Claim:** Courses of action parents and students may take based on knowledge of students' academic achievement and college- and career-readiness are made available to parents and students in a fair and just way.

Evidence: Chapter 9 describes different modes of availability (e.g., paper and online) and in both Spanish and English, which speaks to an effort to making the reports available to parents and students with different access to these modes and of different backgrounds.

1.8 Argument: OSTP score reports provide state and district administrators with classification and score information that usefully, fairly, and appropriately supports evaluation and enhancement of curricula and programs. (Utilization Inference)

1.8.1 **Claim:** State and district administrators understand the meaning of scores and classifications, appropriate uses and interpretations of those scores and classifications, and any limitations on their interpretability, as applied in support of evaluation and enhancement of curricula and programs.

Evidence: Chapter 9, which describes score reporting efforts, demonstrates the effort to present information to state and district administrators in an understandable way.

Subsection 9.5 describes resources available to administrators that provide explanations of scores and classifications, underlying interpretations in terms of knowledge and ability based on those classifications, and applications of those interpretations to support evaluation and enhancement of curricula and programs.

1.8.2 **Claim:** Interpretations of scores and classifications are genuinely useful to state and district administrators for evaluating and enhancing curricula and programs.

Evidence: Section 9.3 describes the interactive reporting tools made available to state and district administrators. Types of information available within the tool and quality assurance efforts are further described.

Subsection 9.5 describes resources available to administrators that explain ways that administrators may apply interpretations of test scores to support evaluation and enhancement of curricula and programs.

1.8.3 **Claim:** Curriculum and program evaluation and enhancement decisions made based on OSTP score and classification information are fair and just.

Evidence: Subsection 9.5 describes resources available to administrators that provide guidance for making fair and equitable decisions regarding their educational programs, including application of appropriate metrics for making those decisions.

1.10 Argument: OSTP score reports provide federal and state administrators, agencies, and legislators with classification and score information that is useful, fair, and appropriate for making accountability decisions. (Utilization Inference)

1.10.1 **Claim:** State administrators, agencies, and legislators understand the meaning of scores and classifications, appropriate uses and interpretations of those scores and classifications, and any limitations on their interpretability, as applied to accountability decisions.

Evidence: Chapter 9, which describes score reporting efforts, demonstrates the effort to present information to state and district administrators in an understandable way.

Subsection 9.5 describes resources available to administrators that provide explanations of scores and classifications, underlying interpretations in terms of knowledge and ability based on those classifications, and applications of those interpretations to support evaluation and enhancement of curricula and programs.

1.10.2 **Claim:** Interpretations of scores and classifications are genuinely useful to state administrators, agencies, and legislators for making accountability decisions.

Evidence: Section 9.3 describes the interactive reporting tools made available to state and district administrators. Types of information available within the tool and quality assurance efforts are further described.

Subsection 9.5 describes resources available to administrators that explain ways that administrators may apply interpretations of test scores to support accountability decisions.

1.10.3 **Claim:** Accountability decisions based on OSTP score and classification information are fair and just.

Evidence: Subsection 9.5 describes resources available to administrators that provide guidance for making fair and equitable decisions regarding their educational programs, including application of appropriate metrics for making those decisions.

CHAPTER 10. VALIDITY ARGUMENTS TO SUPPORT INTENDED SCORE INTERPRETATIONS AND USES

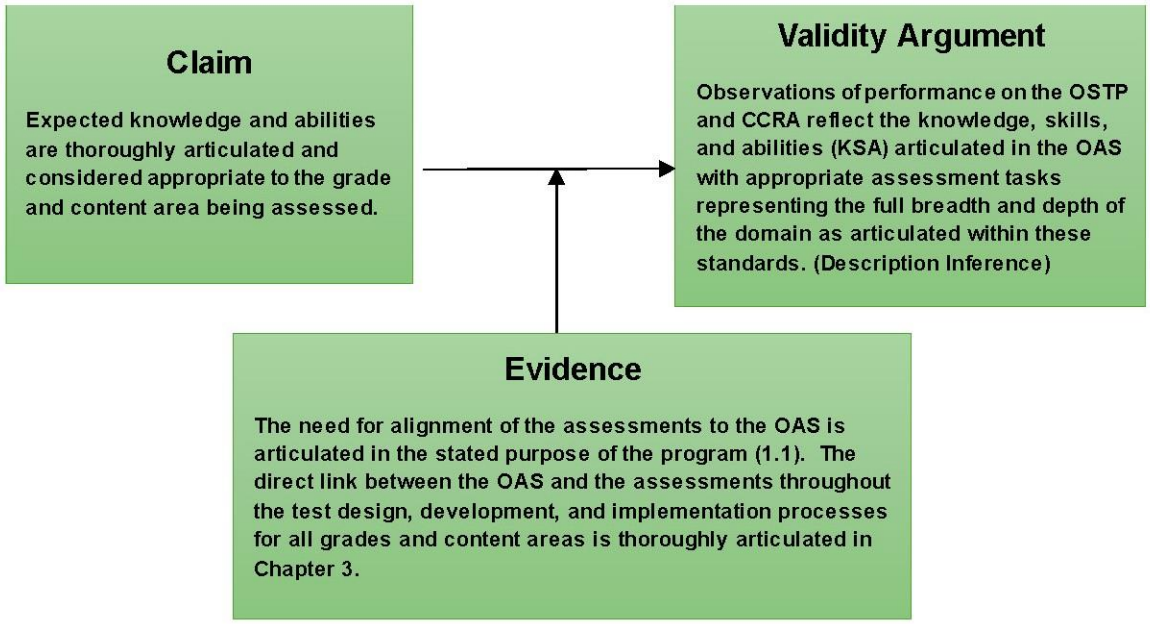
10.1 Rationale for Validity Argument Technical Report

Chapter 10 presents the primary intended score interpretations and uses for the OSTP and CCRA. This chapter presents the assumptions that underlie these score interpretations and uses and the evidence that supports the assumptions. A validity argument logic model is introduced and applied to develop validity arguments to support all intended score interpretations and uses.

The Standards for Educational and Psychological Testing (2014) defines validity as "the degree to which evidence and theory support the interpretations of test scores for proposed uses of tests" (p. 11). Elaborating on that definition, the Standards assert that "it is the interpretations of test scores for proposed uses that are evaluated, not the test itself" (p. 11) and that "validation logically begins with an explicit statement of the proposed interpretation of test scores, along with a rationale for the relevance of the interpretation to the proposed use" (p. 11). This definition applies specifically to intended interpretations and uses of test scores, rather than to the broader program of curriculum and instruction in which a testing program is embedded or to the surrounding education and school improvement policies and aspirations for student learning.

The Standards further state that "a sound validity argument integrates various strands of evidence into a coherent account of the degree to which existing evidence and theory support the intended interpretations of test scores for specific uses" (p. 21; emphasis added). An emerging common practice in state assessment programs is to construct validity arguments based on Toulmin's model of argumentation (Toulmin, 1958). A model for validity arguments and an applied example, derived from the Toulmin model, is shown in Figure 10-1.

Figure 10-1. OSTP and CCRA Validity Argument Model



Adapted from Chapelle (2021) Figures 2.1-2.3, Kane (2013) Figure 1, and Toulmin (1958).

10.2 The OSTP and CCRA Validity Argument Logic Model

In the OSTP and CCRA validity argument logic models, the overall validity argument is that the existing design, procedural, and psychometric evidence supports all intended score interpretations and uses. Each of the interpretations and uses represents a claim that requires supporting evidence and "warrants" (Toulmin's term; here, an assumption) that connect the evidence to the claim. This line of reasoning and argumentation leads to supported conclusions, which are the OSTP and CCRA validity arguments. Subsections 10.2.1 and 10.2.2 describe, respectively, the primary intended score interpretation of the OSTP and CCRA and the primary intended score uses of the OSTP and CCRA. Claims related to Arguments 1.1 to 1.5 provide the chain of inference necessary to support intended score interpretation while claims related to Arguments 1.6 to 1.10 each provides the inferential step to get from interpretation to a specific intended score use. Each score interpretation and use, assumption, and element in the table is presented following the table, with descriptions and summaries of the supporting evidence.

10.2.1 Claims Supporting Intended Interpretations of OSTP and CCRA Assessments

The primary intended interpretation of OSTP scores is that they provide reliable and valid information about student knowledge and ability relative to the Oklahoma Academic Standards (OAS) in mathematics and ELA for grades 3–8 and in science for grades 5 and 8. The primary intended interpretation of CCRA scores is that they provide reliable and valid information about student knowledge relative to the OAS in U.S. history and science for grade 11. These interpretations are supported by the same series of claims. Where different evidence is required for the different assessments, this will be noted within the evidence for the relevant claim.

1.1 Argument: Observations of performance on the OSTP and CCRA reflect the knowledge, skills, and abilities (KSA) articulated in the OAS with appropriate assessment tasks representing the full breadth and depth of the domain as articulated within these standards. (Description Inference)

1.1.1 **Claim:** Expected knowledge and abilities are thoroughly articulated and considered appropriate to the grade and content area being assessed.

> Evidence: The need for alignment of the assessments to the OAS is articulated in the stated purpose of the program (1.1). The direct link between the OAS and the assessments throughout the test design, development, and implementation processes for all grades and content areas is thoroughly articulated in Chapter 3.

1.1.2 **Claim:** Assessment tasks are developed to provide evidence of the expected knowledge and abilities for each grade and content area being assessed.

> **Evidence:** Subsections within each section of Chapter 3 (each section representing a different content area on the OSTP or CCRA) all explicitly state that items in the content area and grades being assessed "were developed specifically for Oklahoma and are directly aligned to the OAS." Subsection 3.1.3 describes passage development for ELA specifically in terms of how reading passages are selected for alignment to the OAS. Subsections 3.1.4, 3.2.3, 3.3.2 and 3.4.2 describe item development for specific content areas.

1.2 Argument: Each test form, an organized sampling of assessment tasks, results in an observed score that reflects a student's knowledge and abilities in the content area being assessed through appropriate test assembly, administration, and scoring procedures. (Evaluation Inference)

1.2.1 **Claim:** Each form is constructed to draw from available items such that the underlying domain of knowledge and abilities is adequately sampled.

> **Evidence:** Subsections within Chapter 3 describe blueprints for identifying the amount of content covered on the test forms for all content areas, specifically stating that test blueprints "are based on the importance and coverage of [the OAS] in Oklahoma schools." Ideal blueprints are included in Appendix C. For existing assessments, tables are provided showing that content and Depth of Knowledge distributions on test forms are within the target blueprint ranges for all assessments.

1.2.2 **Claim:** The assessment is administered under appropriate conditions.

Evidence: Chapter 4 describes the administration process for the OSTP and CCRA assessments. This includes administration modes, procedures, requirements and documentation, training, accommodations, test security, documentation of irregularities, and support provided by the OSTP/CCRA Service Center. The administration process is described in greater detail in the OSTP and CCRA administration manuals. Details of the accommodations are provided in Appendix E.

1.2.3 **Claim:** The scoring procedures and models produce scores accurately reflective of targeted knowledge and abilities.

Evidence: Chapter 5 has detailed sections describing the scoring process for the OSTP and CCRA assessments, including processes for machine scoring multiple-choice responses on paper-based tests, online scoring of computer-based tests, scoring of writing prompts, field-testing procedures for constructed-response items, and methodology for scoring polytomous items. Section 7.1 describes the scoring models used for dichotomous and polytomous items, describing the models used in detail and citing the references that establish the appropriateness of these models for placing student performances on a common scale for scoring purposes.

1.2.4 **Claim:** Items on the assessment demonstrate appropriate statistical quality.

Evidence: Chapter 6 describes the classical item analysis procedures conducted to ensure that all items meet the standards of quality outlined by the Standards for Educational and Psychological Testing (AERA et al., 2014) and Code of Fair Testing Practices in Education (Joint Committee on Testing Practices, 2004). Subsections 3.1.8, 3.2.5, 3.3.4, and 3.4.4 describe the review process for evaluating items flagged by these analyses. Subsection 7.1.1 describes IRT results referring to tables within the Equating Report (Appendix L) that describe quality control checks on items and procedures for making interventions based on items being flagged during these checks.

1.3 Argument: The observed score on any specific test form for a given grade and content area is reflective of the expected score on any form of the test for that grade and content area. (Generalization Inference)

1.3.1 **Claim:** Task specifications adequately inform production or selection of items with similar content and statistical characteristics.

Evidence: Subsections 3.1.2 and 3.2.2 contain some information about item specification for ELA and mathematics assessments, respectively. It is stated that “each item was designed to measure a specific standard and objective” in the OAS.

1.3.2 **Claim:** Test specifications result in forms of similar length and task distribution.

Evidence: Section 3.5 describes the test development process in detail, specifically outlining item selection, test assembly, and review to ensure the equivalency of forms based on a robust set of criteria. Within Chapter 3, the section for each OSTP and CCRA content area has a subsection on Test Design and Development for the current year’s assessments. These demonstrate the common structure of forms within a given grade and content area. The first subsection within each section of Chapter 3 describes blueprint distributions and adherence to those blueprints, providing further evidence that the selection of tasks considers and meets content coverage requirements across all forms.

1.3.3 **Claim:** Statistical analyses of observed scores on specific forms show that they are good predictors of expected scores on other forms.

Evidence: Section 8.1 describes the process for analyzing the reliability of OSTP and CCRA forms and the results of these analyses. These analyses establish the reliability of each form. Subject to the accuracy of equating and scaling methods, adequate reliability of individual forms establishes them as good predictors of expected scores.

1.3.4 **Claim:** Equating and scaling methods accurately place scores from different forms onto a common scale.

Evidence: Section 7.2 describes equating procedures in detail, Section 7.3 summarizes equating results, and Appendix L provides a full report of equating results. These sections demonstrate a high level of rigor in selection, application, and interpretation of equating results.

1.4 Argument: Expected scores are attributable to proficiency in the target knowledge and abilities. (Explanation Inference)

1.4.1 **Claim:** Cut scores are established through defensible standard setting methods.

Evidence: Section 7.4 summarizes standard-setting procedures and results, and Appendices M, N, O, and P provide a full report of standard-setting procedures and results. These demonstrate rigorous adherence to well-accepted standard-setting procedures.

1.4.2 **Claim:** Tests are assembled with adequate precision near cut points.

Evidence: Section 8.2 describes decision consistency analysis procedures and results. Appendix S describes the results in further detail. Accuracy and consistency rates were reported as being adequately high while false positive and negatives demonstrated strong agreement between true score and observed score classification decisions.

1.4.3 **Claim:** Characteristics of knowledge expected to affect task difficulty correlate with empirical item difficulty.

Evidence: Subsections 3.1.1, 3.2.1, 3.3.1 contain Depth of Knowledge distributions for ELA, mathematics, and science, respectively. Subsections 3.3.7 and 3.4.7 describe how cognitive complexity is captured within the science and history exams. These are attributes that are incorporated within item development approaches that correlate with expected item difficulty.

10.2.2 Claims Supporting Intended Uses of OSTP and CCRA Assessments

With evidence provided in support of intended interpretations of the OSTP and CCRA scores, validation of the primary intended uses of these scores only requires evidence that these interpretations can be applied to each use in an appropriate, fair, and just way. Evidence for each use, except the participation requirement for graduation, should show that the intended audience (i.e., those using the scores):

- understand the meaning of scores and classifications, appropriate uses and interpretations of those scores and classifications, and any limits on their interpretability, as applied to the intended use;
- find the scores and classifications genuinely useful for that intended use;

- make decisions, when using the scores and classifications as intended, that are fair and just to those affected by the decisions being made; and
- support for each intended use will provide evidence that each of these three claims is met within the argument for that specific intended use.

1.6 Argument: OSTP and CCRA score reports provide educators with classification and score information that is useful, fair, and appropriate for making decisions regarding student subgroups. It should be noted that the state assessment data should be used in conjunction with district and classroom assessments to monitor progress and overall achievement.

1.6.1 **Claim:** Educators understand the meaning of scores and classifications, appropriate uses and interpretations of those scores and classifications, and any limits on their interpretability, as applied to curricular planning and identification of instructional needs.

> **Evidence:** Subsection 9.5.2 describes resources available to educators that provide explanations of scores and classifications, underlying interpretations in terms of knowledge and ability based on those classifications, and applications of those interpretations within the classroom.

1.6.2 **Claim:** Interpretations of scores and classifications are genuinely useful to educators for the purposes of curricular planning and identification of instructional needs.

> **Evidence:** Subsection 9.5.2 describes resources available to educators that provide specific guidance to educators for applying test scores and interpretations based on those scores to their instruction.

1.6.3 **Claim:** Curricular planning and instructional decisions that educators make based on scores are fair and just to students and classes.

> **Evidence:** Subsection 9.5.2 describes resources available to educators that provide tools for maintaining equity in the classroom. These resources, in combination with a test designed to produce scores in a fair and just way, allow educators to make fair and just decisions in the classroom.

1.7 Argument: OSTP and CCRA score reports provide students and their families with classification and score information that is useful, fair, and appropriate for monitoring academic achievement and progress toward college- and career-readiness. (Utilization Inference)

1.7.1 **Claim:** Students and their families understand the meaning of scores and classifications, appropriate uses and interpretations of those scores and classifications, and any limits on their interpretability, as applied to monitoring academic achievement and progress toward college- and career-readiness.

> **Evidence:** Chapter 9, which describes score reporting efforts, and Appendix T, which provides a sample of the report provided to parents and students, demonstrates the effort to present information within the report in an understandable way.
>
> Subsection 9.5.1 describes resources available to students and their families that provide instructions for accessing the Parent Portal and explanations of scores and classifications, how to interpret those scores and classifications, and application of those interpretations when discussing test results with educators.

1.7.2 **Claim:** Interpretations of scores and classifications are genuinely useful to parents and students for the purposes of monitoring academic achievement and progress toward college- and career-readiness.

> **Evidence:** Subsection 9.2.1 refers to sections of the score reports that parents and students receive that include "detailed information on how families can support students," and "ways in which families can support their student's continued growth," assistance "using the report when meeting with the student's teacher or school," and "a list of resources and links to family guides to further support student growth and achievement." This demonstrates considerable effort in providing courses of action to parents and students based on scores and classifications.
>
> Subsection 9.5.1 describes resources available to students and their families that explain ways that they can use score reporting information to take positive actions toward furthering students' education and college- and career-readiness.

1.7.3 **Claim:** Courses of action parents and students may take based on knowledge of students' academic achievement and college- and career-readiness are made available to parents and students in a fair and just way.

> **Evidence:** Chapter 9 describes different modes of availability (e.g., paper and online) and in both Spanish and English, which speaks to an effort to make the reports available to parents and students with different access to these modes and of different backgrounds.

1.8 Argument: OSTP and CCRA score reports provide state and district administrators with classification and score information that usefully, fairly, and appropriately support evaluation and enhancement of curricula and programs. (Utilization Inference)

1.8.1 **Claim:** State and district administrators understand the meaning of scores and classifications, appropriate uses and interpretations of those scores and classifications, and any limitations on their interpretability, as applied in support of evaluation and enhancement of curricula and programs.

> **Evidence:** Chapter 9, which describes score reporting efforts, demonstrates the effort to present information to state and district administrators in an understandable way.
>
> Subsection 9.5.3 describes resources available to administrators that provide explanations of scores and classifications, underlying interpretations in terms of knowledge and ability based on those classifications, and applications of those interpretations to support evaluation and enhancement of curricula and programs.

1.8.2 **Claim:** Interpretations of scores and classifications are genuinely useful to state and district administrators for evaluating and enhancing curricula and programs.

> **Evidence:** Section 9.3 describes the interactive reporting tools made available to state and district administrators. Types of information available within the tool and quality assurance efforts are further described.
>
> Subsection 9.5.3 describes resources available to administrators that explain ways that administrators may apply interpretations of test scores to support evaluation and enhancement of curricula and programs.

1.8.3 **Claim:** Curriculum and program evaluation and enhancement decisions made based on OSTP score and classification information are fair and just.

Evidence: Subsection 9.5.3 describes resources available to administrators that provide guidance for making fair and equitable decisions regarding their educational programs, including application of appropriate metrics for making those decisions.

1.9 Argument: OSTP and CCRA score reports provide state administrators with classification and score information that is useful, fair, and appropriate for comparing academic achievement of Oklahoma students to academic achievement of students in other states. (Utilization Inference)

1.9.1 **Claim:** State administrators understand the meaning of scores and classifications, appropriate uses and interpretations of those scores and classifications, and any limitations on their interpretability, as applied to comparisons of academic achievement of Oklahoma students to academic achievement of students in other states.

Evidence: Section 7.4 describes how standards are set, including alignment of cuts to NAEP and ACT scores. This alignment allows for some comparability between states.

1.10 Argument: OSTP and CCRA score reports provide federal and state administrators, agencies, and legislators with classification and score information that is useful, fair, and appropriate for making accountability decisions. (Utilization Inference)

1.10.1 **Claim:** State administrators, agencies, and legislators understand the meaning of scores and classifications, appropriate uses and interpretations of those scores and classifications, and any limitations on their interpretability, as applied to accountability decisions.

Evidence: Chapter 9, which describes score reporting efforts, demonstrates the effort to present information to state and district administrators in an understandable way.

Subsection 9.5.3 describes resources available to administrators that provide explanations of scores and classifications, underlying interpretations in terms of knowledge and ability based on those classifications, and applications of those interpretations to support evaluation and enhancement of curricula and programs.

1.10.2 **Claim:** Interpretations of scores and classifications are genuinely useful to state administrators, agencies, and legislators for making accountability decisions.

Evidence: Section 9.3 describes the interactive reporting tools made available to state and district administrators. Types of information available within the tool and quality assurance efforts are further described.

Subsection 9.5.3 describes resources available to administrators that explain ways that administrators may apply interpretations of test scores to support accountability decisions.

1.10.3 **Claim:** Accountability decisions based on OSTP score and classification information are fair and just.

Evidence: Subsection 9.5.3 describes resources available to administrators that provide guidance for making fair and equitable decisions regarding their educational programs, including application of appropriate metrics for making those decisions.

10.3 Conclusion

Validity arguments for the OSTP and CCRA are crafted to not just provide evidence that all steps in the test design, development, and implementation process are taken correctly, but that they are working together to ensure that the resulting scores validly support intended interpretations and uses. The arguments and the logical inferential steps they provide can be summarized as follows:

- **1.1** Description Inference: Items are sampled from domain appropriately such that high-quality forms can be produced. (Domain to Item)
- **1.2** Evaluation Inference: Forms are sampled from the domain appropriately such that observed scores reflective of the domain can be produced. (Item to Form)
- **1.3** Generalization Inference: Observed scores from individual forms are reliable such that they are reflective of expected scores across forms. (Form to Score)*
- **1.4** Explanation Inference: Expected scores are associated with classification cuts such that classification decisions are interpretable. (Score to Classification)
- **1.5** Extrapolation Inference: Classification decisions are accurate such that intended interpretations correspond to other valid metrics of knowledge and ability. (Classification to Interpretation)
- **1.6–1.10** Utilization Inferences: Interpretations of scores and classifications are used as intended and only in ways considered appropriate and fair. (Interpretation to Use)

**It is important for the gathering of information in support of the Generalization Inference (1.3) to define what is meant by the term "form" in this context. A test form is not just the set of items on which the score is based, but the structure of the exam in terms of all elements that can affect an individual's performance. This can include, among other things, the raters scoring an exam, the occasion on which the exam is administered, and the setting in which it is administered. Generalization from observed to expected score is optimized when all sources of potential variability of test scores are identified and accounted for such that observed scores maximally reflect a student's ability and not the influence of unwanted sources of variance.*

Evidence for these claims ranges from complete to unprovided within this report. For the most part, the evidence quite strongly supports interpretability of scores. In this report, based on information available from a non-validity-enhanced technical report, some claims supporting interpretability and many claims supporting use are not sufficiently supported by evidence. This is not meant to suggest that such evidence is unavailable but rather offers insight into sources of evidence that should be considered for inclusion in validity-enhanced technical reports going forward.

OKLAHOMA ENGLISH LANGUAGE ARTS STANDARDS GUIDING PRINCIPLES

Teachers use standards as guides for developing curriculum and instruction that is appropriately engaging, challenging, and sequenced for the students in their care. By nature, acquiring language arts knowledge and skills is a recursive learning endeavor: students revisit concepts again and again as they use language at increasingly sophisticated levels. Because of this recursive learning process, language arts learning will not progress for students in the strictly linear way it may in other content areas. Nonetheless, it is important for any set of standards to provide "concise, written descriptions of what students are expected to know and be able to do at a specific stage of their education" (Great Schools Partnership, 2014). In order to make this document a clear, coherent description of what students are expected to know and be able to do at specific stages, the writers have adopted some guidelines for design and organization.

Clarity

- ★ Standard statements are written with verbs that indicate specifically what learning students must demonstrate and at what depth. When students *defend, compare, estimate, paraphrase, predict,* or *summarize,* they are able to show a broader range of mastery of a concept than when they are expected to *identify, recognize,* or *recall*. However, the writers also have given full consideration to the complexity of the content itself. For example, it is more challenging to identify the implied theme of an extended essay than to identify the subject of a sentence. The progression of language arts learning from pre-kindergarten through high school should reflect a grade-level appropriate relationship between the level of critical thinking students use and the actual listening, speaking, reading, and writing experiences students have.
- ★ Content to be emphasized and assessed at specific grade levels (e.g., modes of writing or particular elements of grammar) is clearly identified.
- ★ Definitions for terms used in the standards document are compiled in an updated, expanded glossary.

Coherence

- ★ Eight overarching standards, the College- and Career- Ready English Language Arts standards, identify the knowledge and skills of the discipline that PK-12 students are to learn; each standard for every grade is delineated at the appropriate level.
- ★ A PK-12 vertical progression of standards, organized by the eight overarching standards, allows for educators to recognize how all the standards are intertwined to develop the total literacy of a student. When a skill is no longer present, mastery is implied; however, teachers must support previous grade level skills according to the mastery level of their students. This grade-to-grade, standard-by-standard progression can be viewed in a horizontal format, organized into overlapping grade bands.
- ★ Users must examine all of the standards for each grade level as a whole to have a coherent understanding of what is required of learners.
- ★ Because of the interconnectedness of language arts concepts and skills, various aspects of what students know and can do may be described in more than one standard. For example, learners conducting research (Standard 6) should use speaking and listening (Standard 1), the reading and writing processes (Standard 2), academic vocabulary (Standard 4), critical reading and writing (Standard 3), formal grammar and usage (Standard

5), and more than likely, they will access research and complete their research products because they are competent in multimodal literacies (Standard 7).

★ As students progress through grade levels, expectations encompass the content of the previous grades. Specifically in connection to reading assignments, the complexity of texts increases as students advance to later grades; however, simpler texts can be used effectively in order for learners to develop a deeper understanding of content (as examples – theme, figurative language, genre, structure).

Purpose

In addition to a commitment to clear and coherent standards, the writers were guided by four fundamental purposes of English language arts education.

★ All learners must hear the voices of their own heritage in the literature they encounter. They must be given the opportunity to speak with the voices they choose for themselves in the writing they create. The language arts classroom is a place that is inclusive of race, ethnicity, culture, and all perspectives that reflect the richness of human experience.

★ All learners are supported to become independent readers in a range of disciplines. The ability to interpret literature as well as informative, highly technical, and often lengthy reading passages on one's own is paramount in achieving academic and career success. Furthermore, learners who possess the skills required to read independently have the power to choose both what they *need* and what they *want* to read.

★ All learners are supported to become independent writers for a variety of audiences and a range of purposes. Four- and five-year-olds begin writing by verbally telling their ideas and stories to others, but their status as independent writers is not earned with mastery of the five-paragraph essay form in high school. Independent writers are able to access multiple strategies and formats to communicate and craft the message so that it resonates with any readers they want to reach.

★ A literate citizenry possesses the skills required to analyze, evaluate, act upon, and compose a wide range of communications. An ultimate goal of language arts education is the development of informed citizens who can contribute to the common good.

OKLAHOMA COLLEGE- AND CAREER-READY ENGLISH LANGUAGE ARTS STUDENTS

The following eight standards encompass the content and competencies of English language arts. Each standard reflects both reading and writing applications, as these processes are bound together in the literate world.

The order of the standards is meant to suggest that students learn to read and write by speaking and listening on their way to the ultimate goal of becoming independent, critical readers and writers. At the same time, speaking and listening skills will continue to be developed as students progress through the grade levels, and concepts of independent reading and writing will be introduced even in the earliest grades.

Independent reading and writing is a natural outgrowth of strong standards implementation through rigorous curriculum. Standard 8 addresses the integrated nature of English language arts and acknowledges students' need to grow increasingly independent for college and career readiness. Being able to work independently and seek out opportunities to read and write is a significant part of life-long learning. These skills easily transfer to test taking, civic engagement, and citizen participation.

Standard 1: Speaking and Listening
Students will speak and listen effectively in a variety of situations including, but not limited to, responses to reading and writing.

Standard 2: Reading Foundations/Reading Process and Writing Process
Students will develop foundational skills for future reading success by working with sounds, letters, and text. Students will use recursive processes when reading and writing.

Standard 3: Critical Reading and Writing
Students will apply critical thinking skills to reading and writing.

Standard 4: Vocabulary
Students will expand their working vocabularies to effectively communicate and understand texts.

Standard 5: Language
Students will apply knowledge of grammar and rhetorical style to reading and writing.

Standard 6: Research
Students will engage in inquiry to acquire, refine, and share knowledge.

Standard 7: Multimodal Literacies
Students will acquire, refine, and share knowledge through a variety of written, oral, visual, digital, non-verbal, and interactive texts.

Standard 8: Independent Reading and Writing
Students will read and write for a variety of purposes including, but not limited to, academic and personal, for extended periods of time.

OKLAHOMA ENGLISH LANGUAGE ARTS STANDARDS GUIDING RESEARCH

Well-recognized guiding research in language arts upholds Oklahoma's Eight CCR Standards as a whole, especially the standards' emphasis on the reciprocal relationship between reading and writing: we read what others have written and write to create reading for audiences beyond ourselves. This guiding research deserves expanded commentary.

READING FOUNDATIONS

The International Literacy Association (ILA) and the Report of the Subgroups of the National Reading Panel have identified important components of reading. Foundational reading skills are included within Standard 2: Reading Process.

PRINT CONCEPTS - the ability to understand distinguishing features of print, including knowing that the print on the page contains a message, that print contains words that can be read aloud, that print has a distinct "right side up," and that words are read from left to right.

PHONOLOGICAL/PHONEMIC AWARENESS - the understanding that words and syllables can be broken down into smaller units or phonemes is a strong predictor of later reading success.

PHONICS/DECODING - instruction that provides students with a consistent strategy to apply knowledge of sound-symbol relationships to assist them in identifying unfamiliar words.

VOCABULARY – a comprehension that a reader's understanding of text is inextricably linked to his or her vocabulary base that can be developed through reading, direct instruction, and student-centered activities.

READING FLUENCY – a recognition that fluent reading is characterized by reading words with automaticity and expression and recognizing words with speed, accuracy, and prosody; such automatic word recognition frees a student's attention to comprehend the text.

COMPREHENSION/CRITICAL LITERACY – a recognition that the goal of reading is understanding text by establishing a purpose for reading and determining what is literal and what is implied in the text. Critical literacy involves the reader being able to make connections between parts of a text and between texts. In addition to these foundational components, skilled reading is influenced by the development of motivation and engagement, attitude, and stance toward reading and writing and the process of interacting with text before, during and after reading.

MOTIVATION and ENGAGEMENT - readers' desire to interact with a text, influenced by their own self-efficacy as well as the genre, text level, author, illustrator, or topic of a text. The reader's engagement with text may be influenced by motivation to interact with a specific text.

ATTITUDE - a reader's attitude toward reading for academic or leisure purposes influences the probability that he/she will choose to become engaged in the reading process.

STANCE - whether a reader is approaching a text for pleasure or for information.

READING PROCESS - the importance of a reader being involved with the text before (setting a purpose for reading), during (reading, monitoring comprehension, investigating terms he/she does not understand), and after (referring back to the text to strengthen one's understanding, answer questions, engage in discussions and complete projects) reading.

WRITING PROCESS

The National Council of Teachers of English (NCTE) has identified a process, confirmed by research, that skilled writers use to create text. Because writing is recursive, the stages of the process may not occur in a linear sequence, but the writer may revert to an activity characteristic of an earlier stage. The stages of the writing process include –

PREWRITING - preparing to write by gathering and organizing ideas, generating a topic, and clarifying purpose, audience, and form.

DRAFTING - putting ideas down on paper with a focus on content while using notes or ideas generated during prewriting, without over-concern about adherence to grammatical rules, spelling, or mechanics.

REVISING - refining of content, not mechanics. Revision begins during the prewriting activity and continues through the final draft, as writers think again about the choices made for content and add, delete, or rearrange the material. Skilled writers may revise a draft several times, accepting suggestions for improvement from peers and teachers in addition to self-critique.

EDITING – making writing suitable for publication, including the correction of errors in punctuation, capitalization, spelling, usage, sentence structure, and legibility so that errors in conventions do not interfere with an audience's ability to understand the message.

PUBLISHING - sharing the writer's product with and/or being evaluated by the intended audience, or readers in general. An authentic audience, one with whom the students want to communicate, is necessary for effective writing. It is important to note that not every piece that a writer begins will be carried through the entire writing process and polished for publication. However, each student should be expected to develop some pieces of writing thoroughly enough to be published. Publishing reinforces the knowledge that writing is an act of communication.

MULTIMODAL LITERACIES

The Multimodal Literacies advanced from the Oklahoma *Priority Academic Student Skills'* Visual Literacy standard.

Text in the twenty-first century is not limited to print. Increasingly, texts are composites of print, images, sound, video, charts, and interactive links. Students need to know how to interpret and produce these kinds of texts for college, career, and informed citizenship. A statement by the NCTE Executive Committee (February 2013) confirms,

> ... the 21st century demands that a literate person possess a wide range of abilities and competencies, many literacies. These literacies are multiple, dynamic, and malleable. As in the past, they are inextricably linked with particular histories, life possibilities, and social trajectories of individuals and groups. Active, successful participants in this 21st century global society must be able to
>
> - develop proficiency and fluency with the tools of technology;
> - build intentional cross-cultural connections and relationships with others so as to pose and solve problems collaboratively and strengthen independent thought;
> - design and share information for global communities to meet a variety of purposes;
> - manage, analyze, and synthesize multiple streams of simultaneous information; create, critique, analyze, and evaluate multimedia texts; and
> - attend to the ethical responsibilities required by these complex environments.

The committee asserts,

> The use of multimodal literacies has expanded the ways we acquire information and understand concepts. Ever since the days of illustrated books and maps texts have included visual elements for the purpose of imparting information. The contemporary difference is the ease with which we can combine words, images, sound, color, animation, video, and styles of print in projects so that they are part of our everyday lives and, at least by our youngest generation, often taken for granted.

What this means for teaching

The techniques of acquiring, organizing, evaluating, and creatively using multimodal information should become an increasingly important component of the English language arts classroom (November 2005).

Further Support

A large body of research has been consulted for each of Oklahoma's Eight College- and Career- Ready Standards; these sources are provided in a complete bibliography which can be accessed on the Oklahoma Department of Education's English Language Arts Standards webpage.

OKLAHOMA ENGLISH LANGUAGE ARTS EIGHT OVERARCHING STANDARDS IN READING AND WRITING

Academic standards establish objective performance criteria. They are used as guides for developing curriculum and instruction that is appropriately engaging, challenging, and sequenced for students. Acquiring language arts knowledge and skills is a recursive learning endeavor. Students need to revisit concepts as they develop language arts acumen at increasingly higher levels of complexity.

The eight overarching standards reinforce the recursive nature of the language arts, a non-linear process that involves the continuous and thoughtful refinement of concepts and skills. In each of the eight overarching English language arts standards, concepts and skills are expressed in terms of both reading and writing, intended to support integrated, rather than isolated, reading/writing instruction. Research supports this integrated model of English language arts, where students read to understand the meaning and composition of a text and write with readers' expectations and assumptions in mind.

ENGLISH LANGUAGE ARTS COLLEGE- AND CAREER- STANDARDS

Standard 1: Speaking and Listening Students will speak and listen effectively in a variety of situations including, but not limited to, responses to reading and writing.

Reading
Students will develop and apply effective communication skills through speaking and active listening.

Writing
Students will develop and apply effective communication skills through speaking and active listening to create individual and group projects and presentations.

Standard 2: Reading Foundations/Reading and Writing Process Students will develop foundational skills for future reading success by working with sounds, letters, and text. Students will use a variety of recursive reading and writing processes.

Reading
Students will read and comprehend increasingly complex literary and informational texts.

Writing
Students will develop and strengthen writing by engaging in a recursive process that includes prewriting, drafting, revising, editing, and publishing.

Standard 3: Critical Reading and Critical Writing Students will apply critical thinking skills to reading and writing.

Reading
Students will comprehend, interpret, evaluate, and respond to a variety of complex texts of all literary and informational genres from a variety of historical, cultural, ethnic, and global perspectives.

Writing
Students will write for varied purposes and audiences in all modes, using fully developed ideas, strong organization, well-chosen words, fluent sentences, and appropriate voice.

Standard 4: Vocabulary Students will expand their working vocabularies to effectively communicate and understand texts.

Reading
Students will expand academic, domain-appropriate, grade-level vocabularies through reading, word study, and class discussion.

Writing
Students will apply knowledge of vocabularies to communicate by using descriptive, academic, and domain-appropriate abstract and concrete words in their writing.

Standard 5: Language Students will apply knowledge of grammar and rhetorical style to reading and writing.

Reading
Students will apply knowledge of grammar and rhetorical style to analyze and evaluate a variety of texts.

Writing
Students will demonstrate command of Standard English grammar, mechanics, and usage through writing and other modes of communication.

Standard 6: Research Students will engage in inquiry to acquire, refine, and share knowledge.

Reading
Students will comprehend, evaluate, and synthesize resources to acquire and refine knowledge.

Writing
Students will summarize and paraphrase, integrate evidence, and cite sources to create reports, projects, papers, texts, and presentations for multiple purposes.

Standard 7: Multimodal Literacies Students will acquire, refine, and share knowledge through a variety of written, oral, visual, digital, non verbal, and interactive texts.

Reading
Students will evaluate written, oral, visual, and digital texts in order to draw conclusions and analyze arguments.

Writing
Students will create multimodal texts to communicate knowledge and develop arguments.

Standard 8: Independent Reading and Writing Students will read and write for a variety of purposes including, but not limited to, academic and personal, for extended periods of time.

Reading
Students will read independently for a variety of purposes and for extended periods of time. Students will select appropriate texts for specific purposes.

Writing
Students will write independently for extended periods of time. Students will vary their modes of expression to suit audience and task.

Navigating the Vertical Alignment

Overarching Oklahoma College- and Career- Ready Standard for English Language Arts

1: Speaking and Listening - Students will speak and listen effectively in a variety of situations including, but not limited to, responses to reading and writing.

	5th Grade	6th Grade	7th Grade
Reading Students will develop and apply effective communication skills through speaking and active listening.	**5.1.R.1** Students will actively listen and speak clearly using appropriate discussion rules with awareness of verbal and nonverbal cues. **5.1.R.2** Students will ask and answer questions to seek help, get information, or clarify about information presented orally through text or other media to confirm understanding. **5.1.R.3** Students will engage in collaborative discussions about appropriate topics and texts, expressing their own ideas clearly while building on the ideas of others in pairs, diverse groups, and whole class settings.	**6.1.R.1** Students will actively listen and speak clearly using appropriate discussion rules with awareness of verbal and nonverbal cues. **6.1.R.2** Students will actively listen and interpret a speaker's messages (both verbal and nonverbal) and ask questions to clarify the speaker's purpose and perspective. **6.1.R.3** Students will engage in collaborative discussions about appropriate topics and texts, expressing their own ideas clearly while building on the ideas of others in pairs, diverse groups, and whole class settings.	**7.1.R.1** Students will actively listen and speak clearly using appropriate discussion rules with awareness and control of verbal and nonverbal cues. **7.1.R.2** Students will actively listen and interpret a speaker's messages (both verbal and nonverbal) and ask questions to clarify the speaker's purpose and perspective. **7.1.R.3** Students will engage in collaborative discussions about appropriate topics and texts, expressing their own ideas clearly while building on the ideas of others in pairs, diverse groups, and whole class settings.
Writing Students will develop and apply effective communication skills through speaking and active listening to create individual and group projects and presentations.	**5.1.W.1** Students will give formal and informal presentations in a group or individually, organizing information and determining appropriate content for audience. **5.1.W.2** Students will work effectively and respectfully within diverse groups, share responsibility for collaborative work, and value individual contributions made by each group member.	**6.1.W.1** Students will give formal and informal presentations in a group or individually, organizing information and determining appropriate content and purpose for audience. **6.1.W.2** Students will work effectively and respectfully within diverse groups, share responsibility for collaborative work, and value individual contributions made by each group member.	**7.1.W.1** Students will give formal and informal presentations in a group or individually, providing evidence to support a main idea. **7.1.W.2** Students will work effectively and respectfully within diverse groups, show willingness to make necessary compromises to accomplish a goal, share responsibility for collaborative work, and value individual contributions made by each group member.

Oklahoma Academic Standards for English Language Arts | 15

Instructional Design Considerations

EIGHT CONSISTENT STANDARDS

The standards were developed with consideration to teachers and curriculum designers. **Rich units of study can be designed by incorporating each of the eight overarching standards.** Further grade-specific guidance is provided in the Reading and Writing strands.

READING and WRITING STRANDS

The standards were designed to develop the total literacy of students by intentionally taking into consideration what they do when reading and writing. **Every standard includes a reading and writing strand with standard objectives delineated by grade-level.**

Reading instruction supports the development and refinement of writing skills. Writing instruction supports the development and refinement of reading skills.

RECURSIVE TEACHING and LEARNING

Teaching and learning language arts is a recursive endeavor: students will revisit concepts again and again as they use language at increasingly sophisticated levels. **Skills are repeated with an implied expectation that they are attributed to increasingly more complex texts.**

Because of this recursive learning process, language arts learning does not progress for students in a strictly linear way.

Oklahoma ELA standards are not taught in isolation. Standards can be bundled for educators to develop grade-appropriate lessons, tasks, and assessments.

Standard 1

Speaking and Listening

Students will speak and listen effectively in a variety of situations including, but not limited to, responses to reading and writing.

Reading

Students will develop and apply effective communication skills through speaking and active listening.

Writing

Students will develop and apply effective communication skills through speaking and active listening to create individual and group projects and presentations.

1: Speaking and Listening Students will speak and listen effectively in a variety of situations including, but not limited to, responses to reading and writing.			
	Pre-Kindergarten	**Kindergarten**	**1st Grade**
Reading Students will develop and apply effective communication skills through speaking and active listening.	**PK.1.R.1** Students will actively listen and speak using agreed-upon rules with guidance and support. **PK.1.R.2.** Students will begin to ask and answer questions about information presented orally or through text or other media with guidance and support. **PK.1.R.3** Students will begin to engage in collaborative discussions about appropriate topics and texts with peers and adults in small and large groups with guidance and support. **PK.1.R.4** Students will follow simple oral directions.	**K.1.R.1** Students will actively listen and speak using agreed-upon rules for discussion with guidance and support. **K.1.R.2** Students will ask and answer questions to seek help, get information, or clarify about information presented orally or through text or other media with guidance and support. **K.1.R.3** Students will engage in collaborative discussions about appropriate topics and texts with peers and adults in small and large groups with guidance and support. **K.1.R.4** Students will follow one and two step directions.	**1.1.R.1** Students will actively listen and speak using agreed-upon rules for discussion. **1.1.R.2** Students will ask and answer questions to seek help, get information, or clarify about information presented orally through text or other media, to confirm understanding. **1.1.R.3** Students will engage in collaborative discussions about appropriate topics and texts with peers and adults in small and large groups. **1.1.R.4** Students will restate and follow simple two-step directions.
Writing Students will develop and apply effective communication skills through speaking and active listening to create individual and group projects and presentations.	**PK.1.W.1** Students will begin to orally describe personal interests or tell stories to classmates with guidance and support. **PK.1.W.2** Students will work respectfully with others with guidance and support.	**K.1.W.1** Students will orally describe personal interests or tell stories, facing the audience and speaking clearly in complete sentences and following implicit rules for conversation, including taking turns and staying on topic. **K.1.W.2** Students will work respectfully with others with guidance and support.	**1.1.W.1** Students will orally describe people, places, things, and events with relevant details expressing their ideas. **1.1.W.2** Students will work respectfully in groups.

1: Speaking and Listening Students will speak and listen effectively in a variety of situations including, but not limited to, responses to reading and writing.			
	2nd Grade	**3rd Grade**	**4th Grade**
Reading Students will develop and apply effective communication skills through speaking and active listening.	**2.1.R.1** Students will actively listen and speak using appropriate discussion rules. **2.1.R.2** Students will ask and answer questions to seek help, get information, or clarify about information presented orally, through text or other media to confirm understanding. **2.1.R.3** Students will engage in collaborative discussions about appropriate topics and texts with peers and adults in small and large groups. **2.1.R.4** Students will restate and follow multi-step directions.	**3.1.R.1** Students will actively listen and speak clearly using appropriate discussion rules. **3.1.R.2** Students will ask and answer questions to seek help, get information, or clarify about information presented orally through text or other media to confirm understanding. **3.1.R.3** Students will engage in collaborative discussions about appropriate topics and texts, expressing their own ideas clearly in pairs, diverse groups, and whole class settings.	**4.1.R.1** Students will actively listen and speak clearly using appropriate discussion rules. **4.1.R.2** Students will ask and answer questions to seek help, get information, or clarify information presented orally through text or other media to confirm understanding. **4.1.R.3** Students will engage in collaborative discussions about appropriate topics and texts, expressing their own ideas clearly while building on the ideas of others in pairs, diverse groups, and whole class settings.
Writing Students will develop and apply effective communication skills through speaking and active listening to create individual and group projects and presentations.	**2.1.W.1** Students will report on a topic or text, tell a story or recount an experience with appropriate facts and relevant, descriptive details, speaking audibly in coherent sentences. **2.1.W.2** Students will work respectfully within groups, share responsibility for collaborative work, and value individual contributions made by each group member.	**3.1.W.1** Students will report on a topic or text, tell a story, or recount an experience with appropriate facts and relevant, descriptive details, speaking audibly in coherent sentences at an appropriate pace. **3.1.W.2** Students will work respectfully within diverse groups, share responsibility for collaborative work, and value individual contributions made by each group member.	**4.1.W.1** Students will report on a topic or text, tell a story, or recount an experience with appropriate facts and relevant, descriptive details, speaking audibly in coherent sentences at an appropriate pace. **4.1.W.2** Students will work effectively and respectfully within diverse groups, share responsibility for collaborative work, and value individual contributions made by each group member.

1: Speaking and Listening	Students will speak and listen effectively in a variety of situations including, but not limited to, responses to reading and writing.		
	5th Grade	**6th Grade**	**7th Grade**
Reading Students will develop and apply effective communication skills through speaking and active listening.	**5.1.R.1** Students will actively listen and speak clearly using appropriate discussion rules with awareness of verbal and nonverbal cues. **5.1.R.2** Students will ask and answer questions to seek help, get information, or clarify about information presented orally through text or other media to confirm understanding. **5.1.R.3** Students will engage in collaborative discussions about appropriate topics and texts, expressing their own ideas clearly while building on the ideas of others in pairs, diverse groups, and whole class settings.	**6.1.R.1** Students will actively listen and speak clearly using appropriate discussion rules with awareness of verbal and nonverbal cues. **6.1.R.2** Students will actively listen and interpret a speaker's messages (both verbal and nonverbal) and ask questions to clarify the speaker's purpose and perspective. **6.1.R.3** Students will engage in collaborative discussions about appropriate topics and texts, expressing their own ideas clearly while building on the ideas of others in pairs, diverse groups, and whole class settings.	**7.1.R.1** Students will actively listen and speak clearly using appropriate discussion rules with awareness and control of verbal and nonverbal cues. **7.1.R.2** Students will actively listen and interpret a speaker's messages (both verbal and nonverbal) and ask questions to clarify the speaker's purpose and perspective. **7.1.R.3** Students will engage in collaborative discussions about appropriate topics and texts, expressing their own ideas clearly while building on the ideas of others in pairs, diverse groups, and whole class settings.
Writing Students will develop and apply effective communication skills through speaking and active listening to create individual and group projects and presentations.	**5.1.W.1** Students will give formal and informal presentations in a group or individually, organizing information and determining appropriate content for audience. **5.1.W.2** Students will work effectively and respectfully within diverse groups, share responsibility for collaborative work, and value individual contributions made by each group member.	**6.1.W.1** Students will give formal and informal presentations in a group or individually, organizing information and determining appropriate content and purpose for audience. **6.1.W.2** Students will work effectively and respectfully within diverse groups, share responsibility for collaborative work, and value individual contributions made by each group member.	**7.1.W.1** Students will give formal and informal presentations in a group or individually, providing evidence to support a main idea. **7.1.W.2** Students will work effectively and respectfully within diverse groups, show willingness to make necessary compromises to accomplish a goal, share responsibility for collaborative work, and value individual contributions made by each group member.

1: Speaking and Listening Students will speak and listen effectively in a variety of situations including, but not limited to, responses to reading and writing.			
	8th Grade	**9th Grade - English I**	**10th Grade - English II**
Reading Students will develop and apply effective communication skills through speaking and active listening.	**8.1.R.1** Students will actively listen and speak clearly using appropriate discussion rules with control of verbal and nonverbal cues. **8.1.R.2** Students will actively listen and interpret a speaker's messages (both verbal and nonverbal) and ask questions to clarify the speaker's purpose and perspective. **8.1.R.3** Students will engage in collaborative discussions about appropriate topics and texts, expressing their own ideas clearly while building on the ideas of others in pairs, diverse groups, and whole class settings.	**9.1.R.1** Students will actively listen and speak clearly using appropriate discussion rules with control of verbal and nonverbal cues. **9.1.R.2** Students will actively listen and interpret a speaker's messages (both verbal and nonverbal) and ask questions to clarify the speaker's purpose and perspective. **9.1.R.3** Students will engage in collaborative discussions about appropriate topics and texts, expressing their own ideas clearly while building on the ideas of others in pairs, diverse groups, and whole class settings.	**10.1.R.1** Students will actively listen and speak clearly using appropriate discussion rules with control of verbal and nonverbal cues. **10.1.R.2** Students will actively listen and evaluate, analyze, and synthesize a speaker's messages (both verbal and nonverbal) and ask questions to clarify the speaker's purpose and perspective. **10.1.R.3** Students will engage in collaborative discussions about appropriate topics and texts, expressing their own ideas clearly while building on the ideas of others in pairs, diverse groups, and whole class settings.
Writing Students will develop and apply effective communication skills through speaking and active listening to create individual and group projects and presentations.	**8.1.W.1** Students will give formal and informal presentations in a group or individually, providing textual and visual evidence to support a main idea. **8.1.W.2** Students will work effectively and respectfully within diverse groups, show willingness to make necessary compromises to accomplish a goal, share responsibility for collaborative work, and value individual contributions made by each group member.	**9.1.W.1** Students will give formal and informal presentations in a group or individually, providing textual and visual evidence to support a main idea. **9.1.W.2** Students will work effectively and respectfully within diverse groups, show willingness to make necessary compromises to accomplish a goal, share responsibility for collaborative work, and value individual contributions made by each group member.	**10.1.W.1** Students will give formal and informal presentations in a group or individually, providing textual and visual evidence to support a main idea. **10.1.W.2** Students will work effectively and respectfully within diverse groups, show willingness to make necessary compromises to accomplish a goal, share responsibility for collaborative work, and value individual contributions made by each group member.

1: Speaking and Listening	Students will speak and listen effectively in a variety of situations including, but not limited to, responses to reading and writing.	
	11th Grade - English III	**12th Grade - English IV**
Reading Students will develop and apply effective communication skills through speaking and active listening.	**11.1.R.1** Students will actively listen and speak clearly using appropriate discussion rules with control of verbal and nonverbal cues. **11.1.R.2** Students will actively listen and evaluate, analyze, and synthesize a speaker's messages (both verbal and nonverbal) and ask questions to clarify the speaker's purpose and perspective. **11.1.R.3** Students will engage in collaborative discussions about appropriate topics and texts, expressing their own ideas by contributing to, building on, and questioning the ideas of others in pairs, diverse groups, and whole class settings.	**12.1.R.1** Students will actively listen and speak clearly using appropriate discussion rules with control of verbal and nonverbal cues. **12.1.R.2** Students will actively listen and evaluate, analyze, and synthesize a speaker's messages (both verbal and nonverbal) and ask questions to clarify the speaker's purpose and perspective. **12.1.R.3** Students will engage in collaborative discussions about appropriate topics and texts, expressing their own ideas by contributing to, building on, and questioning the ideas of others in pairs, diverse groups, and whole class settings.
Writing Students will develop and apply effective communication skills through speaking and active listening to create individual and group projects and presentations.	**11.1.W.1** Students will give formal and informal presentations in a group or individually, providing textual and visual evidence to support a main idea. **11.1.W.2** Students will work effectively and respectfully within diverse groups, demonstrate willingness to make necessary compromises to accomplish a goal, share responsibility for collaborative work, and value individual contributions made by each group member.	**12.1.W.1** Students will give formal and informal presentations in a group or individually, providing textual and visual evidence to support a main idea. **12.1.W.2** Students will work effectively and respectfully within diverse groups, demonstrate willingness to make necessary compromises to accomplish a goal, share responsibility for collaborative work, and value individual contributions made by each group member.

Standard 2:

Reading Foundations

Students will develop foundational skills for future reading success by working with sounds, letters, and text.

Phonological Awareness
Phonological awareness is the ability to recognize, think about, and manipulate sounds in spoken language without using text.
pg. 20

Print Concepts
Students will demonstrate their understanding of the organization and basic features of print, including book handling skills and the understanding that printed materials provide information and tell stories.
pg. 22

Phonics and Word Study
Students will decode and read words in context and isolation by applying phonics and word analysis skills.
pg. 24

Fluency
Students will recognize high-frequency words and read grade-level text smoothly and accurately, with expression that connotes comprehension.
pg. 26

2: Reading Foundations Students will develop foundational skills for future reading success by working with sounds, letters, and text.

	Pre-Kindergarten	Kindergarten	1st Grade
Phonological Awareness Phonological awareness is the ability to recognize, think about, and manipulate sounds in spoken language without using text.	**PK.2.PA.1** Students will distinguish spoken words in a sentence with guidance and support. **PK.2.PA.2** Students will recognize spoken words that rhyme. **PK.2.PA.3** Students will begin to recognize syllables in spoken words *(e.g., sunshine= sun + shine).* **PK.2.PA.4** Students will begin to isolate initial and final sounds in spoken words. **PK.2.PA.5** Students will begin to recognize initial sounds in a set of spoken words (*i.e., alliteration*). **PK.2.PA.6** Students will combine onsets and rimes to form familiar one syllable spoken words with pictorial support (*e.g., /c/ + at = cat).*	**K.2.PA.1** Students will distinguish spoken words in a sentence. **K.2.PA.2** Students will recognize and produce pairs of rhyming words, and distinguish them from non-rhyming pairs. **K.2.PA.3** Students will isolate and pronounce the same initial sounds in a set of spoken words *(i.e., alliteration*) (*e.g., "the puppy pounces"*). **K.2. PA.4** Students will recognize the short or long vowel sound in one syllable words. **K.2.PA.5** Students will count, pronounce, blend, segment, and delete syllables in spoken words. **K.2.PA.6** Students will blend and segment onset and rime in one syllable spoken words *(e.g., Blending: /ch/ + at = chat; segmenting: cat = /c/+ at).* **K.2.PA.7** Students will blend phonemes to form one syllable spoken words with 3 to 5 phonemes *(e.g., /f/ /a/ /s/ /t/= fast)* **K.2.PA.8** Students will segment phonemes in one syllable spoken words with 3 to 5 phonemes *(e.g., "fast" = /f/ /a/ /s/ /t/).* **K.2.PA.9** Students will add, delete, and substitute phonemes in one syllable spoken words *(e.g., "add /c/ to the beginning of "at" to say "cat;" "remove the /p/ from "pin," to say "in;" "change the /d/ in "dog" to /f/ /r/ to say "frog").*	**1.2.PA.1** Students will blend and segment onset and rime in spoken words *(e.g., /ch/+ /at/ = chat).* **1.2.PA.2** Students will differentiate short from long vowel sounds in one syllable words. **1.2.PA.3** Students will isolate and pronounce initial, medial, and final sounds in spoken words. **1.2.PA.4** Students will blend phonemes to form spoken words with 4 to 6 phonemes*)* including consonant blends *(e.g., /s/ /t/ /r/ /i/ /ng/=string).* **1.2.PA.5** Students will segment phonemes in spoken words with 4 to 6 phonemes into individual phonemes *(e.g. string= /s/ /t/ /r/ /i/ /ng/).* **1.2.PA.6** Students will add, delete, and substitute phonemes in spoken words *(e.g., "add /g/ to the beginning of low to say 'glow;' "remove the /idge/ from 'bridge,' to say 'br;' "change the /ar/ in 'charm' to /u/ to say 'chum').*

2: Reading Foundations Students will develop foundational skills for future reading success by working with sounds, letters, and text.

	2nd Grade	3rd Grade	4th Grade
Phonological Awareness Phonological awareness is the ability to recognize, think about, and manipulate sounds in spoken language without using text.	***Students will continue to review and apply earlier grade level expectations for this standard.*** ***If phonological awareness skills are not mastered, students will address skills from previous grades.***		

2: Reading Foundations Students will develop foundational skills for future reading success by working with sounds, letters, and text.

	Pre-Kindergarten	Kindergarten	1st Grade
Print Concepts Students will demonstrate their understanding of the organization and basic features of print, including book handling skills and the understanding that printed materials provide information and tell stories.	**PK.2.PC.1** Students will write the majority of the letters in their first name and some uppercase and lowercase letters with guidance and support. **PK.2.PC.2** Students will understand that print carries a message by recognizing labels, signs, and other print in the environment with guidance and support. **PK.2.PC.3** Students will begin to demonstrate correct book orientation and identify the front and back covers of a book. **PK.2.PC.4** Students will recognize that written words are made up of letters and are separated by spaces with guidance and support. **PK.2.PC.5** Students will begin to understand that print moves from top to bottom, left to right, and front to back. **PK.2.PC.6** Students will recognize ending punctuation marks in print during shared reading or other text experiences with guidance and support.	**K.2.PC.1** Students will correctly form letters to write their first and last name and most uppercase and lowercase letters correctly. **K.2.PC.2** Students will demonstrate their understanding that print carries a message by recognizing labels, signs, and other print in the environment. **K.2.PC.3** Students will demonstrate correct book orientation and identify the title, title page, and the front and back covers of a book. **K.2.PC.4** Students will recognize that written words are made up of letters and are separated by spaces. **K.2.PC.5** Students will recognize that print moves from top to bottom, left to right, and front to back (does not have to be matched to voice). **K.2.PC.6** Students will recognize the distinguishing features of a sentence. *(e.g., capitalization of the first word, ending punctuation: period, exclamation mark, question mark)* with guidance and support.	**1.2.PC.1** Students will correctly form letters and use appropriate spacing for letters, words, and sentences using left-to-right and top-to-bottom progression. **1.2.PC.2** Students will recognize the distinguishing features of a sentence *(e.g., capitalization of the first word, ending punctuation,comma, quotation marks)*. --- ***Students will continue to review and apply earlier grade level expectations for this standard.*** ***If print concepts skills are not mastered, students will address skills from previous grades.***

2: Reading Foundations Students will develop foundational skills for future reading success by working with sounds, letters, and text.

	2nd Grade	3rd Grade	4th Grade
Print Concepts Students will demonstrate their understanding of the organization and basic features of print, including book handling skills and the understanding that printed materials provide information and tell stories.	**2.2.PC** Students will correctly form letters in print and use appropriate spacing for letters, words, and sentences.	**3.2.PC** Students will correctly form letters in print and cursive and use appropriate spacing for letters, words, and sentences.	**4.2.PC** Students will correctly form letters in print and cursive and use appropriate spacing for letters, words, and sentences.
	Students will continue to review and apply earlier grade level expectations for this standard. ***If print concepts skills are not mastered, students will address skills from previous grades.***		

2: Reading Foundations Students will develop foundational skills for future reading success by working with sounds, letters, and text.

	Pre-Kindergarten	Kindergarten	1st Grade

Phonics and Word Study
Students will decode and read words in context and isolation by applying phonics and word analysis skills.
	PK.2.PWS.1 Students will name the majority of the letters in their first name and many uppercase and lowercase letters with guidance and support.	**K.2.PWS.1** Students will name all uppercase and lowercase letters.	**1.2.PWS.1** Students will decode phonetically regular words by using their knowledge of:
			• single consonants *(e.g., c = /k/, c = /s/, s = /s/, s = /z/, x = /ks/, x = /z/)*
			• consonant blends *(e.g., bl, br, cr)*
			• consonant digraphs and trigraphs *(e.g., sh-, -tch)*
			• vowel sounds:
			  ○ long
			  ○ short
			• r-controlled vowels *(e.g., ar, er, ir or, ur)*
			• vowel spelling patterns:
			  ○ vowel digraphs *(e.g., ea, oa, ee)*
			  ○ vowel-consonant-silent-e *(e.g., lake)*

	PK.2.PWS.2 Students will produce some sounds represented by letters with guidance and support.	**K.2.PWS.2** Students will sequence the letters of the alphabet.	**1.2.PWS.2** Students will decode words by applying knowledge of structural analysis: • most major syllable patterns *(e.g., closed, open, vowel team, vowel silent e, r-controlled)* • inflectional endings *(e.g., -s, -ed, -ing)* • compound words • contractions
		K.2.PWS.3 Students will produce the primary or most common sound for each consonant, short and long vowel sounds *(e.g., c = /k/, c = /s/, s = /s/, s = /z/, x = /ks/, x = /z/).* **K.2.PWS.4** Students will blend letter sounds to decode simple *Vowel / Consonant (VC)* and *Consonant / Vowel / Consonant (CVC)* words *(e.g., VC words= at, in, up; CVC words = pat, hen, lot).*	**1.2.PWS.3** Students will read words in common word families *(e.g., -at, -ab, -am, -in).*

2: Reading Foundations Students will develop foundational skills for future reading success by working with sounds, letters, and text.

	2nd Grade	3rd Grade	4th Grade

Phonics and Word Study
Students will decode and read words in context and isolation by applying phonics and word analysis skills.
	2.2.PWS.1 Students will decode one- and two- syllable words by using their knowledge of:
	• single consonants, including those with two different sounds *(e.g., soft and hard c [cent, cat] and g [gem,goat])*
	• consonant blends *(e.g., bl, br, cr)*
	• consonant digraphs and trigraphs *(e.g., sh-, -tch)*
	• vowel sounds:
	  ○ long
	  ○ short
	  ○ "r" controlled vowels *(e.g., ar, er, ir or, ur)*
	• vowel spelling patterns:
	  ○ vowel digraphs *(e.g., ea, oa, ee)*
	  ○ vowel-consonant-silent-e *(e.g., lake)*
	  ○ vowel diphthongs *(vowel combinations having two vowel sounds e.g., oi as in boil, oy as in boy]*
		3.2.PWS.1 Students will decode multisyllabic words using their knowledge of:
		• "r" controlled vowels (*e.g., ar, er, ir or, ur)*
		• vowel diphthongs *(vowel combinations having two vowel sounds e.g., oi as in boil, oy as in boy]*
			4.2.PWS.1 Students will use their combined knowledge of letter-sound correspondences, syllable patterns, morphology and semantics to accurately read unfamiliar words, including multisyllabic words.

	2.2.PWS.2 Students will decode words by applying knowledge of structural analysis: • all major syllable patterns *(e.g., closed, consonant +le, open, vowel team, vowel silent e, r-controlled)* • inflectional endings *(e.g., -s, -ed, -ing)* • compound words • contractions • abbreviations • common roots and related prefixes and suffixes	**3.2.PWS.2** Students will decode multisyllabic words by applying knowledge of structural analysis: • all major syllable patterns • contractions • abbreviations • common roots and related prefixes and suffixes	
	2.2.PWS.3 Students will read words in common word families *(e.g., -ight, -ink, -ine, ow)*.	**3.2.PWS.3** Students will use decoding skills and semantics in context when reading new words in a text, including multisyllabic words.	
	Students will continue to review and apply earlier grade level expectations for this standard. If these decoding skills are not mastered, students will address skills from previous grades.		

2: Reading Foundations Students will develop foundational skills for future reading success by working with sounds, letters, and text.

	Pre-Kindergarten	Kindergarten	1st Grade
Fluency Students will recognize high-frequency words and read grade-level text smoothly and accurately, with expression that connotes comprehension.	**PK.2.F.1** Students will read first name in print.	**K.2.F.1** Students will read first and last name in print. **K.2.F.2** Students will read common high frequency grade-level words by sight *(e.g., not, was, to, have, you, he, is, with, are).*	**1.2.F.1** Students will read high frequency and/or common irregularly spelled grade-level words with automaticity in text. **1.2.F.2** Students will orally read grade-level text at an appropriate rate, smoothly and accurately, with expression that connotes comprehension.

2: Reading Foundations Students will develop foundational skills for future reading success by working with sounds, letters, and text.

	2nd Grade	3rd Grade	4th Grade
Fluency Students will recognize high-frequency words and read grade-level text smoothly and accurately, with expression that connotes comprehension.	**2.2.F.1** Students will read high frequency and/or common irregularly spelled grade-level words with automaticity in text. **2.2.F.2** Students will orally read grade-level text at an appropriate rate, smoothly and accurately, with expression that connotes comprehension.	**3.2.F.1** Students will read high frequency and/or irregularly spelled grade-level words with automaticity in text. **3.2.F.2** Students will orally read grade-level text at an appropriate rate, smoothly and accurately, with expression that connotes comprehension.	**4.2.F.1** Students will read high frequency and irregularly spelled grade-level words with automaticity in text. **4.2.F.2** Students will orally read grade-level text at an appropriate rate, smoothly and accurately, with expression that connotes comprehension.
	Students will continue to review and apply earlier grade level expectations for this standard. If these fluency skills are not mastered, students will address skills from previous grades.		

2: Reading Foundations Students will develop foundational skills for future reading success by working with sounds, letters, and text.

	5th Grade	6th Grade	7th Grade	8th Grade
Fluency Students will recognize high-frequency words and read grade-level text smoothly and accurately, with expression that connotes comprehension.	***Students will continue to review and apply earlier grade level expectations for this standard.*** ***If these fluency skills are not mastered, students will address skills from previous grades.***			

Standard 2

Reading and Writing Process

Students will use a variety of recursive reading and writing processes.

Reading

Students will read and comprehend increasingly complex literary and informational texts.

Writing

Students will develop and strengthen writing by engaging in a recursive process that includes prewriting, drafting, revising, editing, and publishing.

2: Reading and Writing Process Students will use a variety of recursive reading and writing processes.

	Pre-Kindergarten	Kindergarten	1st Grade
Reading Students will read and comprehend increasingly complex literary and informational texts.	**PK.2.R** Students will begin to retell or reenact major events from a read-aloud with guidance and support to recognize the main idea.	**K.2.R.1** Students will retell or reenact major events from a read-aloud with guidance and support to recognize the main idea. **K.2.R.2** Students will discriminate between fiction and nonfiction/informational text with guidance and support. **K.2.R.3** Students will sequence the events/plot *(i.e., beginning, middle, and end)* of a story or text with guidance and support.	**1.2.R.1** Students will retell or reenact major events in a text, focusing on important details to recognize the main idea. **1.2.R.2** Students will discriminate between fiction and nonfiction/informational text. **1.2.R.3** Students will sequence the events/plot *(i.e., beginning, middle, and end)* of a story or text.
Writing Students will develop and strengthen writing by engaging in a recursive process that includes prewriting, drafting, revising, editing, and publishing.	**PK.2.W** Students will begin to express themselves through drawing, dictating, and emergent writing.	**K.2.W.1** Students will begin to develop first drafts by expressing themselves through drawing and emergent writing. **K.2.W.2** Students will begin to develop first drafts by sequencing the action or details of stories/texts. **K.2.W.3** Students will begin to edit first drafts using appropriate spacing between letters and words.	**1.2.W.1** Students will develop and edit first drafts using appropriate spacing between letters, words, and sentences using left-to-right and top-to-bottom progression. **1.2.W.2** Students will develop drafts by sequencing the action or details in a story or about a topic through writing sentences with guidance and support. **1.2.W.3** Students will correctly spell grade-appropriate, highly decodable words *(e.g., cup, like, cart)* and common, irregularly spelled sight words *(e.g., the)* while editing. **1.2.W.4** Students will use resources to find correct spellings of words *(e.g., word wall, vocabulary notebook).*

2: Reading and Writing Process Students will use a variety of recursive reading and writing processes.

	2nd Grade	3rd Grade	4th Grade
Reading Students will read and comprehend increasingly complex literary and informational texts.	**2.2.R.1** Students will locate the main idea and supporting details of a text. **2.2.R.2** Students will begin to compare and contrast details *(e.g., plots or events, settings, and characters)* to discriminate genres. **2.2.R.3** Students will begin to summarize events or plots *(i.e., beginning, middle, end, and conflict)* of a story or text.	**3.2.R.1** Students will locate the main idea and key supporting details of a text or section of text. **3.2.R.2** Students will compare and contrast details *(e.g., plots or events, settings, and characters)* to discriminate genres. **3.2.R.3** Students will summarize events or plots *(i.e., beginning, middle, end, and conflict)* of a story or text.	**4.2.R.1** Students will distinguish how key details support the main idea of a passage. **4.2.R.2** Students will compare and contrast details in literary and nonfiction/informational texts to discriminate various genres. **4.2.R.3** Students will summarize events or plots *(i.e., beginning, middle, end, conflict, and climax)* of a story or text. **4.2.R.4** Students will begin to paraphrase main ideas with supporting details in a text.
Writing Students will develop and strengthen writing by engaging in a recursive process that includes prewriting, drafting, revising, editing, and publishing.	**2.2.W.1** Students will develop drafts by sequencing the action or details in a story or about a topic through writing sentences. **2.2.W.2** Students will develop and edit first drafts using appropriate spacing between letters, words, and sentences. **2.2.W.3** Students will correctly spell grade-appropriate words while editing. **2.2.W.4** Students will use resources to find correct spellings of words *(e.g., word wall, vocabulary notebook, dictionaries).*	**3.2.W.1** Students will develop drafts by categorizing ideas and organizing them into paragraphs using correct paragraph indentations. **3.2.W.2** Students will edit drafts and revise for clarity and organization. **3.2.W.3** Students will correctly spell grade-appropriate words while editing. **3.2.W.4** Students will use resources to find correct spellings of words *(e.g., word wall, vocabulary notebook, print and electronic dictionaries).*	**4.2.W.1** Students will develop drafts by categorizing ideas and organizing them into paragraphs. **4.2.W.2** Students will edit drafts and revise for clarity and organization. **4.2.W.3** Students will correctly spell grade-appropriate words while editing. **4.2.W.4** Students will use resources to find correct spellings of words *(e.g., word wall, vocabulary notebook, print and electronic dictionaries, and spell-check).*

2: Reading and Writing Process Students will use a variety of recursive reading and writing processes.

	5th Grade	6th Grade	7th Grade
Reading Students will read and comprehend increasingly complex literary and informational texts.	**5.2.R.1** Students will create an objective summary, including main idea and supporting details, while maintaining meaning and a logical sequence of events. **5.2.R.2** Students will compare and contrast details in literary and nonfiction/informational texts to distinguish genres. **5.2.R.3** Students will begin to paraphrase main ideas with supporting details in a text.	**6.2.R.1** Students will create an objective summary, including main idea and supporting details, while maintaining meaning and a logical sequence of events. **6.2.R.2** Students will analyze details in literary and nonfiction/informational texts to distinguish genres. **6.2.R.3** Students will paraphrase main ideas with supporting details in a text.	**7.2.R.1** Students will create an objective summary, including main idea and supporting details, while maintaining meaning and a logical sequence of events. **7.2.R.2** Students will analyze details in literary and nonfiction/informational texts to distinguish genres. **7.2.R.3** Students will paraphrase main ideas with supporting details in a text.
Writing Students will develop and strengthen writing by engaging in a recursive process that includes prewriting, drafting, revising, editing, and publishing.	**5.2.W.1** Students will apply components of a recursive writing process for multiple purposes to create a focused, organized, and coherent piece of writing. **5.2.W.2** Students will plan *(e.g., outline)* and prewrite a first draft as necessary. **5.2.W.3** Students will develop drafts by choosing an organizational structure *(e.g., description, compare/contrast, sequential, problem/solution, cause/effect, etc.)* and building on ideas in multi-paragraph essays. **5.2.W.4** Students will edit and revise multiple drafts for intended purpose *(e.g., staying on topic),* organization, and coherence. **5.2.W.5** Students will use resources to find correct spellings of words *(e.g., word wall, vocabulary notebook, print and electronic dictionaries, and spell-check).*	**6.2.W.1** Students will apply components of a recursive writing process for multiple purposes to create a focused, organized, and coherent piece of writing. **6.2.W.2** Students will plan *(e.g., outline)* and prewrite a first draft as necessary. **6.2.W.3** Students will develop drafts by choosing an organizational structure *(e.g., description, compare/contrast, sequential, problem/solution, cause/effect, etc.)* and building on ideas in multi-paragraph essays. **6.2.W.4** Students will edit and revise multiple drafts for intended purpose *(e.g., staying on topic),* organization, coherence, using a consistent point of view. **6.2.W.5** Students will use resources to find correct spellings of words *(e.g., word wall, vocabulary notebook, print and electronic dictionaries, and spell-check).*	**7.2.W.1** Students will apply components of a recursive writing process for multiple purposes to create a focused, organized, and coherent piece of writing. **7.2.W.2** Students will plan *(e.g., outline)* and prewrite a first draft as necessary. **7.2.W.3** Students will develop drafts by choosing an organizational structure *(e.g., description, compare/contrast, sequential, problem/solution, cause/effect, etc.)* and building on ideas in multi-paragraph essays. **7.2.W.4** Students will edit and revise multiple drafts for organization, transitions to improve coherence and meaning, using a consistent point of view. **7.2.W.5** Students will use resources to find correct spellings of words *(e.g., word wall, vocabulary notebook, print and electronic dictionaries, and spell-check).*

2: Reading and Writing Process Students will use a variety of recursive reading and writing processes.

	8th Grade	9th Grade - English I	10th Grade - English II
Reading Students will read and comprehend increasingly complex literary and informational texts.	**8.2.R.1** Students will summarize and paraphrase ideas, while maintaining meaning and a logical sequence of events, within and between texts. **8.2.R.2** Students will analyze details in literary and nonfiction/informational texts to evaluate patterns of genres. **8.2.R.3** Students will generalize main ideas with supporting details in a text.	**9.2.R.1** Students will summarize, paraphrase, and generalize ideas, while maintaining meaning and a logical sequence of events, within and between texts. **9.2.R.2** Students will analyze details in literary and nonfiction/informational texts to evaluate patterns of genres. **9.2.R.3** Students will synthesize main ideas with supporting details in texts.	**10.2.R.1** Students will summarize, paraphrase, and synthesize ideas, while maintaining meaning and a logical sequence of events, within and between texts. **10.2.R.2** Students will analyze details in literary and nonfiction/informational texts to connect how genre supports the author's purpose.
Writing Students will develop and strengthen writing by engaging in a recursive process that includes prewriting, drafting, revising, editing, and publishing.	**8.2.W.1** Students will apply components of a recursive writing process for multiple purposes to create a focused, organized, and coherent piece of writing. **8.2.W.2** Students will plan *(e.g., outline)* and prewrite a first draft as necessary. **8.2.W.3** Students will develop drafts by choosing an organizational structure *(e.g., description, compare/contrast, sequential, problem/solution, cause/effect, etc.)* and building on ideas in multi-paragraph essays. **8.2.W.4** Students will edit and revise multiple drafts for organization, transitions to improve coherence and meaning, sentence variety, and use of consistent point of view. **8.2.W.5** Students will use resources to find correct spellings of words *(e.g., word wall, vocabulary notebook, print and electronic dictionaries, and spell-check).*	**9.2.W.1** Students will apply components of a recursive writing process for multiple purposes to create a focused, organized, and coherent piece of writing. **9.2.W.2** Students will plan *(e.g., outline)* and prewrite a first draft as necessary. **9.2.W.3** Students will develop drafts by choosing an organizational structure *(e.g., description, compare/contrast, sequential, problem/solution, cause/effect, etc.)* and building on ideas in multi-paragraph essays. **9.2.W.4** Students will edit and revise multiple drafts for organization, transitions to improve coherence and meaning, sentence variety, and use of consistent tone and point of view. **9.2.W.5** Students will use resources to find correct spellings of words *(e.g., word wall, vocabulary notebook, print and electronic dictionaries, and spell-check).*	**10.2.W.1** Students will apply components of a recursive writing process for multiple purposes to create a focused, organized, and coherent piece of writing. **10.2.W.2** Students will plan *(e.g., outline)* and prewrite a first draft as necessary. **10.2.W.3** Students will develop drafts by choosing an organizational structure *(e.g., description, compare/contrast, sequential, problem/solution, cause/effect, etc.)* and building on ideas in multi-paragraph essays. **10.2.W.4** Students will edit and revise multiple drafts for organization, enhanced transitions and coherence, sentence variety, and consistency in tone and point of view to establish meaningful texts. **10.2.W.5** Students will use resources to find correct spellings of words *(e.g., word wall, vocabulary notebook, print and electronic dictionaries, and spell-check).*

2: Reading and Writing Process Students will use a variety of recursive reading and writing processes.

	11th Grade - English III	12th Grade - English IV
Reading Students will read and comprehend increasingly complex literary and informational texts.	**11.2.R.1** Students will summarize, paraphrase, and synthesize ideas, while maintaining meaning and a logical sequence of events, within and between texts. **11.2.R.2** Students will evaluate details in literary and non-fiction/informational texts to connect how genre supports the author's purpose.	**12.2.R.1** Students will summarize, paraphrase, and synthesize ideas, while maintaining meaning and a logical sequence of events, within and between texts. **12.2.R.2** Students will evaluate details in literary and non-fiction/informational texts to connect how genre supports the author's purpose.
Writing Students will develop and strengthen writing by engaging in a recursive process that includes prewriting, drafting, revising, editing, and publishing.	**11.2.W.1** Students will apply components of a recursive writing process for multiple purposes to create a focused, organized, and coherent piece of writing. **11.2.W.2** Students will plan *(e.g., outline)* and prewrite a first draft as necessary. **11.2.W.3** Students will develop drafts by choosing an organizational structure *(e.g., description, compare/contrast, sequential, problem/solution, cause/effect, etc.)* and building on ideas in multi-paragraph essays. **11.2.W.4** Students will edit and revise multiple drafts for logical organization, enhanced transitions and coherence, sentence variety, and use of tone and point of view through specific rhetorical devices to establish meaningful texts. **11.2.W.5** Students will use resources to find correct spellings of words *(e.g., word wall, vocabulary notebook, print and electronic dictionaries, and spell-check).*	**12.2.W.1** Students will apply components of a recursive writing process for multiple purposes to create a focused, organized, and coherent piece of writing. **12.2.W.2** Students will plan *(e.g., outline)* and prewrite a first draft as necessary. **12.2.W.3** Students will develop drafts by choosing an organizational structure *(e.g., description, compare/contrast, sequential, problem/solution, cause/effect, etc.)* and building on ideas in multi-paragraph essays. **12.2.W.4** Students will edit and revise multiple drafts for logical organization, enhanced transitions and coherence, sentence variety, and use of tone and point of view through specific rhetorical devices to establish meaningful texts. **12.2.W.5** Students will use resources to find correct spellings of words *(e.g., word wall, vocabulary notebook, print and electronic dictionaries, and spell-check).*

Standard 3

Critical Reading and Writing

Students will apply critical thinking skills to reading and writing.

Reading

Students will comprehend, interpret, evaluate, and respond to a variety of complex texts of all literary and informational genres from a variety of historical, cultural, ethnic, and global perspectives.

Writing

Students will write for varied purposes and audiences in all modes, using fully developed ideas, strong organization, well-chosen words, fluent sentences, and appropriate voice.

3: Critical Reading and Writing Students will apply critical thinking skills to reading and writing.			
	Pre-Kindergarten	**Kindergarten**	**1st Grade**
Reading Students will comprehend, interpret, evaluate, and respond to a variety of complex texts of all literary and informational genres from a variety of historical, cultural, ethnic, and global perspectives.	**PK.3.R.1** Students will describe the role of an author and illustrator, telling how they contribute to a story, with guidance and support. **PK.3.R.2** Students will describe characters in a story with guidance and support. **PK.3.R.3** Students will tell what is happening in a picture or illustration with guidance and support. **PK.3.R.4** Students will ask and answer basic questions *(e.g., who, what, where, and when)* about texts during shared reading or other text experiences with guidance and support.	**K.3.R.1** Students will name the author and illustrator, and explain the roles of each in a particular story. **K.3.R.2** Students will describe characters and setting in a story with guidance and support. **K.3.R.3** Students will tell what is happening in a picture or illustration. **K.3.R.4** Students will ask and answer basic questions *(e.g., who, what, where, and when)* about texts during shared reading or other text experiences with guidance and support	**1.3.R.1** Students will identify the author's purpose *(i.e., tell a story, provide information)* with guidance and support. **1.3.R.2** Students will describe who is telling the story *(i.e., point of view).* **1.3.R.3** Students will find textual evidence when provided with examples of literary elements and organization: • setting *(i.e., time, place)* • plot • main characters and their traits in a story **1.3.R.4** Students will ask and answer basic questions *(e.g., who, what, where, why,and when)* about texts. **1.3.R.5** Students will begin to locate facts that are clearly stated in a text.

	Pre-Kindergarten	Kindergarten	1st Grade
Writing Students will write for varied purposes and audiences in all modes, using fully developed ideas, strong organization, well-chosen words, fluent sentences, and appropriate voice.	**PK.3.W** Students will use drawing, labeling, and dictating to express thoughts and ideas with guidance and support.	**K.3.W** Students will use drawing, labeling, dictating, and writing to tell a story, share information, or express an opinion with guidance and support.	**NARRATIVE** **1.3.W.1** Students will begin to write narratives incorporating characters, plot *(i.e., beginning, middle, end)*, and a basic setting *(i.e., time, place)* with guidance and support. **INFORMATIVE** **1.3.W.2** Students will begin to write facts about a subject in response to a text read aloud to demonstrate understanding with guidance and support. **OPINION** **1.3.W.3** Students will express an opinion in writing about a topic and provide a reason to support the opinion.

3: Critical Reading and Writing Students will apply critical thinking skills to reading and writing.

	2nd Grade	3rd Grade	4th Grade
Reading Students will comprehend, interpret, evaluate, and respond to a variety of complex texts of all literary and informational genres from a variety of historical, cultural, ethnic, and global perspectives.	**2.3.R.1** Students will determine the author's purpose *(i.e., tell a story, provide information).*	**3.3.R.1** Students determine the author's stated and implied purpose *(i.e., entertain, inform, persuade)*.	**4.3.R.1** Students will determine the author's purpose *(i.e., entertain, inform, persuade)* and infer the difference between the stated and implied purpose.
	2.3.R.2 Students will infer whether a story is narrated in first or third person point of view in grade-level literary and/or informational text.	**3.3.R.2** Students will infer whether a story is narrated in first or third person point of view in grade-level literary and/or informational text.	**4.3.R.2** Students will infer whether a story is narrated in first or third person point of view in grade-level literary and/or informational text.
	2.3.R.3 Students will find textual evidence when provided with examples of literary elements and organization: • setting *(i.e., time, place)* • plot • characters • characterization	**3.3.R.3** Students will find textual evidence when provided with examples of literary elements and organization: • setting *(i.e., time, place)* • plot • characters • characterization • theme	**4.3.R.3** Students will describe key literary elements: • setting • plot • characters *(i.e., protagonist, antagonist)* • characterization • theme
	2.3.R.4 Students will find examples of literary devices: • simile • metaphor	**3.3.R.4** Students will find examples of literary devices: • simile • metaphor • personification • onomatopoeia • hyperbole	**4.3.R.4** Students will find examples of literary devices: • simile • metaphor • personification • onomatopoeia • hyperbole • imagery • symbolism* • tone* **Students will find textual evidence when provided with examples.*
	2.3.R.5 Students will locate facts that are clearly stated in a text.	**3.3.R.5** Students will distinguish fact from opinion in a text.	**4.3.R.5** Students will distinguish fact from opinion in a text and investigate facts for accuracy.

	2nd Grade	3rd Grade	4th Grade
Reading (Continued)	**2.3.R.6** Students will describe the structure of a text *(e.g., description, compare/contrast, sequential, problem/solution, cause/effect)* with guidance and support. **2.3.R.7** Students will answer inferential questions *(e.g., how and why)* with guidance and support.	**3.3 R.6** Students will describe the structure of a text *(e.g., description, compare/contrast, sequential, problem/solution, cause/effect)* with guidance and support. **3.3.R.7** Students will ask and answer inferential questions using the text to support answers with guidance and support.	**4.3.R.6** Students will describe the structure of a text *(e.g., description, compare/contrast, sequential, problem/solution, cause/effect).* **4.3.R.7** Students will ask and answer inferential questions using the text to support answers.
Writing Students will write for varied purposes and audiences in all modes, using fully developed ideas, strong organization, well-chosen words, fluent sentences, and appropriate voice.	**NARRATIVE** **2.3.W.1** Students will write narratives incorporating characters, plot *(i.e., beginning, middle, end)*, and a basic setting *(i.e., time, place)* with guidance and support. **INFORMATIVE** **2.3.W.2** Students will write facts about a subject and include a main idea with supporting details. **OPINION** **2.3.W.3** Students will express an opinion about a topic and provide reasons as support.	**NARRATIVE - Grade Level Focus** **3.3.W.1** Students will write narratives incorporating characters, plot, setting, point of view, and conflict *(i.e., solution and resolution).* **INFORMATIVE** **3.3.W.2** Students will write facts about a subject, including a main idea with supporting details, and use transitional and signal words. **OPINION** **3.3.W.3** Students will express an opinion about a topic and provide reasons as support.	**NARRATIVE** **4.3.W.1** Students will write narratives incorporating characters, plot, setting, point of view, conflict *(i.e., solution and resolution),* and dialogue. **INFORMATIVE - Grade Level Focus** **4.3.W.2** Students will write facts about a subject, including a clear main idea with supporting details, and use transitional and signal words. **OPINION** **4.3.W.3** Students will express an opinion about a topic and provide fact-based reasons as support.

3: Critical Reading and Writing Students will apply critical thinking skills to reading and writing.

	5th Grade	6th Grade	7th Grade
Reading Students will comprehend, interpret, evaluate, and respond to a variety of complex texts of all literary and informational genres from a variety of historical, cultural, ethnic, and global perspectives.	**5.3.R.1** Students will determine an author's stated or implied purpose and draw conclusions to evaluate how well the author's purpose was achieved. **5.3.R.2** Students will determine the point of view and describe how it affects grade-level literary and/or informational text. **5.3.R.3** Students will describe and find textual evidence of key literary elements: • setting • plot • characters *(i.e., protagonist, antagonist)* • characterization • theme **5.3.R.4** Students will evaluate literary devices to support interpretations of literary texts: • simile • metaphor • personification • onomatopoeia • hyperbole • imagery • symbolism* • tone* **Students will find textual evidence when provided with examples.*	**6.3.R.1** Students will compare and contrast stated or implied purposes of authors writing on the same topic in grade-level literary and/or informational texts. **6.3.R.2** Students will evaluate how the point of view and perspective affect grade-level literary and/or informational text. **6.3.R.3** Students will analyze how key literary elements contribute to the meaning of the literary work: • setting • plot • characters *(i.e., protagonist, antagonist)* • characterization • theme • conflict *(i.e., internal and external)* **6.3.R.4** Students will evaluate literary devices to support interpretations of literary texts: • simile • metaphor • personification • onomatopoeia • hyperbole • imagery • symbolism* • tone* **Students will find textual evidence when provided with examples.*	**7.3.R.1** Students will compare and contrast stated or implied purposes of authors writing on the same topic in grade-level literary and/or informational texts. **7.3.R.2** Students will evaluate how the point of view and perspective affect grade-level literary and/or informational text. **7.3.R.3** Students will analyze how key literary elements contribute to the meaning of the literary work: • setting • plot • characters *(i.e., protagonist, antagonist)* • characterization • theme • conflict *(i.e., internal and external)* **7.3.R.4** Students will evaluate literary devices to support interpretations of literary texts: • simile • metaphor • personification • onomatopoeia • hyperbole • imagery • symbolism • tone • irony* **Students will find textual evidence when provided with examples.*

	5th Grade	6th Grade	7th Grade
Reading (Continued)	**5.3.R.5** Students will distinguish fact from opinion in non-fiction text and investigate facts for accuracy. **5.3.R.6** Students will distinguish the structures of texts *(e.g., description, compare/contrast, sequential, problem/solution, cause/effect)* and content by making inferences about texts and use textual evidence to support understanding. **5.3.R.7** Students will compare and contrast texts and ideas within and between texts.	**6.3.R.5** Students will categorize facts included in an argument as *for* or *against* an issue. **6.3.R.6** Students will analyze the structures of texts *(e.g., description, compare/contrast, sequential, problem/solution, cause/effect)* and content by making inferences about texts and use textual evidence to support understanding. **6.3.R.7** Students will analyze texts and ideas within and between texts and provide textual evidence to support their inferences.	**7.3.R.5** Students will distinguish factual claims from opinions. **7.3.R.6** Students will analyze the structures of texts *(e.g., compare/contrast, problem/solution, cause/effect, claims/evidence)* and content by making inferences about texts and use textual evidence to draw simple logical conclusions. **7.3.R.7** Students will make connections *(e.g., thematic links)* between and across multiple texts and provide textual evidence to support their inferences.
Writing Students will write for varied purposes and audiences in all modes, using fully developed ideas, strong organization, well-chosen words, fluent sentences, and appropriate voice.	**NARRATIVE** **5.3.W.1** Students will write narratives incorporating characters, plot, setting, point of view, conflict *(i.e., internal, external),* and dialogue. **INFORMATIVE - Grade Level Focus** **5.3.W.2** Students will introduce and develop a topic, incorporating evidence *(e.g., specific facts, examples, details)* and maintaining an organized structure. **OPINION** **5.3.W.3** Students will clearly state an opinion supported with facts and details. **5.3.W.4** Students will show relationships among facts, opinions, and supporting details.	**NARRATIVE** **6.3.W.1** Students will write narratives incorporating characters, plot, setting, point of view, conflict *(i.e., internal, external),* and dialogue. **INFORMATIVE** **6.3.W.2** Students will compose essays and reports about topics, incorporating evidence *(e.g., specific facts, examples, details)* and maintaining an organized structure. **OPINION - Grade Level Focus** **6.3.W.3** Students will clearly state an opinion supported with facts and details. **6.3.W.4** Students will show relationships among facts, opinions, and supporting details.	**NARRATIVE** **7.3.W.1** Students will write narratives incorporating characters, plot, setting, point of view, conflict, dialogue, and sensory details to convey experiences and events. **INFORMATIVE** **7.3.W.2** Students will compose essays and reports about topics, incorporating evidence *(e.g., specific facts, examples, details)* and maintaining an organized structure and a formal style. **ARGUMENT - Grade Level Focus** **7.3.W.3** Students will introduce a claim and organize reasons and evidence, using credible sources. **7.3.W.4** Students will show relationships among the claim, reasons, and evidence.

3: Critical Reading and Writing Students will apply critical thinking skills to reading and writing.

	8th Grade	9th Grade - English I	10th Grade - English II
Reading Students will comprehend, interpret, evaluate, and respond to a variety of complex texts of all literary and informational genres from a variety of historical, cultural, ethnic, and global perspectives.	**8.3.R.1** Students will analyze works written on the same topic and compare the methods the authors use to achieve similar or different purposes and include support using textual evidence. **8.3.R.2** Students will evaluate points of view and perspectives and describe how this affects grade-level literary and/or informational text. **8.3.R.3** Students will analyze how authors use key literary elements to contribute to the meaning of a text: • setting • plot • characters *(i.e., protagonist, antagonist)* • characterization • theme • conflict *(i.e., internal and external)*	**9.3.R.1** Students will analyze works written on the same topic and compare the methods the authors use to achieve similar or different purposes and include support using textual evidence. **9.3.R.2** Students will evaluate points of view and perspectives in more than one grade-level literary and/or informational text and explain how multiple points of view contribute to the meaning of a work. **9.3.R.3** Students will analyze how authors use key literary elements to contribute to meaning and interpret how themes are connected across texts: • setting • plot • characters *(i.e., protagonist, antagonist)* • character development • theme • conflict *(i.e., internal and external)* • archetypes	**10.3.R.1** Students will evaluate the extent to which historical, cultural, and/or global perspectives affect authors' stylistic and organizational choices in grade-level literary and informational genres. **10.3.R.2** Students will evaluate points of view and perspectives in more than one grade-level literary and/or informational text and explain how multiple points of view contribute to the meaning of a work. **10.3.R.3** Students will analyze how authors use key literary elements to contribute to meaning and interpret how themes are connected across texts: • character development • theme • conflict *(i.e., internal and external)* • archetypes

	8th Grade	9th Grade - English I	10th Grade - English II
Reading (Continued)	**8.3.R.4** Students will evaluate literary devices to support interpretations of literary texts: • simile • metaphor • personification • onomatopoeia • hyperbole • imagery • tone • symbolism • irony	**9.3.R.4** Students will evaluate literary devices to support interpretations of texts, including comparisons across texts: • simile • metaphor • personification • onomatopoeia • hyperbole • imagery • tone • symbolism • irony	**10.3.R.4** Students will evaluate literary devices to support interpretations of texts, including comparisons across texts: • figurative language • imagery • tone • symbolism • irony
	8.3.R.5 Students will evaluate textual evidence to determine whether a claim is substantiated or unsubstantiated.	**9.3.R.5** Students will evaluate textual evidence to determine whether a claim is substantiated or unsubstantiated.	**10.3.R.5** Students will distinguish among different kinds of evidence *(e.g., logical, empirical, anecdotal)* used to support conclusions and arguments in texts.
	8.3.R.6 Students will analyze the structures of texts *(e.g., compare/contrast, problem/solution, cause/effect, claims/evidence)* and content by making complex inferences about texts to draw logical conclusions from textual evidence.	**9.3.R.6** Students will comparatively analyze the structures of texts *(e.g., compare/contrast, problem/solution, cause/effect, claims/counterclaims/evidence)* and content by inferring connections among multiple texts and providing textual evidence to support their inferences.	**10.3.R.6** Students will comparatively analyze the structures of texts *(e.g., compare/contrast, problem/solution, cause/effect, claims/counterclaims/evidence)* and content by inferring connections among multiple texts and providing textual evidence to support their inferences.
	8.3.R.7 Students will make connections *(e.g., thematic links, literary analysis)* between and across multiple texts and provide textual evidence to support their inferences.	**9.3.R.7** Students will make connections *(e.g., thematic links, literary analysis)* between and across multiple texts and provide textual evidence to support their inferences.	**10.3.R.7** Students will make connections *(e.g., thematic links, literary analysis)* between and across multiple texts and provide textual evidence to support their inferences.

	8th Grade	9th Grade - English I	10th Grade - English II
Writing Students will write for varied purposes and audiences in all modes, using fully developed ideas, strong organization, well-chosen words, fluent sentences, and appropriate voice.	**NARRATIVE** **8.3.W.1** Students will write narratives incorporating characters, plot *(i.e., flashback and foreshadowing)*, setting, point of view, conflict, dialogue, and sensory details. **INFORMATIVE** **8.3.W.2** Students will compose essays and reports about topics, incorporating evidence *(e.g., specific facts, examples, details)* and maintaining an organized structure and a formal style. **ARGUMENT - Grade Level Focus** **8.3.W.3** Students will introduce a claim, recognize at least one claim from an opposing viewpoint, and organize reasons and evidences, using credible sources. **8.3.W.4** Students will show relationships among the claim, reasons, and evidence and include a conclusion that follows logically from the information presented.	**NARRATIVE - Grade Level Focus** **9.3.W.1** Students will write nonfiction narratives *(e.g., memoirs, personal essays)*. **INFORMATIVE - Grade Level Focus** **9.3.W.2** Students will compose essays and reports to objectively introduce and develop topics, incorporating evidence *(e.g., specific facts, examples, details, data)* and maintaining an organized structure and a formal style. **9.3.W.3** Students will elaborate on ideas by using logical reasoning and illustrative examples to connect evidences to claim(s). **ARGUMENT** **9.3.W.4** Students will introduce claims, recognize and distinguish from alternate or opposing claims, and organize reasons and evidences, using credible sources. **9.3.W.5** Students will show relationships among the claim, reasons, and evidence and include a conclusion that follows logically from the information presented and supports the argument. **9.3.W.6** Students will blend multiple modes of writing to produce effective argumentative essays.	**NARRATIVE** **10.3.W.1** Students will write narratives embedded in other modes as appropriate. **INFORMATIVE - Grade Level Focus** **10.3.W.2** Students will compose essays and reports to objectively introduce and develop topics, incorporating evidence *(e.g., specific facts, examples, details, data)* and maintaining an organized structure and a formal style. **10.3.W.3** Students will elaborate on ideas by using logical reasoning and illustrative examples to connect evidences to claim(s). **ARGUMENT - Grade Level Focus** **10.3.W.4** Students will introduce precise claims and distinguish them from counterclaims and provide sufficient evidences to develop balanced arguments, using credible sources. **10.3.W.5** Students will use words, phrases, and clauses to connect claims, counterclaims, evidence, and commentary to create a cohesive argument and include a conclusion that follows logically from the information presented and supports the argument. **10.3.W.6** Students will blend multiple modes of writing to produce effective argumentative essays.

3: Critical Reading and Writing Students will apply critical thinking skills to reading and writing.

	11th Grade - English III	12th Grade - English IV
Reading Students will comprehend, interpret, evaluate, and respond to a variety of complex texts of all literary and informational genres from a variety of historical, cultural, ethnic, and global perspectives.	**11.3.R.1** Students will analyze the extent to which historical, cultural, and/or global perspectives affect authors' stylistic and organizational choices in grade-level literary and informational genres.	**12.3.R.1** Students will analyze the extent to which historical, cultural, and/or global perspectives affect authors' stylistic and organizational choices in grade-level literary and informational genres.
	11.3.R.2 Students will evaluate points of view and perspectives in more than one grade-level literary and/or informational text and explain how multiple points of view contribute to the meaning of a work.	**12.3.R.2** Students will evaluate points of view and perspectives in more than one grade-level literary and/or informational text and explain how multiple points of view contribute to the meaning of a work.
	11.3.R.3 Students will analyze how authors use key literary elements to contribute to meaning and interpret how themes are connected across texts: • theme • archetypes	**12.3.R.3** Students will analyze how authors use key literary elements to contribute to meaning and interpret how themes are connected across texts.
	11.3.R.4 Students will evaluate literary devices to support interpretations of texts, including comparisons across texts: • imagery • tone • symbolism • irony	**12.3.R.4** Students will evaluate literary devices to support interpretations of texts, including comparisons across texts.
	11.3.R.5 Students will evaluate how authors writing on the same issue reached different conclusions because of differences in assumptions, evidence, reasoning, and viewpoints.	**12.3.R.5** Students will evaluate how authors writing on the same issue reached different conclusions because of differences in assumptions, evidence, reasoning, and viewpoints.
	11.3.R.6 Students will comparatively analyze the structures of texts *(e.g., compare/contrast, problem/solution, cause/effect, claims/counterclaims/evidence)* and content by inferring connections among multiple texts and providing textual evidence to support their conclusions.	**12.3.R.6** Students will comparatively analyze the structures of texts *(e.g., compare/contrast, problem/solution, cause/effect, claims/counterclaims/evidence)* and content by inferring connections among multiple texts and providing textual evidence to support their conclusions.
	11.3.R.7 Students will make connections *(e.g., thematic links, literary analysis, authors' style)* between and across multiple texts and provide textual evidence to support their inferences.	**12.3.R.7** Students will make connections *(e.g., thematic links, literary analysis, authors' style)* between and across multiple texts and provide textual evidence to support their inferences.

	11th Grade - English III	12th Grade - English IV
Writing Students will write for varied purposes and audiences in all modes, using fully developed ideas, strong organization, well-chosen words, fluent sentences, and appropriate voice.	**NARRATIVE** **11.3.W.1** Students will write narratives embedded in other modes as appropriate. **INFORMATIVE** **11.3.W.2** Students will compose essays and reports to objectively introduce and develop topics, incorporating evidence *(e.g., specific facts, examples, details, data)* and maintaining an organized structure and a formal style. **11.3.W.3** Students will elaborate on ideas by using logical reasoning and illustrative examples to connect evidences to claim(s). **ARGUMENT** **11.3.W.4** Students will (1) introduce precise, informed claims, (2) distinguish them from alternate or opposing claims, (3) organize claims, counterclaims, and evidence in a way that provides a logical sequence for the entire argument, and (4) provide the most relevant evidences to develop balanced arguments, using credible sources. **11.3.W.5** Students will use words, phrases, clauses, and varied syntax to connect all parts of the argument and create cohesion and include a conclusion that follows logically from the information presented and supports the argument. **11.3.W.6** Students will blend multiple modes of writing to produce effective argumentative essays.	**NARRATIVE** **12.3.W.1** Students will write narratives embedded in other modes as appropriate. **INFORMATIVE** **12.3.W.2** Students will compose essays and reports to objectively introduce and develop topics, incorporating evidence *(e.g., specific facts, examples, details, data)* and maintaining an organized structure and a formal style. **12.3.W.3** Students will elaborate on ideas by using logical reasoning and illustrative examples to connect evidences to claim(s). **ARGUMENT** **12.3.W.4** Students will (1) introduce precise, informed claims, (2) distinguish them from alternate or opposing claims, (3) organize claims, counterclaims, and evidence in a way that provides a logical sequence for the entire argument, and (4) provide the most relevant evidences to develop balanced arguments, using credible sources. **12.3.W.5** Students will use words, phrases, clauses, and varied syntax to connect all parts of the argument and create cohesion and include a conclusion that follows logically from the information presented and supports the argument. **12.3.W.6** Students will blend multiple modes of writing to produce effective argumentative essays.

Standard 4

Vocabulary

Students will expand their working vocabularies to effectively communicate and understand texts.

Reading

Students will expand academic, domain-appropriate, grade-level vocabularies through reading, word study, and class discussion.

Writing

Students will apply knowledge of vocabularies to communicate by using descriptive, academic, and domain-appropriate abstract and concrete words in their writing.

4: Vocabulary Students will expand their working vocabularies to effectively communicate and understand texts.

	Pre-Kindergarten	Kindergarten	1st Grade
Reading Students will expand academic, domain-appropriate, grade-level vocabularies through reading, word study, and class discussion.	**PK.4.R.1** Students will acquire new academic, content-specific, grade-level vocabulary and relate new words to prior knowledge with guidance and support. **PK.4.R.2** Students will begin to develop an awareness of context clues through read-alouds and other text experiences. **PK.4.R.3** Students will name and sort familiar objects into categories based on common attributes with guidance and support.	**K.4.R.1** Students will acquire new academic, content-specific, grade-level vocabulary and relate new words to prior knowledge with guidance and support. **K.4.R.2** Students will begin to develop an awareness of context clues through read-alouds and other text experiences. **K.4.R.3** Students will name and sort pictures of objects into categories based on common attributes with guidance and support.	**1.4.R.1** Students will acquire new academic, content-specific, grade-level vocabulary, relate new words to prior knowledge, and apply vocabulary in new situations. **1.4.R.2** Students will use word parts *(e.g., affixes, roots, stems)* to define unfamiliar words with guidance and support. **1.4.R.3** Students will use context clues to determine the meaning of words with guidance and support. **1.4.R.4** Students will name and sort words into categories based on common attributes. **1.4.R.5** Students will use a dictionary *(print and/or electronic)* to find words.
Writing Students will apply knowledge of vocabularies to communicate by using descriptive, academic, and domain-appropriate abstract and concrete words in their writing.	**PK.4.W.1** Students will begin to use new vocabulary to produce and expand complete sentences in shared language activities. **PK.4.W.2** Students will begin to select appropriate language according to purpose.	**K.4.W.1** Students will use new vocabulary to produce and expand complete sentences in shared language activities with guidance and support. **K.4.W.2** Students will select appropriate language according to purpose with guidance and support.	**1.4.W.1** Students will use domain-appropriate vocabulary to communicate ideas in writing with guidance and support. **1.4.W.2** Students will select appropriate language according to purpose in writing with guidance and support.

4: Vocabulary Students will expand their working vocabularies to effectively communicate and understand texts.

	2nd Grade	3rd Grade	4th Grade
Reading Students will expand academic, domain-appropriate, grade-level vocabularies through reading, word study, and class discussion.	**2.4.R.1** Students will acquire new academic, content-specific, grade-level vocabulary, relate new words to prior knowledge, and apply vocabulary in new situations. **2.4.R.2** Students will use word parts *(e.g., affixes, roots, stems)* to define and determine the meaning of new words. **2.4.R.3** Students will use context clues to determine the meaning of words with guidance and support. **2.4.R.4** Students will infer relationships among words, including synonyms, antonyms, and simple multiple-meaning words. **2.4.R.5** Students will use a dictionary or glossary *(print and/or electronic)* to determine or clarify the meanings of words or phrases.	**3.4.R.1** Students will increase knowledge of academic, domain-appropriate, grade-level vocabulary to infer meaning of grade-level text. **3.4.R.2** Students will use word parts *(e.g., affixes, roots, stems)* to define and determine the meaning of new words. **3.4.R.3** Students will use context clues to determine the meaning of words or distinguish among multiple-meaning words. **3.4.R.4** Students will infer relationships among words, including synonyms, antonyms, homographs, and homonyms. **3.4.R.5** Students will use a dictionary or glossary *(print and/or electronic)* to determine or clarify the meanings, syllabication, and pronunciation of words.	**4.4.R.1** Students will increase knowledge of academic, domain-appropriate, grade-level vocabulary to infer meaning of grade-level text. **4.4.R.2** Students will use word parts *(e.g., affixes, Greek and Latin roots, stems)* to define and determine the meaning of new words. **4.4.R.3** Students will use context clues to determine the meaning of words or distinguish among multiple-meaning words. **4.4.R.4** Students will infer relationships among words with multiple meanings, including synonyms, antonyms, and more complex homographs and homonyms. **4.4.R.5** Students will use a dictionary or glossary *(print and/or electronic)* to determine or clarify the meanings, syllabication, and pronunciation of words.
Writing Students will apply knowledge of vocabularies to communicate by using descriptive, academic, and domain-appropriate abstract and concrete words in their writing.	**2.4.W.1** Students will use domain-appropriate vocabulary to communicate ideas in writing. **2.4.W.2** Students will select appropriate language according to purpose in writing.	**3.4.W.1** Students will use domain-appropriate vocabulary to communicate ideas in writing. **3.4.W.2** Students will select appropriate language according to purpose in writing.	**4.4.W.1** Students will use domain-appropriate vocabulary to communicate ideas in writing. **4.4.W.2** Students will select appropriate language to create a specific effect according to purpose in writing.

4: Vocabulary Students will expand their working vocabularies to effectively communicate and understand texts.

	5th Grade	6th Grade	7th Grade
Reading Students will expand academic, domain-appropriate, grade-level vocabularies through reading, word study, and class discussion.	**5.4.R.1** Students will increase knowledge of academic, domain-appropriate, grade-level vocabulary to infer meaning of grade-level text. **5.4.R.2** Students will use word parts *(e.g., affixes, Greek and Latin roots, stems)* to define new words and determine the meaning of new words. **5.4.R.3** Students will use context clues to determine or clarify the meaning of words or distinguish among multiple-meaning words. **5.4.R.4** Students will infer the relationships among words with multiple meanings, including synonyms, antonyms, analogies, and more complex homographs and homonyms. **5.4.R.5** Students will use a dictionary, glossary, or a thesaurus *(print and/or electronic)* to determine or clarify the meanings, syllabication, pronunciation, synonyms, and parts of speech of words.	**6.4.R.1** Students will increase knowledge of academic, domain-appropriate, grade-level vocabulary to infer meaning of grade-level text. **6.4.R.2** Students will use word parts *(e.g., affixes, Greek and Latin roots, stems)* to define and determine the meaning of increasingly complex words. **6.4.R.3** Students will use context clues to determine or clarify the meaning of words or distinguish among multiple-meaning words. **6.4.R.4** Students will infer the relationships among words with multiple meanings, including synonyms, antonyms, analogies, and more complex homographs and homonyms. **6.4.R.5** Students will use a dictionary, glossary, or a thesaurus *(print and/or electronic)* to determine or clarify the meanings, syllabication, pronunciation, synonyms, and parts of speech of words.	**7.4.R.1** Students will increase knowledge of academic, domain-appropriate, grade-level vocabulary to infer meaning of grade-level text. **7.4.R.2** Students will use word parts *(e.g., affixes, Greek and Latin roots, stems)* to define and determine the meaning of increasingly complex words. **7.4.R.3** Students will use context clues to determine or clarify the meaning of words or distinguish among multiple-meaning words. **7.4.R.4** Students will infer the relationships among words with multiple meanings and recognize the connotation and denotation of words. **7.4.R.5** Students will use a dictionary, glossary, or a thesaurus *(print and/or electronic)* to determine or clarify the meanings, syllabication, pronunciation, synonyms, and parts of speech of words.
Writing Students will apply knowledge of vocabularies to communicate by using descriptive, academic, and domain-appropriate abstract and concrete words in their writing.	**5.4.W.1** Students will use domain-appropriate vocabulary to communicate ideas in writing clearly. **5.4.W.2** Students will select appropriate language to create a specific effect according to purpose in writing.	**6.4.W.1** Students will use domain-appropriate vocabulary to communicate ideas in writing clearly. **6.4.W.2** Students will select appropriate language to create a specific effect according to purpose in writing.	**7.4.W.1** Students will use domain-appropriate vocabulary to communicate ideas in writing clearly. **7.4.W.2** Students will select appropriate language to create a specific effect according to purpose in writing.

4: Vocabulary Students will expand their working vocabularies to effectively communicate and understand texts.

	8th Grade	9th Grade - English I	10th Grade - English II
Reading Students will expand academic, domain-appropriate, grade-level vocabularies through reading, word study, and class discussion.	**8.4.R.1** Students will increase knowledge of academic, domain-appropriate, grade-level vocabulary to infer meaning of grade-level text.	**9.4.R.1** Students will increase knowledge of academic, domain-appropriate, grade-level vocabulary to infer meaning of grade-level text.	**10.4.R.1** Students will increase knowledge of academic, domain-appropriate, grade-level vocabulary to infer meaning of grade-level text.
	8.4.R.2 Students will use word parts *(e.g., affixes, Greek and Latin roots, stems)* to define and determine the meaning of increasingly complex words.	**9.4.R.2** Students will use word parts *(e.g., affixes, Greek and Latin roots, stems)* to define and determine the meaning of increasingly complex words.	**10.4.R.2** Students will use word parts *(e.g., affixes, Greek and Latin roots, stems)* to define and determine the meaning of increasingly complex words.
	8.4.R.3 Students will use context clues to determine or clarify the meaning of words or distinguish among multiple-meaning words.	**9.4.R.3** Students will use context clues to determine or clarify the meaning of words or distinguish among multiple-meaning words.	**10.4.R.3** Students will use context clues to determine or clarify the meaning of words or distinguish among multiple-meaning words.
	8.4.R.4 Students will infer the relationships among words with multiple meanings and recognize the connotation and denotation of words.	**9.4.R.4** Students will analyze the relationships among words with multiple meanings and recognize the connotation and denotation of words.	**10.4.R.4** Students will analyze the relationships among words with multiple meanings and recognize the connotation and denotation of words.
	8.4.R.5 Students will use a dictionary, glossary, or a thesaurus *(print and/or electronic)* to determine or clarify the meanings, syllabication, pronunciation, synonyms, and parts of speech of words.	**9.4.R.5** Students will use a dictionary, glossary, or a thesaurus *(print and/or electronic)* to determine or clarify the meanings, syllabication, pronunciation, synonyms, parts of speech, and etymology of words or phrases.	**10.4.R.5** Students will use a dictionary, glossary, or a thesaurus *(print and/or electronic)* to determine or clarify the meanings, syllabication, pronunciation, synonyms, parts of speech, and etymology of words or phrases.
Writing Students will apply knowledge of vocabularies to communicate by using descriptive, academic, and domain-appropriate abstract and concrete words in their writing.	**8.4.W.1** Students will use domain-appropriate vocabulary to communicate ideas in writing clearly.	**9.4.W.1** Students will use domain-appropriate vocabulary to communicate complex ideas in writing clearly.	**10.4.W.1** Students will use domain-appropriate vocabulary to communicate complex ideas in writing clearly.
	8.4.W.2 Students will select appropriate language to create a specific effect according to purpose in writing.	**9.4.W.2** Students will select appropriate language to create a specific effect according to purpose in writing.	**10.4.W.2** Students will select appropriate language to create a specific effect according to purpose in writing.

4: Vocabulary Students will expand their working vocabularies to effectively communicate and understand texts.

	11th Grade - English III	12th Grade - English IV
Reading Students will expand academic, domain-appropriate, grade-level vocabularies through reading, word study, and class discussion.	**11.4.R.1** Students will increase knowledge of academic, domain-appropriate, grade-level vocabulary to infer meaning of grade-level text. **11.4.R.2** Students will use word parts *(e.g., affixes, Greek and Latin roots, stems)* to define and determine the meaning of increasingly complex words. **11.4.R.3** Students will use context clues to determine or clarify the meaning of words or distinguish among multiple-meaning words. **11.4.R.4** Students will analyze and evaluate the relationships among words with multiple meanings and recognize the connotation and denotation of words. **11.4.R.5** Students will use general and specialized dictionaries, thesauri, glossaries, histories of language, books of quotations, and other related references *(print and/or electronic)* as needed.	**12.4.R.1** Students will increase knowledge of academic, domain-appropriate, grade-level vocabulary to infer meaning of grade-level text. **12.4.R.2** Students will use word parts *(e.g., affixes, Greek and Latin roots, stems)* to define and determine the meaning of increasingly complex words. **12.4.R.3** Students will use context clues to determine or clarify the meaning of words or distinguish among multiple-meaning words. **12.4.R.4** Students will analyze and evaluate the relationships among words with multiple meanings and recognize the connotation and denotation of words. **12.4.R.5** Students will use general and specialized dictionaries, thesauri, glossaries, histories of language, books of quotations, and other related references *(print and/or electronic)* as needed.
Writing Students will apply knowledge of vocabularies to communicate by using descriptive, academic, and domain-appropriate abstract and concrete words in their writing.	**11.4.W.1** Students will use domain-appropriate vocabulary to communicate complex ideas in writing clearly. **11.4.W.2** Students will select appropriate language to create a specific effect according to purpose in writing.	**12.4.W.1** Students will use domain-appropriate vocabulary to communicate complex ideas in writing clearly. **12.4.W.2** Students will select appropriate language to create a specific effect according to purpose in writing.

Standard 5

Language

Students will apply knowledge of grammar and rhetorical style to reading and writing.

Reading

Students will apply knowledge of grammar and rhetorical style to analyze and evaluate a variety of texts.

Writing

Students will demonstrate command of Standard English grammar, mechanics, and usage through writing and other modes of communication.

5: Language Students will apply knowledge of grammar and rhetorical style to reading and writing.

	Pre-Kindergarten	Kindergarten	1st Grade
Reading Students will apply knowledge of grammar and rhetorical style to analyze and evaluate a variety of texts.	**PK.5.R.1** Students will begin to understand the function of grammar through exposure to conversations, read-alouds, and interactive reading. **PK.5.R.2** Students will recognize concrete objects as persons, places or things *(i.e., nouns)* with guidance and support. **PK.5.R.3** Students will recognize words as actions *(i.e., verbs)* with guidance and support. **PK.5.R.4** Students will group pictures and movement, and determine spatial and time relationships such as up, down, before, and after with guidance and support.	**K.5.R.1** Students will begin to understand the function of grammar through exposure to conversations, read-alouds, and interactive reading. **K.5.R.2** Students will recognize concrete objects as persons, places or things *(i.e., nouns)* with guidance and support. **K.5.R.3** Students will recognize words as actions *(i.e., verbs)* with guidance and support. **K.5.R.4** Students will group pictures and movement, and determine spatial and time relationships such as up, down, before, and after with guidance and support.	**1.5.R.1** Students will recognize nouns as concrete objects *(i.e., people persons, places, and things)* and use the pronoun *"I."* **1.5.R.2** Students will recognize verbs as actions **1.5.R.3** Students will recognize color and number adjectives. **1.5.R.4** Students will recognize the prepositions *(e.g., The dog is on top of the doghouse)* through pictures and movement. **1.5.R.5** Students will recognize singular and plural nouns with correct verbs in simple sentences *(e.g. He sits; we sit).*
Writing Students will demonstrate command of Standard English grammar, mechanics, and usage through writing and other modes of communication.	*These standards begin in Kindergarten.*	**K.5.W.1** Students will capitalize, with guidance and support: • their first name • the pronoun *"I."* **K.5.W.2** Students will begin to compose simple sentences that begin with a capital letter and end with a period or question mark.	**1.5.W.1** Students will capitalize: • the first letter of a sentence • proper names • months and days of the week **1.5.W.2** Students will compose grammatically correct simple and compound sentences and questions (interrogatives) with appropriate end marks.

5: Language Students will apply knowledge of grammar and rhetorical style to reading and writing.

	2nd Grade	3rd Grade	4th Grade
Reading Students will apply knowledge of grammar and rhetorical style to analyze and evaluate a variety of texts.	**2.5.R.1** Students will recognize nouns, pronouns, and irregular plural nouns. **2.5.R.2** Students will recognize different types and tenses of verbs. **2.5.R.3** Students will recognize adjectives. **2.5.R.4** Students will recognize prepositions. **2.5.R.5** Students will recognize the subject and predicate of a sentence.	**3.5.R.1** Students will recognize pronouns and possessive nouns. **3.5.R.2** Students will recognize irregular and past participle verbs and verb tense to identify settings, times, and sequences in text. **3.5.R.3** Students will recognize adjectives, articles as adjectives, and adverbs. **3.5.R.4** Students will recognize prepositions and conjunctions. **3.5.R.5** Students will recognize the subject and verb agreement.	**4.5.R.1** Students will recognize pronouns and irregular possessive nouns. **4.5.R.2** Students will recognize present perfect verbs and verb tense to identify settings, times, sequences, and conditions in text. **4.5.R.3** Students will recognize comparative and superlative adjectives and adverbs. **4.5.R.4** Students will recognize prepositional phrases and conjunctions. **4.5.R.5** Students will recognize the subject and verb agreement.
Writing Students will demonstrate command of Standard English grammar, mechanics, and usage through writing and other modes of communication.	**2.5.W.1** Students will capitalize and appropriately punctuate: • the first letter of a quotation • holidays • product names • initials • months and days of the week **2.5.W.2** Students will use simple contractions *(e.g., isn't, aren't, can't).* **2.5.W.3** Students will compose grammatically correct simple and compound declarative, interrogative, imperative, and exclamatory sentences with appropriate end marks.	**3.5.W.1** Students will capitalize and appropriately punctuate: • titles of respect • appropriate words in titles • geographical names **3.5.W.2** Students will use complex contractions *(e.g., should've, won't).* **3.5.W.3** Students will compose and expand grammatically correct sentences and questions with appropriate commas, apostrophes, quotation marks, and end marks as needed for dialogue. **3.5.W.4** Students will compose simple, compound and complex declarative, interrogative, imperative, and exclamatory sentences.	**4.5.W.1** Students will capitalize • familial relations • proper adjectives • conventions of letter writing **4.5.W.2** Students will compose and expand grammatically correct sentences and questions with appropriate commas, end marks, apostrophes, and quotation marks as needed for dialogue. **4.5.W.3** Students will compose simple, compound, and complex sentences and questions, create sentences with an understood subject, and correct fragments and run-on sentences. **4.5.W.4** Students will compose declarative, interrogative, imperative, and exclamatory sentences.

5: Language Students will apply knowledge of grammar and rhetorical style to reading and writing.

	5th Grade	6th Grade	7th Grade
Reading Students will apply knowledge of grammar and rhetorical style to analyze and evaluate a variety of texts.	**5.5.R.1** Students will recognize conjunctions, prepositions, and interjections and explain their effect in particular sentences. **5.5.R.2** Students will recognize verb tense to signify various times, sequences, states, and conditions in text. **5.5.R.3** Students will recognize the subject and verb agreement.	**6.5.R.1** Students will recognize simple and compound sentences to signal differing relationships among ideas. **6.5.R.2** Students will recognize verb tense to signify various times, sequences, states, and conditions in text. **6.5.R.3** Students will recognize the subject and verb agreement.	**7.5.R.1** Students will recognize the correct use of prepositional phrases and dependent clauses. **7.5.R.2** Students will recognize simple, compound, complex, and compound-complex sentences to signal differing relationships among ideas. **7.5.R.3** Students will recognize the subject and verb agreement. **7.5.R.4** Students will recognize and correct misplaced and dangling modifiers.
Writing Students will demonstrate command of Standard English grammar, mechanics, and usage through writing and other modes of communication.	**5.5.W.1** Students will write using correct mechanics with a focus on commas, apostrophes, and quotation marks as needed for dialogue and quoted material. **5.5.W.2** Students will compose simple, compound, and complex sentences and questions, create sentences with an understood subject, and correct fragments and run-on sentences. **5.5.W.3** Students will form and use the present and past verb tenses. **5.5.W.4** Students will form and use verb tense to convey various times, sequences, states, and conditions. **5.5.W.5** Students will recognize and correct inappropriate shifts in verb tense.	**6.5.W.1** Students will write using correct mechanics with a focus on commas, apostrophes, quotation marks, colons, and semi-colons. **6.5.W.2** Students will compose simple, compound, and complex sentences and questions to signal differing relationships among ideas. **6.5.W.3** Students will use intensive and reflexive pronouns. **6.5.W.4** Students will recognize and correct inappropriate shifts in pronoun number and person. **6.5.W.5** Students will recognize and correct vague pronouns *(i.e., ones with unclear or ambiguous antecedents).*	**7.5.W.1** Students will write using correct mechanics with a focus on commas, apostrophes, quotation marks, colons, and semi-colons. **7.5.W.2** Students will compose simple, compound, complex, and compound-complex sentences and questions to signal differing relationships among ideas. **7.5.W.3** Students will use prepositional phrases and clauses *(e.g., dependent and independent)* in writing.

5: Language Students will apply knowledge of grammar and rhetorical style to reading and writing.

	8th Grade	9th Grade - English I	10th Grade - English II
Reading Students will apply knowledge of grammar and rhetorical style to analyze and evaluate a variety of texts.	**8.5.R.1** Students will recognize the use of verbals *(e.g., gerunds, participles, infinitives)* and clauses. **8.5.R.2** Students will recognize the use of active and passive voice. **8.5.R.3** Students will recognize and correct inappropriate shifts in verb tense. **8.5.R.4** Students will recognize the subject and verb agreement, and correct as necessary.	**9.5.R.1** Students will examine the function of parallel structures, various types of phrases, and clauses to convey specific meanings. **9.5.R.2** Students will recognize the use of active and passive voice. **9.5.R.3** Students will recognize and correct inappropriate shifts in verb tense. **9.5.R.4** Students will recognize the subject and verb agreement, and correct as necessary.	**10.5.R** Students will examine the function of parallel structures, various types of phrases, clauses, and active and passive voice to convey specific meanings and/or reflect specific rhetorical styles.
Writing Students will demonstrate command of Standard English grammar, mechanics, and usage through writing and other modes of communication.	**8.5.W.1** Students will write using correct mechanics with a focus on commas, apostrophes, quotation marks, colons, and semi-colons. **8.5.W.2** Students will compose simple, compound, complex, and compound-complex sentences and questions to signal differing relationships among ideas. **8.5.W.3** Students will use verbals *(e.g., gerunds, participles, infinitives)* in writing. **8.5.W.4** Students will form and use verbs in the active and passive voice. **8.5.W.5** Students will form and use verbs in the indicative, imperative, interrogative, conditional, and subjunctive mood.	**9.5.W.1** Students will write using correct mechanics with a focus on punctuation marks as needed. **9.5.W.2** Students will compose simple, compound, complex, and compound-complex sentences and questions to signal differing relationships among ideas. **9.5.W.3** Students will use parallel structure. **9.5.W.4** Students will use various types of phrases *(e.g., appositive, adjectival, adverbial, participial, prepositional)* and clauses *(e.g., independent, dependent, adverbial)* to convey specific meanings and add variety and interest to writing or presentations.	**10.5.W.1** Students will write using correct mechanics. **10.5.W.2** Students will compose simple, compound, complex, and compound-complex sentences and questions, to signal differing relationships among ideas. **10.5.W.3** Students will practice their use of Standard American English, grammar, mechanics, and usage through writing, presentations, and/or other modes of communication to convey specific meanings and interests.

5: Language Students will apply knowledge of grammar and rhetorical style to reading and writing.

	11th Grade - English III	12th Grade - English IV
Reading Students will apply knowledge of grammar and rhetorical style to analyze and evaluate a variety of texts.	**11.5.R** Students will apply their knowledge of grammar and rhetorical style to analyze and evaluate a variety of texts, understanding that usage and convention change over time and using that understanding to manipulate style when appropriate.	**12.5.R** Students will apply their knowledge of grammar and rhetorical style to analyze and evaluate a variety of texts, understanding that usage and convention change over time and using that understanding to manipulate style when appropriate.
Writing Students will demonstrate command of Standard English grammar, mechanics, and usage through writing and other modes of communication.	**11.5.W.1** Students will write using correct mechanics. **11.5.W.2** Students will compose simple, compound, complex, and compound-complex sentences and questions, including the use of phrases and clauses, to signal differing relationships among ideas. **11.5.W.3** Students will demonstrate command of Standard American English, grammar, mechanics, and usage through writing, presentations, and/or other modes of communication to convey specific meanings and interests.	**12.5.W.1** Students will write using correct mechanics. **12.5.W.2** Students will compose simple, compound, complex, and compound-complex sentences and questions, including the use of phrases and clauses, to signal differing relationships among ideas. **12.5.W.3** Students will demonstrate command of Standard American English, grammar, mechanics, and usage through writing, presentations, and/or other modes of communication to convey specific meanings and interests.

Standard 6

Research

Students will engage in inquiry to acquire, refine, and share knowledge.

Reading

Students will comprehend, evaluate, and synthesize resources to acquire and refine knowledge.

Writing

Students will summarize and paraphrase, integrate evidence, and cite sources to create reports, projects, papers, texts, and presentations for multiple purposes.

6: Research Students will engage in inquiry to acquire, refine, and share knowledge.

	Pre-Kindergarten	Kindergarten	1st Grade
Reading Students will comprehend, evaluate, and synthesize resources to acquire and refine knowledge.	**PK.6.R** Students will begin to identify pictures, charts, grade-appropriate texts, or people as sources of information on a topic of interest.	**K.6.R.1** Students will identify relevant pictures, charts, grade-appropriate texts, or people as sources of information on a topic of interest. **K.6.R.2** Students will identify graphic features to understand a text including photos, illustrations, and titles to understand a text.	**1.6.R.1** Students will decide who can answer questions about their topic or what resources they will need to find the information. **1.6.R.2** Students will identify graphic features including photos, illustrations, titles, labels, headings, charts, and graphs to understand a text. **1.6.R.3** Students will identify the location and purpose of various visual and text reference sources.
Writing Students will summarize and paraphrase, integrate evidence, and cite sources to create reports, projects, papers, texts, and presentations for multiple purposes.	**PK.6.W** Students will generate topics of interest and decide if a friend, teacher, or expert can answer their questions with guidance and support.	**K.6.W.1** Students will generate topics of interest and decide if a friend, teacher, or expert can answer their questions with guidance and support. **K.6.W.2** Students will find information from provided sources during group research with guidance and support.	**1.6.W.1** Students will generate questions about topics of interest. **1.6.W.2** Students will organize information found during group or individual research, using graphic organizers or other aids with guidance and support. **1.6.W.3** Students will make informal presentations of information gathered.

6: Research Students will engage in inquiry to acquire, refine, and share knowledge.

	2nd Grade	3rd Grade	4th Grade
Reading Students will comprehend, evaluate, and synthesize resources to acquire and refine knowledge.	**2.6.R.1** Students will create their own questions to find information on their topic. **2.6.R.2** Students will use graphic features including photos, illustrations, titles, labels, headings, subheadings, charts, and graphs to understand a text. **2.6.R.3** Students will consult various visual and text reference sources to gather information.	**3.6.R.1** Students will use their own questions to find information on their topic. **3.6.R.2** Students will use graphic features including photos, illustrations, captions, titles, labels, headings, subheadings, italics, sidebars, charts, graphs, and legends to define a text. **3.6.R.3** Students will locate information in visual and text reference sources, electronic resources, and/or interviews. **3.6.R.4** Students will determine the relevance and reliability of the information for their specific topic of interest with guidance and support.	**4.6.R.1** Students will use their own viable research questions to find information about a specific topic. **4.6.R.2** Students will use graphic features including photos, illustrations, captions, titles, labels, headings, subheadings, italics, sidebars, charts, graphs, and legends to interpret a text. **4.6.R.3** Students will determine the relevance and reliability of the information gathered.
Writing Students will summarize and paraphrase, integrate evidence, and cite sources to create reports, projects, papers, texts, and presentations for multiple purposes.	**2.6.W.1** Students will generate a list of topics of interest and individual questions about one specific topic of interest. **2.6.W.2** Students will organize information found during group or individual research, using graphic organizers or other aids. **2.6.W.3** Students will organize and present their information in written and/or oral reports or display.	**3.6.W.1** Students will generate a list of topics of interest and individual questions about one specific topic of interest. **3.6.W.2** Students will organize information found during group or individual research, using graphic organizers or other aids. **3.6.W.3** Students will summarize and present information in a report.	**4.6.W.1** Students will generate a viable research question about a specific topic. **4.6.W.2** Students will organize information found during research, following a modified citation style *(e.g., author, title, publication date)* with guidance and support. **4.6.W.3** Students will summarize and present information in a report.

6: Research Students will engage in inquiry to acquire, refine, and share knowledge.

	5th Grade	6th Grade	7th Grade
Reading Students will comprehend, evaluate, and synthesize resources to acquire and refine knowledge.	**5.6.R.1** Students will use their own viable research questions to find information about a specific topic.	**6.6.R.1** Students will use their own viable research questions to find information about a specific topic.	**7.6.R.1** Students will use their own viable research questions and thesis statements to find information about a specific topic.
	5.6.R.2 Students will record and organize information from various print and/or digital sources.	**6.6.R.2** Students will record and organize information from various primary and secondary sources *(e.g., print and digital).*	**7.6.R.2** Students will follow ethical and legal guidelines for finding and recording information from a variety of primary and secondary sources *(e.g., print and digital).*
	5.6.R.3 Students will determine the relevance and reliability of the information gathered.	**6.6.R.3** Students will determine the relevance, reliability, and validity of the information gathered.	**7.6.R.3** Students will determine the relevance, reliability, and validity of the information gathered.
Writing Students will summarize and paraphrase, integrate evidence, and cite sources to create reports, projects, papers, texts, and presentations for multiple purposes.	**5.6.W.1** Students will write research papers and/or texts independently over extended periods of time *(e.g., time for research, reflection, and revision)* and for shorter timeframes *(e.g., a single sitting or a day or two)*.	**6.6.W.1** Students will write research papers and/or texts independently over extended periods of time *(e.g., time for research, reflection, and revision)* and for shorter timeframes *(e.g., a single sitting or a day or two)*.	**7.6.W.1** Students will write research papers and/or texts independently over extended periods of time *(e.g., time for research, reflection, and revision)* and for shorter timeframes *(e.g., a single sitting or a day or two)*.
	5.6.W.2 Students will formulate a viable research question from findings.	**6.6.W.2** Students will refine and formulate a viable research question and/or topic from initial findings.	**7.6.W.2** Students will refine and formulate a viable research question and report findings clearly and concisely, using a thesis statement.
	5.6.W.3 Students will organize information found during research, following a modified citation style *(e.g., author, title, publication date)* with guidance and support.	**6.6.W.3** Students will organize information found during research, following a citation style *(e.g., MLA, APA, etc.)* with guidance and support.	**7.6.W.3** Students will quote, paraphrase, and summarize findings following an appropriate citation style *(e.g., MLA, APA, etc.)* and avoiding plagiarism.
	5.6.W.4 Students will summarize and present information in a report.	**6.6.W.4** Students will summarize and present information in a report.	**7.6.W.4** Students will summarize and present information in a report.

6: Research Students will engage in inquiry to acquire, refine, and share knowledge.

	8th Grade	9th Grade - English I	10th Grade - English II
Reading Students will comprehend, evaluate, and synthesize resources to acquire and refine knowledge.	**8.6.R.1** Students will use their own viable research questions and well-developed thesis statements to find information about a specific topic. **8.6.R.2** Students will follow ethical and legal guidelines for finding and recording information from a variety of primary and secondary sources *(e.g., print and digital).* **8.6.R.3** Students will determine the relevance, reliability, and validity of the information gathered.	**9.6.R.1** Students will use their own viable research questions and well-developed thesis statements to find information about a specific topic. **9.6.R.2** Students will follow ethical and legal guidelines for finding and recording information from a variety of primary and secondary sources *(e.g., print and digital).* **9.6.R.3** Students will evaluate the relevance, reliability, and validity of the information gathered.	**10.6.R.1** Students will use their own viable research questions and well-developed thesis statements to find information about a specific topic. **10.6.R.2** Students will synthesize the most relevant information from a variety of primary and secondary sources *(e.g., print and digital),* following ethical and legal citation guidelines. **10.6.R.3** Students will evaluate the relevance, reliability, and validity of the information gathered.
Writing Students will summarize and paraphrase, integrate evidence, and cite sources to create reports, projects, papers, texts, and presentations for multiple purposes.	**8.6.W.1** Students will write research papers and/or texts independently over extended periods of time *(e.g., time for research, reflection, and revision)* and for shorter timeframes *(e.g., a single sitting or a day or two)*. **8.6.W.2** Students will refine and formulate a viable research question and report findings clearly and concisely, using a well-developed thesis statement. **8.6.W.3** Students will quote, paraphrase, and summarize findings following an appropriate citation style *(e.g., MLA, APA, etc.)* and avoiding plagiarism. **8.6.W.4** Students will summarize and present information in a report.	**9.6.W.1** Students will write research papers and/or texts independently over extended periods of time *(e.g., time for research, reflection, and revision)* and for shorter timeframes *(e.g., a single sitting or a day or two)*. **9.6.W.2** Students will refine and formulate a viable research question, integrate findings from sources, and clearly use a well-developed thesis statement. **9.6.W.3** Students will quote, paraphrase, and summarize findings following an appropriate citation style *(e.g., MLA, APA, etc.)* and avoiding plagiarism. **9.6.W.4** Students will summarize and present information in a report.	**10.6.W.1** Students will write research papers and/or texts independently over extended periods of time *(e.g., time for research, reflection, and revision)* and for shorter timeframes *(e.g., a single sitting or a day or two)*. **10.6.W.2** Students will refine and formulate a viable research question, integrate findings from sources, and clearly use a well-developed thesis statement. **10.6.W.3** Students will integrate into their own writing quotes, paraphrases, and summaries of findings following an appropriate citation style *(e.g., MLA, APA, etc.)* and avoiding plagiarism. **10.6.W.4** Students will synthesize and present information in a report.

6: Research Students will engage in inquiry to acquire, refine, and share knowledge.

	11th Grade - English III	12th Grade - English IV
Reading Students will comprehend, evaluate, and synthesize resources to acquire and refine knowledge.	**11.6.R.1** Students will use their own viable research questions and well-developed thesis statements to find information about a specific topic. **11.6.R.2** Students will synthesize the most relevant information from a variety of primary and secondary sources *(e.g., print and digital),* following ethical and legal citation guidelines. **11.6.R.3** Students will evaluate the relevance, reliability, and validity of the information gathered.	**12.6.R.1** Students will use their own viable research questions and well-developed thesis statements to find information about a specific topic. **12.6.R.2** Students will synthesize resources to acquire and refine knowledge, following ethical and legal citation guidelines. **12.6.R.3** Students will evaluate the relevance, reliability, and validity of the information gathered.
Writing Students will summarize and paraphrase, integrate evidence, and cite sources to create reports, projects, papers, texts, and presentations for multiple purposes.	**11.6.W.1** Students will write research papers and/or texts independently over extended periods of time *(e.g., time for research, reflection, and revision)* and for shorter timeframes *(e.g., a single sitting or a day or two)*. **11.6.W.2** Students will integrate findings from sources using a well-developed thesis statement. **11.6.W.3** Students will integrate into their own writing quotes, paraphrases, and summaries of findings following an appropriate citation style *(e.g., MLA, APA, etc.)* and avoiding plagiarism. **11.6.W.4** Students will synthesize and present information in a report.	**12.6.W.1** Students will write research papers and/or texts independently over extended periods of time *(e.g., time for research, reflection, and revision)* and for shorter timeframes *(e.g., a single sitting or a day or two)*. **12.6.W.2** Students will integrate findings from sources using a well-developed thesis statement. **12.6.W.3** Students will integrate into their own writing quotes, paraphrases, and summaries of findings following an appropriate citation style *(e.g., MLA, APA, etc.)* and avoiding plagiarism. **12.6.W.4** Students will synthesize and present information in a report.

Standard 7

Multimodal Literacies

Students will acquire, refine, and share knowledge through a variety of written, oral, visual, digital, non-verbal, and interactive texts.

Reading

Students will evaluate written, oral, visual, and digital texts in order to draw conclusions and analyze arguments.

Writing

Students will create multimodal texts to communicate knowledge and develop arguments.

7: Multimodal Literacies Students will acquire, refine, and share knowledge through a variety of written, oral, visual, digital, non verbal, and interactive texts.

	Pre-Kindergarten	Kindergarten	1st Grade
Reading Students will evaluate written, oral, visual, and digital texts in order to draw conclusions and analyze arguments.	**PK.7.R** Students will recognize formats of print and digital text with guidance and support.	**K.7.R.1** Students will recognize formats of print and digital text with guidance and support. **K.7.R.2** Students will explore how ideas and topics are depicted in a variety of media and formats.	**1.7.R.1** Students will use provided print and digital resources with guidance and support. **1.7.R.2** Students will explore and compare how ideas and topics are depicted in a variety of media and formats.
Writing Students will create multimodal texts to communicate knowledge and develop arguments.	**PK.7.W** Students will use appropriate technology to communicate with others with guidance and support.	**K.7.W.1** Students will use appropriate technology to communicate with others with guidance and support. **K.7.W.2** Students will use appropriate props, images, or illustrations to support verbal communication.	**1.7.W.1** Students will select and use appropriate technology or media to communicate with others with guidance and support. **1.7.W.2** Students will use visual displays to support verbal communication and clarify ideas, thoughts, and feelings.

7: Multimodal Literacies Students will acquire, refine, and share knowledge through a variety of written, oral, visual, digital, non verbal, and interactive texts.

	2nd Grade	3rd Grade	4th Grade
Reading Students will evaluate written, oral, visual, and digital texts in order to draw conclusions and analyze arguments.	**2.7.R.1** Students will locate and use print and digital resources with guidance and support. **2.7.R.2** Students will explain how ideas and topics are depicted in a variety of media and formats.	**3.7.R.1** Students will locate, organize, and use information from a variety of written, oral, visual, digital, non-verbal, and interactive texts to generate and answer literal questions. **3.7.R.2** Students will compare how ideas and topics are depicted in a variety of media and formats	**4.7.R.1** Students will locate, organize, and analyze information from a variety of written, oral, visual, digital, non-verbal, and interactive texts to generate and answer literal and interpretive questions to create new understandings. **4.7.R.2** Students will compare and contrast how ideas and topics are depicted in a variety of media and formats.
Writing Students will create multimodal texts to communicate knowledge and develop arguments.	**2.7.W.1** Students will select and use appropriate technology or media to communicate with others with guidance and support. **2.7.W.2** Students will create a simple presentation using audio, visual, and/or multimedia tools to support communication and clarify ideas, thoughts, and feelings	**3.7.W.1** Students will create multimodal content that communicates an idea using technology or appropriate media. **3.7.W.2** Students will create presentations using video, photos, and other multimedia elements to support communication and clarify ideas, thoughts, and feelings.	**4.7.W.1** Students will create multimodal content that effectively communicates an idea using technology or appropriate media. **4.7.W.2** Students will create presentations using videos, photos, and other multimedia elements to support communication and clarify ideas, thoughts, and feelings.

7: Multimodal Literacies Students will acquire, refine, and share knowledge through a variety of written, oral, visual, digital, non verbal, and interactive texts.

	5th Grade	6th Grade	7th Grade
Reading Students will evaluate written, oral, visual, and digital texts in order to draw conclusions and analyze arguments.	**5.7.R.1** Students will analyze the characteristics and effectiveness of a variety of written, oral, visual, digital, non-verbal, and interactive texts to generate and answer literal and interpretive questions to create new understandings. **5.7.R.2** Students will compare and contrast how ideas and topics are depicted in a variety of media and formats.	**6.7.R.1** Students will compare and contrast the effectiveness of a variety of written, oral, visual, digital, non-verbal, and interactive texts to generate and answer literal, interpretive, and applied questions to create new understandings. **6.7.R.2** Students will analyze the impact of selected media and formats on meaning.	**7.7.R.1** Students will compare and contrast the effectiveness of techniques used in a variety of written, oral, visual, digital, non-verbal, and interactive texts to generate and answer literal, interpretive, and applied questions to create new understandings. **7.7.R.2** Students will analyze the impact of selected media and formats on meaning.
Writing Students will create multimodal texts to communicate knowledge and develop arguments.	**5.7.W.1** Students will create multimodal content that effectively communicates an idea using technology and appropriate media. **5.7.W.2** Students will create presentations that integrate visual displays and other multimedia to enrich the presentation.	**6.7.W.1** Students will create multimodal content that effectively communicates ideas using technologies and appropriate media. **6.7.W.2** Students will create presentations that integrate visual displays and other multimedia to enrich the presentation.	**7.7.W.1** Students will select, organize, or create multimodal content to complement and extend meaning for a selected topic. **7.7.W.2** Students will utilize multimedia to clarify information and strengthen claims or evidence.

7: Multimodal Literacies Students will acquire, refine, and share knowledge through a variety of written, oral, visual, digital, non verbal, and interactive texts.

	8th Grade	9th Grade - English I	10th Grade - English II
Reading Students will evaluate written, oral, visual, and digital texts in order to draw conclusions and analyze arguments.	**8.7.R.1** Students will determine the intended purposes of techniques used for rhetorical effects in written, oral, visual, digital, non-verbal, and interactive texts to generate and answer interpretive and applied questions to create new understandings. **8.7.R.2** Students will analyze the impact of selected media and formats on meaning.	**9.7.R.1** Students will analyze and evaluate the effectiveness of techniques used in a variety of written, oral, visual, digital, non-verbal, and interactive texts with a focus on persuasion and argument to generate and answer literal, interpretive, and applied questions to create new understandings. **9.7.R.2** Students will analyze the impact of selected media and formats on meaning.	**10.7.R.1** Students will analyze techniques used to achieve the intended rhetorical purposes in written, oral, visual, digital, non-verbal, and interactive texts to generate and answer interpretive and applied questions to create new understandings. **10.7.R.2** Students will analyze the impact of selected media and formats on meaning.
Writing Students will create multimodal texts to communicate knowledge and develop arguments.	**8.7.W.1** Students will select, organize, or create multimodal content that encompasses different points of view. **8.7.W.2** Students will utilize multimedia to clarify information and emphasize salient points.	**9.7.W.1** Students will create a variety of multimodal content to engage specific audiences. **9.7.W.2** Students will create engaging visual and/or multimedia presentations, using a variety of media forms to enhance understanding of findings, reasoning, and evidence for diverse audiences.	**10.7.W.1** Students will critique the sources of multimodal content. **10.7.W.2** Students will create visual and/or multimedia presentations using a variety of media forms to enhance understanding of findings, reasoning, and evidence for diverse audiences.

7: Multimodal Literacies Students will acquire, refine, and share knowledge through a variety of written, oral, visual, digital, non verbal, and interactive texts.

	11th Grade - English III	12th Grade - English IV
Reading Students will evaluate written, oral, visual, and digital texts in order to draw conclusions and analyze arguments.	**11.7.R.1** Students will analyze and evaluate the various techniques used to construct arguments in written, oral, visual, digital, non-verbal, and interactive texts, to generate and answer applied questions, and to create new understandings. **11.7.R.2** Students will analyze the impact of selected media and formats on meaning.	**12.7.R.1** Students will analyze and evaluate written, oral, visual, digital, non-verbal, and interactive texts in order to draw conclusions and defend arguments. **12.7.R.2** Students will analyze the impact of selected media and formats on meaning.
Writing Students will create multimodal texts to communicate knowledge and develop arguments.	**11.7.W.1** Students will design and develop multimodal content for a variety of purposes. **11.7.W.2** Students will construct engaging visual and/or multimedia presentations using a variety of media forms to enhance understanding of findings, reasoning, and evidence for diverse audiences.	**12.7.W.1** Students will create multimodal content to communicate knowledge and defend arguments. **12.7.W.2** Students will construct engaging visual and/or multimedia presentations using a variety of media forms to enhance understanding of findings, reasoning, and evidence for diverse audiences.

Standard 8

Independent Reading and Writing

Students will read and write for a variety of purposes including, but not limited to, academic and personal, for extended periods of time.

Reading

Students will read independently for a variety of purposes and for extended periods of time. Students will select appropriate texts for specific purposes.

Writing

Students will write independently for extended periods of time. Students will vary their modes of expression to suit audience and task.

8: Independent Reading and Writing Students will read and write for a variety of purposes including, but not limited to, academic and personal.

	Pre-Kindergarten	Kindergarten	1st Grade
Reading Students will read independently for a variety of purposes and for extended periods of time. Students will select appropriate texts for specific purposes.	**PK.8.R** Students will demonstrate interest in books during read-alouds and shared reading, and interact independently with books.	**K.8.R** Students will demonstrate interest in books during read-alouds and shared reading, and interact independently with books.	**1.8.R** Students will select appropriate texts for academic and personal purposes and read independently for extended periods of time with guidance and support.
Writing Students will write independently for extended periods of time. Students will vary their modes of expression to suit audience and task.	**PK.8.W** Students will express their ideas through a combination of drawing and emergent writing with guidance and support.	**K.8.W** Students will express their ideas through a combination of drawing and emergent writing with guidance and support.	**1.8.W** Students will write independently for extended and shorter periods of time through a combination of emergent and conventional writing with guidance and support.

8: Independent Reading and Writing Students will read and write for a variety of purposes including, but not limited to, academic and personal.

	2nd Grade	3rd Grade	4th Grade
Reading Students will read independently for a variety of purposes and for extended periods of time. Students will select appropriate texts for specific purposes.	**2.8.R** Students will select appropriate texts for academic and personal purposes and read independently for extended periods of time.	**3.8.R** Students will select appropriate texts for specific purposes and read independently for extended periods of time.	**4.8.R** Students will select appropriate texts for specific purposes and read independently for extended periods of time.
Writing Students will write independently for extended periods of time. Students will vary their modes of expression to suit audience and task.	**2.8.W** Students will write independently over extended periods of time *(e.g., time for reflection and revision)* and for shorter timeframes *(e.g., a single sitting or a day or two)*.	**3.8.W** Students will write independently over extended periods of time *(e.g., time for reflection and revision)* and for shorter timeframes *(e.g., a single sitting or a day or two)* to communicate with different audiences for a variety of purposes.	**4.8.W** Students will write independently over extended periods of time *(e.g., time for reflection and revision)* and for shorter timeframes *(e.g., a single sitting or a day or two)* to communicate with different audiences for a variety of purposes.

8: Independent Reading and Writing Students will read and write for a variety of purposes including, but not limited to, academic and personal.			
	5th Grade	**6th Grade**	**7th Grade**
Reading Students will read independently for a variety of purposes and for extended periods of time. Students will select appropriate texts for specific purposes.	**5.8.R** Students will select appropriate texts for specific purposes and read independently for extended periods of time.	**6.8.R** Students will select appropriate texts for specific purposes and read independently for extended periods of time.	**7.8.R** Students will select appropriate texts for specific purposes and read independently for extended periods of time.
Writing Students will write independently for extended periods of time. Students will vary their modes of expression to suit audience and task.	**5.8.W** Students will write independently over extended periods of time *(e.g., time for research, reflection, and revision)* and for shorter timeframes *(e.g., a single sitting or a day or two)* to communicate with different audiences for a variety of purposes.	**6.8.W** Students will write independently over extended periods of time *(e.g., time for research, reflection, and revision)* and for shorter timeframes *(e.g., a single sitting or a day or two)*, vary their modes of expression to suit audience and task, and explain how concepts relate to one another.	**7.8.W** Students will write independently over extended periods of time *(e.g., time for research, reflection, and revision)* and for shorter timeframes *(e.g., a single sitting or a day or two)*, vary their modes of expression to suit audience and task, and discover different perspectives.

8: Independent Reading and Writing Students will read and write for a variety of purposes including, but not limited to, academic and personal.			
	8th Grade	**9th Grade - English I**	**10th Grade - English II**
Reading Students will read independently for a variety of purposes and for extended periods of time. Students will select appropriate texts for specific purposes.	**8.8.R** Students will select appropriate texts for specific purposes and read independently for extended periods of time.	**9.8.R** Students will select appropriate texts for specific purposes and read independently for extended periods of time.	**10.8.R** Students will select appropriate texts for specific purposes and read independently for extended periods of time.
Writing Students will write independently for extended periods of time. Students will vary their modes of expression to suit audience and task.	**8.8.W** Students will write independently over extended periods of time *(e.g., time for research, reflection, and revision)* and for shorter timeframes *(e.g., a single sitting or a day or two)*, vary their modes of expression to suit audience and task, and analyze different perspectives.	**9.8.W** Students will write independently over extended periods of time *(e.g., time for research, reflection, and revision)* and for shorter timeframes *(e.g., a single sitting or a day or two)*, vary their modes of expression to suit audience and task, and draw appropriate conclusions.	**10.8.W** Students will write independently over extended periods of time *(e.g., time for research, reflection, and revision)* and for shorter timeframes *(e.g., a single sitting or a day or two)*, vary their modes of expression to suit audience and task, and draw and justify appropriate conclusions.

8: Independent Reading and Writing Students will read and write for a variety of purposes including, but not limited to, academic and personal.

	11th Grade - English III	12th Grade - English IV
Reading Students will read independently for a variety of purposes and for extended periods of time. Students will select appropriate texts for specific purposes.	**11.8.R** Students will select appropriate texts for specific purposes and read independently for extended periods of time.	**12.8.R** Students will select appropriate texts for specific purposes and read independently for extended periods of time.
Writing Students will write independently for extended periods of time. Students will vary their modes of expression to suit audience and task.	**11.8.W** Students will write independently over extended periods of time *(e.g., time for research, reflection, and revision)* and for shorter timeframes *(e.g., a single sitting or a day or two)*, vary their modes of expression to suit audience and task, and be able to apply new understandings in an original way.	**12.8.W** Students will write independently over extended periods of time *(e.g., time for research, reflection, and revision)* and for shorter timeframes *(e.g., a single sitting or a day or two)*, vary their modes of expression to suit audience and task, synthesize information across multiple sources, and articulate new perspectives.

Glossary

A

Academic vocabulary : refers to words associated with content knowledge. Within every discipline there is a specific set of words to represent its concepts and processes.

Abbreviation : a shortened or contracted form of a word or phrase, used to represent the whole, as Dr. for Doctor, U.S. for United States, and lb. for pound.

Active listening : the active pursuit of what another person is saying and feeling, as a way to improve mutual understanding. Active listening involves hearing content, listening for tone, observing body language, paraphrasing, summarizing, questioning, clarifying, and reflecting.

Affix : a morpheme or meaningful part of a word attached before or after a root to modify its meaning. Principal kinds of affixes are prefixes and suffixes. The prefix un- is an affix, which added to balanced, makes unbalanced. The suffix -ed is an affix which, added to wish, makes wished.

Alliteration : the repetition of the same initial consonant sound of each word in connected text (e.g., Harry the happy hippo hula-hoops with Henrietta).

Allusion : a brief and indirect reference to a person, place, thing, or idea of historical, cultural, literary, or political significance.

Analogy : a comparison of the similar aspects of two different things.

Annotation : a critical or explanatory note or body of notes added to a text.

Antagonist : the adversary of the hero or protagonist of a drama or other literary work.

Antonyms : words which have opposite meanings (e.g., hot and cold).

Appropriate technology : technology that students can use independently or with minimal scaffolding.

Archetype : a symbol, plot pattern, character type, or theme that recurs in many different cultures.

Argument essay : a genre of writing that requires the student to investigate a topic; collect, generate, and evaluate evidence; and establish and defend a position on the topic in a concise manner.

Argumentation : writing that seeks to influence through appeals that direct readers to specific goals or try to win them to specific beliefs.

Audience : writer's targeted reader or readers.

Author's craft : specific techniques that an author chooses to relay an intended message.

Automaticity : reading without conscious effort or attention to decoding.

B

Base : a free morpheme to which affixes can be added, usually of Anglo-Saxon origin.

Blending : the task of combining sounds rapidly to accurately represent the word.

C

Cause & effect : text structure that notes a relationship in which an event or events (the cause) make(s) another event or action happen (effect).

Citing sources : a quotation of or explicit reference to a source indicating where the paraphrased or quoted materials came. Examples of citation style include MLA (Modern Language Association) and APA (American Psychological Association).

Claim : an assertion of the truth of something.

Close reading : a strategy that requires a student to focus on and arrive at a deep understanding of individual texts by reading and re-reading. Fisher, Frey, and Lapp (2012) describe four reader roles that help the reader uncover meaning in a text:

1. Code Breaker: understanding the text at the surface level (i.e., alphabetic, structural)

2. Meaning maker: comprehending the text at the level intended by the author

3. Text user: analyzing the factors that influenced the author and the text, including a historical grounding of the context within which it was written

4. Text critic: understanding that the text is not neutral and that existing biases inform calls to action.

Closed syllable : a written syllable containing a single vowel and ending in one or more consonants; the vowel sound is short.

Coherence : continuity of meaning that enables others to make sense of a text.

Collaborative discussions : discussions that provide opportunities for speakers and listeners to use dialogue and interaction to raise issues, explore ideas, make claims, discover differences, and find ways to explore all aspects of ELA. These take many forms like a Socratic seminar, debate, or blog and combine students in small or large discourse communities.

Compare : find similarities between two or more texts or text elements.

Comparison : text structure in which ideas are related to one another on the basis of similarities and differences. The text presents ideas organized to compare, to contrast, or to provide an alternative perspective.

Compound word : a word made by putting two or more words together (e.g., cowboy).

Comprehension : understanding what one is reading, the ultimate goal of all reading activity.

Conflict : struggle or clash between opposing characters, forces, or emotions.

Connotation : a meaning that is implied by a word apart from the thing it describes explicitly. Words carry cultural and emotional associations or meanings in addition to their literal meanings or denotations.

Consonant blend : two or more consecutive consonants that retain their individual sounds (e.g., /bl/ in block; /str/ in string).

Consonant digraph : two consecutive consonants that represent one phoneme, or sound (e.g., /ch/, /sh/).

Consonant trigraph : a combination of three letters used to represent a single speech sound or phoneme*. (e.g.*/tch/)

Content-specific : vocabulary that includes technical words related to specific academic disciplines. *(See also academic and domain-specific vocabulary)*

Context : the parts of a written or spoken statement/text that precede or follow a specific word or passage, usually influencing its meaning or effect.

Context clue : the information from the textual setting that helps identify a word or word group.

Contraction : a short way to write two words as one by writing the two words together, leaving out one or more letters and replacing the missing letters with an apostrophe (e.g., cannot = can't).

Conventional writing : expressing thoughts and ideas with agreed upon symbols, like the alphabet.

Counterclaim : a claim made to rebut a previous claim.

D

Declarative sentence : the kind of sentence that makes a statement or "declares" something.

Decode : translate a word from print to speech, usually by employing knowledge of sound symbol correspondences; also the act of deciphering a new word by sounding it out.

Denotation : the literal or dictionary meaning of a word.

Description : text structure that presents a topic, along with the attributes, specifics, or setting information that describe that topic.

Detail : piece of information revealed by the author or speaker that supports the attitude or tone in a piece of poetry or prose. In informational text, details provide information to support the author's main point.

Diction : the choice and use of words by a speaker or a writer.

Digital media : media created, viewed, distributed, modified, and preserved on digital devices (e.g. computers, tablets, phones). Digital media include computer programs, digital videos, video games, web pages and websites, social media, databases, audio, and e-books. Digital media are contrasted with print media such as books, newspapers, magazines, pictures, film, and audiotape.

Domain-specific vocabulary : **"**relatively low-frequency, content-specific words that appear in textbooks and other instructional materials; for example, apex in math, escarpment in geography, and isobar in science" (Blachowicz, C. & Fisher, P., p.1). *(See also academic and content-specific vocabulary)*

E

Edit : to review writing to make sure that it is free of any grammatical errors or strange phrases that make it difficult for readers to understand the meaning.

Emergent writing : “means that children begin to understand that writing is a form of communication and their marks on paper convey a message” (Mayer, 2007, p. 35). Emergent writing progresses along a developmental continuum.

Ethical and legal guidelines for research : guidelines for correctly citing print and digital text when using primary and secondary sources for research. In addition, copying and pasting texts, purchasing essays online, using another author’s work, or violating copyright laws are unethical and could result in legal action.

Exclamatory sentence : a type of sentence that expresses strong feelings by making an exclamation.

F

Fiction : imaginative literary works representing invented rather than actual persons, places, or events.

Figurative language : writing or speech not meant to be taken literally but used to express ideas in vivid or imaginative ways. Figurative language includes simile, metaphor, personification, analogy, hyperbole, and idiom.

Flashback : scene that interrupts the action of a work to show a previous event.

Fluency : ability to read grade-level text accurately, with expression, and with automaticity. The combination of accuracy, automaticity, and prosody allow the reader to build comprehension.

Foreshadowing : use of hints or clues in a narrative to suggest future action.

G

Generalize : to make general or broad statements by inferring from text details.

Genre : a category used to classify literary and other works, usually by form, technique, or content. The novel, the short story, and the lyric poems are all examples of literary genres.

Grammar : rules of language.

Grapheme : a letter or letter combination that spells a phoneme; can be one, two, three, or four letters in English (e.g., e, ei, igh, eigh).

Graphic features : pictorial representation of data or ideas using columns, matrices, or other formats. Graphics can be simple or complex, present information in a straightforward way as in a list or pie graph, or embed or nest information within the document's structure. Graphics may be included in texts or be stand-alone documents.

H

High frequency Irregular words : words in print containing letters that stray from the most common sound pronunciation because they do not follow common phonic patterns (e.g., were, was, laugh, been).

High frequency words : a small group of words (300-500) that account for a large percentage of the words in print and can be regular or irregular words. Often, they are referred to as "sight words" since automatic recognition of these words is required for fluent reading.

Homographs : words that are spelled alike but have different sounds and meanings (e.g., bow used with an arrow vs. bow of a ship).

Homonyms : words that sound the same but have different spellings and meanings (e.g., bear, bare).

Hyperbole : obvious and deliberate exaggeration; an extravagant statement.

I

Idiom : an expression that does not mean what it literally says (e.g., to have the upper hand has nothing to do with the hands).

Imagery : multiple words or a continuous phrase that a writer uses to represent persons, objects, actions, feelings, or ideas descriptively by appealing to the senses.

Imperative sentence : a sentence that gives a command, makes a request, or expresses a wish.

Indent : to set in or back from the margin, as the first line of a paragraph.

Independent reading levels : the level at which a reader can read text with 95% accuracy (i.e., no more than one error per 20 words read). Independent reading level is relatively easy text for the reader.

Inference : act or process of deriving logical conclusions from premises known or assumed to be true; the conclusions drawn from this process.

Inferring : making a reasonable assumption about meaning that is not explicitly stated in the text.

Inflectional endings : in English, a suffix that expresses plurality or possession when added to a noun, tense when added to a verb, and comparison when added to an adjective and some adverbs; Added to verbs, nouns, or adjectives do not change the grammatical role or part of speech of the base words (-s, -es,-ing, ¬ed).

Informational : non-fiction books; also referred to as expository text, that contain facts and information.

Interactive texts : multimodal texts in which readers may determine the order and duration of reading. For example, interactive texts, may include hyperlinks to other pages containing embedded images, videos and audio.

Interrogative sentence : the kind of sentence that asks a question and uses a question mark.

Irony : the use of words to express something other than and especially the opposite of the literal meaning.

L

Legend : inscription or title on an object (e.g., a key to symbols used on a map).

Letter-sound correspondences : the matching of an oral sound to its corresponding letter or group of letters.

Lexile : a quantitative measure of text complexity and individual reading level that can be used to predict how well a reader will likely comprehend a text.

Literal : information directly from the text (e.g., on the line).

Literary nonfiction : text that conveys factual information. The text may or may not employ a narrative structure and characteristics such as dialogue.

M

Main idea : the central thought or premise of a reading passage.

Meaning vocabulary : application of one's understanding of word meanings to passage comprehension.

Memoir : type of autobiography that usually focuses on a single time period or historical event.

Metaphor : a direct comparison of two unlike things.

Modified citation style : using author, title, and publication date of sources to document research. This special style is used only at the fifth grade level to ease students into more stringent citation styles which are used in later grades.

Mood : atmosphere or predominant emotion in a literary work.

Morpheme : the smallest meaningful unit of the language.

Morphology : the study and description of how words are formed from prefixes, roots, and suffixes (e.g., mis-spell-ing), and how words are related to each other.

Multimodal : multiple + mode. A mode refers to a way of meaning-making or communicating. The New London Group (1996) outlines five modes through which meaning is made: Linguistic, Aural, Visual, Gestural, and Spatial. Any combination of modes makes a multimodal text, and all texts—every piece of communication that a human composes—use more than one mode. Thus, all writing is multimodal."All Writing is Multimodal**,"** Cheryl Ball and Colin Charlton, in *Naming What We Know: Threshold Concepts of Writing Studies*, Linda Adler- Kassner & Elizabeth Wardle (Eds.), forthcoming from Utah State University Press.

Multimodal content : content utilizing more than one mode (e.g. still images + words, words + video) to convey a meaning.

Multimodal literacy : "the interplay of meaning-making systems (alphabetic, oral, visual, etc.) that teachers and students should strive to study and produce." NCTE Position Statement on Multimodal Literacies.

Multisyllabic : these are words with more than one syllable. A systematic introduction of prefixes, suffixes, and multisyllabic words should occur throughout a reading program. The average number of syllables in the words students read should increase steadily throughout the grades.

N

Narrative writing : writing that tells a story. This writing is often anecdotal, experiential, and personal—allowing students to express themselves in creative and, quite often, moving ways.

Nonfiction : text that is factual and may be presented by detailed descriptions or examples; organization follows a logical pattern and may include textual aids.

Nonverbal cues : nonverbal messages that are a key aspect of speaking, for example, intonation, pauses, facial expressions, eye contact, gestures, and body language. Listeners should study these cues to determine a speaker's message, argument, and credibility.

Nonverbal texts : In place of words, nonverbal texts may include images, gestures, and movement.

O

Onomatopoeia : use of words that mimic the sounds they describe; imitative harmony.

Onset : all of the sounds in a syllable that come before the first vowel.

Opinion writing : writing that clearly states a view or judgment about a topic, supported by examples, and offering reasons for assertions and/or explaining cause and effect.

P

Parallel structure : repetition of words, phrases, or sentences that have the same grammatical structure or that restate a similar idea.

Paraphrase : to sum something up or clarify a statement by rephrasing it; to say something in other simpler words.

Personification : the bestowing of human qualities on animals, ideas, or things.

Persuasion : form of discourse whose function is to convince an audience or to prove or refute a point of view or an issue.

Phoneme : a speech sound that combines with others in a language system to make words.

Phonemic awareness : the ability to notice, think about, or manipulate the individual phonemes (sounds) in words. It is the ability to understand that sounds in spoken language work together to make words. This term is used to refer to the highest level of phonological awareness: awareness of individual phonemes in words.

Phonics : the study of the relationships between letters and the sounds they represent; also used to describe reading instruction that teaches sound-symbol correspondences. Sound-symbol correspondence are the rules and patterns by which letters and letter combinations represent speech sounds.

Phonological awareness : one's sensitivity to, or explicit awareness of, the phonological structure of words in one's language. This is an "umbrella" term that is used to refer to a student's sensitivity to any aspect of phonological structure in language. It encompasses awareness of individual words in sentences, syllables, and onset-rime segments, as well as awareness of individual phonemes.

Picture walk : a strategy for previewing a book prior to reading by looking at the cover and illustrations and asking questions that require students to make predictions about the text.

Plagiarism : using another person or source's words or ideas without giving credit or obtaining permission.

Plot : sequence of events or actions in a short story, novel, drama, or narrative poem.

Point of view : the way in which an author reveals a viewpoint or perspective. This can be done through characters, ideas, events, and narration.

Prefix : a morpheme that precedes a root and that contributes to or modifies the meaning of a word, as "re" in reprint.

Pre-reading strategies : strategies for preparing students to read a text prior to reading. Examples include: picture walk, brainstorming about the topic/text, advance organizers, activating prior knowledge, vocabulary previews, structural organizers, establishing a purpose for reading, etc.

Primary source : firsthand account of an event or a time period written or created during that time period (examples: *Diary of Anne Frank*, Dorothea Lange's photographs, newspaper article about Hurricane Katrina).

Print concepts : the ability of a child to know and recognize the ways in which print "works" for the purposes of reading, particularly with regard to books.

Prior knowledge : refers to schema, the knowledge and experience that readers bring to the text.

Problem/solution : text structure in which the main ideas are organized into two parts: a problem and a subsequent solution that responds to the problem, or a question and an answer that responds to the question.

Protagonist : central character of a short story, novel, or narrative poem. The antagonist is the character who stands directly opposed to the protagonist.

Purpose : specific reason or reasons for the writing. It conveys what the readers have to gain by reading the selection. Purpose is the objective or the goal that the writer wishes to establish.

Q

Quote : in research, to directly copy down the words from a source, set off in quotation marks.

R

R-controlled vowels : the modified sound of a vowel immediately preceding /r/ in the same syllable (e.g., care, never, sir, or).

Rate : the speed at which a person reads.

Recursive : moving back and forth through a text in either reading or writing, as new ideas are developed or problems encountered. In reading a text, recursive processes might include rereading earlier portions in light of later ones, looking ahead to see what topics are addressed or how a narrative ends, and skimming through text to search for particular ideas or events before continuing a linear reading. In creating a written composition, recursive processes include moving back and forth among the planning, drafting, and revising phases of writing.

Reenact : to act out the events of a text.

Retell : recall the content of what was read or heard.

Revise : the process of rereading a text and making changes (in content, organization, sentence structures, and word choice) to improve it; not to be confused with edit.

Rhetorical device : technique used by writers to persuade an audience. (e.g. alliteration, hyperbole, metaphor, etc.)

Rhyme : words that have the same ending sound.

Rime : a vowel plus the consonants that follow in a syllable; (e.g., -ame, -ick, -out).

Root : a bound morpheme, usually of Latin origin, that cannot stand alone but is used to form a family of words with related meanings.

S

Schema : refers to prior knowledge, the knowledge and experience that readers bring to the text.

Secondary source : an interpretation or analysis of a primary source (examples: book about diaries kept during the Holocaust, book about Great Depression photography, an op-ed about how New Orleans handled the Hurricane Katrina aftermath from a later date).

Segmenting : separating the individual phonemes, or sounds, of a word into discrete units.

Semantics : the study of meaning in language.

Semantic relationships : associations that exist between the meanings of words.

Sequential structure: text structure in which ideas are grouped on the basis of order or time.

Setting : time and place in which events in a short story, novel, drama, or narrative poem take place.

Shared reading : an interactive reading experience that occurs when students join in or share the reading of a big book or other enlarged text while guided and supported by a teacher or other experienced reader.

Simile : a combination of two things that are unlike, usually using the words like or as.

Stem : the base form of a word; also called the root word.

Structural analysis : a procedure for teaching students to read words formed with prefixes, suffixes, or other meaningful word parts.

Style : writer's characteristic manner of employing language.

Suffix : a derivational morpheme added to the end of root or base that often changes the word's part of speech and that modifies its meaning.

Summarize : reducing large selections of text to their base essentials: the gist, the key ideas, the main points that are worth noting and remembering.

Supporting details : reasons, examples, facts, steps, or other kinds of evidence that back up and explain a main idea. Details make up most of the information in what a person reads, but some details are more important than others.

Syllable : a unit of pronunciation that is organized around a vowel sound; it may or may not have consonants before or after the vowel.

Symbol : object, person, place, or action that has both a meaning in itself and that stands for something larger than itself, such as a quality, attitude, belief, or value.

Synonyms : words which have the same meaning. (e.g. example, instance, occurrence)

Syntax : arrangement of words and order of grammatical elements in a sentence.

Synthesize : creating original insights, perspectives, and understanding by reflecting on text(s) and merging elements from text and existing schema.

T

Text complexity : based on Fisher and Frey (2013), three inter-related aspects determine text complexity: quantitative evaluation, qualitative evaluation, and matching readers with texts and tasks.

1. **Quantitative evaluation**: readability measures and other scores of text complexity
2. **Qualitative evaluation**: levels of meaning, structure, language features, and knowledge demands
3. **Matching readers with texts and tasks**: reader variables (such as motivation, knowledge, and experiences) and task variables (such as purpose and the complexity generated by the task assigned and the questions posed) (p.7)

Theme : central meaning of a literary work. A literary work can have more than one theme. Most themes are not directly stated but rather are implied. A literary theme is not the same as a topic or main idea.

Thesis statement : the guiding, arguable statement or claim an essay attempts to prove through evidence and reasoning.

Tone : writer or speaker's attitude toward a subject, character, or audience conveyed through the author's choice of words and detail. Tone can be serious, humorous, sarcastic, objective, etc.

Topic : the subject of the entire paragraph/text selection; tells what the passage is mainly about.

Track print : look and process all the letters in order from left-to-right.

Trait : distinguishing feature, as of a person's character.

V

Verbal cues : words and phrases that speakers use to add emphasis, clarify organization, make connections, and create ethos. Listeners should be focusing on these cues as it helps listeners determine a speaker's message, argument, and credibility.

Vocabulary notebook : a teaching strategy used to help students learn new vocabulary.

Voice : distinctive style or manner of expression of an author or of a character.

Vowel digraph : two vowels together that represent one phoneme, or sound (e.g., ea, ai, oa).

Vowel diphthong : a sound made by combining two vowels, specifically when it starts as one vowel sound and proceeds to another, like the *oy* sound in *oil*.

W

Word study : the integration of phonics, spelling, and vocabulary instruction. This approach teaches students how to look closely at words to discover the regularities and conventions of English orthography, or spelling. The purpose is twofold: (1) develop a general knowledge of English spelling and discover generalizations about spelling, and (2) increase students' specific knowledge of words and their meanings.

Word family : group of words that share a rime (a vowel plus the consonants that follow; e.g., -ame, -ick, -out).

Word wall : a literacy tool used for displaying commonly used vocabulary and/or sight words in large print so that all students can read the words from their desks. The purpose of a word wall is to help students naturally gain familiarity with high frequency words, as well as to gain reinforcement of vocabulary.

Writing Modes : major types of writing. (Narrative, Opinion, Informational, Argumentation).

Writing process : steps contained in the writing process include prewriting, drafting, revising, editing, and publishing. This process is often recursive.

The 44* Phonemes of the English Language

	Phoneme	Graphemes**	Examples		Phoneme	Graphemes**	Examples
	Consonant Sounds:						
1	/**b**/	b, bb	big, ru**bb**er	14	/**t**/	t,tt,ed	**t**op,le**tt**er,stopp**ed**
2	/**d**/	d,dd,ed	**d**og, a**dd**, fill**ed**	15	/**v**/	v,ve	**v**et, gi**ve**
3	/**f**/	f,ph	**f**ish, **ph**one	16	/**w**/	w	**w**et, **w**in, s**w**im
4	/**g**/	g,gg	**g**o,e**gg**	17	/**y**/	y,i	**y**es, on**i**on
5	/**h**/	h	**h**ot	18	/**z**/	z,zz,ze,s,se,x	**z**ip, fi**zz**, snee**ze**, la**s**er,i**s**,wa**s**,plea**se**,**x**ylophone
6	/**j**/	j,g,ge,dge	**j**et,ca**g**e,bar**ge**,ju**dge**		**Consonant Digraphs:**		
7	/**k**/	c,k,ck,ch,cc,que	**c**at,**k**itten,du**ck**,s**ch**ool,o**cc**ur, anti**que**	19	/**th**/ (not voiced)	th	**th**umb, **th**in, thing
8	/**l**/	l.ll	**l**eg, be**ll**	20	/**th**/ (voiced)	th	**th**is, fea**th**er, **th**en
9	/**m**/	m,mm, mb	**m**ad, ha**mm**er, la**mb**	21	/**ng**/	ng,n	si**ng**, mo**n**key, si**n**k
10	/**n**/	n,nn,kn,gn	**n**o,di**nn**er,**kn**ee, **gn**ome	22	/**sh**/	sh,ss,ch,ti,ci	**sh**ip, mi**ss**ion, **ch**ef, mo**ti**on, spe**ci**al
11	/**p**/	p,pp	**p**ie, a**pp**le	23	/**ch**/	ch,tch	chip, ma**tch**

The 44* Phonemes of the English Language

	Phoneme	Graphemes**	Examples
	Short Vowel Sounds:		
26	/**a**/	a, au	h**a**t, l**au**gh
27	/**e**/	e, ea	b**e**d, br**ea**d
28	/**i**/	i	**i**f
29	/**o**/	o, a, au, aw, ough	h**o**t, w**a**nt, h**au**l, dr**aw**, b**ough**t
30	/**u**/	u, o	**u**p, ton
	Long Vowel Sounds:		
31	/**ā**/	a, a_e, ay, ai, ey, ei	b**a**con, l**a**te, d**ay**, tr**ai**n, th**ey**, **ei**ght, v**ei**n
32	/**ē**/	e, e_e, ea, ee, ey, ie, y	m**e**, th**ese**, b**ea**t, f**ee**t, k**ey**, ch**ief**, bab**y**
33	/**ī**/	i, i_e, igh, y, ie	f**i**nd, r**ide**, l**igh**t, fl**y**, p**ie**
34	/**ō**/	o, o_e, oa, ou, ow	n**o**, n**ote**, b**oa**t, s**ou**l, r**ow**
35	/**ū**/	u, u_e, ew	h**u**man, **use**, **few**, ch**ew**
	Other Vowel Sounds:		
36	/**oo**/	oo,u,oul	b**oo**k, p**u**t, c**ould**
37	/**ōō**/	oo,u,u_e	m**oo**n, tr**u**th, r**ule**

	Phoneme	Graphemes**	Examples
	Vowel Diphthongs:		
38	/**ow**/	ow, ou, ou_e	c**ow**, **out**, m**ouse**, h**ouse**
39	/**oy**/	oi, oy	c**oi**n, t**oy**
	Vowel Sounds Influenced by r:		
40	/**a(r)**/	ar	c**ar**
41	/**ā(r)**/	air, ear, are	**air**, ch**air**, f**air**, h**air**, b**ear**, c**are**
42	/**i(r)**/	irr, ere, eer	m**irr**or, h**ere**, ch**eer**
43	/**o(r)**/	or, ore, oor	**for**, c**ore**, d**oor**
44	/**u(r)**/	ur, ir, er, ear, or, ar	b**ur**n, **fir**st, f**er**n, h**ear**d, w**or**k, doll**ar**

Phoneme (speech sound)

Grapheme (letters or groups of letters representing the most common spellings for the individual phonemes

* The number of phonemes is different in some linguistics textbooks; this is evidence of the difficulty of classifying (Moats, 1998).

** This list does not include all possible graphemes for a given phoneme.

Source: Orchestrating Success in Reading by Dawn Reithaug (2002)

Genre Guidance

The following provides a broad index of appropriate genres. This index does not include all genres or subgenres that students are expected to read. The genres align with expectations of the Standard 3 Critical Reading and Writing: Reading Strand - *Students will comprehend, interpret, evaluate, and respond to a variety of complex texts of all literary and informational genres from a variety of historical, cultural, ethnic, and global perspectives.*

By end of **third grade,** students will have read grade-level appropriate texts in following:	By end of **fifth grade,** students will have read grade-level appropriate texts in following:	By end of **eighth grade,** students will have read grade-level appropriate texts in following:	By end of **English IV,** students will have read grade-level appropriate texts in following:
informational text	informational text	informational text	informational text
fiction	fiction	fiction	fiction
nonfiction	nonfiction	nonfiction	nonfiction
poetry	poetry	poetry	poetry
drama	drama	drama	drama
nursery rhyme	fable	fable	*Plus increasingly complex application of previous grades*
fable	legend	legend	
folk, fairy, and tall tale	fairy tale	fairy tale	
autobiography and biography	myth	myth	
	autobiography and biography	autobiography and biography	
	Plus increasingly complex application of previous grades	*Plus increasingly complex application of previous grades*	

Text Complexity Bands

In order to determine the complexity of a text, it is essential to consider three inter-related aspects: quantitative measures, qualitative measures, and reader-task considerations, (Fisher, Frey and Lapp, 2012).

Quantitative measures

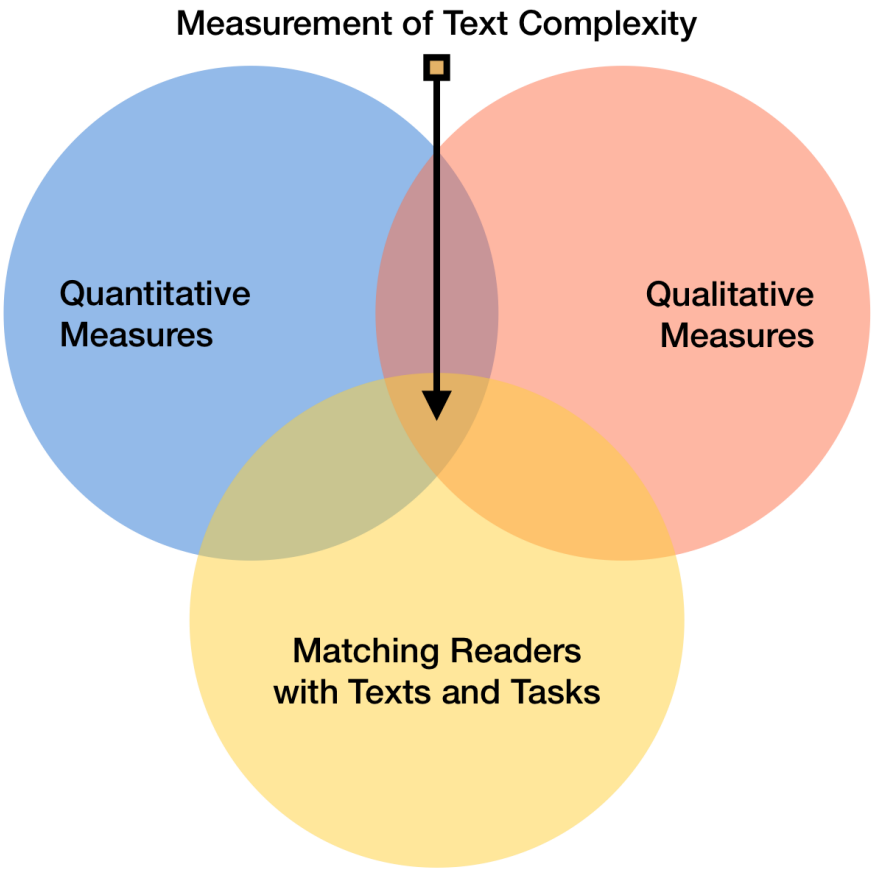
Readability ranges (e.g. ATOS, Lexile Framework, Flesch-Kincaid) are available in order to measure the difficulty of the text. These ranges are created from an evaluation of word frequency and sentence length to determine text difficulty. Word frequency and sentence length are strong predictors of how difficult a text is to comprehend.

Qualitative measures

Readability ranges (quantitative measures) are not capable of assessing the subtleties of meaning, structure, language features and knowledge demands; therefore, Oklahoma educators will evaluate these qualitative measures using their professional judgment and expertise through a research- based rubric.

Matching readers with texts and tasks

Input from parents, local classroom teachers, reading specialists, and/ or school librarians help determine the appropriateness of a text in regards to the reader's age, interests and the content of the text. Matching readers with texts and tasks are foremost in selecting appropriate texts for readers. Reader variables include motivation, knowledge, and experiences, and task variables consist of purpose and the complexity generated by the task assigned and the questions posed.

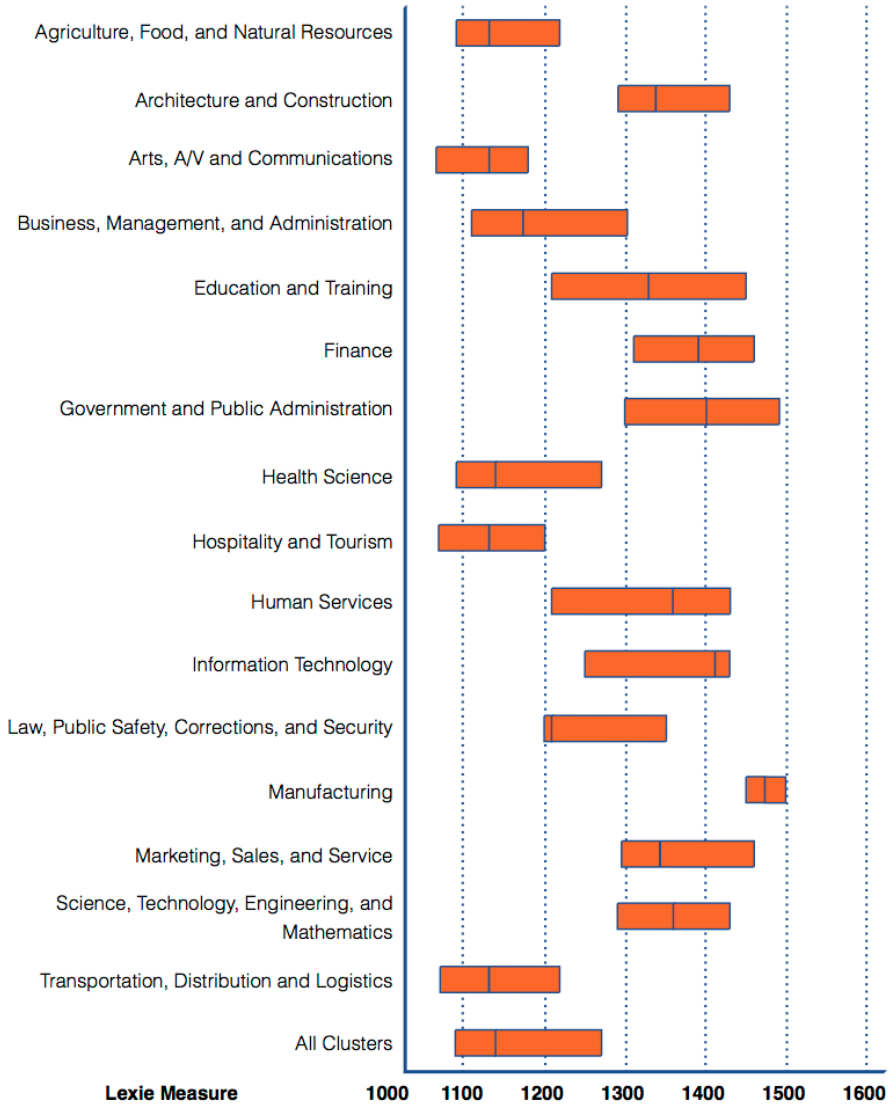


Prekindergarten through Kindergarten guidance

According to Dr. Douglas Fisher in *Text Complexity, Raising the Rigor in Reading*," text complexity is a staircase effect and the first steps on this staircase need to be carefully scaled so the youngest readers successfully acquire the fundamental of reading, which means that they are reading texts that allow for practice with decoding and fluency" (p. 37)

College- and Career-Readiness Reading Range

National Career Clusters® Framework
Text Complexity for 16 Career Clusters



Minimum reading range required for careers.

Typical Lexile Reader Measures, by Grade
lexile.com/about-lexile/grade-equivalent/grade-equivalent-chart

Grade	Lexie Reader Measures, Mid-Year 25th Percentile to 75th percentile (IQR)
1	Up to 300L
2	140L to 500L
3	330L 700L
4	445L to 810L
5	565L to 910L
6	665L to 1000L
7	735L to 1065L
8	805L to 1100L
9	855L to 1165L
10	905L to 1195L
11 and 12	940L to 1210L

If students read in the mid range and continue to progress through the grades, they should be effectively prepared for postsecondary education or the workforce.

Grammar Companion

Eight Parts of Speech

Noun - a word that names a person, place, thing, or idea.

- Proper Noun - the specific name of a particular person, place, or thing. These will always be capitalized.

  Ex: Mr. Smith, Riverdale Elementary, American

- Common noun - refers to a general group of persons, places, things, or ideas.

  Ex: teacher, school, citizen

- Concrete noun - these can be sensed by your five senses; they can be seen, touched, felt, tasted, heard, or smelled.

  Ex: apple, ball, telephone

- Abstract noun - represents a feeling, idea, or quality. These cannot be sensed by your five senses.

  Ex: hope, love, peace, hatred

- Collective noun - refers to things or people as a unit.

  Ex: team, family, class

Pronoun - a word that takes the place of a noun.

- Personal pronoun - refers to who is speaking, being spoken to, or spoken about.

	Personal Pronouns	
	Singular	**Plural**
First Person	I, me	we, us
Second Person	you	you
Third Person	he, him, she, it	they, them

- Possessive pronoun - a word that shows possession and defines who owns a particular object.

	Possessive Pronouns	
	Singular	**Plural**
First Person	my, mine	our, ours
Second Person	your, yours	your, yours
Third Person	his, her, hers, its	their, theirs

- Reflexive pronoun - a word that refers back to the subject of a sentence, clause, or phrase. It is formed by adding **–self** or **–selves** to a personal pronoun.

  Ex: myself, herself, himself, itself, ourselves, themselves

- Demonstrative pronoun - **this, that, these, those.** Points out a person, place, thing, or idea.

  Ex: This is my book. Those are my shoes. These are mine.

- Interrogative pronoun - **what, which, who, whom, whose.** Used at the beginning of a question.

- Antecedent - the noun the pronoun replaces.

    Ex: **Joann** placed **her** coat in the closet**. Joann** is the antecedent for **her**.

Verb - a word that expresses action or state of being.

- Action verb - a verb that expresses physical or mental action of the subject.

    Ex: Joe **walks** to school. The team **played** a great game. She is **talking** to me.

- Linking verb - **am, is, are, was, were, be, being, been.** These words are used to link the subject to some other word in the sentence that describes, identifies, or gives more information about it.

    Ex: John **was** sick for two days. (sick describes John) | John **is** hungry. (hungry describes John)

- Helping verb - used with the main verb to tell what happens or what exists.

may	am	do	should	have	will
might	is	does	could	had	can
must	are	did	would	has	shall
	was				
	were				
	be				
	being				
	been (also linking)				

    Ex: We **might win** the game tomorrow. (might is the helping verb and win is the main verb)

Adjectives - a word that modifies or describes a noun or pronoun. Adjectives tell **what kind, how many, how much,** and **which one**.

- Articles- **a, an, the,** are always adjectives.
- Adjectives tell What Kind. Ex: We stayed in a **large high-rise** hotel.
- Adjectives tell How Many. Ex: I have attended **four** schools.
- Adjectives tell How Much. Ex: We have **some** books to shelve in the library.
- Adjectives tell Which One. Ex: I live in **the blue** house.
    - Demonstrative Adjectives: **this, that, these, those.** When these words are used to describe a noun, they are adjectives. When they are used in place of a noun, they are demonstrative pronouns.

      Ex: This is my book. – demonstrative pronoun taking the place of book.

      This book is mine. – demonstrative adjective describing book.
- Adjectives that Compare - these are usually formed by adding **–er, -ier, -est, -iest.** Ex: **larger** hat, **angrier** than you, **biggest** car.
- Other comparative adjectives - better, best, more, most, little, less

Adverbs - a word that modifies or describes a verb, adjective, or other adverb. Adverbs tell **when, where, how, how often, how much, to what extent.** Common adverbs end in **–ly.**

- Adverbs tell **How**.

  Ex: The dolphin floated **gracefully** in the water.

  John finished the race **strong**.

- Adverbs tell **When**.

  Ex: Lisa will go **first**.

  Sometimes I eat cereal for dinner.

- Adverbs tell **Where**.

  Ex: Turn **left** at the stoplight.

  The dogs are **outside**.

- Adverbs modify other Adjectives and other Adverbs by showing the degree such as **almost, entirely, early, so, frequently, extremely, occasionally, too, awfully, completely, always, very.**

  Ex: It is **very** cold here. (The adverb *very* tells about the adjective *cold*.)

  I work **extremely** fast. (The adverb *extremely* tells about the adverb *fast.*)

Prepositions and Prepositional Phrases - a word or group of words linked to a noun or verb to describe direction or condition.

- One-word Prepositions - consists of one word

  Examples in sentences: The deer ran across the road. We stopped at the store down the street.

Common One-word Prepositions

about	at	but (meaning except)	in	out	under
above	before	by	inside	outside	underneath
across	behind	concerning	into	over	until
after	below	despite	like	past	unto
against	beneath	down	near	since	up
along	beside	during	of	through	upon
among	besides	except	off	throughout	with
around	between	for	on	toward	within
as	beyond	from	onto	to (unless a verb comes after it)	without

- Phrasal Prepositions- consist of more than one word.
  Example in a sentence: Water flowed in front of the rocks.

Common Phrasal Prepositions

according to	from among	in case of	in spite of	out of
along with	from between	in front of	instead of	next to
as for	in accordance with	in place of	on account of	with reference
except for	in addition to	in regard to	on top of	with regard to

Conjunction - a word that connects parts of a sentence.

- Coordinate conjunctions - **and, or, nor, for, so, but, yet -** connect equal parts of a sentence.

  Ex: I like to read **and** watch TV.

  We are going to go to a movie **and** we are going to go to dinner.

- Subordinate conjunctions - connect a dependent clause to an independent clause.

Common Subordinating Conjunctions

after	if	than	until	which
although	how	that	when	
as	since	though	where	
because	supposing	unless	whether	

- Correlative conjunctions - connect two ideas in pairs. **Neither…nor, either…or, not only…but also**

  Ex: **Not only** do I like football, **but** I **also** like baseball.

Interjection - a word or phrase that expresses emotion and often stands alone in a sentence.

Ex: wow, yes, well, please, yuck

Parts of the Sentence

Subject

The subject of a sentence is the person, place, or thing that is performing the action of the sentence. It is what or whom the sentence is about.

Ex: The young **man** built the family a the new house.

The simple subject is the subject and any modifiers.

Ex. **The young man** built the family a new house.

Predicate

The predicate of a sentence expresses the action or being within the sentence.

Ex: The young man **built** the family a new house.

The simple predicate contains the verb and words that modify the verb.

Ex: The young man **built the family a new house.**

Direct Object

The direct object receives the action of the sentence. It is usually a noun or pronoun.

Ex: The young man built the family a new **house**.

Indirect Object

The indirect object indicates to whom or for whom the action of the sentence is being done.

Ex: The young man built the **family** a new house.

Subject Complement

A subject complement either renames or describes the subject and is usually a noun, pronoun, or adjective. Subject complements follow a linking verb within the sentence.

Ex: The man is a good **father**. (father is the noun complement of man.) | The man seems **kind**. (kind is the adjective complement of man.)

Phrases - groups of words that do not contain both a subject and a verb.

Prepositional Phrase -made up of a preposition and its modifiers. It can function as an adjective or adverb in a sentence.

- Adjectival prepositional phrase: The store **around the corner** is green. (around the corner describes the noun store.)
- Adverbial prepositional phrase: Sally is coloring **outside the lines**. (outside the lines describes where the coloring takes place.)

Verbal Phrases - groups of words using verbs as other parts of the sentence. Infinitive, Gerund, and Participial

- **Infinitive Phrase - the word "to" plus a verb. Infinitive phrases can function as adjective, adverbs, or nouns**

  Ex: **To dance gracefully** is my ambition. (noun as the subject of a sentence)

  Her plan **to become a millionaire** fell through when the stock market crashed. (adjective describing plan)

  John went to college **to study engineering**. (adverb describing why he went)

- **Participial Phrase - a verb form functioning as an adjective.**

  Ex: **Swimming for his life**, John made it to shore. (swimming for his life describes John)

- **Gerund Phrase - an –ing verb form functioning as a noun.**

  Ex: **Walking the dog** is not my favorite task. (subject)

Appositive Phrase - renames or identifies a noun or pronoun. It is set off by commas if the added information is nonessential to the meaning of the sentence.

Ex: My teacher, **a woman with curly hair**, is very fun. (curly hair is nonessential to the teacher being fun)

The dog with the sharp teeth **Bowser** is the one who bit me. (Bowser is essential to identifying which dog bites)

Absolute Phrase - is a modifier, or a modifier and a few other words, that attaches to a sentence or a noun, with no conjunction. It cannot contain a finite verb.

Absolute phrases usually consist of a noun and a modifier that modifies this noun, NOT another noun in the sentence.

Absolute phrases are optional in sentences, i.e., they can be removed without damaging the grammatical integrity of the sentence. Since absolute phrases are optional in the sentence, they are often set off from the sentence with commas or, less often, with dashes. We normally explain absolute phrases by saying that they modify entire sentences, rather than one word.

Ex: **Their minds whirling from the events of the school day**, the students made their way to the parking lot.

His head pounding, his hands shaking, the young man knelt and proposed marriage to his girlfriend.

Clauses

Clauses - a group of related words that contains a subject and a verb. Independent clauses can stand alone as complete sentences. Dependent or subordinate clauses cannot stand alone and must be in the sentence with an independent clause.

Adjective Clauses - dependent clauses that describe nouns or pronouns. They begin with relative pronouns: **that, where, which, who, whose.**

Ex: The teacher **who left her papers on the desk** will be late turning in her grades.

Adverb Clauses - dependent clauses that describe verbs, adjectives, or adverbs. They begin with subordinating conjunctions.

Subordinating conjunctions to show time: **after, before, when, while, as , whenever, since, until, as soon as, as long as, once**

Subordinating conjunctions to show cause and effect: **because, since, now that, as, so, in order that**

Subordinating conjunctions to show condition: **if, unless, whether, providing**

Subordinating conjunctions to show contrast: **although, even though, though, whereas, while**

Examples:

Time: **After the family spent the day at the zoo,** they were very tired.

Cause and Effect: The family was very tired **since they spent the day at the zoo.**

Condition: **Unless you plan your trip to the zoo carefully,** you won't be able to see all the animals in one day.

Contrast: The family visited the park, **although they really wanted to spend the day at the zoo.**

Noun Clauses - dependent clauses that function as the subject, object, or compliment of a sentence.
They begin with subordinating conjunctions.

how	when	who
however	whenever	whoever
if	where	whom
that	wherever	whomever
what	which	whose
whether	whichever	why
whatever		

Examples:

Whatever you want for dinner is fine with me. (subject)

John will make **whatever you want for dinner.** (direct object)

I have dinner ready for **whoever wants to eat.** (object of the preposition)

Verb Tense

The tense of a verb is determined by when the action took place. The three tenses are:

- The Past Tense
- The Present Tense
- The Future Tense

Examples of Tenses

Here are some examples of verbs in different tenses:

- I walked to work. (The verb *walked* is in the **past tense**.)
- I walk to work. (The verb *walk* is in the **present tense**.)
- I will walk to work. (The verb *will walk* is in the **future tense**.)

Verbs do not just express actions. They can also express a state of being. For example:

- I was happy. (The verb *was* is in the **past tense**.)
- I am happy. (The verb *am* is in the **present tense**.)
- I will be happy. (The verb *will be* is in the **future tense**.)

Some of the verbs in the past tense are made up of more than one word. We need these different versions of the tenses because the tenses are further categorized depending on whether the action (or state of being) they describe is in progress or completed. For example, the different versions of the verb *to laugh* are:

- **Past Tense**: laughed, was/were laughing, had laughed, had been laughing
- **Present Tense**: laugh, am/is/are laughing, has/have laughed, has/have been laughing
- **Future Tense**: will laugh, will be laughing, will have laughed, will have been laughing

The Full List of Tenses

The table below shows the full list of the tenses:

The 4 Past Tenses	Example
simple past tense	I went
past progressive tense	I was going
past perfect tense	I had gone
past perfect progressive tense	I had been going
The 4 Present Tenses	**Example**
simple present tense	I go
present progressive tense	I am going
present perfect tense	I have gone
present perfect progressive tense	I have been going
The 4 Future Tenses	**Example**
simple future tense	I will go
future progressive tense	I will be going
future perfect tense	I will have gone
future perfect progressive tense	I will have been going

Sentence Structure

1. Simple - a simple sentence contains one independent clause.

Ex: Judy laughed.

2. Compound - a compound sentence contains two or more independent clauses joined by a conjunction.

Ex: Judy laughed and Jimmy cried.

3. Complex - a complex sentence contains an independent clause and at least one dependent clause.

Ex: Jimmy cried when Judy laughed.

4. Compound Complex - a compound-complex sentence contains two or more independent clauses and at least one dependent clause.

Ex: Judy laughed and Jimmy cried when the clowns ran past their seats.

Types of Sentences

1. Declarative sentences make a statement to relay information or ideas. They are punctuated with a simple period. Formal essays or reports are composed almost entirely of declarative sentences.

Ex: The concert begins in two hours. July 4th is Independence Day.

2. Imperative sentences issue commands or requests or they can express a desire or wish. They are punctuated with a simple period or they can be exclamations requiring an exclamation mark. It all depends on the strength of emotion you want to express. Imperative sentences can consist of a single verb or they can be more lengthy and complex.

Ex: Watch out for oncoming traffic. Please do your homework.

3. Exclamatory sentences express strong emotion. It doesn't really matter what the emotion is, an exclamatory sentence is the type of sentence needed to express it. Exclamatory sentences always end in an exclamation mark, so it's pretty easy to spot them.

Ex: The river is rising! I can't wait for the party!

4. Interrogative sentences are also easy to spot. That's because they always ask a question and end in a question mark.

Ex: Is it snowing? Have you had breakfast?

Introduction

The Oklahoma Academic Standards for Mathematics 2016 is the result of the contributions of hundreds of mathematics teachers, mathematics educators, and mathematicians from across the state of Oklahoma. This document reflects a balanced synthesis of the work of all members of the Oklahoma Academic Standards for Mathematics Writing Committee and feedback from teachers, mathematicians, external reviews, and numerous education stakeholders including business, industry and commerce, parent groups, career tech, higher education, and external reviewers.

The Oklahoma Academic Standards for Mathematics 2016 specify what students should know and be able to do as learners of mathematics at the end of each grade level or course. Students are held responsible for learning standards listed at earlier grade levels as well as their current grade level. Throughout this document, the standards are written to allow time for study of additional material at every grade level. The order of the standards at any grade level is not meant to imply a sequence of topics and should be considered flexible for the organization of any course. The document provides standards for PK-7, Pre-Algebra, Algebra I, Geometry, and Algebra II with Algebra I as the pre-requisite for both Geometry and Algebra II.

Development of the Oklahoma Academic Standards for Mathematics

The Oklahoma Academic Standards for Mathematics writing team drew on the work of the National Council of Teachers of Mathematics (NCTM) standards documents; the National Research Council's report Adding It Up, the Oklahoma Priority Academic Standards (PASS), and other states' standards documents and curriculum framework guides (e.g., Minnesota, Virginia, and Massachusetts). Please see the reference list at the end of this document for a more complete list of all resources consulted.

Vision and Guiding Principles

These standards envision all students in Oklahoma will become mathematically proficient and literate through a strong mathematics program that emphasizes and engages them in problem solving, communicating, reasoning and proof, making connections, and using representations. Mathematically proficient and literate students can confidently and effectively use mathematics concepts, computation skills, and numbers to problem-solve, reason, and analyze information. Developing mathematical proficiency and literacy for Oklahoma students depends in large part on a clear, comprehensive, coherent, and developmentally appropriate set of standards to guide curricular decisions. The understanding and implementation of these standards throughout PK-12 mathematics experience for students is based on the following guiding principles:

Guiding Principle 1: Excellence in mathematics education requires equity—high expectations and strong support for all students.
All students must have opportunities to study—and support to learn—mathematics. Equity does not mean that every student should receive identical instruction; instead, it demands that reasonable and appropriate accommodations be made as needed to promote access and attainment for all students.

Guiding Principle 2: Mathematical ideas should be explored in ways that stimulate curiosity, create enjoyment of mathematics, and develop depth of understanding.
Students need to understand mathematics deeply and use it effectively. To achieve mathematical understanding, students should be actively engaged in doing meaningful mathematics, discussing mathematical ideas, and applying mathematics in interesting, thought provoking situations. Student understanding is

further developed through ongoing reflection about cognitively demanding and tasks relevant to their lives.

Tasks should challenge and engage students in mathematics in multiple ways. Short- and long-term investigations that connect procedures and skills with conceptual understanding are integral components of an effective mathematics program. Activities should build upon curiosity and prior knowledge, and enable students to solve progressively deeper, broader, and more sophisticated problems. Mathematical tasks reflecting significant mathematics should generate active classroom talk, promote the development of conjectures, and lead to an understanding of the necessity for mathematical reasoning.

Guiding Principle 3: An effective mathematics program focuses on problem solving.
Mathematical problem solving is the hallmark of an effective mathematics program. Skill in mathematical problem solving requires practice with a variety of mathematical problems as well as a firm grasp of mathematical techniques and their underlying principles. Students who possess a deeper knowledge of mathematics can then use mathematics in a flexible way to attack various problems and devise different ways of solving any particular problem. Mathematical problem solving calls for reflective thinking, persistence, and learning from the ideas of others. Success in solving mathematical problems helps to create an abiding interest in mathematics.

Guiding Principle 4: Technology is essential in teaching and learning mathematics.
Technology enhances the mathematics curriculum in many ways. Technology enables students to communicate ideas within the classroom or to search for needed information. It can be especially helpful in assisting students with special needs in regular and special classrooms, at home, and in the community. Technology changes what mathematics is to be learned and when and how it is learned. Tools such as measuring instruments, manipulatives (such as base ten blocks and fraction pieces), scientific and graphing calculators, and computers with appropriate software, if properly used, contribute to a rich learning environment for developing and applying mathematical concepts. Appropriate use of calculators is essential; calculators should not be used as a replacement for basic understanding and skills. Although the use of a graphing calculator can help middle and secondary students to visualize properties of functions and their graphs, graphing calculators should be used to enhance their understanding and skills rather than replace them.

Standards Overview

The Oklahoma Academic Standards for Mathematics are developed around four main content strands, Algebraic Reasoning and Algebra, Number and Operations, Geometry and Measurement, and Data and Probability organize the content standards throughout PK-7 and Pre-Algebra. The standards for Algebra I, Algebra II, and Geometry are fundamentally organized around these strands as well. The process standards are defined as the Mathematical Actions and Processes and are comprised of the skills and abilities students should develop and be engaged in throughout their PK-12 mathematics education. Among these are the ability to problem solve, communicate, and reason about mathematics which will help students be ready for the mathematics expectations of college and the skills desired by many employers. While the process and content standards work in concert to create clear, concise, and rigorous mathematics standards and expectations for Oklahoma students with the aim of helping them be college and career ready, it is not intended that each mathematical action and process will be utilized or developed with each standard. Certainly some standards and objectives can be achieved more readily with particular mathematics actions and processes. For example, an objective that involves explaining a particular concept may be best accomplished by also engaging students in communicating mathematically. Whereas, standards and objectives that focus in the early grades on fluency with operations will align well with the mathematical action and process focused on procedural fluency.

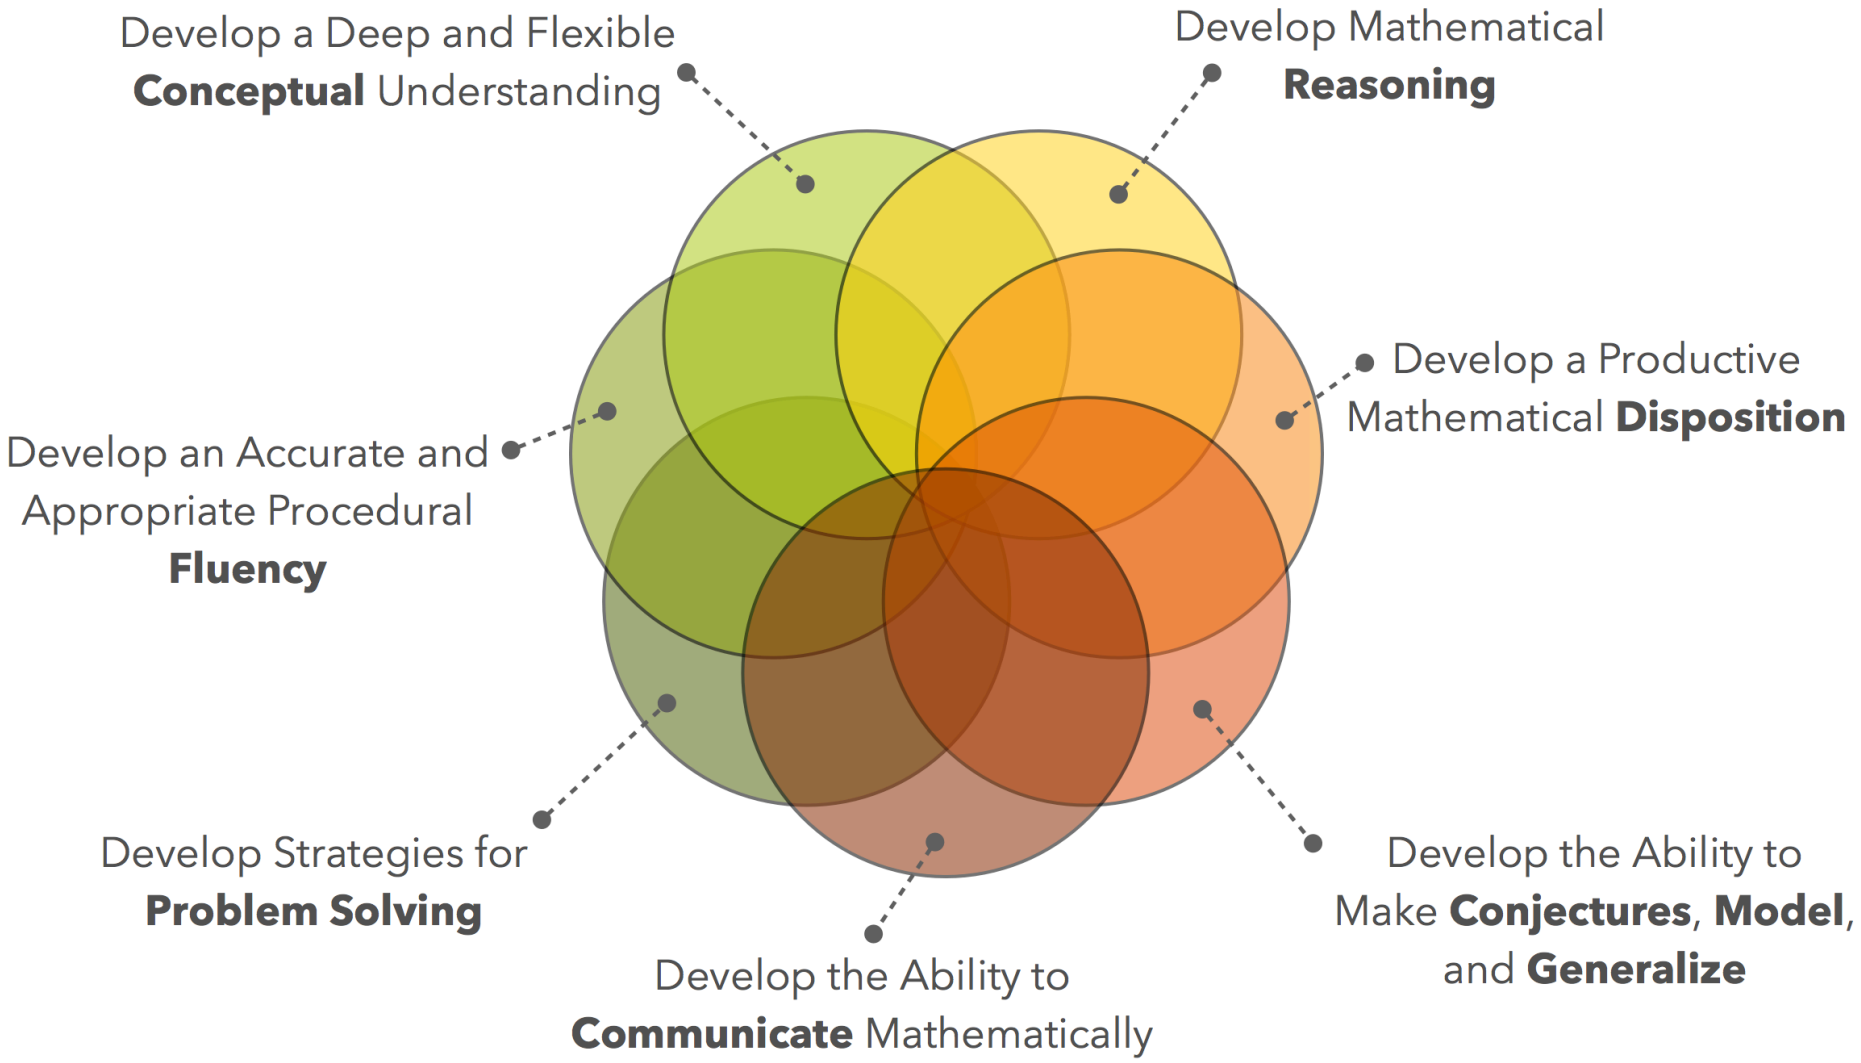
Number and Operations Strand: A focus on number and operations is the cornerstone of a strong mathematics program. Developing students' fluency with number and operations throughout their PK-12 mathematics experience requires a balance and connection between conceptual understanding and computational proficiency and efficiency. This strand provides focus on the importance of students' understanding of numbers, ways of representing numbers, relationships among numbers, relationships among number systems, and meanings of operations and how they relate to one another. An emphasis is placed on the development of estimation so students can determine the reasonableness of solutions and answers. Further, it requires that students should be able to compute efficiently and proficiently.

Algebraic Reasoning and Algebra Strand: All students should be able to reason algebraically and learn algebra. This strand provides focus for the PK-7 and Pre-Algebra standards around the notion that algebra is more than moving symbols around. It is about understanding patterns, relations and functions, representing and analyzing mathematical situations and structures using algebraic symbols, using mathematical models to represent and understand quantitative relationships, and analyzing change in various contexts. Understanding change is fundamental to algebraic reasoning and the concept of function with depth. This understanding is critical for success in college-level mathematics. It is also fundamental to understanding many real-world problems and situations students will face in their future careers.

Geometry and Measurement Strand: All students should gain experience using a variety of visual and coordinate representations to analyze and solve problems and learn how to use appropriate units and tools for measuring. This strand provides focus for the PK-7 and Geometry standards around the notion that geometry and measurement help students understand and represent ideas and solve problems they will encounter in their daily lives. A focus on geometry should enable students to analyze characteristics of two- and three-dimensional objects, develop arguments based on geometric relationships, describe spatial relationships using coordinate geometry and other representational systems, apply transformations and symmetry to analyze mathematical situations, and utilize visualization, spatial reasoning and geometric modeling to solve problems. A focus on measurement should enable students to understand measureable attributes of objects and the units, systems, and processes of measurement, and apply appropriate techniques, tools, and formulas to determine measurements.

Data and Probability Strand: An increased emphasis on understanding data should span all grade levels. Making sense of data and probability has become a part of our daily lives, supporting the importance of this strand throughout a students' PK-12 mathematics experience. A focus on data and probability should enable all students to formulate questions that can be addressed with data, and to collect, organize, and display relevant data to answer them. Students should select and use appropriate statistical methods to analyze data, develop and evaluate inferences and predictions that are based on data, and understand and apply basic concepts of probability. The study of data is also an opportunity to apply the basic skills of computing with numbers and being an educated consumer of information presented in the news and media while the study of probability provides application and use of fractions in daily life.

Mathematical Actions and Processes



Mathematical Actions and Processes

The Mathematical Actions and Processes simultaneously reflect the holistic nature of mathematics as a discipline in which patterns and relationships among quantities, numbers, and space are studied (National Academies of Sciences, 2014) and as a form of literacy such that all students are supported in accessing and understanding mathematics for life, for the workplace, for the scientific and technical community, and as a part of cultural heritage (NCTM, 2000). The seven Mathematical Actions and Processes leverage both the NCTM Process Standards and the Five Mathematical Proficiencies (NRC, 2001) to capture the mathematical experience of Oklahoma students as they pursue mathematical literacy.

Throughout their Pk-12 education experience, mathematically literate students will:

Develop a Deep and Flexible Conceptual Understanding
Demonstrate a deep and flexible conceptual understanding of mathematical concepts, operations, and relations while making mathematical and real-world connections. Students will develop an understanding of how and when to apply and use the mathematics they know to solve problems.

Develop Accurate and Appropriate Procedural Fluency
Learn efficient procedures and algorithms for computations and repeated processes based on a strong sense of numbers. Develop fluency in addition, subtraction, multiplication, and division of numbers and expressions. Students will generate a sophisticated understanding of the development and application of algorithms and procedures.

Develop Strategies for Problem Solving
Analyze the parts of complex mathematical tasks and identify entry points to begin the search for a solution. Students will select from a variety of problem solving strategies and use corresponding multiple representations (verbal, physical, symbolic, pictorial, graphical, tabular) when appropriate. They will pursue solutions to various tasks from real-world situations and applications that are often interdisciplinary in nature. They will find methods to verify their answers in context and will always question the reasonableness of solutions.

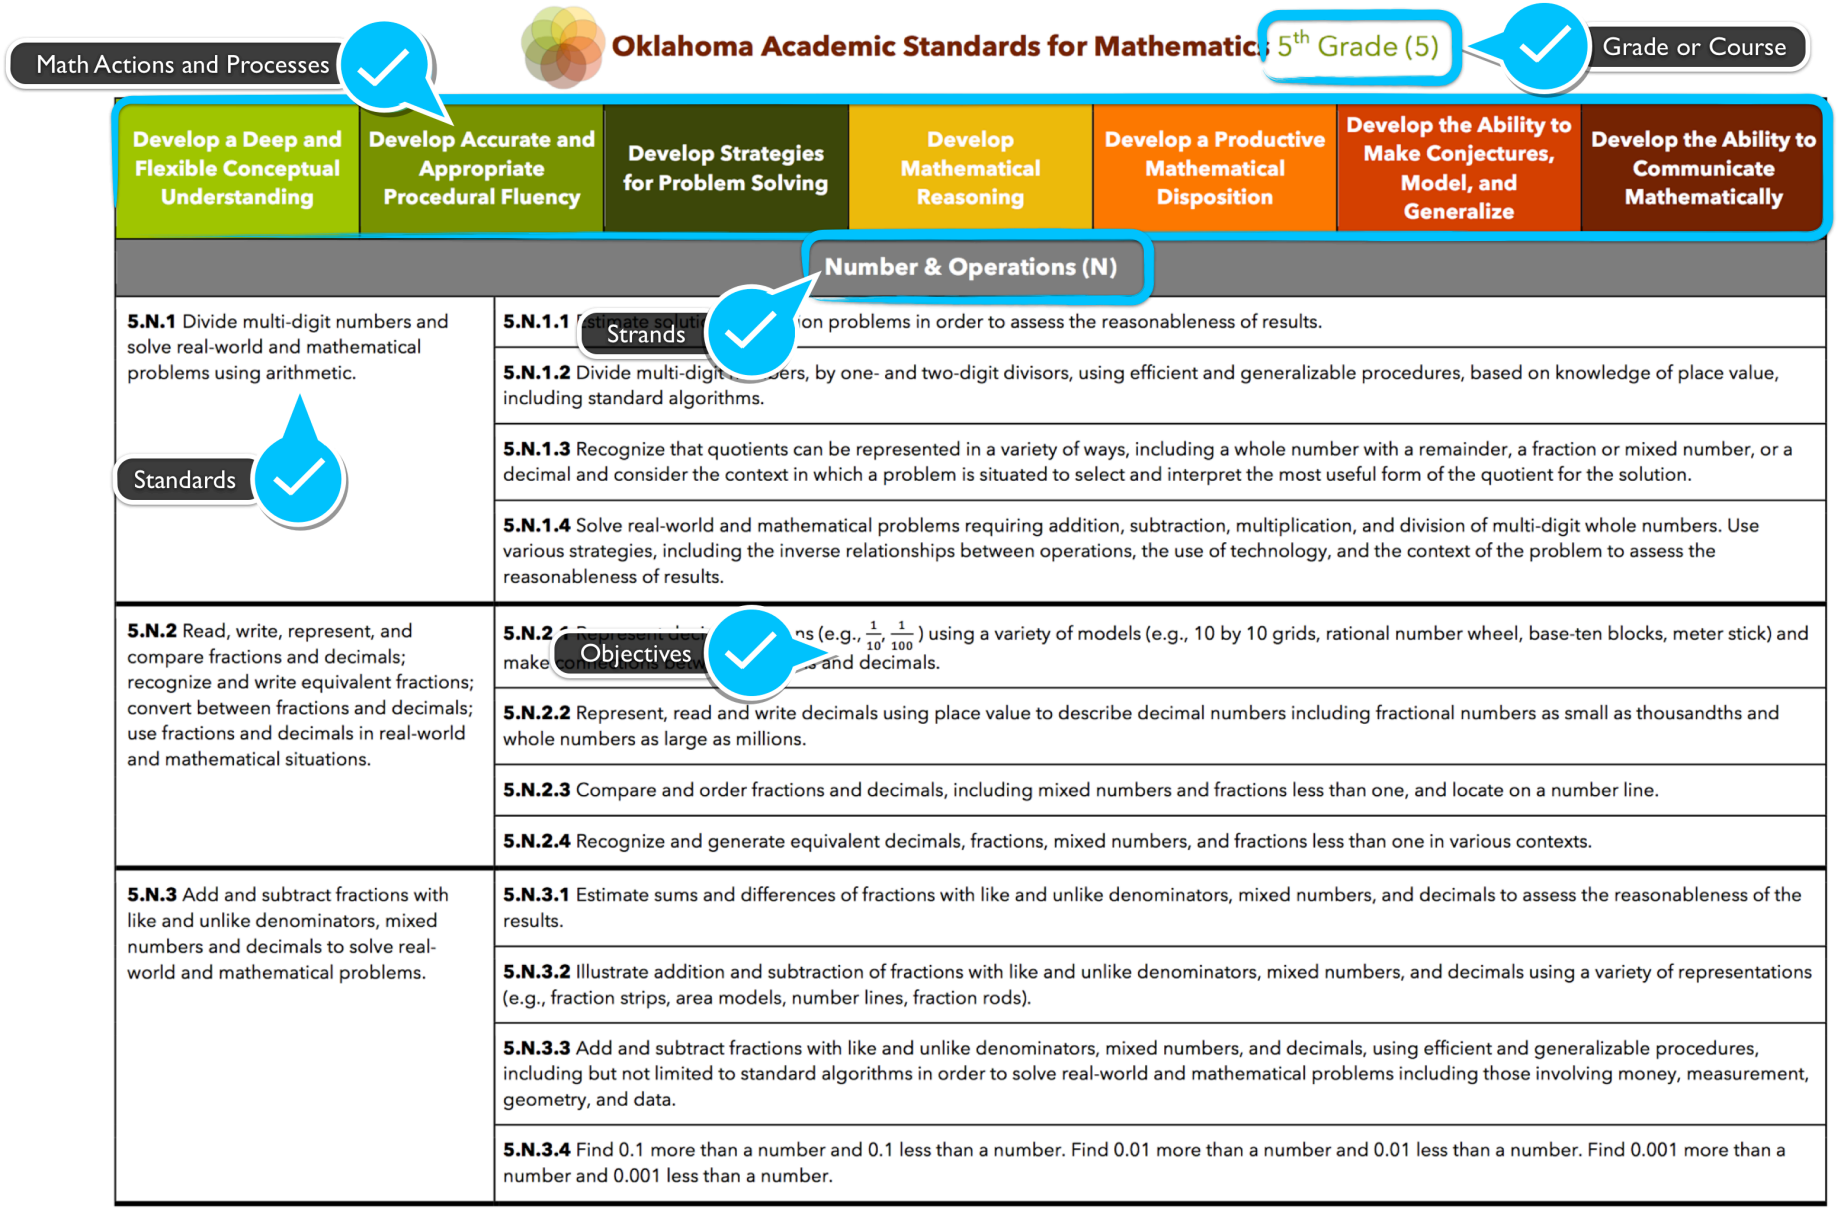
Develop Mathematical Reasoning
Explore and communicate a variety of reasoning strategies to think through problems. Students will apply their logic to critique the thinking and strategies of others to develop and evaluate mathematical arguments, including making arguments and counterarguments and making connections to other contexts.

Develop a Productive Mathematical Disposition
Hold the belief that mathematics is sensible, useful and worthwhile. Students will develop the habit of looking for and making use of patterns and mathematical structures. They will persevere and become resilient, effective problem solvers.

Develop the Ability to Make Conjectures, Model, and Generalize
Make predictions and conjectures and draw conclusions throughout the problem solving process based on patterns and the repeated structures in mathematics. Students will create, identify, and extend patterns as a strategy for solving and making sense of problems.

Develop the Ability to Communicate Mathematically
Students will discuss, write, read, interpret and translate ideas and concepts mathematically. As they progress, students' ability to communicate mathematically will include their increased use of mathematical language and terms and analysis of mathematical definitions.

Reading the Oklahoma Academic Standards for Mathematics



5.N.1 Divide multi-digit numbers and solve real-world and mathematical problems using arithmetic.	**5.N.1.1** [illegible]on problems in order to assess the reasonableness of results.
	5.N.1.2 Divide multi-digit [illegible]bers, by one- and two-digit divisors, using efficient and generalizable procedures, based on knowledge of place value, including standard algorithms.
	5.N.1.3 Recognize that quotients can be represented in a variety of ways, including a whole number with a remainder, a fraction or mixed number, or a decimal and consider the context in which a problem is situated to select and interpret the most useful form of the quotient for the solution.
	5.N.1.4 Solve real-world and mathematical problems requiring addition, subtraction, multiplication, and division of multi-digit whole numbers. Use various strategies, including the inverse relationships between operations, the use of technology, and the context of the problem to assess the reasonableness of results.
5.N.2 Read, write, represent, and compare fractions and decimals; recognize and write equivalent fractions; convert between fractions and decimals; use fractions and decimals in real-world and mathematical situations.	**5.N.2** [illegible]ns (e.g., $\frac{1}{10}$, $\frac{1}{100}$) using a variety of models (e.g., 10 by 10 grids, rational number wheel, base-ten blocks, meter stick) and make [illegible] and decimals.
	5.N.2.2 Represent, read and write decimals using place value to describe decimal numbers including fractional numbers as small as thousandths and whole numbers as large as millions.
	5.N.2.3 Compare and order fractions and decimals, including mixed numbers and fractions less than one, and locate on a number line.
	5.N.2.4 Recognize and generate equivalent decimals, fractions, mixed numbers, and fractions less than one in various contexts.
5.N.3 Add and subtract fractions with like and unlike denominators, mixed numbers and decimals to solve real-world and mathematical problems.	**5.N.3.1** Estimate sums and differences of fractions with like and unlike denominators, mixed numbers, and decimals to assess the reasonableness of the results.
	5.N.3.2 Illustrate addition and subtraction of fractions with like and unlike denominators, mixed numbers, and decimals using a variety of representations (e.g., fraction strips, area models, number lines, fraction rods).
	5.N.3.3 Add and subtract fractions with like and unlike denominators, mixed numbers, and decimals, using efficient and generalizable procedures, including but not limited to standard algorithms in order to solve real-world and mathematical problems including those involving money, measurement, geometry, and data.
	5.N.3.4 Find 0.1 more than a number and 0.1 less than a number. Find 0.01 more than a number and 0.01 less than a number. Find 0.001 more than a number and 0.001 less than a number.

Develop a Deep and Flexible Conceptual Understanding	Develop Accurate and Appropriate Procedural Fluency	Develop Strategies for Problem Solving	Develop Mathematical Reasoning	Develop a Productive Mathematical Disposition	Develop the Ability to Make Conjectures, Model, and Generalize	Develop the Ability to Communicate Mathematically

Number & Operations (N)	
PK.N.1 Know number names and count in sequence.	**PK.N.1.1** Count aloud forward in sequence by 1s to 20.
	PK.N.1.2 Recognize and name written numerals 0-10.
	PK.N.1.3 Recognize that zero represents the count of no objects.
PK.N.2 Count to tell the number of objects.	**PK.N.2.1** Identify the number of objects, up to 10, in a row or column.
	PK.N.2.2 Use one-to-one correspondence in counting objects and matching groups of objects.
	PK.N.2.3 Understand the last numeral spoken, when counting aloud, tells how many total objects are in a set.
	PK.N.2.4 Count up to 5 items in a scattered configuration; not in a row or column.
PK.N.3 Compare sets using number.	**PK.N.3.1** Compare two sets of 1-5 objects using comparative language such as same, more, or fewer.
Algebraic Reasoning & Algebra (A)	
PK.A.1 Recognize, duplicate, and extend patterns.	**PK.A.1.1** Sort and group up to 5 objects into a set based upon characteristics such as color, size, and shape and explain verbally what the objects have in common.
	PK.A.1.2 Recognize, duplicate, and extend repeating patterns involving manipulatives, sound, movement, and other contexts.
Geometry & Measurement (GM)	
PK.GM.1 Identify common shapes.	**PK.GM.1.1** Identify circles, squares, rectangles, and triangles by pointing to the shape when given the name.
PK.GM.2 Describe and compare measureable attributes.	**PK.GM.2.1** Identify measurable attributes of objects. Describe them as little, big, long, short, tall, heavy, light, or other age appropriate vocabulary.
	PK.GM.2.2 Directly compare two objects with a common measurable attribute using words such as longer/shorter; heavier/lighter; or taller/shorter.
	PK.GM.2.3 Sort objects into sets by one or more attributes.

Data & Probability (D)	
PK.D.1 Collect and organize categorical data.	**PK.D.1.1** Collect and organize information about objects and events in the environment.
	PK.D.1.2 Use categorical data to create real-object graphs.

Develop a Deep and Flexible Conceptual Understanding	Develop Accurate and Appropriate Procedural Fluency	Develop Strategies for Problem Solving	Develop Mathematical Reasoning	Develop a Productive Mathematical Disposition	Develop the Ability to Make Conjectures, Model, and Generalize	Develop the Ability to Communicate Mathematically

Number & Operations (N)	
K.N.1 Understand the relationship between quantities and whole numbers.	**K.N.1.1** Count aloud forward in sequence to 100 by 1's and 10's.
	K.N.1.2 Recognize that a number can be used to represent how many objects are in a set up to 10.
	K.N.1.3 Use ordinal numbers to represent the position of an object in a sequence up to 10.
	K.N.1.4 Recognize without counting (subitize) the quantity of a small group of objects in organized and random arrangements up to 10. **Clarification statement**: Subitizing is defined as instantly recognizing the quantity of a set without having to count. "Subitizing" is not a vocabulary word and is not meant for student discussion at this age.
	K.N.1.5 Count forward, with and without objects, from any given number up to 10.
	K.N.1.6 Read, write, discuss, and represent whole numbers from 0 to at least 10. Representations may include numerals, pictures, real objects and picture graphs, spoken words, and manipulatives.
	K.N.1.7 Find a number that is 1 more or 1 less than a given number up to 10.
	K.N.1.8 Using the words more than, less than or equal to compare and order whole numbers, with and without objects, from 0 to 10.
K.N.2 Develop conceptual fluency with addition and subtraction (up to 10) using objects and pictures.	**K.N.2.1** Compose and decompose numbers up to 10 with objects and pictures.
K.N.3 Understand the relationship between whole numbers and fractions through fair share.	**K.N.3.1** Distribute equally a set of objects into at least two smaller equal sets.
K.N.4 Identify coins by name.	**K.N.4.1** Identify pennies, nickels, dimes, and quarters by name.

Algebraic Reasoning & Algebra (A)	
K.A.1 Duplicate patterns in a variety of contexts.	**K.A.1.1** Sort and group up to 10 objects into a set based upon characteristics such as color, size, and shape. Explain verbally what the objects have in common.
	K.A.1.2 Recognize, duplicate, complete, and extend repeating, shrinking and growing patterns involving shape, color, size, objects, sounds, movement, and other contexts.
Geometry & Measurement (GM)	
K.GM.1 Recognize and sort basic two-dimensional shapes and use them to represent real-world objects.	**K.GM.1.1** Recognize squares, circles, triangles, and rectangles.
	K.GM.1.2 Sort two-dimensional objects using characteristics such as shape, size, color, and thickness.
	K.GM.1.3 Identify attributes of two-dimensional shapes using informal and formal geometric language interchangeably.
	K.GM.1.4 Use smaller shapes to form a larger shape when there is an outline to follow.
	K.GM.1.5 Compose free-form shapes with blocks.
	K.GM.1.6 Use basic shapes and spatial reasoning to represent objects in the real world.
K.GM.2 Compare and order objects according to location and measurable attributes.	**K.GM.2.1** Use words to compare objects according to length, size, weight, position, and location.
	K.GM.2.2 Order up to 6 objects using measurable attributes, such as length and weight.
	K.GM.2.3 Sort objects into sets by more than one attribute.
	K.GM.2.4 Compare the number of objects needed to fill two different containers.
K.GM.3 Tell time as it relates to daily life.	**K.GM.3.1** Develop an awareness of simple time concepts using words such as yesterday, today, tomorrow, morning, afternoon, and night within his/her daily life.
Data & Probability (D)	
K.D.1 Collect, organize, and interpret categorical data.	**K.D.1.1** Collect and sort information about objects and events in the environment.
	K.D.1.2 Use categorical data to create real-object and picture graphs.
	K.D.1.3 Draw conclusions from real-object and picture graphs.

Develop a Deep and Flexible Conceptual Understanding	Develop Accurate and Appropriate Procedural Fluency	Develop Strategies for Problem Solving	Develop Mathematical Reasoning	Develop a Productive Mathematical Disposition	Develop the Ability to Make Conjectures, Model, and Generalize	Develop the Ability to Communicate Mathematically

Number & Operations (N)

1.N.1 Count, compare, and represent whole numbers up to 100, with an emphasis on groups of tens and ones.	**1.N.1.1** Recognize numbers to 20 without counting (subitize) the quantity of structured arrangements. **Clarification statement**: Subitizing is defined as instantly recognizing the quantity of a set without having to count. "Subitizing" is not a vocabulary word and is not meant for student discussion at this age.
	1.N.1.2 Use concrete representations to describe whole numbers between 10 and 100 in terms of tens and ones.
	1.N.1.3 Read, write, discuss, and represent whole numbers up to 100. Representations may include numerals, addition and subtraction, pictures, tally marks, number lines and manipulatives, such as bundles of sticks and base 10 blocks.
	1.N.1.4 Count forward, with and without objects, from any given number up to 100 by 1s, 2s, 5s and 10s.
	1.N.1.5 Find a number that is 10 more or 10 less than a given number up to 100.
	1.N.1.6 Compare and order whole numbers from 0 to 100.
	1.N.1.7 Use knowledge of number relationships to locate the position of a given whole number on an open number line up to 20.
	1.N.1.8 Use objects to represent and use words to describe the relative size of numbers, such as more than, less than, and equal to.
1.N.2 Solve addition and subtraction problems up to 10 in real-world and mathematical contexts.	**1.N.2.1** Represent and solve real-world and mathematical problems using addition and subtraction up to ten.
	1.N.2.2 Determine if equations involving addition and subtraction are true.
	1.N.2.3 Demonstrate fluency with basic addition facts and related subtraction facts up to 10.
1.N.3 Develop foundational ideas for fractions.	**1.N.3.1** Partition a regular polygon using physical models and recognize when those parts are equal.
	1.N.3.2 Partition (fair share) sets of objects into equal groupings.

1.N.4 Identify coins and their values.	**1.N.4.1** Identifying pennies, nickels, dimes, and quarters by name and value.
	1.N.4.2 Write a number with the cent symbol to describe the value of a coin.
	1.N.4.3 Determine the value of a collection of pennies, nickels, or dimes up to one dollar counting by ones, fives, or tens.
Algebraic Reasoning & Algebra (A)	
1.A.1 Identify patterns found in real-world and mathematical situations.	**1.A.1.1** Identify, create, complete, and extend repeating, growing, and shrinking patterns with quantity, numbers, or shapes in a variety of real-world and mathematical contexts.
Geometry & Measurement (GM)	
1.GM.1 Recognize, compose, and decompose two- and three-dimensional shapes.	**1.GM.1.1** Identify trapezoids and hexagons by pointing to the shape when given the name.
	1.GM.1.2 Compose and decompose larger shapes using smaller two-dimensional shapes.
	1.GM.1.3 Compose structures with three-dimensional shapes.
	1.GM.1.4 Recognize three-dimensional shapes such as cubes, cones, cylinders, and spheres.
1.GM.2 Select and use nonstandard and standard units to describe length and volume/capacity.	**1.GM.2.1** Use nonstandard and standard measuring tools to measure the length of objects to reinforce the continuous nature of linear measurement.
	1.GM.2.2 Illustrate that the length of an object is the number of same-size units of length that, when laid end-to-end with no gaps or overlaps, reach from one end of the object to the other.
	1.GM.2.3 Measure the same object/distance with units of two different lengths and describe how and why the measurements differ.
	1.GM.2.4 Describe a length to the nearest whole unit using a number and a unit.
	1.GM.2.5 Use standard and nonstandard tools to identify volume/capacity. Compare and sort containers that hold more, less, or the same amount.
1.GM.3 Tell time to the half and full hour.	**1.GM.3.1** Tell time to the hour and half-hour (analog and digital).
Data & Probability (D)	
1.D.1 Collect, organize, and interpret categorical and numerical data.	**1.D.1.1** Collect, sort, and organize data in up to three categories using representations (e.g., tally marks, tables, Venn diagrams).
	1.D.1.2 Use data to create picture and bar-type graphs to demonstrate one-to-one correspondence.
	1.D.1.3 Draw conclusions from picture and bar-type graphs.

Develop a Deep and Flexible Conceptual Understanding	Develop Accurate and Appropriate Procedural Fluency	Develop Strategies for Problem Solving	Develop Mathematical Reasoning	Develop a Productive Mathematical Disposition	Develop the Ability to Make Conjectures, Model, and Generalize	Develop the Ability to Communicate Mathematically

Number & Operations (N)

2.N.1 Compare and represent whole numbers up to 1,000 with an emphasis on place value and equality.	**2.N.1.1** Read, write, discuss, and represent whole numbers up to 1,000. Representations may include numerals, words, pictures, tally marks, number lines and manipulatives.
	2.N.1.2 Use knowledge of number relationships to locate the position of a given whole number on an open number line up to 100.
	2.N.1.3 Use place value to describe whole numbers between 10 and 1,000 in terms of hundreds, tens and ones. Know that 100 is 10 tens, and 1,000 is 10 hundreds.
	2.N.1.4 Find 10 more or 10 less than a given three-digit number. Find 100 more or 100 less than a given three-digit number.
	2.N.1.5 Recognize when to round numbers to the nearest 10 and 100.
	2.N.1.6 Use place value to compare and order whole numbers up to 1,000 using comparative language, numbers, and symbols (e.g., 425 > 276, 73 < 107, page 351 comes after page 350, 753 is between 700 and 800).
2.N.2 Add and subtract one- and two-digit numbers in real-world and mathematical problems.	**2.N.2.1** Use the relationship between addition and subtraction to generate basic facts up to 20.
	2.N.2.2 Demonstrate fluency with basic addition facts and related subtraction facts up to 20.
	2.N.2.3 Estimate sums and differences up to 100.
	2.N.2.4 Use strategies and algorithms based on knowledge of place value and equality to add and subtract two-digit numbers.
	2.N.2.5 Solve real-world and mathematical addition and subtraction problems involving whole numbers up to 2 digits.
	2.N.2.6 Use concrete models and structured arrangements, such as repeated addition, arrays and ten frames to develop understanding of multiplication.
2.N.3 Explore the foundational ideas of fractions.	**2.N.3.1** Identify the parts of a set and area that represent fractions for halves, thirds, and fourths.
	2.N.3.2 Construct equal-sized portions through fair sharing including length, set, and area models for halves, thirds, and fourths.
2.N.4 Determine the value of a set of coins.	**2.N.4.1** Determine the value of a collection(s) of coins up to one dollar using the cent symbol.
	2.N.4.2 Use a combination of coins to represent a given amount of money up to one dollar.

Algebraic Reasoning & Algebra (A)	
2.A.1 Describe the relationship found in patterns to solve real-world and mathematical problems.	**2.A.1.1** Represent, create, describe, complete, and extend growing and shrinking patterns with quantity and numbers in a variety of real-world and mathematical contexts.
	2.A.1.2 Represent and describe repeating patterns involving shapes in a variety of contexts.
2.A.2 Use number sentences involving unknowns to represent and solve real-world and mathematical problems.	**2.A.2.1** Use objects and number lines to represent number sentences.
	2.A.2.2 Generate real-world situations to represent number sentences and vice versa.
	2.A.2.3 Apply commutative and identity properties and number sense to find values for unknowns that make number sentences involving addition and subtraction true or false.
Geometry & Measurement (GM)	
2.GM.1 Analyze attributes of two-dimensional figures and develop generalizations about their properties.	**2.GM.1.1** Recognize trapezoids and hexagons.
	2.GM.1.2 Describe, compare, and classify two-dimensional figures according to their geometric attributes.
	2.GM.1.3 Compose two-dimensional shapes using triangles, squares, hexagons, trapezoids, and rhombi.
	2.GM.1.4 Recognize right angles and classify angles as smaller or larger than a right angle.
2.GM.2 Understand length as a measurable attribute and explore capacity.	**2.GM.2.1** Explain the relationship between the size of the unit of measurement and the number of units needed to measure the length of an object.
	2.GM.2.2 Explain the relationship between length and the numbers on a ruler by using a ruler to measure lengths to the nearest whole unit.
	2.GM.2.3 Explore how varying shapes and styles of containers can have the same capacity.
2.GM.3 Tell time to the quarter hour.	**2.GM.3.1** Read and write time to the quarter-hour on an analog and digital clock. Distinguish between a.m. and p.m.
Data & Probability (D)	
2.D.1 Collect, organize, and interpret data.	**2.D.1.1** Explain that the length of a bar in a bar graph or the number of objects in a picture graph represents the number of data points for a given category.
	2.D.1.2 Organize a collection of data with up to four categories using pictographs and bar graphs with intervals of 1s, 2s, 5s or 10s.
	2.D.1.3 Write and solve one-step word problems involving addition or subtraction using data represented within pictographs and bar graphs with intervals of one.
	2.D.1.4 Draw conclusions and make predictions from information in a graph.

Develop a Deep and Flexible Conceptual Understanding	Develop Accurate and Appropriate Procedural Fluency	Develop Strategies for Problem Solving	Develop Mathematical Reasoning	Develop a Productive Mathematical Disposition	Develop the Ability to Make Conjectures, Model, and Generalize	Develop the Ability to Communicate Mathematically

Number & Operations (N)	
3.N.1 Compare and represent whole numbers up to 100,000 with an emphasis on place value and equality.	**3.N.1.1** Read, write, discuss, and represent whole numbers up to 100,000. Representations may include numerals, expressions with operations, words, pictures, number lines, and manipulatives.
	3.N.1.2 Use place value to describe whole numbers between 1,000 and 100,000 in terms of ten thousands, thousands, hundreds, tens and ones, including expanded form.
	3.N.1.3 Find 10,000 more or 10,000 less than a given five-digit number. Find 1,000 more or 1,000 less than a given four- or five-digit number. Find 100 more or 100 less than a given four- or five-digit number.
	3.N.1.4 Use place value to compare and order whole numbers up to 100,000, using comparative language, numbers, and symbols.
3.N.2 Add and subtract multi-digit whole numbers; multiply with factors up to 10; represent multiplication and division in various ways; Solve real-world and mathematical problems through the representation of related operations.	**3.N.2.1** Represent multiplication facts by using a variety of approaches, such as repeated addition, equal-sized groups, arrays, area models, equal jumps on a number line and skip counting.
	3.N.2.2 Demonstrate fluency of multiplication facts with factors up to 10.
	3.N.2.3 Use strategies and algorithms based on knowledge of place value and equality to fluently add and subtract multi-digit numbers.
	3.N.2.4 Recognize when to round numbers and apply understanding to round numbers to the nearest ten thousand, thousand, hundred, and ten and use compatible numbers to estimate sums and differences.
	3.N.2.5 Use addition and subtraction to solve real-world and mathematical problems involving whole numbers. Use various strategies, including the relationship between addition and subtraction, the use of technology, and the context of the problem to assess the reasonableness of results.
	3.N.2.6 Represent division facts by using a variety of approaches, such as repeated subtraction, equal sharing and forming equal groups.
	3.N.2.7 Recognize the relationship between multiplication and division to represent and solve real-world problems.
	3.N.2.8 Use strategies and algorithms based on knowledge of place value, equality and properties of addition and multiplication to multiply a two-digit number by a one-digit number.

3.N.3 Understand meanings and uses of fractions in real-world and mathematical situations.	**3.N.3.1** Read and write fractions with words and symbols.
	3.N.3.2 Construct fractions using length, set, and area models.
	3.N.3.3 Recognize unit fractions and use them to compose and decompose fractions related to the same whole. Use the numerator to describe the number of parts and the denominator to describe the number of partitions.
	3.N.3.4 Use models and number lines to order and compare fractions that are related to the same whole.
3.N.4 Determine the value of a set of coins or bills.	**3.N.4.1** Use addition to determine the value of a collection of coins up to one dollar using the cent symbol and a collection of bills up to twenty dollars.
	3.N.4.2 Select the fewest number of coins for a given amount of money up to one dollar.
Algebraic Reasoning & Algebra (A)	
3.A.1 Describe and create representations of numerical and geometric patterns.	**3.A.1.1** Create, describe, and extend patterns involving addition, subtraction, or multiplication to solve problems in a variety of contexts.
	3.A.1.2 Describe the rule (single operation) for a pattern from an input/output table or function machine involving addition, subtraction, or multiplication.
	3.A.1.3 Explore and develop visual representations of growing geometric patterns and construct the next steps.
3.A.2 Use number sentences involving multiplication and unknowns to represent and solve real-world and mathematical problems.	**3.A.2.1** Find unknowns represented by symbols in arithmetic problems by solving one-step open sentences (equations) and other problems involving addition, subtraction, and multiplication. Generate real-world situations to represent number sentences.
	3.A.2.2 Recognize, represent and apply the number properties (commutative, identity, and associative properties of addition and multiplication) using models and manipulatives to solve problems.
Geometry & Measurement (GM)	
3.GM.1 Use geometric attributes to describe and create shapes in various contexts.	**3.GM.1.1** Sort three-dimensional shapes based on attributes.
	3.GM.1.2 Build a three-dimensional figure using unit cubes when picture/shape is shown.
	3.GM.1.3 Classify angles as acute, right, obtuse, and straight.
3.GM.2 Understand measurable attributes of real-world and mathematical objects using various tools.	**3.GM.2.1** Find perimeter of polygon, given whole number lengths of the sides, in real-world and mathematical situations.
	3.GM.2.2 Develop and use formulas to determine the area of rectangles. Justify why length and width are multiplied to find the area of a rectangle by breaking the rectangle into one unit by one unit squares and viewing these as grouped into rows and columns.
	3.GM.2.3 Choose an appropriate measurement instrument and measure the length of objects to the nearest whole centimeter or meter.
	3.GM.2.4 Choose an appropriate measurement instrument and measure the length of objects to the nearest whole yard, whole foot, or half inch.

	3.GM.2.5 Using common benchmarks, estimate the lengths (customary and metric) of a variety of objects.
	3.GM.2.6 Use an analog thermometer to determine temperature to the nearest degree in Fahrenheit and Celsius.
	3.GM.2.7 Count cubes systematically to identify number of cubes needed to pack the whole or half of a three-dimensional structure.
	3.GM.2.8 Find the area of two-dimensional figures by counting total number of same size unit squares that fill the shape without gaps or overlaps.
3.GM.3 Solve problems by telling time to the nearest 5 minutes.	**3.GM.3.1** Read and write time to the nearest 5-minute (analog and digital).
	3.GM.3.2 Determine the solutions to problems involving addition and subtraction of time in intervals of 5 minutes, up to one hour, using pictorial models, number line diagrams, or other tools.
Data & Probability (D)	
3.D.1 Summarize, construct, and analyze data.	**3.D.1.1** Summarize and construct a data set with multiple categories using a frequency table, line plot, pictograph, and/or bar graph with scaled intervals.
	3.D.1.2 Solve one- and two-step problems using categorical data represented with a frequency table, pictograph, or bar graph with scaled intervals.

Develop a Deep and Flexible Conceptual Understanding	Develop Accurate and Appropriate Procedural Fluency	Develop Strategies for Problem Solving	Develop Mathematical Reasoning	Develop a Productive Mathematical Disposition	Develop the Ability to Make Conjectures, Model, and Generalize	Develop the Ability to Communicate Mathematically

Number & Operations (N)

4.N.1 Solve real-world and mathematical problems using multiplication and division.	**4.N.1.1** Demonstrate fluency with multiplication and division facts with factors up to 12.
	4.N.1.2 Use an understanding of place value to multiply or divide a number by 10, 100 and 1,000.
	4.N.1.3 Multiply 3-digit by 1-digit or a 2-digit by 2-digit whole numbers, using efficient and generalizable procedures and strategies, based on knowledge of place value, including but not limited to standard algorithms.
	4.N.1.4 Estimate products of 3-digit by 1-digit or 2-digit by 2-digit whole numbers using rounding, benchmarks and place value to assess the reasonableness of results. Explore larger numbers using technology to investigate patterns.
	4.N.1.5 Solve multi-step real-world and mathematical problems requiring the use of addition, subtraction, and multiplication of multi-digit whole numbers. Use various strategies, including the relationship between operations, the use of appropriate technology, and the context of the problem to assess the reasonableness of results.
	4.N.1.6 Use strategies and algorithms based on knowledge of place value, equality and properties of operations to divide 3-digit dividend by 1-digit whole number divisors. (e.g., mental strategies, standard algorithms, partial quotients, repeated subtraction, the commutative, associative, and distributive properties).
	4.N.1.7 Determine the unknown addend(s) or factor(s) in equivalent and non-equivalent expressions. (e.g., 5 + 6 = 4 + □ , 3 x 8 < 3 x □).
4.N.2 Represent and compare fractions and decimals in real-world and mathematical situations; use place value to understand how decimals represent quantities.	**4.N.2.1** Represent and rename equivalent fractions using fraction models (e.g. parts of a set, area models, fraction strips, number lines).
	4.N.2.2 Use benchmark fractions (0, $\frac{1}{4}$, $\frac{1}{3}$, $\frac{1}{2}$, $\frac{2}{3}$, $\frac{3}{4}$, 1) to locate additional fractions on a number line. Use models to order and compare whole numbers and fractions less than and greater than one using comparative language and symbols.
	4.N.2.3 Decompose a fraction in more than one way into a sum of fractions with the same denominator using concrete and pictorial models and recording results with symbolic representations (e.g., $\frac{3}{4} = \frac{1}{4} + \frac{1}{4} + \frac{1}{4}$).
	4.N.2.4 Use fraction models to add and subtract fractions with like denominators in real-world and mathematical situations.
	4.N.2.5 Represent tenths and hundredths with concrete models, making connections between fractions and decimals.
	4.N.2.6 Represent, read and write decimals up to at least the hundredths place in a variety of contexts including money.

	4.N.2.7 Compare and order decimals and whole numbers using place value, a number line and models such as grids and base 10 blocks.
	4.N.2.8 Compare benchmark fractions ($\frac{1}{4}$, $\frac{1}{3}$, $\frac{1}{2}$, $\frac{2}{3}$, $\frac{3}{4}$) and decimals (0.25, 0.50, 0.75) in real-world and mathematical situations.
4.N.3 Determine the value of coins in order to solve monetary transactions.	**4.N.3.1** Given a total cost (whole dollars up to $20 or coins) and amount paid (whole dollars up to $20 or coins), find the change required in a variety of ways. Limited to whole dollars up to $20 or sets of coins.
Algebraic Reasoning & Algebra (A)	
4.A.1 Use multiple representations of patterns to solve real-world and mathematical problems.	**4.A.1.1** Create an input/output chart or table to represent or extend a numerical pattern.
	4.A.1.2 Describe the single operation rule for a pattern from an input/output table or function machine involving any operation of a whole number.
	4.A.1.3 Create growth patterns involving geometric shapes and define the single operation rule of the pattern.
4.A.2 Use multiplication and division with unknowns to create number sentences representing a given problem situation.	**4.A.2.1** Use number sense, properties of multiplication and the relationship between multiplication and division to solve problems and find values for the unknowns represented by letters and symbols that make number sentences true.
	4.A.2.2 Solve for unknowns in problems by solving open sentences (equations) and other problems involving addition, subtraction, multiplication, or division with whole numbers. Use real-world situations to represent number sentences and vice versa.
Geometry & Measurement (GM)	
4.GM.1 Name, describe, classify and construct polygons, and three-dimensional figures.	**4.GM.1.1** Identify points, lines, line segments, rays, angles, endpoints, and parallel and perpendicular lines in various contexts.
	4.GM.1.2 Describe, classify, and sketch quadrilaterals, including squares, rectangles, trapezoids, rhombuses, parallelograms, and kites. Recognize quadrilaterals in various contexts.
	4.GM.1.3 Given two three-dimensional shapes, identify similarities, and differences.
4.GM.2 Understand angle, length, and area as measurable attributes of real-world and mathematical objects. Use various tools to measure angles, length, area, and volume.	**4.GM.2.1** Measure angles in geometric figures and real-world objects with a protractor or angle ruler.
	4.GM.2.2 Find the area of polygons that can be decomposed into rectangles.
	4.GM.2.3 Using a variety of tools and strategies, develop the concept that the volume of rectangular prisms with whole-number edge lengths can be found by counting the total number of same-sized unit cubes that fill a shape without gaps or overlaps. Use appropriate measurements such as cm^3.
	4.GM.2.4 Choose an appropriate instrument and measure the length of an object to the nearest whole centimeter or quarter-inch.
	4.GM.2.5 Solve problems that deal with measurements of length, when to use liquid volumes, when to use mass, temperatures above zero and money using addition, subtraction, multiplication, or division as appropriate (customary and metric).

4.GM.3 Determine elapsed time and convert between units of time.	**4.GM.3.1** Determine elapsed time.
	4.GM.3.2 Solve problems involving the conversion of one measure of time to another.
Data & Probability (D)	
4.D.1 Collect, organize, and analyze data.	**4.D.1.1** Represent data on a frequency table or line plot marked with whole numbers and fractions using appropriate titles, labels, and units.
	4.D.1.2 Use tables, bar graphs, timelines, and Venn diagrams to display data sets. The data may include benchmark fractions or decimals ($\frac{1}{4}$, $\frac{1}{3}$, $\frac{1}{2}$, $\frac{2}{3}$, $\frac{3}{4}$, 0.25, 0.50, 0.75).
	4.D.1.3 Solve one- and two-step problems using data in whole number, decimal, or fraction form in a frequency table and line plot.

Develop a Deep and Flexible Conceptual Understanding	Develop Accurate and Appropriate Procedural Fluency	Develop Strategies for Problem Solving	Develop Mathematical Reasoning	Develop a Productive Mathematical Disposition	Develop the Ability to Make Conjectures, Model, and Generalize	Develop the Ability to Communicate Mathematically

Number & Operations (N)

5.N.1 Divide multi-digit numbers and solve real-world and mathematical problems using arithmetic.	**5.N.1.1** Estimate solutions to division problems in order to assess the reasonableness of results.
	5.N.1.2 Divide multi-digit numbers, by one- and two-digit divisors, using efficient and generalizable procedures, based on knowledge of place value, including standard algorithms.
	5.N.1.3 Recognize that quotients can be represented in a variety of ways, including a whole number with a remainder, a fraction or mixed number, or a decimal and consider the context in which a problem is situated to select and interpret the most useful form of the quotient for the solution.
	5.N.1.4 Solve real-world and mathematical problems requiring addition, subtraction, multiplication, and division of multi-digit whole numbers. Use various strategies, including the inverse relationships between operations, the use of technology, and the context of the problem to assess the reasonableness of results.
5.N.2 Read, write, represent, and compare fractions and decimals; recognize and write equivalent fractions; convert between fractions and decimals; use fractions and decimals in real-world and mathematical situations.	**5.N.2.1** Represent decimal fractions (e.g., $\frac{1}{10}$, $\frac{1}{100}$) using a variety of models (e.g., 10 by 10 grids, rational number wheel, base-ten blocks, meter stick) and make connections between fractions and decimals.
	5.N.2.2 Represent, read and write decimals using place value to describe decimal numbers including fractional numbers as small as thousandths and whole numbers as large as millions.
	5.N.2.3 Compare and order fractions and decimals, including mixed numbers and fractions less than one, and locate on a number line.
	5.N.2.4 Recognize and generate equivalent decimals, fractions, mixed numbers, and fractions less than one in various contexts.
5.N.3 Add and subtract fractions with like and unlike denominators, mixed numbers and decimals to solve real-world and mathematical problems.	**5.N.3.1** Estimate sums and differences of fractions with like and unlike denominators, mixed numbers, and decimals to assess the reasonableness of the results.
	5.N.3.2 Illustrate addition and subtraction of fractions with like and unlike denominators, mixed numbers, and decimals using a variety of representations (e.g., fraction strips, area models, number lines, fraction rods).
	5.N.3.3 Add and subtract fractions with like and unlike denominators, mixed numbers, and decimals, using efficient and generalizable procedures, including but not limited to standard algorithms in order to solve real-world and mathematical problems including those involving money, measurement, geometry, and data.
	5.N.3.4 Find 0.1 more than a number and 0.1 less than a number. Find 0.01 more than a number and 0.01 less than a number. Find 0.001 more than a number and 0.001 less than a number.

Algebraic Reasoning & Algebra (A)	
5.A.1 Describe and graph patterns of change created through numerical patterns.	**5.A.1.1** Use tables and rules of up to two operations to describe patterns of change and make predictions and generalizations about real-world and mathematical problems.
	5.A.1.2 Use a rule or table to represent ordered pairs of whole numbers and graph these ordered pairs on a coordinate plane, identifying the origin and axes in relation to the coordinates.
5.A.2 Understand and interpret expressions, equations, and inequalities involving variables and whole numbers, and use them to represent and evaluate real-world and mathematical problems.	**5.A.2.1** Generate equivalent numerical expressions and solve problems involving whole numbers by applying the commutative, associative, and distributive properties and order of operations (no exponents).
	5.A.2.2 Determine whether an equation or inequality involving a variable is true or false for a given value of the variable.
	5.A.2.3 Evaluate expressions involving variables when values for the variables are given.
Geometry & Measurement (GM)	
5.GM.1 Describe, classify, and draw representations of two- and three-dimensional figures.	**5.GM.1.1** Describe, classify and construct triangles, including equilateral, right, scalene, and isosceles triangles. Recognize triangles in various contexts.
	5.GM.1.2 Describe and classify three-dimensional figures including cubes, rectangular prisms, and pyramids by the number of edges, faces or vertices as well as the shapes of faces.
	5.GM.1.3 Recognize and draw a net for a three-dimensional figure (e.g., cubes, rectangular prisms, pyramids).
5.GM.2 Understand how the volume of rectangular prisms and surface area of shapes with polygonal faces are determined by the dimensions of the object and that shapes with varying dimensions can have equivalent values of surface area or volume.	**5.GM.2.1** Recognize that the volume of rectangular prisms can be determined by the number of cubes (n) and by the product of the dimensions of the prism ($a \times b \times c = n$). Know that rectangular prisms of different dimensions (p, q, and r) can have the same volume if $a \times b \times c = p \times q \times r = n$.
	5.GM.2.2 Recognize that the surface area of a three-dimensional figure with rectangular faces with whole numbered edges can be found by finding the area of each component of the net of that figure. Know that three-dimensional shapes of different dimensions can have the same surface area.
	5.GM.2.3 Find the perimeter of polygons and create arguments for reasonable values for the perimeter of shapes that include curves.
5.GM.3 Understand angle and length as measurable attributes of real-world and mathematical objects. Use various tools to measure angles and lengths.	**5.GM.3.1** Measure and compare angles according to size.
	5.GM.3.2 Choose an appropriate instrument and measure the length of an object to the nearest whole centimeter or 1/16-inch.
	5.GM.3.3 Recognize and use the relationship between inches, feet, and yards to measure and compare objects.
	5.GM.3.4 Recognize and use the relationship between millimeters, centimeters, and meters to measure and compare objects.

Data & Probability (D)	
5.D.1 Display and analyze data to find the range and measures of central tendency (mean, median, and mode).	**5.D.1.1** Find the measures of central tendency (mean, median, or mode) and range of a set of data. Understand that the mean is a "leveling out" or central balance point of the data.
	5.D.1.2 Create and analyze line and double-bar graphs with whole numbers, fractions, and decimals increments.

Develop a Deep and Flexible Conceptual Understanding	Develop Accurate and Appropriate Procedural Fluency	Develop Strategies for Problem Solving	Develop Mathematical Reasoning	Develop a Productive Mathematical Disposition	Develop the Ability to Make Conjectures, Model, and Generalize	Develop the Ability to Communicate Mathematically

Number & Operations (N)

6.N.1 Read, write, and represent integers and rational numbers expressed as fractions, decimals, percents, and ratios; write positive integers as products of factors; use these representations in real-world and mathematical situations.	**6.N.1.1** Represent integers with counters and on a number line and rational numbers on a number line, recognizing the concepts of opposites, direction, and magnitude; use integers and rational numbers in real-world and mathematical situations, explaining the meaning of 0 in each situation.
	6.N.1.2 Compare and order positive rational numbers, represented in various forms, or integers using the symbols <, >, and =.
	6.N.1.3 Explain that a percent represents parts "out of 100" and ratios "to 100."
	6.N.1.4 Determine equivalencies among fractions, decimals, and percents. Select among these representations to solve problems.
	6.N.1.5 Factor whole numbers and express prime and composite numbers as a product of prime factors with exponents.
	6.N.1.6 Determine the greatest common factors and least common multiples. Use common factors and multiples to calculate with fractions, find equivalent fractions, and express the sum of two-digit numbers with a common factor using the distributive property.
6.N.2 Add and subtract integers in order to solve real-world and mathematical problems.	**6.N.2.1** Estimate solutions to addition and subtraction of integers problems in order to assess the reasonableness of results.
	6.N.2.2 Illustrate addition and subtraction of integers using a variety of representations.
	6.N.2.3 Add and subtract integers; use efficient and generalizable procedures including but not limited to standard algorithms.
6.N.3 Understand the concept of ratio and its relationship to fractions and percents and to the multiplication and division of whole numbers. Use ratios to solve real-world and mathematical problems.	**6.N.3.1** Identify and use ratios to compare quantities. Recognize that multiplicative comparison and additive comparison are different.
	6.N.3.2 Determine the unit rate for ratios.
	6.N.3.3 Apply the relationship between ratios, equivalent fractions and percents to solve problems in various contexts, including those involving mixture and concentrations.
	6.N.3.4 Use multiplicative reasoning and representations to solve ratio and unit rate problems.
6.N.4 Multiply and divide decimals, fractions, and mixed numbers; solve real-world and mathematical problems with rational numbers.	**6.N.4.1** Estimate solutions to problems with whole numbers, decimals, fractions, and mixed numbers and use the estimates to assess the reasonableness of results in the context of the problem.
	6.N.4.2 Illustrate multiplication and division of fractions and decimals to show connections to fractions, whole number multiplication, and inverse relationships.

	6.N.4.3 Multiply and divide fractions and decimals using efficient and generalizable procedures.
	6.N.4.4 Solve and interpret real-world and mathematical problems including those involving money, measurement, geometry, and data requiring arithmetic with decimals, fractions and mixed numbers.
Algebraic Reasoning & Algebra (A)	
6.A.1 Recognize and represent relationships between varying quantities; translate from one representation to another; use patterns, tables, graphs and rules to solve real-world and mathematical problems.	**6.A.1.1** Plot integer- and rational-valued (limited to halves and fourths) ordered-pairs as coordinates in all four quadrants and recognize the reflective relationships among coordinates that differ only by their signs.
	6.A.1.2 Represent relationships between two varying quantities involving no more than two operations with rules, graphs, and tables; translate between any two of these representations.
	6.A.1.3 Use and evaluate variables in expressions, equations, and inequalities that arise from various contexts, including determining when or if, for a given value of the variable, an equation or inequality involving a variable is true or false.
6.A.2 Use properties of arithmetic to generate equivalent numerical expressions and evaluate expressions involving positive rational numbers.	**6.A.2.1** Generate equivalent expressions and evaluate expressions involving positive rational numbers by applying the commutative, associative, and distributive properties and order of operations to solve real-world and mathematical problems.
6.A.3 Use equations and inequalities to represent real-world and mathematical problems and use the idea of maintaining equality to solve equations. Interpret solutions in the original context.	**6.A.3.1** Represent real-world or mathematical situations using expressions, equations and inequalities involving variables and rational numbers.
	6.A.3.2 Use number sense and properties of operations and equality to solve real-world and mathematical problems involving equations in the form $x + p = q$ and $px = q$, where x, p, and q are nonnegative rational numbers. Graph the solution on a number line, interpret the solution in the original context, and assess the reasonableness of the solution.
Geometry & Measurement (GM)	
6.GM.1 Calculate area of squares, parallelograms, and triangles to solve real-world and mathematical problems.	**6.GM.1.1** Develop and use formulas for the area of squares and parallelograms using a variety of methods including but not limited to the standard algorithm.
	6.GM.1.2 Develop and use formulas to determine the area of triangles.
	6.GM.1.3 Find the area of right triangles, other triangles, special quadrilaterals, and polygons that can be decomposed into triangles and other shapes to solve real-world and mathematical problems.
6.GM.2 Understand and use relationships between angles in geometric figures.	**6.GM.2.1** Solve problems using the relationships between the angles (vertical, complementary, and supplementary) formed by intersecting lines.
	6.GM.2.2 Develop and use the fact that the sum of the interior angles of a triangle is 180° to determine missing angle measures in a triangle.

6.GM.3 Choose appropriate units of measurement and use ratios to convert within measurement systems to solve real-world and mathematical problems.	**6.GM.3.1** Estimate weights, capacities and geometric measurements using benchmarks in customary and metric measurement systems with appropriate units.
	6.GM.3.2 Solve problems in various real-world and mathematical contexts that require the conversion of weights, capacities, geometric measurements, and time within the same measurement systems using appropriate units.
6.GM.4 Use translations, reflections, and rotations to establish congruency and understand symmetries.	**6.GM.4.1** Predict, describe, and apply translations (slides), reflections (flips), and rotations (turns) to a two-dimensional figure.
	6.GM.4.2 Recognize that translations, reflections, and rotations preserve congruency and use them to show that two figures are congruent.
	6.GM.4.3 Use distances between two points that are either vertical or horizontal to each other (not requiring the distance formula) to solve real-world and mathematical problems about congruent two-dimensional figures.
	6.GM.4.4 Identify and describe the line(s) of symmetry in two-dimensional shapes.
Data & Probability (D)	
6.D.1 Display and analyze data.	**6.D.1.1** Calculate the mean, median, and mode for a set of real-world data.
	6.D.1.2 Explain and justify which measure of central tendency (mean, median, or mode) would provide the most descriptive information for a given set of data.
	6.D.1.3 Create and analyze box and whisker plots observing how each segment contains one quarter of the data.
6.D.2 Use probability to solve real-world and mathematical problems; represent probabilities using fractions and decimals.	**6.D.2.1** Represent possible outcomes using a probability continuum from impossible to certain.
	6.D.2.2 Determine the sample space for a given experiment and determine which members of the sample space are related to certain events. Sample space may be determined by the use of tree diagrams, tables or pictorial representations.
	6.D.2.3 Demonstrate simple experiments in which the probabilities are known and compare the resulting relative frequencies with the known probabilities, recognizing that there may be differences between the two results.

Develop a Deep and Flexible Conceptual Understanding	Develop Accurate and Appropriate Procedural Fluency	Develop Strategies for Problem Solving	Develop Mathematical Reasoning	Develop a Productive Mathematical Disposition	Develop the Ability to Make Conjectures, Model, and Generalize	Develop the Ability to Communicate Mathematically

Number & Operations (N)	
7.N.1 Read, write, represent, and compare rational numbers, expressed as integers, fractions, and decimals.	**7.N.1.1** Know that every rational number can be written as the ratio of two integers or as a terminating or repeating decimal.
	7.N.1.2 Compare and order rational numbers expressed in various forms using the symbols <, >, and =.
	7.N.1.3 Recognize and generate equivalent representations of rational numbers, including equivalent fractions.
7.N.2 Calculate with integers and rational numbers, with and without positive integer exponents, to solve real-world and mathematical problems; explain the relationship between absolute value of a rational number and the distance of that number from zero.	**7.N.2.1** Estimate solutions to multiplication and division of integers in order to assess the reasonableness of results.
	7.N.2.2 Illustrate multiplication and division of integers using a variety of representations.
	7.N.2.3 Solve real-world and mathematical problems involving addition, subtraction, multiplication and division of rational numbers; use efficient and generalizable procedures including but not limited to standard algorithms.
	7.N.2.4 Raise integers to positive integer exponents.
	7.N.2.5 Solve real-world and mathematical problems involving calculations with rational numbers and positive integer exponents.
	7.N.2.6 Explain the relationship between the absolute value of a rational number and the distance of that number from zero on a number line. Use the symbol for absolute value.
Algebraic Reasoning & Algebra (A)	
7.A.1 Understand the concept of proportionality in real-world and mathematical situations, and distinguish between proportional and other relationships.	**7.A.1.1** Describe that the relationship between two variables, x and y, is proportional if it can be expressed in the form $\frac{y}{x} = k$ or $y = kx$; distinguish proportional relationships from other relationships, including inversely proportional relationships ($xy = k$ or $y = \frac{k}{x}$).
	7.A.1.2 Recognize that the graph of a proportional relationship is a line through the origin and the coordinate (1, r), where both r and the slope are the unit rate (constant of proportionality, k).

7.A.2 Recognize proportional relationships in real-world and mathematical situations; represent these and other relationships with tables, verbal descriptions, symbols, and graphs; solve problems involving proportional relationships and interpret results in the original context.	**7.A.2.1** Represent proportional relationships with tables, verbal descriptions, symbols, and graphs; translate from one representation to another. Determine and compare the unit rate (constant of proportionality, slope, or rate of change) given any of these representations.
	7.A.2.2 Solve multi-step problems involving proportional relationships involving distance-time, percent increase or decrease, discounts, tips, unit pricing, similar figures, and other real-world and mathematical situations.
	7.A.2.3 Use proportional reasoning to solve real-world and mathematical problems involving ratios.
	7.A.2.4 Use proportional reasoning to assess the reasonableness of solutions.
7.A.3 Represent and solve linear equations and inequalities.	**7.A.3.1** Write and solve problems leading to linear equations with one variable in the form $px + q = r$ and $p(x + q) = r$, where $p, q, and\ r$ are rational numbers.
	7.A.3.2 Represent, write, solve, and graph problems leading to linear inequalities with one variable in the form $x + p > q$ and $x + p < q$, where p, and q are nonnegative rational numbers.
	7.A.3.3 Represent real-world or mathematical situations using equations and inequalities involving variables and rational numbers.
7.A.4 Use order of operations and properties of operations to generate equivalent numerical and algebraic expressions containing rational numbers and grouping symbols; evaluate such expressions.	**7.A.4.1** Use properties of operations (limited to associative, commutative, and distributive) to generate equivalent numerical and algebraic expressions containing rational numbers, grouping symbols and whole number exponents.
	7.A.4.2 Apply understanding of order of operations and grouping symbols when using calculators and other technologies.
Geometry & Measurement (GM)	
7.GM.1 Develop and understand the concept of surface area and volume of rectangular prisms.	**7.GM.1.1** Using a variety of tools and strategies, develop the concept that surface area of a rectangular prism with rational-valued edge lengths can be found by wrapping the figure with same-sized square units without gaps or overlap. Use appropriate measurements such as cm^2.
	7.GM.1.2 Using a variety of tools and strategies, develop the concept that the volume of rectangular prisms with rational-valued edge lengths can be found by counting the total number of same-sized unit cubes that fill a shape without gaps or overlaps. Use appropriate measurements such as cm^3.
7.GM.2 Determine the area of trapezoids and area and perimeter of composite figures.	**7.GM.2.1** Develop and use the formula to determine the area of a trapezoid to solve problems.
	7.GM.2.2 Find the area and perimeter of composite figures to solve real-world and mathematical problems.
7.GM.3 Use reasoning with proportions and ratios to determine measurements, justify formulas, and solve real-world and mathematical problems involving circles and related geometric figures.	**7.GM.3.1** Demonstrate an understanding of the proportional relationship between the diameter and circumference of a circle and that the unit rate (constant of proportionality) is π and can be approximated by rational numbers such as $\frac{22}{7}$ and 3.14.
	7.GM.3.2 Calculate the circumference and area of circles to solve problems in various contexts, in terms of π and using approximations for π.

7.GM.4 Analyze the effect of dilations, translations, and reflections on the attributes of two-dimensional figures on and off the coordinate plane.	**7.GM.4.1** Describe the properties of similarity, compare geometric figures for similarity, and determine scale factors resulting from dilations.
	7.GM.4.2 Apply proportions, ratios, and scale factors to solve problems involving scale drawings and determine side lengths and areas of similar triangles and rectangles.
	7.GM.4.3 Graph and describe translations and reflections of figures on a coordinate plane and determine the coordinates of the vertices of the figure after the transformation.
Data & Probability (D)	
7.D.1 Display and analyze data in a variety of ways.	**7.D.1.1** Design simple experiments, collect data and calculate measures of central tendency (mean, median, and mode) and spread (range). Use these quantities to draw conclusions about the data collected and make predictions.
	7.D.1.2 Use reasoning with proportions to display and interpret data in circle graphs (pie charts) and histograms. Choose the appropriate data display and know how to create the display using a spreadsheet or other graphing technology.
7.D.2 Calculate probabilities and reason about probabilities using proportions to solve real-world and mathematical problems.	**7.D.2.1** Determine the theoretical probability of an event using the ratio between the size of the event and the size of the sample space; represent probabilities as percents, fractions and decimals between 0 and 1.
	7.D.2.2 Calculate probability as a fraction of sample space or as a fraction of area. Express probabilities as percents, decimals and fractions.
	7.D.2.3 Use proportional reasoning to draw conclusions about and predict relative frequencies of outcomes based on probabilities.

Develop a Deep and Flexible Conceptual Understanding	Develop Accurate and Appropriate Procedural Fluency	Develop Strategies for Problem Solving	Develop Mathematical Reasoning	Develop a Productive Mathematical Disposition	Develop the Ability to Make Conjectures, Model, and Generalize	Develop the Ability to Communicate Mathematically

Number & Operations (N)	
PA.N.1 Read, write, compare, classify, and represent real numbers and use them to solve problems in various contexts.	**PA.N.1.1** Develop and apply the properties of integer exponents, including $a^0 = 1$ (with $a \neq 0$), to generate equivalent numerical and algebraic expressions.
	PA.N.1.2 Express and compare approximations of very large and very small numbers using scientific notation.
	PA.N.1.3 Multiply and divide numbers expressed in scientific notation, express the answer in scientific notation.
	PA.N.1.4 Classify real numbers as rational or irrational. Explain why the rational number system is closed under addition and multiplication and why the irrational system is not. Explain why the sum of a rational number and an irrational number is irrational; and the product of a non-zero rational number and an irrational number is irrational.
	PA.N.1.5 Compare real numbers; locate real numbers on a number line. Identify the square root of a perfect square to 400 or, if it is not a perfect square root, locate it as an irrational number between two consecutive positive integers.
Algebraic Reasoning & Algebra (A)	
PA.A.1 Understand the concept of function in real-world and mathematical situations, and distinguish between linear and nonlinear functions.	**PA.A.1.1** Recognize that a function is a relationship between an independent variable and a dependent variable in which the value of the independent variable determines the value of the dependent variable.
	PA.A.1.2 Use linear functions to represent and explain real-world and mathematical situations.
	PA.A.1.3 Identify a function as linear if it can be expressed in the form $y = mx + b$ or if its graph is a straight line.
PA.A.2 Recognize linear functions in real-world and mathematical situations; represent linear functions and other functions with tables, verbal descriptions, symbols, and graphs; solve problems involving linear functions and interpret results in the original context.	**PA.A.2.1** Represent linear functions with tables, verbal descriptions, symbols, and graphs; translate from one representation to another.
	PA.A.2.2 Identify, describe, and analyze linear relationships between two variables.
	PA.A.2.3 Identify graphical properties of linear functions including slope and intercepts. Know that the slope equals the rate of change, and that the *y*-intercept is zero when the function represents a proportional relationship.
	PA.A.2.4 Predict the effect on the graph of a linear function when the slope or *y*-intercept changes. Use appropriate tools to examine these effects.
	PA.A.2.5 Solve problems involving linear functions and interpret results in the original context.

PA.A.3 Generate equivalent numerical and algebraic expressions and use algebraic properties to evaluate expressions.	**PA.A.3.1** Use substitution to simplify and evaluate algebraic expressions.
	PA.A.3.2 Justify steps in generating equivalent expressions by identifying the properties used, including the properties of operations (associative, commutative, and distributive laws) and the order of operations, including grouping symbols.
PA.A.4 Represent real-world and mathematical problems using equations and inequalities involving linear expressions. Solve and graph equations and inequalities symbolically and graphically. Interpret solutions in the original context.	**PA.A.4.1** Illustrate, write, and solve mathematical and real-world problems using linear equations with one variable with one solution, infinitely many solutions, or no solutions. Interpret solutions in the original context.
	PA.A.4.2 Represent, write, solve, and graph problems leading to linear inequalities with one variable in the form $px + q > r$ and $px + q < r$, where p, q, and r are rational numbers.
	PA.A.4.3 Represent real-world situations using equations and inequalities involving one variable.
Geometry & Measurement (GM)	
PA.GM.1 Solve problems involving right triangles using the Pythagorean Theorem.	**PA.GM.1.1** Informally justify the Pythagorean Theorem using measurements, diagrams, or dynamic software and use the Pythagorean Theorem to solve problems in two and three dimensions involving right triangles.
	PA.GM.1.2 Use the Pythagorean Theorem to find the distance between any two points in a coordinate plane.
PA.GM.2 Calculate surface area and volume of three-dimensional figures.	**PA.GM.2.1** Calculate the surface area of a rectangular prism using decomposition or nets. Use appropriate measurements such as cm^2.
	PA.GM.2.2 Calculate the surface area of a cylinder, in terms of π and using approximations for π, using decomposition or nets. Use appropriate measurements such as cm^2.
	PA.GM.2.3 Develop and use the formulas $V = lwh$ and $V = Bh$ to determine the volume of rectangular prisms. Justify why base area (B) and height (h) are multiplied to find the volume of a rectangular prism. Use appropriate measurements such as cm^3.
	PA.GM.2.4 Develop and use the formulas $V = \pi r^2 h$ and $V = Bh$ to determine the volume of right cylinders, in terms of π and using approximations for π. Justify why base area (B) and height (h) are multiplied to find the volume of a right cylinder. Use appropriate measurements such as cm^3.

Data & Probability (D)	
PA.D.1 Display and interpret data in a variety of ways, including using scatterplots and approximate lines of best fit. Use line of best fit and average rate of change to make predictions and draw conclusions about data.	**PA.D.1.1** Describe the impact that inserting or deleting a data point has on the mean and the median of a data set. Know how to create data displays using a spreadsheet and use a calculator to examine this impact.
	PA.D.1.2 Explain how outliers affect measures of central tendency.
	PA.D.1.3 Collect, display and interpret data using scatterplots. Use the shape of the scatterplot to informally estimate a line of best fit, make statements about average rate of change, and make predictions about values not in the original data set. Use appropriate titles, labels and units.
PA.D.2 Calculate experimental probabilities and reason about probabilities to solve real-world and mathematical problems.	**PA.D.2.1** Calculate experimental probabilities and represent them as percents, fractions and decimals between 0 and 1 inclusive. Use experimental probabilities to make predictions when actual probabilities are unknown.
	PA.D.2.2 Determine how samples are chosen (random, limited, biased) to draw and support conclusions about generalizing a sample to a population.
	PA.D.2.3 Compare and contrast dependent and independent events.

Develop a Deep and Flexible Conceptual Understanding	Develop Accurate and Appropriate Procedural Fluency	Develop Strategies for Problem Solving	Develop Mathematical Reasoning	Develop a Productive Mathematical Disposition	Develop the Ability to Make Conjectures, Model, and Generalize	Develop the Ability to Communicate Mathematically

Number & Operations (N)	
A1.N.1 Extend the understanding of number and operations to include square roots and cube roots.	**A1.N.1.1** Write square roots and cube roots of monomial algebraic expressions in simplest radical form.
	A1.N.1.2 Add, subtract, multiply, and simplify square roots of monomial algebraic expressions and divide square roots of whole numbers, rationalizing the denominator when necessary.
Algebraic Reasoning & Algebra (A)	
A1.A.1 Represent and solve mathematical and real-world problems using linear equations, absolute value equations, and systems of equations; interpret solutions in the original context.	**A1.A.1.1** Use knowledge of solving equations with rational values to represent and solve mathematical and real-world problems (e.g., angle measures, geometric formulas, science, or statistics) and interpret the solutions in the original context.
	A1.A.1.2 Solve absolute value equations and interpret the solutions in the original context.
	A1.A.1.3 Analyze and solve real-world and mathematical problems involving systems of linear equations with a maximum of two variables by graphing (may include graphing calculator or other appropriate technology), substitution, and elimination. Interpret the solutions in the original context.
A1.A.2 Represent and solve real-world and mathematical problems using linear inequalities, compound inequalities and systems of linear inequalities; interpret solutions in the original context.	**A1.A.2.1** Represent relationships in various contexts with linear inequalities; solve the resulting inequalities, graph on a coordinate plane, and interpret the solutions.
	A1.A.2.2 Represent relationships in various contexts with compound and absolute value inequalities and solve the resulting inequalities by graphing and interpreting the solutions on a number line.
	A1.A.2.3 Solve systems of linear inequalities with a maximum of two variables; graph and interpret the solutions on a coordinate plane.
A1.A.3 Generate equivalent algebraic expressions and use algebraic properties to evaluate expressions and arithmetic and geometric sequences.	**A1.A.3.1** Solve equations involving several variables for one variable in terms of the others.
	A1.A.3.2 Simplify polynomial expressions by adding, subtracting, or multiplying.
	A1.A.3.3 Factor common monomial factors from polynomial expressions and factor quadratic expressions with a leading coefficient of 1.
	A1.A.3.4 Evaluate linear, absolute value, rational, and radical expressions. Include applying a nonstandard operation such as $a \odot b = 2a + b$.
	A1.A.3.5 Recognize that arithmetic sequences are linear using equations, tables, graphs, and verbal descriptions. Use the pattern, find the next term.
	A1.A.3.6 Recognize that geometric sequences are exponential using equations, tables, graphs and verbal descriptions. Given the formula $f(x) = a(r)^x$, find the next term and define the meaning of a and r within the context of the problem.

A1.A.4 Analyze mathematical change involving linear equations in real-world and mathematical problems.	**A1.A.4.1** Calculate and interpret slope and the x- and y-intercepts of a line using a graph, an equation, two points, or a set of data points to solve real-world and mathematical problems.
	A1.A.4.2 Solve mathematical and real-world problems involving lines that are parallel, perpendicular, horizontal, or vertical.
	A1.A.4.3 Express linear equations in slope-intercept, point-slope, and standard forms and convert between these forms. Given sufficient information (slope and *y*-intercept, slope and one-point on the line, two points on the line, *x*- and *y*-intercept, or a set of data points), write the equation of a line.
	A1.A.4.4 Translate between a graph and a situation described qualitatively.
Functions (F)	
A1.F.1 Understand functions as descriptions of covariation (how related quantities vary together) in real-world and mathematical problems.	**A1.F.1.1** Distinguish between relations and functions.
	A1.F.1.2 Identify the dependent and independent variables as well as the domain and range given a function, equation, or graph. Identify restrictions on the domain and range in real-world contexts.
	A1.F.1.3 Write linear functions, using function notation, to model real-world and mathematical situations.
	A1.F.1.4 Given a graph modeling a real-world situation, read and interpret the linear piecewise function (excluding step functions).
A1.F.2 Recognize functions and understand that families of functions are characterized by their rate of change.	**A1.F.2.1** Distinguish between linear and nonlinear (including exponential) functions arising from real-world and mathematical situations that are represented in tables, graphs, and equations. Understand that linear functions grow by equal intervals and that exponential functions grow by equal factors over equal intervals.
	A1.F.2.2 Recognize the graph of the functions $f(x) = x$ and $f(x) = \|x\|$ and predict the effects of transformations [$f(x + c)$ and $f(x) + c$, where c is a positive or negative constant] algebraically and graphically using various methods and tools that may include graphing calculators.
A1.F.3 Represent functions in multiple ways and use the representation to interpret real-world and mathematical problems.	**A1.F.3.1** Identify and generate equivalent representations of linear equations, graphs, tables, and real-world situations.
	A1.F.3.2 Use function notation; evaluate a function, including nonlinear, at a given point in its domain algebraically and graphically. Interpret the results in terms of real-world and mathematical problems.
	A1.F.3.3 Add, subtract, and multiply functions using function notation.

Data & Probability (D)	
A1.D.1 Display, describe, and compare data. For linear relationships, make predictions and assess the reliability of those predictions.	**A1.D.1.1** Describe a data set using data displays, describe and compare data sets using summary statistics, including measures of central tendency, location, and spread. Know how to use calculators, spreadsheets, or other appropriate technology to display data and calculate summary statistics.
	A1.D.1.2 Collect data and use scatterplots to analyze patterns and describe linear relationships between two variables. Using graphing technology, determine regression lines and correlation coefficients; use regression lines to make predictions and correlation coefficients to assess the reliability of those predictions.
	A1.D.1.3 Interpret graphs as being discrete or continuous.
A1.D.2 Calculate probabilities and apply probability concepts.	**A1.D.2.1** Select and apply counting procedures, such as the multiplication and addition principles and tree diagrams, to determine the size of a sample space (the number of possible outcomes) and to calculate probabilities.
	A1.D.2.2 Describe the concepts of intersections, unions, and complements using Venn diagrams to evaluate probabilities. Understand the relationships between these concepts and the words AND, OR, and NOT.
	A1.D.2.3 Calculate experimental probabilities by performing simulations or experiments involving a probability model and using relative frequencies of outcomes.
	A1.D.2.4 Apply probability concepts to real-world situations to make informed decisions.

Develop a Deep and Flexible Conceptual Understanding	Develop Accurate and Appropriate Procedural Fluency	Develop Strategies for Problem Solving	Develop Mathematical Reasoning	Develop a Productive Mathematical Disposition	Develop the Ability to Make Conjectures, Model, and Generalize	Develop the Ability to Communicate Mathematically

Geometry: Reasoning & Logic (G.RL)	
G.RL.1 Use appropriate tools and logic to evaluate mathematical arguments.	**G.RL.1.1** Understand the use of undefined terms, definitions, postulates, and theorems in logical arguments/proofs.
	G.RL.1.2 Analyze and draw conclusions based on a set of conditions using inductive and deductive reasoning. Recognize the logical relationships between a conditional statement and its inverse, converse, and contrapositive.
	G.RL.1.3 Assess the validity of a logical argument and give counterexamples to disprove a statement.
Geometry: Two Dimensional Shapes (G.2D)	
G.2D.1 Discover, evaluate and analyze the relationships between lines, angles, and polygons to solve real-world and mathematical problems; express proofs in a form that clearly justifies the reasoning, such as two-column proofs, paragraph proofs, flow charts, or illustrations.	**G.2D.1.1** Apply the properties of parallel and perpendicular lines, including properties of angles formed by a transversal, to solve real-world and mathematical problems and determine if two lines are parallel, using algebraic reasoning and proofs.
	G.2D.1.2 Apply the properties of angles, including corresponding, exterior, interior, vertical, complementary, and supplementary angles to solve real-world and mathematical problems using algebraic reasoning and proofs.
	G.2D.1.3 Apply theorems involving the interior and exterior angle sums of polygons and use them to solve real-world and mathematical problems using algebraic reasoning and proofs.
	G.2D.1.4 Apply the properties of special quadrilaterals (square, rectangle, trapezoid, isosceles trapezoid, rhombus, kite, parallelogram) and use them to solve real-world and mathematical problems involving angle measures and segment lengths using algebraic reasoning and proofs.
	G.2D.1.5 Use coordinate geometry to represent and analyze line segments and polygons, including determining lengths, midpoints, and slopes of line segments.
	G.2D.1.6 Apply the properties of polygons to solve real-world and mathematical problems involving perimeter and area (e.g., triangles, special quadrilaterals, regular polygons up to 12 sides, composite figures).
	G.2D.1.7 Apply the properties of congruent or similar polygons to solve real-world and mathematical problems using algebraic and logical reasoning.
	G.2D.1.8 Construct logical arguments to prove triangle congruence (SSS, SAS, ASA, AAS and HL) and triangle similarity (AA, SSS, SAS).
	G.2D.1.9 Use numeric, graphic and algebraic representations of transformations in two dimensions, such as reflections, translations, dilations, and rotations about the origin by multiples of 90°, to solve problems involving figures on a coordinate plane and identify types of symmetry.

Geometry: Three Dimensional Shapes (G.3D)	
G.3D.1 Solve real-world and mathematical problems involving three-dimensional figures.	**G.3D.1.1** Solve real-world and mathematical problems using the surface area and volume of prisms, cylinders, pyramids, cones, spheres, and composites of these figures. Use nets, measuring devices, or formulas as appropriate.
	G.3D.1.2 Use ratios derived from similar three-dimensional figures to make conjectures, generalize, and to solve for unknown values such as angles, side lengths, perimeter or circumference of a face, area of a face, and volume.
Geometry: Circles (G.C)	
G.C.1 Solve real-world and mathematical problems using the properties of circles.	**G.C.1.1** Apply the properties of circles to solve problems involving circumference and area, approximate values and in terms of π, using algebraic and logical reasoning.
	G.C.1.2 Apply the properties of circles and relationships among angles; arcs; and distances in a circle among radii, chords, secants and tangents to solve problems using algebraic and logical reasoning.
	G.C.1.3 Recognize and write the radius r, center (h, k), and standard form of the equation of a circle $(x-h)^2+(y-k)^2=r^2$ with and without graphs.
	G.C.1.4 Apply the distance and midpoint formula, where appropriate, to develop the equation of a circle in standard form.
Geometry: Right Triangle Trigonometry (G.RT)	
G.RT.1 Develop and verify mathematical relationships of right triangles and trigonometric ratios to solve real-world and mathematical problems.	**G.RT.1.1** Apply the distance formula and the Pythagorean Theorem and its converse to solve real-world and mathematical problems, as approximate and exact values, using algebraic and logical reasoning (include Pythagorean Triples).
	G.RT.1.2 Verify and apply properties of right triangles, including properties of 45-45-90 and 30-60-90 triangles, to solve problems using algebraic and logical reasoning.
	G.RT.1.3 Use the definition of the trigonometric functions to determine the sine, cosine, and tangent ratio of an acute angle in a right triangle. Apply the inverse trigonometric functions to find the measure of an acute angle in right triangles.
	G.RT.1.4 Apply the trigonometric functions as ratios (sine, cosine, and tangent) to find side lengths in right triangles in real-world and mathematical problems.

Develop a Deep and Flexible Conceptual Understanding	Develop Accurate and Appropriate Procedural Fluency	Develop Strategies for Problem Solving	Develop Mathematical Reasoning	Develop a Productive Mathematical Disposition	Develop the Ability to Make Conjectures, Model, and Generalize	Develop the Ability to Communicate Mathematically

Number & Operations (N)	
A2.N.1 Extend the understanding of number and operations to include complex numbers, matrices, radical expressions, and expressions written with rational exponents.	**A2.N.1.1** Find the value of i^n for any whole number n.
	A2.N.1.2 Simplify, add, subtract, multiply, and divide complex numbers.
	A2.N.1.3 Use matrices to organize and represent data. Identify the order (dimension) of a matrix, add and subtract matrices of appropriate dimensions, and multiply a matrix by a scalar to create a new matrix to solve problems.
	A2.N.1.4 Understand and apply the relationship of rational exponents to integer exponents and radicals to solve problems.

Algebraic Reasoning & Algebra (A)	
A2.A.1 Represent and solve mathematical and real-world problems using nonlinear equations and systems of linear equations; interpret the solutions in the original context.	**A2.A.1.1** Represent real-world or mathematical problems using quadratic equations and solve using various methods (including graphing calculator or other appropriate technology), factoring, completing the square, and the quadratic formula. Find non-real roots when they exist.
	A2.A.1.2 Represent real-world or mathematical problems using exponential equations, such as compound interest, depreciation, and population growth, and solve these equations graphically (including graphing calculator or other appropriate technology) or algebraically.
	A2.A.1.3 Solve one-variable rational equations and check for extraneous solutions.
	A2.A.1.4 Solve polynomial equations with real roots using various methods and tools that may include factoring, polynomial division, synthetic division, graphing calculators or other appropriate technology.
	A2.A.1.5 Solve square root equations with one variable and check for extraneous solutions.
	A2.A.1.6 Solve common and natural logarithmic equations using the properties of logarithms.
	A2.A.1.7 Solve real-world and mathematical problems that can be modeled using arithmetic or finite geometric sequences or series given the n^{th} terms and sum formulas. Graphing calculators or other appropriate technology may be used.
	A2.A.1.8 Represent real-world or mathematical problems using systems of linear equations with a maximum of three variables and solve using various methods that may include substitution, elimination, and graphing (may include graphing calculators or other appropriate technology).
	A2.A.1.9 Solve systems of equations containing one linear equation and one quadratic equation using tools that may include graphing calculators or other appropriate technology.

A2.A.2 Represent and analyze mathematical situations and structures using algebraic symbols using various strategies to write equivalent forms of expressions.	**A2.A.2.1** Factor polynomial expressions including but not limited to trinomials, differences of squares, sum and difference of cubes, and factoring by grouping using a variety of tools and strategies.
	A2.A.2.2 Add, subtract, multiply, divide, and simplify polynomial and rational expressions.
	A2.A.2.3 Recognize that a quadratic function has different equivalent representations [$f(x) = ax^2 + bx + c$, $f(x) = a(x - h)^2 + k$, and $f(x) = (x - h)(x - k)$]. Identify and use the representation that is most appropriate to solve real-world and mathematical problems.
	A2.A.2.4 Rewrite expressions involving radicals and rational exponents using the properties of exponents.
Functions (F)	
A2.F.1 Understand functions as descriptions of covariation (how related quantities vary together).	**A2.F.1.1** Use algebraic, interval, and set notations to specify the domain and range of functions of various types and evaluate a function at a given point in its domain.
	A2.F.1.2 Recognize the graphs of exponential, radical (square root and cube root only), quadratic, and logarithmic functions. Predict the effects of transformations [$f(x + c)$, $f(x) + c$, $f(cx)$, and $cf(x)$, where c is a positive or negative real-valued constant] algebraically and graphically, using various methods and tools that may include graphing calculators or other appropriate technology.
	A2.F.1.3 Graph a quadratic function. Identify the *x*- and *y*-intercepts, maximum or minimum value, axis of symmetry, and vertex using various methods and tools that may include a graphing calculator or appropriate technology.
	A2.F.1.4 Graph exponential and logarithmic functions. Identify asymptotes and *x*- and *y*-intercepts using various methods and tools that may include graphing calculators or other appropriate technology. Recognize exponential decay and growth graphically and algebraically.
	A2.F.1.5 Analyze the graph of a polynomial function by identifying the domain, range, intercepts, zeros, relative maxima, relative minima, and intervals of increase and decrease.
	A2.F.1.6 Graph a rational function and identify the *x*- and *y*-intercepts, vertical and horizontal asymptotes, using various methods and tools that may include a graphing calculator or other appropriate technology. (Excluding slant or oblique asymptotes and holes.)
	A2.F.1.7 Graph a radical function (square root and cube root only) and identify the *x*- and *y*-intercepts using various methods and tools that may include a graphing calculator or other appropriate technology.
	A2.F.1.8 Graph piecewise functions with no more than three branches (including linear, quadratic, or exponential branches) and analyze the function by identifying the domain, range, intercepts, and intervals for which it is increasing, decreasing, and constant.

A2.F.2 Analyze functions through algebraic combinations, compositions, and inverses, if they exist.	**A2.F.2.1** Add, subtract, multiply, and divide functions using function notation and recognize domain restrictions.
	A2.F.2.2 Combine functions by composition and recognize that $g(x) = f^{-1}(x)$, the inverse function of $f(x)$, if and only if $f(g(x)) = g(f(x)) = x$.
	A2.F.2.3 Find and graph the inverse of a function, if it exists, in real-world and mathematical situations. Know that the domain of a function f is the range of the inverse function f^{-1}, and the range of the function f is the domain of the inverse function f^{-1}.
	A2.F.2.4 Apply the inverse relationship between exponential and logarithmic functions to convert from one form to another.
Data & Probability (D)	
A2.D.1 Display, describe, and compare data. For linear and nonlinear relationships, make predictions and assess the reliability of those predictions.	**A2.D.1.1** Use the mean and standard deviation of a data set to fit it to a normal distribution (bell-shaped curve).
	A2.D.1.2 Collect data and use scatterplots to analyze patterns and describe linear, exponential or quadratic relationships between two variables. Using graphing calculators or other appropriate technology, determine regression equation and correlation coefficients; use regression equations to make predictions and correlation coefficients to assess the reliability of those predictions.
	A2.D.1.3 Based upon a real-world context, recognize whether a discrete or continuous graphical representation is appropriate and then create the graph.
A2.D.2 Analyze statistical thinking to draw inferences, make predictions, and justify conclusions.	**A2.D.2.1** Evaluate reports based on data published in the media by identifying the source of the data, the design of the study, and the way the data are analyzed and displayed. Given spreadsheets, tables, or graphs, recognize and analyze distortions in data displays. Show how graphs and data can be distorted to support different points of view.
	A2.D.2.2 Identify and explain misleading uses of data. Recognize when arguments based on data confuse correlation and causation.

Mathematical Glossary Terms and Tables

Whenever possible a reference was identified for glossary terms from the following resources:

(DPI) *http://dpi.wi.gov/standards*
(H) *http://www.hbschool.com/glossary/math2/*
(M) *http://www.merriam-webster.com/*
(MW) *http://www.mathwords.com*
(MA) *http://www.doe.mass.edu/frameworks/current.html*
(NCTM) *http://www.nctm.org*
(PASS) *http://www.ok.gov./sde/sites/ok.gov.sde/files/C3%20PASS%20math.pdf*

AA similarity (Angle-Angle similarity) If two triangles have two pairs of corresponding angles that are congruent, then the triangles are similar. (MW)

ASA congruence (Angle-Side-Angle congruence) If two triangles have two corresponding angles and the side adjacent to both angles congruent, then the triangles themselves are congruent. (MW)

Absolute value The absolute value of a real number is its (non-negative) distance from 0 on a number line. Formally,

$$|k| = \begin{cases} k \text{ if } k \geq 0 \\ -k \text{ if } k < 0 \end{cases}$$

Addend In the addition problem 3+2+6 = 11, the addends are 3, 2, and 6. (PASS)

Addition and subtraction within 5, 10, 20, 100, or 1,000 Addition or subtraction of two whole numbers with whole number answers, and with sum or minuend in the range 0–5, 0–10, 0–20, or 0–100, respectively. *Example: 8 + 2 = 10 is an addition within 10, 14 – 5 = 9 is a subtraction within 20, and 55 – 18 = 37 is a subtraction within 100. (MA)*

Additive inverses Two numbers whose sum is 0 are additive inverses of one another. *Example: 3/4 and –3/4 are additive inverses of one another because 3/4 + (–3/4) = (–3/4) + 3/4 = 0. (MA)*

Algorithm A finite set of steps for completing a procedure, e.g., long division. (H)

Analog Having to do with data represented by continuous variables, e.g., a clock with hour, minute, and second hands. (M)

Arc (minor and major) A portion of the circumference of a circle with ending points A and B. Unless stated otherwise, arc AB always refers to the shorter segment of the two (the minor arc). Together with the major arc the two portions beginning and ending at points A and B form the entire circumference of a circle.

Arc length The distance along the curved line forming the arc.

Arc measure The angle formed by the arc at the center of the circle.

Area A measurement of the amount of space within a closed two-dimensional shape. Area is usually measured in terms of "square units", in which 1 square unit is the amount of space within a square that measures 1 unit by 1 unit (for a given unit of length). For example, area may be measured in "square centimeters", 1 square centimeter being the amount of space within a 1cm by 1cm square.

Arithmetic sequence (progression) A sequence in which successive terms exhibit a common difference.

Array (rectangular) An orderly arrangement of objects into a rectangular configuration (e.g., take six tiles and arrange two long and three wide to form a rectangle). (PASS)

Associative property of addition See Table 1 in this Glossary.

Associative property of multiplication See Table 1 in this Glossary.

Assumption A fact or statement (as a proposition, axiom, postulate, or notion) taken for granted. (M)

Attribute Characteristic (e.g., size, shape, color, weight). (PASS)

Benchmark fraction A common fraction against which other fractions can be measured, such as ½. (MA)

Bar graph A display of categorical data in which vertical or horizontal bars represent the count of a category. The relative lengths of the various bars in the graph are commensurate with the relative sizes of the counts of the data.

Bivariate data Pairs of linked numerical observations. *Example: a list of heights and weights for each player on a football team*. (MA)

Box plot A graphic method that shows the distribution of data values by using the median, quartiles, and extremes of the data set. A box shows the middle 50% of the data. (DPI)

Capacity The maximum amount or number that can be contained or accommodated, e.g., a jug with a one-gallon *capacity;* the auditorium was filled to *capacity*. (MA)

Cardinal number A number (such as 1, 5, 15) that is used in simple counting and that indicates how many elements there are in a set. (MA)

Cardinality The cardinality of a finite collection of objects is the number of objects in the set. (For example, in PK-Grade 1 students are still learning that "5" represents the number of objects in any group of "five" objects.)

Categorical data Data that measures the number of occurrences of a discrete set of outcomes (e.g., noticing the different colors of shoes in the class and then recording the number of each color).

Chord A chord is a line that connects two points on a circle.

Circle The set of all points that are equidistant from a given point, called the center of the circle. The set of all points that lie inside the circle is called the *interior* of the circle.

> **Radius of a circle** Both a segment with one endpoint on the center of the circle and the other endpoint on the circle, and the length of this segment (which is necessarily the same for any point on the circle).
>
> **Diameter of a circle** Both a segment with endpoints on the circle that contains the center, and the length of this segment.
>
> **Circumference of a circle** The length of the circle if cut and opened up to make a straight line segment, which can be found with $C = 2\pi r$ where r is the radius and π is the irrational number "pi". (Can be thought of as the perimeter of the circle.)
>
> **Area of a circle** The area of the interior of the circle, which can be found with $A = \pi r^2$ where r is the radius and π the irrational number "pi".

Combinations A selection of objects without regard to order. (PASS)

Coefficient Any of the factors of a product considered in relation to a specific factor. Often, this will be a numerical factor in a product of numbers and variables, e.g., $3x^2$ has coefficient 3. (W)

Commutative property See Table 1 in this Glossary.

Complement (of a set) A set *A* is typically considered to be a subset of an understood "universal set." The complement of *A,* denoted by *A/C* is the set of all elements of the universal set that are not members of *A*.

Complementary angles Two angles whose measures have a sum of 90 degrees. (PASS)

Complex fraction A fraction *A/B* where *A* and/or *B* are fractions ($B \neq 0$). (MA)

Complex number Numbers of the form $a + bi$, where a, a real number, is the "real part" and b, also a real number, is the "imaginary part," and i is the imaginary number. *See also:* ***imaginary number***.

Complex plane A Cartesian plane in which the point (a,b) is used to represent $a + bi$.

Compose numbers To compose numbers is to create new numbers using any of the four operations with other numbers. For example, students compose 10 in many ways (9+1, 8+2, … , 5+5, …). Also, each place in the base ten place value is composed of ten units of the place to the left, i.e., one hundred is composed of ten bundles of ten, one ten is composed of ten ones, etc.

Compose shapes Join geometric shapes without overlaps to form new shapes. (MA)

Composite number Any positive integer divisible by one or more positive integers other than itself and 1. (PASS)

Computation algorithm A set of predefined steps applicable to a class of problems that gives the correct result in every case when the steps are carried out correctly. *See also:* ***algorithm***; ***computation strategy***. (MA)

Computation strategy Purposeful manipulations that may be chosen for specific problems, may not have a fixed order, and may be aimed at converting one problem into another. *See also:* ***computation algorithm***. (MA)

Conditional statement A statement of the form, "If P, then Q," where each of P and Q are themselves statements. For example, "If *it rains*, then *the streets get wet*," is a conditional statement. If the conditional statement "If P, then Q," is *true,* then this means that it is never the case that the statement P is true while the statement Q is false. For example, it will never be the case that "it rained" but "the streets are not wet".

Related statements are:

> **Converse:** "If Q, then P." This may or may not be true if the original statement is true.
>
> **Inverse:** "If NOT P, then NOT Q." This may or may not be true if the original statement is true.
>
> **Contrapositive:** "If NOT Q, then NOT P." This is always true if the original statement is true, and vice versa. For an example, notice that, "If the streets are NOT wet, then it did NOT rain," is logically equivalent to the example statement above.

Congruent Two geometric objects are congruent if one can be mapped onto the other using a sequence of rigid motions (*rigid motions* are geometric transformations that preserve lengths and angles).

Conjugate The result of writing a sum of two terms as a difference, or vice versa. *For example, the conjugate of x – 2 is x + 2.* (MW)

Conjecture A statement believed to be true but not yet proved. (PASS)

Constant A number on its own, or sometimes a letter such as a, b or c to stand for a fixed number. Example: in "x + 5 = 9", 5 and 9 are constants. If it is not a constant it is called a variable.

Constant of proportionality Given a proportional relationship expressed as $y=kx$, the number k is often called the constant of proportionality.

Coordinate plane A plane in which a point is represented using two coordinates that determine the precise location of the point. In the Cartesian plane, two perpendicular number lines are used to determine the locations of points. In the polar coordinate plane, points are determined by their distance along a ray through that point and the origin, and the angle that ray makes with a pre-determined horizontal axis.

Cosine (of an acute angle) In a right triangle, the cosine of an acute angle is the ratio of the length of the leg adjacent to the angle to the length of the hypotenuse. (PASS)

Counterexample An example to show that a given statement is false. For example, to disprove the statement "All right triangles are isosceles," all one needs to do is produce a right triangle that is scalene.

Counting number A number used in counting objects, i.e., a number from the set

$$\{1, 2, 3, 4, 5, \ldots\}.$$

See also: ***Natural number***.

Counting on A strategy for finding the number of objects in a group without having to count every member of the group. *For example, if a stack of books is known to have 8 books and 3 more books are added to the top, it is not necessary to count the stack all over again; one can find the total by counting on—pointing to the top book and saying "eight," following this with, "nine, ten, eleven. There are eleven books now."* (MA)

Continuous graph (of data) A graph is continuous if it contains intervals of data points.

Decimal expansion The resulting decimal number found when dividing a rational number in fraction form. May include terminating and repeating decimals.

Decimal fraction A fraction (as 0.25 = 25/100 or 0.025 = 25/1000) or mixed number (as 3.025 = 3 25/1000) in which the denominator is a power of ten, usually expressed by the use of the decimal point. (M)

Decimal number Any real number expressed in base 10 notation, such as 2.673. (MA)

Decompose numbers Given a number, identify pairs, triples, etc. of numbers that combine to form the given number.

Decompose shapes. Given a geometric shape, identify geometric shapes that meet without overlap to form the given shape. (MA)

Deductive reasoning Informally, the process of using known facts and relationships to derive new facts and relationships.

Dependent events. Events that influence each other. If one of the events occurs, it changes the probability of the other event. (PASS)

Dependent variable The output of a function. The quantity that is affected when the input is changed.

Digit a) Any of the Arabic numerals 1 to 9 and usually the symbol 0; b) One of the elements that combine to form numbers in a system other than the decimal system. (MA)

Digital Having to do with data that is represented in the form of numerical digits; providing a readout in numerical digits, e.g., a digital watch. (MA)

Dilation A transformation that moves each point along the ray through the point emanating from a fixed center, and multiplies distances from the center by a common scale factor. (MA)

Discrete graph (of data) A graph is discrete if it consists of separated data points and contains no intervals of data.

Divisible A non-zero integer p is said to be divisible by a non-zero integer q if there exists an integer r such that $q \times r = p$.

Domain of a relation The set of all the first elements or x-coordinates of a relation. (PASS)

Dot plot *See:* ***line plot***.

Equivalent expressions Two expressions (numerical or otherwise) are said to be equivalent if one can be obtained from the other using the properties of operations, such as the commutative, associative and distributive properties, as well as by representing numbers in the expressions in different but equivalent forms.

Equivalent fractions Two fractions a/b and c/d are said to be equivalent if there exists a non-zero number n such that $na/nb=c/d$. Equivalent fractions represent the same amount by changing both the size and the number of parts of a given fraction.

Equivalent ratios Two ratios $a:b$ and $c:d$ are equivalent if there is a non-zero number k such that $ka=c$ and $kb=d$. Equivalent ratios can be shown to have the same unit rate.

Expanded form A multi-digit number is expressed in expanded form when it is written as a sum of single-digit multiples of powers of ten. *For example, 643 = 600 + 40 + 3. (MA)*

Expected value For a random variable, the weighted average of its possible values, with weights given by their respective probabilities. (MA)

Experimental probability When trials of a probability experiment are run and data is collected, the experimental probability of a desired outcome is the relative frequency of that outcome as a ratio of the number of such outcomes to the total number of outcomes. For example, if a coin is flipped 100 times, and heads comes up 45 times, then the experimental probability of heads is 45/100 or 0.45. (The *theoretical probability* is 0.50, and if the number of trials is increased the experimental probability will get closer and closer to 0.50.)

Exponent (Integer) A negative integer exponent denotes the reciprocal of the base raised to the corresponding opposite integer. Thus $x^{-2} = \frac{1}{x^2}$.

Exponent (Whole Number) The number that indicates how many times the base is used as a factor, e.g., in $4^3 = 4 \times 4 \times 4 = 64$, the exponent is 3, indicating that 4 is repeated as a factor three times. (MA)

Exponential function An exponential function with base b is defined by $y = b^x$, where $b > 0$ and b is not equal to 1. (PASS).

Expression A mathematical phrase that combines operations, numbers, and/or variables (e.g., $3^2 \div a$). (H)

Exterior angles (of a polygon) The supplement of an interior angle of a polygon that is formed by extending one of the line segments determining the interior angle at a given vertex.

Extraneous solution A solution, such as that to an equation, that emerges from the process of solving the problem but is not a valid solution to the original problem. For example, consider the equation $\sqrt{2x+12} - 2 = x$. After adding 2 to both sides and squaring both sides of the equation, we obtain $2x + 12 = x^2 + 4x + 4$. We can subtract $2x$ and 12 to both sides to obtain the quadratic equation $x^2 + 2x - 8 = 0$. Solving this quadratic equation, we obtain two possible solutions, $x = 2$ and $x = -4$. While the original equation is true when evaluated at $x = 2$, -4 is considered an extraneous solution because it is false when evaluated at $x = -4$.

$$\sqrt{2x+12} - 2 = x$$
$$\sqrt{2(-4)+12} - 2 = -4$$
$$\sqrt{-8+12} - 2 = -4$$
$$\sqrt{4} - 2 = -4$$
$$2 - 2 = -4$$
$$0 \neq -4$$

Fluency Easily and accurately responding to calculations (Van de Walle). See Table 4 in this Glossary.

First quartile[1] For a data set with median *M*, the first quartile is the median of the data values less than *M*. *Example: For the data set {1, 3, 6, 7, 10, 12, 14, 15, 22, 120}, the first quartile is 6. See also:* ***median, third quartile, interquartile range***. (MA)

Fraction A number expressible in the form *a*/*b* where *a* is a whole number and *b* is a positive whole number. (The word *fraction* in these standards always refers to a non-negative number.) *See also:* ***rational number*** *and* ***complex fraction***. (MA)

[1] Many different methods for computing quartiles are in use. The method defined here is sometimes called the Moore and McCabe method. See Langford, E., "Quartiles in Elementary Statistics," *Journal of Statistics Education* Volume 14, Number 3 (2006).

Frequency table A representation of data in which categories are listed in one column (row) of a table and the number of occurrences (frequency) of each category is indicated in another column (row).

Function A rule that assigns to every element of one set (the domain) exactly one element of another set (the range). A function is often thought of as an "input/output" rule, as in every input determines an output (usually according to mathematical operations performed on the input).

Function machine An input/output model (often made with milk cartons, boxes, or drawn on the board) to show one number entering and a different number exiting. Students guess the rule that produced the second number (e.g., enter 3, exit 5, rule: add 2). (PASS)

Function notation A notation that describes a function. For a function f, when *x* is a member of the domain, the symbol $f(x)$ denotes the corresponding member of the range (e.g., $f(x) = x + 3$).

Geometric sequence (progression) An ordered list of numbers that has a common ratio between consecutive terms, e.g., 2, 6, 18, 54. (H)

Histogram A type of bar graph used to display the distribution of measurement data across a continuous range. (MA)

Hypotenuse The longest side of a right triangle, necessarily opposite to the right angle. The other sides are called the *legs* of the right triangle (*longer* and *shorter* if applicable).

HL (Hypotenuse-Leg) congruence If two right triangles have hypotenuse and one corresponding leg congruent, then the triangles are congruent.

Identity property of 0 See Table 1 in this Glossary.

Imaginary number A number i is considered imaginary if $i^2 = -1$. *See also:* ***complex number***.

Independent events Events that do not influence one another. Each event occurs without changing the probability of the other event. Specifically, two events *A* and *B* are independent if $P(A \text{ AND } B) = P(A) \cdot P(B)$. (PASS)

Independent variable The input of a function. The quantity whose value is changed to affect the output.

Independently combined probability models. Two probability models are said to be combined independently if the probability of each ordered pair in the combined model equals the product of the original probabilities of the two individual outcomes in the ordered pair. (MA)

Inductive reasoning Informally, the process of examining patterns and making conclusions based on observed patterns.

Input/Output table Usually a two-column table (or two-row table) with one column (row) listing the inputs of a rule and the other column (row) listing the corresponding outputs for each input.

Integer The set of numbers that contains the whole numbers and their additive inverses (opposites). I.e., $\{\dots, -2, -1, 0, 1, 2, 3, \dots\}$.

Intercepts (of a graph) Geometrically, where a graph intersects an axis in a Cartesian plane.

Interquartile range A measure of variation in a set of numerical data, the interquartile range is the distance between the first and third quartiles of the data set. Example: For the data set {1, 3, 6, 7, 10, 12, 14, 15, 22, 120}, the interquartile range is 15 – 6 = 9. *See also:* ***first quartile, third quartile***. (MA)

Intersection (of sets) For two sets and , the intersection ∩ is the set of all elements that are members of both sets simultaneously.

Inverse function. A function g that satisfies $g(f(x)) = x$ and $f(g(x)) = x$ is said to be an inverse function for f. The inverse of f is often denoted by f^{-1}.

Inverse operations Operations that undo each other (e.g., addition and subtraction are inverse operations; multiplication and division are inverse operations). (PASS)

Irrational number Numbers that are not rational. Irrational numbers have nonterminating, nonrepeating decimal expansions (e.g., square root of 2, pi). (MA)

Length (of a segment) The length of a (straight) line segment is a measurement of the distance from one endpoint of the object to the other. Once a unit of length is specified, the length of a segment is found by placing such units end-to-end without gaps or overlaps and counting how many such units are used.

Line Plot A representation of data in which categories are listed underneath points on a number line, and in which the number of occurrences (frequency) of each category is represented by a corresponding number of marks (X's, dots) above each category's point.

Linear association A set of bivariate data exhibits a linear association if a scatter plot of the data can be well-approximated by a line. (MA)

Linear equation Any equation that can be written in the form $Ax + By + C = 0$ where A and B cannot both be 0. The graph of such an equation is a line. (MA)

Linear function A function f is linear if it can be written in the form $f(x) = mx + b$.

Literal equation An equation involving multiple variables and numbers, often that cannot be solved for an explicit numerical value of any of the individual variables. In such a case one may solve for one variable as an expression of the others.

Logarithm The exponent that indicates the power to which a base number is raised to produce a given number. *For example, the logarithm of 100 to the base 10 is 2.* (M)

Logarithmic function Any function in which an independent variable appears in the form of a logarithm; they are the inverse functions of exponential functions. (MA)

Manipulatives Concrete materials (e.g., buttons, beans, egg and milk cartons, counters, attribute and pattern blocks, interlocking cubes, base-10 blocks, geometric models, geo-boards, fractions pieces, rulers, balances, spinners, dot paper) used to represent mathematical concepts, operations, and relationships. (PASS)

Matrix (pl. matrices) A rectangular array of numbers or variables. (MA)

Mean (arithmetic) A measure of center in a set of numerical data, computed by adding the values in a list and then dividing by the number of values in the list. *Example: For the data set {1, 3, 6, 7, 10, 12, 14, 15, 22, 120}, the mean is 21.* (MA)

Mean absolute deviation A measure of variation in a set of numerical data, computed by adding the distances between each data value and the mean, then dividing by the number of data values. *Example: For the data set {2, 3, 6, 7, 10, 12, 14, 15, 22, 120}, the mean absolute deviation is 20.* (MA)

Measure of central tendency A determination of the center of a data set meant to describe a set of data. *See also:* ***mean***, ***median***, ***mode***, *and* ***percentile***.

Measure of spread (or variability) A determination of how much the data in a set deviates from a measure of center .The most frequently used measure is standard deviation. *See also:* ***standard deviation***, ***range***.

Median A measure of center in a set of numerical data. The median of a list of values is the value appearing at the center of a sorted version of the list; or the mean of the two central values, if the list contains an even number of values. *Example: For the data set {2, 3, 6, 7, 10, 12, 14, 15, 22, 90}, the median is 11.* (MA)

Midline In the graph of a sine or cosine function, the horizontal line halfway between its maximum and minimum values. (MA)

Mixed number A number written in the form $A\frac{b}{c}$, which is a shorthand way to represent the quantity $A+\frac{b}{c}$. A mixed number may be written as a fraction greater than 1 by writing $A\frac{b}{c}=A+\frac{b}{c}=\frac{Ac}{c}+\frac{b}{c}=\frac{Ac+b}{c}$.

Model A mathematical representation (e.g., number, graph, matrix, equation(s), geometric figure) for real-world or mathematical objects, properties, actions, or relationships. (DPI)

Modulus of a complex number The distance between a complex number and the origin on the complex plane. The modulus of a complex number, $a+bi$ is written $|a+bi|$ and is found by finding the hypotenuse of the triangle with legs a and b. Thus, $|a+bi|=\sqrt{a^2+b^2}$. For a complex number in polar form, $r(\cos\theta+i\sin\theta)$, the modulus is $|r|$.

Multiplication and division within 100 Multiplication or division of two whole numbers with whole number answers, and with product or dividend in the range 0–100. *Example:* $72 \div 8 = 9$. (MA)

Multiplication counting principle If *k* actions can be taken in N_1, N_2, … , N_k different ways, then there are a total of N_1, N_2, … , N_k different ways to perform those actions in sequence.

Multiplicative inverses Two numbers whose product is 1 are multiplicative inverses of one another. *Example: 3/4 and 4/3 are multiplicative inverses of one another because 3/4 ´ 4/3 = 4/3 ´ 3/4 = 1.* (MA)

Natural number A number used in counting objects, i.e., a number from the set

$$\{1, 2, 3, 4, 5, \ldots\}.$$

See also: ***Counting number***.

Net A two-dimensional representation of a three-dimensional figure constructed of polygons, such that if folds were made on certain edges of the net and appropriate sides were "glued" together, the resulting figure would be the original three-dimensional figure.

Network a) A figure consisting of vertices and edges that shows how objects are connected, b) A collection of points (vertices), with certain connections (edges) between them. (MA)

Non-linear association The relationship between two variables is nonlinear if the change in the second is not simply proportional to the change in the first, independent of the value of the first variable. (MA)

Nonstandard measurement A measurement determined by the use of nonstandard units such as hands, paper clips, beans, cotton balls, etc. (PASS)

Number line diagram A diagram of the number line used to represent numbers and support reasoning about them. In a number line diagram for measurement quantities, the interval from 0 to 1 on the diagram represents the unit of measure for the quantity. (MA)

Number sense The understanding of number size (relative magnitude), number representations, number operations, referents for quantities and measurement used in everyday situations, etc. (PASS)

Numeral A symbol or mark used to represent a number. (MA)

One-to-one correspondence A matching of the elements of two sets such that each element from the first set is matched with one and only one element of the second set, and such that each element of the second set is matched with some element of the first. Early grades students use this to establish the concept of cardinal use of numbers (as in "5" can represent any collection of five objects; if I can match the fingers on one hand to all the elements of a given set then that set has "5" objects.)

Operation General term for any one of addition, subtraction, multiplication, and division. (PASS)

Order of operations Convention adopted to perform mathematical operations in a consistent order.

Step 1. Perform all operations inside grouping symbols, and/or above and below a fraction bar in the order specified in Steps 2, 3 and 4.

Step 2. Find the value of any powers or roots;

Step 3. Multiply, including division, from left to right;

Step 4. Add, including subtraction, from left to right. (NCTM)

Ordinal number A number designating the place (as first, second, or third) occupied by an item in an ordered sequence. (M)

Outlier A data point that is far outside a representative range of the data set. For example, once the inter-quartile range (IQR) is computed, one might calculate the interval of 1.5× IQR above the median and 1.5× IQR below the median and decide that any data point that lies outside this range is considered an outlier.

Parallel lines Lines that do not intersect. Distinct lines can be shown to be parallel if and only if they have equal slopes.

Partition A process of dividing an object into parts or a set into (smaller) subsets. (MA)

Pascal's triangle A triangular arrangement of numbers in which each row starts and ends with 1, and each other number is the sum of the two numbers above it. (H)

Piecewise function A function that is defined differently on different intervals.

Percent rate of change A rate of change expressed as a percent. *Example: if a population grows from 50 to 55 in a year, it grows by 5/50 = 10% per year.* (MA)

Perfect square A number that is a whole number squared, that is, a number that can be expressed as n^2 for n a whole number.

Perimeter (of a polygon) The total length of all the edges of a polygon. Often, perimeter is thought of as the distance around an object, traversed once along the edges starting from one vertex and ending at the same vertex.

Periodic phenomena Events that recur over regular intervals, for example, ocean tides, machine cycles. (MA)

Perpendicular lines Lines that intersect such that all four angles that are created are congruent. Two lines can be shown to be perpendicular if and only if the product of their slopes is -1.

Pi (π) The irrational number that is derived by finding the ratio of the circumference to the diameter of circles. That this ratio is constant and an irrational number are important concepts and challenging to prove, so they are often arrived at empirically by students.

Picture graph A graph that uses pictures to show and compare information. (MA)

Place value The concept that the order in which digits are written in the base-10 number system determines the value of that digit. Thus, in the number 245, the digit 2 is in the "hundreds place", indicating that the value of that particular 2 is actually 2 hundreds or 200.

Polygon A closed, two-dimensional figure comprised of line segments connected end-to-end, and such that no two segments cross each other. The segments are typically called sides or edges, and the common endpoints of adjacent segments are called vertices (sing. vertex). The space within the polygon is called its *interior*. The angles formed by adjacent sides that lie in the interior of a polygon are called its *interior* angles.

Polynomial The sum or difference of terms which have variables raised to positive integer powers and which have coefficients that may be real or complex. The following are all polynomials: $5x^3 - 2x^2 + x - 13$, $x^2y^3 + xy$, and $(1 + i)a^2 + ib^2$. (MW)

Polynomial function Any function whose output is given by a polynomial expression of the input.

Postulate A statement accepted as true without proof. (MA)

Prime factorization A number written as the product of all its prime factors. (H)

Prime number A whole number greater than 1 whose only factors are 1 and itself. (MA)

Probability distribution The set of possible values of a random variable with a probability assigned to each. (MA)

Properties of equality See Table 2 in this Glossary.

Properties of inequality See Table 3 in this Glossary.

Properties of operations See Table 1 in this Glossary.

Probability The study and measure of the likelihood of an event happening. (PASS)

Probability model A probability model is used to assign probabilities to outcomes of a chance process by examining the nature of the process. The set of all outcomes is called the sample space, and their probabilities sum to 1. *See also:* ***uniform probability model***. (MA)

Proof A method of constructing a valid argument using deductive reasoning. (MA)

Proportion An equation that states that two ratios are equivalent, e.g., 4/8 = ½ or 4 : 8 = 1 : 2. (MA)

Pyramid A three-dimensional shape constructed from a polygon (called the *base*) and triangles that have one edge matching the edges of the base and such that the triangles share a common vertex.

Pythagorean theorem For any right triangle, the sum of the squares of the lengths of the legs equals the square of the lengths of the hypotenuse. (MA)

Quadratic equation An equation that is equivalent to $ax^2 + bx + c = 0$, where $a \neq 0$.

Quadratic expression An expression that contains variables raised to whole number exponents no higher than 2.

Quadratic function A function that can be represented by an equation of the form $y = ax^2 + bx + c$, where a, b, and c are arbitrary, but fixed, numbers and $a \neq 0$. The graph of this function is a parabola. (DPI)

Quadratic polynomial A polynomial where the highest degree of any of its terms is 2. (MA)

Quadrilateral A polygon with 4 sides. Important classes of quadrilaterals:

Trapezoid A quadrilateral in which at least two sides are parallel.

Parallelogram A quadrilateral in which opposite sides are parallel.

Rhombus A parallelogram in which opposite sides are congruent (have the same length).

Rectangle A parallelogram that has at least one right interior angle.

Square A rectangle that has all sides congruent.

Kite A quadrilateral that has two pairs of congruent adjacent sides.

Quotient The result of a division problem. Also, given whole numbers n and m with $n>m$, if we write $n=mq+r$ with $0\leq r<m$, then we say q is the quotient and r is the remainder.

Radical The $\sqrt{\ }$ symbol, which is used to indicate square roots or n^{th} roots. (MW)

Random sampling A smaller group of people or objects chosen from a larger group or population by a process giving equal chance of selection to all possible people or objects. (H)

Random variable An assignment of a numerical value to each outcome in a sample space. (M)

Range (of a relation) The set of all the second elements or y-coordinates of a relation is called the range. (PASS)

Range (of a data set) The difference between the maximum and minimum values of a data set, a measure of the spread of the data.

Ratio A relationship between quantities such that for every a units of one quantity there are b units of the other. A ratio is often denoted by $a:b$, and read "a to b."

Rational expression A quotient of two polynomials with a non-zero denominator. (MA)

Rational number A number expressible in the form a/b or $-a/b$ for some fraction a/b. The rational numbers include the integers. (MA)

Real number An element of the set of numbers consisting of all rational and all irrational numbers. (MA)

Rectangular array An arrangement of mathematical elements into rows and columns.(MA)

Rectangular prism A three-dimensional object constructed from three pairs of parallel rectangles (called *faces* in this context) that share common edges so as to form an enclosed space and such that opposite rectangles are congruent. The vertices of the rectangles are the vertices of the prism, and the sides of the rectangles are called edges. A **cube** is a rectangular prism in which each face is a square of the same size as the other faces.

Rectilinear figure A polygon, all angles of which are right angles. (MA)

Recursive pattern (or sequence) Patterns in which each number is found from the previous number by repeating a process (e.g. Fibonacci numbers). (PASS)

Reflection A type of transformation that flips points about a line, called the *line of reflection*. Taken together, the image and the pre-image have the line of reflection as a line of symmetry. (MA)

Real numbers (set of) The set of all rational and irrational numbers (PASS)

Relation A collection of ordered pairs of real numbers.

Relative frequency The empirical counterpart of probability. If an event occurs N' times in N trials, its relative frequency is N'/N. (M)

Remainder Theorem If f(x) is a polynomial in x then the remainder on dividing f(x) by x − a is f(a). (M)

Repeating decimal. A decimal in which, after a certain point, a particular digit or sequence of digits repeats itself indefinitely. (M) *See also:* ***terminating decimal***. (MA)

Right angle Informally, an angle whose measure is 90 degrees. Formally, if two congruent copies of a given angle are supplementary (that is, they form a straight line when one matches an edge of one copy with one edge of the other), then the given angle is said to be a right angle. (We can then define the measure of this angle to be 90 degrees and measure other angles in terms of a right angle.)

Rigid motion A transformation of points in space consisting of a sequence of one or more translations, reflections, and/or rotations. Rigid motions are here assumed to preserve distances and angle measures. (MA)

Rotation A type of transformation that turns a figure about a fixed point, called the *center of rotation*. (MA)

SAS congruence (Side-Angle-Side congruence) If in two triangles two corresponding sides and the angles formed by those sides are congruent, then the triangles are congruent. (MW)

SSS congruence (Side-Side-Side congruence) If two triangles have corresponding sides that are congruent, then the triangles are congruent. (MW)

Sample space In a probability model for a random process, a list of the individual outcomes that are to be considered. (MA)

Scale factor For similar shapes, the common ratio of corresponding side lengths is called the scale factor. Informally, it is the multiplicative amount by which the lengths of one shape are "blown up" or "shrunk down" to obtain the other shape to which it is similar.

Scatter plot A graph in the coordinate plane representing a set of bivariate data. *For example, the heights and weights of a group of people could be displayed on a scatter plot.* (DPI)

Scientific notation A widely used floating-point system in which numbers are expressed as products consisting of a number between 1 and 10 multiplied by an appropriate power of 10, e.g., $562 = 5.62 \times 10^2$. (MW)

Secant (of a circle) A line that intersects a circle at two points.

Sequence A set of elements ordered so that they can be labeled with consecutive positive integers starting with 1, e.g., 1, 3, 9, 27, 81. In this sequence, 1 is the *first term*, 3 is the *second term*, 9 is the *third term*, and so on. (MA)

Set model (for fractions) The use of a discrete set of objects to represent the whole and a subset of those objects to represent a fraction. For example, since 3 of the 15 students in class are wearing blue shirts, 3/15 of the students are wearing blue shirts.

Significant figures (digits) Digits included in a measurement that purposely indicate the precision of the measurement. For example, writing a measurement as 3.50 seconds instead of 3.5 seconds indicates that the measurement is accurate to the hundredths place.

Similar (shapes) Two geometric shapes are said to be similar (to each other) if one can be mapped onto the other by a sequence of similarity transformations.

Similarity transformation A rigid motion followed by a dilation. (MA)

Simultaneous equations Two or more equations containing common variables. (MW)

Sine (of an acute angle) The trigonometric function that for an acute angle is the ratio between the leg opposite the angle when the angle is considered part of a right triangle and the hypotenuse. (M)

Slope (of a line) A measure of the steepness of a line in a Cartesian plane, found by determining the constant change in the y-coordinate per 1-unit change in the x-coordinate.

Spatial sense The ability to build and manipulate mental representations of 2- and 3-dimensional objects and ideas. (PASS)

Standard deviation A measurement of how much each value in the data differs from the mean of the data. (PASS)

Statistics The study of data. (PASS)

Stem-and-leaf plot A frequency distribution made by arranging data in the following way (e.g., student scores on a test were 96, 87, 77, 93, 85, 85, and 75 would be displayed as:

9] 6,3

8] 7,5,5

7] 7,5

Subitize Instantly knowing "how many." Recognizing a number without using other mathematical processes. (Clements)

Substitution The substitution of one expression for an equivalent expression, used when rewriting expressions as equivalent ones or solving equations. It is based on the *transitive property of equality*, which states, "If = ,and = , then = ."

Summary statistics A collection of statistics (measurements based on data) that describe the data set. For example, the range, mean, and standard deviation of a given data set indicate certain features of the data set and hence are summary statistics.

Supplementary angles Two angles whose measures have a sum of 180 degrees. (PASS)

Supposition (act of supposing) Making a statement or assumption without proof. (PASS)

Surface area (of a rectangular prism) The total measure of the area of the faces of a rectangular prism. Equivalently, the total area of a net for the prism.

Tangent a) Meeting a curve or surface in a single point if a sufficiently small interval is considered. b) (of an acute angle) The trigonometric function that, for an acute angle, is the ratio between the leg opposite the angle and the leg adjacent to the angle when the angle is considered part of a right triangle. (MW)

Tape diagram A drawing that looks like a segment of tape, used to illustrate number relationships. Also known as a strip diagram, bar model, fraction strip, or length model. (MA)

Terminating decimal A decimal is called terminating if its repeating digit is 0. Every terminating decimal is the decimal form of some rational number. *See also:* ***repeating decimal***. (MA)

Third quartile For a data set with median *M*, the third quartile is the median of the data values greater than *M*. *Example: For the data set {2, 3, 6, 7, 10, 12, 14, 15, 22, 120}, the third quartile is 15. See also:* ***median, first quartile, interquartile range***. (MA)

Transformation A prescription, or rule, that sets up a one-to-one correspondence between the points in a geometric object (the *pre-image*) and the points in another geometric object (the *image*). Reflections, rotations, translations, and dilations are particular examples of transformations. (MA)

Transitivity principle for indirect measurement If the length of object A is greater than the length of object B, and the length of object B is greater than the length of object C, then the length of object A is greater than the length of object C. This principle applies to measurement of other quantities as well. (MA)

Translation A type of transformation that moves every point in a graph or geometric figure by the same distance in the same direction without a change in orientation or size. (MW)

Transversal line A line that crosses two or more other lines is called a transversal.

Triangle A polygon with three sides. Important classes of triangles:

Equilateral triangle A triangle with all sides congruent.

Right triangle Contains an interior angle that is a right angle.

Scalene triangle A triangle with no side congruent to another.

Isosceles triangle A triangle with two congruent sides.

Trigonometric function Trigonometric functions (sine, cosine, tangent, and their reciprocals) are commonly defined as ratios of two sides of a right triangle containing the angle, and can equivalently be defined as the lengths of various line segments from a unit circle.

Trigonometry The study of trigonometric functions.

Uniform probability model A probability model which assigns equal probability to all outcomes. *See also:* ***probability model***.

Unit fraction A fraction with a numerator of 1, such as 1/3 or 1/5. (MA)

Unit of measurement When measuring a given attribute of an object, a "unit" is defined in terms of which all other measurements are determined. That a given unit is fixed is a concept to be learned by young students (e.g. we wouldn't measure the length of a room in hands because your hand is different from mine, and we wouldn't measure the length of a room using cm and inches at the same time).

Union (of sets) For two sets and , the union $\cup$ is the set of all elements that are members of one or both of the sets.

Variable (a) A quantity that can change or that may take on different values. (b) A symbol (often a letter of the alphabet, sometimes including the Greek alphabet) that represents a number in a mathematical expression.

Venn diagram A data display in which (typically) circles are used to represent categories and in which the overlapping of two (or more) circles indicates data that lies in each category in the overlap.

Visual fraction model A diagram or representation to show the relative size of a fraction, for example, a tape diagram, number line diagram, or area model. (MA)

Volume (of a 3D object) A measurement of the amount of space within a closed three-dimensional shape. Volume is often measured in terms of "cubic units", in which 1 cubic unit is the amount of space within a cube that measures 1 unit by 1 unit by 1 unit (for a given unit of length). For example, volume may be measured in "cubic centimeters", 1 cubic centimeter being the amount of space within a 1cm by 1cm by 1cm cube. Note that since one can measure the volume of a liquid by placing said liquid into a 3D shape, volume has historically been measured in various units such as cups, fluid ounces, and liters. Note that 1 cubic centimeter is equal to 1 milliliter, one way to connect such fluid units to cubic units.

Whole numbers The numbers 0, 1, 2, 3, …

Table 1: The Properties of Operations	
Here a, b and c stand for arbitrary numbers in a given number system. The properties of operations apply to the rational number system, the real number system, and the complex number system.	
Associative property of addition	$(a + b) + c = a + (b + c)$
Commutative property of addition	$a + b = b + a$
Additive identity property of 0	$a + 0 = 0 + a = a$
Existence of additive inverses	For every a there exists $-a$ so that $a + (-a) = (-a) + a = 0$.
Associative property of multiplication	$(a \times b) \times c = a \times (b \times c)$
Commutative property of multiplication	$a \times b = b \times a$
Multiplicative identity property of 1	$a \times 1 = 1 \times a = a$
Existence of multiplicative inverses	For every a (where $a \neq 0$) there exists $\frac{1}{a}$ so that $a \times \frac{1}{a} = \frac{1}{a} \times a = 1$.
Distributive property of multiplication over addition	$a \times (b + c) = a \times b + a \times c$

Table 2: The Properties of Equality	
Here a, b, and c stand for arbitrary numbers in the rational, real, or complex number systems.	
Reflexive property of equality	$a = a$
Symmetric property of equality	If $a = b$, then $b = a$.
Transitive property of equality	If $a = b$ and $b = c$, then $a = c$.
Addition property of equality	If $a = b$, then $a + c = b + c$.
Subtraction property of equality	If $a = b$, then $a - c = b - c$.
Multiplication property of equality	If $a = b$, then $a \times c = b \times c$.
Division property of equality	If $a = b$ and $c \neq 0$, then $a \div c = b \div c$.
Substitution property of equality	If $a = b$, then b may be substituted for a in any expression containing a.

Table 3: The Properties of Inequality	
Here a, b, and c stand for arbitrary numbers in the rational or real number systems.	
Law of Trichotomy	Exactly one of the following is true: $a < b$, $a = b$, or $a > b$
Reversal Property	If $a > b$, then $b < a$.
Additive Inverse	If $a > b$, then $-a < -b$.
Addition and Subtraction Property of Inequality	If $a > b$, then $a \pm c > b \pm c$.
Positive Multiplication Property of Inequality	If $a > b$ and $c > 0$, then $a \times c > b \times c$.
Negative Multiplication Property of Inequality	If $a > b$ and $c < 0$, then $a \times c < b \times c$.
Positive Division Property of Inequality	If $a > b$ and $c > 0$, then $a \div c > b \div c$.
Negative Division Property of Inequality	If $a > b$ and $c < 0$, then $a \div c < b \div c$.

Table 4: Fluency Expectations				
Grade level fluency expectations apply to operations of whole numbers.	**Addition**	**Subtraction**	**Multiplication**	**Division**
1st Grade	Through 10	Through 10		
2nd Grade	Through 20	Through 20		
3rd Grade			Through factors of 10	
4th Grade			Through factors of 12	Through factors of 12

Number & Operations (N)			
Topic	**Pre-Kindergarten (PK)**	**Kindergarten (K)**	**First Grade (1)**
Quantity	**PK.N.1 Know number names and count in sequence.** **PK.N.1.1** Count aloud forward in sequence by 1's to 20. **PK.N.1.2** Recognize and name written numerals 0-10. **PK.N.1.3** Recognize that zero represents the count of no objects. **PK.N.2 Count to tell the number of objects.** **PK.N.2.1** Identify the number of objects, up to 10, in a row or column. **PK.N.2.2** Use one-to-one correspondence in counting objects and matching groups of objects. **PK.N.2.3** Understand the last numeral spoken, when counting aloud, tells how many total objects are in a set. **PK.N.2.4** Count up to 5 items in a scattered configuration; not in a row or column. **PK.N.3 Compare sets using number.** **PK.N.3.1** Compare two sets of 1-5 objects using comparative language such as same, more, or fewer.	**K.N.1 Understand the relationship between quantities and whole numbers.** **K.N.1.1** Count aloud forward in sequence to 100 by 1's and 10's. **K.N.1.2** Recognize that a number can be used to represent how many objects are in a set up to 10. **K.N.1.3** Use ordinal numbers to represent the position of an object in a sequence up to 10. **K.N.1.4** Recognize without counting (subitize) the quantity of a small group of objects in organized and random arrangements up to 10. **Clarification statement:** Subitizing is defined as instantly recognizing the quantity of a set without having to count. "Subitizing" is not a vocabulary word and is not meant for student discussion at this age. **K.N.1.5** Count forward, with and without objects, from any given number up to 10. **K.N.1.6** Read, write, discuss, and represent whole numbers from 0 to at least 10. Representations may include numerals, pictures, real objects and picture graphs, spoken words, and manipulatives. **K.N.1.7** Find a number that is 1 more or 1 less than a given number up to 10. **K.N.1.8** Using the words more than, less than or equal to compare and order whole numbers, with and without objects, from 0 to 10.	**1.N.1 Count, compare and represent whole numbers up to 100, with an emphasis on groups of tens and ones.** **1.N.1.1** Recognize numbers to 20 without counting (subitize) the quantity of structured arrangements. **Clarification statement:** Subitizing is defined as instantly recognizing the quantity of a set without having to count. "Subitizing" is not a vocabulary word and is not meant for student discussion at this age. **1.N.1.2** Use concrete representations to describe whole numbers between 10 and 100 in terms of tens and ones. **1.N.1.3** Read, write, discuss, and represent whole numbers up to 100. Representations may include numerals, addition and subtraction, pictures, tally marks, number lines and manipulatives, such as bundles of sticks and base 10 blocks. **1.N.1.4** Count forward, with and without objects, from any given number up to 100 by 1s, 2s, 5s and 10s. **1.N.1.5** Find a number that is 10 more or 10 less than a given number up to 100. **1.N.1.6** Compare and order whole numbers from 0 to 100. **1.N.1.7** Use knowledge of number relationships to locate the position of a given whole number on an open number line up to 20. **1.N.1.8** Use objects to represent and use words to describe the relative size of numbers, such as more than, less than, and equal to.
Operations	Topic addressed at other grade levels.	**K.N.2 Develop conceptual fluency with addition and subtraction (up to 10) using objects and pictures.** **K.N.2.1** Compose and decompose numbers up to 10 with objects and pictures.	**1.N.2 Solve addition and subtraction problems up to 10 in real-world and mathematical contexts.** **1.N.2.1** Represent and solve real-world and mathematical problems using addition and subtraction up to ten. **1.N.2.2** Determine if equations involving addition and subtraction are true. **1.N.2.3** Demonstrate fluency with basic addition facts and related subtraction facts up to 10.

Number & Operations (N)			
Topic	**Pre-Kindergarten (PK)**	**Kindergarten (K)**	**First Grade (1)**
Fractions	Topic addressed at other grade levels.	**K.N.3 Understand the relationship between whole numbers and fractions through fair share.** **K.N.3.1** Distribute equally a set of objects into at least two smaller equal sets.	**1.N.3 Develop foundational ideas for fractions.** **1.N.3.1** Partition a regular polygon using physical models and recognize when those parts are equal. **1.N.3.2** Partition (fair share) sets of objects into equal groupings.
Money	Topic addressed at other grade levels.	**K.N.4 Identify coins by name.** **K.N.4.1** Identify pennies, nickels, dimes, and quarters by name.	**1.N.4 Identify coins and their values.** **1.N.4.1** Identify pennies, nickels, dimes, and quarters by name and value. **1.N.4.2** Write a number with the cent symbol to describe the value of a coin. **1.N.4.3** Determine the value of a collection of pennies, nickels, or dimes up to one dollar counting by ones, fives, or tens.
Algebraic Reasoning & Algebra (A)			
Topic	**Pre-Kindergarten (PK)**	**Kindergarten (K)**	**First Grade (1)**
Patterns	**PK.A.1 Recognize, duplicate, and extend patterns.** **PK.A.1.1** Sort and group up to 5 objects into a set based upon characteristics such as color, size, and shape and explain verbally what the objects have in common. **PK.A.1.2** Recognize, duplicate, and extend repeating patterns involving manipulatives, sound, movement, and other contexts.	**K.A.1 Duplicate patterns in a variety of contexts.** **K.A.1.1** Sort and group up to 10 objects into a set based upon characteristics such as color, size, and shape. Explain verbally what the objects have in common. **K.A.1.2** Recognize, duplicate, complete, and extend repeating, shrinking and growing patterns involving shape, color, size, objects, sounds, movement, and other contexts.	**1.A.1 Identify patterns found in real-world and mathematical situations.** **1.A.1.1** Identify, create, complete, and extend repeating, growing, and shrinking patterns with quantity, numbers, or shapes in a variety of real-world and mathematical contexts.
Number Sentences	Topic addressed at other grade levels.	Topic addressed at other grade levels.	Topic addressed at other grade levels.

Geometry & Measurement (GM)			
Topic	**Pre-Kindergarten (PK)**	**Kindergarten (K)**	**First Grade (1)**
Geometry	**PK.GM.1 Identify common shapes.** **PK.GM.1.1** Identify circles, squares, rectangles, and triangles by pointing to the shape when given the name.	**K.GM.1 Recognize and sort basic two-dimensional shapes and use them to represent real-world objects.** **K.GM.1.1** Recognize squares, circles, triangles, and rectangles. **K.GM.1.2** Sort two-dimensional objects using characteristics such as shape, size, color, and thickness. **K.GM.1.3** Identify attributes of two-dimensional shapes using informal and formal geometric language interchangeably. **K.GM.1.4** Use smaller shapes to form a larger shape when there is an outline to follow. **K.GM.1.5** Compose free-form shapes with blocks. **K.GM.1.6** Use basic shapes and spatial reasoning to represent objects in the real world.	**1.GM.1 Recognize, compose, and decompose two- and three-dimensional shapes.** **1.GM.1.1** Identify trapezoids and hexagons by pointing to the shape when given the name. **1.GM.1.2** Compose and decompose larger shapes using smaller two-dimensional shapes. **1.GM.1.3** Compose structures with three-dimensional shapes. **1.GM.1.4** Recognize three-dimensional shapes such as cubes, cones, cylinders, and spheres.
Measurement	**PK.GM.2 Describe and compare measureable attributes.** **PK.GM.2.**1 Identify measurable attributes of objects. Describe them as little, big, long, short, tall, heavy, light, or other age appropriate vocabulary. **PK.GM.2.2** Directly compare two objects with a common measurable attribute using words such as longer/shorter; heavier/lighter; or taller/shorter. **PK.GM.2.3** Sort objects into sets by one or more attributes.	**K.GM.2 Compare and order objects according to location and measurable attributes.** **K.GM.2.1** Use words to compare objects according to length, size, weight, position, and location. **K.GM.2.2** Order up to 6 objects using measurable attributes, such as length and weight. **K.GM.2.3** Sort objects into sets by more than one attribute. **K.GM.2.4** Compare the number of objects needed to fill two different containers.	**1.GM.2 Select and use nonstandard and standard units to describe length and volume/capacity.** **1.GM.2.1** Use nonstandard and standard measuring tools to measure the length of objects to reinforce the continuous nature of linear measurement. **1.GM.2.2** Illustrate that the length of an object is the number of same-size units of length that, when laid end-to-end with no gaps or overlaps, reach from one end of the object to the other. **1.GM.2.3** Measure the same object/distance with units of two different lengths and describe how and why the measurements differ. **1.GM.2.4** Describe a length to the nearest whole unit using a number and a unit. **1.GM.2.5** Use standard and nonstandard tools to identify volume/capacity. Compare and sort containers that hold more, less, or the same amount.
Time	Topic addressed at other grade levels.	**K.GM.3 Tell time as it relates to daily life.** **K.GM.3.1** Develop an awareness of simple time concepts using words such as yesterday, today, tomorrow, morning, afternoon, and night within his/her daily life.	**1.GM.3 Tell time to the half and full hour.** **1.GM.3.1** Tell time to the hour and half-hour (analog and digital).

Data & Probability (D)			
Topic	**Pre-Kindergarten (PK)**	**Kindergarten (K)**	**First Grade (1)**
Data Analysis	**PK.D.1 Collect and organize categorical data.** **PK.D.1.1** Collect and organize information about objects and events in the environment. **PK.D.1.2** Use categorical data to create real-object graphs.	**K.D.1 Collect, organize, and interpret categorical data.** **K.D.1.1** Collect and sort information about objects and events in the environment. **K.D.1.2** Use categorical data to create real-object and picture graphs. **K.D.1.3** Draw conclusions from real-object and picture graphs.	**1.D.1 Collect, organize, and interpret categorical and numerical data.** **1.D.1.1** Collect, sort, and organize data in up to three categories using representations (e.g., tally marks, tables, Venn diagrams). **1.D.1.2** Use data to create picture and bar-type graphs to demonstrate one-to-one correspondence. **1.D.1.3** Draw conclusions from picture and bar-type graphs.

Number & Operations (N)			
Topic	**Second Grade (2)**	**Third Grade (3)**	**Fourth Grade (4)**
Quantity	**2.N.1 Compare and represent whole numbers up to 1,000 with an emphasis on place value and equality.** **2.N.1.1** Read, write, discuss, and represent whole numbers up to 1,000. Representations may include numerals, words, pictures, tally marks, number lines and manipulatives. **2.N.1.2** Use knowledge of number relationships to locate the position of a given whole number on an open number line up to 100. **2.N.1.3** Use place value to describe whole numbers between 10 and 1,000 in terms of hundreds, tens and ones. Know that 100 is 10 tens, and 1,000 is 10 hundreds. **2.N.1.4** Find 10 more or 10 less than a given three-digit number. Find 100 more or 100 less than a given three-digit number. **2.N.1.5** Recognize when to round numbers to the nearest 10 and 100. **2.N.1.6** Use place value to compare and order whole numbers up to 1,000 using comparative language, numbers, and symbols (e.g., 425 > 276, 73 < 107, page 351 comes after page 350, 753 is between 700 and 800).	**3.N.1 Compare and represent whole numbers up to 100,000 with an emphasis on place value and equality.** **3.N.1.1** Read, write, discuss, and represent whole numbers up to 100,000. Representations may include numerals, expressions with operations, words, pictures, number lines, and manipulatives. **3.N.1.2** Use place value to describe whole numbers between 1,000 and 100,000 in terms of ten thousands, thousands, hundreds, tens and ones, including expanded form. **3.N.1.3** Find 10,000 more or 10,000 less than a given five-digit number. Find 1,000 more or 1,000 less than a given four- or five-digit number. Find 100 more or 100 less than a given four- or five-digit number. **3.N.1.4** Use place value to compare and order whole numbers up to 100,000, using comparative language, numbers, and symbols.	Topic addressed at other grade levels.

Number & Operations (N)			
Topic	**Second Grade (2)**	**Third Grade (3)**	**Fourth Grade (4)**
Operations	**2.N.2 Add and subtract one- and two-digit numbers in real-world and mathematical problems.** **2.N.2.1** Use the relationship between addition and subtraction to generate basic facts up to 20. **2.N.2.2** Demonstrate fluency with basic addition facts and related subtraction facts up to 20. **2.N.2.3** Estimate sums and differences up to 100. **2.N.2.4** Use strategies and algorithms based on knowledge of place value and equality to add and subtract two-digit numbers. **2.N.2.5** Solve real-world and mathematical addition and subtraction problems involving whole numbers up to 2 digits. **2.N.2.6** Use concrete models and structured arrangements, such as repeated addition, arrays and ten frames to develop understanding of multiplication.	**3.N.2 Add and subtract multi-digit whole numbers; multiply with factors up to 10; represent multiplication and division in various ways; Solve real-world and mathematical problems through the representation of related operations.** **3.N.2.1** Represent multiplication facts by using a variety of approaches, such as repeated addition, equal-sized groups, arrays, area models, equal jumps on a number line and skip counting. **3.N.2.2** Demonstrate fluency of multiplication facts with factors up to 10. **3.N.2.3** Use strategies and algorithms based on knowledge of place value and equality to fluently add and subtract multi-digit numbers. **3.N.2.4** Recognize when to round numbers and apply understanding to round numbers to the nearest ten thousand, thousand, hundred, and ten and use compatible numbers to estimate sums and differences. **3.N.2.5** Use addition and subtraction to solve real-world and mathematical problems involving whole numbers. Use various strategies, including the relationship between addition and subtraction, the use of technology, and the context of the problem to assess the reasonableness of results. **3.N.2.6** Represent division facts by using a variety of approaches, such as repeated subtraction, equal sharing and forming equal groups. **3.N.2.7** Recognize the relationship between multiplication and division to represent and solve real-world problems. **3.N.2.8** Use strategies and algorithms based on knowledge of place value, equality and properties of addition and multiplication to multiply a two-digit number by a one-digit number.	**4.N.1 Solve real-world and mathematical problems using multiplication and division.** **4.N.1.1** Demonstrate fluency with multiplication and division facts with factors up to 12. **4.N.1.2** Use an understanding of place value to multiply or divide a number by 10, 100 and 1,000. **4.N.1.3** Multiply 3-digit by 1-digit or a 2-digit by 2-digit whole numbers, using efficient and generalizable procedures and strategies, based on knowledge of place value, including but not limited to standard algorithms. **4.N.1.4** Estimate products of 3-digit by 1-digit or 2-digit by 2-digit whole numbers using rounding, benchmarks and place value to assess the reasonableness of results. Explore larger numbers using technology to investigate patterns. **4.N.1.5** Solve multi-step real-world and mathematical problems requiring the use of addition, subtraction, and multiplication of multi-digit whole numbers. Use various strategies, including the relationship between operations, the use of appropriate technology, and the context of the problem to assess the reasonableness of results. **4.N.1.6** Use strategies and algorithms based on knowledge of place value, equality and properties of operations to divide 3-digit dividend by 1-digit whole number divisors. (e.g., mental strategies, standard algorithms, partial quotients, repeated subtraction, the commutative, associative, and distributive properties). **4.N.1.7** Determine the unknown addend(s) or factor(s) in equivalent and non-equivalent expressions. (e.g., 5 + 6 = 4 + ☐ , 3 x 8 < 3 x ☐).

Number & Operations (N)			
Topic	**Second Grade (2)**	**Third Grade (3)**	**Fourth Grade (4)**
Fractions	**2.N.3 Explore the foundational ideas of fractions.** **2.N.3.1** Identify the parts of a set and area that represent fractions for halves, thirds, and fourths. **2.N.3.2** Construct equal-sized portions through fair sharing including length, set, and area models for halves, thirds, and fourths.	**3.N.3 Understand meanings and uses of fractions in real-world and mathematical situations**. **3.N.3.1** Read and write fractions with words and symbols. **3.N.3.2** Construct fractions using length, set, and area models. **3.N.3.3** Recognize unit fractions and use them to compose and decompose fractions related to the same whole. Use the numerator to describe the number of parts and the denominator to describe the number of partitions. **3.N.3.4** Use models and number lines to order and compare fractions that are related to the same whole.	**4.N.2 Represent and compare fractions and decimals in real-world and mathematical situations; use place value to understand how decimals represent quantities**. **4.N.2.**1 Represent and rename equivalent fractions using fraction models (e.g. parts of a set, area models, fraction strips, number lines). **4.N.2.2** Use benchmark fractions (0, $\frac{1}{4}$, $\frac{1}{3}$, $\frac{1}{2}$, $\frac{2}{3}$, $\frac{3}{4}$, 1) to locate additional fractions on a number line. Use models to order and compare whole numbers and fractions less than and greater than one using comparative language and symbols. **4.N.2.3** Decompose a fraction in more than one way into a sum of fractions with the same denominator using concrete and pictorial models and recording results with symbolic representations (e.g., $\frac{3}{4} = \frac{1}{4} + \frac{1}{4} + \frac{1}{4}$). **4.N.2.4** Use fraction models to add and subtract fractions with like denominators in real-world and mathematical situations. **4.N.2.5** Represent tenths and hundredths with concrete models, making connections between fractions and decimals. **4.N.2.6** Represent, read and write decimals up to at least the hundredths place in a variety of contexts including money. **4.N.2.7** Compare and order decimals and whole numbers using place value, a number line and models such as grids and base 10 blocks. **4.N.2.8** Compare benchmark fractions ($\frac{1}{4}$, $\frac{1}{3}$, $\frac{1}{2}$, $\frac{2}{3}$, $\frac{3}{4}$) and decimals (0.25, 0.50, 0.75) in real-world and mathematical situations.
Money	**2.N.4 Determine the value of a set of coins**. **2.N.4.1** Determine the value of a collection(s) of coins up to one dollar using the cent symbol. **2.N.4.2** Use a combination of coins to represent a given amount of money up to one dollar.	**3.N.4 Determine the value of a set of coins or bills.** **3.N.4.1** Use addition to determine the value of a collection of coins up to one dollar using the cent symbol and a collection of bills up to twenty dollars. **3.N.4.2** Select the fewest number of coins for a given amount of money up to one dollar.	**4.N.3 Determine the value of coins in order to solve monetary transactions.** **4.N.3.1** Given a total cost (whole dollars up to $20 or coins) and amount paid (whole dollars up to $20 or coins), find the change required in a variety of ways. Limited to whole dollars up to $20 or sets of coins.

Algebraic Reasoning & Algebra (A)			
Topic	**Second Grade (2)**	**Third Grade (3)**	**Fourth Grade (4)**
Patterns	**2.A.1 Describe the relationship found in patterns to solve real-world and mathematical problems.** **2.A.1.1** Represent, create, describe, complete, and extend growing and shrinking patterns with quantity and numbers in a variety of real-world and mathematical contexts. **2.A.1.2** Represent and describe repeating patterns involving shapes in a variety of contexts.	**3.A.1 Describe and create representations of numerical and geometric patterns.** **3.A.1.1** Create, describe, and extend patterns involving addition, subtraction, or multiplication to solve problems in a variety of contexts. **3.A.1.2** Describe the rule (single operation) for a pattern from an input/output table or function machine involving addition, subtraction, or multiplication. **3.A.1.3** Explore and develop visual representations of growing geometric patterns and construct the next steps.	**4.A.1 Use multiple representations of patterns to solve real-world and mathematical problems.** **4.A.1.1** Create an input/output chart or table to represent or extend a numerical pattern. **4.A.1.2** Describe the single operation rule for a pattern from an input/output table or function machine involving any operation of a whole number. **4.A.1.3** Create growth patterns involving geometric shapes and define the single operation rule of the pattern.
Number Sentences	**2.A.2 Use number sentences involving unknowns to represent and solve real-world and mathematical problems.** **2.A.2.1** Use objects and number lines to represent number sentences. **2.A.2.2** Generate real-world situations to represent number sentences and vice versa. **2.A.2.3** Apply commutative and identity properties and number sense to find values for unknowns that make number sentences involving addition and subtraction true or false.	**3.A.2 Use number sentences involving multiplication and unknowns to represent and solve real-world and mathematical problems.** **3.A.2.1** Find unknowns represented by symbols in arithmetic problems by solving one-step open sentences (equations) and other problems involving addition, subtraction, and multiplication. Generate real-world situations to represent number sentences. **3.A.2.2** Recognize, represent and apply the number properties (commutative, identity, and associative properties of addition and multiplication) using models and manipulatives to solve problems**.**	**4.A.2 Use multiplication and division with unknowns to create number sentences representing a given problem situation.** **4.A.2.1** Use number sense, properties of multiplication and the relationship between multiplication and division to solve problems and find values for the unknowns represented by letters and symbols that make number sentences true. **4.A.2.2** Solve for unknowns in problems by solving open sentences (equations) and other problems involving addition, subtraction, multiplication, or division with whole numbers. Use real-world situations to represent number sentences and vice versa.

Geometry & Measurement (GM)			
Topic	**Second Grade (2)**	**Third Grade (3)**	**Fourth Grade (4)**
Geometry	**2.GM.1 Analyze attributes of two-dimensional figures and develop generalizations about their properties.** **2.GM.1.1** Recognize trapezoids and hexagons. **2.GM.1.2** Describe, compare, and classify two-dimensional figures according to their geometric attributes. **2.GM.1.3** Compose two-dimensional shapes using triangles, squares, hexagons, trapezoids, and rhombi. **2.GM.1.4** Recognize right angles and classify angles as smaller or larger than a right angle.	**3.GM.1 Use geometric attributes to describe and create shapes in various contexts.** **3.GM.1.1** Sort three-dimensional shapes based on attributes. **3.GM.1.2** Build a three-dimensional figure using unit cubes when picture/shape is shown. **3.GM.1.3** Classify angles as acute, right, obtuse, and straight.	**4.GM.1 Name, describe, classify, and construct polygons and three-dimensional figures.** **4.GM.1.1** Identify points, lines, line segments, rays, angles, endpoints, and parallel and perpendicular lines in various contexts. **4.GM.1.2** Describe, classify, and sketch quadrilaterals, including squares, rectangles, trapezoids, rhombuses, parallelograms, and kites. Recognize quadrilaterals in various contexts. **4.GM.1.3** Given two three-dimensional shapes, identify similarities, and differences.
Measurement	**2.GM.2 Understand length as a measurable attribute and explore capacity.** **2.GM.2.1** Explain the relationship between the size of the unit of measurement and the number of units needed to measure the length of an object. **2.GM.2.2** Explain the relationship between length and the numbers on a ruler by using a ruler to measure lengths to the nearest whole unit. **2.GM.2.3** Explore how varying shapes and styles of containers can have the same capacity.	**3.GM.2 Understand measurable attributes of real-world and mathematical objects using various tools.** **3.GM.2.1** Find perimeter of polygon, given whole number lengths of the sides, in real-world and mathematical situations. **3.GM.2.2** Develop and use formulas to determine the area of rectangles. Justify why length and width are multiplied to find the area of a rectangle by breaking the rectangle into one unit by one unit squares and viewing these as grouped into rows and columns. **3.GM.2.3** Choose an appropriate measurement instrument and measure the length of objects to the nearest whole centimeter or meter. **3.GM.2.4** Choose an appropriate measurement instrument and measure the length of objects to the nearest whole yard, whole foot, or half inch. **3.GM.2.5** Using common benchmarks, estimate the lengths (customary and metric) of a variety of objects. **3.GM.2.6** Use an analog thermometer to determine temperature to the nearest degree in Fahrenheit and Celsius. **3.GM.2.7** Count cubes systematically to identify the number of cubes needed to pack the whole or half of a three-dimensional structure. **3.GM.2.8** Find the area of two-dimensional figures by counting total number of same size unit squares that fill the shape without gaps or overlaps.	**4.GM.2 Understand angle, length, and area as measurable attributes of real-world and mathematical objects. Use various tools to measure angles, length, area, and volume.** **4.GM.2.1** Measure angles in geometric figures and real-world objects with a protractor or angle ruler. **4.GM.2.2** Find the area of polygons that can be decomposed into rectangles. **4.GM.2.3** Using a variety of tools and strategies, develop the concept that the volume of rectangular prisms with whole-number edge lengths can be found by counting the total number of same-sized unit cubes that fill a shape without gaps or overlaps. Use appropriate measurements such as cm^3. **4.GM.2.4** Choose an appropriate instrument and measure the length of an object to the nearest whole centimeter or quarter-inch. **4.GM.2.5** Solve problems that deal with measurements of length, when to use liquid volumes, when to use mass, temperatures above zero and money using addition, subtraction, multiplication, or division as appropriate (customary and metric).

Geometry & Measurement (GM)			
Topic	**Second Grade (2)**	**Third Grade (3)**	**Fourth Grade (4)**
Time	**2.GM.3 Tell time to the quarter hour.** **2.GM.3.1** Read and write time to the quarter-hour on an analog and digital clock. Distinguish between a.m. and p.m.	**3.GM.3 Tell time to the nearest 5-minutes and solve problems.** **3.GM.3.1** Read and write time to the nearest 5-minute (analog and digital). **3.GM.3.2** Determine the solutions to problems involving addition and subtraction of time in intervals of 5 minutes, up to one hour, using pictorial models, number line diagrams, or other tools.	**4.GM.3 Determine elapsed time and convert between units of time.** **4.GM.3.1** Determine elapsed time. **4.GM.3.2** Solve problems involving the conversion of one measure of time to another.

Data & Probability (D)			
Topic	**Second Grade (2)**	**Third Grade (3)**	**Fourth Grade (4)**
Data Analysis	**2.D.1 Collect, organize, and interpret data.** **2.D.1.1** Explain that the length of a bar in a bar graph or the number of objects in a picture graph represents the number of data points for a given category. **2.D.1.2** Organize a collection of data with up to four categories using pictographs and bar graphs with intervals of 1s, 2s, 5s or 10s. **2.D.1.3** Write and solve one-step word problems involving addition or subtraction using data represented within pictographs and bar graphs with intervals of one. **2.D.1.4** Draw conclusions and make predictions from information in a graph.	**3.D.1 Summarize, construct, and analyze data.** **3.D.1.1** Summarize and construct a data set with multiple categories using a frequency table, line plot, pictograph, and/or bar graph with scaled intervals. **3.D.1.2** Solve one- and two-step problems using categorical data represented with a frequency table, pictograph, or bar graph with scaled intervals.	**4.D.1 Collect, organize, and analyze data.** **4.D.1.1** Represent data on a frequency table or line plot marked with whole numbers and fractions using appropriate titles, labels, and units. **4.D.1.2** Use tables, bar graphs, timelines, and Venn diagrams to display data sets. The data may include benchmark fractions or decimals ($\frac{1}{4}$, $\frac{1}{3}$, $\frac{1}{2}$, $\frac{2}{3}$, $\frac{3}{4}$, 0.25, 0.50, 0.75). **4.D.1.3** Solve one- and two-step problems using data in whole number, decimal, or fraction form in a frequency table and line plot.

Number & Operations (N)			
Fifth Grade (5)	**Sixth Grade (6)**	**Seventh Grade (7)**	**Pre-Algebra (PA)**
5.N.1 Divide multi-digit numbers and solve real-world and mathematical problems using arithmetic. **5.N.1.1** Estimate solutions to division problems in order to assess the reasonableness of results. **5.N.1.2** Divide multi-digit numbers, by one- and two-digit divisors, using efficient and generalizable procedures, based on knowledge of place value, including standard algorithms. **5.N.1.3** Recognize that quotients can be represented in a variety of ways, including a whole number with a remainder, a fraction or mixed number, or a decimal and consider the context in which a problem is situated to select and interpret the most useful form of the quotient for the solution. **5.N.1.4** Solve real-world and mathematical problems requiring addition, subtraction, multiplication, and division of multi-digit whole numbers. Use various strategies, including the inverse relationships between operations, the use of technology, and the context of the problem to assess the reasonableness of results. **5.N.2 Read, write, represent, and compare fractions and decimals; recognize and write equivalent fractions; convert between fractions and decimals; use fractions and decimals in real-world and mathematical situations.** **5.N.2.1** Represent decimal fractions (e.g., $\frac{1}{10}$, $\frac{1}{100}$) using a variety of models (e.g., 10 by 10 grids, rational number wheel, base-ten blocks, meter stick) and make connections between fractions and decimals.	**6.N.1 Read, write, and represent integers and rational numbers expressed as fractions, decimals, percents, and ratios; write positive integers as products of factors; use these representations in real-world and mathematical situations**. **6.N.1.1** Represent integers with counters and on a number line and rational numbers on a number line, recognizing the concepts of opposites, direction, and magnitude; use integers and rational numbers in real-world and mathematical situations, explaining the meaning of 0 in each situation. **6.N.1.2** Compare and order positive rational numbers, represented in various forms, or integers using the symbols <, >, and =. **6.N.1.3** Explain that a percent represents parts "out of 100" and ratios "to 100." **6.N.1.4** Determine equivalencies among fractions, decimals, and percents. Select among these representations to solve problems. **6.N.1.5** Factor whole numbers and express prime and composite numbers as a product of prime factors with exponents. **6.N.1.6** Determine the greatest common factors and least common multiples. Use common factors and multiples to calculate with fractions, find equivalent fractions, and express the sum of two-digit numbers with a common factor using the distributive property. **6.N.2 Add and subtract integers in order to solve real-world and mathematical problems.** **6.N.2.1** Estimate solutions to addition and subtraction of integers problems in order to assess the reasonableness of results.	**7.N.1 Read, write, represent, and compare rational numbers, expressed as integers, fractions, and decimals.** **7.N.1.1** Know that every rational number can be written as the ratio of two integers or as a terminating or repeating decimal. **7.N.1.2** Compare and order rational numbers expressed in various forms using the symbols <, >, and =. **7.N.1.3** Recognize and generate equivalent representations of rational numbers, including equivalent fractions. **7.N.2 Calculate with integers and rational numbers, with and without positive integer exponents, to solve real-world and mathematical problems; explain the relationship between absolute value of a rational number and the distance of that number from zero.** **7.N.2.1** Estimate solutions to multiplication and division of integers in order to assess the reasonableness of results. **7.N.2.2** Illustrate multiplication and division of integers using a variety of representations. **7.N.2.3** Solve real-world and mathematical problems involving addition, subtraction, multiplication and division of rational; use efficient and generalizable procedures including but not limited to standard algorithms. **7.N.2.4** Raise integers to positive integer exponents. **7.N.2.5** Solve real-world and mathematical problems involving calculations with rational numbers and positive integer exponents. **7.N.2.6** Explain the relationship between the absolute value of a rational number	**PA.N.1 Read, write, compare, classify, and represent real numbers and use them to solve problems in various contexts.** **PA.N.1.1** Develop and apply the properties of integer exponents, including $a^0 = 1$ (with $a \neq 0$), to generate equivalent numerical and algebraic expressions. **PA.N.1.2** Express and compare approximations of very large and very small numbers using scientific notation. **PA.N.1.3** Multiply and divide numbers expressed in scientific notation, express the answer in scientific notation. **PA.N.1.4** Classify real numbers as rational or irrational. Explain why the rational number system is closed under addition and multiplication and why the irrational system is not. Explain why the sum of a rational number and an irrational number is irrational; and the product of a non-zero rational number and an irrational number is irrational. **PA.N.1.5** Compare real numbers; locate real numbers on a number line. Identify the square root of a perfect square to 400 or, if it is not a perfect square root, locate it as an irrational number between two consecutive positive integers.

5.N.2.2 Represent, read and write decimals using place value to describe decimal numbers including fractional numbers as small as thousandths and whole numbers as large as millions. **5.N.2.3** Compare and order fractions and decimals, including mixed numbers and fractions less than one, and locate on a number line. **5.N.2.4** Recognize and generate equivalent decimals, fractions, mixed numbers, and fractions less than one in various contexts. **5.N.3 Add and subtract fractions with like and unlike denominators, mixed numbers and decimals to solve real-world and mathematical problems.** **5.N.3.1** Estimate sums and differences of fractions with like and unlike denominators, mixed numbers, and decimals to assess the reasonableness of the results. **5.N.3.2** Illustrate addition and subtraction of fractions with like and unlike denominators, mixed numbers, and decimals using a variety of representations (e.g., fraction strips, area models, number lines, fraction rods). **5.N.3.3** Add and subtract fractions with like and unlike denominators, mixed numbers, and decimals, using efficient and generalizable procedures, including but not limited to standard algorithms in order to solve real-world and mathematical problems including those involving money, measurement, geometry, and data. **5.N.3.4** Find 0.1 more than a number and 0.1 less than a number. Find 0.01 more than a number and 0.01 less than a	**6.N.2.2** Illustrate addition and subtraction integers using a variety of representations. **6.N.2.3** Add and subtract integers; use efficient and generalizable procedures including but not limited to standard algorithms. **6.N.3 Understand the concept of ratio and its relationship to fractions and percents and to the multiplication and division of whole numbers. Use ratios to solve real-world and mathematical problems.** **6.N.3.1** Identify and use ratios to compare quantities. Recognize that multiplicative comparison and additive comparison are different. **6.N.3.2** Determine the unit rate for ratios. **6.N.3.3** Apply the relationship between ratios, equivalent fractions and percents to solve problems in various contexts, including those involving mixture and concentrations. **6.N.3.4** Use multiplicative reasoning and representations to solve ratio and unit rate problems. **6.N.4 Multiply and divide decimals, fractions, and mixed numbers; solve real-world and mathematical problems with rational numbers.** **6.N.4.1** Estimate solutions to problems with whole numbers, decimals, fractions, and mixed numbers and use the estimates to assess the reasonableness of results in the context of the problem. **6.N.4.2** Illustrate multiplication and division of fractions and decimals to show connections to fractions, whole number multiplication, and inverse relationships. **6.N.4.3** Multiply and divide fractions and decimals, using efficient and generalizable	and the distance of that number from zero on a number line. Use the symbol for absolute value.	

number. Find 0.001 more than a number and 0.001 less than a number.	procedures. **6.N.4.4** Solve and interpret real-world and mathematical problems including those involving money, measurement, geometry, and data requiring arithmetic with decimals, fractions and mixed numbers.		

Algebraic Reasoning & Algebra (A)

Fifth Grade (5)	Sixth Grade (6)	Seventh Grade (7)	Pre-Algebra (PA)
5.A.1 Describe and graph patterns of change created through numerical patterns. **5.A.1.1** Use tables and rules of up to two operations to describe patterns of change and make predictions and generalizations about real-world and mathematical problems. **5.A.1.2** Use a rule or table to represent ordered pairs of whole numbers and graph these ordered pairs on a coordinate plane, identifying the origin and axes in relation to the coordinates. **5.A.2 Understand and interpret expressions, equations, and inequalities involving variables and whole numbers, and use them to represent and evaluate real-world and mathematical problems.** **5.A.2.1** Generate equivalent numerical expressions and solve problems involving whole numbers by applying the commutative, associative, and distributive properties and order of operations (no exponents). **5.A.2.2** Determine whether an equation or inequality involving a variable is true or false for a given value of the variable.	**6.A.1 Recognize and represent relationships between varying quantities; translate from one representation to another; use patterns, tables, graphs and rules to solve real-world and mathematical problems.** **6.A.1.1** Plot integer- and rational-valued (limited to halves and fourths) ordered-pairs as coordinates in all four quadrants and recognize the reflective relationships among coordinates that differ only by their signs. **6.A.1.2** Represent relationships between two varying quantities involving no more than two operations with rules, graphs, and tables; translate between any two of these representations. **6.A.1.3** Use and evaluate variables in expressions, equations, and inequalities that arise from various contexts, including determining when or if, for a given value of the variable, an equation or inequality involving a variable is true or false. **6.A.2 Use properties of arithmetic to generate equivalent numerical expressions and evaluate expressions involving positive rational numbers.** **6.A.2.1** Generate equivalent expressions and evaluate expressions involving	**7.A.1 Understand the concept of proportionality in real-world and mathematical situations, and distinguish between proportional and other relationships.** **7.A.1.1** Describe that the relationship between two variables, x and y, is proportional if it can be expressed in the form $\frac{y}{x} = k$ or $y = kx$; distinguish proportional relationships from other relationships, including inversely proportional relationships ($xy = k$ or $y = \frac{k}{x}$). **7.A.1.2** Recognize that the graph of a proportional relationship is a line through the origin and the coordinate $(1, r)$, where both r and the slope are the unit rate (constant of proportionality, k). **7.A.2 Recognize proportional relationships in real-world and mathematical situations; represent these and other relationships with tables, verbal descriptions, symbols, and graphs; solve problems involving proportional relationships and interpret results in the original context.** **7.A.2.1** Represent proportional relationships with tables, verbal descriptions, symbols, and graphs;	**PA.A.1 Understand the concept of function in real-world and mathematical situations, and distinguish between linear and nonlinear functions.** **PA.A.1.1** Recognize that a function is a relationship between an independent variable and a dependent variable in which the value of the independent variable determines the value of the dependent variable. **PA.A.1.2** Use linear functions to represent and explain real-world and mathematical situations. **PA.A.1.3** Identify a function as linear if it can be expressed in the form $y = mx + b$ or if its graph is a straight line. **PA.A.2 Recognize linear functions in real-world and mathematical situations; represent linear functions and other function with tables, verbal descriptions, symbols, and graphs; solve problems involving linear functions and interpret results in the original context.** **PA.A.2.1** Represent linear functions with tables, verbal descriptions, symbols, and graphs; translate from one representation to another. **PA.A.2.2** Identify, describe, and analyze linear relationships between two variables.

Algebraic Reasoning & Algebra (A)			
Fifth Grade (5)	**Sixth Grade (6)**	**Seventh Grade (7)**	**Pre-Algebra (PA)**
5.A.2.3 Evaluate expressions involving variables when values for the variables are given.	positive rational numbers by applying the commutative, associative, and distributive properties and order of operations to solve real-world and mathematical problems. **6.A.3 Use equations and inequalities to represent real-world and mathematical problems and use the idea of maintaining equality to solve equations. Interpret solutions in the original context.** **6.A.3.1** Represent real-world or mathematical situations using expressions, equations and inequalities involving variables and rational numbers. **6.A.3.2** Use number sense and properties of operations and equality to solve real-world and mathematical problems involving equations in the form $x + p = q$ and $px = q$, where x, p, and q are nonnegative rational numbers. Graph the solution on a number line, interpret the solution in the original context, and assess the reasonableness of the solution.	translate from one representation to another. Determine and compare the unit rate (constant of proportionality, slope, or rate of change) given any of these representations. **7.A.2.2** Solve multi-step problems involving proportional relationships involving distance-time, percent increase or decrease, discounts, tips, unit pricing, similar figures, and other real-world and mathematical situations. **7.A.2.3** Use proportional reasoning to solve real-world and mathematical problems involving ratios. **7.A.2.4** Use proportional reasoning to assess the reasonableness of solutions. **7.A.3 Represent and solve linear equations and inequalities.** **7.A.3.1** Write and solve problems leading to linear equations with one variable in the form $px + q = r$ and $p(x+q) = r$, where p, q, and r are rational numbers. **7.A.3.2** Represent, write, solve, and graph problems leading to linear inequalities with one variable in the form $x+p>q$ and $x+p<q$, where p, and q are nonnegative rational numbers. **7.A.3.3** Represent real-world or mathematical situations using equations and inequalities involving variables and rational numbers. **7.A.4 Use order of operations and properties to generate equivalent numerical and algebraic expressions containing rational numbers and grouping symbols; evaluate such expressions.** **7.A.4.1** Use properties of operations (limited to associative, commutative, and distributive) to generate equivalent	**PA.A.2.3** Identify graphical properties of linear functions including slope and intercepts. Know that the slope equals the rate of change, and that the y-intercept is zero when the function represents a proportional relationship. **PA.A.2.4** Predict the effect on the graph of a linear function when the slope or y-intercept changes. Use appropriate tools to examine these effects. **PA.A.2.5** Solve problems involving linear functions and interpret results in the original context. **PA.A.3 Generate equivalent numerical and algebraic expressions and use algebraic properties to evaluate expressions**. **PA.A.3.1** Use substitution to simplify and evaluate algebraic expressions. **PA.A.3.2** Justify steps in generating equivalent expressions by identifying the properties used, including the properties of operations (associative, commutative, and distributive laws) and the order of operations, including grouping symbols. **PA.A.4 Represent real-world and mathematical problems using equations and inequalities involving linear expressions. Solve and graph equations and inequalities symbolically and graphically. Interpret solutions in the original context.** **PA.A.4.1** Illustrate, write, and solve mathematical and real-world problems using linear equations with one variable with one solution, infinitely many solutions, or no solutions. Interpret solutions in the original context. **PA.A.4.2** Represent, write, solve, and graph problems leading to linear

		numerical and algebraic expressions containing rational numbers, grouping symbols and whole number exponents. **7.A.4.2** Apply understanding of order of operations and grouping symbols when using calculators and other technologies.	inequalities with one variable in the form $px + q > r$ and $px + q < r$, where p, q, and r are rational numbers. **PA.A.4.3** Represent real-world situations using equations and inequalities involving one variable.
Geometry & Measurement (GM)			
Fifth Grade (5)	**Sixth Grade (6)**	**Seventh Grade (7)**	**Pre-Algebra (PA)**
5.GM.1 Describe, classify, and draw representations of two- and three-dimensional figures. **5.GM.1.1** Describe, classify and construct triangles, including equilateral, right, scalene, and isosceles triangles. Recognize triangles in various contexts. **5.GM.1.2** Describe and classify three-dimensional figures including cubes, rectangular prisms, and pyramids by the number of edges, faces or vertices as well as the shapes of faces. **5.GM.1.3** Recognize and draw a net for a three-dimensional figure (e.g., cubes, rectangular prisms, pyramids). **5.GM.2 Understand how the volume of rectangular prisms and surface area of shapes with polygonal faces are determined by the dimensions of the object and that shapes with varying dimensions can have equivalent values of surface area or volume.** **5.GM.2.1** Recognize that the volume of rectangular prisms can be determined by the number of cubes (n) and by the product of the dimensions of the prism ($a \times b \times c = n$). Know that rectangular prisms of different dimensions (p, q, and r) can have the same volume if $a \times b \times c = p \times q \times r = n$.	**6.GM.1 Calculate area of squares, parallelograms, and triangles to solve real-world and mathematical problems.** **6.GM.1.1** Develop and use formulas for the area of squares and parallelograms using a variety of methods including but not limited to the standard algorithm. **6.GM.1.2** Develop and use formulas to determine the area of triangles. **6.GM.1.3** Find the area of right triangles, other triangles, special quadrilaterals, and polygons that can be decomposed into triangles and other shapes to solve real-world and mathematical problems. **6.GM.2 Understand and use relationships between angles in geometric figures**. **6.GM.2.1** Solve problems using the relationships between the angles (vertical, complementary, and supplementary) formed by intersecting lines. **6.GM.2.2** Develop and use the fact that the sum of the interior angles of a triangle is 180° to determine missing angle measures in a triangle. **6.GM.3 Choose appropriate units of measurement and use ratios to convert within measurement systems to solve real-world and mathematical problems.** **6.GM.3.1** Estimate weights, capacities	**7.GM.1 Develop and understand the concept of surface area and volume of rectangular prisms.** **7.GM.1.1** Using a variety of tools and strategies, develop the concept that surface area of a rectangular prism with rational-valued edge lengths can be found by wrapping the figure with same-sized square units without gaps or overlap. Use appropriate measurements such as cm^2. **7.GM.1.2** Using a variety of tools and strategies, develop the concept that the volume of rectangular prisms with rational-valued edge lengths can be found by counting the total number of same-sized unit cubes that fill a shape without gaps or overlaps. Use appropriate measurements such as cm^3. **7.GM.2 Determine the area of trapezoids and area and perimeter of composite figures.** **7.GM.2.1** Develop and use the formula to determine the area of a trapezoid to solve problems. **7.GM.2.2** Find the area and perimeter of composite figures to solve real-world and mathematical problems. **7.GM.3 Use reasoning with proportions**	**PA.GM.1 Solve problems involving right triangles using the Pythagorean Theorem**. **PA.GM.1.1** Informally justify the Pythagorean Theorem using measurements, diagrams or dynamic software and use the Pythagorean Theorem to solve problems in two and three dimensions involving right triangles. **PA.GM.1.2** Use the Pythagorean Theorem to find the distance between any two points in a coordinate plane. **PA.GM.2 Calculate surface area and volume of three-dimensional figures.** **PA.GM.2.1** Calculate the surface area of a rectangular prism using decomposition or nets. Use appropriate measurements such as cm^2. **PA.GM.2.2** Calculate the surface area of a cylinder, in terms of π and using approximations for π, using decomposition or nets. Use appropriate measurements such as cm^2. **PA.GM.2.3** Develop and use the formulas $V = lwh$ and $V = Bh$ to determine the volume of rectangular prisms. Justify why base area (B) and height (h) are multiplied to find the volume of a rectangular prism. Use appropriate measurements such as cm^3. **PA.GM.2.4** Develop and use the formulas

Geometry & Measurement (GM)			
Fifth Grade (5)	**Sixth Grade (6)**	**Seventh Grade (7)**	**Pre-Algebra (PA)**
5.GM.2.2 Recognize that the surface area of a three-dimensional figure with rectangular faces with whole numbered edges can be found by finding the area of each component of the net of that figure. Know that three-dimensional shapes of different dimensions can have the same surface area. **5.GM.2.3** Find the perimeter of polygons and create arguments for reasonable values for the perimeter of shapes that include curves. **5.GM.3 Understand angle and length as measurable attributes of real-world and mathematical objects. Use various tools to measure angles and lengths.** **5.GM.3.1** Measure and compare angles according to size. **5.GM.3.2** Choose an appropriate instrument and measure the length of an object to the nearest whole centimeter or 1/16-inch. **5.GM.3.3** Recognize and use the relationship between inches, feet, and yards to measure and compare objects. **5.GM.3.4** Recognize and use the relationship between millimeters, centimeters, and meters to measure and compare objects.	and geometric measurements using benchmarks in customary and metric measurement systems with appropriate units. **6.GM.3.2** Solve problems in various real-world and mathematical contexts that require the conversion of weights, capacities, geometric measurements, and time within the same measurement systems using appropriate units. **6.GM.4 Use translations, reflections, and rotations to establish congruency and understand symmetries.** **6.GM.4.1** Predict, describe, and apply translations (slides), reflections (flips), and rotations (turns) to a two-dimensional figure. **6.GM.4.2** Recognize that translations, reflections, and rotations preserve congruency and use them to show that two figures are congruent. **6.GM.4.3** Use distances between two points that are either vertical or horizontal to each other (not requiring the distance formula) to solve real-world and mathematical problems about congruent two-dimensional figures. **6.GM.4.4** Identify and describe the line(s) of symmetry in two-dimensional shapes.	**and ratios to determine measurements, justify formulas, and solve real-world and mathematical problems involving circles and related geometric figures.** **7.GM.3.1** Demonstrate an understanding of the proportional relationship between the diameter and circumference of a circle and that the unit rate (constant of proportionality) is π and can be approximated by rational numbers such as $\frac{22}{7}$ and 3.14. **7.GM.3.2** Calculate the circumference and area of circles to solve problems in various contexts, in terms of π and using approximations for π. **7.GM.4 Analyze the effect of dilations, translations, and reflections on the attributes of two-dimensional figures on and off the coordinate plane.** **7.GM.4.1** Describe the properties of similarity, compare geometric figures for similarity, and determine scale factors resulting from dilations. **7.GM.4.2** Apply proportions, ratios, and scale factors to solve problems involving scale drawings and determine side lengths and areas of similar triangles and rectangles. **7.GM.4.3** Graph and describe translations and reflections of figures on a coordinate plane and determine the coordinates of the vertices of the figure after the transformation.	$V = \pi r^2 h$ and $V = Bh$ to determine the volume of right cylinders, in terms of π and using approximations for π. Justify why base area (B) and height (h) are multiplied to find the volume of a right cylinder. Use appropriate measurements such as cm^3.

Data & Probability (D)			
Fifth Grade (5)	**Sixth Grade (6)**	**Seventh Grade (7)**	**Pre-Algebra (PA)**
5.D.1 Display and analyze data to find the range and measures of central tendency (mean, median, and mode). **5.D.1.1** Find the measures of central tendency (mean, median, or mode) and range of a set of data. Understand that the mean is a "leveling out" or central balance point of the data. **5.D.1.2** Create and analyze line and double-bar graphs with whole numbers, fractions, and decimals increments.	**6.D.1 Display and analyze data.** **6.D.1.1** Calculate the mean, median, and mode for a set of real-world data. **6.D.1.2** Explain and justify which measure of central tendency (mean, median, or mode) would provide the most descriptive information for a given set of data. **6.D.1.3** Create and analyze box and whisker plots observing how each segment contains one quarter of the data. **6.D.2 Use probability to solve real-world and mathematical problems; represent probabilities using fractions and decimals.** **6.D.2.1** Represent possible outcomes using a probability continuum from impossible to certain. **6.D.2.2** Determine the sample space for a given experiment and determine which members of the sample space are related to certain events. Sample space may be determined by the use of tree diagrams, tables or pictorial representations. **6.D.2.3** Demonstrate simple experiments in which the probabilities are known and compare the resulting relative frequencies with the known probabilities, recognizing that there may be differences between the two results.	**7.D.1 Display and analyze data in a variety of ways.** **7.D.1.1** Design simple experiments, collect data and calculate measures of central tendency (mean, median, and mode) and spread (range). Use these quantities to draw conclusions about the data collected and make predictions. **7.D.1.2** Use reasoning with proportions to display and interpret data in circle graphs (pie charts) and histograms. Choose the appropriate data display and know how to create the display using a spreadsheet or other graphing technology. **7.D.2 Calculate probabilities and reason about probabilities using proportions to solve real-world and mathematical problems.** **7.D.2.1** Determine the theoretical probability of an event using the ratio between the size of the event and the size of the sample space; represent probabilities as percents, fractions and decimals between 0 and 1. **7.D.2.2** Calculate probability as a fraction of sample space or as a fraction of area. Express probabilities as percents, decimals and fractions. **7.D.2.3** Use proportional reasoning to draw conclusions about and predict relative frequencies of outcomes based on probabilities.	**PA.D.1 Display and interpret data in a variety of ways, including using scatterplots and approximate lines of best fit. Use line of best fit and average rate of change to make predictions and draw conclusions about data.** **PA.D.1.1** Describe the impact that inserting or deleting a data point has on the mean and the median of a data set. Know how to create data displays using a spreadsheet and use a calculator to examine this impact. **PA.D.1.2** Explain how outliers affect measures of central tendency. **PA.D.1.3** Collect, display and interpret data using scatterplots. Use the shape of the scatterplot to informally estimate a line of best fit, make statements about average rate of change, and make predictions about values not in the original data set. Use appropriate titles, labels and units. **PA.D.2 Calculate experimental probabilities and reason about probabilities to solve real-world and mathematical problems.** **PA.D.2.1** Calculate experimental probabilities and represent them as percents, fractions and decimals between 0 and 1 inclusive. Use experimental probabilities to make predictions when actual probabilities are unknown. **PA.D.2.2** Determine how samples are chosen (random, limited, biased) to draw and support conclusions about generalizing a sample to a population. **PA.D.2.3** Compare and contrast dependent and independent events.

Number & Operations (N)

Pre-Algebra (PA)

PA.N.1 Read, write, compare, classify, and represent real numbers and use them to solve problems in various contexts.

PA.N.1.1 Develop and apply the properties of integer exponents, including $a^0 = 1$ (with $a \neq 0$), to generate equivalent numerical and algebraic expressions.

PA.N.1.2 Express and compare approximations of very large and very small numbers using scientific notation.

PA.N.1.3 Multiply and divide numbers expressed in scientific notation, express the answer in scientific notation.

PA.N.1.4 Classify real numbers as rational or irrational. Explain why the rational number system is closed under addition and multiplication and why the irrational system is not. Explain why the sum of a rational number and an irrational number is irrational; and the product of a non-zero rational number and an irrational number is irrational.

PA.N.1.5 Compare real numbers; locate real numbers on a number line. Identify the square root of a perfect square to 400 or, if it is not a perfect square root, locate it as an irrational number between two consecutive positive integers.

Algebra 1 (A1)

A1.N.1 Extend the understanding of number and operations to include square roots and cube roots.

A1.N.1.1 Write square roots and cube roots of monomial algebraic expressions in simplest radical form.

A1.N.1.2 Add, subtract, multiply, and simplify square roots of monomial algebraic expressions and divide square roots of whole numbers, rationalizing the denominator when necessary.

Algebra 2 (A2)

A2.N.1 Extend the understanding of number and operations to include complex numbers, matrices, radical expressions, and expressions written with rational exponents.

A2.N.1.1 Find the value of i^n for any whole number n.

A2.N.1.2 Simplify, add, subtract, multiply, and divide complex numbers.

A2.N.1.3 Use matrices to organize and represent data. Identify the order (dimension) of a matrix, add and subtract matrices of appropriate dimensions, and multiply a matrix by a scalar to create a new matrix to solve problems.

A2.N.1.4 Understand and apply the relationship of rational exponents to integer exponents and radicals to solve problems.

Algebraic Reasoning & Algebra (A)

Pre-Algebra (PA)

PA.A.1 Understand the concept of function in real-world and mathematical situations, and distinguish between linear and nonlinear functions.

PA.A.1.1 Recognize that a function is a relationship between an independent variable and a dependent variable in which the value of the independent variable determines the value of the dependent variable.

PA.A.1.2 Use linear functions to represent and explain real-world and mathematical situations.

PA.A.1.3 Identify a function as linear if it can be expressed in the form $y = mx + b$ or if its graph is a straight line.

PA.A.2 Recognize linear functions in real-world and mathematical situations; represent linear functions and other function with tables, verbal descriptions, symbols, and graphs; solve problems involving linear functions and interpret results in the original context.

Algebra 1 (A1)

A1.A.1 Represent and solve mathematical and real-world problems using linear equations, absolute value equations, and systems of equations; interpret solutions in the original context.

A1.A.1.1 Use knowledge of solving equations with rational values to represent and solve mathematical and real-world problems (e.g., angle measures, geometric formulas, science, or statistics) and interpret the solutions in the original context.

A1.A.1.2 Solve absolute value equations and interpret the solutions in the original context.

A1.A.1.3 Analyze and solve real-world and mathematical problems involving systems of linear equations with a maximum of two variables by graphing (may include graphing calculator or other appropriate technology), substitution, and elimination. Interpret the solutions in the original context.

Algebra 2 (A2)

A2.A.1 Represent and solve mathematical and real-world problems using nonlinear equations and systems of linear equations; interpret the solutions in the original context.

A2.A.1.1 Represent real-world or mathematical problems using quadratic equations and solve using various methods (including graphing calculator or other appropriate technology), factoring, completing the square, and the quadratic formula. Find non-real roots when they exist.

A2.A.1.2 Represent real-world or mathematical problems using exponential equations, such as compound interest, depreciation, and population growth, and solve these equations graphically (including graphing calculator or other appropriate technology) or algebraically.

A2.A.1.3 Solve one-variable rational equations and check for extraneous solutions.

A2.A.1.4 Solve polynomial equations with real roots using

Algebraic Reasoning & Algebra (A)

Pre-Algebra (PA)

PA.A.2.1 Represent linear functions with tables, verbal descriptions, symbols, and graphs; translate from one representation to another.
PA.A.2.2 Identify, describe, and analyze linear relationships between two variables.
PA.A.2.3 Identify graphical properties of linear functions including slope and intercepts. Know that the slope equals the rate of change, and that the *y*-intercept is zero when the function represents a proportional relationship.
PA.A.2.4 Predict the effect on the graph of a linear function when the slope or *y*-intercept changes. Use appropriate tools to examine these effects.
PA.A.2.5 Solve problems involving linear functions and interpret results in the original context.

PA.A.3 Generate equivalent numerical and algebraic expressions and use algebraic properties to evaluate expressions.
PA.A.3.1 Use substitution to simplify and evaluate algebraic expressions.
PA.A.3.2 Justify steps in generating equivalent expressions by identifying the properties used, including the properties of operations (associative, commutative, and distributive laws) and the order of operations, including grouping symbols.

PA.A.4 Represent real-world and mathematical problems using equations and inequalities involving linear expressions. Solve and graph equations and inequalities symbolically and graphically. Interpret solutions in the original context.
PA.A.4.1 Illustrate, write, and solve mathematical and real-world problems using linear equations with one variable with one solution, infinitely many solutions, or no solutions. Interpret solutions in the original context.
PA.A.4.2 Represent, write, solve, and graph problems leading to linear inequalities with one variable in the form $px + q > r$ and $px + q < r$, where p, q, and r are rational numbers.
PA.A.4.3 Represent real-world situations using equations and inequalities involving one variable.

Algebra 1 (A1)

A1.A.2 Represent and solve real-world and mathematical problems using linear inequalities, compound inequalities and systems of linear inequalities; interpret solutions in the original context.
A1.A.2.1 Represent relationships in various contexts with linear inequalities; solve the resulting inequalities, graph on a coordinate plane, and interpret the solutions.
A1.A.2.2 Represent relationships in various contexts with compound and absolute value inequalities and solve the resulting inequalities by graphing, and interpreting the solutions on a number line.
A1.A.2.3 Solve systems of linear inequalities with a maximum of two variables; graph and interpret the solutions on a coordinate plane.

A1.A.3 Generate equivalent algebraic expressions and use algebraic properties to evaluate expressions and arithmetic and geometric sequences.
A1.A.3.1 Solve equations involving several variables for one variable in terms of the others.
A1.A.3.2 Simplify polynomial expressions by adding, subtracting, or multiplying.
A1.A.3.3 Factor common monomial factors from polynomial expressions and factor quadratic expressions with a leading coefficient of 1.
A1.A.3.4 Evaluate linear, absolute value, rational, and radical expressions. Include applying a nonstandard operation such as $a \odot b = 2a + b$.
A1.A.3.5 Recognize that arithmetic sequences are linear using equations, tables, graphs, and verbal descriptions. Using the pattern, find the next term.
A1.A.3.6 Recognize that geometric sequences are exponential using equations, tables, graphs and verbal descriptions. Given the formula $f(x) = a(r)^x$, find the next term and define the meaning of a and r within the context of the problem.

A1.A.4 Analyze mathematical change involving linear equations in real-world and mathematical problems.
A1.A.4.1 Calculate and interpret slope and the *x*- and *y*-intercepts of a line using a graph, an equation, two points, or a set of data points to solve real-world and mathematical

Algebra 2 (A2)

various methods and tools that may include factoring, polynomial division, synthetic division, graphing calculators or other appropriate technology.
A2.A.1.5 Solve square root equations with one variable and check for extraneous solutions.
A2.A.1.6 Solve common and natural logarithmic equations using the properties of logarithms.
A2.A.1.7 Solve real-world and mathematical problems that can be modeled using arithmetic or finite geometric sequences or series given the n^{th} terms and sum formulas. Graphing calculators or other appropriate technology may be used.
A2.A.1.8 Represent real-world or mathematical problems using systems of linear equations with a maximum of three variables and solve using various methods that may include substitution, elimination, and graphing (may include graphing calculators or other appropriate technology).
A2.A.1.9 Solve systems of equations containing one linear equation and one quadratic equation using tools that may include graphing calculators or other appropriate technology.

A2.A.2 Represent and analyze mathematical situations and structures using algebraic symbols using various strategies to write equivalent forms of expressions.
A2.A.2.1 Factor polynomial expressions including but not limited to trinomials, differences of squares, sum and difference of cubes, and factoring by grouping using a variety of tools and strategies.
A2.A.2.2 Add, subtract, multiply, divide, and simplify polynomial and rational expressions.
A2.A.2.3 Recognize that a quadratic function has different equivalent representations [$f(x) = ax^2 + bx + c$, $f(x) = a(x - h)^2 + k$, and $f(x) = (x - h)(x - k)$]. Identify and use the representation that is most appropriate to solve real-world and mathematical problems.
A2.A.2.4 Rewrite expressions involving radicals and rational exponents using the properties of exponents.

	problems. **A1.A.4.2** Solve mathematical and real-world problems involving lines that are parallel, perpendicular, horizontal, or vertical. **A1.A.4.3** Express linear equations in slope-intercept, point-slope, and standard forms and convert between these forms. Given sufficient information (slope and *y*-intercept, slope and one-point on the line, two points on the line, *x*- and *y*-intercept, or a set of data points), write the equation of a line. **A1.A.4.4** Translate between a graph and a situation described qualitatively.	
Functions (F)		
Pre-Algebra (PA)	**Algebra 1 (A1)**	**Algebra 2 (A2)**
Strand addressed at other grade levels.	**A1.F.1 Understand functions as descriptions of covariation (how related quantities vary together) in real-world and mathematical problems.** **A1.F.1.1** Distinguish between relations and functions. **A1.F.1.2** Identify the dependent and independent variables as well as the domain and range given a function, equation, or graph. Identify restrictions on the domain and range in real-world contexts. **A1.F.1.3** Write linear functions, using function notation, to model real-world and mathematical situations. **A1.F.1.4** Given a graph modeling a real-world situation, read and interpret the linear piecewise function (excluding step functions). **A1.F.2 Recognize functions and understand that families of functions are characterized by their rate of change.** **A1.F.2.1** Distinguish between linear and nonlinear (including exponential) functions arising from real-world and mathematical situations that are represented in tables, graphs, and equations. Understand that linear functions grow by equal intervals and that exponential functions grow by equal factors over equal intervals. **A1.F.2.2** Recognize the graph of the functions $f(x) = x$ and $f(x) = \|x\|$ and predict the effects of transformations [$f(x + c)$ and $f(x) + c$, where c is a positive or negative constant] algebraically and graphically using various	**A2.F.1 Understand functions as descriptions of covariation (how related quantities vary together).** **A2.F.1.1** Use algebraic, interval, and set notations to specify the domain and range of functions of various types and evaluate a function at a given point in its domain. **A2.F.1.2** Recognize the graphs of exponential, radical (square root and cube root only), quadratic, and logarithmic functions. Predict the effects of transformations [$f(x + c)$, $f(x) + c$, $f(cx)$, and $cf(x)$, where c is a positive or negative real-valued constant] algebraically and graphically, using various methods and tools that may include graphing calculators or other appropriate technology. **A2.F.1.3** Graph a quadratic function. Identify the *x*- and *y*-intercepts, maximum or minimum value, axis of symmetry, and vertex using various methods and tools that may include a graphing calculator o appropriate technology. **A2.F.1.4** Graph exponential and logarithmic functions. Identify asymptotes and *x*- and *y*-intercepts using various methods and tools that may include graphing calculators or other appropriate technology. Recognize exponential decay and growth graphically and algebraically. **A2.F.1.5** Analyze the graph of a polynomial function by identifying the domain, range, intercepts, zeros, relative maxima, relative minima, and intervals of increase and

	methods and tools that may include graphing calculators. **A1.F.3 Represent functions in multiple ways and use the representation to interpret real-world and mathematical problems.** **A1.F.3.1** Identify and generate equivalent representations of linear equations, graphs, tables, and real-world situations. **A1.F.3.2** Use function notation; evaluate a function, including nonlinear, at a given point in its domain algebraically and graphically. Interpret the results in terms of real-world and mathematical problems. **A1.F.3.3** Add, subtract, and multiply functions using function notation.	decrease. **A2.F.1.6** Graph a rational function and identify the *x*- and *y*-intercepts, vertical and horizontal asymptotes, using various methods and tools that may include a graphing calculator or other appropriate technology. (Excluding slant or oblique asymptotes and holes.) **A2.F.1.7** Graph a radical function (square root and cube root only) and identify the *x*- and *y*-intercepts using various methods and tools that may include a graphing calculator or other appropriate technology. **A2.F.1.8** Graph piecewise functions with no more than three branches (including linear, quadratic, or exponential branches) and analyze the function by identifying the domain, range, intercepts, and intervals for which it is increasing, decreasing, and constant. **A2.F.2 Analyze functions through algebraic combinations, compositions, and inverses, if they exist.** **A2.F.2.1** Add, subtract, multiply, and divide functions using function notation and recognize domain restrictions. **A2.F.2.2** Combine functions by composition and recognize that $g(x) = f^{-1}(x)$, the inverse function of $f(x)$, if and only if $f(g(x)) = g(f(x)) = x$. **A2.F.2.3** Find and graph the inverse of a function, if it exists, in real-world and mathematical situations. Know that the domain of a function f is the range of the inverse function f^{-1}, and the range of the function f is the domain of the inverse function f^{-1}. **A2.F.2.4** Apply the inverse relationship between exponential and logarithmic functions to convert from one form to another.
Data & Probability (D)		
Pre-Algebra (PA)	**Algebra 1 (A1)**	**Algebra 2 (A2)**
PA.D.1 Display and interpret data in a variety of ways, including using scatterplots and approximate lines of best fit. Use line of best fit and average rate of change to make predictions and draw conclusions about data. **PA.D.1.1** Describe the impact that inserting or deleting a data point has on the mean and the median of a data set. Know how to create data displays using a spreadsheet and	**A1.D.1 Display, describe, and compare data. For linear relationships, make predictions and assess the reliability of those predictions.** **A1.D.1.1** Describe a data set using data displays, describe and compare data sets using summary statistics, including measures of central tendency, location, and spread. Know how to use calculators, spreadsheets, or other appropriate	**A2.D.1 Display, describe, and compare data. For linear and nonlinear relationships, make predictions and assess the reliability of those predictions.** **A2.D.1.1** Use the mean and standard deviation of a data set to fit it to a normal distribution (bell-shaped curve). **A2.D.1.2** Collect data and use scatterplots to analyze patterns and describe linear, exponential or quadratic

Data & Probability (D)		
Pre-Algebra (PA)	**Algebra 1 (A1)**	**Algebra 2 (A2)**
use a calculator to examine this impact. **PA.D.1.2** Explain how outliers affect measures of central tendency. **PA.D.1.3** Collect, display and interpret data using scatterplots. Use the shape of the scatterplot to informally estimate a line of best fit, make statements about average rate of change, and make predictions about values not in the original data set. Use appropriate titles, labels and units. **PA.D.2 Calculate experimental probabilities and reason about probabilities to solve real-world and mathematical problems.** **PA.D.2.1** Calculate experimental probabilities and represent them as percents, fractions and decimals between 0 and 1 inclusive. Use experimental probabilities to make predictions when actual probabilities are unknown. **PA.D.2.2** Determine how samples are chosen (random, limited, biased) to draw and support conclusions about generalizing a sample to a population. **PA.D.2.3** Compare and contrast dependent and independent events.	technology to display data and calculate summary statistics. **A1.D.1.2** Collect data and use scatterplots to analyze patterns and describe linear relationships between two variables. Using graphing technology, determine regression lines and correlation coefficients; use regression lines to make predictions and correlation coefficients to assess the reliability of those predictions. **A1.D.1.3** Interpret graphs as being discrete or continuous. **A1.D.2 Calculate probabilities and apply probability concepts.** **A1.D.2.1** Select and apply counting procedures, such as the multiplication and addition principles and tree diagrams, to determine the size of a sample space (the number of possible outcomes) and to calculate probabilities. **A1.D.2.2** Describe the concepts of intersections, unions, and complements using Venn diagrams to evaluate probabilities. Understand the relationships between these concepts and the words AND, OR, and NOT. **A1.D.2.3** Calculate experimental probabilities by performing simulations or experiments involving a probability model and using relative frequencies of outcomes. **A1.D.2.4** Apply probability concepts to real-world situations to make informed decisions.	relationships between two variables. Using graphing calculators or other appropriate technology, determine regression equation and correlation coefficients; use regression equations to make predictions and correlation coefficients to assess the reliability of those predictions. **A2.D.1.3** Based upon a real-world context, recognize whether a discrete or continuous graphical representation is appropriate and then create the graph. **A2.D.2 Analyze statistical thinking to draw inferences, make predictions, and justify conclusions.** **A2.D.2.1** Evaluate reports based on data published in the media by identifying the source of the data, the design of the study, and the way the data are analyzed and displayed. Given spreadsheets, tables, or graphs, recognize and analyze distortions in data displays. Show how graphs and data can be distorted to support different points of view. **A2.D.2.2** Identify and explain misleading uses of data. Recognize when arguments based on data confuse correlation and causation.

Reasoning & Logic (G.RL)		
Seventh Grade (7)	**Pre-Algebra (PA)**	**Geometry (G)**
Topic addressed at other grade levels.	Topic addressed at other grade levels.	**G.RL.1 Use appropriate tools and logic to evaluate mathematical arguments.** **G.RL.1.1** Understand the use of undefined terms, definitions, postulates, and theorems in logical arguments/proofs. **G.RL.1.2** Analyze and draw conclusions based on a set of conditions using inductive and deductive reasoning. Recognize the logical relationships between a conditional statement and its inverse, converse, and contrapositive. **G.RL.1.3** Assess the validity of a logical argument and give counterexamples to disprove a statement.
Two Dimensional Shapes (G.2D)		
Seventh Grade (7)	**Pre-Algebra (PA)**	**Geometry (G)**
7.GM.2 Determine the area of trapezoids and area and perimeter of composite figures. **7.GM.2.1** Develop and use the formula to determine the area of a trapezoid to solve problems. **7.GM.2.2** Find the area and perimeter of composite figures to solve real-world and mathematical problems. **7.GM.4 Analyze the effect of dilations, translations, and reflections on the attributes of two-dimensional figures on and off the coordinate plane**. **7.GM.4.1** Describe the properties of similarity, compare geometric figures for similarity, and determine scale factors resulting from dilations. **7.GM.4.2** Apply proportions, ratios, and scale factors to solve problems involving scale drawings and determine side lengths and areas of similar triangles and rectangles. **7.GM.4.3** Graph and describe translations and reflections of figures on a coordinate plane and determine the coordinates of the vertices of the figure after the transformation.	Topic addressed at other grade levels.	**G.2D.1 Discover, evaluate, and analyze the relationships between lines, angles, and polygons to solve real-world and mathematical problems; express proofs in a form that clearly justifies the reasoning, such as two-column proofs, paragraph proofs, flow charts, or illustrations.** **G.2D.1.1** Apply the properties of parallel and perpendicular lines, including properties of angles formed by a transversal, to solve real-world and mathematical problems and determine if two lines are parallel, using algebraic reasoning and proofs. **G.2D.1.2** Apply the properties of angles, including corresponding, exterior, interior, vertical, complementary, and supplementary angles to solve real-world and mathematical problems using algebraic reasoning and proofs. **G.2D.1.3** Apply theorems involving the interior and exterior angle sums of polygons and use them to solve real-world and mathematical problems using algebraic reasoning and proofs. **G.2D.1.4** Apply the properties of special quadrilaterals (square, rectangle, trapezoid, isosceles trapezoid, rhombus, kite, parallelogram) and use them to solve real-world and mathematical problems involving angle measures and segment lengths using algebraic reasoning and proofs. **G.2D.1.5** Use coordinate geometry to represent and

		analyze line segments and polygons, including determining lengths, midpoints, and slopes of line segments. **G.2D.1.6** Apply the properties of polygons to solve real-world and mathematical problems involving perimeter and area (e.g., triangles, special quadrilaterals, regular polygons up to 12 sides, composite figures). **G.2D.1.7** Apply the properties of congruent or similar polygons to solve real-world and mathematical problems using algebraic and logical reasoning. **G.2D.1.8** Construct logical arguments to prove triangle congruence (SSS, SAS, ASA, AAS and HL) and triangle similarity (AA, SSS, SAS). **G.2D.1.9** Use numeric, graphic and algebraic representations of transformations in two dimensions, such as reflections, translations, dilations, and rotations about the origin by multiples of 90˚, to solve problems involving figures on a coordinate plane and identify types of symmetry.
Three Dimensional Shapes (G.3D)		
Seventh Grade (7)	**Pre-Algebra (PA)**	**Geometry (G)**
7.GM.1 Develop and understand the concept of surface area and volume of rectangular prisms. **7.GM.1.1** Using a variety of tools and strategies, develop the concept that surface area of a rectangular prism with rational-valued edge lengths can be found by wrapping the figure with same-sized square units without gaps or overlap. Use appropriate measurements such as cm^2. **7.GM.1.2** Using a variety of tools and strategies, develop the concept that the volume of rectangular prisms with rational-valued edge lengths can be found by counting the total number of same-sized unit cubes that fill a shape without gaps or overlaps. Use appropriate measurements such as cm^3.	**PA.GM.2 Calculate surface area and volume of three-dimensional figures.** **PA.GM.2.1** Calculate the surface area of a rectangular prism using decomposition or nets. Use appropriate measurements such as cm^2. **PA.GM.2.2** Calculate the surface area of a cylinder, in terms of π and using approximations for π, using decomposition or nets. Use appropriate measurements such as cm^2. **PA.GM.2.3** Develop and use the formulas $V = lwh$ and $V = Bh$ to determine the volume of rectangular prisms. Justify why base area (B) and height (h) are multiplied to find the volume of a rectangular prism. Use appropriate measurements such as cm^3. **PA.GM.2.4** Develop and use the formulas $V = \pi r^2 h$ and $V = Bh$ to determine the volume of right cylinders, in terms of π and using approximations for π. Justify why base area (B) and height (h) are multiplied to find the volume of a right cylinder. Use appropriate measurements such as cm^3.	**G.3D.1 Solve real-world and mathematical problems involving three-dimensional figures.** **G.3D.1.1** Solve real-world and mathematical problems using the surface area and volume of prisms, cylinders, pyramids, cones, spheres, and composites of these figures. Use nets, measuring devices, or formulas as appropriate. **G.3D.1.2** Use ratios derived from similar three-dimensional figures to make conjectures, generalize, and to solve for unknown values such as angles, side lengths, perimeter or circumference of a face, area of a face, and volume.

Circles (G.C)

Seventh Grade (7)	Pre-Algebra (PA)	Geometry (G)
7.GM.3 Use reasoning with proportions and ratios to determine measurements, justify formulas, and solve real-world and mathematical problems involving circles and related geometric figures. **7.GM.3.1** Demonstrate an understanding of the proportional relationship between the diameter and circumference of a circle and that the unit rate (constant of proportionality) is π and can be approximated by rational numbers such as $\frac{22}{7}$ and 3.14. **7.GM.3.2** Calculate the circumference and area of circles to solve problems in various contexts, in terms of π and using approximations for π.	Topic addressed at other grade levels.	**G.C.1 Solve real-world and mathematical problems using the properties of circles.** **G.C.1.1** Apply the properties of circles to solve problems involving circumference and area, approximate values and in terms of π, using algebraic and logical reasoning. **G.C.1.2** Apply the properties of circles and relationships among angles; arcs; and distances in a circle among radii, chords, secants and tangents to solve problems using algebraic and logical reasoning. **G.C.1.3** Recognize and write the radius r, center (h, k), and standard form of the equation of a circle $(x-h)^2 + (y-k)^2 = r^2$ with and without graphs. **G.C.1.4** Apply the distance and midpoint formula, where appropriate, to develop the equation of a circle in standard form.

Right Triangle Trigonometry (G.RT)

Seventh Grade (7)	Pre-Algebra (PA)	Geometry (G)
Topic addressed at other grade levels.	**PA.GM.1 Solve problems involving right triangles using the Pythagorean Theorem.** **PA.GM.1.1** Informally justify the Pythagorean Theorem using measurements, diagrams, or dynamic software and use the Pythagorean Theorem to solve problems in two and three dimensions involving right triangles. **PA.GM.1.2** Use the Pythagorean Theorem to find the distance between any two points in a coordinate plane.	**G.RT.1 Develop and verify mathematical relationships of right triangles and trigonometric ratios to solve real-world and mathematical problems.** **G.RT.1.1** Apply the distance formula and the Pythagorean Theorem and its converse to solve real-world and mathematical problems, as approximate and exact values, using algebraic and logical reasoning (include Pythagorean Triples). **G.RT.1.2** Verify and apply properties of right triangles, including properties of 45-45-90 and 30-60-90 triangles, to solve problems using algebraic and logical reasoning. **G.RT.1.3** Use the definition of the trigonometric functions to determine the sine, cosine, and tangent ratio of an acute angle in a right triangle. Apply the inverse trigonometric functions to find the measure of an acute angle in right triangles. **G.RT.1.4** Apply the trigonometric functions as ratios (sine, cosine, and tangent) to find side lengths in right triangles in real-world and mathematical problems.

Introduction

The 2020 Oklahoma Academic Standards for Science are the result of the contributions of hundreds of science educators, representatives of higher education, and community members. This document reflects the collaborative work of all members of the Draft Oklahoma Academic Standards for Science Writing and Draft Committees.

The standards specify what students should know and be able to do as learners of science at the end of each grade level or science course. The order of the standards at any grade level is not meant to imply a sequence of topics and should be considered flexible for the organization of any course. The Oklahoma Academic Standards describe the specific areas of student learning that are considered the most important for proficiency in the discipline at a particular level and provide a basis for the development of local curricula and statewide assessments.

The standards are not a curriculum and they do not represent a scope, sequence, or curriculum guide. They provide a framework for schools and teachers to develop an aligned science curriculum. They are also designed as coherent progressions of learning in grades PreK-12, intended to be used as a whole, ensuring all students are provided opportunities to experience science at each grade K-8 and various courses at high school. Although instruction may go beyond standards, using only a portion of the standards will leave gaps in the scientific understanding and practices of students.

The 2020 Oklahoma Academic Standards for Science were informed by the 2014 Oklahoma Academic Standards for Science, The Framework for K-12 Science Education (National Academies of Science, 2010), the Next Generation Science Standards (Achieve, Inc., 2012), and other states' standards documents.

Science is a way of knowing, a process of using observations and investigations to gain knowledge and understanding of the physical and natural world. The PreK-12 Oklahoma Academic Standards for Science place an emphasis on students being active learners. They showcase that it is not enough for students to read about science; they must do science. Students must engage in planning and carrying out investigations, making observations, asking questions, analyzing data, constructing explanations, engaging in argument from evidence, and obtaining, evaluating, and communicating information to gain the science knowledge and skills to be college, career, and citizen ready upon graduation from high school.

Science Strands Overview

The Oklahoma Academic Standards for Science, K-12, are three-dimensional performance expectations representing the things students should know, understand, and be able to do to be proficient in science and engineering. Performance expectations are considered standards and include a science and engineering practice (everyday skills of scientists and engineers), disciplinary core ideas (science ideas used by scientists and engineers), and crosscutting concepts (ways of thinking like scientists and engineers).
The PreK standards emphasize one dimension, the science and engineering practices. This provides early learners with ample time for exploratory play and background experiences that will inform learning experiences K-12.

Performance Expectation:
Each Performance Expectation is built upon recommendations in *A Framework for K-12 Science Education* and the three dimensions of science.

1. Science and Engineering Practices
2. Disciplinary Core Ideas
3. Crosscutting Concepts (NRC, 2012, p. 2)

The following additional components in the standard documents serve as support for instructors in providing clarity and further guidance for each Performance Expectation.

Clarification Statement:
Where needed, a Clarification Statement accompanies a Performance Expectation. The aim of a Clarification Statement is to provide further explanation or examples to better support educators in understanding the aim of the Performance Expectation.

Assessment Boundary:
Where applicable, an Assessment Boundary accompanies a Performance Expectation in order to provide additional support for educators in understanding the intent of the Performance Expectation and its relation to other Performance Expectations in the learning progression. Teachers should utilize the Assessment Boundaries as tools for developing curriculum and local assessments. For 5th grade, 8th grade, Biology, and Physical Science(s) the Assessement Boundaries will be utilized to inform the development of the state summative academic achievement assessments.

Dimension 1: Science and Engineering Practices

The Science and Engineering Practices describe the major practices that scientists employ as they investigate and build models and theories about the world, and a key set of engineering practices that engineers use as they design and build systems. Performance Expectations that emphasize engineering are designated with an asterisk *. The eight science and engineering practices are:

Asking Questions and Defining Problems

A practice of science is to ask and refine questions that lead to descriptions and explanations of how the natural and designed world(s) works. Engineering questions clarify problems to determine criteria for successful solutions.

Developing and Using Models

A practice of both science and engineering is to use and construct models as helpful tools for representing ideas and explanations. These tools include diagrams, drawings, physical replicas, mathematical representations, analogies, and computer simulations.

Planning and Carrying Out Investigations

Scientists and engineers plan and carry out investigations in the field or laboratory, working collaboratively as well as individually. Their investigations are systematic and require clarifying what counts as data and identifying variables or parameters.

Analyzing and Interpreting Data

Scientific investigations produce data that must be analyzed in order to derive meaning, and engineering investigations include analysis of data collected in the tests of designs.

Using Mathematics and Computational Thinking

In both science and engineering, mathematics and computation are fundamental tools for representing physical variables and their relationships. They are used for constructing simulations, solving equations exactly or approximately, and recognizing, expressing, and applying quantitative relationships.

Constructing Explanations and Designing Solutions

End products of science are explanations, and end products of engineering are solutions. The construction of theories provides explanatory accounts of the world, and scientific knowledge is utilized in the development of solution to problems.

Engaging in Scientific Argument from Evidence

Argumentation is the process by which evidence-based conclusions and solutions are reached. In science and engineering, reasoning and argument based on evidence are essential to identifying the best explanation for a natural phenomenon or the best solution to a design problem.

Obtaining, Evaluating, and Communicating Information

Scientists and engineers must be able to communicate clearly and persuasively the ideas and methods they generate.
Critiquing and communicating ideas individually and in groups is a critical professional activity.

Dimension 2: Disciplinary Core Ideas

Disciplinary Core Ideas represent a set of science and engineering ideas for K-12 science education that have broad importance across multiple sciences or engineering disciplines; provide a key tool for understanding or investigating more complex ideas and solving problems; relate to the interests and life experiences of students; and are teachable and learnable over multiple grades at increasing levels of sophistication. (NRC, 2012, p. 31) Disciplinary Core Ideas are grouped into four domains:

Domain 1: Physical Science (PS)
Most systems or processes depend at some level on physical and chemical subprocesses, whether the system is a star, Earth's atmosphere, a river, a bicycle, or a living cell. To understand the physical and chemical basis of a system, students must understand the structure of matter, the forces between objects, the related energy transfers, and their consequences. In this way, the underlying principles of physical science, chemistry, and physics allow students to understand all natural and human-created phenomena.

Domain 2: Life Science (LS)
The life sciences focus on patterns, processes, and relationships of living organisms. The study of life ranges over scales from single molecules, organisms and ecosystems, to the entire biosphere. A core principle of the life sciences is that organisms are related through common ancestry and that processes of natural selection have led to the tremendous diversity of the biosphere. Through courses like Biology and Environmental Science, students explore all aspects of living things and the environments they live in.

Domain 3: Earth and Space Science (ESS)
Through Earth and Space Sciences (ESS), students investigate processes that operate on Earth and also address Earth's place in the solar system and the galaxy. ESS involve phenomena that range in scale from unimaginably large to invisibly small and provide students opportunities to understand how the atmosphere, geosphere, and biosphere are connected.

Domain 4: Engineering, Technology, and Applications of Science (ETS)
The applications of science knowledge and practices to engineering have contributed to the technologies and the systems that serve people today. Insights gained from scientific discovery have altered the ways in which buildings, bridges, and cities are constructed; changed the operations of factories; led to new methods of generating and distributing energy; and created new modes of travel and communication. An overarching goal of ETS is for students to explore links among engineering, technology, science, and society throughout the physical, life, and Earth and space sciences.

Dimension 3: Crosscutting Concepts

The Crosscutting Concepts represent common threads or themes that span across science disciplines (biology, chemistry, physics, environmental science, Earth/space science) and have value to both scientists and engineers because they identify universal properties and processes found in all disciplines. These Crosscutting Concepts are:

Patterns
Observed patterns of forms and events guide organization and classification. Patterns prompt questions about the factors that influence cause and effect relationships. Patterns are useful as evidence to support explanations and arguments.

Cause and Effect
Events have causes, sometimes simple, sometimes multifaceted and complex. A major activity of science is investigating and explaining causal relationships and the mechanisms by which they are mediated. Such mechanisms can then be tested across given contexts and used to predict and explain events in new contexts.

Scale, Proportion, Quantity
In considering phenomena, it is critical to recognize what is relevant at different measures of size, time, and energy and to recognize how changes in scale, proportion, or quantity affect a system's structure or performance.

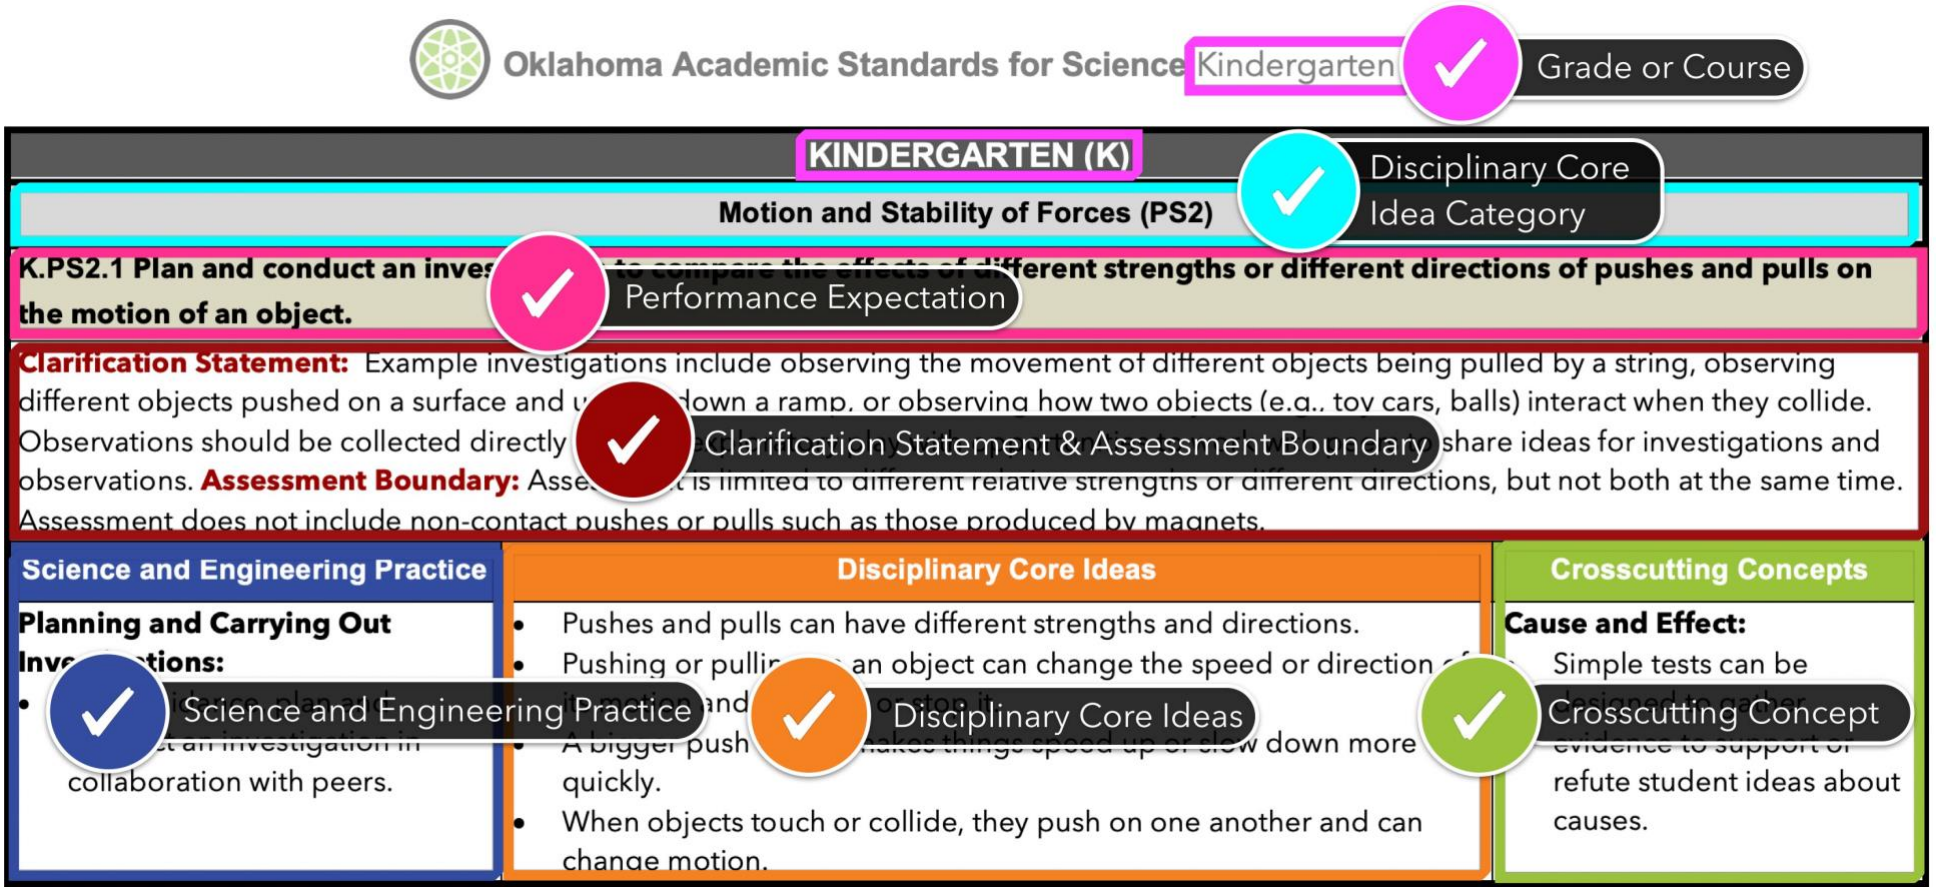
Systems and System Models
Defining the system under study—specifying its boundaries and making explicit a model of that system—provides tools for understanding and testing ideas that are applicable throughout science and engineering.

Energy and Matter
Tracking fluxes of energy and matter into, out of, and within systems helps one understand the system's possibilities and limitations.

Structure and Function
An object's structure and shape determine many of its properties and functions. The structures, shapes, and substructures of living organisms determine how the organism functions to meet its needs within an environment.

Stability and Change
For natural and built systems alike, conditions of stability and rates of change provide the focus for understanding how the system operates and causes for changes in syste

Reading the Oklahoma Academic Standards for Science



PREKINDERGARTEN (PK)	
Science Exploration (S)	
PK.S.1 Engage in play to explore the physical and natural world.	**Clarification Statement:** Exploration-based play should include playing inside the classroom (e.g., building towers with blocks, interacting with a balloon, mixing water colors, placing different objects in water) and outside the classroom (e.g., swinging at different speeds, kicking a ball in different ways, rolling round objects down a hill, digging in the dirt). Emphasis is on basic play as a means of exploration.
PK.S.2 Make observations of the physical and natural world.	**Clarification Statement:** Observations should focus on what things look, feel, hear, or smell like, how they might operate or function, and similarities and differences among things inside classroom (e.g., pencils, markers, and highlighters make different marks on paper) and outside a classroom (e.g., leaves look different at different times of year, sticks in different areas of the school yard are different shapes and sizes, it is cooler in the morning than at lunch). Explanations for why things inside and outside the classroom look, feel, or smell the way they do are not expected.
PK.S.3 Notice and describe similarities and differences among plants, animals, and objects.	**Clarification Statement:** Similarities and differences might include grouping like plants, animals, or objects based on observations. Descriptions of groupings might be based on how plants, animals, or objects look, feel, or smell.
PK.S.4 Share noticings and wonderings about the physical and natural world.	**Clarification Statement:** Sharing could include drawing, writing, building models, or other creative expressions, such as drama or creative movement. Sharing could include retelling, verbal descriptions, or talking with others. Wonderings might include "why," "how," and "what if" statements. Respect for the noticings and wondering of others should be emphasized, but explanations for noticings and wonderings are not emphasized or expected.
PK.S.5 Ask questions based on curiosity about the physical and natural world.	**Clarification Statement:** Questions may arise through observations, play, interests, events in the classroom, text, media, or other experiences of the natural and physical world.
PK.S.6 Engage in investigations based on curiosity and wondering about the physical and natural world.	**Clarification Statement:** Opportunities for investigation or further investigation could arise from opportunities to engage in play inside and outside the classroom, curiosities and wonderings of the student from school or out of school experiences. Emphasis is on providing opportunities for investigations to arise from student curiosities, wonderings, or questions.

KINDERGARTEN (K)

Motion and Stability of Forces (PS2)

K.PS2.1 Plan and conduct an investigation to compare the effects of different strengths or different directions of pushes and pulls on the motion of an object.

Clarification Statement: Example investigations include observing the movement of different objects being pulled by a string, observing different objects pushed on a surface and up and down a ramp, or observing how two objects (e.g., toy cars, balls) interact when they collide. Observations should be collected directly through exploratory play with opportunities to work with peers to share ideas for investigations and observations. **Assessment Boundary:** Assessment is limited to different relative strengths or different directions, but not both at the same time.
Assessment does not include non-contact pushes or pulls such as those produced by magnets.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Planning and Carrying Out Investigations: • With guidance, plan and conduct an investigation in collaboration with peers.	• Pushes and pulls can have different strengths and directions. • Pushing or pulling on an object can change the speed or direction of its motion and can start or stop it. • A bigger push or pull makes things speed up or slow down more quickly. • When objects touch or collide, they push on one another and can change motion.	**Cause and Effect:** • Simple tests can be designed to gather evidence to support or refute student ideas about causes.

K.PS2.2 Analyze data to determine if a design solution works as intended to change the speed or direction of an object with a push or pull.*

Clarification Statement: Data should be limited to observational data collected through exploration-based play of simple design solutions to address problems. Example problems include having an object (e.g., toy car or ball) move a certain distance, follow a particular path, or knock down other objects. Designed solutions could include using or building a ramp to increase the speed of the object, using objects that would cause an object like a toy car or ball to follow a particular path. Emphasis is on basic play as a means to develop a designed solution and test that design. **Assessment Boundary:** Assessment does not include friction as a mechanism for change in speed.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Analyzing Data: • Analyze data from tests of an object or tool to determine if it works as intended.	• Pushes and pulls can have different strengths and directions. • Pushing or pulling on an object can change the speed or direction of its motion and can start or stop it. • A situation that people want to change or create can be approached as a problem to be solved through engineering. • Such problems may have many acceptable solutions.	**Cause and Effect:** • Simple tests can be designed to gather evidence to support or refute student ideas about causes.

Energy (PS3)

K.PS3.1 Make observations to determine the effect of sunlight on Earth's surface.

Clarification Statement: Making observations should include opportunities to directly observe surfaces (e.g. sand, soil, rocks, or playground equipment) in direct sunlight, partial sunlight and shade with opportunities to explore and discuss observed patterns of the Sun's impact on those surfaces. Opportunities to share noticings and wonderings should be encouraged. **Assessment Boundary:** Assessment of temperature is limited to relative measures such as warmer/cooler.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Planning and Carrying Out Investigations: • Make observations (firsthand or from media) to collect data that can be used to make comparisons.	• Sunlight warms the Earth's surface.	**Cause and Effect:** • Events have causes that generate observable patterns.

K.PS3.2 Use tools and materials to design and build a structure that will reduce the warming effect of sunlight on an area.*

Clarification Statement: Examples of structures could include forms of umbrellas, canopies, and tents developed through exploratory play with a variety of materials allowing opportunities to build and test how designed structures might minimize the warming effect of the Sun. Effectiveness can be determined by placing rocks or sand under the structure and observing the warmth or coolness of the object. **Assessment Boundary:** Assessment of temperature is limited to relative measures such as warmer/cooler.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Designing Solutions: • Use tools and materials provided to design and build a device that solves a specific problem or a solution to a specific problem.	• Sunlight warms the Earth's surface.	**Cause and Effect:** • Events have causes that generate observable patterns.

From Molecules to Organisms: Structure and Function (LS1)

K.LS1.1 Use observations to describe patterns of what plants and animals (including humans) need to survive.

Clarification Statement: Examples of observable patterns could include that animals need to take in food but plants do not; the different kinds of food needed by different types of animals; the requirement of plants to have light; and that all living things need water. Observations could be collected through nature walks around the playground and videos. Patterns of similarities and differences among different animals or between plants and animals should be discussed.
Assessment Boundary: Assessment is limited to observations and not how plants use light (photosynthesis).

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Analyzing and Interpreting Data: • Use observations (firsthand or from media) to describe patterns in the natural world in order to answer scientific questions.	• All animals need food in order to live and grow. • Animals obtain their food from plants or from other animals. • Plants need water and light to live and grow.	**Patterns:** • Patterns in the natural and human designed world can be observed and used as evidence.

Earth Systems (ESS2)

K.ESS2.1 Use and share observations of local weather conditions to describe patterns over time.

Clarification Statement: Examples of qualitative observations could include descriptions of the weather (such as sunny, cloudy, rainy, and warm); examples of quantitative observations could include numbers of sunny, windy, and rainy days in a month. Examples of patterns could include that it is usually cooler in the morning than in the afternoon and the number of sunny days versus cloudy days in different months.
Assessment Boundary: Assessment of temperature is limited to whole numbers for patterns, and relative measures such as warmer/cooler for temperatures.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Analyzing and Interpreting Data: • Use observations (firsthand or from media) to describe patterns in the natural world in order to answer scientific questions.	• Weather is the combination of sunlight, wind, snow or rain, and temperature in a particular region at a particular time. • People measure these conditions to describe and record the weather and to notice patterns over time.	**Patterns:** • Patterns in the natural world can be observed, used to describe phenomena, and used as evidence.

Earth Systems (ESS2)

K.ESS2.2 Construct an argument supported by evidence for how plants and animals (including humans) can change the environment to meet their needs.

Clarification Statement: Arguments center on sharing examples of how plants and animals change their environments and discussing ideas as to why those changes meet a need of plants and animals (e.g., shelter, food, room to grow). Examples of arguments could include squirrels digging in the ground to hide food, tree roots breaking sidewalks, birds building a nest to protect their young.
Assessment Boundary: Arguments should be based on qualitative not quantitative evidence.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Engaging in Argument from Evidence: • Construct an argument with evidence to support a claim.	• Plants and animals can change their environment. • Things that people do to live comfortably can affect the world around them.	**Systems and System Models:** • Systems in the natural and designed world have parts that work together.

Earth and Human Activity (ESS3)

K.ESS3.1 Use a model to represent the relationship between the needs of different plants or animals (including humans) and the places they live.

Clarification Statement: Models could include drawings, physical replicas, or dramatizations that show relationships between plants or animals and their surroundings. Examples of relationships could include that squirrels eat nuts and seeds, and therefore, they usually live near trees; and grasses need sunlight, so they often grow in meadows with no or few trees. Opportunities to share noticings and wondering should be encouraged. **Assessment Boundary:** N/A

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Developing and Using Models: • Use a model to represent relationships in the natural world.	• Living things need water, air, and resources from the land, and they live in places that have the things they need. • Humans use natural resources for everything they do.	**Systems and System Models:** • Systems in the natural and designed world have parts that work together.

Earth and Human Activity (ESS3)		
K.ESS3.2 Ask questions to understand the purpose of weather forecasting to prepare for and respond to severe weather.*		
Clarification Statement: Questions may arise or be encouraged through observations, interests, text, or media. Emphasis is on weather forecasting of local weather and how weather forecasting can help people plan for, and respond to, specific types of local weather (e.g., staying indoors during severe weather, going to cool places during heat waves). **Assessment Boundary:** Assessment does not include causes for severe weather.		
Science and Engineering Practice	**Disciplinary Core Ideas**	**Crosscutting Concepts**
Asking Questions: • Asking questions, making observations, and gathering information are helpful in thinking about problems.	• Some kinds of severe weather are more likely than others in a given region. • Weather scientists forecast severe weather so that the communities can prepare for and respond to these events. • People depend on various technologies in their lives; human life would be very different without technology. • People encounter questions about the natural world every day.	**Cause and Effects:** • Events have causes that generate observable patterns.

1st Grade (1)

Waves and Their Applications in Technologies for Information Transfer (PS4)

1.PS4.1 Plan and conduct investigations to provide evidence that vibrating materials can make sound and that sound can make materials vibrate.

Clarification Statement: Examples of vibrating materials that make sound could include tuning forks, kazoos, plucking a stretched string or rubber band, and stringed instruments. Examples of sound making matter vibrate could include holding a piece of paper near a speaker making sound, placing hand on personal larynx or mouth while humming, and holding an object near a vibrating tuning fork. **Assessment Boundary:** N/A

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Planning and Carrying Out Investigations: • Plan and conduct investigations collaboratively to produce data to serve as the basis for evidence to answer a question.	• Sound can make matter vibrate, and vibrating matter can make sound.	**Cause and Effect:** • Simple tests can be designed to gather evidence to support or refute student ideas about causes.

1.PS4.2 Make observations to construct an evidence-based account that objects can be seen only when illuminated.

Clarification Statement: Examples of observations could include those made in a completely dark room or those made in a dark room with the door opened slightly. Illumination could be from an external light source or an object giving off its own light. This can be explored with string lights, mirrors, projectors, and flashlights. **Assessment Boundary:** N/A

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Constructing Explanations: • Make observations (firsthand or from media) to construct an evidence- based account for natural phenomena.	• Objects can be seen if light is available to illuminate them or if they give off their own light.	**Cause and Effect:** • Simple tests can be designed to gather evidence to support or refute student ideas about causes.

Waves and Their Applications in Technologies for Information Transfer (PS4)

1.PS4.3 Plan and conduct an investigation to determine the effect of placing objects made with different materials in the path of a beam of light.

Clarification Statement: Examples of materials could include those that are transparent (such as clear plastic), translucent (such as wax paper), opaque (such as cardboard), and reflective (such as a mirror). **Assessment Boundary:** Assessment does not include the speed of light or assessment of descriptive words like transparent, translucent, opaque, or reflective.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Planning and Carrying Out Investigations: • Plan and conduct investigations collaboratively to produce data to serve as the basis for evidence to answer a question.	• Some materials allow light to pass through them, others allow only some light through, and others block all the light and create a dark shadow on any surface beyond them, where the light cannot reach. • Mirrors can be used to redirect a light beam. (Boundary: The idea that light travels from place to place is developed through experiences with light sources, mirrors, and shadows, but no attempt is made to discuss the speed of light.)	**Cause and Effect:** • Simple tests can be designed to gather evidence to support or refute student ideas about causes.

1.PS4.4 Use tools and materials to design and build a device that uses light or sound to solve the problem of communicating over a distance.*

Clarification Statement: Examples of devices could include a light source to send signals, paper cup and string "telephones," and a pattern of drum beats. **Assessment Boundary:** Assessment does not include technological details for how communication devices work.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Designing Solutions: • Use tools and materials provided to design a device that solves a specific problem.	• People also use a variety of devices to communicate (send and receive information) over long distances. • People depend on various technologies in their lives; human life would be very different without technology.	**Structure and Function:** • The shape and stability of structures of natural and designed objects are related to their functions.

From Molecules to Organisms: Structure and Function (LS1)

1.LS1.1 Use materials to design a solution to a human problem by mimicking how plants and/or animals use their external parts to help them survive, grow, and meet their needs.*

Clarification Statement: Examples of human problems that can be solved by mimicking plant or animal solutions could include designing clothing or equipment to protect bicyclists by mimicking turtle shells, acorn shells, and animal scales; stabilizing structures by mimicking animal tails and roots on plants; keeping out intruders by mimicking thorns on branches and animal quills; and detecting intruders by mimicking eyes and ears. **Assessment Boundary:** N/A

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Designing Solutions: • Use tools and materials provided to design a device that solves a problem.	• All organisms have external parts. • Different animals use their body parts in different ways to see, hear, grasp objects, protect themselves, move from place to place, and seek, find, and take in food, water, and air. • Plants also have different parts (roots, stems, leaves, flowers, fruits) that help them survive and grow. • Animals have body parts that capture and convey different kinds of information needed for growth and survival. • Plants also respond to some external inputs. • Every human-made product is designed by applying some knowledge of the natural world and is built using materials derived from the natural world.	**Structure and Function:** • The shape and stability of structures of natural and designed objects are related to their functions.

From Molecules to Organisms: Structure and Function (LS1)

1.LS1.2 Obtain information from media and/or text to determine patterns in the behavior of parents and offspring that help offspring survive.

Clarification Statement: Examples of patterns of behaviors could include the signals that offspring make (such as crying, cheeping, and other vocalizations) and the responses of the parents (such as feeding, comforting, and protecting the offspring). Information may be obtained through observations, media, and/or text. **Assessment Boundary:** N/A

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Obtaining, Evaluating, and Communicating Information: • Read grade-appropriate texts and use media to obtain scientific information to determine patterns in the natural world.	• Adult plants and animals can have young. • In many kinds of animals, parents and the offspring themselves engage in behaviors that help the offspring to survive.	**Patterns:** • Patterns in the natural world can be observed, used to describe phenomena, and used as evidence.

Heredity: Inheritance and Variation of Traits (LS3)

1.LS3.1 Make observations to construct an evidence-based account that young plants and animals are like, but not exactly like, their parents.

Clarification Statement: Examples of patterns could include features plants or animals share. Examples of observations could include that leaves from the same kind of plant are the same shape but can differ in size; and that particular breed of dog looks like its parents but is not exactly the same. **Assessment Boundary:** Assessment does not include inheritance, animals that undergo metamorphosis or hybrids.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Constructing Explanations: • Make observations (firsthand or from media) to construct an evidence-based account for natural phenomena.	• Young animals are very much, but not exactly like, their parents. • Plants also are very much, but not exactly, like their parents. • Individuals of the same kind of plant or animal are recognizable as similar but can also vary in many ways.	**Patterns:** • Patterns in the natural world can be observed, used to describe phenomena, and used as evidence.

Earth's Place in the Universe (ESS1)

1.ESS1.1 Use observations of the Sun, Moon, and stars to describe patterns that can be predicted.

Clarification Statement: Examples of patterns could include that the Sun and Moon appear to rise in one part of the sky, move across the sky, and set; and stars other than our Sun are visible at night but not during the day. **Assessment Boundary:** Assessment of star patterns is limited to stars being seen at night and not during the day.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Analyzing and Interpreting Data: • Use observations (firsthand or from media) to describe patterns in the natural world in order to answer scientific questions.	• Patterns of the motion of the Sun, Moon, and stars in the sky can be observed, described, and predicted.	**Patterns:** • Patterns in the natural world can be observed, used to describe phenomena, and used as evidence.

1.ESS1.2 Make observations at different times of year to relate the amount of daylight and relative temperature to the time of year.

Clarification Statement: Emphasis is on relative comparisons of the amount of daylight and temperature in the winter to the amount in the spring, fall, or summer. **Assessment Boundary:** Assessment is limited to relative amounts of daylight, not quantifying the hours or time of daylight.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Planning and Carrying Out Investigations: • Make observations (firsthand or from media) to collect data that can be used to make comparisons.	• Seasonal patterns of sunrise and sunset can be observed, described, and predicted.	**Patterns:** • Patterns in the natural world can be observed, used to describe phenomena, and used as evidence.

Earth and Human Activity (ESS3)		
1.ESS3.1 Communicate solutions that will reduce the impact of humans on the land, water, air, and/or other living things in the local environment.*		
Clarification Statement: Examples of human impact on the land could include cutting trees to produce paper and using resources to produce bottles. Examples of solutions could include reusing paper and recycling cans and bottles. **Assessment Boundary:** N/A		
Science and Engineering Practice	**Disciplinary Core Ideas**	**Crosscutting Concepts**
Obtaining, Evaluating and Communicating Information: • Communicate solutions with others in oral and/or written forms using models and/or drawings that provide detail about scientific ideas.	• Things that people do to live comfortably can affect the world around them. But, they can make choices that reduce their impacts on the land, water, air, and other living things. • Designs can be conveyed through sketches, drawings, or physical models. These representations are useful in communicating ideas for a problem's solutions to other people.	**Cause and Effect:** • Events have causes that generate observable patterns.

2nd GRADE (2)

Matter and Its Interactions (PS1)

2.PS1.1 Plan and conduct an investigation to describe and classify different kinds of materials by their observable properties.

Clarification Statement: Observations could include color, texture, hardness, and flexibility. Patterns could include the similar properties that different materials share. Investigations could include ice and snow melting or frozen objects thawing. **Assessment Boundary:** N/A

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Planning and Carrying Out Investigations: • Plan and conduct an investigation collaboratively to produce data to serve as the basis for evidence to answer a question.	• Different kinds of matter exist and many of them can be either solid or liquid, depending on temperature. • Matter can be described and classified by its observable properties. • Different properties are suited to different purposes.	**Patterns:** • Patterns in the natural and human-designed world can be observed.

2.PS1.2 Analyze data obtained from testing different materials to determine which materials have the properties that are best suited for the intended purpose.*

Clarification Statement: Examples of properties could include strength, flexibility, hardness, texture, and absorbency (e.g. paper towels could be utilized to measure absorbency and strength). **Assessment Boundary:** Assessment of quantitative measurements is limited to length.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Analyzing and Interpreting Data: • Analyze data from tests of an object or tool to determine if it works as intended.	• Different properties are suited to different purposes. • Every human-made product is designed by applying some knowledge of the natural world and is built using materials derived from the natural world.	**Cause and Effect:** • Simple tests can be designed to gather evidence to support or refute student ideas about causes.

Matter and Its Interactions (PS1)

2.PS1.3 Make observations to construct an evidence-based account of how an object made of a small set of pieces can be disassembled and made into a new object.

Clarification Statement: Examples of pieces could include building blocks, or other assorted small objects. Provide students with the same number of pieces to create a different object. **Assessment Boundary:** Do not introduce terminology associated with the Law of Conservation of Matter just concepts. Chemical change is outside of this performance expectation.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Constructing Explanations: • Make observations (firsthand or from media) to construct an evidence-based account for natural phenomena.	• A great variety of objects can be built up from a small set of pieces. • Different properties are suited to different purposes.	**Energy and Matter:** • Objects may break into smaller pieces and be put together into larger pieces, or change shapes.

2.PS1.4 Construct an argument with evidence that some changes caused by heating or cooling can be reversed and some cannot.

Clarification Statement: Demonstrations of reversible changes could include materials such as water, butter, or crayons at different temperatures. Demonstrations of irreversible changes could include cooking an egg, freezing a plant leaf, or heating paper. Arguments center on using first-hand observations as evidence to support a claim that a material can change and go back to its original form through heating and cooling. **Assessment Boundary:** Students should not be expected to identify or explain physical and chemical changes.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Engaging in Argument from Evidence: • Construct an argument with evidence to support a claim.	• Heating or cooling a substance may cause changes that can be observed. • Sometimes these changes are reversible, and sometimes they are not.	**Cause and Effect:** • Events have causes that generate observable patterns.

Ecosystems: Interactions, Energy and Dynamics (LS2)

2.LS2.1 Plan and conduct an investigation to determine if plants need sunlight and water to grow.

Clarification Statement: Investigations should be limited to testing one variable at a time. **Assessment Boundary:** Assessment is limited to testing one variable at a time, although students are not expected to understand the term variable at this time.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Planning and Carrying Out Investigations: • Plan and conduct an investigation collaboratively to produce data to serve as the basis for evidence to answer a question.	• Plants depend on water and light to grow.	**Cause and Effect:** • Events have causes that generate observable patterns.

2.LS2.2 Develop a simple model that mimics the function of an animal in dispersing seeds or pollinating plants.*

Clarification Statement: Examples include: placing socks on the outside of students' shoes and walking outside allows socks to gather seeds, plant sock(s) to see what grows, use a pipe cleaner to move powder (like flour) from one place to another emulating flowers being pollinated by bees or other insects. **Assessment Boundary:** N/A

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Developing and Using Models: • Develop a simple model based on evidence to represent a proposed object or tool.	• Plants depend on animals for pollination or to move their seeds around. • Designs can be conveyed through sketches, drawings, or physical models. • These representations are useful in communicating ideas for a problem's solutions to other people.	**Structure and Function:** • The shape and stability of structures of natural and designed objects are related to their function(s).

Biological Unity and Diversity (LS4)

2.LS4.1 Make observations of plants and animals to compare the diversity of life in different habitats.

Clarification Statement: Emphasis is on the diversity of living things in each of a variety of different habitats. Students could explore different habitats such as a neighborhood park, ponds, and the school playground. **Assessment Boundary:** Assessment does not include specific animal and plant names in specific habitats.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Planning and Carrying Out Investigations: • Make observations (firsthand or from media) to collect data which can be used to make comparisons.	• There are many different kinds of living things in any area, and they exist in different places on land and in water.	**Systems and System Models:** • A system is an organized group of related objects or components.

Earth's Place in the Universe (ESS1)

2.ESS1.1 Use information from several sources to provide evidence that Earth events can occur quickly or slowly.

Clarification Statement: Examples of events and timescales could include volcanic explosions and earthquakes, which happen quickly, and erosion of rocks, which occurs slowly. **Assessment Boundary:** Assessment does not include quantitative measurements of timescales.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Constructing Explanations: • Make observations from several sources to construct an evidence-based account for natural phenomena.	• Some events happen very quickly; others occur very slowly, over a time period much longer than one can observe.	**Stability and Change:** • Things may change slowly or rapidly.

Earth's Systems (ESS2)

2.ESS2.1 Compare multiple solutions designed to slow or prevent wind or water from changing the shape of the land.*

Clarification Statement: Examples of solutions could include different designs of dikes and windbreaks to hold back wind and water, and different designs for using shrubs, grass, and trees to hold back the land. Students could explore these ideas with sand tables or soil and water in large containers. **Assessment Boundary:** N/A.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Designing Solutions: • Compare multiple solutions to a problem.	• Wind and water can change the shape of the land. • Because there is always more than one possible solution to a problem, it is useful to compare and test designs. • Developing and using technology has impacts on the natural world.	**Stability and Change:** • Things may change slowly or rapidly.

2.ESS2.2 Develop a model to represent the shapes and kind of land and bodies of water in an area.

Clarification Statement: Examples could include a diagram, drawing, physical replica, or three-dimensional diorama. Models can be based on photographs, virtual images, or in-person observations. **Assessment Boundary:** Assessment does not include quantitative scaling in models.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Developing and Using Models: • Develop a model to represent patterns in the natural world.	• Maps show where things are located. • One can map the shapes and kinds of land and water in any area.	**Patterns:** • Patterns in the natural world can be observed.

2.ESS2.3 Obtain information to identify where water is found on Earth and that it can be solid or liquid.

Clarification Statement: Information can be obtained through text, media, or in-person observations. Patterns can be observed through identifying where solid water (ice) is found and where liquid water can be located. **Assessment Boundary:** N/A.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Obtaining, Evaluating, and Communicating Information: • Obtain information using various texts and media.	• Water is found in the ocean, rivers, lakes, and ponds. • Water exists as solid ice and in liquid form.	**Patterns:** • Patterns in the natural world can be observed.

3RD GRADE (3)

Motion and Stability: Forces and Interactions (PS2)

3.PS2.1 Plan and conduct investigations on the effects of balanced and unbalanced forces on the motion of an object.

Clarification Statement: Examples could include that an unbalanced force on one side of a ball can make it start moving and balanced forces pushing on a box from opposite sides will not produce any motion at all. **Assessment Boundary:** Assessment is limited to one variable at a time: number, size, or direction of forces. Assessment does not include quantitative force size, only qualitative and relative. Assessment is limited to gravity being addressed as a force that pulls objects down.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Planning and Carrying Out Investigations: • Plan and conduct an investigation collaboratively to produce data to serve as the basis for evidence, using fair tests in which variables are controlled and the number of trials considered.	• Each force acts on one particular object and has both strength and a direction. An object at rest typically has multiple forces acting on it, but they add to give zero net force on the object. Forces that do not sum to zero can cause changes in the object's speed or direction of motion. (Boundary: Qualitative and conceptual, but quantitative addition of forces is not used at this level.) • Objects in contact exert forces on each other.	**Cause and Effect:** • Cause and effect relationships are routinely identified.

3.PS2.2 Make observations and/or measurements of an object's motion to provide evidence that a pattern can be used to predict future motion.

Clarification Statement: Examples of motion with a predictable pattern could include a child swinging in a swing (pendulum), object rolling down a ramp from different heights, a ball rolling back and forth in a bowl, and two children on a see-saw. **Assessment Boundary:** Assessment does not include technical terms such as period and frequency.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Planning and Carrying Out Investigations: • Make observations and/or measurements to produce data to serve as the basis for evidence for an explanation of a phenomenon.	• The patterns of an object's motion in various situations can be observed and measured; when that past motion exhibits a regular pattern, future motion can be predicted from it. (Boundary: Technical terms, such as magnitude, velocity, momentum, and vector quantity are not introduced at this level, but the concept that some quantities need both size and direction to be described is developed).	**Patterns:** • Patterns of change can be used to make predictions.

Motion and Stability: Forces and Interactions (PS2)

3.PS2.3 Ask questions to determine cause and effect relationships of electric or magnetic interactions between two objects not in contact with each other.

Clarification Statement: Examples of an electric force could include the force on hair from an electrically charged balloon and the electrical forces between a charged rod and pieces of paper; examples of a magnetic force could include the force between two permanent magnets, the force between an electromagnet and steel paperclips, and the force exerted by one magnet versus the force exerted by two magnets. Examples of cause and effect relationships could include how the distance between objects affects strength of the force and how the orientation of magnets affects the direction of the magnetic force. **Assessment Boundary:** Assessment is limited to forces produced by objects that can be manipulated by students, and electrical interactions are limited to static electricity.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Asking Questions: • Ask questions that can be investigated based on patterns such as cause and effect relationships.	• Electric and magnetic forces between a pair of objects do not require that the objects be in contact. The sizes of the forces in each situation depend on the properties of the objects and their distances apart and, for forces between two magnets, on their orientation relative to each other.	**Cause and Effect:** • Cause and effect relationships are routinely identified, tested, and used to explain change.

3.PS2.4 Define a simple design problem that can be solved by applying scientific ideas about magnets.*

Clarification Statement: Examples of problems could include a door that will not stay closed or two objects that keep colliding. **Assessment Boundary:** N/A

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Define Problems: • Define a simple problem that can be solved through the development of a new or improved object or tool.	• Electric and magnetic forces between a pair of objects do not require that the objects be in contact. The sizes of the forces in each situation depend on the properties of the objects and their distances apart and, for forces between two magnets, on their orientation relative to each other. • Scientific discoveries about the natural world can often lead to new and improved technologies, which are developed through the engineering design process.	**Cause and Effect:** • Cause and effect relationships are routinely identified, tested, and used to explain change. *Other crosscutting concepts may be more appropriate depending on the problem chosen.*

From Molecules to Organisms: Structure and Function (LS1)

3.LS1.1 Develop and use models to describe that organisms have unique and diverse life cycles but all have a common pattern of birth, growth, reproduction, and death.

Clarification Statement: Changes different organisms go through during their life form a pattern. Organism life cycles that can be studied include mealworms, dandelions, lima beans, dogs, and butterflies. **Assessment Boundary:** Assessment includes animal and plant life cycles. Plant life cycles are limited to those of flowering plants. Assessment does not include details of human reproduction or microscopic organisms.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Developing and Using Models: • Develop models to describe phenomena.	• Reproduction is essential to the continued existence of every kind of organism. • Plants and animals have unique and diverse life cycles.	**Patterns:** • Patterns of change can be used to make predictions.

Ecosystems: Interactions, Energy, and Dynamics (LS2)

3.LS2.1 Construct an argument that some animals form groups that help members survive.

Clarification Statement: Arguments could include examples of group behavior such as division of labor in a bee colony, flocks of birds staying together to confuse or intimidate predators, or wolves hunting in packs to more efficiently catch and kill prey. When animals are no longer part of their group, they may not survive as well. **Assessment Boundary:** N/A

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Engage in Argument from Evidence: • Construct an argument from evidence, data, and/or a model.	• Being part of a group helps animals obtain food, defend themselves, and cope with changes. • Groups may serve different functions and vary dramatically in size.	**Cause and Effect:** • Cause and effect relationships are routinely used to explain change.

Heredity: Inheritance and Variation of Traits (LS3)

3.LS3.1 Analyze and interpret data to provide evidence that plants and animals have traits inherited from parents and that variation of these traits exists in a group of similar organisms.

Clarification Statement: Patterns are the similarities and differences in traits shared between offspring and their parents, or among siblings. Emphasis is on organisms other than humans. **Assessment Boundary:** Assessment does not include genetic mechanisms of inheritance and prediction of traits. Assessment is limited to non-human examples.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Analyzing and Interpreting Data: • Analyze and interpret data to make sense of phenomena using logical reasoning.	• Many characteristics of organisms are inherited from their parents. • Different organisms vary in how they look and function because they have different inherited information.	**Patterns:** • Similarities and differences in patterns can be used to sort and classify natural phenomenon.

3.LS3.2 Use evidence to support the explanation that traits can be influenced by the environment.

Clarification Statement: Examples of the environment affecting a trait could include that normally tall plants grown with insufficient water are stunted; a pet dog that is given too much food and little exercise may become overweight; and animals who teach their offspring skills like hunting. **Assessment Boundary:** N/A

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Constructing Explanations: • Use evidence (e.g., observations, patterns) to support an explanation.	• Other characteristics result from individuals' interactions with the environment, which can range from diet to learning. Many characteristics involve both inheritance and environment. • The environment also affects the traits that an organism develops.	**Cause and Effect:** • Cause and effect relationships are routinely identified and used to explain changes.

Biological Unity and Diversity (LS4)

3.LS4.1 Analyze and interpret data from fossils to provide evidence of the organisms and the environments in which they lived long ago.

Clarification Statement: Examples of data could include type, size, and distribution of fossil organisms. Examples of fossils and environments could include marine fossils found on dry land, tropical plant fossils found in Arctic areas, and fossils of extinct organisms. **Assessment Boundary:** Assessment does not include identification of specific fossils or present plants and animals. Assessment is limited to major fossil types and relative ages.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Analyzing and Interpreting Data: • Analyze and interpret data to make sense of phenomena using logical reasoning.	• Some kinds of plants and animals that once lived on Earth are no longer found anywhere. • Fossils provide evidence about the types of organisms that lived long ago and also about the nature of their environments.	**Scale, Proportion, and Quantity:** • Observable phenomena exist from very short to very long time periods.

3.LS4.2 Use evidence to construct an explanation for how the variations in characteristics among individuals of the same species may provide advantages in surviving and reproducing.

Clarification Statement: Examples of cause and effect relationships could be plants that have larger thorns than other plants may be less likely to be eaten by predators; and animals that have better camouflage coloration than other animals may be more likely to survive and therefore more likely to leave offspring. **Assessment Boundary:** N/A

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Constructing Explanations: • Use evidence (e.g., observations, patterns) to construct an explanation.	• Sometimes the differences in characteristics between individuals of the same species provide advantages in surviving, finding mates, and reproducing.	**Cause and Effect:** • Cause and effect relationships are routinely identified, tested, or used to explain change.

Biological Unity and Diversity (LS4)

3.LS4.3 Construct an argument with evidence that in a particular habitat some organisms can survive well, some survive less well, and some cannot survive at all.

Clarification Statement: Examples of evidence could include needs and characteristics of the organisms and habitats involved. The organisms and their habitat make up a system in which the parts depend on each other. At no time should animals be put in danger to collect evidence.
Assessment Boundary: N/A

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Engaging in Argument from Evidence: • Construct an argument with evidence.	• For any particular environment, some kinds of organisms survive well, some survive less well, and some cannot survive at all. • Changes in an organism's habitat are sometimes beneficial to it and sometimes harmful.	**Cause and Effect:** • Cause and effect relationships are routinely identified and used to explain change.

3.LS4.4 Make a claim about the merit of a solution to a problem caused when the environment changes and the types of plants and animals that live there may change.*

Clarification Statement: Examples of environmental changes could include changes in land characteristics, water distribution, temperature, food, and other organisms. **Assessment Boundary:** Assessment is limited to a single environmental change. Assessment does not include the greenhouse effect or climate change.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Engaging in Argument from Evidence: • Make a claim about the merit of a solution to a problem by citing relevant evidence about how it meets the criteria and constraints of the problem.	• When the environment changes in ways that affect a place's physical characteristics, temperature, or availability of resources, some organisms survive and reproduce, others move to new locations, yet others move into the transformed environment, and some die. • Populations live in a variety of habitats, and change in those habitats affects the organisms living there. • Knolwedge of relevant scientific concepts and research findings is important in engineering.	**Systems and System Models:** • A system can be described in terms of its components and their interactions.

Earth's Systems (ESS2)		
3.ESS2.1 Represent data in tables and graphical displays to describe typical weather conditions expected during a particular season.		
Clarification Statement: Examples of data at this grade level could include average temperature, precipitation, and wind direction. **Assessment Boundary:** Assessment of graphical displays is limited to frequency tables, line plots, pictographs, and single bar graphs. Students are not expected to calculate averages but simply to represent them in graphical form.		
Science and Engineering Practice	**Disciplinary Core Ideas**	**Crosscutting Concepts**
Analyzing and Interpreting Data: • Represent data in tables and various graphical displays (bar graphs and pictographs) to reveal patterns that indicate relationships.	• Scientists record patterns of the weather across different times and areas so that they can make predictions about what kind of weather might happen next.	**Patterns:** • Patterns of change can be used to make predictions.

Earth's Systems (ESS2)		
3.ESS2.2 Obtain and combine information to describe climates in different regions of the world.		
Clarification Statement: Information could include hours of daylight, amount of precipitation, temperature, seasons, and wind. Descriptions could include the use of frequency tables, line plots, pictographs, and single bar graphs. Climate data should include weather conditions over multiple years. **Assessment Boundary:** Assessments do not include causes of seasons.		
Science and Engineering Practice	**Disciplinary Core Ideas**	**Crosscutting Concepts**
Obtaining, Evaluating, and Communicating Information: • Obtain and combine information from books and other reliable media to explain phenomena.	• Climate describes a range of an area's typical weather conditions and the extent to which those conditions vary over years to centuries.	**Patterns:** • Patterns of change can be used to make predictions.

Earth and Human Activity (ESS3)

3.ESS3.1 Make a claim about the merit of a design solution that reduces the impacts of a weather-related hazard.*

Clarification Statement: Examples of design solutions to weather-related hazards could include barriers to prevent flooding, wind/hail resistant roofs/windows, textured walking surfaces for ice, tornado shelters, and lighting rods. While earthquakes, volcanoes, and tsunamis are natural hazards they are not caused by weather phenomenon. **Assessment Boundary:** Assessments are limited to weather-related hazards only.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Engaging in Argument from Evidence: • Make a claim about the merit of a solution to a problem by citing relevant evidence about how it meets the criteria and constraints of the problem.	• A variety of natural hazards result from natural processes. • Humans cannot eliminate natural hazards but can take steps to reduce their impact. • Engineers improve existing technologies or develop new ones to increase their benefits (e.g., better artificial limbs), decrease known risks (e.g., seatbelts in cars), and meet societal demands (e.g., cell phones).	**Cause and Effect:** • Cause and effect relationships are routinely identified, tested, and used to explain change.

4TH GRADE (4)

Energy (PS3)

4.PS3.1 Use evidence to construct an explanation relating the speed of an object to the energy of that object.

Clarification Statement: Energy can be moved from place to place by moving objects (e.g. wind moving a sail then moving a boat, throwing a ball, or paddling a boat). As objects increase in speed they possess more energy (e.g. ball rolling down a ramp). **Assessment Boundary:** Assessment does not include quantitative measures of changes in the speed of an object (acceleration) or on any precise, quantitative, or complete definition of energy.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Constructing Explanations: • Use evidence (e.g., measurements, observations, patterns) to construct an explanation.	• The faster a given object is moving, the more energy it possesses.	**Patterns:** • Patterns can be used as evidence to support an explanation.

Energy (PS3)		
4.PS3.2 Make observations to provide evidence that energy can be transferred from place to place by sound, light, heat, and electric currents.		
Clarification Statement: Light, heat, sound, and electric currents transfer energy. Examples of this can include sound from a radio, light from a flashlight, the Sun heating a window pane, and currents to electronic devices. When energy is transferred it can stay in the same form or change forms. **Assessment Boundary:** Assessment does not include quantitative measurements of energy or the difference between transferring and transforming energy.		
Science and Engineering Practice	**Disciplinary Core Ideas**	**Crosscutting Concepts**
Planning and Carrying Out Investigations: • Make observations to produce data to serve as the basis for evidence for an explanation of a phenomena or test a design solutions.	• Energy can be moved from place to place by moving objects or through sound, light, or electric currents. • Energy is present whenever there are moving objects, sound, light, or heat. • When objects collide, energy can be transferred from one object to another, thereby changing their motion. In such collisions, some energy is typically also transferred to the surrounding air; as a result, the air gets heated and sound is produced. • Light also transfers energy from place to place. • Energy can also be transferred from place to place by electric currents, which can then be used locally to produce motion, sound, heat, or light.	**Energy and Matter:** • Energy can be transferred in various ways and between objects.

Energy (PS3)		
4.PS3.3 Ask questions and predict outcomes about the changes in energy that occur when objects collide.		
Clarification Statement: Collisions include any interactions between objects when they come in contact with one another and transfer energy. Emphasis is on the change in energy due to the change in speed, not forces, as objects interact. **Assessment Boundary:** Assessment does not include quantitative measures of changes in the speed of an object (acceleration) or quantitative measurements of energy.		
Science and Engineering Practice	**Disciplinary Core Ideas**	**Crosscutting Concepts**
Asking Questions: • Ask questions that can be investigated and predict reasonable outcomes based on patterns such as cause and effect relationships.	• Energy can be moved from place to place by moving objects or through sound, light, or electric currents. • Energy is present whenever there are moving objects, sound, light, or heat. • When objects collide, energy can be transferred from one object to another, thereby changing their motion. In such collisions, some energy is typically also transferred to the surrounding air; as a result, the air gets heated and sound is produced. • When objects collide, the contact forces transfer energy so as to change the objects' motions.	**Energy and Matter:** • Energy can be transferred in various ways and between objects.

Energy (PS3)		
4.PS3.4 Apply scientific ideas to design, test, and refine a device that converts energy from one form to another.*		
Clarification Statement: Examples of devices could include mousetrap cars; rubber band-powered vehicles; electric circuits that convert electrical energy into light, sound, or motion energy of a vehicle; and a passive solar heater that converts light into heat. Examples of constraints could include the materials, cost, or time to design the device. **Assessment Boundary:** N/A		
Science and Engineering Practice	**Disciplinary Core Ideas**	**Crosscutting Concepts**
Designing Solutions: • Apply scientific ideas to solve design problems.	• Energy can be transferred from place to place by electric currents, which can then be used locally to produce motion, sound, heat, or light. The currents may have been produced to begin with by transforming the energy of motion into electrical energy. • The expression "produce energy" typically refers to the conversion of stored energy into a desired form for practical use. • Possible solutions to a problem are limited by available materials and resources (constraints).Different proposals for solutions can be compared on the basis of how well each one meets the specified criteria for success or how well each takes the constraints into account. • The success of a designed solution is determined by considering the desired features of a solution (criteria). • Engineers improve existing technologies or develop new ones.	**Energy and Matter:** • Energy can be transferred in various ways and between objects.

Waves and Their Applications in Technologies for Information Transfer (PS4)

4.PS4.1 Develop and use a model of waves to describe patterns in terms of amplitude and wavelength, and to show that waves can cause objects to move.

Clarification Statement: Examples of models could include diagrams, analogies, and physical models using items like stringed beads, rubber bands, or yarn to illustrate wavelength and amplitude of waves. Examples of wave patterns that cause objects to move up and down or side to side could include the vibrating patterns associated with sound, the vibrating patterns of seismic waves produced by earthquakes.

Assessment Boundary: Assessment does not include interference effects, electromagnetic waves, non-periodic waves, or quantitative models of amplitude and wavelength.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Developing and Using Models: • Develop a model using an analogy, example, or abstract representation to describe a scientific principle.	• Waves, which are regular patterns of motion, can be made in water by disturbing the surface. • When waves move across the surface of deep water, the water goes up and down in place; there is no net motion in the direction of the wave except when the water meets a beach. • Waves of the same type can differ in amplitude (height of the wave) and wavelength (spacing between wave peaks).	**Patterns:** • Similarities and differences in patterns can be used to sort and classify designed products.

4.PS4.2 Develop a model to describe that light reflecting from objects and entering the eye allows objects to be seen.

Clarification Statement: Models would identify components such as the source of the light, objects that are seen, the path of the light, and the eye. Models could be used to investigate what happens when one of the components changes (Example: Close the eyes, block the light, or change the light path). **Assessment Boundary:** Assessment does not include knowledge of specific colors reflected and seen, the cellular mechanisms of vision, or how the retina works.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Developing and Using Models: • Develop a model to describe phenomena.	• An object can be seen when light reflected from its surface enters the eyes.	**Cause and Effect:** • Cause and effect relationships are routinely identified.

Waves and Their Applications in Technologies for Information Transfer (PS4)

4.PS4.3 Generate and compare multiple solutions that use patterns to transfer information.*

Clarification Statement: Examples of solutions could include drums sending coded information through sound waves, using a grid of 1's and 0's representing black and white to send information about a picture, QR codes, barcodes, and using Morse code to send text. **Assessment Boundary:** Assessment does not include creating or writing digital code.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Designing Solutions: • Generate and compare multiple solutions to a problem based on how well they meet the criteria and constraints of the design solution.	• Digitized information can be transmitted over long distances without significant degradation. • High-tech devices, such as computers or cell phones, can receive and decode information—convert it from digitized form to voice—and vice versa. • Different solutions need to be tested in order to determine which of them best solves the problem, given the criteria and the constraints.	**Patterns:** • Similarities and differences in patterns can be used to sort and classify designed products.

From Molecules to Organisms: Structure and Processes (LS1)

4.LS1.1 Construct an argument that plants and animals have internal and external structures that function to support survival, growth, behavior, and reproduction.

Clarification Statement: Examples of structures could include thorns, stems, roots, colored petals, heart, stomach, lung, brain, and skin.
Assessment Boundary: Assessment is limited to macroscopic structures within plant and animal systems.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Engaging in Argument from Evidence: • Construct an argument with evidence, data, and/or a model.	• Plants and animals have both internal and external structures that serve various functions in growth, survival, behavior, and reproduction.	**Structure and Function:** • Substructures have shapes and parts that serve functions.

From Molecules to Organisms: Structure and Processes (LS1)

4.LS1.2 Use a model to describe that animals receive different types of information through their senses, process the information in their brain, and respond to the information in different ways.

Clarification Statement: Emphasis is on systems of information transfer. Examples of response to stimuli include a dog is hot and lies in the shade, a rabbit hears a noise and runs away, and a person is cold so they put on a jacket. **Assessment Boundary:** Assessment does not include the mechanisms by which the brain stores and recalls information or the mechanisms of how sensory receptors function.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Developing and Using Models: • Use a model to test interactions concerning the functioning of a natural system.	• Different sense receptors are specialized for particular kinds of information, which may be then processed by the animal's brain. • Animals are able to use their perceptions and memories to guide their actions.	**Systems and System Models:** • A system can be described in terms of its components and their interactions.

Earth's Place in the Universe (ESS1)

4.ESS1.1 Identify evidence from patterns in rock formations and fossils in rock layers to support an explanation for changes in a landscape over time.

Clarification Statement: Examples of evidence from patterns could include rock layers with marine shell fossils above rock layers with plant fossils and no shells, indicating a change from land to water over time; and a canyon with different rock layers in the walls and a river in the bottom, indicating that over time a river cut through the rock. **Assessment Boundary:** Assessment does not include specific knowledge or memorization of specific rock formation and layers. Assessment is limited to relative time.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Constructing Explanations: • Identify the evidence that supports particular points in an explanation.	• Local, regional, and global patterns of rock formations reveal changes over time due to earth forces, such as earthquakes. • The presence and location of certain fossil types indicate the order in which rock layers were formed.	**Patterns:** • Patterns can be used as evidence to support an explanation.

Earth's Systems (ESS2)

4.ESS2.1 Plan and conduct investigations on the effects of water, ice, wind, and vegetation on the relative rate of weathering and erosion.

Clarification Statement: Examples of variables to test could include angle of slope in the downhill movement of water, amount of vegetation, speed of wind, relative rate of deposition, cycles of freezing and thawing of water, cycles of heating and cooling, and volume of water flow.
Assessment Boundary: Assessment is limited to a single form of weathering or erosion.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Planning and Carrying Out Investigations: • With guidance, plan and conduct an investigation with peers.	• Rainfall helps to shape the land and affects the types of living things found in a region. Water, ice, wind, living organisms, and gravity break rocks, soils, and sediments into smaller particles and move them around.	**Cause and Effect:** • Cause and effect relationships are routinely identified, tested, and used to explain change.

4.ESS2.2 Analyze and interpret data from maps to describe patterns of Earth's features.

Clarification Statement: Maps can include topographic maps of Earth's land and ocean floor, as well as maps of the locations of mountains, continental boundaries, volcanoes, and earthquakes. **Assessment Boundary:** N/A

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Analyzing and Interpreting Data: • Analyze and interpret data to make sense of phenomena using logical reasoning.	• The locations of mountain ranges, deep ocean trenches, ocean floor structures, earthquakes, and volcanoes occur in patterns. • Most earthquakes and volcanoes occur in bands that are often along the boundaries between continents and oceans. • Major mountain chains form inside continents or near their edges. • Maps can help locate the different land and water features where people live and in other areas of Earth.	**Patterns:** • Patterns can be used as evidence to support an explanation.

Earth and Human Activity (ESS3)

4.ESS3.1 Obtain and combine information to describe that energy and fuels are derived from renewable and non-renewable resources and how their uses affect the environment.

Clarification Statement: Examples of renewable energy resources could include wind energy, water behind dams, and sunlight; non-renewable energy resources are fossil fuels and fissile materials. Examples of environmental effects could include loss of habitat due to dams, loss of habitat due to surface mining, and air pollution from burning of fossil fuels. **Assessment Boundary:** N/A

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Obtaining, Evaluating, and Communicating Information: • Obtain and combine information from books and other reliable media to explain phenomena.	• Energy and fuels that humans use are derived from natural sources, and their use affects the environment in multiple ways. • Some resources are renewable over time, and others are not.	**Cause and Effect:** • Cause and effect relationships are routinely identified, tested, and used to explain change.

4.ESS3.2 Generate and compare multiple solutions to reduce the impacts of natural Earth processes on humans.*

Clarification Statement: Examples of solutions could include designing an earthquake resistant building, improving monitoring of volcanic activity, and constructing waterways for flood waters. **Assessment Boundary:** Assessment is limited to earthquakes, floods, tsunamis, and volcanic eruptions.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Designing Solutions: • Generate and compare multiple solutions to a problem based on how well they meet the criteria and constraints of the design solution.	• A variety of hazards result from natural processes (e.g., earthquakes, tsunamis, volcanic eruptions). • Humans cannot eliminate the hazards but can take steps to reduce their impacts. • Testing a solution involves investigating how well it performs under a range of likely conditions. • Engineers improve existing technologies or develop new ones to increase their benefits, to decrease known risks, and to meet societal demands.	**Cause and Effect:** • Cause and effect relationships are routinely identified and used to explain change.

5TH GRADE (5)

Matter and Its Interactions (PS1)

5.PS1.1 Develop a model to describe that matter is made of particles too small to be seen.

Clarification Statement: Examples of evidence that could be utilized in building models include adding air to expand a basketball, compressing air in a syringe, dissolving sugar in water, and evaporating salt water. **Assessment Boundary:** Assessment does not include atomic scale mechanism of evaporation and condensation or defining the unseen particles.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Developing and Using Models: • Develop a model to describe phenomena.	• Matter of any type can be subdivided into particles that are too small to see, but even then, the matter still exists and can be detected by other means. • A model showing that gases are made from matter particles that are too small to see and are moving freely around in space can explain many observations, including the inflation and shape of a balloon; the effects of air on larger particles or objects.	**Scale, Proportion, and Quantity:** • Natural objects exist from the very small to the immensely large.

5.PS1.2 Measure and graph quantities to provide evidence that regardless of the type of change that occurs when heating, cooling, or mixing substances, the total weight of matter is conserved.

Clarification Statement: Examples of reactions or changes could include phase changes, dissolving, and mixing that forms new substances. Measurements can be organized in tables, charts, and graphs and can be used as evidence that weight is conserved. **Assessment Boundary:** Assessment does not include distinguishing between mass and weight.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Use Mathematics and Computational Thinking: • Represent data in graphical displays (bar graphs, pictographs, and/or pie charts) to reveal patterns that indicate relationships.	• The amount (weight) of matter is conserved when it changes form, even in transitions in which it seems to vanish. • No matter what reaction or change in properties occurs, the total weight of the substances does not change. (Boundary: Mass and weight are not distinguished at this grade level).	**Scale, Proportion, and Quantity:** • Standard units are used to measure and describe physical quantities such as weight, time, temperature, and volume.

Matter and Its Interactions (PS1)

5.PS1.3 Make observations and measurements to identify materials based on their properties.

Clarification Statement: Observations can be based on direct experiences with materials and comparisons of materials. Examples of materials to be identified could include powders (e.g. baking soda, cornstarch, sugar), metals, minerals, and liquids. Examples of properties could include color, hardness, reflectivity, electrical conductivity, thermal conductivity, response to magnetic forces, and solubility; density is not intended as an identifiable property. **Assessment Boundary:** Assessment does not include density or distinguishing mass and weight. At this grade level, mass and weight are not distinguished, and no attempt is made to define the unseen particles or explain the atomic-scale mechanism of evaporation and condensation.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Planning and Carrying Out Investigations: • Make observations and measurements to produce data to serve as the basis for evidence for an explanation of a phenomenon.	• Measurements of a variety of properties can be used to identify materials. (Boundary: At this grade level, mass and weight are not distinguished, and no attempt is made to define the unseen particles or explain the atomic-scale mechanism of evaporation and condensation.)	**Scale, Proportion, and Quantity:** • Standard units are used to measure and describe physical quantities such as weight, time, temperature, and volume.

5.PS1.4 Conduct an investigation to determine whether the mixing of two or more substances results in new substances.

Clarification Statement: Examples of interactions forming new substances can include mixing baking soda and vinegar. Examples of interactions not forming new substances can include mixing baking soda and water. **Assessment Boundary:** N/A

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Planning and Carrying Out Investigations: • Conduct an investigation collaboratively to produce data to serve as the basis for evidence, using fair tests in which variables are controlled and the number of trials considered.	• When two or more different substances are mixed, a new substance with different properties may be formed.	**Cause and Effect:** • Cause and effect relationships are routinely identified, tested, and used to explain change.

Motion and Stability: Forces and Interactions (PS2)

5.PS2.1 Support an argument, with evidence, that Earth's gravitational force pulls objects downward toward the center of the earth.

Clarification Statement: "Downward" is a local description of the direction that points toward the center of the spherical earth. Earth causes objects to have a force on them that point toward the center of the Earth, "downward". Evidence could be drawn from diagrams, models, and data that are provided. **Assessment Boundary:** Mathematical representation of gravitational force is not assessed.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Engaging in Argument from Evidence: • Construct and/or support an argument with evidence, data, and/or a model.	• The gravitational force of Earth acting on an object near Earth's surface pulls that object toward the planet's center.	**Cause and Effect:** • Cause and effect relationships are routinely identified, tested, and used to explain change.

Energy (PS3)

5.PS3.1 Use models to describe that energy in animals' food (used for body repair, growth, motion, and to maintain body warmth) was once energy from the Sun.

Clarification Statement: Examples of models could include diagrams and flow-charts. **Assessment Boundary:** Assessment does not include cellular mechanisms of digestive absorption.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Developing and Using Models: • Use models to describe phenomena.	• The energy released from food was once energy from the Sun that was captured by plants in the chemical process that forms plant matter (from air and water). • Food provides animals with the materials they need for body repair and growth, energy they need to maintain body warmth and for motion.	**Energy and Matter:** • Energy can be transferred in various ways and between objects.

From Molecules to Organisms: Structure and Processes (LS1)		
5.LS1.1 Support an argument that plants get the materials they need for growth chiefly from air and water.		
Clarification Statement: While energy for plant growth comes from the Sun, material for plant growth comes chiefly from air and water, not from the soil. Emphasis is on the idea that plant matter comes mostly from air and water, not from the soil. **Assessment Boundary:** Does not include molecular explanations of photosynthesis.		
Science and Engineering Practice	**Disciplinary Core Ideas**	**Crosscutting Concepts**
Engaging in Argument from Evidence: • Support an argument with evidence, data, or a model.	• The energy released from food was once energy from the Sun that was captured by plants in the chemical process that forms plant matter (from air and water). • Plants acquire their material for growth chiefly from air and water.	**Energy and Matter:** • Matter is transported into, out of, and within systems.

Ecosystems: Interactions, Energy, and Dynamics (LS2)

5.LS2.1 Develop a model to describe the movement of matter among plants, animals, decomposers, and the environment.

Clarification Statement: Emphasis is on the idea that matter in systems cycles among living and nonliving things (air, water, decomposed materials in soil). Examples of systems could include organisms, ecosystems, and the Earth. **Assessment Boundary:** Assessment does not include photosynthesis or molecular explanations.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Developing and Using Models: • Develop a model to describe phenomena.	• The food of almost any kind of animal can be traced back to plants. • Organisms are related in food webs in which some animals eat plants for food and other animals eat the animals that eat plants. • Some organisms, such as fungi and bacteria, break down dead organisms (both plants or plants parts and animals) and therefore operate as "decomposers." • Decomposition eventually restores (recycles) some materials back to the soil. • Organisms can survive only in environments in which their particular needs are met. • A healthy ecosystem is one in which multiple species of different types are each able to meet their needs in a relatively stable web of life. • Newly introduced species can damage the balance of an ecosystem. • Matter cycles between the air and soil and among plants, animals, and microbes as these organisms live and die. • Organisms obtain gases and water from the environment, and release waste matter (gas, liquid, or solid) back into the environment.	**Systems and System Models:** • A system can be described in terms of its components and their interactions.

Ecosystems: Interactions, Energy, and Dynamics (LS2)

5.LS2.2 Use models to explain factors that upset the stability to local ecosystems.

Clarification Statement: Explanatory models can include representations of relationships between and among organisms, or simulations can be used to predict how factors might impact an ecosystem. Factors that upset an ecosystem's stability includes invasive species, drought, human development, and removal of predators. **Assessment Boundary:** Does not include molecular explanations.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Developing and Using Models: • Develop a model to describe phenomena.	• Organisms can survive only in environments in which their particular needs are met. • A healthy ecosystem is one in which multiple species of different types are each able to meet their needs in a relatively stable web of life. • Newly introduced species can damage the balance of an ecosystem.	**Systems and System Models:** • A system can be described in terms of its components and their interactions.

Earth's Place in the Universe (ESS1)

5.ESS1.1 Support an argument with evidence that differences in the apparent brightness of the Sun compared to other stars is due to their relative distances from Earth.

Clarification Statement: Examples of scale could include relative distance of specific stars to Earth. Evidence to support arguments could come from data or models. Examples of stars include Polaris, Sirius, and Betelgeuse. **Assessment Boundary:** Assessment is limited to relative distances, not size of stars. Assessment does not include other factors that affect apparent brightness (such as stellar masses, age, stage).

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Engaging in Arguments from Evidence: • Support an argument with evidence, data, or a model.	• The Sun is a star that appears brighter than other stars because it is closer to Earth. • The Sun is a star that appears larger than other stars because it is closer to Earth. • Stars range greatly in their distance from Earth.	**Scale, Proportion, and Quantity:** • Natural objects exist from the very small to the immensely large.

Earth's Place in the Universe (ESS1)

5.ESS1.2 Represent data in graphical displays to reveal patterns of daily changes in the length and direction of shadows, in addition to different positions of the Sun, Moon, and stars at different times of the day, month, and year.

Clarification Statement: Examples of patterns could include the position and motion of Earth with respect to the Sun, and selected stars that are visible only in particular months or the position of the Moon with respect to the Sun and Earth. **Assessment Boundary:** Assessment does not include causes of seasons or labeling specific phases of the Moon.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Analyzing and Interpreting Data: • Represent data in graphical displays (bar graphs, pictographs, and/or pie charts) to reveal patterns that indicate relationships.	• The orbits of Earth around the Sun and of the Moon around Earth, together with the rotation of Earth about an axis between its North and South poles, cause observable patterns. These include: day and night; daily changes in the length and direction of shadows; and different positions of the Sun, Moon, and stars at different times of the day, month, and year.	**Patterns:** • Similarities and differences in patterns can be used to sort, classify, communicate, and analyze simple rates of change for natural phenomena.

Earth's Systems (ESS2)

5.ESS2.1 Develop a model to describe ways the geosphere, biosphere, hydrosphere, and/or atmosphere interact.

Clarification Statement: The geosphere, hydrosphere, atmosphere, and biosphere are each a system. Examples of system interactions could include the influence of the ocean on ecosystems, landform shape, and climate; the influence of the atmosphere on landforms and ecosystems through weather and climate; and the influence of mountain ranges on winds and clouds in the atmosphere. **Assessment Boundary:** Assessment is limited to the interactions of two systems at a time.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Developing and Using Models: • Develop a model using an example to describe phenomena.	• Earth's major systems are the geosphere, hydrosphere, atmosphere, and biosphere. • These systems interact in multiple ways to affect Earth's surface materials and processes. • The ocean supports a variety of ecosystems and organisms, shapes landforms, and influences climate. • Winds and clouds in the atmosphere interact with landforms to determine patterns of weather.	**System and System Models:** • A system can be described in terms of its components and their interactions.

Earth's Systems (ESS2)

5.ESS2.2 Describe and graph amounts of saltwater and freshwater in various reservoirs to provide evidence about the distribution of water on Earth.

Clarification Statement: Descriptions could include comparisons using graphs, charts, and tables. Quantities could include percentages, total volume, and amounts. Emphasis is on using amounts or percentages of water to make comparisons. No attempt to calculate percentages should be made. **Assessment Boundary:** Assessment is limited to oceans, lakes, rivers, glaciers, groundwater, and polar ice caps, and does not include the atmosphere. Only a tiny fraction is in streams, lakes, wetlands, and the atmosphere. Assessment should not include circle charts (pie charts) or calculation of percentages.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Using Mathematics and Computational Thinking: • Describe and graph quantities such as area and volume to address scientific questions.	• Nearly all of Earth's available water is in the ocean. • Most freshwater is in glaciers or underground; only a tiny fraction is in streams, lakes, wetlands, and the atmosphere.	**Scale, Proportion, and Quantity:** • Standard units are used to measure and describe physical quantities such as weight and volume.

Earth and Human Activity (ESS3)

5.ESS3.1 Obtain and combine information about ways individual communities use science ideas to protect the Earth's resources and environments.

Clarification Statement: Examples of information might include the use of natural fertilizers or biological pest control by farmers, replanting trees after cutting them by the logging industry, and the institution of recycling programs in cities. **Assessment Boundary:** Assessment is limited to one human interaction at a time.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Obtaining, Evaluating, and Communicating Information: • Obtain and combine information from books and/or other reliable media to explain phenomena or solutions to a design problem.	• Human activities in agriculture, industry, and everyday life have had major effects on the land, vegetation, streams, ocean, air, and even outer space. But individuals and communities are doing things to help protect Earth's resources and environments.	**System and System Models:** • A system can be described in terms of its components and their interactions.

6TH GRADE (6)

Matter and Its Interactions (PS1)

6.PS1.4 Develop a model that predicts and describes changes in particle motion, temperature, and state of a pure substance when thermal energy is added or removed.

Clarification Statement: Emphasis is on qualitative molecular-level models of solids, liquids, and gases to show that adding or removing thermal energy increases or decreases kinetic energy of the particles until a change of state occurs. Examples of models could include drawings and diagrams. Examples of particles could include molecules or inert atoms. Examples of pure substances could include water, carbon dioxide, and helium. **Assessment Boundary:** The use of mathematical formulas is not intended

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Developing and Using Models: • Develop a model to predict and/or describe phenomena.	• Gases and liquids are made of molecules or inert atoms that are moving about relative to each other. In a liquid, the molecules are constantly in contact with others; in a gas, they are widely spaced except when they happen to collide. In a solid, atoms are closely spaced and may vibrate in position but do not change relative locations. • The changes of state that occur with variations in temperature or pressure can be described and predicted using these models of matter. • The term "heat" as used in everyday language refers both to thermal energy (the motion of atoms or molecules within a substance) and the transfer of that thermal energy from one object to another. In science, heat is used only for this second meaning; it refers to the energy transferred due to the temperature difference between two objects. • The temperature of a system is proportional to the average internal kinetic energy and potential energy per atom or molecule (whichever is the appropriate building block for the system's material). The details of that relationship depend on the type of atom or molecule and the interactions among the atoms in the material. • Temperature is not a direct measure of a system's total thermal energy. The total thermal energy (sometimes called the total internal energy) of a system depends jointly on the temperature, the total number of atoms in the system, and the state of the material.	**Cause and Effect:** • Cause and effect relationships are routinely identified, tested, and used to explain change.

Energy (PS3)

6.PS3.3 Apply scientific principles to design, construct, and test a device that either minimizes or maximizes thermal energy transfer.*

Clarification Statement: Examples of devices could include an insulated box, a solar cooker, and a Styrofoam cup. Care should be taken with devices that concentrate significant amounts of energy, e.g. conduction, convection, and/or radiation. **Assessment Boundary:** Assessment does not include calculating the total amount of thermal energy.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Designing Solutions: • Apply scientific ideas or principles to design, construct, and test a design of an object, tool, process, or system.	• Temperature is a measure of the average kinetic energy of particles of matter. • The relationship between the temperature and the total energy of a system depends on the types, states, and amounts of matter present. • Energy is spontaneously transferred out of hotter regions or objects and into colder ones. • The more precisely a design task's criteria and constraints can be defined, the more likely it is that the designed solution will be successful. • Specification of constraints includes consideration of scientific principles and other relevant knowledge that is likely to limit possible solutions. • A solution needs to be tested, and then modified on the basis of the test results in order to improve it. • There are systematic processes for evaluating solutions with respect to how well they meet criteria and constraints of a problem.	**Energy and Matter:** • The transfer of energy can be tracked as energy flows through a designed or natural system.

Energy (PS3)

6.PS3.4 Plan an investigation to determine the relationships among the energy transferred, the type of matter, the mass, and the change in the average kinetic energy of the particles as measured by the temperature of the sample.

Clarification Statement: Examples of experiments could include comparing final water temperatures after different masses of ice melted in the same volume of water with the same initial temperature, the temperature change of samples of different materials with the same mass as they cool or heat in the environment, or the same material with different masses when a specific amount of energy is added. **Assessment Boundary:** Assessment does not include calculating the total amount of thermal energy transferred.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Planning and Carrying Out Investigations: • Plan an investigation individually and collaboratively, and in the design: identify independent and dependent variables and controls, what tools are needed to do the gathering, how measurements will be recorded, and how many data are needed to support a claim.	• Temperature is a measure of the average kinetic energy of particles of matter. • The relationship between the temperature and the total energy of a system depends on the types, states, and amounts of matter present. • The amount of energy transfer needed to change the temperature of a matter sample by a given amount depends on the nature of the matter, the size of the sample, and the environment.	**Scale, Proportion, and Quantity:** • Proportional relationships (e.g., speed as the ratio of distance traveled to time taken) among different types of quantities provide information about the magnitude of properties and processes.

Waves and Their Applications in Technologies for Information Transfer (PS4)		
6.PS4.2 Develop and use a model to describe that waves are reflected, absorbed, or transmitted through various materials.		
Clarification Statement: Emphasis is on both light and mechanical waves. Examples of models could include drawings, simulations, and written descriptions of light waves through a prism, mechanical waves through gas vs. liquids vs. solids, or sound waves through different mediums. **Assessment Boundary:** Assessment is limited to qualitative applications pertaining to electromagnetic and mechanical waves.		
Science and Engineering Practice	**Disciplinary Core Ideas**	**Crosscutting Concepts**
Developing and Using Models: • Develop and use a model to describe phenomena.	• A sound wave needs a medium through which it is transmitted. • When light shines on an object, it is reflected, absorbed, or transmitted through the object, depending on the object's material and the frequency (color) of the light. • The path that light can travel can be traced as straight lines, except at surfaces between different transparent materials (e.g., air and water, air, and glass) where the light path bends. • A wave model of light is useful for explaining brightness, color, and the frequency-dependent bending of light at a surface between media. However, because light can travel through space, it cannot be a matter wave, like sound or water waves.	**Structure and Function:** • Structures can be designed to serve particular functions by taking into account properties of different materials, and how materials can be shaped and used.

From Molecules to Organisms: Structure and Processes (LS1)

6.LS1.1 Conduct an investigation to provide evidence that living things are made of cells; either one cell or many different numbers and types of cells.

Clarification Statement: Emphasis is on developing evidence that living things are made of cells, distinguishing between living and non-living things, and understanding that living things may be made of one cell or many and varied cells. **Assessment Boundary:** Assessment does not include identification of specific cell types and should emphasize the use of evidence from investigations.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Planning and Carrying Out Investigations: • Conduct an investigation to produce data to serve as the basis for evidence that meets the goals of an investigation.	• All living things are made up of cells, which is the smallest unit that can be said to be alive. • An organism may consist of one single cell (unicellular) or many different numbers and types of cells (multicellular).	**Scale, Proportion, and Quantity:** • Phenomena that can be observed at one scale may not be observable at another scale.

6.LS1.2 Develop and use a model to describe the function of a cell as a whole and ways parts of cells contribute to the function.

Clarification Statement: Emphasis is on the cell functioning as a whole system and the primary role of identified parts of the cell, specifically the nucleus, chloroplasts, mitochondria, cell membrane, and cell wall. Other organelles can be introduced while covering this concept.
Assessment Boundary: Assessment of organelle structure/function relationships limited to cell wall and cell membrane. Assessment of other organelles is limited to their relationship to the whole cell. Assessment does not include biochemical functions of cell or cell parts.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Developing and Using Models: • Develop and use a model to describe phenomena.	• Within cells, special structures are responsible for particular functions, and the cell membrane forms the boundary that controls what enters and leaves the cell.	**Structure and Function:** • Complex and microscopic structures and systems can be visualized, modeled, and used to describe how their function depends on the relationships among its parts.

From Molecules to Organisms: Structure and Processes(LS1)

6.LS1.3 Use an argument supported by evidence for how the body is a system of interacting subsystems composed of groups of cells.

Clarification Statement: Emphasis is on the conceptual understanding that cells form tissues and tissues form organs specialized for particular body functions. Examples could include the interaction of subsystems within a system and the normal functioning of those systems.

Assessment Boundary: Assessment does not include the mechanism of one body system independent of others. Assessment is limited to the circulatory, excretory, digestive, respiratory, muscular, and nervous systems.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Engaging in Argument from Evidence: • Use an oral and written argument supported by evidence to support or refute an explanation or a model for a phenomenon.	• In multicellular organisms, the body is a system of multiple interacting subsystems. These subsystems are groups of cells that work together to form tissues and organs that are specialized for particular body functions.	**Systems and System Models:** • Systems may interact with other systems; they may have sub-systems and be a part of larger complex systems.

6.LS1.8 Gather and synthesize information that sensory receptors respond to stimuli by sending messages to the brain for immediate behavior or storage as memories.

Clarification Statement: Examples include receptors in the eye that respond to light intensity and color; receptors in hair cells of the inner ear that detect vibrations conducted from the eardrum; taste buds that detect chemical qualities of foods including sweetness, bitterness, sourness, saltiness, and umami (savory taste); and receptors in the skin that respond to variations in pressure. **Assessment Boundary:** The assessment should provide evidence of students' abilities to provide a basic and conceptual explanation of the process. Assessment does not include mechanisms for the transmission of this information.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Obtaining, Evaluating, and Communicating Information: • Read and comprehend grade appropriate complex texts and/or other reliable media to summarize and obtain scientific and technical ideas.	• Each sense receptor responds to different inputs (electromagnetic, mechanical, chemical), transmitting them as signals that travel along nerve cells to the brain. The signals are then processed in the brain, resulting in immediate behaviors or memories.	**Cause and Effect:** • Cause and effect relationships may be used to predict phenomena in natural systems.

Earth's Place in the Universe (ESS1)

6.ESS1.4 Construct a scientific explanation based on evidence from rock strata for how the geologic time scale is used to organize Earth's geologic history.

Clarification Statement: Emphasis is on analyses of rock formations and fossils they contain to establish relative ages of major events in Earth's history. Scientific explanations can include models to study the geologic time scale. **Assessment Boundary:** Assessment does not include recalling the names of specific periods or epochs and events within them.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Constructing Explanations: • Construct an explanation based on valid and reliable evidence obtained from a variety of sources (including students' own investigations, models, theories, simulations, peer review) and the assumption that theories and laws that describe the natural world operate today as they did in the past, and will continue to do so in the future.	• The geologic time scale interpreted from rock strata provides a way to organize Earth's history. • Analyses of rock strata and the fossil record provide only relative dates, not an absolute scale.	**Scale, Proportion, and Quantity:** • Time, space, and energy phenomena can be observed at various scales using models to study systems that are too large or too small.

Earth's Systems (ESS2)		
6.ESS2.1 Develop a model to describe the cycling of Earth's materials and the flow of energy that drives these processes within and among Earth's systems.		
Clarification Statement: Emphasis is on how energy from the Sun and Earth's hot interior drive processes that cause physical and chemical changes to materials within and between the geosphere, hydrosphere, atmosphere, and biosphere. Examples of processes could include melting, crystallization, weathering, deformation, and sedimentation, which act together to form and change rocks and minerals through the rock cycle. **Assessment Boundary:** Assessment does not include the identification or naming of minerals.		
Science and Engineering Practice	**Disciplinary Core Ideas**	**Crosscutting Concepts**
Developing and Using Models: • Develop and use a model to describe phenomena.	• All Earth processes are the result of energy flowing and matter cycling within and among the planet's systems. This energy is derived from the Sun and Earth's hot interior. The energy that flows and matter that cycles produces chemical and physical changes in Earth's materials.	**Stability and Change:** • Explanations of stability and change in natural or designed systems can be constructed by examining the changes over time and forces at different scales, including the atomic scale.

Earth's Systems (ESS2)

6.ESS2.2 Construct an explanation based on evidence for how geoscience processes have changed Earth's surface at varying time and spatial scales.

Clarification Statement: Emphasis is on how processes change Earth's surface at time and spatial scales that can be large (such as slow plate motions or the uplift of large mountain ranges) or small (such as rapid landslides or microscopic geochemical reactions), and how many geoscience processes usually behave gradually but are punctuated by catastrophic events (such as earthquakes, volcanoes, and meteor impacts). Examples of geoscience processes include surface weathering and deposition by the movements of water, ice, and wind. Emphasis is on geoscience processes that shape local geographic features, where appropriate. **Assessment Boundary:** Assessment does not include identification or naming of specific events.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Constructing Explanations: • Construct an explanation based on valid and reliable evidence obtained from a variety of sources (including students' own investigations, models, theories, simulations, peer review) and the assumption that theories and laws that describe the natural world operate today as they did in the past and will continue to do so in the future.	• The planet's systems interact over scales that range from microscopic to global in size; these interactions have shaped Earth's history and will determine its future. • Water's movements, both on the land and underground, cause weathering and erosion, which change the land's surface features and create underground formations.	**Scale, Proportion, and Quantity:** • Time, space, and energy phenomena can be observed at various scales, using models to study systems that are too large or too small.

Earth's Systems (ESS2)		
6.ESS2.3 Analyze and interpret data on the patterns of distribution of fossils and rocks, continental shapes, and seafloor structures to provide evidence of the past plate motions.		
Clarification Statement: Examples could include identifying patterns on maps of earthquakes and volcanoes relative to plate boundaries, the shapes of the continents, the locations of ocean structures (including mountains, volcanoes, faults, and trenches), or similarities of rock and fossil types on different continents. **Assessment Boundary:** Paleomagnetic anomalies in oceanic and continental crust are not assessed.		
Science and Engineering Practice	**Disciplinary Core Ideas**	**Crosscutting Concepts**
Analyze and Interpret Data: • Analyze and interpret data to determine similarities and differences in findings.	• Tectonic processes continually generate new ocean sea floor at ridges and destroy old sea floor at trenches. • Maps of ancient land and water patterns, based on investigations of rocks and fossils, make clear how Earth's plates have moved great distances, collided, and spread apart.	**Patterns:** • Patterns in rate of change and other numerical relationships can provide information about natural and human-designed systems.

Earth's Systems (ESS2)

6.ESS2.4 Develop a model to describe the cycling of water through Earth's systems driven by energy from the sun and the force of gravity.

Clarification Statement: Emphasis is on the ways water changes its state as it moves through the multiple pathways of the hydrologic cycle. Examples of models can be conceptual or physical. **Assessment Boundary:** A quantitative understanding of the latent heats of vaporization and fusion is not assessed.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Developing and Using Models: • Develop a model to describe unobservable mechanisms.	• Water continually cycles among land, ocean, and atmosphere via transpiration, evaporation, condensation, and crystallization, and precipitation, as well as downhill flows on land. • Global movements of water and its changes in form are propelled by sunlight and gravity.	**Energy and Matter:** • Within a natural or designed system, the transfer of energy drives the motion and/or cycling of matter.

6.ESS2.5 Collect data to provide evidence for how the motions and complex interactions of air masses result in changes in weather conditions.

Clarification Statement: Emphasis is on how air masses flow from regions of high pressure to low pressure, causing weather (defined by temperature, pressure, humidity, precipitation, and wind) at a fixed location to change over time, and how sudden changes in weather can result when different air masses interact. Emphasis is on how weather can be predicted within probabilistic ranges. Examples of data can be provided to students (such as weather maps, diagrams, and visualizations) or obtained through laboratory experiments (such as with condensation). **Assessment Boundary:** Assessment does not include recalling the names of cloud types or weather symbols used on weather maps or the reported diagrams from weather stations.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Planning and Carrying Out Investigations: • Collect data to serve as the basis for evidence to answer scientific questions or test design solutions under a range of conditions.	• Weather and climate are influenced by interactions involving sunlight, the ocean, the atmosphere, ice, landforms, and living things. • These interactions vary with latitude, altitude, and local and regional geography, all of which can affect oceanic and atmospheric flow patterns. • Because these patterns are so complex, weather can be predicted only probabilistically.	**Cause and Effect:** • Cause and effect relationships may be used to predict phenomena in natural or designed systems.

Earth's Systems (ESS2)

6.ESS2.6 Develop and use a model to describe how unequal heating and rotation of the Earth causes patterns of atmospheric and oceanic circulation that determine regional climates.

Clarification Statement: Emphasis is on how patterns vary by latitude, altitude, and geographic land distribution. Emphasis of atmospheric circulation is on the sunlight-driven latitudinal banding, the Coriolis effect, and resulting prevailing winds; emphasis of ocean circulation (e.g., Gulf Stream, North Pacific Drift, California Current) is on the transfer of heat by the global ocean convection cycle, which is constrained by the Coriolis effect and the outlines of continents. Interactions between the atmosphere and oceans can affect the ocean's surface temperature (El Nino/La Nina). Examples of models can be diagrams, maps and globes, or digital representations. **Assessment Boundary:** Assessment should not be focused on specific weather events, but on the patterns that drive Earth's climate systems.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Developing and Using Models: • Develop and use a model to describe phenomena.	• Variations in density due to variations in temperature and salinity drive a global pattern on interconnected ocean currents. • Weather and climate are influenced by interactions involving sunlight, the ocean, the atmosphere, ice, landforms, and living things. • These interactions vary with latitude, altitude, and local and regional geography, all of which can affect oceanic and atmospheric flow patterns. • The ocean exerts a major influence on weather and climate by absorbing energy from the Sun, and globally redistributing it through ocean currents.	**Systems and System Models:** • Models can be used to represent systems and their interactions (such as inputs, processes, and outputs) and energy, matter, and information flows within the systems.

Earth and Human Activity (ESS3)

6.ESS3.2 Analyze and interpret data on natural hazards to forecast future catastrophic events and inform the development of technologies to mitigate their effects.

Clarification Statement: Emphasis is on how some natural hazards, such as volcanic eruptions and severe weather, are preceded by phenomena that allow for reliable predictions, but others, such as earthquakes, occur suddenly and with no notice, and thus are not yet predictable. Examples of natural hazards can be taken from interior processes (such as earthquakes and volcanic eruptions), surface processes (such as mass wasting and tsunamis), or severe weather events (such as hurricanes, tornadoes, and floods). Examples of data can include the locations, magnitudes, and frequencies of the natural hazards. Examples of technologies can be global (such as satellite systems to monitor hurricanes or forest fires), or local (such as building basements in tornado-prone regions or reservoirs to mitigate droughts). **Assessment**

Boundary: N/A

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Analyzing and Interpreting Data: • Analyze and interpret data to provide evidence for phenomena.	• Mapping the history of natural hazards in a region, combined with an understanding of related geologic forces, can help forecast the locations and likelihoods of future events.	**Patterns:** • Graphs, charts, and images can be used to identify patterns in data.

7TH GRADE (7)

Matter and Its Interactions (PS1)

7.PS1.1 Develop models to describe the atomic composition of simple molecules and extended structures.

Clarification Statement: Emphasis is on developing models of molecules that vary in complexity. Examples of simple molecules could include ammonia and/or methanol. Examples of extended structures could include sodium chloride or diamonds. Examples of molecular-level models could include drawings, 3D ball and stick structures, or computer representations showing different molecules with different types of atoms.

Assessment Boundary: Assessment does not include valence electrons and bonding energy, discussing the ionic nature of subunits of complex structures, or a complete depiction of all individual atoms in a complex molecule or extended structure.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Developing and Using Models: • Use a model to predict the relationships between systems or between components of a system.	• Substances are made from different types of atoms, which combine with one another in various ways. • Atoms form molecules that range in size from two to thousands of atoms. • Solids may be formed from molecules, or they may be extended structures with repeating subunits (e.g., crystals).	**Scale, Proportion, and Quantity:** • Time, space, and energy phenomena can be observed at various scales using models to study systems that are too large or too small.

7.PS1.2 Analyze and interpret patterns of data related to the properties of substances before and after the substances interact to determine if a chemical reaction has occurred.

Clarification Statement: Analyze characteristic chemical and physical properties of pure substances. Examples of chemical reactions could include burning sugar or steel wool, baking a cake, milk curdling, or metal rusting. **Assessment Boundary:** Assessment is limited to analysis of the following properties: color change, formation of a gas, temperature change, density, melting point, boiling point, solubility, flammability, and odor.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Analyzing and Interpreting Data: • Analyze and interpret data to determine similarities and differences in findings.	• Each pure substance has characteristic physical and chemical properties (for any bulk quantity under given conditions) that can be used to identify it. • Substances react chemically in characteristic ways. In a chemical process, the atoms that make up the original substances are regrouped into different molecules, and these new substances have different properties from those of the reactants.	**Patterns:** • Macroscopic patterns are related to the nature of microscopic and atomic-level structure.

Matter and Its Interactions (PS1)		
7.PS1.3 Gather and make sense of information to describe that synthetic materials come from natural resources and impact society.*		
Clarification Statement: Emphasis is on natural resources that undergo a chemical process to form the synthetic material. Examples of new materials could include new medicine, foods, and alternative fuels. **Assessment Boundary:** N/A		
Science and Engineering Practice	**Disciplinary Core Ideas**	**Crosscutting Concepts**
Obtaining, Evaluating, and Communicating Information: • Gather, read, synthesize information from multiple appropriate sources, and assess the credibility, accuracy, and possible bias of each publication and methods used, and describe how they are supported or not supported by evidence.	• Each pure substance has characteristics, physical and chemical properties (for any bulk quantity under given conditions), that can be used to identify it. • Substances react chemically in characteristic ways. • In a chemical process, the atoms that make up the original substances regroup into different molecules, and these new substances have different properties from those of the reactants. • Engineering advances have led to important discoveries in virtually every field of science, and scientific discoveries have led to the development of entire industries and engineered systems. • The uses of technologies and any limitations on their use are driven by individual or societal needs, desires, and values; by the findings of scientific research; and by differences in such factors as climate, natural resources, and economic conditions.	**Structure and Function:** • Structures can be designed to serve particular functions by taking into account properties of different materials, and how materials can be shaped and used.

Matter and Its Interactions (PS1)		
7.PS1.5 Develop and use a model to describe how the total number of atoms does not change in a chemical reaction and thus mass is conserved.		
Clarification Statement: Emphasis is on law of conservation of matter and on physical models or drawings, including digital forms, that represent atoms. **Assessment Boundary:** Assessment does not include the use of atomic masses or intermolecular forces.		
Science and Engineering Practice	**Disciplinary Core Ideas**	**Crosscutting Concepts**
Developing and Using Models: • Develop a model to describe unobservable mechanics.	• Substances react chemically in characteristic ways. • In a chemical process, the atoms that make up the original substances are regrouped into different molecules, and these new substances have different properties from those of the reactants. • The total number of each type of atom is conserved and thus, the mass does not change. Laws are regularities or mathematical descriptions of natural phenomena.	**Energy and Matter:** • Matter is conserved because atoms are conserved in physical and chemical processes.

Matter and Its Interactions (PS1)

7.PS1.6 Construct, test, and modify a device that releases or absorbs thermal energy by chemical processes to solve a problem.*

Clarification Statement: Examples of device modification could include changing factors such as type and concentration of a substance. Examples of problems could be keeping a chemical ice pack cold longer or chemical heat pack warm longer. Emphasis is on the design, controlling the transfer of energy to the environment, and modification of a device using factors such as type and concentration of a substance. Examples of designs could involve chemical reactions such as dissolving ammonium chloride or calcium chloride. **Assessment**
Boundary: Assessment is limited to the criteria of amount, time, and temperature of substances in testing the device.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Designing Solutions: • Undertake a design project engaging in the design cycle, to construct and/or implement a solution that meets specific design criteria and constraints.	• Some chemical reactions release energy, others store energy. • A solution needs to be tested, and then modified on the basis of the test results, in order to improve it. • Although one design may not perform the best across all tests, identifying the characteristics of the design that performed the best in each test can provide useful information for the redesign process – that is, some of the characteristics may be incorporated into the new design. • The iterative process of testing the most promising solutions and modifying what is proposed on the basis of the test results leads to greater refinement and ultimately to an optimal solution.	**Energy and Matter:** • The transfer of energy can be tracked as energy flows through a designed or natural system.

Energy (PS3)		
7.PS3.1 Construct and interpret graphical displays of data to describe the proportional relationships of kinetic energy to the mass of an object and to the speed of an object.		
Clarification Statement: Emphasis is on descriptive relationships between kinetic energy and mass separately from kinetic energy and speed. Examples could include riding a bicycle at different speeds, rolling different sizes of rocks downhill, and getting hit by a wiffle ball versus a tennis ball. **Assessment Boundary:** Does not include mathematical calculations of kinetic energy.		
Science and Engineering Practice	**Disciplinary Core Ideas**	**Crosscutting Concepts**
Analyze and Interpret Data: • Construct and interpret graphical displays of data to identify linear and nonlinear relationships.	• Motion energy is properly called kinetic energy; it is proportional to the mass of the moving object and grows with the square of its speed.	**Scale, Proportion and Quantity:** • Proportional relationships (e.g., speed as a ratio of distance traveled to time taken) among different types of quantities provide information about the magnitude of properties and process.

Energy (PS3)

7.PS3.2 Develop a model to describe that when objects interacting at a distance change their arrangement, different amounts of potential energy are stored in the system.

Clarification Statement: Emphasis is on relative amounts of potential energy, not on calculations of potential energy. Examples of objects within systems interacting at varying distances could include: the Earth and either a roller coaster cart at varying positions on a hill or objects at varying heights on shelves, changing the direction/orientation of a magnet, and a balloon with static electrical charge being brought closer to a classmate's hair. Examples of models could include representations, diagrams, pictures, and written descriptions of systems. **Assessment Boundary:** Assessment is limited to two objects and electric, magnetic, and gravitational interactions.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Developing and Using Models: • Develop a model to predict and/or describe phenomena.	• A system of objects may also contain stored (potential) energy, depending on their relative positions. • When two objects interact, each one exerts a force on the other that can cause energy to be transferred to or from the object.	**Systems and System Models:** • Models can be used to represent systems and their interactions (such as inputs, processes, and outputs) and energy and matter flows within systems.

7.PS3.5 Construct, use, and present arguments to support the claim that when the kinetic energy of an object changes, energy is transferred to or from the object.

Clarification Statement: Examples of empirical evidence used in arguments could include an inventory or other representation of the energy before and after the transfer in the form of temperature changes or motion of object. **Assessment Boundary:** Assessment does not include calculations of energy.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Engaging in Argument from Evidence: • Construct, use, and present oral and written arguments supported by empirical evidence and scientific reasoning to support or refute an explanation or a model for a phenomenon.	• When the motion energy of an object changes, there is inevitably some other change in energy at the same time.	**Energy and Matter:** • The transfer of energy can be tracked as energy flows through a designed or natural system.

From Molecules to Organisms: Structure and Function (LS1)

7.LS1.6 Construct a scientific explanation based on evidence for the role of photosynthesis in the cycling of matter and flow of energy into and out of organisms.

Clarification Statement: Emphasis is on tracing movement of matter and flow of energy. **Assessment Boundary:** Assessment does not include the biochemical mechanisms of photosynthesis.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Constructing Explanations: • Construct a scientific explanation based on valid and reliable evidence obtained from sources (including the students' own experiments) and the assumption that theories and laws that describe the natural world operate today as they did in the past and will continue to do so in the future.	• Plants, algae (including phytoplankton), and many microorganisms use the energy from light to make sugars (food) from carbon dioxide from the atmosphere and water through the process of photosynthesis, which also releases oxygen. These sugars can be used immediately or stored for growth or later use. • The chemical reaction by which plants produce complex food molecules (sugars) requires an energy input (i.e., from sunlight) to occur. • In this reaction, carbon dioxide and water combine to form carbon- based organic molecules and release oxygen.	**Energy and Matter:** • Within a natural system, the transfer of energy drives the motion and/or cycling of matter.

7.LS1.7 Develop a model to describe how food molecules in plants and animals are broken down and rearranged through chemical reactions to form new molecules that support growth and/or release energy as matter moves through an organism.

Clarification Statement: Emphasis is on describing how energy stored within food molecules is released as they are broken apart and rearranged into new molecules. **Assessment Boundary:** Assessment does not include details of the chemical reactions for photosynthesis or respiration.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Developing and Using Models: • Develop a model to predict and/or describe phenomena.	• Within an individual organism, food moves through a series of chemical reactions in which it is broken down and rearranged to form new molecules, to support growth, or release energy. • Cellular respiration in plants and animals involves chemical reactions with oxygen that release stored energy. In these processes, complex molecules containing carbon react with oxygen to produce carbon dioxide and other materials.	**Energy and Matter:** • Matter is conserved because atoms are conserved in physical and chemical processes.

Ecosystems: Interactions, Energy, and Dynamics (LS2)

7.LS2.1 Analyze and interpret data to provide evidence for the effects of resource availability on organisms and populations of organisms in an ecosystem.

Clarification Statement: Emphasis is on cause and effect relationships between resources and growth of individual organisms and the numbers of organisms in ecosystems during periods of abundant and scarce resources. **Assessment Boundary:** Determining the carrying capacity of ecosystems is beyond the intent.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Analyzing and Interpreting Data: • Analyze and interpret data to provide evidence for phenomena.	• Organisms, and populations of organisms, are dependent on their environmental interactions both with other living things and with nonliving factors. • In any ecosystem, organisms and populations with similar requirements for food, water, oxygen, or other resources may compete with each other for limited resources, access to which consequently constrains their growth and reproduction. • Growth of organisms and population increases are limited by access to resources.	**Cause and Effect:** • Cause and effect relationships may be used to predict phenomena in natural or designed systems.

7.LS2.2 Construct an explanation that predicts patterns of interactions among organisms across multiple ecosystems.

Clarification Statement: Emphasis is on constructing explanations that predict consistent patterns of interactions in different ecosystems in terms of the relationships among and between living organisms and nonliving components of ecosystems. Examples of types of interactions could include competition, predation, parasitism, commensalism, mutualism. **Assessment Boundary:** N/A

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Constructing Explanations: • Construct an explanation that includes qualitative or quantitative relationships between variables that predict and/or describe phenomena.	• Predatory interactions may reduce the number of organisms or eliminate whole populations of organisms. Mutually beneficial interactions, in contrast, may become so interdependent that each organism requires the other for survival. Although the species involved in these competitive, predatory, and mutually beneficial interactions vary across ecosystems, the patterns of interactions of organisms with their environments, both living and nonliving, are shared.	**Patterns:** • Patterns can be used to identify cause and effect relationships.

Ecosystems: Interactions, Energy, and Dynamics (LS2)

7.LS2.3 Develop a model to describe the cycling of matter and flow of energy among living and nonliving parts of an ecosystem.

Clarification Statement: Emphasis is on describing the conservation of matter and flow of energy into and out of various ecosystems, and on defining the boundaries of the system. **Assessment Boundary:** Assessment does not include the use of chemical reactions to describe the processes.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Developing and Using Models: • Develop a model to describe phenomena.	• Food webs are models that demonstrate how matter and energy is transferred between producers, consumers, and decomposers as the three groups interact within an ecosystem. • Transfers of matter into and out of the physical environment occur at every level. • Decomposers recycle nutrients from dead plant or animal matter back to the soil in terrestrial environments or to the water in aquatic environments. • The atoms that make up the organisms in an ecosystem are cycled repeatedly between the living and nonliving parts of the ecosystem.	**Energy and Matter:** • The transfer of energy can be tracked as energy flows through a natural system.

7.LS2.4 Construct an argument supported by empirical evidence that changes to physical or biological components of an ecosystem affect populations.

Clarification Statement: Emphasis is on recognizing patterns in data and making warranted inferences about changes in populations, and on evaluating empirical evidence supporting arguments about changes to ecosystems. **Assessment Boundary:** N/A

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Engaging in Argument from Evidence: • Construct an oral and written argument supported by empirical evidence and scientific reasoning to support or refute an explanation or model for a phenomenon.	• Ecosystems are dynamic in nature; their characteristics can vary over time. • Disruptions to any physical or biological component of an ecosystem can lead to shifts in all its populations.	**Stability and Change:** • Small changes in one part of a system might cause large changes in another part.

Ecosystems: Interactions, Energy, and Dynamics (LS2)

7.LS2.5 Evaluate competing design solutions for maintaining biodiversity and ecosystem services.*

Clarification Statement: Examples of ecosystem services could include water purification, nutrient recycling, and prevention of soil erosion. Examples of design solution constraints could include scientific, economic, and social considerations. **Assessment Boundary:** N/A

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Engaging in Argument from Evidence: • Evaluate competing design solutions based on jointly developed and agreed-upon design criteria.	• Biodiversity describes the variety of species found in Earth's terrestrial and oceanic ecosystems. • The completeness or integrity of an ecosystem's biodiversity is often used as a measure of its health. • Changes in biodiversity can influence humans' resources, such as food, energy, and medicines, as well as ecosystem services that humans rely on—for example, water purification and recycling. • There are systematic processes for evaluating solutions with respect to how well they meet the criteria and constraints of a problem. • The use of technologies and any limitations on their use are driven by individual or societal needs, desires, and values; by the findings of scientific research; and by differences in such factors as climate, natural resources, and economic conditions. Thus technology use varies form region to region and over time.	**Stability and Change:** • Small changes in one part of a system might cause large changes in another part.

Earth and Human Activity (ESS3)

7.ESS3.1 Construct a scientific explanation based on evidence for how the uneven distributions of Earth's mineral, energy, and groundwater resources are the result of past and current geoscience processes.

Clarification Statement: Emphasis is on how these resources are limited and typically non-renewable, and how their distributions are significantly changing as a result of removal by humans. Examples of uneven distributions of resources as a result of past processes include but are not limited to petroleum (locations of the burial of organic marine sediments and subsequent geological traps), metal ores (locations of past volcanic and hydrothermal activity associated with subduction zones), and soil (locations of active weathering and/or deposition of rock).

Assessment Boundary: N/A

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Constructing Explanations: • Apply scientific ideas, principles, and evidence (including students' own investigations, models, theories, simulations, peer review) to provide an explanation of phenomena.	• Humans depend on Earth's land, ocean, atmosphere, and biosphere for many different resources. • Minerals, fresh water, and biosphere resources are limited, and many are not renewable or replaceable over human lifetimes. • These resources are distributed unevenly around the planet as a result of past geologic processes.	**Cause and Effect:** • Cause and effect relationships may be used to predict phenomena in natural or designed systems.

Earth and Human Activity (ESS3)		
7.ESS3.3 Apply scientific principles to design a method for monitoring and minimizing human impact on the environment.*		
Clarification Statement: Examples of the design process include examining human environmental impacts, assessing the kinds of solutions that are feasible, and designing and evaluating solutions that could reduce that impact. Examples of human impacts can include water usage (such as the withdrawal of water from streams and aquifers or the construction of dams and levees), land usage (such as urban development, agriculture, or the removal of wetlands), and pollution (such as of the air, water, or land). **Assessment Boundary:** N/A		
Science and Engineering Practice	**Disciplinary Core Ideas**	**Crosscutting Concepts**
Constructing Explanations: • Apply scientific principles to design an object, tool, process, or system.	• Human activities have significantly altered the biosphere, sometimes damaging or destroying natural habitats and causing the extinction of other species. But changes to Earth's environments can have different impacts (negative and positive) for different living things. • Typically, as human populations and per-capita consumption of natural resources increase, so do the negative impacts on Earth unless the activities and technologies involved are engineered otherwise. • The use of technologies and any limitations on their use are driven by individual or societal needs, desires, and differences in such factors as climate, natural resources, and economic conditions. Thus technology use varies from region to region, and over time.	**Cause and Effect:** • Cause and effect relationships may be used to predict phenomena in natural or designed systems.

Earth and Human Activity (ESS3)		
7.ESS3.4 Construct an argument supported by evidence for how increases in human population and per-capita consumption of natural resources impact Earth's systems.		
Clarification Statement: Examples of evidence include grade-appropriate databases on human populations and the rates of consumption of food and natural resources (such as freshwater, mineral, and energy). Examples of impacts can include changes to the appearance, composition, and structure of Earth's systems as well as the rates at which they change. The consequences of increases in human populations and consumption of natural resources are described by science, but science does not make the decisions for the actions society takes. **Assessment Boundary:** N/A		
Science and Engineering Practice	**Disciplinary Core Ideas**	**Crosscutting Concepts**
Engaging in Argument from Evidence: • Construct an oral and written argument supported by empirical evidence and scientific reasoning to support or refute an explanation or model for a phenomenon.	• Typically, as human populations and per-capita consumption of natural resources increase, so do the negative impacts on Earth unless the activities and technologies involved are engineered otherwise.	**Cause and Effect:** • Cause and effect relationships may be used to predict phenomena in natural or designed systems.

Earth and Human Activity (ESS3)		
7.ESS3.5 Obtain, evaluate, and communicate evidence of the factors that have caused changes in global temperatures over the past century.		
Clarification Statement: Examples of evidence can include tables, graphs, and maps of global and regional temperatures; atmospheric levels of gases such as carbon dioxide and methane; and the impact humans have on the environment. **Assessment Boundary:** N/A		
Science and Engineering Practice	**Disciplinary Core Ideas**	**Crosscutting Concepts**
Obtaining, Evaluating and Communicating Evidence: • Gather, read, synthesize information from multiple appropriate sources, and assess the credibility, accuracy, and possible bias of each publication and methods used, and describe how they are supported or not supported by evidence.	• Understanding atmospheric changes and reducing human vulnerability to whatever climate changes do occur depend on the understanding of climate science, engineering capabilities, and other kinds of knowledge (such as understanding of human behavior) and on applying that knowledge wisely in decisions and activities.	**Stability and Change:** • Stability might be disturbed either by sudden events or gradual changes that accumulate over time.

8TH GRADE (8)

Motion and Stability: Forces and Interactions (PS2)

8.PS2.1 Apply Newton's Third Law to design a solution to a problem involving the motion of two colliding objects in a system.*

Clarification Statement: Examples of practical problems could include the impact of collisions between two cars, between a car and stationary objects, and between a meteor and a space vehicle. **Assessment Boundary:** Assessment is limited to vertical or horizontal interactions in one dimension.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Constructing Explanations: • Apply scientific principles to design an object, tool, process, or system.	• For any pair of interacting objects, the force exerted by the first object on the second object is equal in strength to the force that the second object exerts on the first, but in the opposite direction (Newton's third law). • The use of technologies and any limitations on their use are driven by individual or societal needs, desires, and values; by the findings of scientific research; and by differences in such factors as climate, natural resources, and economic conditions.	**Systems and System Models:** • Models can be used to represent systems and their interactions (such as inputs, processes, and outputs) and energy, matter, and information flows within the systems.

Motion and Stability: Forces and Interactions (PS2)		
8.PS2.2 Plan an investigation to provide evidence that the change in an object's motion depends on the sum of the forces on the object and the mass of the object.		
Clarification Statement: Emphasis is on balanced (Newton's First Law) and unbalanced forces in a system, qualitative comparisons of forces, mass and changes in motion (Newton's Second Law); frame of reference; and specification of units. An increase in force can be caused by increasing the mass, the acceleration, or both the mass and acceleration of an object. An example of evidence could include reasoning from mathematical expressions (F=ma). **Assessment Boundary:** Assessment is limited to forces and changes in motion in one-dimension in an inertial reference frame and a change in one variable at a time. Assessment does not include the use of trigonometry.		
Science and Engineering Practice	**Disciplinary Core Ideas**	**Crosscutting Concepts**
Planning and Carrying Out Investigations: • Plan an investigation individually and collaboratively; identify independent and dependent variables and controls, what tools are needed to do the gathering, how measurements will be recorded, and how many data are needed to support a claim.	• The motion of an object is determined by the sum of the forces acting on it; if the total force on the object is not zero its motion will change. • The greater the mass of the object, the greater the force needed to achieve the same change in motion. • For any given object, a larger force causes a larger change in motion.	**Stability and Change:** • Explanations of stability and change in natural or designed systems can be constructed by examining the changes over time and forces at different scales.

Motion and Stability: Forces and Interactions (PS2)		
8.PS2.3 Ask questions about data to determine the factors that affect the strength of electric and magnetic forces.		
Clarification Statement: Examples of devices that use electric and magnetic forces could include electromagnets, electric motors, or generators. Examples of data could include the effect of the number of turns of wire on the strength of an electromagnet, or the effect of increasing the number or strength of magnets on the speed of an electric motor. **Assessment Boundary:** Assessment about questions that require quantitative answers is limited to proportional reasoning. Assessment of Coulomb's Law is not intended.		
Science and Engineering Practice	**Disciplinary Core Ideas**	**Crosscutting Concepts**
Asking Questions: • Ask questions that can be investigated within the scope of the classroom, outdoor environment, and museums and other public facilities with available resources and, when appropriate, frame a hypothesis based on observations and scientific principles.	• Electric and magnetic (electromagnetic) forces can be attractive or repulsive, and their sizes depend on the magnitudes of the charges, currents, or magnetic strengths involved and on the distances between the interacting objects.	**Cause and Effect:** • Cause and effect relationships may be used to predict phenomena in natural or designed systems.

8.PS2.4 Construct and present arguments using evidence to support the claim that gravitational interactions are attractive and depend on the masses of interacting objects.

Clarification Statement: Examples of evidence for arguments could include data generated from simulations or digital tools; and charts displaying mass, strength of interaction, distance from the Sun, and orbital periods of objects within the solar system. **Assessment Boundary:** Assessment does not include Newton's Law of Gravitation or Kepler's Laws. Assessment should be focused on qualitative observations and data, or other quantitative data that does not require mathematical computations beyond basic central tendencies.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Engaging in Argument from Evidence • Construct and present oral and written arguments supported by empirical evidence and scientific reasoning to support or refute an explanation or a model for a phenomenon or a solution to a problem.	• Gravitational forces are always attractive. • There is a gravitational force between any two masses, but it is very small except when one or both of the objects have large mass (e.g., Earth and the Sun).	**Systems and System Models:** • Models can be used to represent systems and their interactions (such as inputs, processes and outputs) and energy and matter flows within systems.

Motion and Stability: Forces and Interactions (PS2)

8.PS2.5 Conduct an investigation and evaluate the experimental design to provide evidence that fields exist between objects exerting forces on each other even though the objects are not in contact.

Clarification Statement: Examples of this phenomenon could include the interactions of magnets, electrically-charged strips of tape, and electrically charged balloons. Examples of investigations could include first-hand experiences or simulations. **Assessment Boundary:** Assessment is limited to electric and magnetic fields, and limited to qualitative evidence for the existence of fields.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Planning and Carrying Out Investigations: • Conduct an investigation and evaluate the experimental design to produce data to serve as the basis for evidence that can meet the goals of the investigation.	• Forces that act at a distance (electric, magnetic, and gravitational) can be explained by fields that extend through space and can be mapped by their effect on a test object (a charged object, or a ball, respectively).	**Cause and Effect:** • Cause and effect relationships may be used to predict phenomena in natural or designed systems.

Waves and Their Applications in Technologies for Information Transfer (PS4)

8.PS4.1 Use mathematical representations to describe patterns in a simple model for waves that includes how the amplitude of a wave is related to the energy in a wave.

Clarification Statement: Emphasis is on describing waves with both qualitative and quantitative thinking. **Assessment Boundary:** Assessment does not include electromagnetic waves and is limited to standard repeating waves.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Using Mathematical and Computational Thinking: • Use mathematical representation to describe and/or support scientific conclusions and design solutions.	• A simple wave has a repeating pattern with a specific wavelength, frequency, and amplitude.	**Patterns:** • Graphs and charts can be used to identify patterns in data.

Waves and Their Applications in Technologies for Information Transfer (PS4)

8.PS4.3 Integrate qualitative scientific and technical information to support the claim that digitized signals (sent as wave pulses) are a more reliable way to encode and transmit information.*

Clarification Statement: Emphasis is on a basic understanding that waves can be used for communication purposes. Examples could include using fiber optic cable to transmit light pulses, radio wave pulses in WIFI devices, and conversion of stored binary patterns to make sound or text on a computer screen. Examples of reliability in encoding could include transmitting digital information at a higher quality than analog signals (digital vs. analog photographs or videos, or digital vs. analog thermometer). Examples of reliability in transmission could include the degradation of an analog signal compared to a digital signal.
Assessment Boundary: Assessment does not include binary counting or the specific mechanism of any given device.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Obtaining, Evaluating, and Communicating Evidence: • Integrate qualitative scientific and technical information in written text with that contained in media and visual displays to clarify claims and findings.	• Many modern communications devices use digitized signals (sent as wave pulses) as they are a more reliable way to encode and transmit information.	**Structure and Function:** • Structures can be designed to serve particular functions by taking into account properties of different materials, and how materials can be shaped and used.

From Molecules to Organisms: Structure and Processes (LS1)

8.LS1.4 Use arguments based on empirical evidence and scientific reasoning to support an explanation for how characteristic animal behaviors and specialized plant structures affect the probability of successful reproduction of animals and plants respectively.

Clarification Statement: Examples of behaviors that affect the probability of animal reproduction could include nest building to protect young from cold, herding of animals to protect young from predators, and vocalization of animals and colorful plumage to attract mates for breeding. Examples of animal behaviors that affect the probability of plant reproduction could include transferring pollen or seeds and creating conditions for seed germination and growth. Examples of plant structures could include bright flowers attracting butterflies that transfer pollen, flower nectar and odors that attract insects that transfer pollen, and hard shells on nuts that squirrels bury. **Assessment Boundary:** Assessment should not focus on the identification of the reproductive plant structures.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Engaging in Argument from Evidence: • Use an oral and written argument supported by empirical evidence and scientific reasoning to support or refute an explanation or a model for phenomena.	• Animals engage in characteristic behaviors that increase the odds of reproduction. • Plants reproduce in a variety of ways, sometimes depending on animal behavior and specialized features for reproduction.	**Cause and Effect:** • Phenomena may have more than one cause, and some cause and effect relationships in systems can only be described using probability.

8.LS1.5 Construct a scientific explanation based on evidence for how environmental and genetic factors influence the growth of organisms.

Clarification Statement: Examples of local environmental conditions could include availability of food, light, space, and water. Examples of genetic factors could include large breed cattle and species of grass affecting growth of organisms. Examples of evidence could include drought decreasing plant growth, fertilizer increasing plant growth, different varieties of plant seeds growing at different rates in different conditions, and fish growing larger in large ponds than they do in small ponds. **Assessment Boundary:** Assessment does not include genetic mechanisms, gene regulation, or biochemical processes.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Constructing Explanations: • Construct a scientific explanation based on valid and reliable evidence obtained from sources (including the students' own experiments) and the assumption that theories and laws that describe the natural world operate today as they did in the past and will continue to do so in the future.	• Genetic factors, as well as local conditions, affect the growth of the adult plant.	**Cause and Effect:** • Phenomena may have more than one cause, and some cause and effect relationships in systems can only be described using probability.

Heredity: Inheritance and Variation of Traits (LS3)

8.LS3.1 Develop and use a model to describe why structural changes to genes (mutations) located on chromosomes may affect proteins and may result in harmful, beneficial, or neutral effects to the structure and function of the organism.

Clarification Statement: Emphasis is on conceptual understanding that changes in genetic material may result in making different proteins. Examples: Radiation treated plants, genetically modified organisms (e.g. roundup resistant crops, bioluminescence), mutations both harmful and beneficial. **Assessment Boundary:** Assessment does not include specific changes at the molecular level, mechanisms for protein synthesis, or specific types of mutations.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Developing and Using Models: • Develop and use a model to describe phenomena.	• Genes are located in the chromosomes of cells, with each chromosome pair containing two variants of each of many distinct genes. Each distinct gene chiefly controls the production of specific proteins, which in turn affects the traits of the individual. • Changes (mutations) to genes can result in changes to proteins, which can affect the structures and functions of the organism and thereby change traits. • In addition to variations that arise from sexual reproduction, genetic information can be altered because of mutations. • Though rare, mutations may result in changes to the structure and function of proteins. • Some changes are beneficial, others harmful, and some neutral to the organism.	**Structure and Function:** • Complex and microscopic structures and systems can be visualized, modeled, and used to describe how their function depends on the shapes, composition, and relationships among its parts; therefore complex natural structures/systems can be analyzed to determine how they function.

Heredity: Inheritance and Variation of Traits (LS3)

8.LS3.2 Develop and use a model to describe why asexual reproduction results in offspring with identical genetic information and sexual reproduction results in offspring with genetic variation.

Clarification Statement: Emphasis is on using models such as Punnett squares, diagrams, and simulations to describe the cause and effect relationship of gene transmission from parent(s) to offspring and resulting genetic variation. **Assessment Boundary:** The assessment should measure the students' abilities to explain the general outcomes of sexual versus asexual reproduction in terms of variation seen in the offspring.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Developing and Using Models: • Develop and use a model to describe phenomena.	• Organisms reproduce, either sexually or asexually, and transfer their genetic information to their offspring. • Variations of inherited traits between parent and offspring arise from genetic differences that result from the subset of chromosomes (and therefore genes) inherited. • In sexually reproducing organisms, each parent contributes half of the genes acquired (at random) by the offspring. Individuals have two of each chromosome and hence two alleles of each gene, one acquired from each parent. These versions may be identical or may differ from each other.	**Cause and Effect:** • Cause and effect relationships may be used to predict phenomena in natural systems.

Biological Unity and Diversity (LS4)

8.LS4.1 Analyze and interpret data to identify patterns within the fossil record that document the existence, diversity, extinction, and change of life forms throughout the history of life on Earth.

Clarification Statement: Emphasis is on finding patterns of change in the complexity of anatomical structures in organisms and the chronological order of fossils' appearance in the rock layers. The natural laws that operate today are assumed to operate as they have in the past. **Assessment Boundary:** Assessment does not include the names of individual species or geological time scales in the fossil record.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Analyze and Interpret Data: • Analyze and interpret data to determine similarities and differences in findings.	• The collection of fossils and their placement in chronological order (e.g., through the location of the sedimentary layers in which they are found) is known as the fossil record. It documents the existence, diversity, extinction, and change of many life forms throughout the history of life on Earth.	**Patterns:** • Graphs and charts can be used to identify patterns in data.

8.LS4.2 Apply scientific ideas to construct an explanation for the patterns of anatomical similarities and differences among modern organisms and between modern and fossil organisms to infer ancestral relationships.

Clarification Statement: Emphasis is on explanations of the ancestral relationships among organisms in terms of similarities or differences of anatomical features or structures. Examples could include how structural similarities/differences could determine relationships between two modern organisms (e.g., wings of birds vs. bats vs. insects) or modern and fossil organisms (e.g., fossilized horses compared to modern horses, trilobites compared to horseshoe crabs). **Assessment Boundary:** Assessment does not include the names of individual species or geological eras in the fossil record.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Constructing Explanations: • Construct a scientific explanation based on valid and reliable evidence.	• The collection of fossils and their placement in chronological order (e.g., through the location of the sedimentary layers in which they are found) is known as the fossil record. It documents the existence, diversity, extinction, and change of many life forms throughout the history of life on Earth. • Anatomical similarities and differences between various organisms living today and between them and organisms in the fossil record serve as evidence of ancestral relationships among organisms and changes in populations over time.	**Patterns:** • Graphs and charts can be used to identify patterns in data.

Biological Unity and Diversity (LS4)

8.LS4.3 Analyze displays of pictorial data to compare patterns of similarities in the embryological development across multiple species to identify relationships not evident in the fully formed anatomy.

Clarification Statement: Emphasis is on inferring general patterns of relatedness among embryos of different organisms by comparing the macroscopic appearance in diagrams or pictures. **Assessment Boundary:** Assessment of comparisons is limited to gross appearance of anatomical structures in embryological development.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Analyze and Interpret Data: • Analyze and interpret data to determine similarities and differences in findings.	• Comparison of embryological development of different species also reveals similarities that show relationships not evident in the fully-formed anatomy.	**Patterns:** • Graphs and charts can be used to identify patterns in data.

8.LS4.4 Construct an explanation based on evidence that describes how genetic variations of traits in a population increase some individuals' probability of surviving and reproducing in a specific environment.

Clarification Statement: Emphasis is on using simple probability statements and proportional reasoning to construct explanations for why in a specific environment impacted by different factors (e.g., limited food availability, predators, nesting site availability, light availability), some traits confer advantages that make it more probable that an organism will be able to survive and reproduce there. **Assessment Boundary:** N/A

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Constructing Explanations: • Construct an explanation that includes qualitative or quantitative relationships between variables that predict and/or describe phenomena.	• Natural selection leads to the predominance of certain traits in a population, and the suppression of others.	**Cause and Effect:** • Phenomena may have more than one cause, and some cause and effect relationships in systems can only be described using probability.

Biological Unity and Diversity (LS4)

8.LS4.5 Gather and synthesize information about the practices that have changed the way humans influence the inheritance of desired traits in organisms.*

Clarification Statement: Emphasis is on synthesizing information from reliable sources about the influence of humans on genetic outcomes in artificial selection (such as genetic modification, animal husbandry, gene therapy); and on the impacts these practices have on society, as well as the technologies leading to these scientific discoveries. **Assessment Boundary:** The assessment should provide evidence of students' abilities to understand and communicate how technology affects both individuals and society.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Obtaining, Evaluating, and Communicating Information: • Gather, read, synthesize information from multiple appropriate sources; assess the credibility, accuracy, and possible bias of each publication and methods used; and describe how they are supported or not supported by evidence.	• In artificial selections, humans have the capacity to influence certain characteristics of organisms by selective breeding. One can choose desired parental traits by genes, which are then passed on to offspring. • Engineering advances have led to important discoveries in virtually every field of science, and scientific discoveries have led to the development of entire industries and engineered systems.	**Cause and Effect:** • Phenomena may have more than one cause, and some cause and effect relationships in systems can only be described using probability.

8.LS4.6 Use mathematical representations to support explanations of how natural selection may lead to increases and decreases of specific traits in populations over time.

Clarification Statement: Emphasis is on using mathematical models, probability statements, and proportional reasoning to support explanations of trends in changes to populations over time. **Assessment Boundary:** The assessment should provide evidence of students' abilities to explain trends in data for the number of individuals with specific traits changing over time. Assessment does not include Hardy Weinberg calculations.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Using Mathematics and Computational Thinking: • Use mathematical representation to describe and/or support scientific conclusions and design solutions.	• Adaptation by natural selection acting over generations is one important process by which species change over time in response to changes in environmental conditions. • Traits that support successful survival and reproduction in the new environment become more common; those that do not become less common. Thus, the distribution of traits in a population change.	**Cause and Effect:** • Phenomena may have more than one cause, and some cause and effect relationships in systems can only be described using probability.

Earth's Place in the Universe (ESS1)

8.ESS1.1 Develop and use a model of the Earth-Sun-Moon system to describe the cyclic patterns of lunar phases, eclipses of the Sun and Moon, and seasons.

Clarification Statement: Earth's rotation relative to the positions of the Moon and Sun describes the occurrence of tides; the revolution of Earth around the Sun explains the annual cycle of the apparent movement of the constellations in the night sky; the Moon's revolution around Earth explains the cycle of spring/neap tides and the occurrence of eclipses; and the Moon's elliptical orbit mostly explains the occurrence of total and annular eclipses. The position and tilt of Earth, as it revolves around the Sun, explain why seasons occur. Examples of models can be physical, graphical, or conceptual. **Assessment Boundary:** Definitions of spring or neap tides should not be included.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Developing and Using Models: • Develop and use a model to describe a phenomenon.	• Patterns of the apparent motion of the Sun, the Moon, and stars in the sky can be observed, described, predicted, and explained with models. • The model of the solar system can explain eclipses of the Sun and the Moon. • Earth's spin axis is fixed in direction over the short term but tilted relative to its orbit around the Sun. The seasons are a result of its tilt and are caused by the differential intensity of sunlight on different areas of Earth across the year.	**Patterns:** • Patterns can be used to identify cause-and- effect relationships.

Earth's Place in the Universe (ESS1)

8.ESS1.2 Develop and use a model to describe the role of gravity in the motions within galaxies and the solar system.

Clarification Statement: Emphasis for the model is on effects of gravity and inertia as the forces that hold together the solar system and Milky Way Galaxy and controls orbital motions within them. Examples of models can be physical (such as the analogy of distance along a football field or computer visualizations of elliptical orbits) or conceptual (such as mathematical proportions relative to the size of familiar objects such as a school or state). **Assessment Boundary:** Assessment does not include Kepler's Laws of orbital motion or the apparent retrograde motion of the planets as viewed from Earth.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Developing and Using Models: • Develop and use a model to describe a phenomenon.	• Earth and its solar system are part of the Milky Way Galaxy, which is one of the many galaxies in the universe. • The solar system consists of the Sun and a collection of objects, including planets, their moons, and asteroids that are held in orbit around the Sun by its gravitational pull on them. • The solar system appears to have formed from a disk of dust and gas, drawn together by gravity.	**Systems and System Models:** • Models can be used to represent systems and their interactions.

8.ESS1.3 Analyze and interpret data to determine scale properties of objects in the solar system.*

Clarification Statement: Emphasis is on the analysis of data from Earth-based instruments, space-based telescopes, and spacecraft to determine similarities and differences among solar system objects. Examples of scale properties include the sizes of an object's layers (such as crust and atmosphere), surface features (such as volcanoes), and orbital radius. Examples of data include statistical information, drawings and photographs, and models. **Assessment Boundary:** Assessment emphasis is on data analysis of properties of the planets and should not include recalling facts about the planets and other solar system bodies.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Analyzing and Interpreting Data: • Analyze and interpret data to determine similarities and differences in findings.	• The solar system consists of the Sun and a collection of objects, including planets, their moons, and asteroids that are held in orbit around the Sun by its gravitational pull on them. • Engineering advances have led to important discoveries in virtually every field of science, and scientific discoveries have led to the development of entire industries and engineered systems.	**Scale, Proportion, and Quantity:** • Time, space, and energy phenomena can be observed at various scales using models to study systems that are too large or too small.

PHYSICAL SCIENCE (PS)

Matter and Its Interactions (PS1)

PS.PS1.1 Use the periodic table as a model to predict the relative properties of elements based on the patterns of electrons in the outermost energy level of atoms.

Clarification Statement: Examples of properties that could be predicted from trends and patterns could include reactivity of metals, types of bonds formed, numbers of bonds formed, and reactions with oxygen. **Assessment Boundary:** Assessment is limited to main group elements. Assessment does not include understanding of ionization energy and electronegativity.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Developing and Using Models: • Use a model to predict the relationships between systems or between components of a system.	• Each atom has a charged substructure consisting of a nucleus, which is made of protons and neutrons, surrounded by electrons. • The periodic table orders elements horizontally by the number of protons in the atom's nucleus and places those with similar chemical properties in columns. The repeating patterns of this table reflect patterns of outer electron states.	**Patterns:** • Different patterns may be observed at each of the scales at which a system is studied and can provide evidence for causality in explanations of phenomena.

Matter and Its Interactions (PS1)

PS.PS1.2 Construct and revise an explanation for the outcome of a simple chemical reaction based on the outermost electron states of atoms, trends in the periodic table, knowledge of the patterns of chemical properties, and formation of compounds.

Clarification Statement: Identifying patterns in reactions allows the emphasis to be on student explanation of observed reaction outcomes. Reactions that students could be exposed to are synthesis (limited to elements forming a compound), decomposition (limited to a compound producing two or more elements), combustion, single displacement, or double displacement. **Assessment Boundary:** Assessment is limited to chemical reactions involving main group elements.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Constructing Explanations: • Construct and revise an explanation based on valid and reliable evidence obtained from a variety of sources and the assumption that theories and laws that describe the natural world operate today as they did in the past and will continue to do so in the future.	• The periodic table orders elements horizontally by the number of protons in the atom's nucleus and places those with similar chemical properties in columns. The repeating patterns of this table reflect patterns of outer electron states. • The fact that atoms are conserved, together with knowledge of the chemical properties of the elements involved, can be used to describe and predict chemical reactions.	**Patterns:** • Different patterns may be observed at each of the scales at which a system is studied and can provide evidence for causality in explanations of phenomena.

Matter and Its Interactions (PS1)

PS.PS1.5 Apply scientific principles and evidence to provide an explanation about the effects of changing the temperature or concentration of the reacting particles on the rate at which a reaction occurs.

Clarification Statement: Emphasis is on student reasoning that focuses on the qualitative evidence for number and energy of collisions (Collison Theory) and relationships between rate and temperature. **Assessment Boundary:** Assessment is limited to explaining the result of changing one condition at a time in a simple reaction in which there are only two reactants.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Constructing Explanations: • Apply scientific reasoning, theory, and/or models to link evidence to the claims to assess the extent to which the reasoning and data support the explanation or conclusion.	• Chemical processes, their rates, and whether or not energy is stored or released can be understood in terms of the collisions of molecules and the rearrangement of atoms into new molecules, with consequent changes in the sum of all bond energies in the set of molecules that are matched by changes in kinetic energy.	**Cause and Effect:** • Cause and effect relationships can be suggested and predicted for complex natural and human-designed systems by examining what is known about smaller scale mechanisms within the system.

PS.PS1.7 Use mathematical representations to support the claim that atoms, and therefore mass, are conserved during a chemical reaction.

Clarification Statement: Emphasis is on using mathematical ideas to communicate the proportional relationships between masses of atoms in the reactants and the products, and the translation of these relationships to the macroscopic scale. Mathematical representation can include balancing chemical equations to represent the laws of conservation of mass, constant composition (definite proportions) and understanding the ratio of the coefficients between reactants and products. **Assessment Boundary:** Assessment does not include complex chemical reactions or stoichiometry. Emphasis is on assessing students' use of mathematical reasoning and not on memorization and rote application of problem-solving techniques.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Using Mathematics and Computational Thinking: • Use mathematical representations of phenomena to support claims.	• The fact that atoms are conserved, together with knowledge of the chemical properties of the elements involved, can be used to describe and predict chemical reactions.	**Energy and Matter:** • The total amount of energy and matter in closed systems is conserved.

Motion and Stability: Forces and Interactions (PS2)

PS.PS2.1 Analyze and interpret data to support the claim of a causal relationship between the net force on an object and its change in motion, as described in Newton's second law of motion.

Clarification Statement: Examples of data could include tables or graphs of position or velocity of an object as a function of time. Examples of objects subjected to a net force can include objects in free-fall, objects sliding down a ramp, or moving objects pulled by a constant force.

Assessment Boundary: Assessment is limited to macroscopic objects moving in one-dimensional motion, at non-relativistic speeds. Air-resistance is ignored.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Analyzing and Interpreting Data: • Analyze data using tools, technologies, and/or models (e.g., computational, mathematical) in order to make valid and reliable scientific claims.	• Newton's second law accurately predicts changes in the motion of macroscopic objects.	**Cause and Effect:** • Empirical evidence is required to differentiate between cause and correlation and make claims about specific causes and effects.

PS.PS2.2 Use mathematical representations to support the explanation that the total momentum of a system of objects is conserved when there is no net force on the system.

Clarification Statement: Emphasis is on the quantitative conservation of momentum in interactions and the qualitative meaning of this principle. **Assessment Boundary:** Assessment is limited to systems of two macroscopic bodies moving in one dimension and does not include naming the types of collisions. Assessment should provide evidence of students' abilities to explain the mathematical relationships between momentum, mass, and velocity.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Using Mathematics and Computational Thinking: • Use mathematical, computational, and/or algorithmic representations of phenomena or design solutions to describe and/or support claims and/or explanations.	• Momentum is defined for a particular frame of reference; it is the mass times the velocity of the object. • If a system interacts with objects outside itself, the total momentum of the system can change; however, any such change is balanced by change in the momentum of objects outside the system.	**Systems and System Models:** • When investigating or describing a system, the boundaries and initial conditions of the system need to be defined.

Motion and Stability: Forces and Interactions (PS2)		
PS.PS2.3 Apply scientific and engineering ideas to design, evaluate, and refine a device that minimizes the force on a macroscopic object during a collision.*		
Clarification Statement: An example of evaluation could include determining the success of the device at protecting an object from damage. Examples of devices could include football helmets, parachutes, and car restraint systems, such as seatbelts and airbags. Refinement of the device may include modifying one or more parts or all of the device to improve performance of the device. **Assessment Boundary:** Assessment is limited to qualitative evaluations and/or algebraic manipulations.		
Science and Engineering Practice	**Disciplinary Core Ideas**	**Crosscutting Concepts**
Designing Solutions: • Apply scientific ideas to solve a design problem, taking into account possible unanticipated effects.	• If a system interacts with objects outside itself, the total momentum of the system can change; however, any such change is balanced by change in the momentum of objects outside the system. • Criteria and constraints also include satisfying any requirements set by society, such as taking issues of risk mitigation into account; and they should be quantified to the extent possible and stated in such a way that one can tell if a given design meets them.	**Cause and Effect:** • Systems can be designed to cause a desired effect.

Motion and Stability: Forces and Interactions (PS2)

PS.PS2.5 Plan and conduct an investigation to provide evidence that an electric current can cause a magnetic field and that a changing magnetic field can cause an electric current.

Clarification Statement: Students' investigations should describe the data that will be collected and the evidence to be derived from that data. Examples could include electromagnets/solenoids, motors, current carrying wires, and compasses. **Assessment Boundary:** Assessment is limited to planning and conducting investigations with provided materials and tools.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Planning and Carrying Out Investigations: • Plan and conduct an investigation individually and collaboratively to produce data to serve as the basis for evidence, and in the design: decide on types, how much, and accuracy of data needed to produce reliable measurements; consider limitations on the precision of the data (e.g., number of trials, cost, risk, time); and refine the design accordingly.	• Forces at a distance are explained by fields (gravitational, electric, and magnetic) permeating space that can transfer energy through space. • Magnets or electric currents cause magnetic fields; electric charges or changing magnetic fields cause electric fields. • "Electrical energy" may mean energy stored in a battery or energy transmitted by electric currents.	**Cause and Effect:** • Empirical evidence is required to differentiate between cause and correlation and make claims about specific causes and effects.

Energy (PS3)

PS.PS3.1 Create a computational model to calculate the change in the energy of one component in a system when the change in energy of the other component(s) and energy flows in and out of the system are known.

Clarification Statement: Emphasis is on utilizing calculations to understand that energy is transferred in and out of systems and conserved, as well as explaining the meaning of mathematical expressions used in the model. **Assessment Boundary:** Assessment is limited to two or three components and the transfer of thermal energy, kinetic energy, potential energy, and/or the energies in gravitational, magnetic, or electric fields.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Using Mathematics and Computational Thinking: • Create a computational model of a phenomenon, process, or system based on basic assumptions.	• Energy is a quantitative property of a system that depends on the motion and interactions of matter and radiation within that system. That there is a single quantity called energy is due to the fact that a system's total energy is conserved, even as, within the system, energy is continually transferred from one object to another and between its various possible forms. • Conservation of energy means that the total change of energy in any system is always equal to the total energy transferred into or out of the system. • Energy cannot be created or destroyed, but it can be transported from one place to another and transferred between systems. • Mathematical expressions, which quantify how the stored energy in a system depends on its configuration (e.g., relative positions of charged particles, compression of a spring) and how kinetic energy depends on mass and speed, allow the concept of conservation of energy to be used to predict and describe system behavior. • The availability of energy limits what can occur in any system.	**System and System Models:** • Models can be used to predict the behavior of a system, but these predictions have limited precision and reliability due to the assumptions and approximations inherent in models.

Energy (PS3)

PS.PS3.2 Develop and use models to illustrate that energy at the macroscopic scale can be accounted for as either motions of particles or energy stored in fields.

Clarification Statement: Examples of phenomena at the macroscopic scale could include the conversion of kinetic energy to thermal energy, the energy stored due to the position of an object above the earth (considered as stored in fields), and the energy stored between two electrically-charged plates. Examples of models could include diagrams, drawings, descriptions, and computer simulations. **Assessment**

Boundary: Assessment does not include quantitative calculations, chemical energy, or effects of air resistance/friction.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Developing and Using Models: • Develop, revise, and/or use a model based on evidence to illustrate and/or predict the relationships between systems or between components of a system.	• Energy is a quantitative property of a system that depends on the motion and interactions of matter and radiation within that system. That there is a single quantity called energy is due to the fact that a system's total energy is conserved, even as, within the system, energy is continually transferred from one object to another and between its various possible forms. • At the macroscopic scale, energy manifests itself in multiple ways, such as in motion, sound, light, and thermal energy. • These relationships are better understood at the microscopic scale, at which all of the different manifestations of energy can be modeled as a com- bination of energy associated with the motion of particles and energy associated with the configuration (relative position of the particles). In some cases the relative position energy can be thought of as stored in fields (which mediate interactions between particles). This last concept includes radiation, a phenomenon in which energy stored in fields moves across space.	**Energy and Matter:** • Energy cannot be created or destroyed—only moves between one place and another place, between objects and/or fields, or between systems.

Energy (PS3)		
PS.PS3.3 Design, build, and refine a device that works within given constraints to convert one form of energy into another form of energy.*		
Clarification Statement: Emphasis is on both qualitative and quantitative evaluations of devices. Examples of devices could include Rube Goldberg devices, wind turbines, solar cells, solar ovens, and generators. Examples of constraints placed on a device could include the cost of materials, types of materials available, having to use renewable energy, an efficiency threshold, and time to build and/or operate the device. **Assessment Boundary:** Assessment for quantitative evaluations is limited to total output for a given input. Assessment is limited to devices constructed with materials provided to students.		
Science and Engineering Practice	**Disciplinary Core Ideas**	**Crosscutting Concepts**
Designing Solutions: • Design, evaluate, and/or refine a solution to a complex real-world problem, based on scientific knowledge, student-generated sources of evidence, prioritized criteria, and trade-off considerations.	• At the macroscopic scale, energy manifests itself in multiple ways, such as in motion, sound, light, and thermal energy. • Criteria and constraints also include satisfying any requirements set by society, such as taking issues of risk mitigation into account, and they should be quantified to the extent possible and stated in such a way that one can tell if a given design meets them. • Modern civilization depends on major technological systems. Engineers continuously modify these technological systems by applying scientific knowledge and engineering design practices to increase benefits while decreasing costs and risks.	**Energy and Matter:** • Changes of energy and matter in a system can be described in terms of energy and matter flows into, out of, and within that system.

Energy (PS3)		
PS.PS3.4 Plan and conduct an investigation to provide evidence that the transfer of thermal energy when two components of different temperature are combined within a closed system results in a more uniform energy distribution among the components in the system (second law of thermodynamics).		
Clarification Statement: Emphasis is on analyzing data from student investigations and using mathematical thinking to describe the thermal energy changes both quantitatively and conceptually. Examples of investigations could include mixing liquids at different initial temperatures or adding objects at different temperatures to water. **Assessment Boundary:** Assessment is limited to devices constructed with materials provided to students. Assessment includes both quantitative and conceptual descriptions of energy change.		
Science and Engineering Practice	**Disciplinary Core Ideas**	**Crosscutting Concepts**
Planning and Carrying Out Investigations: • Plan an investigation or test a design individually and collaboratively to produce data to serve as the basis for evidence as part of building and revising models, supporting explanations for phenomena, or testing solutions to problems. Consider possible confounding variables or effects and evaluate the investigation's design to ensure variables are controlled.	• Energy cannot be created or destroyed, but it can be transported from one place to another and transferred between systems. • Uncontrolled systems always evolve toward more stable states - that is, toward more uniform energy distribution (e.g., water flows downhill, objects hotter than surrounding environments cool down).	**Systems and System Models:** • When investigating or describing a system, the boundaries and initial conditions of the system need to be defined and their inputs and outputs analyzed and described using models.

Waves and Their Applications in Technologies for Information Transfer (PS4)

PS.PS4.1 Use mathematical representations to explain both qualitative and quantitative relationships among frequency, wavelength, and speed of waves traveling in various media.

Clarification Statement: Emphasis is on using mathematical representations to understand how various media change the speed of waves. Examples of waves moving through various media could include electromagnetic radiation traveling in a vacuum or glass, sound waves traveling through air or water, or seismic waves traveling through Earth. **Assessment Boundary:** Assessment is limited to algebraic relationships and describing those relationships qualitatively.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Mathematical and Computational Thinking: • Use mathematical representations of phenomena or design solutions to describe and/or support claims and/or explanations.	• The wavelength and frequency of a wave are related to one another by the speed of travel of the wave, which depends on the type of wave and the medium through which it is passing.	**Cause and Effect:** • Empirical evidence is required to differentiate between cause and correlation and make claims about specific causes and effects.

PS.PS4.2 Evaluate questions about the advantages and disadvantages of using a digital transmission and storage of information.*

Clarification Statement: Examples of advantages could include that digital information is stable because it can be stored reliably in computer memory, transferred easily, and copied and shared rapidly. Disadvantages could include issues of easy deletion, security, and theft.
Assessment Boundary: N/A

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Asking Questions: • Evaluate questions that challenge the premise(s) of an argument, the interpretation of a data set, or the suitability of a design.	• Information can be digitized (e.g., a picture stored as the values of an array of pixels); in this form, it can be stored reliably in computer memory and sent over long distances as a series of wave pulses. • Modern civilization depends on major technological systems. Engineers continuously modify these technological systems by applying scientific knowledge and engineering design practices to increase benefits while decreasing costs and risks.	**Stability and Change:** • Systems can be designed for greater or lesser stability.

Waves and Their Applications in Technologies for Information Transfer (PS4)

PS.PS4.4 Evaluate the validity and reliability of claims in published materials of the effects that different frequencies of electromagnetic radiation have when absorbed by matter.

Clarification Statement: Emphasis is on the idea that different frequencies of electromagnetic radiation have different energies, and the damage to living tissue depends on the energy of the radiation. Examples of published materials could include peer-reviewed scientific articles, or trade books, magazines, web resources, videos, and other passages that may reflect bias. **Assessment Boundary:** Assessment is limited to qualitative descriptions.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Obtaining, Evaluating, and Communicating Information: • Evaluate the validity and reliability of multiple claims that appear in scientific and technical texts or media reports, verifying the data when possible.	• When light or longer wavelength electromagnetic radiation is absorbed in matter, it is generally converted into thermal energy (heat). • Shorter wavelength electromagnetic radiation (ultraviolet, X-rays, gamma rays) can ionize atoms and cause damage to living cells. • Photoelectric materials emit electrons when they absorb light of high enough frequency.	**Cause and Effect:** • Cause and effect relationships can be suggested and predicted for complex natural and human-designed systems by examining what is known about smaller scale mechanisms within the system.

CHEMISTRY (CH)

Matter and Its Interactions (PS1)

CH.PS1.1 Use the periodic table as a model to predict the relative properties of elements based on the patterns of electrons in the outermost energy level of atoms.

Clarification Statement: Examples could include trends in ionization energy, atomic radius, or electronegativity. Examples of properties that could be predicted from patterns could include reactivity of metals, types of bonds formed, numbers of bonds formed, and ion formation.

Assessment Boundary: Assessment is limited to main group elements. Assessment does not include quantitative understanding of ionization energy beyond relative trends or exception explanations (e.g. Be to B or N to O).

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Developing and Using Models: • Use a model to predict the relationships between systems or between components of a system.	• Each atom has a charged substructure consisting of a nucleus, which is made of protons and neutrons, surrounded by electrons. • The periodic table orders elements horizontally by the number of protons in the atom's nucleus and places those with similar chemical properties in columns. The repeating patterns of this table reflect patterns of outer electron states.	**Patterns:** • Different patterns may be observed at each of the scales at which a system is studied and can provide evidence for causality in explanations of phenomena.

Matter and Its Interactions (PS1)		
CH.PS1.2 Construct and revise an explanation for the outcome of a simple chemical reaction based on the outermost electron states of atoms, trends in the periodic table, knowledge of the patterns of chemical properties, and formation of compounds.		
Clarification Statement: Periodic trends (ionization energy, electronegativity, reactivity), patterns of valence electrons, and classifying reaction types should be utilized when constructing and revising explanations for the prediction of products (e.g. synthesis/combination, decomposition, combustion, single displacement, double displacement, oxidation/reduction, and/or acid/base). **Assessment Boundary:** Assessment is limited to chemical reactions involving main group elements and polyatomic ions (e.g. Nitrate, Nitrite, Sulfate, Hydroxide, Carbonate, and Phosphate).		
Science and Engineering Practice	**Disciplinary Core Ideas**	**Crosscutting Concepts**
Constructing Explanations: • Construct and revise an explanation based on valid and reliable evidence obtained from a variety of sources (including students' own investigations, models, theories, simulations, and peer review) and the assumption that theories and laws that describe the natural world operate today as they did in the past and will continue to do so in the future.	• The periodic table orders elements horizontally by the number of protons in the atom's nucleus and places those with similar chemical properties in columns. The repeating patterns of this table reflect patterns of outer electron states. • The fact that atoms are conserved, together with knowledge of the chemical properties of the elements involved, can be used to describe and predict chemical reactions.	**Patterns:** • Different patterns may be observed at each of the scales at which a system is studied and can provide evidence for causality in explanations of phenomena.

Matter and Its Interactions (PS1)		
CH.PS1.3 Plan and conduct an investigation to compare the structure of substances at the bulk scale level to infer the strength of electrical forces between particles.		
Clarification Statement: Emphasis is on understanding the relative strengths of forces between particles, not on naming specific intermolecular forces (such as dipole-dipole). Examples of particles could include ions, atoms, molecules, and networked materials (such as graphite). Examples of bulk properties of substances could include the melting point and boiling point, vapor pressure, and surface tension. The intent of the performance expectation is limited to evaluation of bulk-scale properties and not microscale properties. **Assessment Boundary:** Assessment does not include calculations related to any bulk-scale property.		
Science and Engineering Practice	**Disciplinary Core Ideas**	**Crosscutting Concepts**
Planning and Carrying Out Investigations: • Plan and conduct an investigation individually and collaboratively to produce data to serve as the basis for evidence, and in the design: decide on types, how much, and accuracy of data needed to produce reliable measurements; consider limitations on the precision of the data (e.g., number of trials, cost, risk, time); and refine the design accordingly.	• The structure and interactions of matter at the bulk-scale are determined by electrical forces within and between atoms.	**Structure and Function:** • The functions and properties of natural and designed objects and systems can be inferred from their overall structure, the way their components are shaped and used, and the molecular substructures of its various materials.

Matter and Its Interactions (PS1)

CH.PS1.4 Develop a model to illustrate that the release or absorption of energy from a chemical reaction system depends upon the changes in total bond energy.

Clarification Statement: Emphasis is on the idea that a chemical reaction is a system that involves an overall change in energy that is due to the absorption of energy when bonds are broken and the release of energy when new bonds are formed. Examples of models could include molecular-level drawings and diagrams of reactions, graphs showing the relative energies of reactants and products, and representations showing energy is conserved. **Assessment Boundary:** Assessment does not include calculating the total bond energy changes during a chemical reaction from the bond energies of reactants and products.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Developing and Using Models: • Develop a model based on evidence to illustrate the relationships between systems or between components of a system.	• A stable molecule has less energy than the same set of atoms separated; one must provide at least this energy in order to take the molecule apart. • Chemical processes, their rates, and whether or not energy is stored or released can be understood in terms of the collisions of molecules and rearrangements of atoms into new molecules, with consequent changes in the sum of all bond energies in the set of molecules that are matched by changes in kinetic energy.	**Energy and Matter:** • Changes of energy and matter in a system can be described in terms of energy and matter flows into, out of, and within that system.

Matter and Its Interactions (PS1)		
CH.PS1.5 Apply scientific principles and evidence to provide an explanation about the effects of changing the conditions of the reacting particles on the rate at which a reaction occurs.		
Clarification Statement: Emphasis is on student reasoning that focuses on the number and energy of collisions between molecules (Collision Theory). Examples of reaction conditions that affect rate could include temperature, concentration, surface area/particle size, pressure, or the addition of a catalyst. **Assessment Boundary:** Assessment is limited to explaining the result of changing one condition at a time in a simple reaction in which there are only two reactants.		
Science and Engineering Practice	**Disciplinary Core Ideas**	**Crosscutting Concepts**
Constructing Explanations: • Apply scientific reasoning, theory, and/or models to link evidence to the claims to assess the extent to which the reasoning and data support the explanation or conclusion.	• Chemical processes, their rates, and whether or not energy is stored or released can be understood in terms of the collisions of molecules and the rearrangement of atoms into new molecules, with consequent changes in the sum of all bond energies in the set of molecules that are matched by changes in kinetic energy.	**Cause and Effect:** • Cause and effect relationships can be suggested and predicted for complex natural and human designed systems by examining what is known about smaller scale mechanisms within the system.

Matter and Its Interactions (PS1)

CH.PS1.6 Refine the design of a chemical system by specifying a change in conditions that would produce a change in the amounts of products at equilibrium.*

Clarification Statement: Emphasis is on the qualitative application of Le Châtelier's Principle and on refining designs of chemical reaction systems, including descriptions of the connection between changes made at the macroscopic level and what happens at the molecular level. Designs may include ways to achieve the desired effect on a system at equilibrium by changing temperature, pressure, and/or adding or removing reactants or products. **Assessment Boundary:** Assessment is limited to specifying the change in only one variable at a time.
Assessment does not include calculating equilibrium constants and concentrations.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Designing Solutions: • Refine a solution to a complex real- world problem, based on scientific knowledge, student-generated sources of evidence, prioritized criteria, and trade off considerations.	• In many situations, a dynamic and condition-dependent balance between a reaction and the reverse reaction determines the numbers of all types of molecules present. • Criteria may need to be broken down into simpler ones that can be approached systematically, and decisions about the priority of certain criteria over others (trade-offs) may be needed.	**Stability and Change:** • Much of science deals with constructing explanations of how things change and how they remain stable.

Matter and Its Interactions (PS1)

CH.PS1.7 Use mathematical representations to support the claim that atoms, and therefore mass, are conserved during a chemical reaction.

Clarification Statement: Mathematical representations could include balanced chemical equations that represent the laws of conservation of mass and constant composition (definite proportions) and mass-to-mass stoichiometry. The mole concept and stoichiometry are used to show proportional relationships between masses of reactants and products. **Assessment Boundary:** Assessment does not include complex chemical reactions. Emphasis is on assessing students' use of mathematical reasoning and does not include recall of mathematical equations and rote application of problem-solving techniques.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Using Mathematics and Computational Thinking: • Use mathematical representations of phenomena to support claims.	• The fact that atoms are conserved, together with knowledge of the chemical properties of the elements involved, can be used to describe and predict chemical reactions.	**Energy and Matter:** • The total amount of energy and matter in closed systems is conserved.

CH.PS1.8 Develop models to illustrate the changes in composition of the nucleus of the atom and the energy released during the processes of fission, fusion, and radioactive decay.

Clarification Statement: Emphasis is on qualitative models, such as pictures or diagrams, and on the scale of energy released in nuclear processes relative to other kinds of transformations. Examples of nuclear processes could include the formation of elements through fusion in stars, generation of electricity in a nuclear power plant, or the use of radioisotopes in nuclear medicine. **Assessment Boundary:** Assessment does not include quantitative calculation of energy released (i.e., binding energy). Assessment is limited to alpha, beta, and gamma radioactive decay.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Developing and Using Models: • Develop, revise, and/or use a model based on evidence to illustrate and/or predict the relationships between systems or between components of a system.	• Nuclear processes, including fusion, fission, and radioactive decay of unstable nuclei, involve release or absorption of energy. • The total number of neutrons plus protons does not change in any nuclear process.	**Energy and Matter:** • In nuclear processes, atoms are not conserved, but the total number of protons plus neutrons are conserved.

Motion Stability: Forces and Interactions (PS2)

CH.PS2.6 Communicate scientific and technical information about why the molecular level structure of designed materials determines how the material functions.*

Clarification Statement: Emphasis is on the attractive and repulsive forces that determine the functioning of the material. Examples could include why electrically conductive materials are often made of metal, flexible but durable materials are made up of long chained molecules, and pharmaceuticals are designed to interact with specific receptors. Scientific and technical information should include molecular structures of specific designed materials and limit comparison to two substances of the same type. **Assessment Boundary:** Assessment is limited to provided molecular structures or specific designed materials.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Obtaining, Evaluating, and Communicating Information: • Communicate scientific and technical information (e.g., about the process of development and the design and performance of a proposed process or system) in multiple formats (including oral, graphical, textual, and mathematical).	• Attraction and repulsion between electric charges at the atomic scale explain the structure, properties, and transformations of matter, as well as the contact forces between material objects.	**Structure and Function:** • Investigating or designing net systems or structures requires a detailed examination of the properties of different materials, the structures of different components, and the connections of components to reveal its function and/or solve a problem.

Energy (PS3)		
CH.PS3.3 Design, build, and refine a device that works within given constraints to convert one form of energy into another form of energy.*		
Clarification Statement: Emphasis is on both qualitative and quantitative evaluations of devices. Sources of energy could include those from chemical or nuclear reactions. Examples of devices could include lemon or potato clock, a voltaic cell (batteries), hand warmers, solar panels/solar ovens, and nuclear power generation through simulations. Examples of constraints placed on a device could include the cost of materials, types of materials available, having to use renewable energy, an efficiency threshold, and time to build and/or operate the device. **Assessment Boundary:** Assessment for quantitative evaluations is limited to total output for a given input. Assessment is limited to devices constructed with materials provided to students.		
Science and Engineering Practice	**Disciplinary Core Ideas**	**Crosscutting Concepts**
Designing Solutions: • Design, evaluate, and/or refine a solution to a complex real-world problem, based on scientific knowledge, student- generated sources of evidence, prioritized criteria, and trade-off considerations.	• At the macroscopic scale, energy manifests itself in multiple ways, such as in motion, sound, light, and thermal energy. • Criteria and constraints also include satisfying any requirements set by society, such as taking issues of risk mitigation into account, and they should be quantified to the extent possible and stated in such a way that one can tell if a given design meets them. • Modern civilization depends on major technological systems. Engineers continuously modify these technological systems by applying scientific knowledge and engineering design practices to increase benefits while decreasing costs and risks.	**Energy and Matter:** • Changes of energy and matter in a system can be described in terms of energy and matter flows into, out of, and within that system.

Energy (PS3)

CH.PS3.4 Plan and conduct an investigation to provide evidence that the transfer of thermal energy between components in a closed system involves changes in energy dispersal and heat content and results in a more uniform energy distribution among the components in the system (second law of thermodynamics).

Clarification Statement: Emphasis is on analyzing data from student investigations and using mathematical thinking to describe the thermal energy changes both quantitatively and conceptually. Examples of investigations could include calorimetry (i.e., dissolving a substance in water, mixing two solutions, and combining two components) where students measure temperatures and calculate heat. **Assessment**

Boundary: Assessment is limited to conceptual understanding of energy and investigations based on materials and tools provided to students. Assessment includes both quantitative and conceptual descriptions of energy change.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Planning and Carrying Out Investigations: • Plan and conduct investigations individually and collaboratively to produce data to serve as the basis for evidence, and in the design: decide on types, how much, and accuracy of data needed to produce reliable measurements; consider limitations on the precision of the data (e.g., number of trials, cost, risk, time); and refine the design accordingly.	• Energy cannot be created or destroyed, but it can be transported from one place to another and transferred between systems. • Uncontrolled systems always evolve toward more stable states - that is, toward more uniform energy distribution (e.g., water flows downhill, objects hotter than surrounding environments cool down).	**Systems and System Models:** • When investigating or describing a system, the boundaries and initial conditions of the system need to be defined and their inputs and outputs analyzed and described using models.

Waves and Their Applications in Technologies for Information Transfer (PS4)

CH.PS4.1 Use mathematical representations to support a claim regarding relationships among the frequency, wavelength, and speed of waves traveling in various media.

Clarification Statement: Emphasis is on using mathematical relationships to understand how various media change the speed of waves. Examples of different media that could be explored include electromagnetic radiation traveling in a vacuum or glass, sound waves traveling through air or water, or seismic waves traveling through Earth. **Assessment Boundary:** Assessment is limited to algebraic relationships and describing those relationships qualitatively.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Using Mathematics and Computational Thinking: • Use mathematical, computational, and/or algorithmic representations of phenomena or design solutions to describe and/or support claims and/or explanations.	• The wavelength and frequency of a wave are related to one another by the speed of travel of the wave, which depends on the type of wave and the medium through which it is passing.	**Cause and Effect:** • Empirical evidence is required to differentiate between cause and correlation and make claims about specific causes and effects.

Waves and Their Applications in Technologies for Information Transfer (PS4)		
CH.PS4.3 Develop an argument for how scientific evidence supports the explanation that electromagnetic radiation can be described either by the wave model or the particle model, and in some situations one model is more useful than the other.		
Clarification Statement: Emphasis is on how the experimental evidence supports the claim and how a theory is generally modified in light of new evidence. Examples of a phenomenon could include resonance, interference, diffraction, and the photoelectric effect. **Assessment Boundary:** Assessment does not include using quantum theory.		
Science and Engineering Practice	**Disciplinary Core Ideas**	**Crosscutting Concepts**
Engaging in Argument from Evidence: • Evaluate the claims, evidence, and reasoning behind currently accepted explanations or solutions to determine the merits of arguments.	• Waves can add or cancel one another as they cross, depending on their relative phase (i.e., relative position of peaks and troughs of the waves), but they emerge unaffected by each other. • Boundary: The discussion at this grade level is qualitative only; it can be based on the fact that two sounds can pass a location in different directions without getting mixed up. • Electromagnetic radiation (e.g., radio, microwaves, light) can be modeled as a wave of changing electric and magnetic fields or as particles called photons. The wave model is useful for explaining many features of electromagnetic radiation, and the particle model explains other features.	**Systems and System Models:** • Models (e.g., physical, mathematical, computer) can be used to simulate systems and interactions, including energy, matter, and information flow within and between systems at different scales.

PHYSICS (PH)

Matter and Its Interactions (PS1)

PH.PS1.8 Develop models to illustrate the changes in the composition of the nucleus of the atom and the energy released during the processes of fission, fusion, and radioactive decay.

Clarification Statement: Emphasis is on qualitative models, such as pictures or diagrams, and on the scale of energy released in nuclear processes relative to other kinds of transformations. Examples of nuclear processes could include, the formation of elements through fusion in stars, generation of electricity in a nuclear power plant, or the use of radioisotopes in nuclear medicine. **Assessment Boundary:** Assessment does not include quantitative calculation of energy released (i.e., binding energy). Assessment is limited to alpha, beta, and gamma radioactive decay.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Developing and Using Models: • Develop, revise, and/or use a model based on evidence to illustrate and/or predict the relationships between systems or between components of a system.	• Nuclear processes, including fusion, fission, and radioactive decay of unstable nuclei, involve release or absorption of energy. • The total number of neutrons plus protons does not change in any nuclear process.	**Energy and Matter:** • In nuclear processes, atoms are not conserved, but the total number of protons plus neutrons are conserved.

Motion and Stability: Forces and Interactions (PS2)

PH.PS2.1 Analyze and interpret data to support the claim that Newton's second law of motion describes the mathematical relationship among the net force on a macroscopic object, its mass, and its acceleration.

Clarification Statement: Examples of data could include tables or graphs of position or velocity of an object as a function of time. Examples of objects subjected to a net force can include objects in free-fall, objects sliding down a ramp, or moving objects pulled by a constant force. The relationship $F_{net} = ma$ should be explored qualitatively and quantitatively. **Assessment Boundary:** Assessment is limited to macroscopic objects moving in one-dimensional motion, at non-relativistic speeds.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Analyzing and Interpreting Data: • Analyze data using tools, technologies, and/or models (e.g., computations, mathematical) in order to make valid and reliable scientific claims or determine an optimal design solution.	• Newton's Second Law accurately predicts changes in the motion of macroscopic objects.	**Cause and Effect:** • Empirical evidence is required to differentiate between cause and correlation and make claims about specific causes and effects.

Motion and Stability: Forces and Interactions (PS2)

PH.PS2.2 Use mathematical representations to support the claim that the total momentum of a system of objects is conserved when there is no net force on the system.

Clarification Statement: Emphasis is on the quantitative conservation of momentum in interactions and the qualitative meaning of this principle. Examples could include one-dimensional elastic or inelastic collisions between objects within the system. **Assessment Boundary:** Assessment is limited to systems of two macroscopic bodies moving in one dimension and does not include naming the types of collisions.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Using Mathematics and Computational Thinking: • Use mathematical, computational, and/or algorithmic representations of phenomena or design solutions to describe and/or support claims and/or explanations.	• Momentum is defined for a particular frame of reference; it is the mass times the velocity of the object. • If a system interacts with objects outside itself, the total momentum of the system can change; however, any such change is balanced by change in the momentum of objects outside the system.	**Systems and System Models:** • When investigating or describing a system, the boundaries and initial conditions of the system need to be defined.

PH.PS2.3 Apply scientific and engineering ideas to design, evaluate, and refine a device that minimizes the force on a macroscopic object during a collision.*

Clarification Statement: An example of evaluation could include determining the success of the device at protecting an object from damage. Examples of devices could include football helmets, parachutes, and car restraint systems, such as seatbelts and airbags. Refinement of the device may include modifying one or more parts or all of the device to improve performance of the device. **Assessment Boundary:** Assessment is limited to qualitative evaluations and/or algebraic manipulations.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Designing Solutions: • Design, evaluate, and/or refine a solution to a complex real-world problem, based on scientific knowledge, student- generated sources of evidence, prioritized criteria, and tradeoff considerations.	• If a system interacts with objects outside itself, the total momentum of the system can change; however, any such change is balanced by change in the momentum of objects outside the system. • Criteria and constraints also include satisfying any requirements set by society, such as taking issues of risk mitigation into account, and they should be quantified to the extent possible and stated in such a way that one can tell if a given design meets them.	**Cause and Effect:** • Systems can be designed to cause a desired effect.

Motion and Stability: Forces and Interactions (PS2)		
PH.PS2.4 Use mathematical representations of Newton's Law of Gravitation and Coulomb's Law to describe and predict the gravitational and electrostatic forces between object.		
Clarification Statement: Emphasis is on both quantitative and conceptual descriptions of interactions between masses in gravitational fields and electrical charges in electric fields. **Assessment Boundary:** Assessment is limited to systems with two objects.		
Science and Engineering Practice	**Disciplinary Core Ideas**	**Crosscutting Concepts**
Using Mathematics and Computational Thinking: • Use mathematical, computational, and/or algorithmic representations of phenomena or design solutions to describe and/or support claims and/or explanations.	• Newton's Law of Universal Gravitation and Coulomb's Law provide the mathematical models to describe and predict the effects of gravitational and electrostatic forces between distant objects. • Forces at a distance are explained by fields (gravitational, electric, and magnetic) permeating space that can transfer energy through space. • Magnets or electric fields cause magnetic fields; electric charges or changing magnetic fields causes electric fields.	**Patterns:** • Different patterns may be observed at each of the scales at which a system is studied and can provide for causality in explanations of phenomena.

Motion and Stability: Forces and Interactions (PS2)		
PH.PS2.5 Plan and conduct an investigation to provide evidence that an electric current can cause a magnetic field and that a changing magnetic field can cause an electric current.		
Clarification Statement: Students' investigations should describe the data that will be collected and the evidence to be derived from that data. Examples could include electromagnets/solenoids, motors, current carrying wires, and compasses. **Assessment Boundary:** Assessment is limited to planning and conducting investigations with provided materials and tools.		
Science and Engineering Practice	**Disciplinary Core Ideas**	**Crosscutting Concepts**
Planning and Carrying Out Investigations: • Plan and conduct an investigation individually and collaboratively to produce data to serve as the basis for evidence, and in the design: decide on types, how much, and accuracy of data needed to produce reliable measurements; consider limitations on the precision of the data (e.g., number of trials, cost, risk, time); and refine the design accordingly.	• Forces at a distance are explained by fields (gravitational, electric, and magnetic) permeating space that can transfer energy through space. • Magnets or electric currents cause magnetic fields; electric charges or changing magnetic fields cause electric fields. • "Electrical energy" may mean energy stored in a battery or energy transmitted by electric currents.	**Cause and Effect:** • Empirical evidence is required to differentiate between cause and correlation and make claims about specific causes and effects.

Energy (PS3)

PH.PS3.1 Create a computational model to calculate the change in the energy of one component in a system when the change in energy of the other component(s) and energy flows in and out of the system are known.

Clarification Statement: Emphasis is on utilizing calculations to understand that energy is transferred in and out of systems and conserved, as well as explaining the meaning of mathematical expressions used in the model. **Assessment Boundary:** Assessment is limited to basic algebraic expressions or computations; to systems of two or three components; and to thermal energy, kinetic energy, potential energy, and/or the energies in gravitational, magnetic, or electric fields.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Using Mathematics and Computational Thinking: • Create a computational model of a phenomenon, process, or system based on basic assumptions.	• Energy is a quantitative property of a system that depends on the motion and interactions of matter and radiation within that system. That there is a single quantity called energy is due to the fact that a system's total energy is conserved, even as, within the system, energy is continually transferred from one object to another and between its various possible forms. • Conservation of energy means energy cannot be created or destroyed and the total change of energy in a system is always equal to the energy transferred into or out of the system. • Energy cannot be created or destroyed, but it can be transported from one place to another and transferred between systems. • Mathematical expressions, which quantify how the stored energy in a system depends on its configuration (e.g. relative positions of charged particles, compression of a spring) and how kinetic energy depends on mass and speed, allow the concept of conservation of energy to be used to predict and describe system behavior. • The availability of energy limits what can occur in any system.	**Systems and System Models:** • Models can be used to predict the behavior of a system, but these predictions have limited precision and reliability due to the assumptions and approximations inherent in models.

Energy (PS3)

PH.PS3.2 Develop and use models to illustrate that energy at the macroscopic scale can be accounted for as either motions of particles or energy stored in fields.

Clarification Statement: Examples of phenomena at the macroscopic scale could include the conversion of kinetic energy to thermal energy, the energy stored due to the position of an object above the earth (considered as stored in fields), and the energy stored between two electrically-charged plates. Examples of models could include diagrams, drawings, descriptions, and computer simulations. **Assessment**

Boundary: Assessment does not include quantitative calculations.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Developing and Using Models: • Develop, revise, and/or use a model based on evidence to illustrate and/or predict the relationships between systems or between components of a system.	• Energy is a quantitative property of a system that depends on the motion and interactions of matter and radiation within that system. • That there is a single quantity called energy is due to the fact that a system's total energy is conserved, even as, within the system, energy is continually transferred from one object to another and between its various possible forms. • At the macroscopic scale, energy manifests itself in multiple ways, such as in motion, sound, light, and thermal energy. • These relationships are better understood at the microscopic scale, at which all of the different manifestations of energy can be modeled as a combination of energy associated with the motion of particles and energy associated with the configuration (relative position of the particles). In some cases, the relative position energy can be thought of as stored in fields (which mediate interactions between particles). This last concept includes radiation, a phenomenon in which energy stored in fields moves across space.	**Energy and Matter:** • Energy cannot be created or destroyed—only moves between one place and another place, between objects and/or fields, or between system.

Energy (PS3)		
PH.PS3.3 Design, build, and refine a device that works within given constraints to convert one form of energy into another form of energy.*		
Clarification Statement: Emphasis is on both qualitative and quantitative evaluations of devices. Examples of devices could include Rube Goldberg devices, wind turbines, solar cells, solar ovens, and generators. Examples of constraints placed on a device could include the cost of materials, types of materials available, having to use renewable energy, an efficiency threshold, and time to build and/or operate the device. **Assessment Boundary:** Assessment for quantitative evaluations is limited to total output for a given input. Assessment is limited to devices constructed with materials provided to students.		
Science and Engineering Practice	**Disciplinary Core Ideas**	**Crosscutting Concepts**
Designing Solutions: • Design, evaluate, and/or refine a solution to a complex real-world problem, based on scientific knowledge, student-generated sources of evidence, prioritized criteria, and trade-off considerations.	• At the macroscopic scale, energy manifests itself in multiple ways, such as in motion, sound, light, and thermal energy. • Criteria and constraints also include satisfying any requirements set by society, such as taking issues of risk mitigation into account, and they should be quantified to the extent possible and stated in such a way that one can tell if a given design meets them. • Modern civilization depends on major technological systems. Engineers continuously modify these technological systems by applying scientific knowledge and engineering design practices to increase benefits while decreasing costs and risks.	**Energy and Matter:** • Changes of energy and matter in a system can be described in terms of energy and matter flows into, out of, and within that system.

Energy (PS3)		
PH.PS3.4 Plan and conduct an investigation to provide evidence that the transfer of thermal energy between components in a closed system results in a more uniform energy distribution among the components in the system (second law of thermodynamics).		
Clarification Statement: Emphasis is on analyzing data from student investigations and using mathematical thinking to describe the thermal energy changes both quantitatively and conceptually. Examples of investigations could include mixing liquids at different initial temperatures or adding objects at different temperatures to water. **Assessment Boundary:** Assessment is limited to investigations based on materials and tools provided to students. Assessment includes both quantitative and conceptual descriptions of energy change.		
Science and Engineering Practice	**Disciplinary Core Ideas**	**Crosscutting Concepts**
Planning and Carrying Out Investigations: • Plan and conduct an investigation individually and collaboratively to produce data to serve as the basis for evidence, and in the design: decide on types, how much, and accuracy of data needed to produce reliable measurements; consider limitations on the precision of the data (e.g., number of trials, cost, risk, time) and refine the design accordingly.	• Energy cannot be created or destroyed, but it can be transported from one place to another and transferred between systems. • Uncontrolled systems always evolve toward more stable states-that is, toward more uniform energy distribution (e.g., water flows downhill, objects hotter than their surrounding environment cool down).	**Systems and System Models:** • When investigating or describing a system, the boundaries and initial conditions of the system need to be defined and their inputs and outputs analyzed and described using models.

Energy (PS3)		
PH.PS3.5 Develop and use a model of two objects interacting through electric or magnetic fields to illustrate the forces between objects and the changes in energy of the objects due to the interaction.		
Clarification Statement: Examples of models could include drawings, diagrams, and texts, such as drawings of what happens when two charges of opposite polarity are near each other, including an explanation of how the change in energy of the objects is related to the change in energy of the field. Examples of electric field phenomena may include volcanic lightning or laser printing and examples of magnetic field phenomena may include a mag-lev or magnetic braking. **Assessment Boundary:** Assessment is limited to systems containing two objects.		
Science and Engineering Practice	**Disciplinary Core Ideas**	**Crosscutting Concepts**
Developing and Using Models: • Develop, revise, and/or use a model based on evidence to illustrate and/or predict the relationships between systems or between components of a system.	• When two objects interact, each one exerts a force on the other. These forces can transfer energy between the objects. Forces between two objects at a distance are explained by force fields (gravitational, electric, or magnetic) between them.	**Energy and Matter:** • Energy cannot be created or destroyed. It only moves between one place to another, between objects and/or fields, or between systems.

Waves and Their Applications in Technologies for Information Transfer (PS4)

PH.PS4.1 Use mathematical representations to support a claim regarding relationships among the frequency, wavelength, and speed of waves traveling in various media.

Clarification Statement: Emphasis is on using mathematical relationships to understand how various media change the speed of waves. Examples of different media that could be explored include electromagnetic radiation traveling in a vacuum or glass, sound waves traveling through air or water, or seismic waves traveling through Earth. **Assessment Boundary:** Assessment is limited to algebraic relationships and describing those relationships qualitatively.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Using Mathematics and Computational Thinking: • Use mathematical, computational, and/or algorithmic representations of phenomena or design solutions to describe and/or support claims and/or explanations.	• The wavelength and frequency of a wave are related to one another by the speed of travel of the wave, which depends on the type of wave and the medium through which it is passing.	**Cause and Effect:** • Empirical evidence is required to differentiate between cause and correlation and make claims about specific causes and effects.

Waves and Their Applications in Technologies for Information Transfer (PS4)

PH.PS4.2 Evaluate questions about the advantages and disadvantages of using digital transmission and storage of information.*

Clarification Statement: Examples of advantages could include that digital information is stable because it can be stored reliably in computer memory, transferred easily, and copied and shared rapidly. Disadvantages could include issues of easy deletion, security and theft.
Assessment Boundary: N/A

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Asking Questions: • Evaluate questions that challenge the premises(s) of an argument, the interpretation of a data set, or the suitability of a design.	• Information can be digitized (e.g., picture stored as the values of an array of pixels); in this form, it can be stored reliably in computer memory and sent over long distances as a series of wave pulses. • Modern civilization depends on major technological systems. • Engineers continuously modify these technological systems by applying scientific knowledge and engineering design practices to increase benefits while decreasing costs and risks.	**Stability and Change:** • Systems can be designed for greater or lesser stability.

Waves and Their Applications in Technologies for Information Transfer (PS4)		
PH.PS4.3 Develop an argument for how scientific evidence supports the explanation that electromagnetic radiation can be described either by the wave model or the particle model, and in some situations one model is more useful than the other.		
Clarification Statement: Emphasis is on how the experimental evidence supports the claim and how a theory is generally modified in light of new evidence. Examples of a phenomenon could include resonance, interference, diffraction, and the photoelectric effect. **Assessment Boundary:** Assessment does not include using quantum theory.		
Science and Engineering Practice	**Disciplinary Core Ideas**	**Crosscutting Concepts**
Engaging in Argument from Evidence: • Construct, use, and/or present an oral and written argument or counter-arguments based on data and evidence.	• Waves can add or cancel one another as they cross, depending on their relative phase (i.e., relative position of peaks and troughs of the waves), but they emerge unaffected by each other. • Boundary: The discussion at this grade level is qualitative only; it can be based on the fact that two sounds can pass a location in different directions without getting mixed up. • Electromagnetic radiation (e.g., radio, microwaves, light) can be modeled as a wave of changing electric and magnetic fields or as particles called photons. • The wave model is useful for explaining many features of electromagnetic radiation, and the particle model explains other features.	**Systems and System Models:** • Models (e.g., physical, mathematical, computer) can be used to simulate systems and interactions (including energy, matter and information flows) within and between systems at different scales.

Waves and Their Applications in Technologies for Information Transfer (PS4)		
PH.PS4.4 Evaluate the validity and reliability of claims in published materials of the effects that different frequencies of electromagnetic radiation have when absorbed by matter.		
Clarification Statement: Emphasis is on the idea that different frequencies of electromagnetic radiation have different energies, and the damage to living tissue depends on the energy of the radiation. Examples of published materials could include peer-reviewed scientific articles, or trade books, magazines, web resources, videos, and other passages that may reflect bias. **Assessment Boundary:** Assessment is limited to qualitative descriptions.		
Science and Engineering Practice	**Disciplinary Core Ideas**	**Crosscutting Concepts**
Obtaining, Evaluating, and Communicating Information: • Evaluate the validity and reliability of and/or synthesize multiple claims, methods, and/or designs that appear in scientific and technical texts or media reports, verifying the data when possible.	• When light or longer wavelength electromagnetic radiation is absorbed in matter, it is generally converted into thermal energy (heat). • Shorter wavelength electromagnetic radiation (ultraviolet, X- rays, gamma rays) can ionize atoms and cause damage to living cells. • Photoelectric materials emit electrons when they absorb light of high enough frequency.	**Cause and Effect:** • Cause and effect relationships can be suggested and predicted for complex natural and human-designed systems by examining what is known about smaller scale mechanisms within the system.

Waves and Their Applications in Technologies for Information Transfer (PS4)		
PH.PS4.5 Communicate technical information about how some technological devices use the principles of wave behavior and wave interactions with matter to transmit and capture information and energy.*		
Clarification Statement: Examples could include solar cells capturing light and converting it to electricity and transmitting an audio file through a modulated laser signal. Other examples can be found in medical imaging and communication technology. **Assessment Boundary:** Assessments are limited to qualitative information. Assessments do not include band theory.		
Science and Engineering Practice	**Disciplinary Core Ideas**	**Crosscutting Concepts**
Obtaining, Evaluating, and Communicating Information: • Communicate scientific and/or technical information (e.g., about phenomena and/or the process of development and the design and performance of a proposed process or system) in multiple formats (including orally, graphically, textually, and mathematically).	• Solar cells are human-made devices that capture the Sun's energy and produce electrical energy. • Information can be digitized (e.g., a picture stored as the values of an array of pixels); in this form, it can be stored reliably in computer memory and sent over long distances as a series of wave pulses. • Photoelectric materials emit electrons when they absorb light of a high enough frequency. • Multiple technologies based on the understanding of waves and their interactions with matter are part of every day experiences in the modern world (e.g., medical imaging, communications, scanners) and in scientific research. They are essential tools for producing, transmitting, and capturing signals and for storing and interpreting the information contained in them. • Modern civilization depends on major technological systems.	**Cause and Effect:** • Cause and effect relationships can be suggested and predicted for complex natural and human-designed systems by examining what is known about smaller scale mechanisms within the system.

BIOLOGY (B)		
From Molecules to Organisms: Structures and Processes (LS1)		
B.LS1.1 Construct an explanation based on evidence for how the structure of DNA determines the structure of proteins, which carry out the essential functions of life through systems of specialized cells.		
Clarification Statement: Emphasis is on the conceptual understanding that the sequence of nucleotides in DNA determines the amino acid sequence of proteins through the processes of transcription and translation. **Assessment Boundary:** Assessment does not include identification of specific cell or tissue types, whole body systems, specific protein structures and functions, or the biochemistry of protein synthesis.		
Science and Engineering Practice	**Disciplinary Core Ideas**	**Crosscutting Concepts**
Constructing Explanations: • Construct and revise an explanation based on valid and reliable evidence obtained from a variety of sources (including students' own investigations, models, theories, simulations, peer review) and the assumption that theories and laws that describe the natural world operate today as they did in the past and will continue to do so in the future.	• Systems of specialized cells within organisms help them perform the essential functions of life. • All cells contain genetic information in the form of DNA molecules. • Genes are regions in the DNA that contain the instructions that code for the formation of proteins, which carry out most of the work of the cells.	**Structure and Function:** • The functions and properties of natural and designed objects and systems can be inferred from their overall structure, the way their components are shaped and used, and the molecular substructures of their various materials.

From Molecules to Organisms: Structures and Processes (LS1)

B.LS1.2 Develop and use a model to illustrate the hierarchical organization of interacting systems that provide specific functions within multicellular organisms.

Clarification Statement: Emphasis is on developing a model in which relevant parts (e.g., an organ system, organs, and their component tissues) and processes (e.g., transport of fluids, motion) of body systems in multicellular organisms are identified and described. Models should then be used to illustrate how relevant parts within a system interact and how systems interact with one another to provide specific functions in multicellular organisms. **Assessment Boundary:** Assessment does not include interactions and functions at the molecular or chemical reaction level and is limited to two systems interacting at a time.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Developing and Using Models: • Develop, revise, and/or use a model based on evidence to illustrate and/or predict the relationships between systems or between components of a system.	• Multicellular organisms have a hierarchical structural organization, in which any one system is made up of numerous parts and is itself a component of the next level.	**Systems and System Models:** • Models (e.g., physical, mathematical, computer) can be used to simulate systems and interactions, including energy, matter, and information flow within and between systems at different scales.

From Molecules to Organisms: Structures and Processes (LS1)

B.LS1.3 Plan and conduct an investigation to provide evidence of the importance of maintaining homeostasis in living organisms.

Clarification Statement: A state of homeostasis (stability) must be maintained for organisms to remain alive and functional even as external conditions change within some range. Examples of investigations could include heart rate response to exercise, stomate response to moisture and temperature, root development in response to water levels, and cell response to hypertonic and hypotonic environments. **Assessment**
Boundary: Assessment does not include the cellular processes involved in the feedback mechanism.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Planning and Conducting Investigations: • Plan and conduct an investigation individually and collaboratively to produce data to serve as the basis for evidence.	• Feedback mechanisms maintain a living system's internal conditions within certain limits and mediate behaviors, allowing it to remain alive and functional even as external conditions change within some range. Outside that range (e.g., at too high or low external temperature, with too little food or water available) the organism cannot survive.	**Stability and Change:** • Feedback (negative or positive) can stabilize or destabilize a system.

B.LS1.4 Use a model to illustrate the role of cellular division (mitosis) and differentiation in producing and maintaining complex organisms.

Clarification Statement: Emphasis is not on the details of each phase of mitosis but on the conceptual understanding that mitosis produces genetically identical cells via DNA replication and cell division and that immature cells may become specialized through differentiation.
Assessment Boundary: Assessment does not include specific gene control mechanisms or rote memorization of the steps of mitosis.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Developing and Using Models: • Develop, revise, and/or use a model based on evidence to illustrate and/or predict the relationships between systems or between components of a system.	• In multicellular organisms, individual cells grow and then divide via a process called mitosis, thereby allowing the organism to grow. • The organism begins as a single cell (fertilized egg) that divides successively to produce many cells, with each parent cell passing identical genetic material (two variants of each chromosome pair) to both daughter cells. • Cellular division and differentiation produce and maintain a complex organism, composed of systems of tissues and organs that work together to meet the needs of the whole organism.	**Systems and System Models:** • Models (e.g., physical, mathematical, computer) can be used to simulate systems and interactions, including energy, matter, and information flow within and between systems at different scales.

From Molecules to Organisms: Structures and Processes (LS1)

B.LS1.5 Use a model to illustrate how photosynthesis transforms light energy into stored chemical energy.

Clarification Statement: Emphasis is on illustrating inputs and outputs of matter and the transfer and transformation of energy in photosynthesis by plants and other photosynthesizing organisms. Examples of models could include diagrams, chemical equations, or conceptual models developed from investigations.
Assessment Boundary: The assessment should provide evidence of students' abilities to describe the inputs and outputs of photosynthesis, not the specific biochemical steps (e.g., photosystems, electron transport, and Calvin Cycle).

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Developing and Using Models: • Develop, revise, and/or use a model based on evidence to illustrate and/or predict the relationships between systems or between components of a system.	• The process of photosynthesis converts light energy to stored chemical energy by converting carbon dioxide plus water into sugars plus released oxygen.	**Energy and Matter:** • Changes of energy and matter in a system can be described in terms of energy and matter flows into, out of, and within that system.

B.LS1.6 Construct and revise an explanation based on evidence for how carbon, hydrogen, and oxygen from sugar molecules may combine with other elements to form amino acids and/or other large carbon-based molecules.

Clarification Statement: Emphasis is on using evidence from models and/or simulations to support explanations for how organisms take in matter and rearrange the atoms in chemical reactions to form amino acids and/or other large carbon-based molecules.
Assessment Boundary: Assessment does not include the details of the specific chemical reactions or identification of macromolecules.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Constructing Explanations: • Use evidence (e.g., measurements, observations, patterns) to construct or support an explanation.	• The sugar molecules thus formed contain carbon, hydrogen, and oxygen: their hydrocarbon backbones are used to make amino acids and other carbon-based molecules that can be assembled into large molecules (such as proteins or DNA), used, for example, to form new cells. • As matter and energy flow through different organization levels of living systems, chemical elements are recombined in different ways to form different products.	**Energy and Matter:** • Changes of energy and matter in a system can be described in terms of energy and matter flows into, out of, and within that system.

From Molecules to Organisms: Structures and Processes (LS1)

B.LS1.7 Use a model to illustrate that cellular respiration is a chemical process whereby the bonds of food molecules and oxygen molecules are broken and the bonds in new compounds are formed, resulting in a net transfer of energy.

Clarification Statement: Emphasis is on the conceptual understanding of the inputs and outputs of the process of cellular respiration. Examples of models could include diagrams, chemical equations, or conceptual models developed from investigations. **Assessment Boundary:** Assessment should not include identification of the steps or specific processes involved in cellular respiration (e.g. glycolysis, Kreb's Cycle, and electron transport).

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Developing and Using Models: • Develop, revise, and/or use a model based on evidence to illustrate and/or predict the relationships between systems or between components of a system.	• As matter and energy flow through different organization levels of living systems, chemical elements are recombined in different ways to form different products. • As a result of these chemical reactions, energy is transferred from one system of interacting molecules to another. • Cellular respiration is a chemical process in which the bonds of food molecules and oxygen molecules are broken and new compounds are formed that can transport energy to muscles. • Cellular respiration also releases the energy needed to maintain body temperature despite ongoing energy transfer to the surrounding environment.	**Energy and Matter:** • Energy cannot be created or destroyed. It only moves between one place to another, between objects and/or fields, or between systems.

Ecosystems: Interactions, Energy, and Dynamics (LS2)		
B.LS2.1 Use mathematical and/or computational representations to support explanations of factors that affect carrying capacities of ecosystems at different scales.		
Clarification Statement: Emphasis is on quantitative analysis and comparison of the relationships among interdependent factors including boundaries, resources, climate, and competition. Examples of mathematical comparisons could include graphs, charts, histograms, or population changes gathered from simulations or historical data sets. **Assessment Boundary:** Assessment does not include deriving mathematical equations to make comparisons.		
Science and Engineering Practice	**Disciplinary Core Ideas**	**Crosscutting Concepts**
Using Mathematics and Computational Thinking: • Use mathematical, computational, and/or algorithmic representations of phenomena to describe and/or support claims and/or explanations.	• Ecosystems have carrying capacities, which are limits to the number of organisms and populations they can support. These limits result from such factors as the availability of living and nonliving resources and from such challenges as predation, competition, and disease. • Organisms would have the capacity to produce populations of great size were it not for the fact that environments and resources are finite. This fundamental tension affects the abundance (number of individuals) of species in any given ecosystem.	**Scale, Proportion, and Quantity:** • The significance of a phenomenon is dependent on the scale, proportion, and quantity at which it occurs.

Ecosystems: Interactions, Energy, and Dynamics (LS2)		
B.LS2.2 Use mathematical representations to support and revise explanations based on evidence about factors affecting biodiversity and populations in ecosystems of different scales.		
Clarification Statement: Examples of mathematical representations include finding the average, determining trends, and using graphical comparisons of multiple sets of data. **Assessment Boundary:** Assessment is limited to provided data.		
Science and Engineering Practice	**Disciplinary Core Ideas**	**Crosscutting Concepts**
Using Mathematics and Computational Thinking: • Use mathematical representation to describe and/or support scientific conclusions.	• Ecosystems have carrying capacities, which are limits to the numbers of organisms and populations they can support. These limits result from such factors as the availability of living and nonliving resources and from such challenges such as predation, competition, and disease. • Organisms would have the capacity to produce populations of great size were it not for the fact that environments and resources are finite. This fundamental tension affects the abundance (number of individuals) of species in any given ecosystem. • A complex set of interactions within an ecosystem can keep its number and types of organisms relatively constant over long periods of time under stable conditions. • If a modest biological or physical disturbance to an ecosystem occurs, it may return to its more or less original status (i.e., the ecosystem is resilient) as opposed to becoming a very different ecosystem. • Extreme fluctuations in conditions or the size of any populations, however, can challenge the functions of ecosystems in terms of resources and habitat availability.	**Scale, Proportion, and Quantity:** • Algebraic thinking is used to examine scientific data and predict the effect of a change in one variable on another (e.g., linear growth vs. exponential growth).

Ecosystems: Interactions, Energy, and Dynamics (LS2)		
B.LS2.3 Construct and revise an explanation based on evidence for the cycling of matter and the flow of energy in aerobic and anaerobic conditions.		
Clarification Statement: Emphasis is on describing the role of aerobic and anaerobic respiration in the conservation of matter and flow of energy into, out of, and within various ecosystems (e.g., chemosynthetic bacteria near deep ocean vents, yeast in various environments, muscle cells during exertion, water-logged plants). **Assessment Boundary:** Assessment focuses on the conceptual understanding and does not include the specific chemical processes of either aerobic or anaerobic respiration.		
Science and Engineering Practice	**Disciplinary Core Ideas**	**Crosscutting Concepts**
Constructing Explanations: • Construct and revise an explanation based on valid and reliable evidence obtained from a variety of sources (including students' own investigations, models, theories, simulations, peer review) and the assumption that theories and laws that describe the natural world operate today as they did in the past and will continue to do so in the future.	• Photosynthesis and cellular respiration (including anaerobic processes) provide most of the energy for life processes.	**Energy and Matter:** • Energy drives the cycling of matter within and between systems.

Ecosystems: Interactions, Energy, and Dynamics (LS2)

B.LS2.4 Use a mathematical representation to support claims for the cycling of matter and the flow of energy among organisms in an ecosystem.

Clarification Statement: Emphasis is on using a mathematical model of stored energy in biomass to describe the transfer of energy from one trophic level to another and that matter and energy are conserved as matter cycles and energy flows through ecosystems. Emphasis is on atoms and molecules such as carbon, oxygen, hydrogen, and nitrogen being conserved as they move through an ecosystem. **Assessment Boundary:** The assessment should provide evidence of students' abilities to develop and use energy pyramids, food chains, food webs, and other models from data sets.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Using Mathematics and Computational Thinking: • Use mathematical representation to describe and/or support scientific conclusions.	• Plants or algae form the lowest level of the food chain. • At each link upward in a food web, only a small fraction of the matter consumed at the lower level is transferred upward to produce growth and release energy in cellular respiration at the higher level. • Given this inefficiency, there are generally fewer organisms at higher levels of a food web. • Some matter reacts to release energy for life functions, some matter is stored in newly made structures, and much is discarded. • The chemical elements that make up the molecules of organisms pass through food webs and into and out of the atmosphere and soil, and they are combined and recombined in different ways. • At each link in an ecosystem, matter and energy are conserved.	**Energy and Matter:** • Energy cannot be created or destroyed. It only moves between one place to another, between objects and/or fields, or between systems.

Ecosystems: Interactions, Energy, and Dynamics (LS2)		
B.LS2.5 Develop a model to illustrate the role of photosynthesis and cellular respiration in the cycling of carbon among the biosphere, atmosphere, hydrosphere, and geosphere.		
Clarification Statement: Examples of models could include simulations and mathematical models. The emphasis is on the movement of carbon. **Assessment Boundary:** Assessment does not include the specific chemical steps of photosynthesis and respiration.		
Science and Engineering Practice	**Disciplinary Core Ideas**	**Crosscutting Concepts**
Developing and Using Models: • Develop a model based on evidence to illustrate the relationships between systems or components of a system.	• Photosynthesis and cellular respiration are important components of the carbon cycle, in which carbon is exchanged among the biosphere, atmosphere, oceans, and geosphere through chemical, physical, geological, and biological processes. • The main way that solar energy is captured and stored on Earth is through the complex chemical process known as photosynthesis.	**Systems and System Models:** • Models (e.g., physical, mathematical, computer) can be used to simulate systems and interactions; including energy, matter, and information flow within and between systems at different scales.

Ecosystems: Interactions, Energy, and Dynamics (LS2)		
B.LS2.6 Evaluate the claims, evidence, and reasoning that the complex interactions in ecosystems maintain relatively consistent numbers and types of organisms in stable conditions, but changing conditions may result in a new ecosystem.		
Clarification Statement: Examples of changes in ecosystem conditions could include modest biological or physical changes, such as moderate hunting or a seasonal flood; and extreme changes, such as volcanic eruption or sea level rise. **Assessment Boundary:** The assessment should provide evidence of students' abilities to derive trends from graphical representations of population trends. Assessments should focus on describing drivers of ecosystem stability and change, not on the organismal mechanisms of responses and interactions.		
Science and Engineering Practice	**Disciplinary Core Ideas**	**Crosscutting Concepts**
Engaging in Argument from Evidence: • Evaluate the claims, evidence, and/or reasoning behind currently accepted explanations or solutions to determine the merit of arguments.	• A complex set of interactions within an ecosystem can keep its number and types of organisms relatively constant over long periods of time under stable conditions. • If a modest biological or physical disturbance to an ecosystem occurs, it may return to its more or less original status (i.e., the ecosystem is resilient) as opposed to becoming a very different ecosystem. • Extreme fluctuations in conditions or the size of any populations, however, can challenge the functions of ecosystems in terms of resources and habitat availability.	**Stability and Change:** • Much of science deals with constructing explanations of how things change and how they remain stable.

Ecosystems: Interactions, Energy, and Dynamics (LS2)		
B.LS2.8 Evaluate evidence for the role of group behavior on individual and species' chances to survive and reproduce.		
Clarification Statement: Emphasis is on advantages of grouping behaviors (e.g., flocking, schooling, herding) and cooperative behaviors (e.g., hunting, migrating, swarming) on survival and reproduction. **Assessment Boundary:** The assessment should provide evidence of students' abilities to: (1) distinguish between group versus individual behavior, (2) identify evidence supporting the outcomes of group behavior, and (3) develop logical and reasonable arguments based on evidence.		
Science and Engineering Practice	**Disciplinary Core Ideas**	**Crosscutting Concepts**
Engaging in Argument from Evidence: • Evaluate the claims, evidence, and/or reasoning behind currently accepted explanations or solutions to determine the merit of arguments.	• Group behavior has evolved because membership can increase the chances of survival for individuals and their genetic relatives.	**Cause and Effect:** • Empirical evidence is required to differentiate between cause and correlation and make claims about specific causes and effects.

Heredity: Inheritance and Variation of Traits (LS3)

B.LS3.1 Ask questions to clarify relationships about the role of DNA and chromosomes in coding the instructions for characteristic traits passed from parents to offspring.

Clarification Statement: Emphasis is on the use of models of DNA to formulate questions, the answers to which would clarify the cause and effect relationships (including distinguishing between causal and correlational relationships) between DNA, the proteins it codes for, and the resulting traits observed in an organism. **Assessment Boundary:** Assessment does not include the phases of meiosis or the biochemical mechanism of specific steps in the process.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Asking Questions: • Ask questions that arise from examining models or a theory, to clarify and/or seek additional information and relationships.	• All cells contain genetic information in the form of DNA molecules. • Genes are regions in the DNA that contain the instructions that code for the formation of proteins, which carry out most of the work of the cells. • Each chromosome consists of a single, very long DNA molecule, and each gene on the chromosome is a particular segment of that DNA. • The instructions for forming species' characteristics are carried in DNA. All cells in an organism have the same genetic content, but the genes used (expressed) by the cell may be regulated in different ways. • Not all DNA codes for protein; some segments of DNA are involved in regulatory or structural functions, and some have no, as of yet, known functions.	**Cause and Effect:** • Empirical evidence is required to differentiate between cause and correlation and make claims about specific causes and effects.

Heredity: Inheritance and Variation of Traits (LS3)		
B.LS3.2 Make and defend a claim based on evidence that inheritable genetic variations may result from: (1) new genetic combinations through meiosis, (2) viable errors occurring during replication, and/or (3) mutations caused by environmental factors.		
Clarification Statement: Emphasis is on using data to support arguments for the way variation occurs. **Assessment Boundary:** Assessment does not include the phases of meiosis or the biochemical mechanisms of specific steps in the process.		
Science and Engineering Practice	**Disciplinary Core Ideas**	**Crosscutting Concepts**
Engaging in Argument from Evidence: • Make and defend a claim based on evidence about the natural world or the effectiveness of a design solution that reflects scientific knowledge and student-generated evidence.	• In sexual reproduction, chromosomes can sometimes swap sections during the process of meiosis (cell division), thereby creating new genetic combinations and thus more genetic variation. • Although DNA replication is tightly regulated and remarkably accurate, errors do occur and result in mutations, which also cause mutations in genes, and variables in mutations are also inherited. • Environmental factors also affect expression of traits, and hence affect the probability of occurrences of traits in the population; thus, the variation and distribution of traits observed depends on both genetic and environmental factors.	**Cause and Effect:** • Empirical evidence is required to differentiate between cause and correlation and make claims about specific causes and effects.

Heredity: Inheritance and Variation of Traits (LS3)

B.LS3.3 Apply concepts of statistics and probability to explain the variation and distribution of expressed traits in a population.

Clarification Statement: Emphasis is on distribution and variation of traits in a population and the use of mathematics (e.g., calculations of frequencies based on data from Punnett squares, graphical representations) to describe the distribution of traits in a population, not individuals. **Assessment Boundary:** Emphasis is on students' use of genetic models to explain the variation and patterns observed in a population as a combination of genetic and environmental factors. Assessment does not include Hardy-Weinberg calculations.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Analyzing and Interpreting Data: • Apply concepts of statistics and probability (including determining function fits to data, slope, intercept, and correlation coefficient for linear fits) to scientific questions and problems, using digital tools when feasible.	• Environmental factors also affect expression of traits, and hence affect the probability of occurrences of traits in the population; thus, the variation and distribution of traits observed depends on both genetic and environmental factors.	**Scale, Proportion, and Quantity:** • Algebraic thinking is used to examine scientific data and predict the effect of a change in one variable on another (e.g., linear growth vs. exponential growth).

Biological Unity and Diversity (LS4)

B.LS4.1 Communicate scientific information that common ancestry and biological evolution are supported by multiple lines of empirical evidence.

Clarification Statement: Emphasis is on a conceptual understanding of the role each line of evidence has relating to common ancestry and biological evolution. Examples of evidence should include similarities in DNA and amino acid sequences, but could also include fossil record, anatomical structures, and the order of appearance of structures in embryological development. **Assessment Boundary:** Emphasis is on students' abilities to use evidence such as DNA and amino acid sequences, cladograms, analogous/homologous structures, and fossil records
to communicate their understanding of common ancestry and biological evolution.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Obtaining, Evaluating, and Communicating Information: • Communicate scientific information (e.g., about phenomena) in multiple formats (including orally, graphically, textually, and mathematically).	• Genetic information provides evidence of common ancestry and diversity. DNA sequences vary among species, but there are many overlaps; in fact, the ongoing branching that produces multiple lines of descent can be inferred by comparing the DNA sequences of different organisms. Such information is also derivable from the similarities and differences in amino acid sequences and from anatomical and embryological evidence. • Evolution is a consequence of the interaction of four factors: (1) the potential for a species to increase in number, (2) the genetic variation of individuals in a species due to mutation and sexual reproduction, (3) competition for an environment's limited supply of the resources that individuals need in order to survive and reproduce, and (4) the ensuing proliferation of those organisms that are better able to survive and reproduce in that environment.	**Patterns:** • Different patterns may be observed at each of the scales at which a system is studied and can provide evidence for causality in explanations of phenomena.

Biological Unity and Diversity (LS4)		
B.LS4.2 Construct an explanation based on evidence that biological diversity is influenced by (1) the potential for a species to increase in number, (2) the heritable genetic variation of individuals in a species due to mutation and sexual reproduction, (3) competition for limited resources, and (4) the proliferation of those organisms that are better able to survive and reproduce in the environment.		
Clarification Statement: Emphasis is on using evidence to explain the influence each of the four factors has on number of organisms, behaviors, morphology, or physiology in terms of ability to survive and reproduce. Examples of evidence could include mathematical models such as simple distribution graphs and proportional reasoning. **Assessment Boundary:** Assessment does not include genetic drift, gene flow through migration, and co-evolution.		
Science and Engineering Practice	**Disciplinary Core Ideas**	**Crosscutting Concepts**
Constructing Explanations: • Construct an explanation based on valid and reliable evidence obtained from a variety of sources (including students' own investigations, models, theories, simulations, peer review) and the assumption that theories and laws that describe the natural world operate today as they did in the past and will continue to do so in the future.	• Natural selection occurs only if there is both (1) variation in the genetic information between organisms in a population and (2) variation in the expression of that genetic information—that is, trait variation— that leads to differences in performance among individuals.	**Cause and Effect:** • Empirical evidence is required to differentiate between cause and correlation and make claims about specific causes and effects.

Biological Unity and Diversity (LS4)		
B.LS4.3 Apply concepts of statistics and probability to support explanations that organisms with an advantageous heritable trait tend to increase in proportion to organisms lacking this trait.		
Clarification Statement: Emphasis is on analyzing shifts in numerical distribution of traits and using these shifts as evidence to support explanations for adaptations. **Assessment Boundary:** Emphasis is on students' abilities to analyze shifts in numerical distribution of traits as evidence to support explanations. Analysis is limited to basic statistical and graphical analysis, not allele or gene frequency calculations.		
Science and Engineering Practice	**Disciplinary Core Ideas**	**Crosscutting Concepts**
Analyzing and Interpreting Data: • Apply concepts of statistics and probability (including determining function fits to data, slope, intercept, and correlation coefficient for linear fits) to scientific and engineering questions and problems, using digital tools when feasible.	• Natural selection occurs only if there is both (1) variation in the genetic information between organisms in a population and (2) variation in the expression of that genetic information—that is, trait variation—that leads to differences in performance among individuals. • The traits that positively affect survival are more likely to be reproduced, and thus are more common in the population. • Natural selection leads to adaptation, that is, to a population dominated by organisms that are anatomically, behaviorally, and physiologically well suited to survive and reproduce in a specific environment. That is, the differential survival and reproduction of organisms in a population that have an advantageous heritable trait leads to an increase in the proportion of individuals in future generations that have the trait and to a decrease in the proportion of individuals that do not. • Adaptation also means that the distribution of traits in a population can change when conditions change.	**Patterns:** • Different patterns may be observed at each of the scales at which a system is studied and can provide evidence for causality in explanations and phenomena.

Biological Unity and Diversity (LS4)

B.LS4.4 Construct an explanation based on evidence for how natural selection leads to adaptation of populations.

Clarification Statement: Emphasis is on using data to provide evidence for how specific biotic and abiotic differences in ecosystems (such as ranges of seasonal temperature, long-term climate change, acidity, light, geographic barriers, or adaptation of other organisms) contribute to a change in gene frequency over time, leading to adaptation of populations. **Assessment Boundary:** N/A

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Constructing Explanations: • Construct an explanation based on valid and reliable evidence obtained from a variety of sources (including students' own investigations, models, theories, simulations, peer review) and the assumption that theories and laws that describe the natural world operate today as they did in the past and will continue to do so in the future.	• Natural selection leads to adaptation, that is, to a population dominated by organisms that are anatomically, behaviorally, and physiologically well suited to survive and reproduce in a specific environment. • That is, the differential survival and reproduction of organisms in a population that have an advantageous heritable trait leads to an increase in the proportion of individuals in future generations that have the trait and to a decrease in the proportion of individuals that do not. • Changes in the physical environment, whether naturally occurring or human induced, have thus contributed to the expansion of some species, the emergence of new distinct species as populations diverge under different conditions, and the decline–and sometimes the extinction–of some species.	**Cause and Effect:** • Empirical evidence is required to differentiate between cause and correlation and make claims about specific causes and effects.

Biological Unity and Diversity (LS4)		
B.LS4.5 Evaluate the evidence supporting claims that changes in environmental conditions may result in (1) increases in the number of individuals of some species, (2) the emergence of new species over time, and (3) the extinction of other species.		
Clarification Statement: Emphasis is on determining cause and effect relationships for how changes to the environment such as deforestation, fishing, application of fertilizers, drought, flood, and the rate of change of the environment affect distribution or disappearance of traits in species. **Assessment Boundary:** N/A		
Science and Engineering Practice	**Disciplinary Core Ideas**	**Crosscutting Concepts**
Engaging in Argument from Evidence: • Evaluate the evidence behind currently accepted explanations or solutions to determine the merits of arguments.	• Changes in the physical environment, whether naturally occurring or human induced, have thus contributed to the expansion of some species, the emergence of new distinct species as populations diverge under different conditions, and the decline–and sometimes the extinction–of some species. • Species become extinct because they can no longer survive and reproduce in their altered environment. If members cannot adjust to change that is too fast or drastic, the opportunity for the species' adaptation over time is lost.	**Cause and Effect:** • Empirical evidence is required to differentiate between cause and correlation and make claims about specific causes and effects.

EARTH AND SPACE SCIENCE (ES)

Earth's Place in the Universe (ESS1)

ES.ESS1.1 Develop a model based on evidence to illustrate the life span of the Sun and the role of nuclear fusion in the Sun's core to convert matter to energy that eventually reaches Earth in the form of radiation.

Clarification Statement: Emphasis is on the energy transfer mechanisms that allow energy from nuclear fusion in the Sun's core to reach Earth. Examples of evidence for the model include observations of the masses and lifetimes of other stars, as well as the ways that the Sun's radiation varies due to sudden solar flares ("space weather"), the 11-year sunspot cycle, and non-cyclic variations over centuries.

Assessment Boundary: Assessment does not include details of the atomic and sub-atomic processes involved with the Sun's nuclear fusion.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Develop and Use Models: • Develop and/or use a model (including mathematical and computational) to generate data to support explanations, predict phenomena, analyze systems, and/or solve problems.	• The star called the Sun is changing and will burn out over a lifespan of approximately 10 billion years. • Nuclear Fusion processes in the center of the Sun release the energy that ultimately reaches Earth as radiation.	**Energy and Matter:** • Changes of energy and matter in a system can be described in terms of energy and matter flows into, out of, and within that system.

Earth's Place in the Universe (ESS1)

ES.ESS1.2 Construct an explanation of how the universe formed as a single point and continues to expand based on astronomical evidence of light spectra, motion of distant galaxies, and the composition of matter in the universe.

Clarification Statement: Emphasis is on the astronomical evidence of the red shift of light from galaxies as an indication that the universe is currently expanding, the remnant cosmic microwave background radiation, and the observed composition of ordinary matter of the universe, primarily found in stars and interstellar gases. **Assessment Boundary:** Details about the mapped distribution of galaxies and clusters are not assessed.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Constructing Explanations: • Use evidence (e.g., measurements, observations, patterns) to construct or support an explanation or design a solution to a problem.	• The study of stars' light spectra and brightness is used to identify compositional elements of stars, their movements, and their distances from Earth. • Observations of distant galaxies receding from our own, the measured composition of stars and non-stellar gases, and maps of spectra of the primordial radiation (cosmic microwave background) that still fills the universe are used as evidence to support the explanation of formation. • Other than the hydrogen and helium formed at the time of formation, nuclear fusion within stars produces all atomic nuclei lighter than and including iron, and the process releases electromagnetic energy. Heavier elements are produced when certain massive stars achieve a supernova stage and explode. • Atoms of each element emit and absorb characteristic frequencies of light. These characteristics allow identification of the presence of an element, even in microscopic quantities.	**Energy and Matter:** • Energy cannot be created or destroyed. It only moves between one place to another, between objects and/or fields, or between systems.

Earth's Place in the Universe (ESS1)

ES.ESS1.3 Construct an explanation about the process that causes stars to produce elements throughout their life cycle.

Clarification Statement: Emphasis is on the way nucleosynthesis, and therefore the different elements created, depend on the mass of a star and the stage of its lifetime. **Assessment Boundary:** Details of the many different nucleosynthesis pathways for stars of different masses are not assessed.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Constructing Explanations: • Use evidence (e.g., measurements, observations, patterns) to construct or support an explanation.	• The study of stars' light spectra and brightness is used to identify compositional elements of stars, their movements, and their distances from Earth. • Other than the hydrogen and helium formed at the time of formation, nuclear fusion within stars produces all atomic nuclei lighter than and including iron, and the process releases electromagnetic energy. • Heavier elements are produced when certain massive stars achieve a supernova stage and explode.	**Cause and Effect:** • Empirical evidence is required to differentiate between cause and correlation and make claims about specific causes and effects.

ES.ESS1.4 Use mathematical or computational representations to determine patterns that can be used to predict the motion of orbiting objects in the solar system.

Clarification Statement: Emphasis is on Newtonian gravitational laws governing orbital motions, which apply to human-made satellites as well as planets and moons (e.g. graphical representations of orbits). **Assessment Boundary:** Mathematical representations for the gravitational attraction of bodies and Kepler's Laws of orbital motions should not deal with more than two bodies, nor involve calculus.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Using Mathematics and Computational Thinking • Use mathematical representations of phenomena or design solutions to support and revise explanations.	• The solar system consists of the Sun and a collection of objects of varying sizes and conditions-including planets and their moons-that are held in orbit around the Sun by its gravitational pull on them. • Kepler's laws describe common features of the motions of orbiting objects, including their elliptical paths around the Sun. Orbits may change due to the gravitational effects from, or collisions with, other objects in the solar system.	**Patterns:** • Mathematical representations are needed to identify some patterns.

Earth's Place in the Universe (ESS1)

ES.ESS1.5 Evaluate evidence in the patterns of the past and current movements of continental and oceanic crust and the theory of plate tectonics to explain the ages of crustal rocks.

Clarification Statement: Emphasis is on the ability of plate tectonics to explain the ages of crustal rocks. Examples include evidence of the ages of oceanic crust increases with distance from mid-ocean ridges (a result of plate spreading) and the ages of North American continental crust decreasing with distance away from a central ancient core (a result of past plate interactions). **Assessment Boundary:** N/A

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Engaging in Argument from Evidence: • Evaluate the claims, evidence, and/or reasoning behind currently accepted explanations or solutions to determine the merit of arguments.	• Plate tectonics is the unifying theory that explains the past and current movements of the rocks at Earth's surface and provides a framework for understanding its geologic history.	**Stability and Change:** • Much of science deals with constructing explanations of how things change and how they remain stable.

ES.ESS1.6 Apply scientific reasoning and evidence from ancient Earth materials, meteorites, and other planetary surfaces to construct an account of changes in Earth's formation and early history.

Clarification Statement: Emphasis is on using available evidence within the solar system to reconstruct the early history of Earth, which formed along with the rest of the solar system. Examples of evidence include the absolute ages of ancient materials (obtained by radiometric dating of meteorites, Moon rocks, and Earth's oldest minerals), the sizes and compositions of solar system objects, and the impact cratering record of planetary surfaces. **Assessment Boundary:** N/A

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Constructing Explanations: • Apply scientific reasoning, theory, and/or models to link evidence to the claims to assess the extent to which the reasoning and data support the explanation or conclusion.	• Although active geologic processes, such as plate tectonics and erosion, have destroyed or altered most of the very early rock record on Earth, other objects in the solar system, such as lunar rocks, asteroids, and meteorites, have changed little over billions of years. Studying these objects can provide information about Earth's formation and early history. • Spontaneous radioactive decays follow a characteristic exponential decay law. Nuclear lifetimes allow radiometric dating to be used to determine the ages of rocks and other materials.	**Stability and Change:** • Much of science deals with constructing explanations of how things change and how they remain stable.

Earth Systems (ESS2)

ES.ESS2.1 Develop a model to illustrate how Earth's internal and surface processes operate at different scales of space and time to form continental and ocean-floor features.

Clarification Statement: Emphasis is on how the appearance of land features (such as mountains, valleys, and plateaus) and sea-floor features (such as trenches, ridges, and seamounts) are a result of both constructive forces (such as volcanism, tectonic uplift, and mountain building) and destructive mechanisms (such as weathering, erosion, and landslides or mudslides). **Assessment Boundary:** Assessment does not include memorization of formation details of specific geographic features of Earth's surface.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Developing and Using Models: • Develop a model based on evidence to illustrate the relationships between systems or components of a system.	• Earth's systems, being dynamic and interacting, cause feedback effects that can increase or decrease the original changes. • Plate tectonics is the unifying theory that explains the past and current movements of rocks at Earth's surface and provides a framework for understanding its geologic history. • Plate movements are responsible for most continental and ocean-floor features and for the distribution of most rocks and minerals within the Earth's crust.	**Scale, Proportion, and Quantity:** • Some systems can only be studied indirectly as they are too small, too large, too fast, or too slow to observe directly.

Earth Systems (ESS2)

ES.ESS2.2 Analyze geoscience data to make the claim that one change to Earth's surface can create feedbacks and interactions that cause changes to other Earth's systems.

Clarification Statement: Examples could be taken from system interactions, such as how the loss of ground vegetation causes an increase in water runoff and soil erosion, which limits additional vegetation patterns; how dammed rivers increase groundwater recharge, decrease sediment transport, and increased coastal erosion; or how the loss of wetlands causes a decrease in local humidity that further reduces the wetland extent. Examples could also include climate feedbacks that increase surface temperatures through geologic time. **Assessment Boundary:** N/A

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Analyzing and Interpreting Data: • Analyze data using tools, technologies, and/or models in order to make valid and reliable scientific claims.	• Earth's systems, being dynamic and interacting, cause feedback effects that can increase or decrease the original changes. • The foundation for Earth's global climate system is the electromagnetic radiation from the Sun, as well as its reflection, absorption, storage, and redistribution among the atmosphere, ocean, and land systems, and this energy's re-radiation into space.	**Stability and Change:** • Feedback (negative or positive) can stabilize or destabilize a system.

Earth Systems (ESS2)

ES.ESS2.3 Develop a model based on evidence of Earth's interior to describe the cycling of matter by thermal convection.

Clarification Statement: Emphasis is on both a one-dimensional model of Earth, with radial layers determined by density, and a three- dimensional model, which is controlled by mantle convection and the resulting plate tectonics. Examples of evidence include maps of the Earth's surface features as well as three-dimensional structure in the subsurface, obtained from seismic waves; records of the rate of change of Earth's magnetic field (as constraints on convection in the outer core); and prediction of the composition of Earth's layers from high pressure laboratory experiments. **Assessment Boundary:** Emphasis is on the processes occurring in the layers of the Earth.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Developing and Using Models: • Develop a model based on evidence to illustrate the relationships between systems or components of a system.	• Evidence from deep probes and seismic waves, reconstructions of historical changes in Earth's surface features, its magnetic field, and an understanding of physical and chemical processes lead to a model of Earth with a hot but solid inner core, a liquid outer core, a solid mantle and crust. • Motions of the mantle and its plates occur primarily through thermal convection, which involves the cycling of matter due to the outward flow of energy from Earth's interior and gravitational movement of denser materials toward the interior. • The radioactive decay of unstable isotopes continually generates new energy within Earth's crust and mantle, providing the primary source of the heat that drives mantle convection. • Plate tectonics can be viewed as the surface expression of mantle convection. • Geologists use seismic waves and their reflection at interfaces between layers to probe structures deep in the planet.	**Energy and Matter:** • Energy drives the cycling of matter within and between systems.

Earth Systems (ESS2)

ES.ESS2.4 Analyze and interpret data to explore how variations in the flow of energy into and out of Earth's systems causes changes to the atmosphere and climate.

Clarification Statement: Changes differ by timescale, from sudden (large volcanic eruption, ocean circulation), to intermediate (ocean circulation, solar output, human activity), and long-term (Earth's orbit and the orientation of its axis and changes in atmospheric composition). Examples of human activities could include fossil fuel combustion, cement production, or agricultural activity and natural processes such as changes in incoming solar radiation or volcanic activity. Examples of data can include tables, graphs, maps of global and regional temperatures, and atmospheric levels of gases. **Assessment Boundary:** N/A

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Analyzing and Interpreting Data: • Analyze data using computational models in order to make valid and reliable scientific claims.	• The geological record shows that changes to global and regional climate can be caused by interactions among changes in the Sun's energy output or Earth's orbit, tectonic events, ocean circulation, volcanic activity, glaciers, vegetation, and human activities. These changes can occur on a variety of time scales from sudden (e.g., volcanic ash clouds) to intermediate (ice ages) to very long-term (tectonic cycles). • The foundation for Earth's global climate system is the electromagnetic radiation from the Sun, as well as its reflection, absorption, storage, and redistribution among the atmosphere, ocean, and land systems, and this energy's re-radiation into space. • Cyclical changes in the shape of Earth's orbit around the Sun, together with changes in the tilt of the planet's axis of rotation, both occurring over hundreds of thousands of years, have altered the intensity and distribution of sunlight falling on the Earth. These phenomena cause a cycle of ice ages and other changes in climate.	**Cause and Effect:** • Empirical evidence is required to differentiate between cause and correlation and make claims about specific causes and effects.

Earth Systems (ESS2)		
ES.ESS2.5 Plan and conduct investigations of how the structure and resulting properties of water interact with the Earth's materials and surface processes.		
Clarification Statement: Emphasis is on how the structure of water affects its physical and chemical properties. These properties can lead to mechanical and chemical investigations with water and a variety of solid materials to provide the evidence for connections between the hydrologic cycle and system interactions commonly known as the rock cycle. Examples of mechanical investigations include stream transportation and deposition using a stream table, erosion using variations in soil moisture content, or frost wedging by the expansion of water as it freezes. Examples of chemical investigations include chemical weathering and recrystallization (by testing the solubility of different materials) or melt generation (by examining how water lowers the melting temperature of most solids). **Assessment Boundary:** N/A		
Science and Engineering Practice	**Disciplinary Core Ideas**	**Crosscutting Concepts**
Planning and Carrying Out Investigations: • Plan and conduct an investigation individually and collaboratively to produce data to serve as the basis for evidence.	• The abundance of liquid water on Earth's surface and its unique combination of physical and chemical properties are central to the planet's dynamics. These properties include water's exceptional capacity to absorb, store, and release large amounts of energy; transmit sunlight; expand upon freezing; dissolve and transport materials; and lower the viscosities and melting points of rocks.	**Structure and Function:** • The functions and properties of natural and designed objects and systems can be inferred from their overall structure, the way their components are shaped and used, and the molecular substructures of their various materials.

Earth Systems (ESS2)

ES.ESS2.6 Develop a quantitative model to describe the cycling of carbon among the hydrosphere, atmosphere, geosphere, and biosphere.

Clarification Statement: Emphasis is on modeling biogeochemical cycles that include the cycling of carbon through the ocean, atmosphere, soil, and biosphere (including humans), providing the foundation for living organisms. Examples could include more carbon absorbed in the oceans leading to ocean acidification or more carbon present in the atmosphere. **Assessment Boundary:** N/A

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Developing and Using Models: • Develop a model based on evidence to illustrate the relationships between systems or components of a system.	• Gradual atmospheric changes were due to plants and other organisms that captured carbon dioxide and released oxygen. • Changes in the atmosphere due to human activity have increased carbon dioxide concentrations and thus affect climate.	**Energy and Matter:** • Energy drives the cycling of matter within and between systems.

ES.ESS2.7 Engage in argument from evidence for how the simultaneous co-evolution of Earth's systems and life on Earth led to periods of stability and change over geologic time.

Clarification Statement: Emphasis is on the dynamic causes, effects, and feedbacks between the biosphere and Earth's other systems, whereby geoscience factors influence conditions for life, which in turn continuously alters Earth's surface. Examples include how photosynthetic life altered the atmosphere through the production of oxygen, which in turn increased weathering rates and affected animal life; how microbial life on land increased the formation of soil, which in turn allowed for the development of land plant species; or how the changes in coral species created reefs that altered patterns of erosion and deposition along coastlines and provided habitats to support biodiversity. Geologic timescale should be considered with the emphasis above. **Assessment Boundary:** Assessment does not include a comprehensive understanding of the mechanisms of how the biosphere interacts with all of Earth's other systems.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Engaging in Argument from Evidence: • Construct an oral and written argument or counter- argument based on data and evidence.	• Gradual atmospheric changes were due to plants and other organisms that captured carbon dioxide and released oxygen. • The many dynamic and delicate feedback mechanisms between the biosphere and other Earth systems cause a continual co-evolution of Earth's surface and the life that exists on it.	**Stability and Change:** • Much of science deals with constructing explanations of how things change and how they remain stable.

Earth and Human Activities (ESS3)

ES.ESS3.1 Construct an explanation based on evidence for how the availability of natural resources, occurrence of natural hazards, and changes in climate affect human activity.

Clarification Statement: Examples of key natural resources include access to fresh water (such as rivers, lakes, and groundwater), regions of fertile soils (such as river deltas), and high concentrations of minerals and fossil fuels. Examples of natural hazards can be from interior processes (such as volcanic eruptions and earthquakes), surface processes (such as tsunamis, landslides, mudslides, and soil erosion), and severe weather (such as hurricanes, floods, and droughts). Natural hazards and other geologic events exhibit some non-random patterns of occurrence. Examples of the results of changes in climate that can affect populations or drive mass migrations include changes to sea level, regional patterns of temperature and precipitation, and the types of crops and livestock that can be raised. **Assessment Boundary:** N/A

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Constructing Explanations: • Construct an explanation based on valid and reliable evidence obtained from a variety of sources (including students' own investigations, models, theories, simulations, peer review) and the assumption that theories and laws that describe the natural world operate today as they did in the past and will continue to do so in the future.	• Resource availability has guided the development of human society. • Natural hazards and other geologic events have shaped the course of human history; they have significantly altered the sizes of human populations and have driven human migrations.	**Cause and Effect:** • Empirical evidence is required to differentiate between cause and correlation and make claims about specific causes and effects.

Earth and Human Activities (ESS3)

ES.ESS3.2 Evaluate competing design solutions for developing, managing, and utilizing energy and mineral resources based on cost-benefit ratios on large and small scales.*

Clarification Statement: Emphasis is on the conservation, recycling, and reuse of resources (such as minerals and metals) where possible, and on minimizing impacts where it is not. Examples of large-scale solutions include developing best practices for agriculture; soil use; forestry; mining; and production of conventional, unconventional, or renewable energy resources. Examples of small-scale solutions could include mulching lawn clippings or adding biomass to gardens. **Assessment Boundary:** N/A

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Engaging in Argument from Evidence: • Evaluate competing design solutions to a real-world problem based on scientific ideas and principles, empirical evidence, and logical arguments regarding relevant factors (e.g. economic, societal, environmental, ethical considerations).	• All forms of energy production and other resource extraction have associated economic, social, environmental, and geopolitical costs and risks as well as benefits. New technologies and social regulations can change the balance of these factors. • When evaluating solutions, it is important to take into account a range of constraints, including cost, safety, reliability, and aesthetics, and to consider social, cultural, and environmental impacts.	**Scale, Proportion, and Quantity:** • Using concepts of orders of magnitude allows one to understand how a model at one scale relates to a model at another scale.

ES.ESS3.5 Construct a scientific explanation from evidence for how geological processes cause uneven distribution of natural resources.

Clarification Statement: Emphasis is on how geological processes have led to geological sedimentary basins that provide significant accumulations of crude oil and natural gas in some areas and not others, how geological processes lead to diverse soil profiles that support a diversity and range of agricultural crops, and how plate tectonics lead to concentrations of mineral deposits. **Assessment Boundary:** N/A

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Constructing Explanations: • Construct an explanation based on valid and reliable evidence obtained from a variety of sources (including students' own investigations, models, theories, simulations, peer review) and the assumption that theories and laws that describe the natural world operate today as they did in the past and will continue to do so in the future.	• Most elements exist in Earth's crust at concentrations too low to be extracted, but in some locations-where geological processes have concentrated them-extraction is economically viable.	**Cause and Effect:** • Empirical evidence is required to differentiate between cause and correlation and make claims about specific causes and effects.

ENVIRONMENTAL SCIENCE (EN)

Ecosystems: Interactions, Energy, and Dynamics (LS2)

EN.LS2.1 Use mathematical and/or computational representations to support explanations of factors that affect carrying capacities of ecosystems at different scales.

Clarification Statement: Emphasis is on quantitative analysis and comparison of the relationships among interdependent factors including boundaries, resources, climate, and competition. Examples of mathematical comparisons could include graphs, charts, histograms, or population changes gathered from simulations or historical data sets. **Assessment Boundary:** Assessment does not include deriving mathematical equations to make comparisons.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Using Mathematics and Computational Thinking: • Use mathematical, computational, and/or algorithmic representations of phenomena to describe and/or support claims and/or explanations.	• Ecosystems have carrying capacities, which are limits to the number of organisms and populations they can support. These limits result from such factors as the availability of living and nonliving resources and from such challenges as predation, competition, and disease. • Organisms would have the capacity to produce populations of great size were it not for the fact that environments and resources are finite. This fundamental tension affects the abundance (number of individuals) of species in any given ecosystem.	**Scale, Proportion, and Quantity:** • The significance of a phenomenon is dependent on the scale, proportion, and quantity at which it occurs.

Ecosystems: Interactions, Energy, and Dynamics (LS2)

EN.LS2.2 Use mathematical representations to support and revise explanations based on evidence about factors affecting biodiversity and populations in ecosystems of different scales.

Clarification Statement: Examples of mathematical representations include finding the average, determining trends, and using graphical comparisons of multiple sets of data. **Assessment Boundary:** The assessments should provide evidence of students' abilities to analyze and interpret the effect new information has on explanations (e.g., DDT effects on raptor populations, effects of water temperature below reservoirs on fish spawning, invasive species effects when spread to larger scale).

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Using Mathematics and Computational Thinking: • Use mathematical representation to describe and/or support scientific conclusions.	• Ecosystems have carrying capacities, which are limits to the numbers of organisms and populations they can support. These limits result from such factors as the availability of living and nonliving resources and from such challenges such as predation, competition, and disease. • Organisms would have the capacity to produce populations of great size were it not for the fact that environments and resources are finite. This fundamental tension affects the abundance (number of individuals) of species in any given ecosystem. • A complex set of interactions within an ecosystem can keep its number and types of organisms relatively constant over long periods of time under stable conditions. • If a modest biological or physical disturbance to an ecosystem occurs, it may return to its more or less original status (i.e., the ecosystem is resilient) as opposed to becoming a very different ecosystem. • Extreme fluctuations in conditions or the size of any populations, however, can challenge the functions of ecosystems in terms of resources and habitat availability.	**Scale, Proportion, and Quantity:** • Using the concept of orders of magnitude allows one to understand how a model at one scale relates to a model at another scale.

Ecosystems: Interactions, Energy, and Dynamics (LS2)

EN.LS2.4 Use a mathematical representation to support claims for the cycling of matter and the flow of energy among organisms in an ecosystem.

Clarification Statement: Emphasis is on using a mathematical model of stored energy in biomass to describe the transfer of energy from one trophic level to another and that matter and energy are conserved as matter cycles and energy flows through ecosystems. Emphasis is on atoms and molecules such as carbon, oxygen, hydrogen, and nitrogen being conserved as they move through an ecosystem. **Assessment Boundary:** The assessment should provide evidence of students' abilities to develop and use energy pyramids, food chains, food webs, and other models from data sets.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Using Mathematics and Computational Thinking: • Use mathematical representation to describe and/or support scientific conclusions.	• Plants or algae form the lowest level of the food chain. • At each link upward in a food web, only a small fraction of the matter consumed at the lower level is transferred upward to produce growth and release energy in cellular respiration at the higher level. • Given this inefficiency, there are generally fewer organisms at higher levels of a food web. • Some matter reacts to release energy for life functions, some matter is stored in newly made structures, and much is discarded. • The chemical elements that make up the molecules of organisms pass through food webs and into and out of the atmosphere and soil, and they are combined and recombined in different ways. • At each link in an ecosystem, matter and energy are conserved.	**Energy and Matter:** • Energy cannot be created or destroyed. It only moves between one place to another, between objects and/or fields, or between systems.

Ecosystems: Interactions, Energy, and Dynamics (LS2)		
EN.LS2.6 Evaluate the claims, evidence, and reasoning that the complex interactions in ecosystems maintain relatively consistent numbers and types of organisms in stable conditions, but changing conditions may result in a new ecosystem.		
Clarification Statement: Examples of changes in ecosystem conditions could include modest biological or physical changes, such as moderate hunting or a seasonal flood; and extreme changes, such as volcanic eruption or sea level rise. **Assessment Boundary:** The assessment should provide evidence of students' abilities to derive trends from graphical representations of population trends. Assessments should focus on describing drivers of ecosystem stability and change, not on the organismal mechanisms of responses and interactions.		
Science and Engineering Practice	**Disciplinary Core Ideas**	**Crosscutting Concepts**
Engaging in Argument from Evidence: • Evaluate the claims, evidence, and/or reasoning behind currently accepted explanations or solutions to determine the merit of arguments.	• A complex set of interactions within an ecosystem can keep its number and types of organisms relatively constant over long periods of time under stable conditions. • If a modest biological or physical disturbance to an ecosystem occurs, it may return to its more or less original status (i.e., the ecosystem is resilient) as opposed to becoming a very different ecosystem. • Extreme fluctuations in conditions or the size of any populations, however, can challenge the functions of ecosystems in terms of resources and habitat availability.	**Stability and Change:** • Much of science deals with constructing explanations of how things change and how they remain stable.

Ecosystems: Interactions, Energy, and Dynamics (LS2)

EN.LS2.7 Design, evaluate, and refine a solution for reducing the impacts of human activities on the environment and biodiversity.*

Clarification Statement: Examples of human activities can include habitat destruction, pollution, introduction of invasive species, overexploitation, climate change, overpopulation, urbanization, and building dams. **Assessment Boundary:** N/A

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Designing Solutions: • Design, evaluate, and refine a solution to a complex real-world problem, based on scientific knowledge, student-generated sources of evidence, prioritized criteria, and tradeoff considerations.	• Anthropogenic changes (induced by human activity) in the environment can disrupt an ecosystem and threaten the survival of some species. • Biodiversity is increased by the formation of new species (speciation) and decreased by the loss of species (extinction). • Humans depend on the living world for the resources and other benefits provided by biodiversity, but human activity is also having adverse impacts on biodiversity. Thus, sustaining biodiversity so that ecosystem functioning and productivity are maintained is essential to supporting and enhancing life on Earth. • Sustaining biodiversity also aids humanity by preserving landscapes of recreational or inspirational value. • When evaluating solutions it is important to take into account a range of constraints including cost, safety, reliability and aesthetics, and to consider social, cultural, and environmental impacts.	**Stability and Change:** • Much of science deals with constructing explanations of how things change and how they remain stable.

Earth Systems (ESS2)

EN.ESS2.1 Develop a model to illustrate how Earth's internal and surface processes operate at different scales of space and time to form continental and ocean-floor features.

Clarification Statement: Emphasis is on how the appearance of land features (such as mountains, valleys, and plateaus) and sea-floor features (such as trenches, ridges, and seamounts) are a result of both constructive forces (such as volcanism, tectonic uplift, and mountain building) and destructive mechanisms (such as weathering, erosion, and landslides or mudslides). **Assessment Boundary:** Assessment does not include memorization of formation details of specific geographic features of Earth's surface.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Developing and Using Models: • Develop a model based on evidence to illustrate the relationships between systems or components of a system.	• Earth's systems, being dynamic and interacting, cause feedback effects that can increase or decrease the original changes. • Plate tectonics is the unifying theory that explains the past and current movements of rocks at Earth's surface and provides a framework for understanding its geologic history. • Plate movements are responsible for most continental and ocean-floor features and for the distribution of most rocks and minerals within the Earth's crust.	**Scale, Proportion, and Quantity:** • Some systems can only be studied indirectly as they are too small, too large, too fast, or too slow to observe directly.

Earth Systems (ESS2)

EN.ESS2.2 Analyze geoscience data to make the claim that one change to Earth's surface can create feedbacks and interactions that cause changes to other Earth systems.

Clarification Statement: Examples could be taken from system interactions, such as how the loss of ground vegetation causes an increase in water runoff and soil erosion, which limits additional vegetation patterns; how dammed rivers increase groundwater recharge, decrease sediment transport, and increase coastal erosion; or how the loss of wetlands causes a decrease in local humidity that further reduces the wetland extent. Examples could also include climate feedbacks that increase surface temperatures through geologic time. **Assessment**

Boundary: N/A

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Analyzing and Interpreting Data: • Analyze data using tools, technologies, and/or models in order to make valid and reliable scientific claims.	• Earth's systems, being dynamic and interacting, cause feedback effects that can increase or decrease the original changes. • The foundation for Earth's global climate system is the electromagnetic radiation from the Sun, as well as its reflection, absorption, storage, and redistribution among the atmosphere, ocean, and land systems, and this energy's re-radiation into space.	**Stability and Change:** • Feedback (negative or positive) can stabilize or destabilize a system.

Earth Systems (ESS2)		
EN.ESS2.3 Develop a model based on evidence of Earth's interior to describe the cycling of matter by thermal convection.		
Clarification Statement: Emphasis is on both a one-dimensional model of Earth, with radial layers determined by density, and a three- dimensional model, which is controlled by mantle convection and the resulting plate tectonics. Examples of evidence include maps of the Earth's surface features as well as three-dimensional structure in the subsurface, obtained from seismic waves; records of the rate of change of Earth's magnetic field (as constraints on convection in the outer core); and prediction of the composition of Earth's layers from high pressure laboratory experiments. **Assessment Boundary:** Emphasis is on the processes occurring in the layers of the Earth.		
Science and Engineering Practice	**Disciplinary Core Ideas**	**Crosscutting Concepts**
Developing and Using Models: • Develop a model based on evidence to illustrate the relationships between systems or components of a system.	• Evidence from deep probes and seismic waves, reconstructions of historical changes in Earth's surface features, its magnetic field, and an understanding of physical and chemical processes lead to a model of Earth with a hot but solid inner core, a liquid outer core, and a solid mantle and crust. • Motions of the mantle and its plates occur primarily through thermal convection, which involves the cycling of matter due to the outward flow of energy from Earth's interior and gravitational movement of denser materials toward the interior. • The radioactive decay of unstable isotopes continually generates new energy within Earth's crust and mantle, providing the primary source of the heat that drives mantle convection. • Plate tectonics can be viewed as the surface expression of mantle convection. • Geologists use seismic waves and their reflection at interfaces between layers to probe structures deep in the planet.	**Energy and Matter:** • Energy drives the cycling of matter within and between systems.

Earth Systems (ESS2)		
EN.ESS2.4 Analyze and interpret data to explore how variations in the flow of energy into and out of Earth's systems causes changes to the atmosphere and climate.		
Clarification Statement: Changes differ by timescale, from sudden (large volcanic eruption, ocean circulation), to intermediate (ocean circulation, solar output, human activity), and long-term (Earth's orbit and the orientation of its axis and changes in atmospheric composition). Examples of human activities could include fossil fuel combustion, cement production, or agricultural activity and natural processes such as changes in incoming solar radiation or volcanic activity. Examples of data can include tables, graphs, maps of global and regional temperatures, and atmospheric levels of gases. **Assessment Boundary:** N/A		
Science and Engineering Practice	**Disciplinary Core Ideas**	**Crosscutting Concepts**
Analyzing and Interpreting Data: • Analyze data using computational models in order to make valid and reliable scientific claims.	• The geological record shows that changes to global and regional climate can be caused by interactions among changes in the Sun's energy output or Earth's orbit, tectonic events, ocean circulation, volcanic activity, glaciers, vegetation, and human activities. These changes can occur on a variety of time scales from sudden (e.g., volcanic ash clouds) to intermediate (ice ages) to very long-term (tectonic cycles). • The foundation for Earth's global climate system is the electromagnetic radiation from the Sun, as well as its reflection, absorption, storage, and redistribution among the atmosphere, ocean, and land systems, and this energy's re-radiation into space. • Cyclical changes in the shape of Earth's orbit around the Sun, together with changes in the tilt of the planet's axis of rotation, both occurring over hundreds of thousands of years, have altered the intensity and distribution of sunlight falling on the Earth. These phenomena cause a cycle of ice ages and other changes in climate.	**Cause and Effect:** • Empirical evidence is required to differentiate between cause and correlation and make claims about specific causes and effects.

Earth Systems (ESS2)		
EN.ESS2.5 Plan and conduct investigations of how the structure and resulting properties of water interact with the Earth's materials and surface processes.		
Clarification Statement: Emphasis is on how the structure of water affects its physical and chemical properties. These properties can lead to mechanical and chemical investigations with water and a variety of solid materials to provide the evidence for connections between the hydrologic cycle and system interactions commonly known as the rock cycle. Examples of mechanical investigations include stream transportation and deposition using a stream table, erosion using variations in soil moisture content, or frost wedging by the expansion of water as it freezes. Examples of chemical investigations include chemical weathering and recrystallization (by testing the solubility of different materials) or melt generation (by examining how water lowers the melting temperature of most solids). **Assessment Boundary:** N/A		
Science and Engineering Practice	**Disciplinary Core Ideas**	**Crosscutting Concepts**
Planning and Conducting Investigations: • Plan and conduct an investigation individually and collaboratively to produce data to serve as the basis for evidence.	• The abundance of liquid water on Earth's surface and its unique combination of physical and chemical properties are central to the planet's dynamics. These properties include water's exceptional capacity to absorb, store, and release large amounts of energy; transmit sunlight; expand upon freezing; dissolve and transport materials; and lower the viscosities and melting points of rocks.	**Structure and Function:** • The functions and properties of natural and designed objects and systems can be inferred from their overall structure, the way their components are shaped and used, and the molecular substructures of its various materials.

Earth Systems (ESS2)

EN.ESS2.6 Develop a quantitative model to describe the cycling of carbon among the hydrosphere, atmosphere, geosphere, and biosphere.

Clarification Statement: Emphasis is on modeling biogeochemical cycles that include the cycling of carbon through the ocean, atmosphere, soil, and biosphere (including humans), providing the foundation for living organisms. Examples could include more carbon absorbed in the oceans leading to ocean acidification or more carbon present in the atmosphere. **Assessment Boundary:** N/A

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Developing and Using Models: • Develop a model based on evidence to illustrate the relationships between systems or components of a system.	• Gradual atmospheric changes were due to plants and other organisms that captured carbon dioxide and released oxygen. • Changes in the atmosphere due to human activity have increased carbon dioxide concentrations and thus affect climate.	**Energy and Matter:** • Energy drives the cycling of matter within and between systems.

EN.ESS2.7 Engage in argument from evidence for how the simultaneous co-evolution of Earth's systems and life on Earth led to periods of stability and change over geologic time.

Clarification Statement: Emphasis is on the dynamic causes, effects, and feedbacks between the biosphere and Earth's other systems, whereby geoscience factors influence conditions for life, which in turn continuously alters Earth's surface. Examples include how photosynthetic life altered the atmosphere through the production of oxygen, which in turn increased weathering rates and affected animal life; how microbial life on land increased the formation of soil, which in turn allowed for the development of land plant species; or how the changes in coral species created reefs that altered patterns of erosion and deposition along coastlines and provided habitats to support biodiversity. Geologic timescale should be considered with the emphasis above. **Assessment Boundary:** Assessment does not include a comprehensive understanding of the mechanisms of how the biosphere interacts with all of Earth's other systems.

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Engaging in Argument from Evidence: • Construct an oral and written argument or counter-argument based on data and evidence.	• Gradual atmospheric changes were due to plants and other organisms that captured carbon dioxide and released oxygen. • The many dynamic and delicate feedback mechanisms between the biosphere and other Earth systems cause a continual co-evolution of Earth's surface and the life that exists on it.	**Stability and Change:** • Much of science deals with constructing explanations of how things change and how they remain stable.

Earth and Human Activities (ESS3)		
EN.ESS3.1 Construct an explanation based on evidence for how the availability of natural resources, occurrence of natural hazards, and changes in climate affect human activity.		
Clarification Statement: Examples of key natural resources include access to fresh water (such as rivers, lakes, and groundwater), regions of fertile soils such as river deltas, and high concentrations of minerals and fossil fuels. Examples of natural hazards can be from interior processes (such as volcanic eruptions and earthquakes), surface processes (such as tsunamis, landslides, mudslides, and soil erosion), and severe weather (such as hurricanes, floods, and droughts). Natural hazards and other geologic events exhibit some non-random patterns of occurrence. Examples of the results of changes in climate that can affect populations or drive mass migrations include changes to sea level, regional patterns of temperature and precipitation, and the types of crops and livestock that can be raised. **Assessment Boundary:** N/A		
Science and Engineering Practice	**Disciplinary Core Ideas**	**Crosscutting Concepts**
Constructing Explanations: • Construct an explanation based on valid and reliable evidence obtained from a variety of sources (including students' own investigations, models, theories, simulations, peer review) and the assumption that theories and laws that describe the natural world operate today as they did in the past and will continue to do so in the future.	• Resource availability has guided the development of human society. • Natural hazards and other geologic events have shaped the course of human history; they have significantly altered the sizes of human populations and have driven human migrations.	**Cause and Effect:** • Empirical evidence is required to differentiate between cause and correlation and make claims about specific causes and effects.

Earth Human Activities (ESS3)

EN.ESS3.2 Evaluate competing design solutions for developing, managing, and utilizing energy and mineral resources based on cost-benefit ratios on large and small scales.*

Clarification Statement: Emphasis is on the conservation, recycling, and reuse of resources (such as minerals and metals) where possible, and on minimizing impacts where it is not. Examples of large-scale solutions include developing best practices for agriculture, soil use, forestry, mining, and production of conventional, unconventional, or renewable energy resources. Examples of small-scale solutions could include mulching lawn clippings or adding biomass to gardens. **Assessment Boundary:** N/A

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Engaging in Argument from Evidence: • Evaluate competing design solutions to a real-world problem based on scientific ideas and principles, empirical evidence, and logical arguments regarding relevant factors (e.g. economic, societal, environmental, ethical considerations).	• All forms of energy production and other resource extraction have associated economic, social, environmental, and geopolitical costs and risks as well as benefits. New technologies and social regulations can change the balance of these factors. • When evaluating solutions, it is important to take into account a range of constraints, including cost, safety, reliability, and aesthetics, and to consider social, cultural, and environmental impacts.	**Scale, Proportion, and Quantity:** • Using concepts of orders of magnitude allows one to understand how a model at one scale relates to a model at another scale.

EN.ESS3.3 Use computational simulations to illustrate changes between the relationships of natural resources, human populations, and biodiversity and their sustainability within Earth systems.

Clarification Statement: Emphasis is on the importance of responsible stewardship of Earth's resources. Examples of factors that affect the management of natural resources include costs of resource extraction and waste management, per-capita consumption, and the development of new technologies. Examples of factors that affect human sustainability include agricultural efficiency, levels of consumption, and urban planning. **Assessment Boundary:** N/A

Science and Engineering Practice	Disciplinary Core Ideas	Crosscutting Concepts
Using Mathematical and Computational Thinking: • Create a computational model or simulation of a phenomenon, design device, process, or system.	• The sustainability of human societies and biodiversity that supports them requires responsible management of natural resources.	**Stability and Change:** • Change and rates of change can be quantified and modeled over very short or very long periods of time. Some systems' changes are irreversible.

Earth and Human Activities (ESS3)		
EN.ESS3.4 Evaluate design solutions for a major global or local environmental problem that reduces or stabilizes the impacts of human activities on natural systems.*		
Clarification Statement: Examples of major global or local problems could include water pollution or availability, air pollution, deforestation, or energy production. Examples of data on the impacts of human activities could include the quantities and types of pollutants released, changes to biomass and species diversity, or areal changes in land surface use. Examples for limiting future impacts could range from local efforts (such as reducing, reusing, and recycling resources) to large-scale geoengineering design solutions. **Assessment Boundary:** N/A		
Science and Engineering Practice	**Disciplinary Core Ideas**	**Crosscutting Concepts**
Constructing Explanations: • Design or refine a solution to a complex problem, based on scientific knowledge, student generated sources of evidence, prioritized criteria, and tradeoff considerations.	• Scientists and engineers can make major contributions by developing technologies that produce less pollution and waste and that preclude ecosystem degradation. • When evaluating solutions, it is important to take into account a range of constraints, including cost, safety, reliability, and aesthetics, and to consider social, cultural, and environmental impacts. • Engineers continuously modify these technological systems by applying scientific knowledge and engineering design practices to increase benefits while decreasing costs and risks.	**Stability and Change:** • Feedback (negative or positive) can stabilize or destabilize a system.

Introduction

The Oklahoma Academic Standards for Social Studies is the result of the contributions of hundreds of social studies educators, representatives of higher education, tribal representatives, and community members. This document reflects a balanced synthesis of the work of all members of the Oklahoma Academic Standards for Social Studies Writing and Draft Committees.

The standards specify what students should know and be able to do as learners of social studies at the end of each grade level or social studies course. The order of the standards at any grade level is not meant to imply a sequence of topics and should be considered flexible for the organization of any course.

The Oklahoma Academic Standards for Social Studies were informed by the National Council of the Social Studies (NCSS) Skills Framework , the Center for Civic Education Civics Standards, the National Council for Geographic Education (NCGE) Geography for Life Standards, the Council for Economic Education Voluntary National Content Standards in Economics, the National Council for History Education (NCHE) Habits of Mind, the National Center for History in the Schools Standards for Historical Thinking, the Oklahoma Academic Standards for English Language Arts and Social Studies, and other states' standards documents.

Standards Overview

Having a literate citizenry rests on a commitment to democratic values and the practice of them. It requires the ability to use knowledge about one's community, nation and world, apply inquiry processes, and employ skills of data collection and analysis, collaboration, decision-making; and problem-solving. Young people who are knowledgeable, skillful, and committed to democracy are necessary to sustaining and improving the democratic way of life. This will also enable our students to become participating members of a global community. A well-rounded, vigorous social studies education encourages and enables each student to acquire a core of basic knowledge, an arsenal of useful skills, and a way of thinking drawn from many academic disciplines. Thus equipped, students are prepared to become informed, contributing, and participating citizens in this democratic republic – the United States of America.

The standards are comprised of two primary components, content standards and social studies practices. The content standards designate specific learning targets at each grade level or course. These content standards are derived from the major disciplines of the social sciences: history, geography, civics and economics. The social studies practices define basic skills and disciplinary tools to prepare students for college, career, and civic life. These practices are meant to be integrated with the instruction of content standards.

Social Studies Content Strands Overview

Social Studies is a systematic and coordinated discipline designed to promote civic competence by drawing upon four content strands: history, geography, civics, and economics. These strands draw from all fields of study related to the social sciences to provide a framework used in the development of the content standards for social studies. They are to be threaded through an integrated program, from grades pre-K through 12, as appropriate at each level. While at some grades and for some courses, specific strands will be more dominant than others, all strands are represented and interrelated in the standards for each grade and course.

Strand 1: History
History focuses on the written record of human experience revealing how individuals and societies developed institutions, philosophies, ideals, and cultural values, and resolved their problems. A balanced study of history helps students understand the how and why of the challenges and successes of past societies. By studying the choices and decisions of the past, students can confront today's problems with a deeper awareness of their alternatives and likely consequences.

Strand 2: Geography
Geography has more to do with asking questions and solving problems than with rote memorization of isolated facts. It is the study of the earth's surface and the processes that shape it, the relationships between people and environments, and the connections between people and places. As a discipline, geography provides the skills to help students answer questions about where things are, how they got there, and how they interact with other things - in the past, now, and in the future.

Strand 3: Civics
Civics is defined to mean the study of the rights and duties of Oklahoma and United States citizens and of how their governments work. This strand helps students understand the essential principles and workings of their political system and that of others, as well as the relationship of American politics and government to world affairs. The goal of civics is to develop literate, informed, competent, and responsible citizens who are politically aware, active, and committed to the fundamental values and principles of American constitutional democracy.

Strand 4: Economics
Economics provides students with an understanding of how individuals, communities, states, and nations allocate both scarce and abundant resources. A clear understanding of economics enables students to comprehend the various competing economic philosophies, ideas, and forces that affect them every day, measure the effectiveness of each, and identify and evaluate the consequences of personal decisions and public policies. Students then will understand how a market economy effectively functions preparing them to be producers, consumers, and citizens.

Social Studies Practices Overview

The Social Studies Practices reflect the key skills and disciplinary tools to prepare students for college, career, and civic life. The practices are meant to be integrated with the instruction of content standards. The five practices are defined broadly below and are further delineated on pg. 6. The social studies practices are designed to support student mastery of the content through a progression of skills PK-12.

Engage in Democratic Processes

Understanding civic virtues and the role of civic institutions. Students will gain knowledge of the history, principles, and foundations of American democracy to participate in civic and democratic processes. Students will identify the institutions of American government to analyze their role as responsible citizens.

Analyze and Address Authentic Civic Issues

Understanding the importance of critical questioning to solve real world problems. Students will develop essential questions to frame independent inquiry related to the past and present. Students will identify and address public problems individually and collaboratively to improve communities and society.

Acquire, Apply, and Evaluate Evidence

Understanding and using strategies to analyze evidence in the social studies. Students will evaluate historical, geographic, and economic information. Students will draw conclusions from primary and secondary sources to formulate informed decisions.

Read Critically and Interpret Information Sources

Understanding the purpose of engaging with text.
Students will evaluate factual information and points of view as presented in text. Students will read historical and contemporary texts to engage in collaborative discussion.

Engage in Evidence-Based Writing

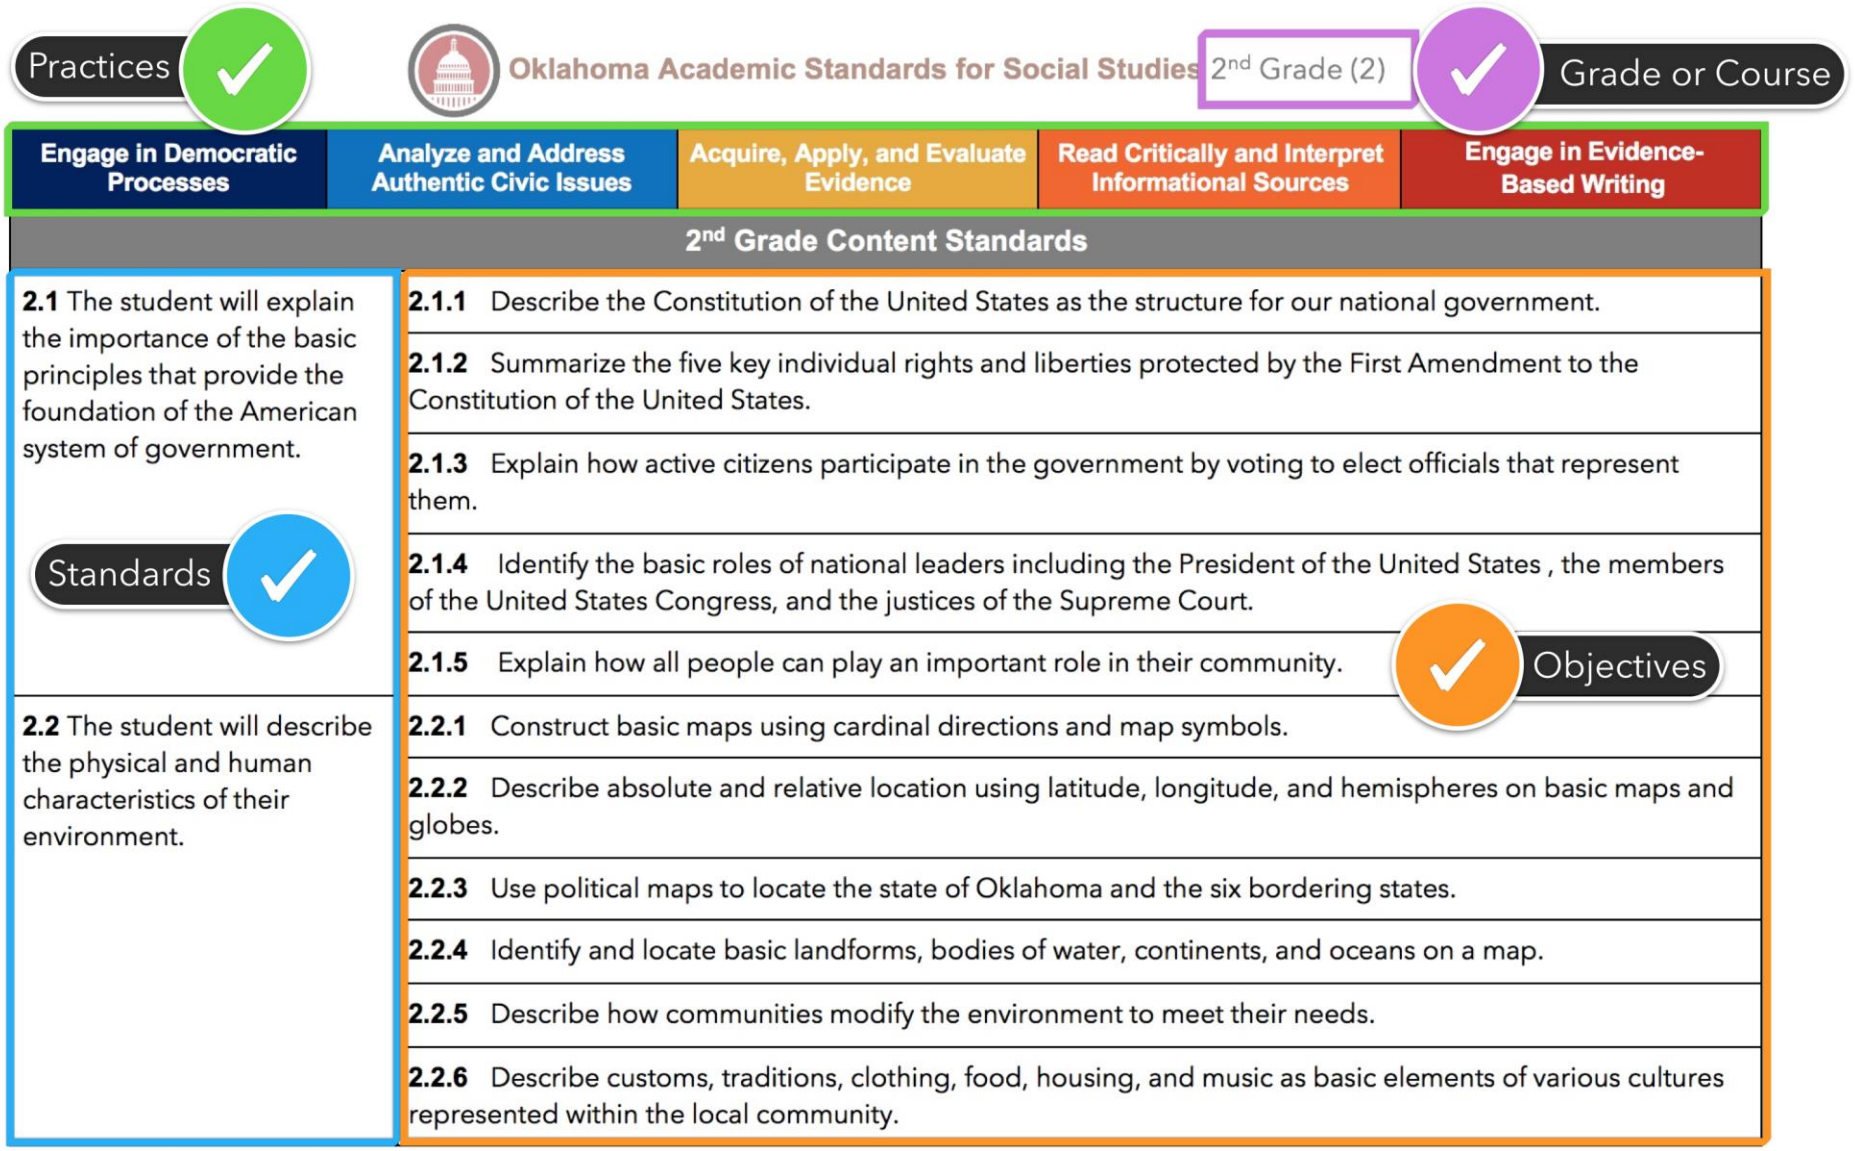
Understanding the multiple purposes of the writing process.
Students will develop written products designed for a variety of social studies related investigations. Students will use and integrate evidence to present knowledge and support opinion.

Social Studies Practices PK-12

The Social Studies Practices describe the experience all students should have as they explore and reason about social studies content PK-12. Additional guidance for what the Social Studies Practices look like across grade levels is provided in **Appendix A: Social Studies Practices PK-12 Progression**.

1. **Engage in Democratic Processes** - Students will understand the principles of government, the benefits of democratic systems, and their responsibilities as citizens.
   - 1.A. Students will demonstrate an understanding of the virtues that citizens should use when interacting with each other and the virtues that guide official government institutions.
   - 1.B. Students will demonstrate an understanding of the important institutions of their society and the principles that these institutions are intended to reflect.
   - 1.C. Students will demonstrate understanding of the processes and rules by which groups of people make decisions, govern themselves, and address public problems.
2. **Analyze and Address Authentic Civic Issues** - Students will determine the kinds of sources that will be helpful in answering essential, compelling, and supporting questions addressing authentic civic issues.
   - 2.A. Students will demonstrate the capability for developing essential, compelling, and supporting questions that address authentic civic issues.
   - 2.B. Students will demonstrate the ability to investigate problems taking into consideration multiple points of view represented in arguments, structure of an explanation, and other sources.
3. **Acquire, Apply, and Evaluate Evidence** - Students will utilize interdisciplinary tools and master the basic concepts of the social studies in order to acquire and apply content understanding in all related fields of study.
   - 3.A. Students will develop skills and practices which demonstrate an understanding that historical inquiry is based on the analysis and evaluation of evidence and its credibility.
   - 3.B. Students will demonstrate an understanding of geographic concepts and develop mastery of geographic tools and ways of thinking in order to become geographically informed.
   - 3.C. Students will analyze the principles of economic systems and develop an understanding of the benefits of a market system in local, national, and global settings.
4. **Read Critically and Interpret Informational Sources** - Students will engage in critical, active reading of grade-level appropriate primary and secondary sources related to key social studies concepts, including frequent analysis and interpretation of informational sources.
   - 4.A. Students will comprehend, evaluate, and synthesize textual sources to acquire and refine knowledge in the social studies.
   - 4.B. Students will apply critical reading and thinking skills to interpret, evaluate, and respond to a variety of complex texts from historical, ethnic, and global perspectives.
5. **Engage in Evidence-Based Writing** - Students will apply effective communication skills by developing a variety of evidence-based written products designed for multiple purposes and tasks, in order to demonstrate their understandings of social studies concepts, ideas, and content.
   - 5.A. Students will summarize and paraphrase, integrate evidence, and cite sources to create written products, research projects, and presentations for multiple purposes related to social studies content.
   - 5.B. Students will engage in authentic inquiry to acquire, refine, and share knowledge through written presentations related to social studies.

Reading the Oklahoma Academic Standards for Social Studies



Engage in Democratic Processes	Analyze and Address Authentic Civic Issues	Acquire, Apply, and Evaluate Evidence	Read Critically and Interpret Informational Sources	Engage in Evidence Based Writing

Pre Kindergarten Content Standards	
PK.1 The student will exhibit traits of good citizenship.	**PK.1.1** Describe the importance of rules and personal responsibilities including working together to make decisions as a member of a family and classroom community.
	PK.1.2 Explain the need to respect the uniqueness of individuals in our class and community.
	PK.1.3 Describe the concept of being a citizen.
	PK.1.4 Identify the United States Flag as a symbol of the country.
PK.2 The student will demonstrate knowledge of basic physical and human geographic concepts.	**PK.2.1** Explain that a map is a drawing of a place.
	PK.2.2 Use basic directional terms in relation to the student's relative location.
	PK.2.3 Describe a classroom as a community.
	PK.2.4 Identify family customs and traditions as basic elements of culture.
PK.3 The student will understand that history relates to events and people of other times and places.	**PK.3.1** Explain history as things that happened in the past.
	PK.3.2 Describe how we honor people and events of the past.
	PK.3.3 Use words and phrases, such as before and after, as they relate to chronology and time in order to explain how things change.
	PK.3.4 Explain that lessons can be learned from the past.
PK.4 The student will identify basic economic concepts.	**PK.4.1** Identify basic needs all people share.
	PK.4.2 Explain that people work to earn money to buy things they need and want.
	PK.4.3 Explain how resources are used by people to meet their needs.
	PK.4.4 Describe how various school personnel provide needed services.

Engage in Democratic Processes	Analyze and Address Authentic Civic Issues	Acquire, Apply, and Evaluate Evidence	Read Critically and Interpret Informational Sources	Engage in Evidence Based Writing

Kindergarten Content Standards	
K.1 The student will exhibit traits of good citizenship.	**K.1.1** Describe the importance of rules, personal responsibilities, and natural consequences as a member of a family, class, and school.
	K.1.2 Identify ways to be an active member of the community.
	K.1.3 Identify the United States Flag as a symbol of the country, explaining the stripes as symbols for the first states and the stars as symbols for the current states in our country.
	K.1.4 Identify the purpose of the Pledge of Allegiance and explain appropriate flag etiquette.
	K.1.5 Identify other important United States symbols including the Statue of Liberty located in New York Harbor.
K.2 The student will demonstrate knowledge of basic physical and human geographic concepts.	**K.2.1** Explain that a globe is a model of the Earth and that a map is a drawing of a place; construct basic maps.
	K.2.2 Identify basic cardinal directions and relative location terms.
	K.2.3 Identify the shape of the state of Oklahoma on a map.
	K.2.4 Explain that the school is part of a larger community and one's community is within the state of Oklahoma.
	K.2.5 Describe what makes one's community alike or different than other communities.
	K.2.6 Describe family and community customs and traditions as basic elements of culture.

K.3 The student will understand that history relates to events and people of other times and places.	**K.3.1** Explain how events of the past may have affected our community and the way we live today.
	K.3.2 Explain how we honor people and events of the past.
	K.3.3 Use words and phrases related to chronology and time to explain how things change including before/after and yesterday/today/tomorrow.
	K.3.4 Explain that different types of sources can be used to learn about the past.
K.4 The student will identify basic economic concepts.	**K.4.1** Describe the basic needs of all people: food, clothing, and shelter; differentiate between these needs and a want.
	K.4.2 Explain the relationship between work and earning money.
	K.4.3 Identify ways that people use their money, including spending and saving.
	K.4.4 Explain how various community members including police officers, firefighters, soldiers, school personnel, business professionals, and medical personnel impact the student's life.

Engage in Democratic Processes	Analyze and Address Authentic Civic Issues	Acquire, Apply, and Evaluate Evidence	Read Critically and Interpret Informational Sources	Engage in Evidence Based Writing

1st Grade Content Standards	
1.1 The student will analyze their role as a citizen in a community.	**1.1.1** Describe the need for written laws and the main purpose of government, including the concept of consequences for one's actions when a law or rule is violated.
	1.1.2 Describe how citizens within communities work together to accomplish common tasks and fulfill roles of authority.
	1.1.3 Explain patriotic traditions including *The Pledge of Allegiance*, describe appropriate flag etiquette and proper behavior during the playing of *The Star-Spangled Banner*.
	1.1.4 Identify important symbols of the United States including the Bald Eagle and the Liberty Bell, and explain their meanings.
1.2 The student will demonstrate knowledge of basic geographic concepts.	**1.2.1** Describe the difference between physical and political maps; construct basic maps of specific places.
	1.2.2 Identify cardinal directions and use them to identify specific locations on a map.
	1.2.3 Identify the difference between continents and oceans.
	1.2.4 Compare the features of urban and rural communities.
	1.2.5 Describe community customs and traditions as basic elements of culture.
1.3 The student will examine important events and historical figures in the nation's past.	**1.3.1** Explain why people may see events from different points of view.
	1.3.2 Describe the contributions of people and groups who have shaped our history and ways we commemorate important places and events of the past.
	1.3.3 Read and construct basic timelines to understand the chronology of events in history.
	1.3.4 Identify primary sources and how they help us to learn about the past.

1.4 The student will describe the characteristics of the American economic system.	**1.4.1** Explain the costs and benefits of spending and saving in order to meet needs and wants.
	1.4.2 Describe ways people are paid for their labor and how goods and services are purchased using money and credit.
	1.4.3 Identify and explain the roles of consumers and producers in the American economy.
	1.4.4 Describe the role of banks in the community.

Engage in Democratic Processes	Analyze and Address Authentic Civic Issues	Acquire, Apply, and Evaluate Evidence	Read Critically and Interpret Informational Sources	Engage in Evidence Based Writing

2nd Grade Content Standards	
2.1 The student will explain the importance of the basic principles that provide the foundation of the American system of government.	**2.1.1** Describe the Constitution of the United States as the structure for our national government.
	2.1.2 Summarize the five key individual rights and liberties protected by the First Amendment to the Constitution of the United States.
	2.1.3 Explain how active citizens participate in the government by voting to elect officials that represent them.
	2.1.4 Identify the basic roles of national leaders including the President of the United States , the members of the United States Congress, and the justices of the Supreme Court.
	2.1.5 Explain how all people can play an important role in their community.
2.2 The student will describe the physical and human characteristics of their environment.	**2.2.1** Construct basic maps using cardinal directions and map symbols.
	2.2.2 Describe absolute and relative location using latitude, longitude, and hemispheres on basic maps and globes.
	2.2.3 Use political maps to locate the state of Oklahoma and the six bordering states.
	2.2.4 Identify and locate basic landforms, bodies of water, continents, and oceans on a map.
	2.2.5 Describe how communities modify the environment to meet their needs.
	2.2.6 Describe customs, traditions, clothing, food, housing, and music as basic elements of various cultures represented within the local community.

2.3 The student will examine the lives of notable Americans who expanded peoples' rights and freedoms through our history.	**2.3.1** Analyze the contributions of people and groups who have shaped our history and who are honored by holidays and commemorative months.
	2.3.2 Compare perspectives of people in the past to people in the present.
	2.3.3 Compare different accounts of the same historical event using primary and secondary sources.
	2.3.4 Explain possible reasons for events in the past.
2.4 The student will understand basic economic concepts in the American economy.	**2.4.1** Explain the importance of supply and demand in the consumer and producer relationship.
	2.4.2 Explain how barter and trade can lead to interdependence among communities.
	2.4.3 Describe the connection between taxes and community services, including schools, sanitation and water, fire and police protection, parks and recreation, libraries, and roads.
	2.4.4 Describe how setting goals and creating a budget helps people pay for things they need and want.

Engage in Democratic Processes	Analyze and Address Authentic Civic Issues	Acquire, Apply, and Evaluate Evidence	Read Critically and Interpret Informational Sources	Engage in Evidence Based Writing

3rd Grade Content Standards	
3.1 The student will analyze the traits of good citizens.	**3.1.1** Examine and determine the main purposes of Oklahoma's state government and identify elected leaders of the state of Oklahoma and the three branches of government.
	3.1.2 Explain that tribal governments in Oklahoma have a right to self-government known as sovereignty.
	3.1.3 Describe the historical significance of the symbols of Oklahoma including the Oklahoma State Seal and the Oklahoma Flag; explain how the name of Oklahoma is derived from the Choctaw language.
	3.1.4 Describe relationships between people and events of the past, including those commemorated on national, state, and community holidays.
	3.1.5 Define the concept of civic virtue and responsibilities of the citizen at the local, state, and tribal levels, including respect for diversity.
3.2 The student will examine Oklahoma's geography and how people of Oklahoma interact with their environment.	**3.2.1** Examine Oklahoma's political and physical features. **A.** Identify the state of Oklahoma using relative location, absolute location (latitude and longitude), direction, scale, size, and shape using physical and political maps. **B.** Interpret thematic maps of Oklahoma with the essential map elements of title, legend, scale, and directional indicators. **C.** Identify Oklahoma's major landforms and bodies of water on a physical map. **D.** Identify Oklahoma's major metropolitan centers and cities on a political map. **E.** Describe the climate and various natural vegetation zones found in Oklahoma. **F.** Identify the six states bordering Oklahoma on a map.

	3.2.2 Examine the interaction of the environment and the peoples of Oklahoma. **A.** Describe how early American Indians used Oklahoma's natural resources, such as bison hunting, fur trading, and farming. **B.** Describe how pioneers to Oklahoma adapted to and modified their environment, such as sod houses, windmills, and crops. **C.** Summarize how the weather and the environment have impacted the economy of Oklahoma in events such as the Dust Bowl, floods, and tornadoes. **D.** Summarize how Oklahomans affect and change their environments such as the construction of the McClellan-Kerr Arkansas River Navigation System, creation of recreational lakes by the building of dams, irrigation of croplands, and the establishment of wildlife refuges.
	3.2.3 Identify the characteristics of renewable and non-renewable resources and evaluate the role of citizens in conserving natural resources.
3.3 The student will analyze the significant events and historic personalities contributing to the development of the state of Oklahoma.	**3.3.1** Understand and describe the relationship between historic events and chronology through the creation of basic timelines.
	3.3.2 Read and interpret primary sources related to key events in Oklahoma's past.
	3.3.3 Describe American Indian pre-contact cultures that have inhabited what is now Oklahoma, such as the Spiro Mound Builders.
	3.3.4 Identify cultural similarities and differences of the existing sovereign tribal nations in Oklahoma, especially those near the local community.
	3.3.5 Describe early expeditions into Oklahoma such as those of Coronado, Washington Irving, and George Catlin.
	3.3.6 Describe the migrations, settlements, relocations and forced removals of American Indians.
	3.3.7 Describe cowboy life and cattle drives as typified by experiences along such routes as the Chisholm Trail and the impact of Mexican ranching traditions on the cattle industry and cowboy culture.
	3.3.8 Distinguish between the points of view of both American Indians and settlers regarding the opening of territories in Oklahoma for settlement.
	3.3.9 Commemorate Statehood Day, November 16, as the joining of Indian and Oklahoma Territories.

	3.3.10 Describe the contributions of Oklahoma's military personnel, including the Buffalo Soldiers, the code talkers, and the 45th Infantry.
	3.3.11 Explain how Oklahomans come together to help one another during difficult times, such as recovering from the bombing of the Oklahoma City Murrah Building, exhibiting what has become the "Oklahoma Standard".
	3.3.12 Examine notable historic and present-day Oklahomans utilizing biographies and information texts such as Jim Thorpe, Sequoyah, Will Rogers, Wiley Post, Mickey Mantle, Shannon Lucid, Bill Pickett, Clara Luper, and Maria Tallchief.
3.4 The student will identify and describe basic economic activities creating prosperity in the state of Oklahoma.	**3.4.1** Compare differences among human, natural, and capital resources used to produce goods and services.
	3.4.2 Summarize how the factors of scarcity and surplus and the laws of supply and demand of natural and human resources require people to make choices about producing and consuming goods and services.
	3.4.3 Examine how the development of Oklahoma's major economic activities have contributed to the growth of the state, including, mining and energy industry, agriculture, aviation, tourism, tribal enterprises, and military installations.

Engage in Democratic Processes	Analyze and Address Authentic Civic Issues	Acquire, Apply, and Evaluate Evidence	Read Critically and Interpret Informational Sources	Engage in Evidence Based Writing

4th Grade Content Standards

4.1 The student will describe the features of self-government and the role of citizens of the United States.	**4.1.1** Describe the concepts of democracy and representative government, including the rule of law, equality, the common good, and individual rights. **A.** Explain the concept of civic responsibilities, including respect for the law, the necessity for compromise, civic participation, and public service. **B.** Understand the necessity of respect for diversity of the individual and diversity of groups comprising American society.
	4.1.2 Compare powers exercised by the local, state, and national levels of governments, recognizing tribal sovereignty as a tribal nation's inherent right to self-govern.
	4.1.3 Summarize the role of citizens as responsible stewards of natural resources and the environment. **A.** Describe the benefits of participation in recycling and anti-littering activities. **B.** Identify present-day examples to conserve natural resources and the development of alternative, sustainable energy sources.
4.2 The student will examine the physical geography and environments of the United States.	**4.2.1** Use maps and other geographic representations (such as globes and graphs), tools, and technologies to acquire, process, and report information from a spatial perspective. **A.** Use and describe various elements of maps, including keys/legends, scale, cardinal, and intermediate directions. **B.** Interpret aerial photographs, satellite images and thematic maps to locate and identify physical and human features of the United States and North America. **C.** Use latitude and longitude to identify the location of physical and human features of the United States.
	4.2.2 Identify major physical features in the United States and analyze how physical processes shape places. **A.** Identify and describe the physical characteristics of places, including the major landforms, bodies of water, vegetation and climates in the United States. **B.** Describe the location and characteristics of the major ecosystems in the United States.

	4.2.3 Explain how people create regions using common geographic characteristics. **A.** Identify and describe the major physical, cultural, and economic regions of the United States, comparing one's own region to the other regions. **B.** Explain how and why regions change over time by comparing regions in the past with life in the same regions in the present.
	4.2.4 Describe how physical processes of the Earth's surface impact humans and their environment. **A.** Identify and describe the different climates in the United States using maps, globes, and graphs. **B.** Explain how climate and natural processes including floods, wind, and storms impact how we live.
	4.2.5 Identify and locate on a political map the fifty states and the United States capital.
4.3 The student will analyze the human characteristics of the United States and how geography impacts historic events.	**4.3.1** Identify and describe early settlement patterns of regions in the United States. **A.** Draw conclusions from maps to show how climate, vegetation, natural resources, and historic events affect the location and growth of settlements. **B.** Identify major American Indian groups and their ways of life in each region, including economic activities, customs, and viewpoints on land usage and ownership. **C.** Summarize the reasons for key expeditions of North America by Spain, France, and England and their impact on the development of each region. **D.** Identify push and pull factors of human migration. **E.** Evaluate the impact of the Columbian Exchange on American Indian groups, African slaves and European settlers, including agriculture, trade, culture, military alliances, control of territory, and the sudden and significant decline of indigenous peoples.
	4.3.2 Examine the characteristics of culture, including the distribution and complexity of the regions of the United States. **A.** Identify the characteristics of culture (language, customs, beliefs, food, clothing, shelter) and compare the cultural characteristics of different regions of the United States. **B.** Explain how the characteristics of culture affect the ways in which people live.
4.4 The student will identify basic economic activities of the United States.	**4.4.1** Analyze how humans adapt to and modify their environments in order to survive and grow. **A.** Explain how humans depend upon the physical environment for food, shelter, and economic activities. **B.** Distinguish between renewable and nonrenewable resources. **C.** Explain how physical environments can provide both opportunities and limitations for human activity.

	4.4.2 Describe the patterns and networks of economic interdependence among regions of the United States. **A.** Identify and locate on a map the major cities of the United States, including their relative location to natural resources and transportation routes. **B.** Identify the major economic activities of each region of the United States by comparing how people satisfy their basic needs through the production of goods and services. **C.** Describe the relative location of natural resources, such as fossil fuels, minerals and soils, and their relationship to each region's major economic activities, including agriculture, manufacturing, transportation, energy, and services.
	4.4.3 Explain how economic activities can threaten the physical environment. **A.** Identify ways in which humans can change ecosystems, such as clearing forests, draining wetlands, and diverting waterways, by examining present-day issues related to the use of resources. **B.** Identify examples of changes in land use in local communities and how the physical environment can be stressed by human activities.

Engage in Democratic Processes	Analyze and Address Authentic Civic Issues	Acquire, Apply, and Evaluate Evidence	Read Critically and Interpret Informational Sources	Engage in Evidence Based Writing

5th Grade Content Standards	
5.1 The student will examine and compare the Jamestown and Plymouth settlements as the foundations of American culture and society.	**5.1.1** Summarize reasons for European colonization of North America and the impact on the development of the American colonies.
	5.1.2 Examine the economic and political motivations for English settlements at Roanoke and Jamestown .
	5.1.3 Explain the economic and political motivations of immigrants and indentured servants who came to Virginia.
	5.1.4 Explain the early successes and challenges of the Jamestown settlement including the leadership of John Smith, interrelationships with American Indians, challenges of the Starving Times, and the export of natural resources for profit.
	5.1.5 Explain the English commitment to the permanent settlement at Jamestown as evidenced through the events of 1619 including: **A.** representative government established through the House of Burgesses **B.** private ownership of land **C.** introduction of Africans as slave labor **D.** arrival of women and families
	5.1.6 Analyze the religious, economic, and political motivations of immigrants and indentured servants who migrated to Plymouth.
	5.1.7 Explain the early successes and challenges of the Plymouth settlement including: **A.** practice of self-government established by the Mayflower Compact **B.** contributions of American Indians including Chief Massasoit and Squanto **C.** leadership of William Bradford
	5.1.8 Explain how American Indian agricultural practices, such as the Three Sisters, contributed to the early survival of the colonists.
5.2 The student will compare the developments of the New	**5.2.1** Explain the contributions of important citizens and groups to the foundation of the colonies including the Puritans and Quakers, Roger Williams, Anne Hutchinson, William Penn, Lord Baltimore, and James Oglethorpe.

England Colonies, the Middle Colonies, and the Southern Colonies.	**5.2.2** Compare the economic development of the three colonial regions including: **A.** agriculture and exports as affected by climate and natural resources **B.** a labor system utilizing indentured servants **C.** slave labor central to the growth of the economy
	5.2.3 Explain the international economic and cultural interactions resulting from the triangular trade routes, including the forced migration of Africans through the Transatlantic slave trade and experiences of the Middle Passage.
	5.2.4 Analyze the forms of self-government in the three colonial regions including the role of religion in the establishment of some colonial governments, the Virginia House of Burgesses, and New England town hall meetings.
	5.2.5 Explain the evolving relationships between American Indians and the British colonists involving territorial claims.
	5.2.6 Explain that tribal sovereignty is a tribal nation's inherent right to self-govern.
	5.2.7 Compare daily life in the colonies as experienced by different social classes, plantation owners, farmers, merchants, craftsmen, artisans, and women and children.
	5.2.8 Compare the experiences of both free and enslaved Africans in the British colonies, including resistance efforts by enslaved peoples and attempts to maintain aspects of African culture.
5.3 The student will examine the foundations of the American nation established during the Revolutionary Era.	**5.3.1** Examine the causes and effects of significant events leading to armed conflict between the thirteen American colonies and Great Britain including: **A** French and Indian War **B.** Proclamation of 1763 **C.** Sugar and Stamp Acts **D.** Townshend Act **E.** colonial arguments regarding taxation and rightful representation in Parliament **F.** boycotts of British goods and the efforts of the Committees of Correspondence **G.** Quartering Act **H.** Boston Massacre **I.** Tea Act and The Boston Tea Party **J.** Coercive Acts (Intolerable Acts) **K.** British raids on Lexington and Concord **L.** publication of *Common Sense,* by Thomas Paine

	5.3.2 Analyze the ideals stated in the Declaration of Independence, drafted by Thomas Jefferson and adopted July 4, 1776, used to: **A.** identify natural, unalienable rights, such as life, liberty, and the pursuit of happiness **B.** declare the equality of all individuals **C.** define the purpose of government **D.** establish the principle of self-government and consent of the governed **E.** explain specific colonial grievances
	5.3.3 Explain the importance of the Articles of Confederation as the first American national system of government under which the colonies waged a war in order to gain independence.
	5.3.4 Compare the Iroquois Confederacy's representative government to the early attempts of the colonies to unite as one nation.
	5.3.5 Compare the advantages and disadvantages of the British and the American colonies at the eve and during the Revolutionary War, including political and military leadership, military strength, population, resources, foreign alliances, and motivations for fighting.
	5.3.6 Analyze the relationships of significant military and diplomatic events of the Revolutionary War including the leadership of General George Washington, experiences of Valley Forge, impact of the battles of Bunker Hill, Trenton, Saratoga, Yorktown, and the Treaty of Paris in 1783.
	5.3.7 Identify the points of view of major groups that remained loyal to Britain, joined the patriot cause, or remained neutral.
	5.3.8 Identify the contributions of key individuals involved in the American Revolution including Patrick Henry, Samuel Adams, John Adams, Abigail Adams, Paul Revere, Nathan Hale, John Paul Jones, Thayendanegea (Joseph Brant), Nancy Ward the Beloved Woman of the Cherokee, Marquis de Lafayette, Benjamin Franklin, Mercy Otis Warren, and Phillis Wheatley.
5.4 The student will examine the formation of the American	**5.4.1** Evaluate issues and events that led to the Constitutional Convention, including a weak national government and Shays' Rebellion.

system of government following the American Revolution.	**5.4.2** Identify key leaders and explain the debates and compromises of the Constitutional Convention, including: **A.** Virginia and New Jersey Plans **B.** Great Compromise **C.** Three-fifths Compromise and its maintenance of the institution of slavery **D.** Father of the Constitution, James Madison **E.** President of the Convention, George Washington
	5.4.3 Examine the purposes and basic responsibilities of government as described in the Preamble of the Constitution of the United States, which established the supreme law of the land.
	5.4.4 Describe the relationship between the federal government and sovereign American Indian nations, as established under the Constitution of the United States.
	5.4.5 Compare the viewpoints of the Federalists, led by James Madison, and Anti-Federalists, such as George Mason, over the addition of a bill of rights.
	5.4.6 Explain how the Constitution of the United States was amended to include the Bill of Rights and summarize the liberties protected in each of the ten amendments.
5.5 The student will describe the structure and responsibilities of the American system of government and the role of the individual citizen.	**5.5.1** Examine the key principles of government established in the Constitution of the United States including: **A.** separation of powers among three branches of government **B.** the system of checks and balances **C.** shared powers between the federal and state governments.
	5.5.2 Describe the roles of Congress, the President, and the Supreme Court in the legislative process.
	5.5.3 Describe the responsibilities of United States citizens including: **A.** registration and voting in public elections **B.** becoming informed voters **C.** engagement in civil discourse **D.** service on trial juries **E.** payment of taxes **F.** obedience to laws **G.** registration for military service

Engage in Democratic Processes	Analyze and Address Authentic Civic Issues	Acquire, Apply, and Evaluate Evidence	Read Critically and Interpret Informational Sources	Engage in Evidence Based Writing

6th Grade Content Standards	
6.1 The student will analyze data from a geographic perspective using the skills and tools of geography.	**6.1.1** Apply geographic information to support analysis from primary and secondary sources located in a variety of texts.
	6.1.2 Describe how various map projections distort the surface of the earth; apply the concepts of scale, distance, direction, relative location, absolute location, and latitude and longitude.
	6.1.3 Integrate visual information, draw conclusions, and make predictions from geographic data and analyze spatial distribution and patterns by interpreting that data as displayed on geographic tools.
	6.1.4 Integrate visual information and develop the skill of mental mapping of the political and physical features of Earth's surface in order to organize information about people, places, and environments.
	6.1.5 Describe and analyze the role of geographic factors on current events and issues.
6.2 The student will analyze the physical systems of the major regions of the Western Hemisphere.	**6.2.1** Use visual information to identify and describe on a physical map the landforms, bodies of water, climate, and vegetation zones that are important to each region.
	6.2.2 Explain how the processes and factors of latitude, elevation, Earth-Sun relationships, prevailing winds, and proximity to bodies of water influence climate.
	6.2.3 Describe the predominant natural resources found in each region.
	6.2.4 Describe the relationship and summarize the impact of the distribution of major renewable and nonrenewable resources on each region.

6.3 The student will identify the characteristics, distribution, and demographic patterns of human populations and systems of the Western Hemisphere.	**6.3.1** Identify on a political map the major countries and population centers of each region.
	6.3.2 Identify and describe cultural traits of language, ethnic heritage, religion, and traditions practiced among peoples.
	6.3.3 Analyze the impact of geography on population distribution, growth, and change, applying geographic concepts of population density, the availability of resources.
	6.3.4 Describe how the push and pull factors of migration have affected settlement patterns and the human characteristics of places over time.
	6.3.5 Compare the systems of government, including representative governments (democracy, republic, constitutional monarchy) and authoritarian systems (dictatorship, absolute monarchy).
	6.3.6 Identify the role of the citizen in the selection of government officials and lawmaking; compare individual liberties under different forms of government.
	6.3.7 Identify and explain topics related to indigenous sovereignty.
	6.3.8 Evaluate how the three levels of economic activities (primary, secondary, tertiary) contribute to the development of a nation and region.
	6.3.9 Describe benefits and limitations of the traditional, market, and command economic systems, including how government policies affect economic activities and trade relationships.
	6.3.10 Identify the common characteristics of developed and developing countries, including the impact of education and technology; analyze data used by geographers such as literacy rate, life expectancy, per capita income, and infant mortality.

6.4 The student will analyze the interactions of humans and their environment in the Western Hemisphere.	**6.4.1** Describe the commercial agriculture and industrial regions that support human development.
	6.4.2 Evaluate the effects of human modification on the natural environment through transformation caused by subsistence and commercial agriculture, industry, demand for energy, and urbanization.
	6.4.3 Analyze the impact of climate and natural disasters on human populations, including forced migration, scarcity of consumer goods, economic activities, and loss of life.
	6.4.4 Analyze environmental challenges of each region.
	6.4.5 Evaluate the role of ecotourism in creating environmental awareness of resources, climate, cultures, and wildlife.
	6.4.6 Describe the role of citizens as responsible stewards of natural resources and the environment.
6.5 The student will compare common physical and human characteristics of regions which create identity or uniqueness and influence people's perceptions of the Western Hemisphere.	**6.5.1** Define the concept of region and identify the major political, physical, cultural, and economic regions.
	6.5.2 Explain how cultural diffusion, both voluntary and forced, impacts societies of a region.
	6.5.3 Describe patterns of global economic interdependence and trade, including the concepts of balance of trade and supply and demand; compare measures of economic growth including Gross Domestic Product (GDP) and Gross National Product (GNP).
	6.5.4 Analyze global interdependence which explains the outsourcing of technological and manufacturing jobs to developing regions.
	6.5.5 Analyze reasons for conflict and cooperation among and between groups, societies, nations, and regions.

Engage in Democratic Processes	Analyze and Address Authentic Civic Issues	Acquire, Apply, and Evaluate Evidence	Read Critically and Interpret Informational Sources	Engage in Evidence Based Writing

7th Grade Content Standards	
7.1 The student will analyze data from a geographic perspective using the skills and tools of geography.	**7.1.1** Integrate specific geographic information to support analysis from primary and secondary sources located in texts, documents, newspapers, magazines, journals, political cartoons, and online news sources.
	7.1.2 Apply the concepts of scale, distance, direction, relative location, absolute location, and latitude and longitude.
	7.1.3 Explain the relationship between the continents, world oceans, and major cultural regions.
	7.1.4 Integrate visual information and apply the skill of mental mapping of the political and physical features of the Earth's surface in order to organize information about people, places, and environments.
	7.1.5 Integrate visual information, draw conclusions, and make predictions from geographic data; analyze spatial distribution and patterns by interpreting that data as displayed on geographic tools.
	7.1.6 Describe and analyze the role of geographic factors on current events and issues.
7.2 The student will analyze the physical systems of the major regions of the Eastern Hemisphere.	**7.2.1** Identify on a physical map the major landforms and bodies of water of each region.
	7.2.2 Describe the distribution of major renewable and nonrenewable resources of each region.
	7.2.3 Explain how the competition for scarce resources can cause economic and political conflict and cooperation.
7.3 The student will identify the characteristics, distribution and demographic patterns of human populations and systems of the Eastern Hemisphere.	**7.3.1** Identify on a political map the major countries and population centers of each region.
	7.3.2 Compare common cultural traits, including language, ethnic heritage, social systems, and traditions.
	7.3.3 Evaluate the impact of a region's major religions, including geographic hearths, major beliefs, customs, and the significance of religion in contemporary societies; explain how religion can both unify or divide people.
	7.3.4 Evaluate and summarize the impact of geography on population distribution, density, growth, change, settlement patterns, the availability of resources, and migration, including push and pull factors.
	7.3.5 Describe reasons for and analyze from multiple perspectives the challenges and benefits of migration on inigenous and immigrant populations.

	7.3.6 Describe the distribution of resources and evaluate how the three levels of economic activities (primary, secondary, tertiary) contribute to the development of a country or region.
	7.3.7 Compare the structures of representative governments and authoritarian systems.
	7.3.8 Identify the role of the citizen in the selection of government officials and lawmaking; compare individual liberties under different forms of government.
	7.3.9 Identify and explain the advantages and disadvantages of traditional, market, and command economic systems.
	7.3.10 Explain the role of government policies in utilizing wealth from natural resources to finance development.
	7.3.11 Assess the influence of economic development and distribution of wealth on society.
	7.3.12 Distinguish between developed and developing regions using the Human Development Index; analyze data used by geographers, including literacy rate, life expectancy, infant mortality, and per capita income.
7.4 The student will analyze the interactions of humans and their environment in the Eastern Hemisphere.	**7.4.1** Analyze the impact of climate events, weather patterns and natural disasters on human populations and the environment, resulting in forced migrations, scarcity of consumer goods, economic activities, and loss of life.
	7.4.2 Explain how climate change is affecting environments and human populations.
	7.4.3 Explain the differences among subsistence, cash crop and commercial agriculture, including the impact on economic development.
	7.4.4 Evaluate the effects of human modification of and adaptation to the natural environment through transformation caused by agriculture, the use of modern irrigation methods, industry, demand for energy, and urbanization.
	7.4.5 Summarize the role of ecotourism in creating environmental awareness of resources, climate, cultures and wildlife.
	7.4.6 Describe the role of citizens as responsible stewards of natural resources and the environment.
7.5 The student will compare common physical and human characteristics of regions which create identity or uniqueness and influence people's	**7.5.1** Define the concept of region and explain how and why regions change over time through physical and human processes which operate to modify the Earth's surface.
	7.5.2 Describe how cultural diffusion, both voluntary and forced, impacts society.
	7.5.3 Explain patterns of global interdependence and world trade, including the impact of changing technology on trade routes.

perceptions of the Eastern Hemisphere.	**7.5.4** Explain patterns of global economic interdependence and world trade, focusing on the concepts of balance of trade, supply and demand; compare the economic measurements of productivity, Gross Domestic Product (GDP) and Gross National Product (GNP).
	7.5.5 Analyze global interdependence which explains the outsourcing of technological and manufacturing jobs to developing regions.
	7.5.6 Analyze reasons for conflict and cooperation among groups, societies, and countries, including the creation and involvement of supranational organizations.
	7.5.7 Describe how political, economic, and cultural forces challenge contemporary political arrangements leading to the devolution of states (civil wars, terrorism, genocide, and ethnic separatism).

Engage in Democratic Processes	Analyze and Address Authentic Civic Issues	Acquire, Apply, and Evaluate Evidence	Read Critically and Interpret Informational Sources	Engage in Evidence Based Writing

8th Grade Content Standards

8.1 The student will analyze the foundations of the United States by examining the causes, events, and ideologies which led to the American Revolution	**8.1.1** Describe the political climate in the British colonies prior to the French and Indian War including the policy of salutary neglect, mercantilism through the Navigation Acts and colonial reaction through the Albany Plan of Union; compare the Iroquois Confederacy to early attempts to unite the colonies.
	8.1.2 Summarize the political and economic consequences of the French and Indian War including imperial policies of taxation, the Proclamation of 1763, and the migration of colonists into American Indian sovereign territories.
	8.1.3 Summarize British attempts to regulate the colonies and colonial responses including: **A.** Sugar Act **B.** Stamp Act Congress Resolves **C.** Committees of Correspondence **D.** legal principle of taxation and political representation **E.** Townshend Act and boycotts of British goods **F.** Quartering Act **G.** Boston Massacre **H.** Tea Act and Boston Tea Party **I.** Coercive Acts (Intolerable Acts) **J.** First Continental Congress **K.** British raids on Lexington and Concord
	8.1.4 Analyze the significance of the Second Continental Congress including: **A.** formation of the Continental Army **B.** establishment of currency **C.** Olive Branch Petition **D.** French alliance negotiated by Benjamin Franklin **E.** committee to draft a declaration of independence

	8.1.5 Analyze the ideological and propaganda war between Great Britain and the colonies including: **A.** points of views of the Patriots and the Loyalists **B.** writings of Mercy Otis Warren and Phillis Wheatley **C.** use of Paul Revere's engraving of the Boston Massacre **D.** rejection of the Olive Branch Petition **E.** *Give Me Liberty or Give Me Death,* speech attributed to Patrick Henry **F.** *Common Sense* pamphlet by Thomas Paine
	8.1.6 Examine the central ideas expressed in the Declaration of Independence, drafted by Thomas Jefferson and adopted July 4, 1776, and their intellectual origins including: **A.** John Locke's theory on natural and unalienable rights, including life, liberty and the pursuit of happiness **B.** the ideals of equality for all individuals, including the impact of the First Great Awakening. **C.** the purpose of government as a social contract requiring the consent of the governed **D.** economic and political grievances against British policies.
8.2 The student will examine key military and diplomatic events of the Revolutionary War that resulted in an independent nation.	**8.2.1** Explain the purpose of the Articles of Confederation which established the first American national system of government to support and conduct a war against Britain.
	8.2.2 Evaluate the motivations and points of view of various populations to remain loyal to Britain, join the patriot cause, or choose neutrality, including: **A.** Patriots and Loyalists and their political, economic, and family interests **B.** American Indians and the preservation of their homelands, cultures, and trade **C.** women and their political status **D.** free and enslaved blacks and their petitions to colonial governments for a ban on slavery.
	8.2.3 Identify and evaluate the contributions of individuals and significant groups toward winning independence from British rule.
	8.2.4 Compare the advantages and disadvantages of the British and the American colonists including political and military leadership, military strength, population and resources, motivation, foreign alliances, financial and military support, and the British recruitment of enslaved black men in exchange for freedom.

	8.2.5 Summarize the impact of key military and diplomatic events of the Revolutionary War including: **A.** military leadership of General George Washington **B.** victories at Boston, Trenton, and Saratoga **B.** publication of Thomas Paine's *The Crisis* **D.** Valley Forge encampment **E.** French alliance, negotiated by Benjamin Franklin **F.** victory at Yorktown **G.** Treaty of Paris, 1783
8.3 The student will examine the formation of the American system of government following the Revolutionary War and the creation of the Constitution of the United States as the supreme law of the land.	**8.3.1** Examine the strengths and weaknesses of the Articles of Confederation that led to the Constitutional Convention in Philadelphia in 1787, including: **A.** resolution of disputes over the western territories as resolved by the Northwest Ordinance **B.** organization and leadership necessary to win the war **C.** lack of a common national currency **D.** lack of a common defense **E.** lack of a national judiciary **F.** mismanagement of war debts due to an inability to tax **G.** unanimous vote required to amend the Articles of Confederation **H.** civil unrest as typified in Shays' Rebellion.
	8.3.2 Analyze the significance of the Constitutional Convention, contributions of the Framers, major debates and compromises including the Virginia and New Jersey Plans, Great Compromise, the leadership of James Madison, Father of the Constitution, and George Washington, President of the Convention.
	8.3.3 Describe how the framers of the Constitution addressed the issue of slavery including the Three-Fifth Compromise which maintained the institution of slavery in both northern and southern states, the Fugitive Slave Clause, and the delayed ban on the slave trade.
	8.3.4 Explain the significance of the Commerce Clause in establishing a constitutional relationship between Indian tribes and the United States government.
	8.3.5 Examine the concept of self-government, the purpose, and the responsibilities of government as expressed in the Preamble to the Constitution of the United States.

	8.3.6 Analyze the key principles of government established by the Constitution of the United States including: **A.** federalism (reserved and concurrent powers) **B.** separation of powers among three branches of government (legislative, executive, judicial) **C.** a system of checks and balances among the three branches **D.** popular sovereignty and consent of the governed **E.** judicial review **F.** rule of law
	8.3.7 Examine the Federalist and Anti-Federalist arguments for and against the ratification of the Constitution as expressed in the *Federalist Papers* authored by James Madison, Alexander Hamilton, and John Jay and the writings of Anti-Federalists, such as George Mason, including concerns over a strong central government and the omission of a bill of rights.
	8.3.8 Explain how the Constitution of the United States was amended to include the Bill of Rights; identify and analyze the guarantees of individual rights and liberties as expressed in each of the ten amendments.
	8.3.9 Identify the structure and responsibilities of the elected and appointed officials of the three branches of government in relationship to the legislative process, including the role of Congress and the President, as well as the Supreme Court's power of judicial review.
	8.3.10 Describe the responsibilities of United States citizens such as: **A.** registering and voting in public elections **B.** engaging in informed civil discourse **C.** serving on a jury **D.** paying taxes **E.** obeying laws **F.** registering for military service

8.4 The student will examine the political and economic changes that occurred during the Early Federal Period.	**8.4.1** Analyze the impact of the Whiskey Rebellion and enforcement of the government's right to tax.
	8.4.2 Describe President Washington's attempt to develop a cohesive Indian policy, which included respectful interactions with American Indian leaders, treaties to delineate tribal lands, and precedent-setting practices of assimilation.
	8.4.3 Describe the advice in *President Washington's Farewell Address* and its impact.
	8.4.4 Evaluate the impact of the Alien and Sedition Acts on individual rights during the Adams Administration, including the responses of the Democratic-Republicans in the *Virginia and Kentucky Resolutions*.
8.5 The student will analyze the political and geographic changes that occurred during the Jeffersonian Era.	**8.5.1** Explain the impact of the peaceful transfer of power from one political party to another, as exhibited by the presidential election of 1800.
	8.5.2 Analyze the impact of the Supreme Court under the leadership of Chief John Marshall and the *Marbury v. Madison* decision which confirmed the principle of judicial review.
	8.5.3 Analyze the acquisition of the Louisiana territory, the contributions of the Lewis and Clark Corps of Discovery Expedition, and the eventual establishment of the Indian Territory.
8.6 The student will examine the political, economic and social transformations during the "Era of Good Feelings".	**8.6.1** Explain how the War of 1812 confirmed American independence and fueled a spirit of nationalism, reflected in the lyrics of our national anthem, the *Star-Spangled Banner*, by Francis Scott Key.
	8.6.2 Examine the Monroe Doctrine as a policy of isolationism which was designed to protect American interests in the Western Hemisphere.
	8.6.3 Analyze the impact of *McCulloch v. Maryland* which established federal supremacy concerning taxation.
	8.6.4 Examine the increased tension between Southern sectionalist and Northern nationalist perspectives.
	8.6.5 Summarize the impact of the Missouri Compromise on the expansion of slavery into new western territories.
8.7 The student will examine the political, economic and social transformations of the Jacksonian Era.	**8.7.1** Describe the factors that led to the election of Andrew Jackson including the "Corrupt Bargain" election of 1824, the expansion of voting rights, and Jackson's political success by identifying with the "common man".
	8.7.2 Analyze the impact of the Nullification Crisis on the development of the states' rights debate.

	8.7.3 Analyze the impact of Jackson's policies and decisions concerning American Indian nations and their tribal sovereignty as a nation's inherent right to self-govern, including: **A.** non-adherence to federal treaties **B.** disregard for the *Worcester v. Georgia* decision **C.** forced removals of American Indians
8.8 The student will examine the political, economic, social, and geographic changes that occurred during the period of westward expansion.	**8.8.1** Examine the concept and opposing perspectives toward Manifest Destiny as a motivation and justification for westward expansion.
	8.8.2 Explain the territorial growth of the United States including the annexation of Texas, Mexican Cession, and the Gadsden Purchase; describe the need to maintain a balance of "free" and "slave" states.
	8.8.3 Identify push and pull factors of mass migration and the settlement of western territories including the California Gold Rush, settlement of Oregon, and the Mormon migration.
	8.8.4 Analyze the consequences of westward expansion, including the impact on the culture of American Indians and their homelands, and the growing sectional tensions regarding the expansion of slavery.
8.9 The student will analyze the social and economic transformations of the early nineteenth century.	**8.9.1** Explain the impact of the Industrial Revolution in the North including the concentration of population, manufacturing, and transportation.
	8.9.2 Describe the plantation system and its reliance on a slave labor system in the South, including how Eli Whitney's invention of the cotton gin increased the profitability of the crop and led to the expansion of slavery.
	8.9.3 Compare perspectives and experiences of both free and enslaved blacks including the **A.** everyday life of free African Americans **B.** everyday acts of resistance to slavery **C.** efforts of Harriet Tubman and the Underground Railroad **D.** Nat Turner's Rebellion **E.** legal restrictions and Slave Codes
	8.9.4 Summarize the impact of the Abolitionist Movement including the writings and work of Frederick Douglass and William Lloyd Garrison.
	8.9.5 Identify the ideals, significance, and key leaders of the Second Great Awakening and the Women's Suffrage Movement, including the *Declaration of Sentiments* and the leadership of Susan B. Anthony, Elizabeth Cady Stanton, and Sojourner Truth.

8.10 The student will analyze major political, economic, and social events that resulted in the Civil War.	**8.10.1** Summarize the importance of slavery as the principal cause of increased sectional polarization leading to the Civil War.
	8.10.2 Evaluate the goals of the Compromise of 1850 regarding the issue of slavery.
	8.10.3 Evaluate the impact of the publication *Uncle Tom's Cabin,* by Harriet Beecher Stowe, on anti-slavery sentiments.
	8.10.4 Analyze the impact of the Kansas-Nebraska Act on the issue of popular sovereignty in new territories regarding the institution of slavery, repeal of the Missouri Compromise, and factional feuds in Bleeding Kansas.
	8.10.5 Summarize the *Dred Scott v. Sandford* case which declared slaves as property and motivated John Brown's Raid on the federal arsenal at Harpers Ferry.
8.11 The student will analyze the course and consequences of the Civil War.	**8.11.1** Analyze the immediate impact of the presidential election of 1860 including **A.** secession of southern states who declared slavery as the central factor for seceding **B.** Lincoln's goal to preserve the Union **C.** formation of the Confederate States of America **D.** Confederate attack on Fort Sumter **E.** tensions over strategic border states.
	8.11.2 Compare the advantages and disadvantages of the Union and the Confederacy including natural resources, population, industrialization, and the military leadership of Ulysses S Grant and Robert E. Lee.
	8.11.3 Evaluate the impact and contributions of specific groups in the Civil War including free and enslaved African Americans, American Indians, women, and immigrants.
	8.11.4 Discuss the key strategies utilized during the war, such as the Anaconda Plan, Total War, and the southern defense strategy.
	8.11.5 Summarize the significance of the key battles of the war, including Antietam, Gettysburg, Vicksburg, and Lee's surrender at Appomattox.
	8.11.6 Analyze the *Emancipation Proclamation*, including its role in expanding the goals of the war and its impact on slavery; identify the significance of Juneteenth in relationship to emancipation.
	8.11.7 Explain how the *Gettysburg Address* clarified the Union's motivation for winning the war.

	8.11.8 Evaluate the impact of Lincoln's assassination, loss of his leadership, and plans for reconciliation as expressed in his *Second Inaugural* Address.
8.12 The student will analyze the political, social, and economic transformations during the Reconstruction Era to 1877.	**8.12.1** Compare the major plans and policies proposed for Reconstruction.
	8.12.2 Analyze the impact of state and federal legislation following the Civil War including **A.** 13th, 14th, and 15th Amendments **B.** Black Codes and Jim Crow laws **C.** establishment of the Freedmen's Bureau
	8.12.3 Compare the emerging social structure of the South including the **A.** influx of carpetbaggers and scalawags **B.** rise of the Ku Klux Klan and its acts of intimidation and violence **C.** election of blacks to government positions **D.** expansion of the tenant and sharecropper systems **E.** migration of former slaves.
	8.12.4 Assess the impact of the presidential election of 1876 as an end to reconstruction in the South, including decline of black leadership, loss of enforcement of the 14th and 15th amendments, and the development of segregated societies.
	8.12.5 Evaluate the impact of federal policies including: **A.** Homestead Act of 1862 and the resulting movement westward to free land **B.** impact of continued displacement of American Indians **C.** President Grant's Peace Policy on Indian affairs **D.** the development of the Transcontinental Railroad.

Economics Content Standards	
E.1 The student will develop and apply economic reasoning and decision-making skills.	**E.1.1** Define and apply basic economic concepts of money supply, scarcity, surplus, choice, opportunity cost, cost/benefit analysis, risk/reward relationship, incentive, disincentive, and trade-off to a variety of economic situations.
	E.1.2 Determine appropriate courses of economic actions using a variety of economic reasoning and decision-making models.
	E.1.3 Examine how the decision-making process is impacted by the scope of the decision and the size of the decision-making entity.
	E.1.4 Explain that people tend to respond to fair treatment with fair treatment and to unfair treatment with retaliation, even when such reactions may not maximize their material wealth.
E.2 The student will evaluate how societies answer the three basic economic questions: what goods and services to produce, how to produce them and for whom are they produced.	**E.2.1** Compare the world's basic economic systems of market (free enterprise), command, and mixed market economies identifying countries that have adopted each and comparing the results such economic systems have produced in those countries as measured by GDP, national prosperity, individual income, and wealth.
	E.2.2 Describe the role of the factors of production, land, labor, capital, entrepreneurship, and technology as well as the place of imports and exports in economic systems.
	E.2.3 Answer how the three basic economic questions affect personal income and in turn impact the economic system.
	E.2.4 Explain the costs and benefits of government fiduciary policy and regulations including the impact both have on competition.
	E.2.5 Describe the impact of comparative and absolute advantage upon the three basic economic questions.
E.3 The student will explain how prices are set in a market economy and will determine how price provides incentives to buyers and sellers.	**E.3.1** Analyze how price and non-price factors affect the demand and supply of goods and services available in the marketplace.
	E.3.2 Explain what causes shortages and surpluses including government-imposed price floors, price ceilings, and other government regulations and the impact they have on prices and people's decisions to buy or sell.

	E.3.3 Evaluate the role of the government within the economy as to defining, establishing, and enforcing property rights.
E.4 The student will evaluate how changes in the level of competition in different markets affect prices.	**E.4.1** Explain how competition impacts the free market production and the allocation of goods and services to consumers.
	E.4.2 Explain how people's own self-interest, incentives, and disincentives influence market decisions.
E.5 The student will describe the role of economic institutions including banks, credit unions, corporations, governments, and not-for-profits in a market economy.	**E.5.1** Evaluate the impact of government ensuring the protection of private property rights and the rule of law in a market economy.
	E.5.2 Describe how banks allow people to pool their incomes and provide future income through investment in stocks.
	E.5.3 Identify how credit unions, corporations, and not-for-profits influence a market economy.
	E.5.4 Explain how successive deposits and loans made by commercial banks can cause the money supply to expand.
E.6 The student will analyze how money makes it easier to trade, borrow, save, invest, and compare the value of goods and services.	**E.6.1** Explain how individuals, businesses, and the overall economy benefit from the various uses of money, such as trading, borrowing, investing, and diversifying, versus saving money.
	E.6.2 Identify the components of the money supply and the different functions of money; give examples of each.
	E.6.3 Explain how the value of money is determined by the goods and services it can buy.

E.7 The student will evaluate how interest rates impact decisions in the market economy.	**E.7.1** Define interest rates and inflation; analyze the relationship between interest rates and inflation rates to both the borrower and the lender.
	E.7.2 Determine how changes in real interest rates impact people's decisions to borrow money and purchase goods in a market economy.
E.8 The student will analyze the role of entrepreneurs and laborers within a market economy.	**E.8.1** Identify both an entrepreneur and a laborer and describe how their decisions affect job opportunities for others, such as profit-maximizing level of output, hiring the optimal number of workers, comparing marginal costs and benefits of producing more or less of a resource.
	E.8.2 Analyze the potential risks and potential gains of entrepreneurs opening new businesses or inventing a new product; determine the financial and nonfinancial incentives that motivate entrepreneurs.
	E.8.3 Evaluate the costs and benefits of incorporation including the expansion of resources and reduction of risks.
E.9 The student will evaluate the economic role of government in a free market and a mixed market economy.	**E.9.1** Explain the aspects of and differences between a free market and a mixed market economy.
	E.9.2 Explain the purpose, costs, and benefits of government assistance programs and government funded services and projects.
	E.9.3 Evaluate the impact of voters' decisions as they relate to governmental economic policy.
E.10 The student will examine current economic conditions in the United States.	**E.10.1** Determine how interest rates, unemployment, Consumer Price Index (CPI), individual savings and debt, government debt, government-enforced price ceilings, labor supply, and inflation impact current economic conditions in the United States.
	E.10.2 Explain how these conditions have an impact on consumers, producers, and government policymakers.
	E.10.3 Explain how changes in supply and demand cause prices to change and in turn, cause buyers and sellers to change, including changes in price of productive resources and technologies used to make the product, profit opportunities available to producers for selling other products, number of sellers in a market, consumer incomes, consumer options, and the number of consumers in a market.
E.11 The student will identify the basic measures of a nation's economic output and income.	**E.11.1** Explain GDP and GNP and how they are used to describe economic output over time; compare the GDP of various countries representing market, command, and mixed economic systems.
	E.11.2 Describe the impact on the economy when GDP and GNP are growing or declining.

	E.11.3 Evaluate the impact of self-interest, competition, collusion, technological advancement, standard of living, the business cycle and fluctuation to the GDP.
	E.11.4 Examine the differences between the nominal and the real GDP.
E.12 The student will explain the role of inflation and unemployment in an economic system.	**E.12.1** Define inflation and determine how it is measured, including the impact inflation has on different sectors of the United States economy.
	E.12.2 Define the causes of unemployment, as well as the different types of unemployment; determine how unemployment is measured and the impact it has on different sectors of the United States economy.
E.13 The student will identify the potential econcomic impact of policy changes by the Federal Reserve and the federal government.	**E.13.1** Compare fiscal and monetary policy and the impact each has on the economy.
	E.13.2 Explain the role of the Federal Reserve System within government economic policy.
	E.13.3 Evaluate the conditions under which the federal government and the Federal Reserve implement expansionary or contractionary policies.

Engage in Democratic Processes	Analyze and Address Authentic Civic Issues	Acquire, Apply, and Evaluate Evidence	Read Critically and Interpret Informational Sources	Engage in Evidence Based Writing

Oklahoma History Content Standards	
OKH.1 The student will describe the state's geography and the historic foundations laid by American Indian, European, and American cultures.	**OKH.1.1** Integrate visual information to identify and describe the significant physical and human features including major trails, railway lines, waterways, cities, ecological regions, natural resources, highways, and landforms.
	OKH.1.2 Summarize the accomplishments of pre-contact cultures including the Spiro Mound Builders.
	OKH.1.3 Compare the goals and significance of early Spanish, French, and American interactions with American Indians, including trade, the impact of disease, the arrival of the horse, and new technologies.
	OKH.1.4 Compare cultural perspectives of American Indians and European Americans regarding land ownership, structure of self-government, religion, and trading practices.
OKH.2 The student will evaluate the major political and economic events that transformed the land and its people from early contact through Indian Removal and its aftermath.	**OKH.2.1** Summarize and analyze the role of river transportation to early trade and mercantile settlements including Chouteau's Trading Post at Three Forks.
	OKH.2.2 Describe the major trading and peacekeeping goals of early military posts including Fort Gibson.
	OKH.2.3 Analyze the motivations for removal of American Indians and the passage of the Indian Removal Act of 1830; trace the forced removal of American Indian nations, including the impact on the tribal nations removed to present-day Oklahoma and tribal resistance to the forced relocations.
	OKH.2.4 Describe the consequences of Indian Removal on intertribal relationships with western nations, such as the Osage, Comanche, Kiowa, Cheyenne and Arapaho.
OKH.3 The student will evaluate the major political and economic events that transformed the land and its people from the outbreak of the Civil War through allotment and land openings.	**OKH.3.1** Summarize the impact of the Civil War and Reconstruction Treaties on American Indian peoples, territories, and tribal sovereignty including: **A.** required enrollment of the Freedmen **B.** Second Indian Removal **C.** significance of the Massacre at the Washita **D.** reasons for the reservation system and the controversy regarding the reservation system as opposed to tribal lands. **E.** establishment of the western military posts including the role of the Buffalo Soldiers **F.** construction of railroads through Indian Territory

	OKH.3.2 Assess the impact of the cattle and coal mining industries on the location of railroad lines, transportation routes, and the development of communities.
	OKH.3.3 Analyze the influence of the idea of Manifest Destiny on the Boomer Movement.
	OKH.3.4 Compare multiple points of view to evaluate the impact of the Dawes Act (General Allotment Act) which resulted in the loss of tribal communal lands through a transfer to individual property and the redistribution of lands, including the Unassigned Lands and the Cherokee Outlet, by various means.
	OKH.3.5 Explain how American Indian nations lost control over tribal identity and citizenship through congressional action, including the Indian Reorganization Act.
OKH.4 The student will analyze the formation of constitutional government in Oklahoma.	**OKH.4.1** Compare the governments among the American Indian nations and the movement for the state of Sequoyah.
	OKH.4.2 Describe the proposal for an all-black state advocated by Edward McCabe.
	OKH.4.3 Explain the impact of the Enabling Act on single statehood.
	OKH.4.4 Describe and summarize attempts to create a state constitution joining Indian and Oklahoma Territories including the impact of the Progressive and Labor Movements resulting in statehood on November 16,1907.
	OKH.4.5 Compare Oklahoma's state government to the United States' national system of government including the branches of government, their functions, and powers.
	OKH.4.6 Describe the division, function, and sharing of powers among levels of government including city, county, state and tribal.
	OKH.4.7 Identify major sources of local and state revenues and the services provided including education, health and human services, transportation, courts, corrections, and public safety.
	OKH.4.8 Describe state constitutional provisions including the direct primary, initiative petition, referendum, and recall.

OKH.5 The student will examine the Oklahoma's political, social, cultural, and economic transformation during the early decades following statehood.	**OKH.5.1** Examine the policies of the United States and their effects on American Indian identity, culture, economy, tribal government and sovereignty including: **A.** passage of the Indian Citizenship Act of 1924 **B.** effects of the federal policy of assimilation including Indian boarding schools (1880s-1940s) **C.** authority to select tribal leaders as opposed to appointment by the federal government **D.** exploitation of American Indian resources, lands, trust accounts, head rights, and guardianship as required by the Bureau of Indian Affairs.
	OKH.5.2 Examine multiple points of view regarding the evolution of race relations in Oklahoma, including: **A.** growth of all-black towns (1865-1920) **B.** passage of Senate Bill 1 establishing Jim Crow Laws **C.** rise of the Ku Klux Klan **D.** emergence of "Black Wall Street" in the Greenwood District **E.** causes of the Tulsa Race Riot and its continued social and economic impact. **F.** the role labels play in understanding historic events, for example "riot" versus "massacre".
	OKH.5.3 Analyze how various segments of Oklahoma society including agriculture, mining, and state politics were influenced by the organized labor and socialist movements.
	OKH.5.4 Examine how the economic cycles of boom and bust of the oil industry affected major sectors of employment, mining, and the subsequent development of communities, as well as the role of entrepreneurs, including J.J. McAlester, Frank Phillips, E.W. Marland and Robert S. Kerr, and the designation of Tulsa as the "Oil Capital of the World".
	OKH.5.5 Evaluate the impact of the boom and bust cycle of Oklahoma's agricultural production due to mechanization and the needs of World War I, including its effect as a precursor of the Great Depression.
	OKH.5.6 Analyze William H. "Alfalfa Bill" Murray's response to the conditions created by the Great Depression.
	OKH.5.7 Describe the impact of environmental conditions and human mismanagement of resources resulting in the Dust Bowl and the migration of the "Okies", the national perceptions of Oklahomans, and the New Deal policies regarding conservation of natural resources.
	OKH.5.8 Describe the contributions of Oklahomans including African-American jazz musicians, the political and social commentaries of Will Rogers and Woody Guthrie's, Wiley Post's aviation milestones, and the artwork of the Kiowa Six.
	OKH.5.9 Summarize and analyze the impact of mobilization for World War II including the establishment of military bases, prisoner of war installations, and the contributions of Oklahomans to the war effort including the American Indian code talkers and the 45th Infantry Division.

OKH.6 The student will investigate how post-war social, political, and economic events continued to transform the state of Oklahoma from the 1950s through the present.	**OKH.6.1** Evaluate the progress of race relations and actions of civil disobedience in the state including: **A.** judicial interpretation of the equal protection clause of the 14th Amendment which ultimately resulted in the desegregation of public facilities and public schools and universities **B.** landmark Supreme Court cases of *Sipuel v. Board of Regents of the University of Oklahoma (1948)* and *McLaurin v. Oklahoma Board of Regents for Higher Education (1950)* **C.** lunch counter sit-ins organized by Clara Luper and the NAACP **D.** leadership of Governor Gary in the peaceful integration of the public common and higher education systems.
	OKH.6.2 Analyze the impact of economic growth in various sectors including: **A.** impact of rural to urban migration **B.** development of wind, water, and timber resources **C.** continuing role of agriculture **D.** emergence of tourism as an industry **E.** development of the aerospace and aviation industry including the FAA and the influence of weather research on national disaster preparedness **F.** oil and gas boom and bust, including the discovery of new fossil fuel resources **G.** improvement of the state's transportation infrastructures, such as the interstate highway system and the McClellan-Kerr Arkansas River Navigation System.
	OKH.6.3 Describe the artistic contributions of Oklahomans in the fields of music, art, literature, theater, and dance such as Ralph Ellison and the Five Indian Ballerinas.
	OKH.6.4 Summarize the impact of individual Oklahomans' leadership on state and national politics including political realignment.
	OKH.6.5 Analyze the evolving relationship between state and tribal governments impacting tribal self-determination and control over American Indian lands and resources including issues of jurisdiction, taxation, and gaming.
	OKH.6.6 Examine the contributions of major cultural and ethnic groups, including Asians, African Americans, American Indians, and Latinos to the state of Oklahoma and their impact on the social and economic transformation of the modern state of Oklahoma.
	OKH.6.7 Analyze the causes and effects of the domestic terrorist attack on the Murrah Federal Building in Oklahoma City including the responses of Oklahomans to the act, concept of the "Oklahoma Standard" and the creation of the Oklahoma City National Memorial and Museum.

	OKH.6.8 Describe the changing perceptions, both internal and external, of the state and its citizens, as reflected in the *Grapes of Wrath*, the musical *Oklahoma!,* Route 66, and the professional basketball team the Oklahoma City Thunder.
	OKH.6.9 Examine ongoing issues including immigration, criminal justice reform, employment, environmental issues, race relations, civic engagement, and education.

Engage in Democratic Processes	Analyze and Address Authentic Civic Issues	Acquire, Apply, and Evaluate Evidence	Read Critically and Interpret Informational Sources	Engage in Evidence Based Writing

Psychology Content Standards	
PS.1 The student will examine the foundations of psychology and its origins as a separate social science discipline.	**PS.1.1** Analyze the definition of psychology in the context of psychology as an empirical science and the major approaches to psychology including cognitive-behavioral, psychoanalytic, cognitive, and humanistic.
	PS.1.2 Evaluate the origins of psychology based on significant historic figures including Wilhelm Wundt, William James, John B. Watson, and Karen Horney.
	PS.1.3 Classify the various subfields in psychology including vocational applications such as counseling, industrial, clinical, experimental, and educational psychology.
PS.2 The student will examine the development of psychology as an empirical science by describing the scientific method, explaining research strategies, and identifying ethical issues.	**PS.2.1** Describe the scientific method as the framework for research and apply the principles of research design to an appropriate experiment.
	PS.2.2 Compare quantitative and qualitative research strategies including experiments, surveys, focus groups, and narratives as the foundation of research in psychology.
	PS.2.3 Identify ethical standards psychologists must address regarding research with human and non-human participants.
	PS.2.4 Explore the various modes of psychological testing including personality, intelligence, and projective while assessing the reliability of each.
PS.3 The student will investigate the structure, biochemistry and circuitry of the brain and the nervous system to understand their roles in affecting behavior.	**PS.3.1** Identify and describe the structure and function of the brain including the hypothalamus, prefrontal lobe, corpus callosum, hemispheres, and amygdala.
	PS.3.2 Examine the structure and function of the nervous and endocrine system and how they affect behavior.
	PS.3.3 Identify the parts of a neuron and explain neurotransmission including the role and impact of various neurotransmitters.
	PS.3.4 Explain the processes of sensation and perception, as well as the capabilities and limitations of sensory processes including the visual, auditory, kinesthetic, olfactory, and gustatory sensory systems.

	PS.3.5 Describe the interaction of a person and the environment in determining perception including Gestalt principles and how one's experiences and expectations influence perception.
	PS.3.6 Identify various states of consciousness including sleep and dreams, hypnosis, meditation, and psychoactive drugs.
moral and cognitive development from conception through the latter stages of adulthood.	**PS.4.1** Explain the interaction of environmental and biological factors in human development including the role of the brain in all aspects of development.
	PS.4.2 Compare the theories of Jean Piaget, Sigmund Freud, Lawrence Kohlberg, Carl Jung, and Erik Erikson regarding human development.
PS.5 The student will understand how organisms adapt to their environment through learning and cognition.	**PS.5.1** Identify and explain the major theories of learning including Ivan Pavlov's classical conditioning, B.F. Skinner's and Albert Bandura's Operant conditioning, and Bandura's observational learning.
	PS.5.2 Describe the process, organization, and factors that influence memory and recall.
	PS.5.3 Analyze strategies and impediments involved in problem solving and decision making and how this knowledge could be applied to daily life.
PS.6 The student will understand the principles of motivation and emotion.	**PS.6.1** Compare the predominant theories of motivation and emotion including the biological, social-cognitive, humanistic, and cultural theories.
	PS.6.2 Analyze the biological and environmental influences on positive and negative emotion.
PS.7 The student will understand how society and culture influence a person's behavior and mental processes.	**PS.7.1** Evaluate the factors that lead to conformity, obedience and nonconformity as demonstrated in experiments including the Stanford Prison Experiment, Milgram Experiment, or Solomon Asch's studies.
	PS.7.2 Explain how bias, discrimination and use of stereotypes influence behavior with regard to gender, race, sexual orientation and ethnicity as demonstrated in the studies of the Brown Eyed/Blue Eyed Experiment and the Clark Doll Experiment.
	PS.7.3 Examine influences on aggression and conflict including the factors associated with the bystander effect as demonstrated in such cases as the Kitty Genovese murder.
	PS.8.1 Analyze the methods of determining abnormal behavior and the tools used to diagnose and classify disorders.

PS.8 The student will examine how psychological disorders are diagnosed, classified, and treated.	**PS.8.2** Describe symptoms and causes of major categories of psychological disorders including schizophrenia mood, anxiety, personality, somatoform, and dissociative disorders.
	PS.8.3 Compare available treatment options and how they evolved through history and among different cultures.
PS.9 The student will evaluate the many factors that promote mental health.	**PS.9.1** Identify and explain potential sources of stress, effects of stress, and various coping strategies for dealing with stress.
	PS.9.2 Describe the characteristics of and factors that promote resilience and optimism.
	PS.9.3 Analyze the relationship between psychological health and physiological health.
	PS.9.4 Identify mental health disorders such as eating disorders and obsessive compulsive disorders.

Engage in Democratic Processes	Analyze and Address Authentic Civic Issues	Acquire, Apply, and Evaluate Evidence	Read Critically and Interpret Informational Sources	Engage in Evidence Based Writing

United States Government Content Standards	
USG.1 The student will compare the formation of contemporary governments in terms of access, use and justification of power.	**USG.1.1** Compare the essential characteristics of limited versus unlimited governments.
	USG.1.2 Compare historic and contemporary examples of unlimited governments to examples of limited systems.
	USG.1.3 Compare the advantages and disadvantages of the ways governmental power is distributed, shared and structured in unitary, federal and confederal systems in terms of effectiveness, prevention of abuse of power and responsiveness to the popular will.
	USG.1.4 Compare the role of government in market and command economic systems.
USG.2 The student will describe the historical and philosophical foundations of the republican system of government in the United States.	**USG.2.1** Summarize the major documents contributing to the formation of constitutional government in the United States, including the Magna Carta, the Mayflower Compact and the English Bill of Rights.
	USG.2.2 Identify the central ideas and importance of the concept of inalienable rights, including life, liberty and the pursuit of happiness, the social contract, and the grievances stated in the Declaration of Independence and reflected in the Constitution of the United States.
	USG.2.3 Evaluate the necessity of a written constitution to set forth enumerated powers, to organize government, and to distribute powers among the three branches of government, the states, and the people.
	USG.2.4 Compare the points of view toward the structure and powers of government as expressed in the *Federalist Papers,* authored by Madison, Hamilton and Jay, as well as the writings of the Anti-Federalists.
	USG.2.5 Analyze the constitutional amendment process including the 27 amendments to the Constitution of the United States.
USG.3 The student will analyze the fundamental principles of	**USG.3.1** Examine the American system of federalism and evaluate the changes that have occurred in the relationship between the states and the national government over time.

the American system of government resulting in a republic, as established in the Constitution of the United States, the supreme law of the land.	**USG.3.2** Analyze the system of federalism including the **A.** enumerated (express) powers **B.** implied powers **C.** powers denied to the national government **D.** reserved powers to the states **E.** concurrent powers.
	USG.3.3 Summarize and explain the relationships and the responsibilities among national, state, tribal, and local governments.
	USG.3.4 Explain that tribal sovereignty is a tribal nation's inherent power to self-govern, such as challenges made regarding the Major Crimes Act.
	USG.3.5 Analyze how the Commerce Clause established the initial constitutional relationship between the Indian tribes and the United States government.
	USG.3.6 Explain how power is separated as well as shared under the American system including the **A.** system of separation of powers **B.** system of checks and balances **C.** principle of judicial review.
	USG.3.7 Evaluate the importance of the rule of law on the purposes and functions of government; explain how the rule of law provides for the protection of individual liberties, including due process and equality under the law.
	USG.3.8 Analyze the concept of popular sovereignty, including the government's responsibility to legitimize majority rule while protecting minority rights.
	USG.3.9 Analyze the rights and liberties guaranteed to all citizens in the Bill of Rights and how they are protected at the state level through the doctrine of incorporation using the 14th Amendment.
	USG.3.10 Analyze historic and contemporary examples of landmark Supreme Court decisions which have addressed and clarified individual rights under the First Amendment, including **A.** *Gitlow v. New York* (1925) **B.** *West Virginia v. Barnette* (1943) **C.** *Engel v. Vitale* (1962) **D.** *Tinker v. Des Moines* (1969) **E.** *Texas v. Johnson* (1989)

	USG.3.11 Analyze historic and contemporary examples of landmark Supreme Court cases which have specified individual rights of due process under the Constitution, including: **A.** *Mapp v. Ohio* (1961) **B.** *Gideon v. Wainwright* (1963) **C.** *Miranda v. Arizona* (1966) **D.** *Roe v. Wade* (1973) ***E****. Furman v. Georgia* (1972).
USG.4 The student will examine the Constitution of the United States by comparing the legislative, executive, and judicial branches of government as they address the needs of the public.	**USG.4.1** Explain the purposes of government expressed in the Preamble and how the Constitution of the United States preserves the core principles of American society.
	USG.4.2 Examine the structure, functions, and authority exercised by the executive, legislative, and judicial branches of government. **A.** Identify the constitutional qualifications for holding public office and the terms of office, including the composition of Congress, the Supreme Court, and the executive branch. **B.** Explain the steps of the legislative process, including the role of Congress and the president. **C.** Explain the role of the executive branch, including the function of the bureaucracy in implementing public policy. **D.** Identify the issues and describe the significance of landmark Supreme Court decisions including *Marbury v. Madison* (1803), *McCulloch v. Maryland* (1819), *United States v. Nixon* (1974), *Bush v. Gore* (2000), and *Citizens United v. F.E.C.* (2010) **E.** Examine how government exercises its authority in real world situations including current issues and events.
USG.5 The student will be able to evaluate the significance of civic participation in order to ensure the preservation of our constitutional government.	**USG.5.1** Define civic virtue and explain the individual's duty and responsibility to participate in civic life by voting, serving on juries, volunteering within the community, running for office, serving on a political campaign, paying state and federal taxes prior to the April 15th annual deadline, and respecting legitimate authority.
	USG.5.2 Explain the naturalization process under the laws of the United States.
	USG.5.3 Analyze how our system of government provides citizens opportunities to monitor and influence the actions of the government and hold elected officials accountable.
	USG.5.4 Analyze factors affecting the political process and their role in government, including the role of political parties, interest groups, mass media, public opinion, and campaign funding.
	USG.5.5 Explain the steps of the electoral process including the components of local and national campaigns, the nominative process, and the Electoral College.

USG.6 The student will examine the United States public policy formation process.	**USG.6.1** Examine the budget process including significant policy issues and examples of economic trade-offs that occur when addressing competing public needs.
	USG.6.2 Examine how the government influences the economy using fiscal and monetary policy.
	USG.6.3 Explain the role of the national government in formulating and carrying out domestic policy.
	USG.6.4 Evaluate the role of the national government in formulating and carrying out foreign policy, national defense, and participation in international alliances and organizations.

Engage in Democratic Processes	Analyze and Address Authentic Civic Issues	Acquire, Apply, and Evaluate Evidence	Read Critically and Interpret Informational Sources	Engage in Evidence Based Writing

United States History Content Standards

USH.1 The student will analyze the transformation of the United States through its civil rights struggles, immigrant experiences, and settlement of the American West in the Post-Reconstruction Era, 1865 to the 1920s.	**USH.1.1** Explain the constitutional issues that arise in the post-Civil War era including federalism, separation of powers, and the system of checks and balances.
	USH.1.2 Analyze the post-Reconstruction civil rights struggles. **A.** Identify the significance of Juneteenth in relation to emancipation and modern-day celebrations. **B.** Examine the purposes and effects of the 13th, 14th, and 15th Amendments. **C.** Assess the impact of the Black Codes, Jim Crow laws, and the actions of the Ku Klux Klan.
	USH.1.3 Analyze the impact of westward expansion and immigration on migration, settlement patterns in American society, economic growth, and American Indians. **A.** Summarize the reasons for immigration, shifts in settlement patterns, the immigrant experience at immigrant processing centers such as Ellis Island and Angel Island, and the impact of Nativism and Americanization. **B.** Analyze the creation of federal immigration policies including the Chinese Exclusion Act, the Gentlemen's Agreement, federal court decisions, the Supreme Court's application of the 14th Amendment and the Immigration Act of 1924. **C.** Examine the rationale behind federal policies toward American Indians including the establishment of reservations, attempts at assimilation, the end of the Indian Wars at Wounded Knee, and the impact of the Dawes Act on tribal sovereignty and land ownership. **D.** Compare viewpoints of American Indian resistance to United States Indian policies as evidenced by Red Cloud in his *Cooper Union* speech, Quanah Parker, and Chief Joseph as expressed in his *I Will Fight No More Forever* speech.

USH.2 The student will analyze the social, economic and political changes that occurred during the American Industrial Revolution, the Gilded Age, and significant reform movements from the 1870s to the 1920s.	**USH.2.1** Evaluate the transformation of American society, economy and politics during the American Industrial Revolution. **A.** Analyze the impact of capitalism, laissez-faire policy and the role of leading industrialists as robber barons, captains of industry and philanthropists including John D. Rockefeller and Andrew Carnegie and his *Gospel of Wealth* essay on American society. **B.** Identify the impact of new inventions and industrial production methods including new technologies by Thomas Edison, Alexander G. Bell, Henry Ford, and the Bessemer process. **C.** Evaluate the contributions of muckrakers, including Ida Tarbell, Jacob Riis and Upton Sinclair, in changing government policies regarding child labor, working conditions and regulation of big business. **D.** Analyze major social reform movements including the Women's Suffrage and Temperance Movement and the leadership of Susan B. Anthony, Alice Paul, and Jane Addams. **E.** Evaluate the significance of the Labor Movement on the organization of workers including the impact of the Pullman strikes, the Haymarket Riot, and the leadership of Eugene V. Debs. **F.** Assess and summarize changing race relations as exemplified in the *Plessy v. Ferguson* case. **G.** Compare early civil rights leadership including the viewpoints of Booker T. Washington, and W.E.B. DuBois in response to rising racial tensions, the anti-lynching work of Ida B. Wells, and the use of poll taxes and literacy tests to disenfranchise blacks.
	USH.2.2 Evaluate the rise and reforms of Populism and the Progressive Movement including: **A.** direct primary, initiative petition, referendum, and recall intended to limit the corrupting influence of political machines **B.** impact of William Jennings Bryan and his *Cross of Gold* speech on the political landscape **C.** series of events leading to and the effects of the 16th, 17th, 18th, 19th, and 21st Amendments to the Constitution of the United States.
	USH.2.3 Analyze and summarize the key personalities, actions and policies of Presidents Theodore Roosevelt, William Howard Taft, and Woodrow Wilson by: **A.** comparing the policies of Roosevelt and Taft on environmental conservation and trust busting, **B.** evaluating the 1912 presidential election including the role of Roosevelt's *Bull Moose Party* and Eugene V. Debs Socialist Party. **C.** describing the policies of Wilson on the issue of women's right to vote.

USH.3 The student will analyze the expanding role of the United States in international affairs as America was transformed into a world power in the late 19th and early 20th centuries, 1890 to 1920.	**USH.3.1** Evaluate the impact of American imperialism on international relations and explain its impact on developing nations. **A.** Compare the economic, religious, social, and political rationales for American imperialism including the concept of "white man's burden," the annexation of Hawaii, the impact of Admiral Alfred T. Mahan, and the actions of the Anti-Imperialist League. **B.** Assess the role of yellow journalism and jingoism in inciting the desire of Americans to go to war with Spain. **C.** Examine how the Spanish-American War resulted in the rise of the United States as a world power and led to new territorial acquisitions and national insurrections in Cuba and the Philippines. **D.** Compare the foreign policies of Presidents Roosevelt, Taft, and Wilson including Big Stick Diplomacy, Dollar Diplomacy, Missionary Diplomacy, the Roosevelt Corollary, military interventionism, and the territorial acquisition and construction of the Panama Canal.
	USH.3.2 Evaluate the long-term impact of America's entry into World War I on national politics, the economy, and society. **A.** Summarize the transformation of the United States from a position of neutrality to engagement in World War I including the Zimmermann Telegram and the threats to international trade caused by unrestricted submarine warfare. **B.** Analyze the impact of the war on the home front including the use of propaganda, women's increased role in industry, the marshaling of industrial production, and the Great Migration. **C.** Analyze the institution of a draft and the suppression of individual liberties resulting in the First Red Scare, including the Palmer Raids and the Sacco-Vanzetti trials. **D.** Evaluate Wilson's foreign policy as proposed in his Fourteen Points and the reasons for the nation's return to isolationism highlighted by the Senate's rejection of the League of Nations.
USH.4 The student will analyze the cycles of boom and bust of the 1920s and 1930s on the transformation of American government, the economy and society.	**USH.4.1** Examine the economic, political, and social transformations between the World Wars. **A.** Describe modern forms of cultural expression including the significant impact of people of African descent on American culture as exhibited by the Harlem Renaissance and the Jazz Age. **B.** Describe the rising racial tensions in American society including the resurgence of the Ku Klux Klan, increased lynchings, race riots as typified by the Tulsa Race Riot, the rise of Marcus Garvey and black nationalism, and the use of poll taxes and literacy tests to disenfranchise blacks. **C.** Assess the impact of the Indian Citizenship Act of 1924 on the American Indian nations. **D.** Examine growing labor unrest and industry's reactions, including the use of sit-down strikes and court injunctions, and why socialism and communism appealed to labor. **E.** Describe the booming economy based upon access to easy credit through installment buying of appliances and inventions of modern conveniences including the automobile.

	USH.4.2 Analyze the effects of the destabilization of the American economy. **A.** Identify causes contributing to an unstable economy including the overproduction of agriculture products, greater speculation and buying on margin in the Stock Market, and the government's pro-business and laissez-faire policies. **B.** Examine the role of the Stock Market Crash and bank failures in weakening both the agricultural and manufacturing sectors of the economy leading to the Great Depression. **C.** Analyze how President Herbert Hoover's financial policies and massive unemployment as exemplified by the Bonus Army March and Hoovervilles impacted the presidential election of 1932. **D.** Compare points of view regarding the economic and social impact of the Great Depression on individuals, families, and the nation.
	USH.4.3 Analyze the impact of the New Deal in transforming the federal government's role in domestic economic policies. **A.** Assess changing viewpoints regarding the expanding role of government as expressed in President Franklin Roosevelt's *First Inaugural Address.* **B.** Examine how national policies addressed the economic crisis including John Maynard Keynes' theory of deficit spending, Roosevelt's court packing plan, and the new federal agencies of the Social Security Administration, Federal Deposit Insurance Corporation (FDIC), Works Progress Administration (WPA), Civilian Conservation Corps (CCC), and the Tennessee Valley Authority (TVA). **C.** Summarize the causes and impact of the Dust Bowl including the government's responses.
USH.5 The student will analyze the United States role in international affairs by examining the major causes, events and effects of the nation's involvement in World War II, 1933 to 1946.	**USH.5.1** Describe the transformations in American society and government policy as the nation mobilized for entry into World War II. **A.** Examine the roles of appeasement and isolationism in the United States' reluctance to respond to Fascist military aggression in Europe and Asia including the Neutrality Acts and the Lend-Lease program. **B.** Evaluate the industrial mobilization for war and the psychological preparation for war as reflected in President Franklin Roosevelt's *Four Freedoms* speech. **C.** Examine President Franklin Roosevelt's *Day Which Will Live* in Infamy speech and America's conduct of the war, including the role of women and minorities in the war effort, rationing, the internment of Americans of Japanese descent, and the treatment of Americans of German, and Italian descent, including the *Korematsu v. United States* decision.
	USH.5.2 Analyze the series of events affecting the outcome of World War II including major battles, military turning points, and key strategic decisions in both the European and Pacific Theaters of operation including Pearl Harbor, the D-Day Invasion, development and use of the atomic bomb, the island-hopping strategy, the Allied conferences at Yalta and Potsdam, and the contributions of Generals MacArthur and Eisenhower.

	USH.5.3 Summarize American reactions to the events of the Holocaust resulting in United States participation in the Nuremberg Trials which held Nazi leaders accountable for war crimes.
USH.6 The student will analyze foreign events and policies during the Cold War, 1945-1975.	**USH.6.1** Analyze the origins of international alliances and efforts at containment of Communism following World War II. **A.** Identify the origins of Cold War confrontations between the Soviet Union and the United States including the leadership of President Harry Truman, the postwar division of Berlin, the Berlin Blockade and Airlift, the Iron Curtain, and the Marshall Plan. **B.** Describe the roles and consequences of the spheres of influence created by the formation of the United Nations and NATO by the United States and the formation of the Warsaw Pact by the Soviet Union. **C.** Assess the impact and successes of the Truman Doctrine including the American military response to the invasion of South Korea. **D.** Evaluate the Kennedy administration's international goals as expressed in his *Inaugural Address* in light of the subsequent building of the Berlin Wall, the Bay of Pigs Invasion, the Cuban Missile Crisis, NASA, and the establishment of the Peace Corps.
	USH.6.2 Describe domestic events related to the Cold War and its aftermath. **A.** Summarize the reasons for the public fear of communist influence within the United States and how politicians capitalized on this fear including the leadership of President Dwight D. Eisenhower, the Army-McCarthy hearings, the Second Red Scare, the Alger Hiss controversy, and the Rosenbergs' spy trials. **B.** Examine the impact of the proliferation of nuclear weapons and the resulting nuclear arms race, the concept of brinkmanship, the doctrine of mutually assured destruction (MAD), the launching of Sputnik and the space race. **C.** Evaluate the continuing role of radio, television and other mass media in relationship to the Nixon and Kennedy debates as part of the 1960 and subsequent elections.
	USH.6.3 Analyze the series of events and long term foreign and domestic consequences of the United States' military involvement in Vietnam including the Domino Theory, the Gulf of Tonkin Resolution, the Tet Offensive, the presidential election of 1968, university student protests led by the counterculture movement, expanded television coverage of the war, the War Powers Resolution Act, and the 26th Amendment.
	USH.6.4 Analyze the political and economic impact of President Nixon's foreign policies including détente and the opening of China.

USH.7 The student will analyze the cause and effects of significant domestic events and policies from 1945 to 1975.	**USH.7.1** Analyze the major events, personalities, tactics and effects of the Civil Rights Movement. **A.** Assess the effects of President Truman's decision to desegregate the United States armed forces and the legal attacks on segregation by the NAACP and Thurgood Marshall, the United States Supreme Court decisions in the cases of Oklahomans Ada Lois Sipuel Fisher and George McLaurin, and the differences between *de jure* and *de facto* segregation. **B.** Evaluate the events arising from separate but equal, policies, such as poll taxes and literacy tests, violent responses such as the Birmingham church bombing and the assassination of Dr. Martin Luther King, Jr., and conflicts over segregation including: 1. *Brown v. Board of Education, Topeka, Kansas* decision 2. Montgomery Bus Boycott 3. desegregation of Little Rock Central High School 4. Oklahoma City lunch counter sit-ins led by Clara Luper 5. Freedom Rides 6. Marches on Washington and Selma to Montgomery 7. adoption of the 24th Amendment 8. passage of the Civil Rights Act of 1964 and the Voting Rights Act of 1965. **C.** Compare the viewpoints and the contributions of civil rights leaders and organizations linking them to events of the movement, including Dr. Martin Luther King, Jr. and his *I Have a Dream* speech, the leadership of Malcolm X, the role of organizations such as the Black Panthers; describe the tactics used at different times including civil disobedience, non-violent resistance, sit-ins, boycotts, marches, and voter registration drives.

	USH.7.2 Analyze the ongoing social and political transformations within the United States. **A.** Summarize and examine the United States Supreme Court's use of the 14th Amendment incorporation doctrine in applying the Bill of Rights to the states, thereby securing and further defining individual rights and civil liberties. **B.** Assess the rise of liberalism in the 1960s and the lasting impact of President Lyndon Johnson's civil rights initiatives, the war on poverty, and the Great Society. **C.** Describe the goals and effectiveness of the American Indian movements on tribal identity and sovereignty including the American Indian Movement (AIM) and mismanagement by the federal government causing the occupations at Wounded Knee and Alcatraz. **D.** Describe the goals and effectiveness of the social movement of the United Farm Workers and César Chávez. **E.** Compare the changing roles of women from the post-war era through the 1970s including the goals of the Women's Liberation Movement and the National Organization of Women under the leadership of Betty Friedan, various debates on the Equal Rights Amendment, and the United States Supreme Court's ruling in *Roe v. Wade*. **F.** Evaluate the impact of the Watergate Scandal on executive powers including the role of the media, the Pentagon Papers, the first use of the 25th Amendment, and President Ford's decision to pardon former President Nixon.
USH.8 The student will analyze the impact of foreign and domestic policies from 1977 to 2001.	**USH.8.1** Evaluate President Jimmy Carter's foreign policy in the Middle East including the Camp David Accords, the OPEC oil embargo, and the response to the 1979 Iranian hostage crisis.
	USH.8.2 Analyze the economic and political impact of the rise of conservatism and President Reagan's domestic and foreign policies including Reaganomics, the Iran-Contra Scandal and Reagan's *Tear Down This Wall* speech in West Berlin.
	USH.8.3 Summarize the series of events leading to the emergence of the United States as the sole superpower following the fall of the Berlin Wall and the collapse of the Soviet Empire.
	USH.8.4 Describe the goal of President George H.W. Bush's foreign policy in forming an international coalition to counter Iraqi aggression in the Persian Gulf.
	USH.8.5 Describe and evaluate the influence of William J. Clinton's presidency, including the **A.** continuing global influence of the United States including NAFTA and the NATO interventions to restore stability to the former Yugoslav republics. **B.** political impact of Clinton's impeachment.
	USH.8.6 Evaluate the rise of terrorism and its impact on the United States including the 1995 bombing of the Murrah Federal Building, the first attack on the World Trade Center Towers in 1993, the attacks on September 11, 2001, the USA PATRIOT Act, and the creation of the Department of Homeland Security.

USH.9 The student will examine contemporary challenges and successes in meeting the needs of the American citizen and society, 2002 to the present.	**USH.9.1** Assess George W. Bush's presidency, including the causes, conduct and consequences of the United States led wars in Afghanistan and Iraq, efforts to counter and combat terrorism, and domestic issues such as the FEMA response to Hurricane Katrina and the Great Recession.
	USH.9.2 Assess Barack Obama's presidency, including the significance of his election, the wars in Afghanistan and Iraq, handling of economic conditions, establishment of DACA, and reforms to healthcare.
	USH.9.3 Examine the ongoing issues to be addressed by the Donald Trump and subsequent administrations, including taxation, immigration, employment, climate change, race relations, religious discrimination and bigotry, civic engagement, and perceived biases in the media.

World Human Geography Content Standards	
WG.1 The student will use maps and other geographic representations, tools and technologies to acquire, research, process, and solve problems from a spatial perspective.	**WG.1.1** Analyze key concepts underlying the geographical perspectives of location, space, place, scale, pattern, regionalization, and globalization.
	WG.1.2 Utilize geographic skills to understand and analyze the spatial organization of people, places, and environments on the Earth's surface.
	WG.1.3 Define regions and evaluate the regionalization process to characterize and analyze changing interconnections among places.
	WG.1.4 Utilize geographic technologies of GIS, remote sensing and GPS sources of geographical data including census data, population pyramids, cartograms, and satellite imagery.
WG.2 The student analyze how human population is organized geographically in order to understand the cultural, political, and economic systems of the world.	**WG.2.1** Analyze geographic data measuring population including density, distribution, patterns of composition (age, sex, race, and ethnicity), and population trends and projections.
	WG.2.2 Describe and summarize the push and pull theory of migration and its impact on human capital and demographic transitions including the research of major voluntary and involuntary migrations.
	WG.2.3 Compare and contrast the impact of population policies on the patterns of fertility, mortality, and health.
WG.3 The student will analyze the components and regional variations of cultural patterns and processes.	**WG.3.1** Assess the spatial dimensions of culture as defined by language, religion, ethnicity, and gender.
	WG.3.2 Analyze and summarize the role the environment plays in determining a region's culture.
	WG.3.3 Explain the processes of cultural diffusion, acculturation, assimilation, and globalization regarding their impact on defining a region.
	WG.3.4 Compare the world's major cultural landscapes to analyze cultural differences, cultural identity, social mores, and sets of beliefs which determine a sense of place.
	WG.3.5 Explain how cultural characteristics, such as language, ethnicity, and religion impact different regions.

WG.4 The student will explain the political organization of space.	**WG.4.1** Describe and summarize the different forces that shape the evolution of the world's contemporary political map including the rise of nation-states.
	WG.4.2 Analyze the concept of territoriality, the nature and meaning of boundaries, and their influence on identity, interaction, and exchange.
	WG.4.3 Compare the world's political patterns of organization including federal and unitary states.
	WG.4.4 Examine changes and challenges to political/territorial arrangements, the changing nature of sovereignty, and evolution of contemporary political patterns.
	WG.4.5 Evaluate how the forces of cooperation and conflict among people influence the division and control of territory and resources.
WG.5 The student will analyze agricultural and commercial land use.	**WG.5.1** Examine the origin and diffusion of agriculture including the Agricultural Revolutions and the Green Revolution.
	WG.5.2 Describe and summarize the characteristics of modern commercial agriculture including major production regions, variations within major zones, and effects of markets.
	WG.5.3 Analyze settlement patterns associated with major agricultural regions and linkages among regions of food production and consumption.
	WG.5.4 Describe the impact of agricultural practices including irrigation, conservation, desertification, deforestation, organic farming, pesticides and herbicides, and genetic modification on the environment and the quality of life.
	WG.5.5 Examine common characteristics of rural communities including the impact of the environment on location, the political, economic and cultural functions of rural communities, the types of transportation, communication and trade linkages among rural areas, and the impact of modern migration to urban centers.
WG.6 The student will analyze the impact of industrialization on economic development.	**WG.6.1** Examine the changing roles of natural resources, energy, and technology that resulted in the Industrial Revolution.
	WG.6.2 Evaluate the impact of industrialization and government policies of both market and command economic systems on the availability and use of natural resources, environmental concerns, and sustainable development.
	WG.6.3 Compare contemporary patterns of industrialization and development in selected regions of the world including the Pacific Rim, Central Asia, and the Arabian Peninsula.

	WG.6.4 Analyze why some economies achieve rapid growth while other economies with similar resources struggle to reach developed status.
	WG.6.5 Summarize common characteristics of developed nations including variations in levels of development, modern patterns of deindustrialization, and economic restructuring, globalization, and international division of labor.
WG.7 The student will evaluate specific textual and visual evidence to analyze cities and urban land use.	**WG.7.1** Examine the origin, development and character of cities including the impact of the environment on location, the political, economic, and cultural functions of cities, historical distribution of cities, and the types of transportation, communication, and trade linkages among cities.
	WG.7.2 Analyze contemporary patterns of rural migration on urban development including the concept of suburbanization, edge cities, megacities, and global cities.
	WG.7.3 Describe the factors that impact cities over time including uneven development, changing economic and demographic structures, transportation and infrastructure, housing and urban planning.

Engage in Democratic Processes	Analyze and Address Authentic Civic Issues	Acquire, Apply, and Evaluate Evidence	Read Critically and Interpret Informational Sources	Engage in Evidence Based Writing

World History Content Standards	
WH.1 The student will analyze and summarize the impact of the major patterns of political, economic, and cultural change over time to 1450 CE and their long-term influences.	**WH.1.1** Evaluate the impact of geography and trade on the development of culture in Africa, Asia, and Europe including religion, philosophy, and political belief.
	WH.1.2 Describe the origins, major beliefs, spread and lasting impact of the world's major religions and philosophies, including Judaism, Hinduism, Buddhism, Christianity, Islam, Confucianism, and Sikhism.
	WH.1.3 Compare the contributions of Greek and Roman philosophers, including Plato, Aristotle and Cicero including their impact on Western society.
	WH.1.4 Evaluate the economic, political, and cultural impact of interregional trade networks.
	WH.1.5 Describe the institution of slavery around the world prior to the 15th century as a widespread result of warfare and economic practices.
WH.2 The student will analyze patterns of social, economic, political, and cultural changes during the rise of Western civilization and the Global Age (1400-1750 CE).	**WH.2.1** Assess the significance of the Renaissance on politics, economics, and artistic creativity, including the works of Machiavelli, Michelangelo, and daVinci.
	WH.2.2 Summarize the causes of and influence of the theological movements of the Reformation and how those movements subsequently transformed society.
	WH.2.3 Analyze migration, settlement patterns, cultural diffusion, and the transformations caused by the competition for resources among European nations during the Age of Exploration.
	WH.2.4 Explain how slavery and the slave trade was used for the development and growth of colonial economies.
	WH.2.5 Compare the various forms of government established by: **A.** divine right rule, such as the Mandate of Heaven in China and absolutism in England and France **B.** Magna Carta in England, the English Civil War, and the Glorious Revolution **C.** enlightened monarchs such as Catherine the Great and Frederick the Great.
	WH.2.6 Compare how scientific theories and technological discoveries brought about social and cultural changes, including those made by Copernicus, Galileo, and Newton; describe the impact of Islamic learning.

	WH.2.7 Analyze the impact of the Enlightenment on modern government and economic institutions, including the theories of Hobbes, Locke, Voltaire, Rousseau, Montesquieu, and Adam Smith.
WH.3 The student will analyze the political, economic, and social transformations brought about by the events of the age of revolutions and imperialism (1750-1900 CE).	**WH.3.1** Analyze the causes and global impact of **A.** England's Glorious Revolution **B.** the American Revolution **C.** the French Revolution including the Napoleonic Wars **D.** the Congress of Vienna.
	WH.3.2 Summarize the influence and global impact of emerging democratic ideals on the Latin American and Caribbean revolutions including Haiti and Mexico and the leadership of Simon Bolivar.
	WH.3.3 Evaluate the economic and social impact of the Industrial Revolution.
	WH.3.4 Analyze how the Industrial Revolution gave rise to socialism and communism, including ideas and influence of Karl Marx.
	WH.3.5 Explain the rationales for and consequences of imperialism on Asia, Africa, and the Americas, such as colonization and the exploitation of natural resources and peoples; summarize various efforts to resist imperialism.
WH.4 The student will evaluate the global transformation created by the World Wars (1900-1945 CE).	**WH.4.1** Explain the complex and multiple causes of World War I, including militarism, nationalism, imperialism, systems of alliances, and other significant causes.
	WH.4.2 Describe the significant events of World War I, including key strategies, advancements in technology, the war's significant turning points, and its lasting impact.
	WH.4.3 Analyze the immediate and long-term global consequences of the Treaty of Versailles.
	WH.4.4 Analyze socialism, communism, and the Bolshevik Revolution as responses to capitalism.
	WH.4.5 Describe the economic, social, and political conditions that caused WWII including **A.** failure of the Treaty of Versailles **B.** impact of global depression **C.** rise of totalitarian regimes in the Soviet Union, Germany, Italy, and Japan
	WH.4.6 Examine the significant events of World War II from a global perspective, such as campaigns in Africa, Asia, and the Pacific.

	WH.4.7 Evaluate the effects of World War II including military and economic power shifts, purposes of the United Nations and NATO, and the origins and escalation of the Cold War.
	WH.4.8 Examine the causes, series of events and effects of the Holocaust through eyewitnesses such as inmates, survivors, liberators, and perpetrators.
	WH.4.9 Summarize world responses to the Holocaust, resulting in the Nuremberg Trials, the move to establish a Jewish homeland, and the creation of the Universal Declaration of Human Rights and its impact on human rights today.
WH.5 The student will evaluate post World War II regional events leading to the transformations of the modern world (1945-1990 CE).	**WH.5.1** Describe the creation of the modern state of Israel and ongoing territorial disputes, including the impact of significant regional leaders.
	WH.5.2 Evaluate the ongoing regional disputes of the Middle East, including the Iranian Revolution, the Iran-Iraq conflict, and the invasion of Kuwait.
	WH.5.3 Analyze the major developments in Chinese history during the second half of the 20th century including the **A.** Chinese Civil War and the Communist Revolution in China **B.** rise of Mao Zedong and the political, social, and economic upheavals under his leadership **C.** student protests of Tiananmen Square **D.** economic reforms under the leadership of Deng Xiaoping.
	WH.5.4 Examine the origins of India and Pakistan as independent nations, including the **A.** struggle for independence achieved through Mohandas Gandhi's non-violent civil disobedience movement **B.** development of India's industrial economy **C.** ongoing struggles in the region.
	WH.5.5 Evaluate the people, events, and conditions leading to the end of the Cold War including the **A.** effects of Poland's Solidarity Movement **B.** policies of the perestroika and glasnost **C.** fall of the Berlin Wall **D.** breakup of the Soviet Union

	WH.5.6 Assess the impact of African independence movements on human rights and the global expansion of democracy including the **A.** effects of Pan-Africanism on changing political boundaries **B.** struggle for self-government in Ghana, including the influence of Kwame Nkrumah **C.** creation and dismantling of South Africa's apartheid system, including the influence of Nelson Mandela and Desmond Tutu.
	WH.5.7 Compare multiple perspectives to examine the religious, ethnic, and political origins, as well as the lasting impact of modern genocide and conflicts including **A.** actions of the Khmer Rouge in Cambodia **B.** Northern Ireland's Troubles **C.** ethnic-cleansing in the Balkans **D.** Rwanda's mass murders **E.** crisis in Darfur
WH.6 The student will evaluate contemporary global issues and challenges.	**WH.6.1** Describe the ongoing impact of interdependence on the world's economies resulting in the creation and growth of multinational organizations, international trade agreements, and the challenges faced by the global economy.
	WH.6.2 Examine contemporary issues that impact the new global era such as the **A.** changing patterns of population **B.** cycle of disease and poverty **C.** status of women **D.** environmental issues.
	WH.6.3 Describe the impact of trade and interdependence on cultural diffusion.
	WH.6.4 Analyze responses by world governments concerning the rise and impact of international terrorism and their responses to regional disputes such as Syria.

Engage in Democratic Processes	Analyze and Address Authentic Civic Issues	Acquire, Apply, and Evaluate Evidence	Read Critically and Interpret Informational Sources	Engage in Evidence Based Writing

Sociology Content Standards	
S.1 The student will recognize sociology as a social science, identify methods and strategies of research, and examine the contributions of sociology to the understanding of social issues.	**S.1.1** Describe the development of the field of sociology as a social science.
	S.1.2 Identify the contributions of leading theorists within sociology including Auguste Comte, Emile Durkheim, Harriet Martineau, Herbert Spencer, Max Weber, C. Wright Mills, Karl Marx, and W.E.B. Dubois.
	S.1.3 Evaluate different sociological research methods including participant observation, natural observation, library research, questionnaires, experiments, interviews, and case studies.
	S.1.4 Conduct research on an issue using the scientific method of inquiry including developing a hypothesis, gathering and interpreting data, and drawing conclusions.
S.2 The student will examine the influence of culture and the way cultural transmission is accomplished.	**S.2.1** Examine how relationships, structures, patterns and processes influence culture.
	S.2.2 Recognize the key components of a culture including knowledge, language and communication, customs, values, and physical artifacts.
	S.2.3 Explain the differences between a culture and a society.
	S.2.4 Analyze the influences of genetic inheritance and culture on human behavior including the debate over nature versus nurture.
	S.2.5 Compare various subcultures including counter cultures, pop cultures, ethnic cultures, and religious cultures.
	S.2.6 Describe factors that have led to cultural diversity within the United States.
S.3 The student will identify how social status influences individual and group behaviors.	**S.3.1** Describe how social status affects social order including upper class, middle class, lower class, white-collar professionals, blue-collar workers, and the unemployed.
	S.3.2 Recognize how role expectations can lead to conflict including gender, age, racial groups, and ethnic groups within different societies.

S.4 The student will examine how social groups are composed of people who share common characteristics including interests, beliefs, behaviors, and feelings.	**S.4.1** Examine why individuals become members of or associate with different social groups.
	S.4.2 Compare various types of norms including folkways, mores, laws, and taboos; explain why rules of behavior are considered important to society.
	S.4.3 Evaluate the characteristics of primary groups including small size intimate settings and enduring relationships and how members' behaviors are influenced by the primary group.
	S.4.4 Evaluate the characteristics of secondary groups including less permanence, less personal, and having a special purpose; explain how members' behaviors are influenced by the secondary groups.
	S.4.5 Investigate stereotypes of different groups including gangs, generational groups, immigrants, and the homeless.
S.5 The student will identify the effects of social institutions on individual and group behavior and explain how these institutions influence the development of the individual.	**S.5.1** Analyze the impact of social institutions on individuals, groups and organizations within society; explain how these institutions transmit the values of society including familial, religious, educational, economic, and political.
	S.5.2 Examine rites of passage within various social institutions such as religious ceremonies, school proms, quinceañeros, graduation, marriage, and retirement.
	S.5.3 Define ethnocentrism and xenophobia; analyze how they can be beneficial or destructive to a culture.
S.6 The student will examine social change over time and the various factors that lead to these changes.	**S.6.1** Examine environmental, political, economic, scientific, and technological influences upon immediate and long-term social change.
	S.6.2 Describe how collective behavior can influence and change society including sit-ins, organized demonstrations, and the use of social media.
S.7 The student will analyze social problems that affect large numbers of people or result from imbalances within a social system.	**S.7.1** Distinguish between characteristics of a social problem as compared to an individual problem.
	S.7.2 Analyze patterns of behavior found within social problems and their implications for society including juvenile crime, drug addiction, and long-term unemployment.
	S.7.3 Examine individual and group response and potential resolutions to social problems as well as the consequences of such solutions.
	S.8.1 Describe the traditions, roles, and expectations necessary for a society to continue and flourish.
	S.8.2 Examine factors that can lead to the breakdown and disruption of a society.

S.8 The student will explore both individual and collective behavior.	**S.8.3** Differentiate the impact of individual leaders of different social and political movements including Mohandas Gandhi, Dr. Martin Luther King Jr., and Susan B. Anthony.
	S.8.4 Interpret how social behavior is influenced by propaganda, the news media, and advertising.
	S.8.5 Investigate the impact of rumor, gossip, and other inaccurate communications upon group behavior.

Appendix A Social Studies Practices PK-12 Progression

1. Engage in Democratic Processes
Students will understand the principles of government, the benefits of democratic systems, and their responsibilities as citizens.

A. Students will demonstrate an understanding of the virtues that citizens should use when interacting with each other and the virtues that guide official government institutions.

PreK-Grade 1	Grades 2-3	Grades 4-5	Grades 6-8	Grades 9-12
1.A.PK-1.1 Discuss democratic principles such as equality, fairness, and respect for legitimate authority.	**1.A.2-3.1** Identify civic virtues and democratic principles such as equality, fairness, and respect for legitimate authority.	**1.A.4-5.1** Identify democratic principles in historic documents and describe examples of civic virtues and democratic principles at work in state and national settings.	**1.A.6-8.1** Compare and analyze civic virtues and democratic principles in historic and global settings, explaining how they influence various political systems.	**1.A.9-12.1** Evaluate various significant documents from the United States and other countries to compare civic virtues and principles of political systems.
1.A.PK-1.2 Discuss how people can improve their communities in the present and over time.	**1.A.2-3.2** Describe and offer examples of how people have improved their communities in the past and present.	**1.A.4-5.2** Compare the experiences that form student's and other's points of view about civic issues.	**1.A.6-8.2** Analyze the role that perspectives, civic virtues, and democratic principles play when citizens address issues or problems.	**1.A.9-12.2** Evaluate the impact of perspectives, civic virtues, democratic principles, constitutional rights, and human rights on addressing issues and problems in society.

B. Students will demonstrate an understanding of the important institutions of their society and the principles that these institutions are intended to reflect.				
PreK-Grade 1	**Grades 2-3**	**Grades 4-5**	**Grades 6-8**	**Grades 9-12**
1.B.PK-1.1 Describe roles and responsibilities of people in authority in school and community settings.	**1.B.2-3.1** Describe the basic structure of government at the local, state, and tribal levels.	**1.B.4-5.1** Explain the structure, responsibilities, and powers exercised by national officials of the branches of the United States government.	**1.B.6-8.1** Analyze the powers and responsibilities of the United States government and compare it to other forms of government.	**1.B.9-12.1** Evaluate the impact of the structure and powers exercised by local, state, tribal, national, and international institutions on public policy.
1.B.PK-1.2 Explain how all informed citizens play important roles in the community.	**1.B.2-3.2** Explain why all informed citizens should participate in their community.	**1.B.4-5.2** Explain ways in which informed and responsible citizens can and should participate in state and national government.	**1.B.6-8.2** Explain specific roles played by informed and responsible citizens (e.g. voters, jurors, taxpayers, military service, office holders) in all forms of government.	**1.B.9-12.2** Analyze the role of informed and responsible citizens in their political systems and provide examples of changes in civic participation over time.
1.B.PK-1.3 Explain the need for and purposes of rules in various settings such as the family, classroom, and school.	**1.B.2-3.3** Explain the need for and purposes of laws in the community and state.	**1.B.4-5.3** Examine the purposes of government and laws, as stated in the Constitution of the United States.	**1.B.6-8.3** Examine the origins, purposes and impact of constitutions, laws, treaties, and international agreements.	**1.B.9-12.3** Analyze the impact of constitutions, laws, treaties, and international agreements, including the concept of sovereignty, in order to maintain national and international order.
1.B.PK-1.4 Explain how rules are made and the consequences for violating those rules.	**1.B.2-3.4** Explain and provide examples of the consequences for violating laws in the community or state.	**1.B.4-5.4** Explain how laws are made in a democratic society to protect individual freedoms.	**1.B.6-8.4** Explain the concept of the rule of law and how limits on government authority guarantee individual liberties.	**1.B.9-12.4** Analyze how various governmental powers, responsibilities, and limitations are enacted and have changed over time.

C. Students will demonstrate understanding of the processes and rules by which groups of people make decisions, govern themselves, and address public problems.				
PreK-Grade 1	**Grades 2-3**	**Grades 4-5**	**Grades 6-8**	**Grades 9-12**
1.C.PK-1.1 Describe how people can work together to make decisions in the classroom and school.	**1.C.2-3.1** Explain how people can work together to make decisions in their community and state.	**1.C.4-5.1** Explain how laws have changed society in the past and present.	**1.C.6-8.1** Assess specific laws, both actual and proposed, as means of addressing historic and current national and international problems.	**1.C.9-12.1** Analyze historical, contemporary, and emerging means to promote the common good and protect individual rights.
1.C.PK-1.2 Engage in democratic processes to address authentic, real-world problems in the classroom or school.	**1.C.2-3.2** Use democratic processes to consider and propose actions to address authentic, real-world problems in the community and state.	**1.C.4-5.2** Use a range of democratic procedures to discuss and make decisions about real-world problems in the community, region, and nation.	**1.C.6-8.2** Apply a range of deliberative and democratic procedures to debate, make decisions, and propose action about authentic, real-world problems in out-of-school contexts.	**1.C.9-12.2** Engage in a range of deliberative and democratic processes to develop strategies to address authentic, real-world problems in the community and out-of-school contexts.

2. Analyze and Address Authentic Civic Issues
Students will determine the kinds of sources that will be helpful in answering essential, compelling, and supporting questions addressing authentic civic issues.

A. Students will demonstrate the capability for developing essential, compelling, and supporting questions that address authentic civic issues.

PreK-Grade 1	Grades 2-3	Grades 4-5	Grades 6-8	Grades 9-12
2.A.PK-1.1 Collaboratively ask and respond to enduring essential questions of common concerns to the student and the community.	**2.A.2-3.1** Ask and respond to enduring essential questions of common concerns to the student, the community and the state.	**2.A.4-5.1** Create and explore essential questions that are important to others, as well as enduring across the social studies disciplines.	**2.A.6-8.1** Investigate and propose answers to essential questions representing enduring issues across the social studies disciplines.	**2.A.9-12.1** Develop, investigate and evaluate plausible answers to essential questions that reflect enduring understandings across time and all disciplines.
2.A.PK-1.2 Recognize connections between compelling and supporting questions which help answer an essential social studies question.	**2.A.2-3.2** Make connections between compelling and supporting questions which help answer an essential social studies question.	**2.A.4-5.2** Identify concepts and ideas from discipline-based compelling and supporting questions that are open to different interpretations.	**2.A.6-8.2** Compare points of agreement from reliable information and interpretations associated with discipline-based compelling and supporting questions.	**2.A.9-12.2** Compare points of agreement and disagreement from reliable information and expert interpretations associated with discipline-based compelling and supporting questions.
2.A.PK-1.3 Practice inquiry skills by responding to various levels of open-ended questions on a regular basis.	**2.A.2-3.3** Reinforce inquiry skills by asking and responding to various levels of open-ended questions on a regular basis.	**2.A.4-5.3** Demonstrate depth of knowledge by developing, exploring, and answering various levels of open-ended questions frequently.	**2.A.6-8.3** Develop deeper levels of understanding by questioning ideas and assumptions and identifying inconsistencies or errors in reasoning.	**2.A.9-12.3** Reinforce critical thinking by evaluating and challenging ideas and assumptions; analyze and explain inconsistencies in reasoning.

B. Students will demonstrate the ability to investigate problems taking into consideration multiple points of view represented in arguments, structure of an explanation and other sources.

PreK-Grade 1	Grades 2-3	Grades 4-5	Grades 6-8	Grades 9-12

2.B.PK-1.1 Discuss local problems and ways in which people are trying to address these problems.	**2.B.2-3.1** Identify a range of local and state problems in which people are trying to address these problems.	**2.B.4-5.1** Explain the challenges people have faced and the strategies used to address local, regional, or national historical problems.	**2.B.6-8.1** Draw upon gathered information to analyze how a specific problem can manifest itself in local, regional, and global levels over time, evaluating options for individual and collective solutions.	**2.B.9-12.1** Use interdisciplinary lenses to gather and evaluate information regarding complex local, regional, and global problems; assess individual and collective actions taken to address such problems.
2.B.PK-1.2 With guidance and support, demonstrate understanding of social studies content through completion of authentic tasks and assessments.	**2.B.2-3.2** Demonstrate understanding of social studies content through completion of teacher-led authentic tasks and assessments.	**2.B.4-5.2** Reinforce understanding of social studies content through teacher-led investigations and the completion of authentic tasks and assessments.	**2.B.6-8.2** Demonstrate understanding of social studies content through the development of self-driven investigations and the completion of teacher-led authentic tasks and assessments.	**2.B.9-12.2** Demonstrate understanding of content through the development of self-driven investigations and the completion of multi-staged, authentic tasks and assessments.

3. Acquire, Apply, and Evaluate Evidence
Students will utilize interdisciplinary tools and master the basic concepts of the social studies in order to acquire and apply content understanding in all related fields of study.

A. Students will develop skills and practices which demonstrate an understanding that historical inquiry is based on the analysis and evaluation of evidence and its credibility.

PreK-Grade 1	Grades 2-3	Grades 4-5	Grades 6-8	Grades 9-12
3.A.PK-1.1 Identify a primary source of information and gather basic information from such sources.	**3.A.2-3.1** Explain the difference between a primary and secondary source of information and gather basic information from such sources.	**3.A.4-5.1** Gather, compare, and analyze information between primary and secondary sources about the past and present.	**3.A.6-8.1** Gather, compare, and analyze evidence from primary and secondary sources on the same topic, identifying possible bias and evaluating credibility.	**3.A.9-12.1** Gather, organize, and analyze various kinds of primary and secondary source evidence on related topics, evaluating the credibility of sources.
3.A.PK-1.2 Identify the author and date of a primary source using information found within the source itself with guidance and support.	**3.A.2-3.2** Identify the author and date of a primary source using information found within the source itself.	**3.A.4-5.2** Identify the intended audience and purpose of an historical primary source from information found within the source itself.	**3.A.6-8.2** Draw conclusions regarding the plausible author, date, origin, audience, and purpose of primary sources when not easily identifiable in the source.	**3.A.9-12.2** Evaluate the usefulness of primary and secondary sources for specific inquiry, based on the author, date, place of origin, intended audience, and purpose.
3.A.PK-1.3 With guidance and support, compare two primary or secondary sources about a particular event in history or contemporary events.	**3.A.2-3.3** Compare two or more primary or secondary sources about a particular event in history or contemporary events.	**3.A.4-5.3** Describe the similarities and differences between multiple historical or contemporary primary sources and their relationships to historical events.	**3.A.6-8.3** Use multiple historical or contemporary primary sources to identify further areas of inquiry and additional relevant sources.	**3.A.9-12.3** Develop questions about multiple historical and/or contemporary sources to pursue further inquiry and investigate additional sources.

3.A.PK-1.4 Make simple timelines from given information with guidance and support.	**3.A.2-3.4** Make simple timelines and identify immediate cause and effect relationships from given information.	**3.A.4-5.4** Create timelines to identify multiple causes and effects from given information.	**3.A.6-8.4** Distinguish multiple causation, immediate and long-term cause-effect relationships by constructing timelines which reflect related events.	**3.A.9-12.4** Analyze multiple causation and change over time by constructing and interpreting parallel timelines.
3.A.PK-1.5 Discuss possible reasons for an event or development in the past.	**3.A.2-3.5** Generate possible reasons for an event or development in the past.	**3.A.4-5.5** Explain multiple causes and effects of events and developments of the past or present.	**3.A.6-8.5** Distinguish between long-term causes and triggering events on historical developments or contemporary events.	**3.A.9-12.5** Evaluate how multiple, complex events are shaped by unique circumstances of time and place, as well as broader historical contexts.
3.A.PK-1.6 Discuss how individuals and groups have shaped significant historical changes.	**3.A.2-3.6** Explain and give examples of how individuals and groups have shaped significant historical changes in the community and state.	**3.A.4-5.6** Describe the specific contributions of individuals and groups who have shaped significant historical changes in regional and national events.	**3.A.6-8.6** Analyze the roles of specific individuals and groups who shaped historically significant events, both nationally, regionally, and on a global scale.	**3.A.9-12.6** Assess the significance and impact of individuals and groups throughout local, national, tribal, and world history, tracing the continuity of past events to the present.
3.A.PK-1.7 Identify point of view and give examples relevant to the student's experiences.	**3.A.2-3.7** Define point of view and give examples relevant to the student's experiences.	**3.A.4-5.7** Compare perspectives of individuals and groups during the same historical period.	**3.A.6-8.7** Describe multiple factors that influence the perspectives of individuals and groups during historical eras or toward contemporary situations.	**3.A.9-12.7** Analyze complex and interacting factors that influence multiple perspectives during different historical eras or contemporary events.
B. Students will demonstrate an understanding of geographic concepts and develop mastery of geographic tools and ways of thinking in order to become geographically informed.				
PreK-Grade 1	**Grades 2-3**	**Grades 4-5**	**Grades 6-8**	**Grades 9-12**

3.B.PK-1.1 Answer geographic questions using geographic information about the student's own community.	**3.B.2-3.1** Ask and answer geographic questions, using geographic information about the student's community and state.	**3.B.4-5.1** Answer geographic questions by organizing geographic information about regions of the United States from historical as well as contemporary perspectives.	**3.B.6-8.1** Answer geographic questions and conduct investigations by acquiring, organizing, and interpreting information about the modern world and historical events.	**3.B.9-12.1** Actively engage in asking and answering geographic questions by acquiring, organizing, and analyzing multiple sources of data and information about the world's past and its present conditions.
3.B.PK-1.2 Create and use basic maps, graphs, and other simple models to identify the physical and human features of the community.	**3.B.2-3.2** Create and use maps, graphs, and other simple geographic models to describe the physical and human features of the community and state.	**3.B.4-5.2** Create and use maps, data graphs and charts, photographs, and other geographic representations to explain spatial relationships of physical and human places.	**3.B.6-8.2** Use multiple mapping techniques and data visuals to create and analyze spatial patterns of environmental and cultural characteristics.	**3.B.9-12.2** Compare and analyze complex maps and mapping technologies to explain relationships between the environment and events, past and present.
3.B.PK-1.3 Describe the community's human and physical environment through the use of simple geographic representations and photographs.	**3.B.2-3.3** Describe the community and state's human and physical environment through the use of geographic representations, including aerial photographs.	**3.B.4-5.3** Analyze the impact of human and physical features of the Earth by drawing conclusions from digital representations, such as aerial photographs and satellite images of our nation and its regions.	**3.B.6-8.3** Make connections between spatial patterns of physical and human features of the Earth's surface by interpreting satellite images and using geographic technology.	**3.B.9-12.3** Analyze spatial patterns of human and physical environments, using geographic technology, from contemporary and historical perspectives.
3.B.PK-1.4 Identify examples of how humans modify and adapt to their physical environment using its natural resources.	**3.B.2-3.4** Identify and describe how humans modify and adapt to their physical environment, using its natural and human resources.	**3.B.4-5.4** Explain how culture, political, and economic actions can influence the ways people modify and adapt to their environment.	**3.B.6-8.4** Explain how cultural patterns, political and economic decisions can affect the physical environment, including how places and regions change over time.	**3.B.9-12.4** Evaluate the extent to which political and economic decisions have had significant historical and global impact on human and physical environments of various places and regions.

3.B.PK-1.5 Discuss how the physical environment impacts our daily lives and affects human activities.	**3.B.2-3.5** Describe how the physical environment impacts our daily lives and affects human activities in the past and present.	**3.B.4-5.5** Explain how environmental factors affected historical events and continue to impact contemporary human activities.	**3.B.6-8.5** Explain the influences of multiple environmental factors on historical events and current situations, which provide both opportunities and limitations on human development.	**3.B.9-12.5** Analyze the connections between historical events and the geographic contexts in which they have occurred, including the causes and processes of environmental changes over time.
3.B.PK-1.6 Discuss why and how people and goods move from place to place.	**3.B.2-3.6** Describe how the movement of resources, people, goods, and ideas move, connecting communities.	**3.B.4-5.6** Describe the spatial patterns of economic activities caused by interactions with other places.	**3.B.6-8.6** Explain how changes in transportation, communication, and technology affect the diffusion of ideas.	**3.B.9-12.6** Evaluate how globalization and the expanding use of scarce resources contribute to conflict and cooperation.

C. Students will analyze the principles of economic systems and develop an understanding of the benefits of a market system in local, national, and global settings.

PreK-Grade 1	Grades 2-3	Grades 4-5	Grades 6-8	Grades 9-12
3.C.PK-1.1 Collaboratively gather simple economic data from charts and tables.	**3.C.2-3.1** Gather basic economic data from various types of graphs and charts.	**3.C.4-5.1** Interpret and draw conclusions from economic data on charts and graphs.	**3.C.6-8.1** Analyze, interpret, and compare economic data from multiple charts and graphs.	**3.C.9-12.1** Evaluate economic data from charts and graphs, noting trends and making predictions.
3.C.PK-1.2 Describe freedom of choice when determining needs and wants.	**3.C.2-3.2** Describe freedom of choice when determining needs and wants in a free market.	**3.C.4-5.2** Explain how the concepts of supply and demand operate in a market economy, using historic and contemporary examples.	**3.C.6-8.2** Compare the advantages and disadvantages of different types of economic systems.	**3.C.9-12.2** Analyze the ways in which incentives and resource availability influence what is produced and distributed in different types of economic systems.
3.C.PK-1.3 Discuss the concept that personal decisions have costs and benefits.	**3.C.2-3.3** Give examples of costs and benefits resulting from personal economic decisions.	**3.C.4-5.3** Identify positive and negative incentives that influence economic decision making.	**3.C.6-8.3** Describe alternative solutions to current economic issues in terms of benefits and costs for different groups.	**3.C.9-12.3** Construct arguments using a combination of evidence for or against an approach or solution to an economic issue.
3.C.PK-1.4 Identify examples of the goods and services that school and community workers provide.	**3.C.2-3.4** Describe examples of the goods and services that local and state governments provide.	**3.C.4-5.4** Analyze the role of innovation and entrepreneurship in a market economy.	**3.C.6-8.4** Evaluate how the advancements in technology impact economic growth and standard of living.	**3.C.9-12.4** Evaluate the impact of government policies on market outcomes at national and global levels, past and present.
3.C.PK-1.5 Explain why people in the community trade goods and services with people in other communities.	**3.C.2-3.5** Describe why people in one country trade goods and services with people in other countries.	**3.C.4-5.5** Explain how trade influences growth and progress of nations.	**3.C.6-8.5** Explain how trade impacts standard of living and leads to economic interdependence.	**3.C.9-12.5** Analyze the possible consequences, both intended and unintended, of government policies on markets and international trade.

4. Read Critically and Interpret Informational Sources
Students will engage in critical, active reading of grade level appropriate primary and secondary sources related to key social studies concepts, including frequent analysis and interpretation of informational sources.

A. Students will comprehend, evaluate, and synthesize textual sources to acquire and refine knowledge in the social studies.

PreK-Grade 1	Grades 2-3	Grades 4-5	Grades 6-8	Grades 9-12
4.A.PK-1.1 Locate the main idea and supporting details of a text.	**4.A.2-3.1** Locate and paraphrase the main idea and supporting details of a text (e.g. primary and secondary sources.)	**4.A.4-5.1** Quote accurately from a text when explaining the text explicitly and when drawing inferences from the text.	**4.A.6-8.1** Paraphrase the main idea and cite evidence from primary and secondary sources; provide an accurate summary of a source distinct from prior knowledge or opinion.	**4.A.9-12.1** Cite specific textual evidence to support analysis of primary and secondary sources, evaluating features such as author, date, and origin of information.
4.A.PK-1.2 Use titles and graphic features, including photographs and illustrations, to understand a text.	**4.A.2-3.2** Use graphic features of a text, such as photographs, titles, headings, subheadings, charts, and graphs, to understand content.	**4.A.4-5.2** Use information from multiple print or digital sources (e.g. timelines, maps, graphs, political cartoons, images) to answer a question.	**4.A.6-8.2** Integrate the use of visual information (e.g. maps, charts, photographs, videos, political cartoons) with textual information from primary and secondary sources.	**4.A.9-12.2** Analyze information from visual, oral, digital, and interactive texts (e.g. maps, charts, images, political cartoons, videos) in order to draw conclusions and defend arguments.
4.A.PK-1.3 Acquire new academic vocabulary and relate new words to prior knowledge.	**4.A.2-3.3** Acquire new academic vocabulary; relate new words to prior knowledge, and apply vocabulary in social studies.	**4.A.4-5.3** Acquire and use appropriate academic vocabulary and phrases in a social studies context.	**4.A.6-8.3** Acquire, determine the meaning, and appropriately use academic vocabulary and phrases used in social studies contexts.	**4.A.9-12.3** Appropriately apply and demonstrate understanding of academic vocabulary in a social studies context.

B. Students will apply critical reading and thinking skills to interpret, evaluate, and respond to a variety of complex texts from historical, ethnic, and global perspectives.				
PreK-Grade 1	**Grades 2-3**	**Grades 4-5**	**Grades 6-8**	**Grades 9-12**
4.B.PK-1.1 Explain and discuss the author's purpose, with guidance and support.	**4.B.2-3.1** Identify the author's purpose, including what the author wants to answer, explain, or describe in primary and secondary informational texts.	**4.B.4-5.1** Determine an author's purpose and draw conclusions to evaluate how well the author's purpose was achieved.	**4.B.6-8.1** Analyze works written on the same topic and compare methods the authors use to achieve similar or different purposes.	**4.B.9-12.1** Evaluate the extent to which historical, cultural, and/or global perspectives affect an author's stated or implied purpose.
4.B.PK-1.2 Locate facts that are clearly stated in a text (e.g. who, what, where, when, why, and how).	**4.B.2-3.2** Locate facts (e.g. who, what, where, when, why, and how) to demonstrate an understanding of key details in a text.	**4.B.4-5.2** Distinguish fact from opinion in non-fiction text and investigate facts for accuracy.	**4.B.6-8.2** Evaluate textual evidence to determine whether a claim is substantial or unsubstantial.	**4.B.9-12.2** Evaluate authors' points of view, potential bias, and how authors can reach different conclusions regarding the same issue.
4.B.PK-1.3 Ask and answer basic questions and engage in collaborative discussions about appropriate topics in a social studies text.	**4.B.2-3.3** Ask and answer questions to clarify information and engage in collaborative discussions about appropriate topics in social studies.	**4.B.4-5.3** Engage in collaborative discussions about appropriate topics and texts, expressing ideas clearly to others in diverse groups and whole class settings.	**4.B.6-8.3** Engage in collaborative discussions and debates about information presented in social studies texts, expressing ideas clearly while building on the ideas of others.	**4.B.9-12.3** Actively listen, evaluate, and analyze a speaker's message, asking questions while engaged in collaborative discussions and debates about social studies topics and texts.

5. Engage in Evidence Based Writing

Students will apply effective communication skills by demonstrating a variety of evidence based written products designed for multiple purposes and tasks, in order to demonstrate their understandings of social studies concepts, ideas, and content.

A. Students will summarize and paraphrase, integrate evidence, and cite sources to create written products, research projects, and presentations for multiple purposes related to social studies content.

PreK-Grade 1	Grades 2-3	Grades 4-5	Grades 6-8	Grades 9-12
5.A.PK-1.1 Draw, label, dictate and write a narrative with guidance and support.	**5.A.2-3.1** Compose narratives which introduce a topic, use facts to develop the topic, and provide a concluding statement.	**5.A.4-5.1** Compose narratives to develop and examine a topic in social studies, using information appropriately in a structured format.	**5.A.6-8.1** Compose narratives incorporating point of view, the use of an appropriate structure of ideas, and application of information.	**5.A.9-12.1** Compose narrative writing, when appropriate to a given purpose or task, citing evidence from informational texts.
5.A.PK-1.2 Draw, label, dictate, and write an informative product with guidance and support.	**5.A.2-3.2** Compose informative written products, focusing on the facts about a topic, including a main idea with supporting details.	**5.A.4-5.2** Compose informative essays and written products by introducing and developing a topic, incorporating evidence (e.g. facts, examples, details) and maintaining an organized structure.	**5.A.6-8.2** Compose informative essays and other written products about social studies topics, incorporating evidence (e.g. facts, examples, details) from multiple sources, maintaining an organized, formal structure.	**5.A.9-12.2** Compose informative essays and written products, developing a thesis, citing evidence from multiple sources and maintaining an organized, formal structure.
5.A.PK-1.3 With guidance and support, draw, label, dictate, and write to express an opinion, providing reasons as support.	**5.A.2-3.3** Express an opinion about a topic by composing a written product and providing logical reasons as support.	**5.A.4-5.3** Clearly state an opinion through written products, supported by commentary including examples, details, and reasoning.	**5.A.6-8.3** Compose argumentative written products by introducing a claim, recognizing an opposing viewpoint, and organizing evidence and commentary from credible sources.	**5.A.9-12.3** Compose argumentative written products, including a precise claim as distinguished from opposing claims, organizing logical reasoning, and providing credible evidence to develop a balanced argument.
5.A.PK-1.4 Express ideas independently through a	**5.A.2-3.4** Write independently over extended	**5.A.4-5.4** Write independently over extended	**5.A.6-8.4** Write independently over extended	**5.A.9-12.4** Write independently over extended

combination of drawing and emergent writing.	periods of time (e.g. time for research and reflection) and for shorter time frames (e.g. single sitting).	periods of time and for shorter time frames to communicate with different audiences for a variety of purposes.	periods of time and for shorter time frames, varying modes of expression to suit audience, purpose, and task and/or to analyze different perspectives.	periods of time, varying modes of expression to suit audience, purpose, and task; synthesize information across multiple sources and/or articulate new perspectives.
B. Students will engage in authentic inquiry to acquire, refine, and share knowledge through written presentations related to social studies.				
PreK-Grade 1	**Grades 2-3**	**Grades 4-5**	**Grades 6-8**	**Grades 9-12**
5.B.PK-1.1 With guidance and support, generate a list of topics of interest and questions about social studies.	**5.B.2-3.1** Generate a list of topics of interest and individual questions about a specific topic in social studies.	**5.B.4-5.1** Formulate a viable research question related to expanding knowledge of social studies concepts.	**5.B.6-8.1** Refine and formulate viable research questions related to social studies investigations, using well-developed theses or claims.	**5.B.9-12.1** Develop self-generated theses or claims related to independent research and investigations using credible and relevant sources.
5.B.PK-1.2 Organize information found during group research, using graphic organizers and other aids with guidance and support.	**5.B.2-3.2** Organize information found during group or individual research, using graphic organizers or other aids.	**5.B.4-5.2** Organize information from research, quoting accurately from the source, avoiding plagiarism.	**5.B.6-8.2** Quote, paraphrase, and summarize findings, avoiding plagiarism.	**5.B.9-12.2** Integrate quotes, paraphrase, and summaries of research findings into writing while avoiding plagiarism.
5.B.PK-1.3 With guidance and support, create a simple presentation, using audio, visual, or multimedia tools to communicate ideas and thoughts.	**5.B.2-3.3** Create a simple presentation, using audio, visual, and/or multimedia tools to communicate ideas and thoughts.	**5.B.4-5.3** Create presentations that integrate visual displays and other multimedia to enrich the presentation.	**5.B.6-8.3** Select, organize, and create presentations using multi-modal content (variety of written oral, visual, digital, or interactive texts) encompassing different points of view.	**5.B.9-12.3** Construct visual and/or multimedia presentations, using a variety of media forms to enhance understanding of findings and reasoning, for diverse audiences.

APPENDIX B

GLOSSARY OF ASSESSMENT TERMS

Glossary

This glossary of commonly used assessment terms can be used to help interpret and communicate test results. Note that because assessment terms evolve in terms of meaning and application, the definitions for some words may evolve beyond the sense indicated here.

Accommodation—A general term referring to changes in the setting in which a test is administered, the timing of a test, the scheduling of a test, the ways in which the test is presented, and the ways in which the student responds to the test. The term is used to refer to changes that do not alter in any significant way what the test measures or the comparability of scores.

Achievement Test—An assessment that measures a student's acquired knowledge and skills in a content area in which the student has received instruction.

Alternate Assessment—A substitute way of gathering information on the performance and progress of students who cannot participate, even with accommodations, in the regular state or district assessment programs. Alternate assessments provide a mechanism for all students to be included in the accountability system.

Analytic Scoring—A scoring procedure in which a student's writing is evaluated for selected traits or dimensions, with each trait receiving a separate score. The resulting values are combined for an overall score.

Bias—A systematic error in a test score. Bias occurs when factors irrelevant to the subject matter related to the assessment result in one or more specific groups of students being advantaged or disadvantaged relative to other groups.

Classical Test Theory—A psychometric theory based on the perspective that an individual's observed score on a test is composed of the true score of the examinee and an independent component of measurement error.

College and Career Readiness Assessment (CCRA)— The CCRA testing program is a suite of assessment for grade 11. The SAT and ACT are administered for the ELA and Mathematics assessments. There are separate assessments for Science and U.S. History.

Construct—The underlying concept or the characteristic that a test is designed to measure.

Construct Irrelevance—The extent to which test scores are affected by factors that are not relevant to the construct that the test is designed to measure.

Construct Validity (Content Validity)—Construct validity indicates the extent to which the content of the test samples the subject matter or situation about which conclusions are to be drawn; also described as "evidence based on test content."

Constructed-response Item—An assessment unit with directions, a question, or an idea that elicits a written response from a student.

Content Standard—A statement describing the knowledge and skills in a content area that is expected to be taught in classrooms and should be met at a specified point in time (e.g., at the end of the course).

Conversion Tables—Tables used to convert a student's test scores from raw-score total to scaled score.

Criterion—A standard or judgment used as a basis for quantitative and qualitative comparison; also, a variable to which a test is compared as a measure of the test's validity.

Criterion-referenced Test—An assessment that allows its users to make score interpretations of a student's performance in relation to specified performance standards or criteria, rather than in comparison to the performances of other test takers. See also performance standard/level.

Cut Score—Selected points on the score scale of a test. The points are used to determine whether a particular test score is sufficient for some purpose. For example, student performance on a test may be classified into one of several categories, such as below basic, basic, proficient, or advanced on the basis of cut scores.

Differential Item Functioning (DIF)—A situation that occurs in testing when different groups of examinees (e.g., ethnic or gender groups) with the same true achievement levels have different levels of success on a particular item. Test developers reduce DIF by analyzing item data separately for each group. Items identified with DIF are carefully reviewed by content experts and culture and sensitivity committees. Items that appear to be unfair to one or more groups are discarded.

Discrimination Parameter—In the Item Response Theory (IRT) models, it indicates the degree an item distinguishes between examinees of differing abilities on the trait being measured. Low discrimination values indicate an item does not discriminate students of low and high abilities.

Distractor—An incorrect answer choice in a selected-response or multiple-choice test item.

Frequency Distribution—An ordered tabulation of individual scores (or groups of scores) showing the number of students obtaining each score or the number of students that were within each score grouping.

Holistic Scoring—A scoring procedure yielding a single score based on overall student performance rather than on an accumulation of points. Holistic scoring uses rubrics to evaluate student performance. The holistic scoring approach is utilized on the extended constructed responses for grades 5 & 8 ELA, by providing an overall score for the student's performance related to idea development and focus, organization, word choice, sentence structure, and control of grammar, usage, and mechanics.

Item—A statement, exercise, task, question, or problem on a test.

Item Pattern Scoring—A method of scoring responses on test items that is based on the IRT model (see below) and takes the item characteristics (such as item difficulty) into account. With item-pattern scoring, a student who correctly answers a number of more difficult items will get a higher score than one who answers the same number of easier items.

Item Response Theory (IRT)—A set of mathematical models that describes the relationship between performance on test items and the student's level of performance on the same scale as the ability or trait being measured. The three-parameter logistic (3PL) model is used for calibration and scaling of multiple-choice items; the graded response model (GRM) is used for polytomous items, including polytomously scored multipart items and open-response items. The various item parameters associated with each model (discrimination, difficulty, and guessing) are used to describe the statistical characteristics of each item.

Location (Difficulty) Parameter—In Item Response Theory, this parameter is the point on the ability scale at which an item discriminates, or measures, best.

Mean—The quotient obtained by dividing the sum of a set of scores by the number of scores; also called the "average." Mathematicians call it the "arithmetic mean."

Median—The middle score in a set of ranked scores. Equal numbers of ranked scores lie above and below the median. It corresponds to the 50th percentile and the 5th decile.

Mode—The score or value that occurs most frequently in a distribution.

Multiple-choice Item—A question, problem, or statement called a "stem" that appears on a test followed by two or more answer choices, called alternatives or response choices. The incorrect choices, called distractors, usually reflect common errors. The student's task is to choose the best answer to the question posed in the stem.

Normal Distribution Curve—A bell-shaped curve representing a theoretical distribution of measurements that is often approximated by a wide variety of actual data. It is often used as a basis for scaling and statistical hypothesis testing and estimation in psychology and education because it approximates the frequency distributions of sets of measurements of human characteristics.

Norm-referenced Test—A standardized assessment in which all students perform under the same conditions (e.g., carefully defined directions, time limits, materials, and scoring procedures). This type of test allows for the interpretation of the test score in relation to a specified reference group, usually others of the same grade and level.

Objective—The goals and expectations of each content standard.

Oklahoma Academic Standards—The Oklahoma Academic Standards are Oklahoma's core curriculum. Each subject/grade has a different set of standards and objectives on which students are tested.

Oklahoma Alternate Assessment Program (OAAP)—The Oklahoma Alternate Assessment Program (OAAP) is a component of the Oklahoma School Testing Program (OSTP) and is designed for students with the most significant cognitive disabilities. The OAAP mirrors the general assessment system regarding grade levels and subjects assessed and utilizes the Dynamic Learning Maps (DLM) Alternate Assessment System to measure academic content knowledge of students with significant cognitive disabilities.

Oklahoma Performance Index (OPI)—The Oklahoma Performance Index (OPI) is a scaled score resulting from the mathematical transformation of the true score, which is associated with each of

the raw scores. The OPI score is used to place students in one of four performance levels: Advanced, Proficient, Basic, or Below Basic.

Oklahoma School Testing Program (OSTP)—The Oklahoma School Testing Program (OSTP) assessments are state-mandated, criterion-referenced tests that measure student proficiency in English Language Arts and mathematics in grades 3 through 8 and science for students in Grades 5 and 8. The OSTP also includes the Oklahoma Alternate Assessment Program (OAAP) for students in the same grades and content areas with the most significant cognitive disabilities. Finally, the OSTP includes a College-and-Career-Readiness Assessment (CCRA) in science and U.S. history for grade 11 students.

Open-ended Item—See constructed-response item.

Performance Level—A level of performance on a test, established by education experts, as a goal of student attainment. It may also refer to a description of the knowledge, skills, and abilities typically held by students within a performance level.

Performance-level Score Ranges—The performance-level score range is the range of scale scores that corresponds to one of the four performance levels: Advanced, Proficient, Basic, and Below Basic.

Raw Score—The number of correct answers on a test.

Reliability—The degree to which test scores obtained by a group of individuals are consistent over repeated applications. The reliability coefficient indicates the degree to which scores are free of measurement error. The conditions that the coefficient estimates may involve variations in test forms (alternate form reliability), repeated administration of the same form to the same groups after a time interval (test-retest reliability), or the statistical interrelationship of responses on separate parts of the test (internal consistency).

Rubric—A scoring tool, or set of criteria, used to evaluate a student's test performance.

Scale Scores—Scores on a single scale with intervals. The scale can be applied to all groups taking a given test, regardless of group characteristics or time of year, making it possible to compare scores from different groups of students. Scale scores are appropriate for various statistical purposes. For example, they can be added, subtracted, and averaged across test levels. Such computations permit educators to make direct comparisons among examinees or compare individual scores to groups in a way that is statistically valid. This cannot be done with percentiles or grade equivalents.

Standard—A target toward which instruction is specifically directed. In OSTP tests, standards are used to cluster key skills and/or concepts in an instructional domain.

Standard Deviation—A statistic used to express the extent of the divergence of a set of scores from the average of all the scores in the group. In a normal distribution, approximately two thirds (68.3 percent) of the scores lie within the limits of one standard deviation above and one standard deviation below the mean. The remaining scores are equally distributed more than one standard deviation above and below the mean.

Standard Error of Measurement (SEM)—Measurement error is associated with all test scores. The standard error of measurement (SEM) is an estimate of the amount of error to be expected in a score from a particular test. This statistic provides a range within which a student's true score is likely to fall. The smaller the standard error of measurement, the smaller the range in which the student's true score would likely fall and the more accurate the test score.

Standardized Test—A test that is given in exactly the same way to all children taking the test. The items are the same, the instructions are the same, the timing is the same, the method of determining correctness is the same, and the scoring is the same. No variations are allowed.

Stem—The part of an item that asks a question, provides directions, or presents a statement to be completed.

Stimulus—A passage or graphic display about which questions are asked.

Strand—The main content areas that organize the math standards. Oklahoma math standards are developed around four main content strands: Numbers and Operations, Algebraic Reasoning and Algebra, Geometry and Measurement, and Data and Probability.

Test—A device or procedure designed to elicit responses that permit an inference about what a student knows or can do.

Test Item—See item.

True Score—In classical test theory, the hypothetical average score that would result if the test could be administered repeatedly without practice or fatigue effects. In Item Response Theory, the "true score" is the error-free value of the test taker's performance.

Unscorable—Writing responses that do not meet certain criteria cannot be scored. A zero composite score is given to responses that fall into the following categories:
N – No Response/Refusal to Answer, I –Illegible/Incomprehensible, L – Language other than English, O – Off Topic.

Validity—The degree to which accumulated evidence and theory support specific interpretations of test scores proposed by users of a test.

Writing Prompt—An assessment topic, situation, or statement to which students are expected to respond in the form of an essay.

APPENDIX C
TEST BLUEPRINTS

OKLAHOMA SCHOOL TESTING PROGRAM

TEST BLUEPRINT ENGLISH LANGUAGE ARTS GRADE 3

This blueprint describes the content and structure of an assessment and defines the ideal number of test items by standard of the Oklahoma Academic Standards (OAS).

IDEAL PERCENTAGE OF ITEMS	STANDARDS
38–42%	**STANDARD 2: READING AND WRITING PROCESS**** Students will use a variety of recursive reading and writing processes.
12–18%	**STANDARD 3: CRITICAL READING AND WRITING** Students will apply critical thinking skills to reading and writing.
22–26%	**STANDARD 4: VOCABULARY**** Students will expand their working vocabularies to effectively communicate and understand texts.
12–18%	**STANDARD 5: LANGUAGE** Students will apply knowledge of grammar and rhetorical style to reading and writing.
12–18%	**STANDARD 6: RESEARCH** Students will engage in inquiry to acquire, refine, and share knowledge.
	**Reading Comprehension and Vocabulary standards applied to determine RSA Status
100%	**TOTAL: 50 ITEMS**

*Standard 8: Independent Reading and Writing is assessed throughout the test and dually aligned to each standard.
Please note this blueprint does not include items that may be field-tested.
A minimum of 6 items is required to report a standard.

OKLAHOMA SCHOOL TESTING PROGRAM

TEST BLUEPRINT ENGLISH LANGUAGE ARTS GRADE 4

This blueprint describes the content and structure of an assessment and defines the ideal number of test items by standard of the Oklahoma Academic Standards (OAS).

IDEAL PERCENTAGE OF ITEMS	STANDARDS
30–34%	**STANDARD 2: READING AND WRITING PROCESS** Students will use a variety of recursive reading and writing processes.
18–22%	**STANDARD 3: CRITICAL READING AND WRITING** Students will apply critical thinking skills to reading and writing.
22–26%	**STANDARD 4: VOCABULARY** Students will expand their working vocabularies to effectively communicate and understand texts.
12–18%	**STANDARD 5: LANGUAGE** Students will apply knowledge of grammar and rhetorical style to reading and writing.
12–18%	**STANDARD 6: RESEARCH** Students will engage in inquiry to acquire, refine, and share knowledge.
100%	**TOTAL: 50 ITEMS**

*Standard 8: Independent Reading and Writing is assessed throughout the test and dually aligned to each standard.
Please note this blueprint does not include items that may be field-tested.
A minimum of 6 items is required to report a standard.

OKLAHOMA SCHOOL TESTING PROGRAM

TEST BLUEPRINT ENGLISH LANGUAGE ARTS GRADE 5

This blueprint describes the content and structure of an assessment and defines the ideal number of test items by standard of the Oklahoma Academic Standards (OAS).

IDEAL PERCENTAGE OF MC ITEMS	STANDARDS
30–34%	**STANDARD 2: READING AND WRITING PROCESS** Students will use a variety of recursive reading and writing processes.
22–26%	**STANDARD 3: CRITICAL READING AND WRITING** Students will apply critical thinking skills to reading and writing.
18–22%	**STANDARD 4: VOCABULARY** Students will expand their working vocabularies to effectively communicate and understand texts.
12–18%	**STANDARD 5: LANGUAGE** Students will apply knowledge of grammar and rhetorical style to reading and writing.
12–18%	**STANDARD 6: RESEARCH** Students will engage in inquiry to acquire, refine, and share knowledge.
90% OF OVERALL SCORE	
10% OF OVERALL SCORE	**WRITING SECTION** Standard 2: Reading and Writing Process Standard 3: Critical Reading and Writing Standard 4: Vocabulary Standard 5: Language Standard 6: Research Standard 8: Independent Reading and Writing
100%	**TOTAL: 51 ITEMS**

*Standard 8: Independent Reading and Writing is assessed throughout the test and dually aligned to each standard.
Please note this blueprint does not include items that may be field-tested.
A minimum of 6 items is required to report a standard.

OKLAHOMA SCHOOL TESTING PROGRAM

TEST BLUEPRINT ENGLISH LANGUAGE ARTS GRADE 6

This blueprint describes the content and structure of an assessment and defines the ideal number of test items by standard of the Oklahoma Academic Standards (OAS).

IDEAL PERCENTAGE OF ITEMS	STANDARDS
34–38%	**STANDARD 2: READING AND WRITING PROCESS** Students will use a variety of recursive reading and writing processes.
18–22%	**STANDARD 3: CRITICAL READING AND WRITING** Students will apply critical thinking skills to reading and writing.
18–22%	**STANDARD 4: VOCABULARY** Students will expand their working vocabularies to effectively communicate and understand texts.
12–18%	**STANDARD 5: LANGUAGE** Students will apply knowledge of grammar and rhetorical style to reading and writing.
12–18%	**STANDARD 6: RESEARCH** Students will engage in inquiry to acquire, refine, and share knowledge.
100%	**TOTAL: 50 ITEMS**

*Standard 8: Independent Reading and Writing is assessed throughout the test and dually aligned to each standard.
Please note this blueprint does not include items that may be field-tested.
A minimum of 6 items is required to report a standard.

OKLAHOMA SCHOOL TESTING PROGRAM

TEST BLUEPRINT ENGLISH LANGUAGE ARTS GRADE 7

This blueprint describes the content and structure of an assessment and defines the ideal number of test items by standard of the Oklahoma Academic Standards (OAS).

IDEAL PERCENTAGE OF ITEMS	STANDARDS
34–38%	**STANDARD 2: READING AND WRITING PROCESS** Students will use a variety of recursive reading and writing processes.
18–22%	**STANDARD 3: CRITICAL READING AND WRITING** Students will apply critical thinking skills to reading and writing.
14–20%	**STANDARD 4: VOCABULARY** Students will expand their working vocabularies to effectively communicate and understand texts.
12–18%	**STANDARD 5: LANGUAGE** Students will apply knowledge of grammar and rhetorical style to reading and writing.
14–20%	**STANDARD 6: RESEARCH** Students will engage in inquiry to acquire, refine, and share knowledge.
100%	**TOTAL: 50 ITEMS**

*Standard 8: Independent Reading and Writing is assessed throughout the test and dually aligned to each standard.
Please note this blueprint does not include items that may be field-tested.
A minimum of 6 items is required to report a standard.

OKLAHOMA SCHOOL TESTING PROGRAM

TEST BLUEPRINT ENGLISH LANGUAGE ARTS GRADE 8

This blueprint describes the content and structure of an assessment and defines the ideal number of test items by standard of the Oklahoma Academic Standards (OAS).

IDEAL PERCENTAGE OF MC ITEMS	STANDARDS
24–30%	**STANDARD 2: READING AND WRITING PROCESS** Students will use a variety of recursive reading and writing processes.
24–30%	**STANDARD 3: CRITICAL READING AND WRITING** Students will apply critical thinking skills to reading and writing.
14–20%	**STANDARD 4: VOCABULARY** Students will expand their working vocabularies to effectively communicate and understand texts.
12–18%	**STANDARD 5: LANGUAGE** Students will apply knowledge of grammar and rhetorical style to reading and writing.
12–18%	**STANDARD 6: RESEARCH** Students will engage in inquiry to acquire, refine, and share knowledge.
88% OF OVERALL SCORE	
12% OF OVERALL SCORE	**WRITING SECTION** Standard 2: Reading and Writing Process Standard 3: Critical Reading and Writing Standard 4: Vocabulary Standard 5: Language Standard 6: Research Standard 8: Independent Reading and Writing
100%	**TOTAL: 51 ITEMS**

*Standard 8: Independent Reading and Writing is assessed throughout the test and dually aligned to each standard.
Please note this blueprint does not include items that may be field-tested.
A minimum of 6 items is required to report a standard.

OKLAHOMA SCHOOL TESTING PROGRAM

TEST BLUEPRINT MATHEMATICS GRADE 3

This blueprint describes the content and structure of an assessment and defines the ideal number of test items by strand and standard of the Oklahoma Academic Standards (OAS).

IDEAL % OF ITEMS	STRANDS AND STANDARDS
44–48%	**NUMBER AND OPERATIONS** 3.N.1 Number Sense 3.N.2 Number Operations 3.N.3 Fractions 3.N.4 Money
12–18%	**ALGEBRAIC REASONING AND ALGEBRA** 3.A.1 Numerical and Geometric Patterns 3.A.2 Equations
26–30%	**GEOMETRY AND MEASUREMENT** 3.GM.1 Describe and Create Shapes 3.GM.2 Measurement 3.GM.3 Time
12–18%	**DATA AND PROBABILITY** 3.D.1 Data Analysis
100%	**TOTAL: 50 ITEMS**

(Please note this blueprint does not include items that may be field-tested.)
A minimum of 6 items is required to report a strand.

OKLAHOMA SCHOOL TESTING PROGRAM

TEST BLUEPRINT MATHEMATICS GRADE 4

This blueprint describes the content and structure of an assessment and defines the ideal number of test items by strand and standard of the Oklahoma Academic Standards (OAS).

IDEAL % OF ITEMS	STRANDS AND STANDARDS
42–46%	**NUMBER AND OPERATIONS** 4.N.1 Number Operations 4.N.2 Rational Numbers 4.N.3 Money
14–18%	**ALGEBRAIC REASONING AND ALGEBRA** 4.A.1 Numerical Patterns 4.A.2 Equations
26–30%	**GEOMETRY AND MEASUREMENT** 4.GM.1 Polygons and Polyhedra 4.GM.2 Measurement 4.GM.3 Time
12–18%	**DATA AND PROBABILITY** 4.D.1 Data Analysis
100%	**TOTAL: 50 ITEMS**

(Please note this blueprint does not include items that may be field-tested.)
A minimum of 6 items is required to report a strand.

OKLAHOMA SCHOOL TESTING PROGRAM

TEST BLUEPRINT MATHEMATICS GRADE 5

This blueprint describes the content and structure of an assessment and defines the ideal number of test items by strand and standard of the Oklahoma Academic Standards (OAS).

IDEAL % OF ITEMS	STRANDS AND STANDARDS
44–48%	**NUMBER AND OPERATIONS** 5.N.1 Division of Multi-digit Numbers 5.N.2 Fractions and Decimals 5.N.3 Add and Subtract Rational Numbers
16–20%	**ALGEBRAIC REASONING AND ALGEBRA** 5.A.1 Numerical Patterns and Graphs 5.A.2 Equations and Inequalities
22–26%	**GEOMETRY AND MEASUREMENT** 5.GM.1 Polygons and Polyhedra 5.GM.2 Volume and Surface Area 5.GM.3 Angles
12–18%	**DATA AND PROBABILITY** 5.D.1 Data Analysis
100%	**TOTAL: 50 ITEMS**

(Please note this blueprint does not include items that may be field-tested.)
A minimum of 6 items is required to report a strand.

OKLAHOMA SCHOOL TESTING PROGRAM

TEST BLUEPRINT MATHEMATICS GRADE 6

This blueprint describes the content and structure of an assessment and defines the ideal number of test items by strand and standard of the Oklahoma Academic Standards (OAS).

IDEAL % OF ITEMS	STRANDS AND STANDARDS
38–42%	**NUMBER AND OPERATIONS** 6.N.1 Number Sense of Integers and Rational Numbers 6.N.2 Addition and Subtraction of Integers 6.N.3 Ratios 6.N.4 Multiplication and Division of Rational Numbers
20–24%	**ALGEBRAIC REASONING AND ALGEBRA** 6.A.1 Algebraic Representations 6.A.2 Algebraic Expressions 6.A.3 Equations and Inequalities
22–26%	**GEOMETRY AND MEASUREMENT** 6.GM.1 Area of Parallelograms and Triangles 6.GM.2 Angle Relationships on Intersecting Lines 6.GM.3 Units of Measurement and Unit Conversions 6.GM.4 Congruency and Symmetry of Transformations
12–16%	**DATA AND PROBABILITY** 6.D.1 Data Analysis 6.D.2 Probability
100%	**TOTAL: 50 ITEMS**

(Please note this blueprint does not include items that may be field-tested.)
A minimum of 6 items is required to report a strand.

OKLAHOMA SCHOOL TESTING PROGRAM

TEST BLUEPRINT MATHEMATICS GRADE 7

This blueprint describes the content and structure of an assessment and defines the ideal number of test items by strand and standard of the Oklahoma Academic Standards (OAS).

IDEAL % OF ITEMS	STRANDS AND STANDARDS
18–22%	**NUMBER AND OPERATIONS** 7.N.1 Representation and Comparison of Rational Numbers 7.N.2 Number Operations and Absolute Value
28–32%	**ALGEBRAIC REASONING AND ALGEBRA** 7.A.1 Proportional Relationships 7.A.2 Proportions, Rates and Ratios 7.A.3 Linear Equations and Inequalities 7.A.4 Order of Operations
28–32%	**GEOMETRY AND MEASUREMENT** 7.GM.1 Surface Area and Volume of Rectangular Prisms 7.GM.2 Trapezoids and Composite Figures 7.GM.3 Circles 7.GM.4 Transformations
18–22%	**DATA AND PROBABILITY** 7.D.1 Data Analysis 7.D.2 Probability
100%	**TOTAL: 50 ITEMS**

(Please note this blueprint does not include items that may be field-tested.)
A minimum of 6 items is required to report a strand.

OKLAHOMA SCHOOL TESTING PROGRAM

TEST BLUEPRINT MATHEMATICS GRADE 8

This blueprint describes the content and structure of an assessment and defines the ideal number of test items by strand and standard of the Oklahoma Academic Standards (OAS).

IDEAL % OF ITEMS	STRANDS AND STANDARDS
16–20%	**NUMBER AND OPERATIONS** PA.N.1 Real Number Operations
44–48%	**ALGEBRAIC REASONING AND ALGEBRA** PA.A.1 Linear and Non-Linear Functions PA.A.2 Linear Function Representations and Problem Solving PA.A.3 Algebraic Expressions PA.A.4 Equations and Inequalities
18–22%	**GEOMETRY AND MEASUREMENT** PA.GM.1 Pythagorean Theorem PA.GM.2 Surface Area and Volume
14–18%	**DATA AND PROBABILITY** PA.D.1 Data Analysis and Scatter Plots PA.D.2 Probability
100%	**TOTAL: 50 ITEMS**

Please note this blueprint does not include items that may be field-tested. A minimum of 6 items is required to report a strand.

OKLAHOMA SCHOOL TESTING PROGRAM
TEST BLUEPRINT SCIENCE GRADE 5

This blueprint describes the content and structure of the Grade 5 Science Content Assessment and defines the ideal range of test items by reporting category of the Oklahoma Academic Standards – Science (OAS-S).

REPORTING CATEGORIES

PHYSICAL SCIENCES 27–33%

5.PS1.1	Develop a model to describe that matter is made of particles too small to be seen.
5.PS1.2	Measure and graph quantities to provide evidence that regardless of the type of change that occurs when heating, cooling, or mixing substances, the total weight of matter is conserved.
5.PS1.3	Make observations and measurements to identify materials based on their properties.
5.PS1.4	Conduct an investigation to determine whether the mixing of two or more substances results in new substances.

LIFE SCIENCES 27–33%

5.LS1.1	Support an argument that plants get the materials they need for growth chiefly from air and water.
5.LS2.1	Develop a model to describe the movement of matter among plants, animals, decomposers, and the environment.
5.LS2.2	Use models to explain factors that upset the stability of local ecosystems.
5.PS3.1[a]	Use models to describe that energy in animals' food (used for body repair, growth, motion, and to maintain body warmth) was once energy from the sun.

OKLAHOMA STATE DEPARTMENT OF EDUCATION

Copyright © 2023 by the Oklahoma State Department of Education

EARTH AND SPACE SCIENCES 33–40%

5.ESS1.1	Support an argument that differences in the apparent brightness of the sun compared to other stars is due to their relative distances from Earth.
5.ESS1.2	Represent data in graphical displays to reveal patterns of daily changes in the length and direction of shadows, in addition to different positions of the sun, moon, and stars at different times of the day, month, and year.
5.ESS2.1	Develop a model to describe ways the geosphere, biosphere, hydrosphere, and/or atmosphere interact.
5.ESS2.2	Describe and graph the amounts and percentages of water and fresh water in various reservoirs to provide evidence about the distribution of water on Earth.
5.ESS3.1	Obtain and combine information about ways individual communities use science ideas to protect Earth's resources and environments.
5.PS2.1[a]	Support an argument, with evidence, that Earth's gravitational force pulls objects downward toward the center of the earth.

Standards will be assessed using a cluster-based format: a set of three multiple-choice items linked with a common stimulus or a set of two multiple-choice items and a technology-enhanced item linked with a common stimulus. The Grade 5 test consists of some clusters containing only multiple-choice items and some clusters containing both multiple-choice and technology-enhanced items. Each cluster will align to a single standard with its associated Disciplinary Core Idea(s), Science and Engineering Practice, and Cross Cutting Concept.

The Grade 5 Science operational test will contain a total of 15 clusters.

[a]The physical science standards 5.PS3.1 and 5.PS2.1 are being reported in Life Sciences and Earth and Space Sciences, respectively. Their placement in these reporting categories reflects the way that these standards would typically be incorporated into units in classroom instruction.

OKLAHOMA Education

OKLAHOMA SCHOOL TESTING PROGRAM
TEST BLUEPRINT SCIENCE GRADE 8

This blueprint describes the content and structure of the Grade 8 Science Content Assessment and defines the ideal range of test items by reporting category of the Oklahoma Academic Standards – Science (OAS-S).

REPORTING CATEGORIES

PHYSICAL SCIENCES 33 - 40%

8.PS2.1	Apply Newton's Third Law to design a solution to a problem involving the motion of two colliding objects.
8.PS2.2	Plan an investigation to provide evidence that the change in an object's motion depends on the sum of the forces on the object and the mass of the object.
8.PS2.3	Ask questions about data to determine the factors that affect the strength of electric and magnetic forces.
8.PS2.4	Construct and present arguments using evidence to support the claim that gravitational interactions are attractive and depend on the masses of interacting objects.
8.PS2.5	Conduct an investigation and evaluate the experimental design to provide evidence that fields exist between objects exerting forces on each other even though the objects are not in contact.
8.PS4.1	Use mathematical representations to describe patterns in a simple model for waves that includes how the amplitude of a wave is related to the energy in a wave.
8.PS4.3	Integrate qualitative scientific and technical information to support the claim that digitized signals (sent as wave pulses) are a more reliable way to encode and transmit information.

LIFE SCIENCES 40 - 46%

8.LS1.4	Use arguments based on empirical evidence and scientific reasoning to support an explanation for how characteristic animal behaviors and specialized plant structures affect the probability of successful reproduction of animals and plants respectively.
8.LS1.5	Construct a scientific explanation based on evidence for how environmental and genetic factors influence the growth of organisms.
8.LS3.1	Develop and use a model to describe why structural changes to genes (mutations) located on chromosomes may affect proteins and may result in harmful, beneficial, or neutral effects to the structure and function of the organism.

Copyright © 2023 by the Oklahoma State Department of Education

8.LS3.2	Develop and use a model to describe why asexual reproduction results in offspring with identical genetic information and sexual reproduction results in offspring with genetic variation.
8.LS4.1	Analyze and interpret data to identify patterns within the fossil record that document the existence, diversity, extinction, and change of life forms throughout the history of life on Earth.
8.LS4.2	Apply scientific ideas to construct an explanation for the patterns of anatomical similarities and differences among modern organisms and between modern and fossil organisms to infer ancestral relationships.
8.LS4.3	Analyze displays of pictorial data to compare patterns of similarities in the embryological development across multiple species to identify relationships not evident in the fully formed anatomy.
8.LS4.4	Construct an explanation based on evidence that describes how genetic variations of traits in a population increase some individuals' probability of surviving and reproducing in a specific environment.
8.LS4.5	Gather and synthesize information about the practices that have changed the way humans influence the inheritance of desired traits in organisms.
8.LS4.6	Use mathematical representations to support explanations of how natural selection may lead to increases and decreases of specific traits in populations over time.

EARTH AND SPACE SCIENCES 21 - 27%

8.ESS1.1	Develop and use a model of the Earth-sun-moon system to describe the cyclic patterns of lunar phases, eclipses of the sun and moon, and seasons.
8.ESS1.2	Develop and use a model to describe the role of gravity in the motions within galaxies and the solar system.
8.ESS1.3	Analyze and interpret data to determine scale properties of objects in the solar system.

Standards will be assessed using a cluster-based format: a set of three multiple-choice items linked with a common stimulus or a set of two multiple-choice items and a technology-enhanced item linked with a common stimulus. The Grade 8 test consists of some clusters containing only multiple-choice items and some clusters containing both multiple-choice and technology-enhanced items. Each cluster will align to a single standard with its associated Disciplinary Core Idea(s), Science and Engineering, Practice, and Cross Cutting Concept.

The Grade 8 Science operational test will contain a total of 15 clusters.

OKLAHOMA Education

OKLAHOMA SCHOOL TESTING PROGRAM
TEST BLUEPRINT SCIENCE GRADE 11

This blueprint describes the content and structure of the CCR Science Content Assessment and defines the ideal range of test items by reporting category of the Oklahoma Academic Standards – Science (OAS-S).

REPORTING CATEGORIES

PHYSICAL SCIENCES 45 - 55%

PS.PS1.1	Use the periodic table as a model to predict the relative properties of elements based on the patterns of electrons in the outermost energy level of atoms.
PS.PS1.2	Construct and revise an explanation for the outcome of a simple chemical reaction based on the outermost electron states of atoms, trends in the periodic table, knowledge of the patterns of chemical properties, and formation of compounds.
PS.PS1.5	Apply scientific principles and evidence to provide an explanation about the effects of changing the temperature or concentration of the reacting particles on the rate at which a reaction occurs.
PS.PS1.7	Use mathematical representations to support the claim that atoms, and therefore mass, are conserved during a chemical reaction.
PS.PS2.5	Plan and conduct an investigation to provide evidence that an electric current can cause a magnetic field and that a changing magnetic field can cause an electric current.
PS.PS3.1	Create a computational model to calculate the change in the energy of one component in a system when the change in energy of the other component(s) and energy flows in and out of the system are known.
PS.PS3.2	Develop and use models to illustrate that energy at the macroscopic scale can be accounted for as either motions of particles or energy stored in fields.
PS.PS3.3	Design, build, and refine a device that works within given constraints to convert one form of energy into another form of energy.
PS.PS3.4	Plan and conduct an investigation to provide evidence that the transfer of thermal energy when two components of different temperature are combined within a closed system results in a more uniform energy distribution among the components in the system (second law of thermodynamics).
PS.PS4.1	Use mathematical representations to explain both qualitative and quantitative relationships among frequency, wavelength, and speed of waves traveling in various media.
PS.PS4.4	Evaluate the validity and reliability of claims in published materials of the effects that different frequencies of electromagnetic radiation have when absorbed by matter.

Copyright © 2023 by the Oklahoma State Department of Education

LIFE SCIENCES 45 - 55%

B.LS1.1	Construct an explanation based on evidence for how the structure of DNA determines the structure of proteins, which carry out the essential functions of life through systems of specialized cells.
B.LS1.2	Develop and use a model to illustrate the hierarchical organization of interacting systems that provide specific functions within multicellular organisms.
B.LS1.3	Plan and conduct an investigation to provide evidence of the importance of maintaining homeostasis in living organisms.
B.LS1.4	Use a model to illustrate the role of cellular division (mitosis) and differentiation in producing and maintaining complex organisms.
B.LS1.5	Use a model to illustrate how photosynthesis transforms light energy into stored chemical energy.
B.LS1.6	Construct and revise an explanation based on evidence for how carbon, hydrogen, and oxygen from sugar molecules may combine with other elements to form amino acids and/or other large carbon-based molecules.
B.LS1.7	Use a model to illustrate that cellular respiration is a chemical process whereby the bonds of food molecules and oxygen molecules are broken and the bonds in new compounds are formed resulting in a net transfer of energy.
B.LS2.1	Use mathematical and/or computational representations to support explanations of factors that affect carrying capacity of ecosystems at different scales.
B.LS2.2	Use mathematical representations to support and revise explanations based on evidence about factors affecting biodiversity and populations in ecosystems of different scales.
B.LS2.3	Construct and revise an explanation based on evidence for the cycling of matter and flow of energy in aerobic and anaerobic conditions.
B.LS2.4	Use a mathematical representation to support claims for the cycling of matter and flow of energy among organisms in an ecosystem.
B.LS2.5	Develop a model to illustrate the role of photosynthesis and cellular respiration in the cycling of carbon among the biosphere, atmosphere, hydrosphere, and geosphere.
B.LS2.6	Evaluate the claims, evidence, and reasoning that the complex interactions in ecosystems maintain relatively consistent numbers and types of organisms in stable conditions, but changing conditions may result in a new ecosystem.
B.LS2.8	Evaluate evidence for the role of group behavior on individual and species' chances to survive and reproduce.
B.LS3.1	Ask questions to clarify relationships about the role of DNA and chromosomes in coding the instructions for characteristic traits passed from parents to offspring.

Copyright © 2023 by the Oklahoma State Department of Education

B.LS3.2	Make and defend a claim based on evidence that inheritable genetic variations may result from: (1) new genetic combinations through meiosis, (2) viable errors occurring during replication, and/or (3) mutations caused by environmental factors.
B.LS3.3	Apply concepts of statistics and probability to explain the variation and distribution of expressed traits in a population.
B.LS4.1	Communicate scientific information that common ancestry and biological evolution are supported by multiple lines of empirical evidence.
B.LS4.2	Construct an explanation based on evidence that biological diversity is influenced by (1) the potential for a species to increase in number, (2) the heritable genetic variation of individuals in a species due to mutation and sexual reproduction, (3) competition for limited resources, and (4) the proliferation of those organisms that are better able to survive and reproduce in the environment.
B.LS4.3	Apply concepts of statistics and probability to support explanations that organisms with an advantageous heritable trait tend to increase in proportion to organisms lacking this trait.
B.LS4.4	Construct an explanation based on evidence for how natural selection leads to adaptation of populations.
B.LS4.5	Evaluate the evidence supporting claims that changes in environmental conditions may result in (1) increases in the number of individuals of some species, (2) the emergency of new species over time, and (3) the extinction of other species.

Standards will be assessed using a cluster-based format: a set of three multiple-choice items linked with a common stimulus or a set of two multiple-choice items and a technology-enhanced item linked with a common stimulus. The CCR Science Content test consists of some clusters containing only multiple-choice items and some clusters containing both multiple-choice and technology-enhanced items. Each cluster will align to a single standard with its associated Disciplinary Core Idea(s), Science and Engineering Practice, and Cross Cutting Concept.

The CCR Science Content operational test will contain a total of 20 operational clusters and 2 field test clusters.

OKLAHOMA SCHOOL TESTING PROGRAM

TEST BLUEPRINT CCRA: U.S. HISTORY CONTENT

The blueprint describes the content and structure of the operational test and defines the target number of test items by reporting category for CCRA: U.S. History Content.

REPORTING CATEGORIES[1] (OKLAHOMA ACADEMIC STANDARDS)	TARGET RANGE OF SCORE POINTS[2] (PERCENTAGE OF TOTAL)
U.S. HISTORY **Standard 1:** 1.2.A, 1.3.A, 1.3.D **Standard 2:** 2.1.A, 2.1.B, 2.1.D, 2.1.E, 2.1.G, 2.2.B, 2.3.B **Standard 3:** 3.1.A, 3.1.B, 3.1.C, 3.2.A, 3.2.B **Standard 4:** 4.1.A, 4.1.D, 4.1.E, 4.2.A, 4.2.B, 4.2.D, 4.3.C **Standard 5:** 5.1.B, 5.2, 5.3 **Standard 6:** 6.1.A, 6.1.B, 6.1.C, 6.1.D, 6.2.A, 6.2.B, 6.2.C, 6.4 **Standard 7:** 7.2.D **Standard 8:** 8.1, 8.2, 8.3, 8.4, 8.5.A	45–55%
CIVICS **Standard 1:** 1.1, 1.2.B, 1.2.C, 1.3.B, 1.3.C **Standard 2:** 2.1.C, 2.1.F, 2.2.A, 2.2.C, 2.3.A, 2.3.C **Standard 3:** 3.1.D, 3.2.C, 3.2.D **Standard 4:** 4.1.B, 4.1.C, 4.2.C, 4.3.A, 4.3.B **Standard 5:** 5.1.A, 5.1.C **Standard 6:** 6.3 **Standard 7:** 7.1.A, 7.1.B, 7.1.C, 7.2.A, 7.2.B, 7.2.C, 7.2.E, 7.2.F **Standard 8:** 8.5.B, 8.6	45–55%
TOTAL OPERATIONAL TEST	100%

[1] All objectives included in each reporting category are found in OAS-U.S. History.

[2] A minimum of 12 points is required to report results for a reporting category for the CCRA: U.S. History Content.

APPENDIX D
PERFORMANCE LEVEL DESCRIPTORS

OSTP ELA Grade 3—Range Performance Level Descriptors (Range PLDs)

Objective	Basic	Proficient	Advanced
	OK Policy PLD Basic: *Students demonstrate partial mastery of the essential knowledge and skills appropriate to their grade level. Students scoring at the Basic level typically:*	***OK Policy PLD Proficient:*** *Students demonstrate mastery over appropriate grade-level subject matter and readiness for the next grade level. Students scoring at the Proficient level typically:*	***OK Policy PLD Advanced:*** *Students demonstrate superior performance on challenging subject matter. In addition to demonstrating a broad and in-depth understanding and application of all skills at the Proficient level, students scoring at the Advanced level typically:*
Reading & Writing Process			
3.2.R.1	Identify the main idea of a portion of text and identify key details related to the main idea of a portion of the text.	Determine the main idea and supporting details of a text.	Explain how key details support the main idea of a text.
3.2.R.2	Identify elements of fiction and nonfiction texts.	Identify elements of various genres in fiction, poetry, and nonfiction texts.	Compare elements of various genres in fiction, poetry, and nonfiction texts and provide supporting details.
3.2.R.3	Summarize portions of a text or sequence main events of a story (first, next, last).	Summarize and sequence the important events of a story.	Analyze a story to summarize and correctly sequence the events in a story; evaluate the best summary; explain why details are included in a summary.
3.2.R.4	Summarize facts and details in a portion of an informational text.	Summarize facts and details from an informational text.	Explain why certain facts and details are included in an informational text.
3.2.W.1	Identify the parts of and use the writing process to prewrite, organize, and develop narrative, informative, and opinion drafts of a single paragraph.	Prewrite, organize, and develop narrative, informative, and opinion drafts that display evidence of paragraphing.	
3.2.W.2	Use a process to revise content in a paragraph for correct organization (e.g., logical order and transitions) and clarity.	Revise content for clarity, coherence, and organization (e.g., logical order and transitions).	
3.2.W.3	Edit drafts of a sentence for punctuation (end marks), capitalization (beginnings of sentences), and correctly spelled high-frequency words, using resources as needed.	Edit drafts for punctuation, capitalization, and correctly-spelled grade-level words, using resources as needed.	
Critical Reading & Writing			
3.3.R.1	Identify if the author's purpose is to entertain, inform, or persuade.	Determine if the author's purpose is to entertain, inform, or persuade.	Analyze a text to determine whether the author's purpose is to entertain, inform, or persuade.
3.3.R.2	Identify features of first- or third-person point-of-view texts.	Determine whether a grade-level literary text is narrated in first- or third-person point of view.	Determine whether a grade-level literary text is narrated in first- or third-person point of view and provide evidence to support their determination.

Objective	Basic	Proficient	Advanced
3.3.R.3	Identify literary elements: • setting • plot • characters • characterization	Find textual examples of literary elements: • setting • plot • characters • characterization	Identify the effect of literary elements: • setting • plot • characters • characterization
3.3.R.4	Identify examples of literary devices: • personification • simile • alliteration • onomatopoeia	Find examples of literary devices: • personification • simile • alliteration • onomatopoeia	Identify the effect of literary devices: • personification • simile • alliteration • onomatopoeia
3.3.R.5	Answer simple inferential questions from a portion of a text and use evidence from a portion of a text to support inferences.	Answer inferential questions, using a text to support answers.	Answer complex inferential questions, using a text to support answers.
3.3.R.6	Identify fact and opinion in an informational text.	Distinguish fact from opinion in an informational text.	Identify how the fact or opinion supports the main idea of a text.
3.3.R.7	Identify the structure of a portion of an informational text: • problem/solution • description • sequential	Describe the structure of a portion of an informational text: • problem/solution • description • sequential	Analyze the structure of a portion of an informational text: • problem/solution • description • sequential
3.3.W.1	Write simple narratives with support (e.g., graphic organizers) that incorporate: • setting • plot • characters • characterization	Write narratives that incorporate: • setting • plot • characters • characterization	Write complex narratives reflecting real or imagined experiences that include: • setting • plot • characters • characterization
3.3.W.2	With support (e.g., graphic organizers), write facts about a subject, including a main idea with supporting details, in a paragraph.	Write facts about a subject, including a main idea with supporting details, in multiple paragraphs with transitional words and phrases.	Write complex facts about a subject, including a main idea with supporting details, in multiple paragraphs with transitional words and phrases.
3.3.W.3	With support (e.g., graphic organizers), write an opinion about a topic and provide relevant evidence as support in a paragraph.	Write an opinion about a topic and provide relevant evidence as support in multiple paragraphs with transitional words and phrases.	Write a complex opinion about a topic and provide relevant evidence as support in multiple paragraphs with transitional words and phrases.
Vocabulary			
3.4.R.1	Identify relationships among words, including synonyms, and antonyms.	Identify relationships among words, including synonyms, antonyms, homophones, and homographs.	Identify relationships among words, including synonyms, antonyms, homophones, and homographs.
3.4.R.2	Use context clues to clarify the meaning of words.	Use context clues to clarify the meaning of words.	Use context clues to clarify the meaning of words.
3.4.R.3	Use word parts (e.g., simple affixes, simple Anglo-Saxon roots, stems) to identify the meaning of words.	Use word parts (affixes, Anglo-Saxon roots. and stems) to define and determine the meaning of new words.	Define and determine the meaning of new words by using familiar word parts including affixes, Anglo-Saxon roots, and stems.

Objective	Basic	Proficient	Advanced
3.4.R.4	Consult reference materials (e.g., dictionaries, glossaries) to identify the meaning of words in a text.	Consult reference materials (e.g., dictionaries, glossaries, thesauruses) to demonstrate comprehension of the words in a text.	
3.4.R.5		Acquire new grade-level vocabulary, relate new words to prior knowledge, and apply vocabulary in various contexts.	Use new grade-level vocabulary, relate new words to prior knowledge, and apply vocabulary in various contexts.
3.4.W.1	Use high-frequency vocabulary in writing to clearly communicate ideas.	Use grade-level vocabulary in writing to clearly communicate ideas.	Use above-grade-level vocabulary in writing to clearly communicate ideas.
3.4.W.2	Use precise and vivid basic vocabulary in writing.	Use precise and vivid grade-level vocabulary in writing for the intended mode and effect on the audience.	
Language			
3.5.R.1	Recognize simple sentences.	Recognize simple and compound sentences.	Define the features of simple and compound sentences in grade-appropriate texts.
3.5.R.2	Recognize parts of speech in basic sentences: • concrete and abstract nouns • different types of verbs (i.e., action, linking, helping) • the subject and predicate of a sentence • adjectives • prepositions • possessive pronouns • adverbs • coordinating conjunctions (i.e., and, but, or)	Recognize parts of speech in sentences: • concrete, abstract, and possessive nouns • different types of verbs (i.e., action, linking, helping) and their roles in a sentence • the complete subject and complete predicate of a sentence • possessive adjectives • prepositional phrases • possessive pronouns and the nouns they replace • coordinating conjunctions (i.e., for, and, nor, but, or, yet, so) • adverbs of frequency (e.g., always, often, never)	Analyze parts of speech in complex sentences: • concrete, abstract, and possessive nouns • different types of verbs (i.e., action, linking, helping) and their roles in a sentence • the complete subject and complete predicate of a sentence • possessive adjectives • prepositional phrases • possessive pronouns and the nouns they replace • coordinating conjunctions (i.e., for, and, nor, but, or, yet, so) • adverbs of frequency (e.g., always, often, never)
3.5.W.1	Compose simple and compound declarative, interrogative, imperative, and exclamatory sentences.	Compose simple and compound declarative, interrogative, imperative, and exclamatory sentences, avoiding and correcting fragments.	
3.5.W.2	Use nouns, verbs, adjectives, and adverbs.	Use nouns, verbs, adjectives, prepositions, and adverbs to add clarity and variety to their writing.	Explain the effect of nouns, verbs, adjectives, prepositions, and adverbs in their writing.
3.5.W.3	Capitalize titles of respect, words in titles, and geographical names.	Capitalize and punctuate titles of respect, words in titles, and geographical names.	Recognize and correct errors in capitalization and punctuation in titles of respect, words in titles, and geographical names.

Objective	Basic	Proficient	Advanced
3.5.W.4	Use periods with declarative and imperative sentences and question marks with interrogative sentences.	Use periods with declarative and imperative sentences, question marks with interrogative sentences, and exclamation points with exclamatory sentences.	Recognize and correct errors in punctuation: periods with declarative and imperative sentences, question marks with interrogative sentences, and exclamation points with exclamatory sentences.
3.5.W.5	Use apostrophes to form simple contractions (e.g., can't, doesn't, isn't) and to show possession.	Use apostrophes to form complex contractions (e.g., should've, won't, y'all) and to show possession.	Recognize and correct errors in apostrophes when forming complex contractions (e.g., should've, won't, y'all) and to show possession.
3.5.W.6	Identify the placement of commas when using a coordinating conjunction and when separating individual words in a series.	Use commas before a coordinating conjunction and to separate individual words in a series.	Recognize and correct errors in comma usage before a coordinating conjunction and to separate individual words in a series.
3.5.W.7		Use a colon to indicate time.	
3.5.W.8	Explain why quotation marks are used.	Use quotation marks to indicate dialogue.	Recognize and revise errors in quotation mark usage when indicating dialogue.
Research			
3.6.R.1	Conduct research to answer assigned questions and to build knowledge.	Conduct research to answer questions, including self-generated questions, and to build knowledge.	Conduct research and evaluate if research questions are fully answered.
3.6.R.2	Identify some text features (e.g., captions, subheadings, charts) to comprehend informational texts.	Identify and use text features (e.g., graphics, captions, subheadings, italics, charts, tables, legends) to comprehend informational texts.	Analyze text features (e.g., graphics, captions, subheadings, italics, charts, tables, legends) to comprehend complex informational texts.
3.6.R.3	Identify relevant sources.	Begin to determine the relevance of the information gathered.	Determine the relevance of more complex information gathered.
3.6.W.1	Identify questions related to a topic.	Choose a topic of interest and generate several questions about it for research.	Choose a topic of interest and generate several valid questions about it for research.
3.6.W.2	With support (e.g., a partially completed graphic organizer), organize information found during research and follow a modified citation style (i.e., author, title, publication year).	Begin to organize information found during research, following a modified citation style (i.e., author, title, publication year).	

OSTP ELA Grade 4—Range Performance Level Descriptors (Range PLDs)

Objective	Basic	Proficient	Advanced
	OK Policy PLD Basic: *Students demonstrate partial mastery of the essential knowledge and skills appropriate to their grade level. Students scoring at the Basic level typically:*	***OK Policy PLD Proficient:*** *Students demonstrate mastery over appropriate grade-level subject matter and readiness for the next grade level. Students scoring at the Proficient level typically:*	***OK Policy PLD Advanced:*** *Students demonstrate superior performance on challenging subject matter. In addition to demonstrating a broad and in-depth understanding and application of all skills at the Proficient level, students scoring at the Advanced level typically:*
Reading & Writing Process			
4.2.R.1	Identify the main idea and key supporting details of a text.	Determine the key details that support the main idea of a text.	Evaluate the key details that support the main idea of a text.
4.2.R.2	Identify features of fiction, poetry, and nonfiction to distinguish various genres.	Compare fiction, poetry, and nonfiction to distinguish various genres.	Compare and explain the differences in fiction, poetry, and nonfiction to distinguish various genres.
4.2.R.3	Summarize or sequence the important events in a portion of a story (e.g., first, next, last).	Summarize and sequence the important events of a story.	Analyze a story, summarize and sequence the important events of a story, evaluate for the best summary, and explain why certain details should be included in a summary.
4.2.R.4	Summarize facts and details from a portion of an informational text.	Summarize facts and details from an informational text.	Explain why certain facts and details from an informational text are included in a summary.
4.2.W.1	Identify the parts of and use the writing process to prewrite, organize, and develop narrative, informative, and opinion drafts of a paragraph.	Use the writing process to prewrite, organize, and develop narrative, informative, and opinion drafts that display evidence of paragraphing.	Use the writing process to prewrite by selecting a strategy, organize by selecting a particular structure, and develop narrative, informative, and opinion drafts that display evidence of paragraphing.
4.2.W.2	Revise content in a paragraph for clarity and organization (e.g., logical order).	Revise content for clarity, coherence, and organization (e.g., logical order and transitions).	Revise content for clarity (using precise language geared toward the audience), coherence, and organization (e.g., logical order and transitions) using effective language.
4.2.W.3	Edit drafts of a sentence for punctuation (end marks), capitalization (beginnings of sentences), and correctly spelled grade-level words, using resources as needed.	Edit drafts for punctuation, capitalization, and correctly spelled grade-level words, using resources as needed.	
Critical Reading & Writing			
4.3.R.1	Identify the author's purpose (i.e., entertain, inform, persuade).	Determine the author's purpose (i.e., entertain, inform, persuade) by identifying key details.	Determine the author's purpose (i.e., entertain, inform, persuade) and determine how key details reveal the author's purpose was achieved.
4.3.R.2	Identify features of first- or third-person point of view.	Determine whether a grade-level literary text is narrated in first- or third-person point of view.	Determine whether a grade-level literary text is narrated in first- or third-person point of view and provide evidence to support their determination.

Objective	Basic	Proficient	Advanced
4.3.R.3	Identify textual evidence of literary elements: ● setting ● plot ● characters (i.e., protagonist, antagonist) ● characterization ● conflict	Find textual evidence of literary elements: ● setting ● plot ● characters (i.e., protagonist, antagonist) ● characterization ● conflict	Determine the effect of literary elements: ● setting ● plot ● characters (i.e., protagonist, antagonist) ● characterization ● conflict
4.3.R.4	Identify textual evidence of literary devices: ● metaphor ● idiom ● personification ● hyperbole ● simile ● alliteration ● onomatopoeia	Find textual evidence of literary devices: ● metaphor ● idiom ● personification ● hyperbole ● simile ● alliteration ● onomatopoeia	Determine the effect of literary devices: ● metaphor ● idiom ● personification ● hyperbole ● simile ● alliteration ● onomatopoeia
4.3.R.5	Answer simple inferential questions and use evidence from a text to support answers.	Answer inferential questions using evidence from one or more texts to support answers.	Answer complex inferential questions using evidence from one or more texts to support answers.
4.3.R.6	Distinguish fact from opinion in an informational text and identify how reasons and facts support specific points.	Distinguish fact from opinion in an informational text and explain how reasons and facts support specific points.	Distinguish fact from opinion in an informational text and draw a conclusion about their effectiveness.
4.3.R.7	Identify the structures of an informational text: ● cause/effect ● problem/solution ● description ● sequential	Distinguish the structures of an informational text: ● cause/effect ● problem/solution ● description ● sequential	Determine the structure of an informational text: ● cause/effect ● problem/solution ● description ● sequential
4.3.W.1	Compose simple narratives reflecting real or imagined experiences that: ● include a plot with a climax and resolution ● include characters who overcome conflicts and use dialogue ● unfold in chronological sequence ● use some sentence variety and sensory details to create interest ● replicate literary elements and/or literary devices from mentor texts	Compose narratives that reflect real or imagined experiences that: ● include plots with a climax and resolution ● include developed characters who overcome conflicts and use dialogue ● use a consistent point of view ● unfold in chronological sequence ● use sentence variety, sensory details, and vivid language to create interest ● model literary elements and/or literary devices from mentor texts	Compose complex narratives that reflect real or imagined experiences that: ● include plots with a climax and resolution ● include developed characters who overcome conflicts and use dialogue ● use a consistent point of view ● unfold in chronological sequence ● use sentence variety, sensory details, and vivid language to create interest ● model literary elements and/or literary devices from mentor texts

Objective	Basic	Proficient	Advanced
4.3.W.2	Compose simple informative essays that: ● introduce and develop a topic ● incorporate evidence (e.g., specific facts, examples) ● maintain an organized structure ● replicate literary devices from mentor texts	Compose informative essays that: ● introduce and develop a topic ● incorporate evidence (e.g., specific facts, examples) ● maintain an organized structure with transitional words and phrases ● use sentence variety and word choice to create interest ● model literary devices from mentor texts	Compose complex informative essays that: ● introduce and develop a topic ● incorporate and explain evidence (e.g., specific facts, examples) ● maintain an organized structure with complex transitional words and phrases ● use sentence variety and precise word choice to create interest ● model literary devices from mentor texts
4.3.W.3	Write simple opinion essays that: ● introduce a topic and state an opinion ● incorporate text-based evidence to support the opinion ●maintain an organized structure with simple transitional words and phrases	Write opinion essays that: ● introduce a topic and state an opinion ● incorporate relevant, text-based evidence to support the opinion ● use sentence variety and word choice to create interest ●maintain an organized structure with transitional words and phrases	Write complex opinion essays that: ● introduce a topic and state an opinion ● incorporate and explain relevant, text-based evidence to support the opinion ● use sentence variety and precise word choice to create interest ●maintain an organized structure with complex transitional words and phrases
Vocabulary			
4.4.R.1	Identify relationships among words, including synonyms, antonyms, homophones, and homographs.	Identify relationships among words, including synonyms, antonyms, analogies, homophones, and homographs.	Identify relationships among words, including synonyms, antonyms, analogies, homophones, and homographs.
4.4.R.2	Use context clues to clarify the meaning of words.	Use context clues to clarify the meaning of words.	Use context clues to clarify the meaning of words.
4.4.R.3	Use word parts (e.g., simple affixes, simple Latin roots, stems) to define and determine the meaning of new words.	Use word parts (e.g., affixes, Latin roots, stems) to define and determine the meaning of new words.	Use word parts (e.g., complex affixes, complex Latin roots, stems) to define and determine the meaning of new words.
4.4.R.4	Consult reference materials (e.g., dictionaries, glossaries) to identify the meaning of words in a text.	Consult reference materials (e.g., dictionaries, glossaries, thesauruses) to comprehend the words in a text.	
4.4.R.5		Acquire new grade-level vocabulary, relate new words to prior knowledge, and apply vocabulary in various contexts.	
4.4.W.1		Use grade-level vocabulary in writing to clearly communicate ideas.	
4.4.W.2	Use precise and vivid vocabulary in writing.	Use precise and vivid vocabulary in writing for the intended mode and effect on the audience.	
Language			
4.5.R.1	Recognize simple and compound sentences.	Recognize simple and compound sentences.	Define the features of simple and compound sentences.

Objective	Basic	Proficient	Advanced
4.5.R.2	Recognize parts of speech in sentences: ● possessive nouns ● irregular verbs ● subject of a verb ● comparative adjectives ● prepositional phrases ● possessive pronouns ● coordinating conjunctions ● comparative adverbs	Recognize parts of speech in sentences: ● irregular possessive nouns (e.g., children's) ● irregular and past participle verbs and verb tense to identify settings, times, and sequences ● subject and verb agreement ● comparative and superlative adjectives ● prepositional phrases ● possessive pronouns and the nouns they replace (i.e., antecedents) ● coordinating conjunctions ● comparative and superlative adverbs ● interjections	
4.5.W.1	Compose simple declarative, interrogative, imperative, and exclamatory sentences, and recognize fragments.	Compose simple and compound declarative, interrogative, imperative, and exclamatory sentences, avoiding and correcting fragments.	
4.5.W.2	Use nouns, verbs, adjectives, prepositions, and adverbs to add variety to their writing.	Use nouns, verbs, adjectives, prepositions, and adverbs to add clarity and variety to their writing.	Explain why nouns, verbs, adjectives, prepositions, and adverbs are included in their writing.
4.5.W.3	Recognize or correct errors in subject and verb agreement.	Recognize and correct errors in subject and verb agreement.	Compose sentences with correct subject and verb agreement.
4.5.W.4	Capitalize familial relations and proper adjectives.	Capitalize familial relations, proper adjectives, conventions of letter writing, and the first letter of a quotation.	
4.5.W.5		Use periods with declarative and imperative sentences, question marks with interrogative sentences, and exclamation points with exclamatory sentences.	Recognize and revise errors in end punctuation including periods with declarative and imperative sentences, question marks with interrogative sentences, and exclamation points with exclamatory sentences.
4.5.W.6	Use apostrophes to show possession of singular nouns.	Use apostrophes to show possession of singular and plural nouns and recognize and remove apostrophes used to form plurals.	Recognize and revise errors in apostrophe use to show possession of singular and plural nouns and recognize and remove apostrophes used to form plurals.
4.5.W.7	Use commas to separate individual words in a series.	Use commas in greetings and closings in letters and emails, to separate individual words in a series, and to indicate dialogue.	Recognize and revise errors in comma usage in greetings and closings in letters and emails, to separate individual words in a series, and to indicate dialogue.

Objective	Basic	Proficient	Advanced
4.5.W.8	Recognize where a colon should be placed when introducing a list (e.g., Deb only needed three things from the grocery store: milk, eggs, and bread.).	Use a colon to introduce a list (e.g., Deb only needed three things from the grocery store: milk, eggs, and bread.).	Recognize and revise errors when using a colon to introduce a list (e.g., Deb only needed three things from the grocery store: milk, eggs, and bread.).
4.5.W.9	Recognize where quotation marks belong when being used to indicate dialogue and titles of works; explain why quotation marks are used.	Use quotation marks to indicate dialogue, quoted material, and titles of works.	Recognize and revise errors when using quotation marks to indicate dialogue, quoted material, and titles of works.
4.5.W.10	Recognize the correct way to use underlining to indicate titles of works.	Use underlining or italics to indicate titles of works.	Recognize and revise errors when using underlining or italics to indicate titles of works.
Research			
4.6.R.1	Conduct research to answer questions, including self-generated questions, and to build knowledge, using one source (e.g., visual and text reference sources, electronic resources, and/or interviews).	Conduct research to answer questions, including self-generated questions, and to build knowledge, using multiple sources (e.g., visual and text reference sources, electronic resources, and/or interviews).	Conduct research to answer questions, including self-generated questions, and to evaluate knowledge, using multiple sources (e.g., visual and text reference sources, electronic resources, and/or interviews).
4.6.R.2	Identify and/or use some text features (e.g., graphics, captions, subheadings, italicized words, charts, tables, legends) to comprehend informational texts.	Identify and use text features (e.g., graphics, captions, headings/subheadings, bold/italicized words, charts, tables, legends) to comprehend informational texts.	Analyze text features (e.g., graphics, captions, headings/subheadings, bold/italicized words, charts, tables, legends) to comprehend informational texts.
4.6.R.3	Determine the relevance of sources.	Determine the relevance of the information gathered.	Explain the relevance of the information gathered.
4.6.W.1	Identify a viable research question about a topic.	Generate a viable research question about a topic.	Generate more than one viable research question about a topic.
4.6.W.2	With support (e.g., a graphic organizer) organize information found during research.	Organize information found during research, following a modified citation style (i.e., author, title, publication year).	

OSTP ELA Grade 5—Range Performance Level Descriptors (Range PLDs)

Objective	Basic	Proficient	Advanced
	OK Policy PLD Basic: *Students demonstrate partial mastery of the essential knowledge and skills appropriate to their grade level. Students scoring at the Basic level typically:*	***OK Policy PLD Proficient:*** *Students demonstrate mastery over appropriate grade-level subject matter and readiness for the next grade level. Students scoring at the Proficient level typically:*	***OK Policy PLD Advanced:*** *Students demonstrate superior performance on challenging subject matter. In addition to demonstrating a broad and in-depth understanding and application of all skills at the Proficient level, students scoring at the Advanced level typically:*
Reading & Writing Process			
5.2.R.1	Identify key supporting details that support the main idea of a text.	Explain how key supporting details support the main idea of a text.	Analyze how key supporting details support the main idea of a text.
5.2.R.2	Use features of fiction, poetry, and nonfiction texts to distinguish various genres.	Identify details in fiction, poetry, and nonfiction texts to distinguish various genres.	Compare details within or across fiction, poetry, and nonfiction texts to distinguish various genres.
5.2.R.3	Summarize or sequence the important events from a portion of a story.	Summarize and sequence the important events of a story.	Analyze a complex story, summarize and sequence the important events of a story, evaluate for the best summary, and explain why certain details should be included in a summary.
5.2.R.4	Summarize facts and details from portions of an informational text.	Summarize facts and details from an informational text.	Summarize facts and details from a complex informational text; evaluate for the best summary.
5.2.W.1	Identify the parts of and use the writing process to prewrite, organize, and develop narrative, informative, and opinion drafts of a paragraph.	Use a recursive process to prewrite, organize, and draft multi-paragraph narrative, informative, and opinion drafts.	Show knowledge of a recursive process to prewrite and organize for intended purpose, and draft multi-paragraph narrative, informative, and opinion drafts.
5.2.W.2	Revise content in a paragraph for clarity and organization (e.g., logical order and transitions).	Revise content for clarity, coherence, and organization (e.g., logical order and transitions).	Revise content for clarity (using precise language geared toward the audience), coherence, and organization (e.g., logical order and effective use of transitions).
5.2.W.3	Edit drafts of a sentence for punctuation (end marks), capitalization (beginnings of sentences), and correctly spelled grade-level words, using resources as needed.	Edit drafts for punctuation, capitalization, and correctly spelled grade-level words, using resources as needed.	
Critical Reading & Writing			
5.3.R.1	Identify the author's purpose (i.e., entertain, inform, persuade).	Determine the author's purpose (i.e., entertain, inform, persuade), and draw conclusions to determine if the author's purpose was achieved.	Analyze key details to determine if the author's purpose was achieved.
5.3.R.2	Determine whether a grade-level literary text is narrated in first- or third-person point of view.	Determine whether a grade-level literary text is narrated in first- or third-person point of view (limited and omniscient) and describe its effect.	Analyze key details to determine if the text is narrated first- or third-person point of view (limited and omniscient) and describe its effect.

Objective	Basic	Proficient	Advanced
5.3.R.3	Identify textual evidence of literary elements: ● setting ● plot ● characters (i.e., protagonist, antagonist) ● characterization ● conflict	Determine how literary elements contribute to the meaning of a literary text: ● setting ● plot ● characters (i.e., protagonist, antagonist) ● characterization ● conflict ● theme	Using textual evidence, explain how literary elements contribute to the meaning of a literary text: ● setting ● plot ● characters (i.e., protagonist, antagonist) ● characterization ● conflict ● theme
5.3.R.4	Identify textual evidence of literary devices: ● imagery ● metaphor ● idiom ● personification ● hyperbole ● simile ● alliteration ● onomatopoeia	Determine how literary devices contribute to the meaning of a text: ● imagery ● metaphor ● idiom ● personification ● hyperbole ● simile ● alliteration ● onomatopoeia	Using textual evidence, explain how literary devices contribute to the meaning of a text: ● imagery ● metaphor ● idiom ● personification ● hyperbole ● simile ● alliteration ● onomatopoeia
5.3.R.5	Analyze ideas in a portion of a text, providing textual evidence to support their inferences.	Analyze ideas in one or more texts, providing textual evidence to support their inferences.	Draw evaluative conclusions from one or more texts, providing textual evidence to support their inferences.
5.3.R.6	Identify fact or opinion in an informational text and locate reasons and facts that support specific points.	Distinguish fact from opinion in an informational text and explain how reasons and facts support specific points.	Distinguish relevant fact from opinion in an informational text and explain how reasons and facts support specific points using supporting evidence from the informational text.
5.3.R.7	Identify the structures of informational texts: ● compare/contrast ● cause/effect ● problem/solution ● description ● sequential	Distinguish the structures of informational texts: ● compare/contrast ● cause/effect ● problem/solution ● description ● sequential	Analyze the structures of informational texts and provide supporting evidence for that analysis: ● compare/contrast ● cause/effect ● problem/solution ● description ● sequential

Objective	Basic	Proficient	Advanced
5.3.W.1	Compose simple narratives reflecting real or imagined experiences that: ● include plots with a climax and resolution ● include developed characters who overcome conflicts and use dialogue ● unfold in chronological sequence ● use some sentence variety, sensory details, and vivid language to create interest ● replicate literary elements and/or literary devices from mentor texts	Compose narratives experiences reflecting real or imagined that: ● include plots with a climax and resolution ● include developed characters who overcome conflicts and use dialogue ● use a consistent point of view ● unfold in chronological sequence ● use sentence variety, sensory details, and vivid language to create interest ● model literary elements and/or literary devices from mentor texts	Compose complex narratives reflecting real or imagined experiences that: ● include plots with a climax and resolution ● including developed characters who overcome conflicts and use dialogue ● use a consistent point of view ● unfold in chronological sequence ● use sentence variety, sensory details, and vivid language to create interest ● model literary elements and/or literary devices from mentor texts
5.3.W.2	Compose simple informative essays that: ● introduce and develop a topic ● include evidence (e.g., specific facts, examples, charts, and graphs) ● maintain an organized structure with simple transitional words and phrases ● use some sentence variety and word choice to create interest ● replicate literary devices from mentor texts	Compose informative essays that: ● introduce and develop a topic ● incorporate evidence (e.g., specific facts, examples, charts, and graphs) ● maintain an organized structure with transitional words and phrases ● use sentence variety and word choice to create interest ● model literary devices from mentor texts	Compose complex informative essays that: ● introduce and develop a topic ● incorporate and explain evidence (e.g., specific facts, examples, charts, and graphs) ● maintain an organized structure with complex transitional words and phrases ● use sentence variety and precise word choice to create interest ● model literary devices from mentor texts
5.3.W.2	Write simple opinion essays that: ● introduce a topic and state an opinion ● include text-based evidence ● use some sentence variety and word choice to create interest ● organize writing in a logical sequence with simple transitional words and phrases	Write opinion essays that: ● introduce a topic and state a clear opinion ● incorporate relevant, text-based evidence to support the opinion ● use sentence variety and word choice to create interest ● organize writing in a logical sequence with transitional words and phrases	Write complex opinion essays that: ● introduce a topic and state a clear opinion ● incorporate relevant, text-based evidence to support the opinion ● use sentence variety and word choice to create interest ● organize writing in a logical sequence with transitional words and phrases
Vocabulary			
5.4.R.1	Identify relationships among words, including synonyms, antonyms, simple analogies, homophones, and homographs.	Identify relationships among words, including synonyms, antonyms, analogies, homophones, and homographs.	Identify relationships among words, including synonyms, antonyms, complex analogies, homophones, and homographs.
5.4.R.2	Use context clues to clarify the meaning of basic words.	Use context clues to clarify the meaning of words.	Use context clues to clarify the meaning of words and identify supporting evidence.
5.4.R.3	Use word parts (e.g., simple affixes, simple Latin roots, stems) to define and determine the meaning of new words.	Use word parts (e.g., affixes, Latin roots, stems) to define and determine the meaning of new words.	Use word parts (e.g., complex affixes, complex Latin roots, stems) to define and determine the meaning of new words.
5.4.R.4	Choose reference materials (e.g., dictionaries, glossaries, thesauruses) to identify the meanings of words in a text.	Consult reference materials (e.g., dictionaries, glossaries, thesauruses) to comprehend the words in a text.	

Objective	Basic	Proficient	Advanced
5.4.R.5		Acquire new grade-level vocabulary, relate new words to prior knowledge, and apply vocabulary in various contexts.	
5.4.W.1		Use grade-level vocabulary in writing to clearly communicate ideas.	
5.4.W.2	Use precise and vivid vocabulary in writing.	Use precise and vivid vocabulary in writing for the intended mode and effect on the audience.	
Language			
5.5.R.1	Recognize simple and compound sentences.	Recognize simple, compound, and complex (i.e., independent and dependent clauses) sentences.	Determine and explain whether sentences are simple, compound, or complex (i.e., independent and dependent clauses) and identify independent and dependent clauses.
5.5.R.2	Recognize parts of speech in simple sentences: ● nouns ● verb tense to identify settings, times, sequences, and conditions ● subject and verb agreement ● adjectives ● prepositional phrases ● intensive pronouns and their antecedents ● coordinating conjunctions ● adverbs ● interjections	Recognize and explain the impact on meaning of parts of speech in sentences: ● nouns ● verb tense to identify settings, times, sequences, and conditions ● subject and verb agreement ● adjectives ● prepositional phrases ● intensive pronouns and their antecedents ● coordinating conjunctions ● adverbs ● interjections	
5.5.W.1		Compose simple, compound, and complex (i.e., independent and dependent clauses) sentences.	
5.5.W.2		Use nouns, verbs, adjectives, prepositions, adverbs, and pronouns to add clarity and variety to their writing.	
5.5.W.3	Recognize the following: run-ons, errors in subject and verb agreement, inappropriate shifts in verb tense, and inappropriate shifts in pronoun number and person.	Recognize and correct the following: run-ons, errors in subject and verb agreement, inappropriate shifts in verb tense, and inappropriate shifts in pronoun number and person.	
5.5.W.6		Use the correct forms of it's/its, you're/your, and they're/there/their.	Recognize and revise errors in the incorrect use of it's/its, you're/your, and they're/there/their.
5.5.W.7	Use commas to separate individual words in a series and to indicate dialogue.	Use commas to separate individual words in a series, to indicate dialogue, and to separate the independent and dependent clauses in a complex sentence.	Recognize and revise errors in comma usage to separate individual words in a series, to indicate dialogue, and to separate the independent and dependent clauses in a complex sentence.
5.5.W.8	Identify sentences that correctly use a colon to introduce a list.	Use a colon to introduce a list.	Recognize and revise errors in colon use to introduce a list.

Objective	Basic	Proficient	Advanced
5.5.W.9	Identify sentences that correctly use quotation marks to indicate dialogue, quoted material, and titles of works.	Use quotation marks to indicate dialogue, quoted material, and titles of works.	Recognize and revise errors when using quotation marks to indicate dialogue, quoted material, and titles of works.
5.5.W.10	Identify sentences that correctly use underlining or italics to indicate titles of works.	Use underlining or italics to indicate titles of works.	Recognize and revise errors when using underlining or italics to indicate titles of works.
5.5.W.11	Identify sentences that correctly use a semicolon to punctuate compound sentences.	Use a semicolon to punctuate compound sentences.	Recognize and revise errors when using a semicolon to punctuate compound sentences.
Research			
5.6.R.1	Conduct research to answer questions, including self-generated questions, and to build knowledge, using one source (e.g., visual and text reference sources, electronic resources, and/or interviews).	Conduct research to answer questions, including self-generated questions, and to build knowledge, using multiple sources (e.g., visual and text reference sources, electronic resources, and/or interviews).	Conduct research to answer questions, including self-generated questions, and to evaluate knowledge, using multiple sources (e.g., visual and text reference sources, electronic resources, and/or interviews).
5.6.R.2	Identify and/or use some text features (e.g., graphics, captions, subheadings, italicized words, charts, tables, legends) to comprehend the structure of informational texts.	Identify and use text features (e.g., graphics, captions, headings/subheadings, bold/italicized words, charts, tables, legends) to analyze the structure of informational texts.	Use text features (e.g., graphics, captions, headings/subheadings, bold/italicized words, charts, tables, legends) and explain how they support the structure of informational texts.
5.6.R.3	Determine the relevance of the information gathered.	Determine the relevance and reliability of the information gathered.	Determine and explain the relevance and reliability of the information gathered.
5.6.W.1	Identify a viable research question about a provided topic.	Formulate a viable research question.	Formulate multiple viable research questions.
5.6.W.2	Organize information found during research.	Organize information found during research, following a modified citation style (i.e., author, title, publication date).	

OSTP ELA Grade 6—Range Performance Level Descriptors (Range PLDs)

Objective	Basic	Proficient	Advanced
	OK Policy PLD Basic: *Students demonstrate partial mastery of the essential knowledge and skills appropriate to their grade level. Students scoring at the Basic level typically:*	***OK Policy PLD Proficient:*** *Students demonstrate mastery over appropriate grade-level subject matter and readiness for the next grade level. Students scoring at the Proficient level typically:*	***OK Policy PLD Advanced:*** *Students demonstrate superior performance on challenging subject matter. In addition to demonstrating a broad and in-depth understanding and application of all skills at the Proficient level, students scoring at the Advanced level typically:*
Reading & Writing Process			
6.2.R.1	Summarize the important events or information in a text.	Summarize alphabetic and/or multimodal texts, including main idea, to demonstrate comprehension.	Summarize complex alphabetic and/or multimodal texts, including main idea, to demonstrate comprehension; evaluate summaries.
6.2.R.2	Identify details in fiction, poetry, and nonfiction texts to distinguish genres.	Analyze details in fiction, poetry, and nonfiction texts to distinguish genres.	Analyze details in fiction, poetry, and nonfiction texts to distinguish genres and provide supporting evidence for analysis.
6.2.R.3	Paraphrase a sentence in their own words to demonstrate comprehension.	Paraphrase a paragraph in their own words to demonstrate comprehension.	
6.2.W.1	Identify a prewriting strategy.	Prewrite (e.g., develop ideas and plan).	Create a prewriting strategy.
6.2.W.2	Develop ideas to compose a first draft.	Organize and develop ideas to compose a first draft.	Organize and develop ideas related to a thesis to compose a first draft.
6.2.W.3	Revise drafts of paragraphs for logical order and effective transitions.	Revise drafts for intended purpose, audience, and organization (e.g., logical order and transitions).	Evaluate and revise drafts for intended purpose, audience, and organization (e.g., logical order and transitions).
6.2.W.4	Edit for correct grammar, usage, and mechanics, using various resources.	Edit for correct grammar, usage, and mechanics, using various resources.	Use various resources to correct grammar, usage, and mechanics for intended purposes.
Critical Reading & Writing			
6.3.R.1	Compare and contrast stated purposes of authors writing on the same topic from a variety of historical, cultural, ethnic, and global perspectives.	Compare and contrast stated or implied purposes of authors writing on the same topic from a variety of historical, cultural, ethnic, and global perspectives.	Compare and contrast stated or implied purposes of authors writing on the same topic from a variety of historical, cultural, ethnic, and global perspectives in complex texts.
6.3.R.2	Identify how perspective (e.g., historical, cultural, ethnic, and global) affects a variety of literary and informational texts.	Evaluate how perspective (e.g., historical, cultural, ethnic, and global) affects a variety of literary and informational texts.	Evaluate how perspective (e.g., historical, cultural, ethnic, and global) affects a variety of literary and informational texts and provide supporting evidence.

Objective	Basic	Proficient	Advanced
6.3.R.3	Identify how literary elements contribute to the meaning of a literary text: ● setting ● plot ● characters (i.e., protagonist, antagonist) ● characterization ● conflict (i.e., internal, external) ● point of view (i.e., third person limited and omniscient)	Analyze how literary elements contribute to the meaning of a literary text: ● setting ● plot ● characters (i.e., protagonist, antagonist) ● characterization ● conflict (i.e., internal, external) ● point of view (i.e., third person limited and omniscient)	Evaluate how literary elements contribute to the meaning of a literary text: ● setting ● plot ● characters (i.e., protagonist, antagonist) ● characterization ● conflict (i.e., internal, external) ● point of view (i.e., third person limited and omniscient)
6.3.R.4	Identify how literary devices contribute to the meaning of a text: ● figurative language (i.e., simile, metaphor, personification, hyperbole, imagery, symbolism, idiom) ● sound devices (i.e., onomatopoeia, alliteration)	Analyze how literary devices contribute to the meaning of a text: ● figurative language (i.e., simile, metaphor, personification, hyperbole, imagery, symbolism, idiom) ● sound devices (i.e., onomatopoeia, alliteration)	Evaluate how literary devices contribute to the meaning of a text: ● figurative language (i.e., simile, metaphor, personification, hyperbole, imagery, symbolism, idiom) ● sound devices (i.e., onomatopoeia, alliteration)
6.3.R.5	Identify literary elements that impact a text's theme.	Identify literary elements and devices that impact a text's theme.	Evaluate literary elements and devices that impact a text's theme.
6.3.R.6	Identify facts included in an argument as for or against an issue.	Categorize facts included in an argument as for or against an issue.	Determine whether facts strengthen or weaken an argument.
6.3.R.7	Determine how informational text structures support the author's purpose: ● compare/contrast ● cause/effect ● problem/solution ● description ● sequential	Analyze how informational text structures support the author's purpose: ● compare/contrast ● cause/effect ● problem/solution ● description ● sequential	Analyze and explain how informational text structures support the author's purpose: ● compare/contrast ● cause/effect ● problem/solution ● description ● sequential
6.3.R.8	Identify evidence from a text that supports an inference.	Analyze one or more ideas from a text, providing textual evidence to support their inferences.	
6.3.W.1	Compose simple narratives reflecting real or imagined experiences that: ● include plots involving characters resolving conflicts ● unfold in chronological sequence ● include a narrator, precise language, sensory details, dialogue, and thoughts to enhance the narrative ● use sentence variety to create clarity ● emulate literary elements and/or literary devices from mentor texts	Compose narratives reflecting real or imagined experiences that: ● include plots involving complex characters resolving conflicts ● unfold in chronological or surprising sequence (e.g., foreshadowing) ● include a narrator, precise language, sensory details, dialogue, and thoughts to enhance the narrative ● use sentence variety to create clarity ● emulate literary elements and/or literary devices from mentor texts	Compose complex narratives reflecting real or imagined experiences that: ● include plots involving complex characters resolving conflicts ● unfold in chronological or surprising sequence (e.g., foreshadowing) ● include a narrator, precise language, sensory details, dialogue, and thoughts to enhance the narrative ● use sentence variety to create clarity ● emulate literary elements and/or literary devices from mentor texts

Objective	Basic	Proficient	Advanced
6.3.W.2	Compose simple informative essays or reports that: ● introduce and develop a topic ● incorporate evidence (e.g., specific facts and details) ● attempt to maintain an organized structure	Compose informative essays or reports that: ● objectively introduce and develop topics ● incorporate evidence (e.g., specific facts, details, charts and graphs, data) ● maintain an organized structure ● use sentence variety and word choice to create clarity ● establish and maintain a formal style ● emulate literary devices from mentor texts	Compose complex informative essays or reports that: ● objectively introduce and develop topics ● incorporate evidence (e.g., specific facts, details, charts and graphs, data) ● maintain an organized structure ● use sentence variety and word choice to create clarity ● establish and maintain a formal style ● emulate literary devices from mentor texts
6.3.W.3	Compose simple argumentative essays that: ● introduce a claim ● attempt to organize claims and evidence in a logical sequence ● attempt to provide relevant evidence to develop arguments, using credible sources	Compose argumentative essays that: ● introduce precise claims ● organize claims and evidence in a logical sequence ● provide relevant evidence to develop arguments, using credible sources ● use sentence variety and word choice to create clarity ● establish and maintain a formal style	Compose complex argumentative essays that: ● introduce precise claims ● organize claims and evidence in a logical sequence ● provide relevant evidence to develop arguments, using credible sources ● use sentence variety and word choice to create clarity ● establish and maintain a formal style
Vocabulary			
6.4.R.1	Identify synonyms, antonyms, and analogies.	Analyze the relationships among synonyms, antonyms, and analogies.	Evaluate the relationships among synonyms, antonyms, and analogies for intended effect.
6.4.R.2	Use context clues, connotation, and denotation to determine or clarify the meaning of words or distinguish among simple multiple-meaning words.	Use context clues, connotation, and denotation to determine or clarify the meaning of words or distinguish among multiple-meaning words.	Use context clues, connotation, and denotation to determine or clarify the meaning of words or distinguish among complex multiple-meaning words.
6.4.R.3	Use word parts (e.g., affixes, Latin roots, stems) to define and determine the meaning of simple words.	Use word parts (e.g., affixes, Latin roots, stems) to define and determine the meaning of increasingly complex words.	
6.4.R.4		Use a dictionary, glossary, or thesaurus to determine or clarify the meanings, syllabication, pronunciation, synonyms, antonyms, and parts of speech of words.	
6.4.W.1	Use simple vocabulary in writing to clearly communicate ideas.	Use precise, grade-level vocabulary in writing to clearly communicate ideas.	Use precise, complex vocabulary in writing to clearly communicate ideas.
6.4.W.2	Select language in writing to create a specific given effect according to purpose.	Select language in writing to create a specific effect according to purpose.	Select complex language in writing to create a specific effect according to purpose.
Language			
6.5.R.1		Recognize simple, compound, and complex sentences.	

Objective	Basic	Proficient	Advanced
6.5.R.2	Recognize and explain the impact on meaning of parts of speech in sentences: ● nouns ● verb tense to signify various times, sequences, and conditions ● subject and verb agreement ● adjectives ● prepositional phrases ● adverbs ● interjections	Recognize and explain the impact on meaning of parts of speech in sentences: ● nouns ● verb tense to signify various times, sequences, conditions, and states ● subject and verb agreement ● adjectives ● prepositional phrases ● reflexive pronouns and their antecedents ● singular they / them / their ● subordinating conjunctions ● adverbs ● interjections	
6.5.W.1	Compose simple, compound, and complex sentences.	Compose simple, compound, and complex sentences to add clarity and variety in their writing.	
6.5.W.2	Use nouns, verbs, adjectives, prepositions, adverbs, and pronouns.	Add clarity and variety to their writing with nouns, verbs, adjectives, prepositions, adverbs, and pronouns.	
6.5.W.3	Recognize the following: run-ons, errors in subject and verb agreement, inappropriate shifts in verb tense, and inappropriate shifts in pronoun number and person.	Recognize and correct the following: run-ons, errors in subject and verb agreement, inappropriate shifts in verb tense, and inappropriate shifts in pronoun number and person.	Evaluate for and correct the following: run-ons, errors in subject and verb agreement, inappropriate shifts in verb tense, and inappropriate shifts in pronoun number and person.
6.5.W.7	Identify sentences that correctly use commas to separate an introductory element from the rest of the sentence and to indicate direct address (e.g., Where are you, Sam?).	Use commas to separate an introductory element from the rest of the sentence and to indicate direct address (e.g., Where are you, Sam?).	Edit for commas to separate an introductory element from the rest of the sentence and to indicate direct address (e.g., Where are you, Sam?).
6.5.W.8	Identify sentences that correctly use a colon to introduce a quotation from a source (e.g., According to National Geographic, meerkat homes are quite comfortable: “Each burrow is an extensive tunnel-and-room system that remains cool even under the broiling African sun.”).	Use a colon to introduce a quotation from a source (e.g., According to National Geographic, meerkat homes are quite comfortable: “Each burrow is an extensive tunnel-and-room system that remains cool even under the broiling African sun.”).	Edit for a colon to introduce a quotation from a source (e.g., According to National Geographic, meerkat homes are quite comfortable: “Each burrow is an extensive tunnel-and-room system that remains cool even under the broiling African sun.”).
6.5.W.9	Identify sentences that use quotation marks to indicate dialogue, quoted material, and titles of works.	Use quotation marks to indicate dialogue, quoted material, and titles of works.	Edit for quotation marks to indicate dialogue, quoted material, and titles of works.
6.5.W.10	Identify sentences that use underlining or italics to indicate titles of works.	Use underlining or italics to indicate titles of works.	Edit for underlining or italics to indicate titles of works.

Objective	Basic	Proficient	Advanced
6.5.W.11	Identify sentences that use a semicolon to punctuate compound sentences.	Use a semicolon to punctuate compound sentences.	Edit for a semicolon to punctuate compound sentences.
Research			
6.6.R.1	Identify viable research questions to gather information about a topic.	Use their own viable research questions to gather information about a topic.	
6.6.R.2	Record information from various primary and secondary sources.	Record and organize information from various primary and secondary sources.	Record, organize, and analyze information from various primary and secondary sources.
6.6.R.3	Identify the relevance and reliability of the information gathered.	Determine the relevance and reliability of the information gathered.	Evaluate the relevance and reliability of the information gathered.
6.6.W.1	Identify a viable research question.	Formulate and refine a viable research question.	
6.6.W.2	Identify a clear, concise thesis statement.	Develop a clear, concise thesis statement.	Revise a thesis statement to be clear and concise.
6.6.W.3	Quote findings.	Quote findings following a consistent citation style (e.g., MLA, APA) to avoid plagiarism.	

OSTP ELA Grade 7—Range Performance Level Descriptors (Range PLDs)

Objective	Basic	Proficient	Advanced
	OK Policy PLD Basic: *Students demonstrate partial mastery of the essential knowledge and skills appropriate to their grade level. Students scoring at the Basic level typically:*	***OK Policy PLD Proficient:*** *Students demonstrate mastery over appropriate grade-level subject matter and readiness for the next grade level. Students scoring at the Proficient level typically:*	***OK Policy PLD Advanced:*** *Students demonstrate superior performance on challenging subject matter. In addition to demonstrating a broad and in-depth understanding and application of all skills at the Proficient level, students scoring at the Advanced level typically:*
Reading & Writing Process			
7.2.R.1	Summarize alphabetic and/or multimodal text, including main idea and key details, to demonstrate comprehension of a text.	Summarize alphabetic and/or multimodal texts, including main idea and key details, to demonstrate comprehension within and between texts.	Summarize alphabetic and/or multimodal texts, including main idea and key details, to demonstrate comprehension between texts; evaluate summaries.
7.2.R.2	Identify details in fiction, poetry, and nonfiction texts to distinguish genres.	Analyze details in fiction, poetry, and nonfiction texts to distinguish genres.	Analyze details in fiction, poetry, and nonfiction texts to distinguish genres and provide supporting evidence.
7.2.R.3	Paraphrase a paragraph in their own words to demonstrate comprehension.	Paraphrase a short passage in their own words to demonstrate comprehension.	
7.2.W.1	Identify a prewriting strategy (e.g., develop ideas and plan).	Prewrite (e.g., develop ideas and plan).	Create prewriting strategy.
7.2.W.2	Minimally plan/organize ideas.	Organize and develop ideas to compose a first draft.	Organize and develop ideas related to a thesis to compose a first draft.
7.2.W.3	Revise provided drafts of paragraphs for intended purpose, audience, organization, and coherence (e.g., consistent point of view).	Revise drafts for intended purpose, audience, organization, and coherence (e.g., consistent point of view).	Revise self-created drafts for intended purpose, audience, organization, and coherence (e.g., consistent point of view) and style.
7.2.W.4	Edit for correct grammar, usage, and mechanics, using various resources.	Edit for correct grammar, usage, and mechanics, using various resources.	Use various resources to correct grammar, usage, and mechanics for intended purposes.
Critical Reading & Writing			
7.3.R.1	Read works written on the same topic from a variety of historical, cultural, ethnic, and global perspectives and identify the methods the authors use to achieve their purposes.	Read works written on the same topic from a variety of historical, cultural, ethnic, and global perspectives and compare the methods the authors use to achieve their purposes.	Read works written on the same topic from a variety of historical, cultural, ethnic, and global perspectives and analyze the methods the authors use to achieve their purposes.
7.3.R.2	Identify how perspective (e.g., historical, cultural, ethnic, and global) affects a variety of literary and informational texts.	Evaluate how perspective (e.g., historical, cultural, ethnic, and global) affects a variety of literary and informational texts.	Evaluate how perspective (e.g., historical, cultural, ethnic, and global) affects a variety of literary and informational texts and provide supporting evidence.

Objective	Basic	Proficient	Advanced
7.3.R.3	Identify literary elements to support an interpretation of a text: ● setting ● plot ● characters (i.e., protagonist, antagonist) ● characterization ● conflict (i.e., internal, external) ● point of view (i.e., third person limited and omniscient and second person)	Analyze literary elements to support an interpretation of a text: ● setting ● plot ● characters (i.e., protagonist, antagonist) ● characterization ● conflict (i.e., internal, external) ● point of view (i.e., third person limited and omniscient and second person)	Evaluate literary elements to support an interpretation of a text: ● setting ● plot ● characters (i.e., protagonist, antagonist) ● characterization ● conflict (i.e., internal, external) ● point of view (i.e., third person limited and omniscient and second person)
7.3.R.4	Identify literary devices to support an interpretation of a text: ● figurative language (i.e., simile, metaphor, personification, hyperbole, imagery, symbolism, idiom) ● sound devices (i.e., onomatopoeia, alliteration) ● verbal irony	Analyze literary devices to support an interpretation of a text: ● figurative language (i.e., simile, metaphor, personification, hyperbole, imagery, symbolism, idiom) ● sound devices (i.e., onomatopoeia, alliteration) ● verbal irony	Evaluate literary devices to support an interpretation of a text: ● figurative language (i.e., simile, metaphor, personification, hyperbole, imagery, symbolism, idiom) ● sound devices (i.e., onomatopoeia, alliteration) ● verbal irony
7.3.R.5	Identify literary elements and devices that impact a text's theme.	Identify literary elements and devices that impact a text's theme and mood.	Explain how literary elements and devices impact a text's theme and mood.
7.3.R.6	Identify factual claims in a text.	Distinguish factual claims from opinions.	Evaluate factual claims.
7.3.R.7	Determine how informational text structures support the author's purpose: ● compare/contrast ● cause/effect ● problem/solution ● description ● sequential	Analyze how informational text structures support the author's purpose: ● compare/contrast ● cause/effect ● problem/solution ● description ● sequential	Analyze and explain how informational text structures support the author's purpose: ● compare/contrast ● cause/effect ● problem/solution ● description ● sequential
7.3.R.8	Identify multiple ideas from a text that support an inference.	Analyze multiple ideas from a text, providing textual evidence to support their inferences.	
7.3.W.1	Compose simple narratives reflecting real or imagined experiences that may: ● include plots involving complex characters resolving conflicts ● unfold in chronological or surprising sequence (e.g., foreshadowing) ● include a narrator, precise language, sensory details, dialogue, and thoughts to enhance the narrative ● use sentence variety to create clarity ● emulate literary elements and/or literary devices from mentor texts	Compose narratives reflecting real or imagined experiences that: ● include plots involving complex characters resolving conflicts ● unfold in chronological or surprising sequence (e.g., foreshadowing) ● include a narrator, precise language, sensory details, dialogue, and thoughts to enhance the narrative ● use sentence variety to create clarity ● emulate literary elements and/or literary devices from mentor texts	Compose complex narratives reflecting real or imagined experiences that: ● include plots involving complex characters resolving conflicts ● unfold in chronological or surprising sequence (e.g., foreshadowing) ● include a narrator, precise language, sensory details, dialogue, and thoughts to enhance the narrative ● use sentence variety to create clarity ● emulate literary elements and/or literary devices from mentor texts

Objective	Basic	Proficient	Advanced
7.3.W.2	Compose simple informative essays or reports that: ● introduce and develop topics ● incorporate evidence (e.g., specific facts and details) ● attempt to maintain an organized structure	Compose informative essays or reports that: ● objectively introduce and develop topics ● incorporate evidence (e.g., specific facts, details, charts and graphs, data) ● maintain an organized structure ● use sentence variety and word choice to create clarity ● establish and maintain a formal style ● emulate literary devices from mentor texts	Compose complex informative essays or reports that: ● objectively introduce and develop topics ● incorporate evidence (e.g., specific facts, details, charts and graphs, data) ● maintain an organized structure ● use sentence variety and word choice to create clarity ● establish and maintain a formal style ● emulate literary devices from mentor texts
7.3.W.3	Compose simple argumentative essays that: ● introduce a claim ● attempt to organize the claim and evidence in a logical sequence ● provide evidence to develop arguments, using credible sources	Compose argumentative essays that: ● introduce precise claims ● organize claims and evidence in a logical sequence ● provide relevant evidence to develop arguments, using credible sources ● use sentence variety and word choice to create clarity ● establish and maintain a formal style	Compose complex argumentative essays that: ● introduce precise claims ● organize claims and evidence in a logical sequence ● provide relevant evidence to develop arguments, using credible sources ● use sentence variety and word choice to create clarity ● establish and maintain a formal style
Vocabulary			
7.4.R.1	Identify synonyms, antonyms, and analogies.	Analyze the relationships among synonyms, antonyms, and analogies.	Evaluate the relationships among synonyms, antonyms, and analogies for intended effect.
7.4.R.2	Use context clues and denotation to determine or clarify the meaning of words or distinguish among simple multiple-meaning words.	Use context clues, connotation, and denotation to determine or clarify the meaning of words or distinguish among multiple-meaning words.	Use context clues, connotation, and denotation to determine or clarify the meaning of words or distinguish among complex multiple-meaning words.
7.4.R.3	Use word parts (e.g., affixes, Greek roots, stems) to define and determine the meaning of new words.	Use word parts (e.g., affixes, Greek roots, stems) to define and determine the meaning of increasingly complex words.	
7.4.R.4		Use a dictionary, glossary, or thesaurus to determine or clarify the meanings, syllabication, pronunciation, synonyms, antonyms, and parts of speech of words.	
7.4.W.1	Use simple vocabulary in writing to clearly communicate ideas.	Use precise, grade-level vocabulary in writing to clearly communicate ideas.	Use precise, complex vocabulary in writing to clearly communicate ideas.

Objective	Basic	Proficient	Advanced
7.4.W.2	Select simple language in writing to create a specific, given effect according to purpose.	Select language in writing to create a specific effect according to purpose.	Select complex language in writing to create a specific effect according to purpose.
Language			
7.5.R.1	Recognize simple, compound, and complex sentences.	Recognize simple, compound, complex, and compound-complex sentences and explain their effects.	Analyze simple, compound, complex, and compound-complex sentences and explain their effects.
7.5.R.2	Recognize and explain the impact on meaning of parts of speech in sentences: ● nouns ● subject and verb agreement ● singular they / them / their ● adverbs ● interjections	Recognize and explain the impact on meaning of parts of speech in sentences: ● nouns ● gerunds ● subject and verb agreement ● cumulative and coordinate adjectives ● demonstrative pronouns ● vague pronouns (i.e., ones with unclear or ambiguous antecedents) ● singular they / them / their ● correlative conjunctions ● adverbs ● interjections	
7.5.W.1	Compose simple, compound, complex sentences.	Compose simple, compound, complex, and compound-complex sentences to add clarity and variety in their writing.	Compose compound-complex sentences to add clarity, variety, and intended effect in their writing.
7.5.W.2	Use nouns, verbs, adjectives, prepositions, adverbs, and pronouns.	Add clarity and variety to their writing with nouns, verbs, adjectives, prepositions, adverbs, and pronouns.	
7.5.W.3	Identify the following: run-ons, errors in subject and verb agreement, and inappropriate shifts in verb tense.	Recognize and correct the following: run-ons, errors in subject and verb agreement, inappropriate shifts in verb tense, and vague pronouns (i.e., ones with unclear or ambiguous antecedents).	Evaluate for and correct the following: run-ons, errors in subject and verb agreement, inappropriate shifts in verb tense, and vague pronouns (i.e., ones with unclear or ambiguous antecedents).
7.5.W.7	Identify sentences that correctly use commas to separate words or phrases in a series.	Use commas to separate words or phrases in a series.	Edit for commas used to separate words or phrases in a series.
7.5.W.8	Identify sentences that correctly use a colon to introduce a quotation from a source.	Use a colon to introduce a quotation from a source.	Edit for colons used to introduce a quotation from a source.
7.5.W.9	Identify sentences that correctly use quotation marks to indicate dialogue, quoted material, and titles of works.	Use quotation marks to indicate dialogue, quoted material, and titles of works.	Edit for quotation marks used to indicate dialogue, quoted material, and titles of works.
7.5.W.10	Identify sentences that correctly use underlining or italics to indicate titles of works, thoughts in narratives, and words in a foreign language.	Use underlining or italics to indicate titles of works, thoughts in narratives, and words in a foreign language.	Edit for use of underlining or italics to indicate titles of works, thoughts in narratives, and words in a foreign language.

Objective	Basic	Proficient	Advanced
7.5.W.11	Identify sentences that correctly use a semicolon to punctuate compound and compound-complex sentences.	Use a semicolon to punctuate compound and compound-complex sentences.	Edit for a semicolon to punctuate compound and compound-complex sentences.
Research			
7.6.R.1	Find and comprehend information (e.g., claims, evidence) about a topic and identify a viable research question.	Find and comprehend information (e.g., claims, evidence) about a topic, using their own viable research questions.	
7.6.R.2	Record and organize information from a variety of primary and secondary sources.	Find, record, and organize information from a variety of primary and secondary sources, following ethical and legal guidelines.	Find, analyze, and record and organize information from a variety of primary and secondary sources, following ethical and legal guidelines.
7.6.R.3	Determine the relevance and reliability of the information gathered.	Determine the relevance, reliability, and validity of the information gathered.	Evaluate the relevance, reliability, and validity of the information gathered.
7.6.W.1	Identify a clear and concise research question.	Formulate and refine a viable research question.	
7.6.W.2	Identify a clear, concise thesis statement.	Develop a clear, concise thesis statement.	Revise a thesis statement to be clear and concise.
7.6.W.3	Quote and summarize findings.	Quote and summarize findings following a consistent citation style (e.g., MLA, APA) to avoid plagiarism.	

OSTP ELA Grade 8—Range Performance Level Descriptors (Range PLDs)

Objective	Basic	Proficient	Advanced
	OK Policy PLD Basic: *Students demonstrate partial mastery of the essential knowledge and skills appropriate to their grade level. Students scoring at the Basic level typically:*	***OK Policy PLD Proficient:*** *Students demonstrate mastery over appropriate grade-level subject matter and readiness for the next grade level. Students scoring at the Proficient level typically:*	***OK Policy PLD Advanced:*** *Students demonstrate superior performance on challenging subject matter. In addition to demonstrating a broad and in-depth understanding and application of all skills at the Proficient level, students scoring at the Advanced level typically:*
Reading & Writing Process			
8.2.R.1	Summarize an alphabetic or multimodal text to demonstrate comprehension of a text.	Summarize alphabetic and/or multimodal texts about similar topics to demonstrate comprehension within and between texts.	Summarize alphabetic and/or multimodal texts about similar topics to demonstrate comprehension within and between texts; evaluate summaries.
8.2.R.2	Identify details in fiction, poetry, and nonfiction texts to distinguish genres.	Analyze details in fiction, poetry, and nonfiction texts to identify characteristics of genres.	Analyze details in fiction, poetry, and nonfiction texts to identify characteristics of genres and provide supporting evidence.
8.2.R.3	Paraphrase a paragraph in their own words to demonstrate comprehension.	Paraphrase a portion of passage in their own words to demonstrate comprehension.	
8.2.W.1	Identify a prewriting strategy (e.g., develop ideas and plan).	Prewrite (e.g., develop ideas and plan).	Create and use a prewriting strategy.
8.2.W.2	Minimally plan/organize ideas.	Organize and develop ideas to compose a first draft.	Organize and develop ideas related to a thesis to compose a first draft.
8.2.W.3	Revise provided drafts of paragraphs for intended purpose, audience, and organization.	Revise drafts for intended purpose, audience, organization, coherence, and style (e.g., word choice and sentence variety).	Revise self-created drafts for intended purpose, audience, organization, coherence, and style (e.g., word choice and sentence variety).
8.2.W.4	Edit a paragraph for correct grammar and mechanics, using various resources.	Edit for correct grammar, usage, and mechanics, using various resources.	Edit for correct grammar, usage, and mechanics, using various resources; edit mechanics for intended effect and purpose.
Critical Reading & Writing			
8.3.R.1	Analyze works written on the same topic from a variety of historical, cultural, ethnic, and global perspectives and compare the methods the authors use to achieve their purposes.	Analyze works written on the same topic from a variety of historical, cultural, ethnic, and global perspectives and analyze the methods the authors use to achieve their purposes.	Analyze works written on the same topic from a variety of historical, cultural, ethnic, and global perspectives and evaluate the methods the authors use to achieve their purposes.
8.3.R.2	Determine perspectives (e.g., historical, cultural, ethnic, and global) and describe how they affect various literary and informational texts.	Evaluate perspectives (e.g., historical, cultural, ethnic, and global) and describe how they affect various literary and informational texts.	

Objective	Basic	Proficient	Advanced
8.3.R.3	Identify literary elements to support interpretations of a literary text: ● setting ● plot ● characters (i.e., protagonist, antagonist) ● characterization ● conflict (i.e., internal, external) ● point of view (i.e., third person limited and omniscient, second person, and unreliable narrator)	Analyze literary elements to support interpretations of a literary text: ● setting ● plot ● characters (i.e., protagonist, antagonist) ● characterization ● conflict (i.e., internal, external) ● point of view (i.e., third person limited and omniscient, second person, and unreliable narrator)	Evaluate literary elements to support interpretations of a literary text: ● setting ● plot ● characters (i.e., protagonist, antagonist) ● characterization ● conflict (i.e., internal, external) ● point of view (i.e., third person limited and omniscient, second person, and unreliable narrator)
8.3.R.4	Determine literary devices to support interpretations of a text: ● figurative language (i.e., simile, metaphor, personification, hyperbole, imagery, symbolism, idiom) ● sound devices (i.e., onomatopoeia, alliteration) ● verbal and situational irony	Analyze literary devices to support interpretations of a text: ● figurative language (i.e., simile, metaphor, personification, hyperbole, imagery, symbolism, idiom) ● sound devices (i.e., onomatopoeia, alliteration) ● verbal and situational irony	Evaluate literary devices to support interpretations of a text: ● figurative language (i.e., simile, metaphor, personification, hyperbole, imagery, symbolism, idiom) ● sound devices (i.e., onomatopoeia, alliteration) ● verbal and situational irony
8.3.R.5	Identify literary elements and devices that impact a text's theme and mood.	Identify literary elements and devices that impact a text's theme, mood, and tone.	Identify literary elements and devices that impact a text's theme, mood, and tone.
8.3.R.6	Identify a claim and describe how evidence supports a claim.	Evaluate textual evidence to determine whether a claim is substantiated or unsubstantiated.	
8.3.R.7	Determine how informational text structures support the author's purpose: ● compare/contrast ● cause/effect ● problem/solution ● description ● sequential	Analyze how informational text structures support the author's purpose: ● compare/contrast ● cause/effect ● problem/solution ● description ● sequential	Analyze and evaluate how informational text structures support the author's purpose and explain why one structure was selected over another. ● compare/contrast ● cause/effect ● problem/solution ● description ● sequential
8.3.R.8	Compare or contrast ideas within a text, providing textual evidence to support their inferences.	Compare or contrast two or more texts, providing textual evidence to support their inferences.	Analyze two or more texts, providing textual evidence to support their inferences.
8.3.W.1	Compose simple narratives reflecting real or imagined experiences that may: ● include plots involving complex characters resolving conflicts ● unfold in chronological or surprising sequence (e.g., flashback and foreshadowing) ● include a narrator, precise language, sensory details, and dialogue to enhance the narrative ● use sentence variety to create clarity ● emulate literary elements and/or literary devices from mentor texts	Compose narratives reflecting real or imagined experiences that: ● include plots involving complex characters resolving conflicts ● unfold in chronological or surprising sequence (e.g., flashback and foreshadowing) ● include a narrator, precise language, sensory details, and dialogue to enhance the narrative ● use sentence variety to create clarity ● emulate literary elements and/or literary devices from mentor texts	Compose complex narratives reflecting real or imagined experiences that: ● include plots involving complex characters resolving conflicts ● unfold in chronological or surprising sequence (e.g., flashback and foreshadowing) ● include a narrator, precise language, sensory details, and dialogue to enhance the narrative ● use sentence variety to create clarity ● emulate literary elements and/or literary devices from mentor texts

Objective	Basic	Proficient	Advanced
8.3.W.2	Compose simple informative essays or reports that: ● introduce and develop topics ● incorporate evidence (e.g., specific facts, details) ● attempt to maintain an organized structure ● attempt to use sentence variety and word choice to create clarity	Compose informative essays or reports that: ● objectively introduce and develop topics ● incorporate evidence (e.g., specific facts, details, charts and graphs, data) ● maintain an organized structure ● use sentence variety and word choice to create clarity ● establish and maintain a formal style ● emulate literary devices from mentor texts	Compose complex informative essays or reports that: ● objectively introduce and develop topics ● incorporate evidence (e.g., specific facts, details, charts and graphs, data) ● maintain a clear and organized structure using smooth transitions ● use sentence variety and word choice to create clarity ● establish and maintain a formal style ● emulate literary devices from mentor texts
8.3.W.3	Compose simple argumentative essays that: ● introduce claims ● attempt to organize claims and evidence in a logical sequence ● provide evidence to develop arguments, using credible sources ● attempt to use sentence variety and word choice to create clarity	Compose argumentative essays that: ● introduce precise claims ● acknowledge counterclaims ● organize claims, counterclaims, and evidence in a logical sequence ● provide relevant evidence to develop arguments, using credible sources ● use sentence variety and word choice to create clarity ● establish and maintain a formal style	Compose complex argumentative essays that: ● clearly introduce precise claims ● acknowledge counterclaims ● effectively organize claims, counterclaims, and evidence in a logical sequence using smooth transitions ● provide relevant evidence to develop arguments, using credible sources ● use sentence variety and precise word choice to create clarity ● establish and maintain a formal style
Vocabulary			
8.4.R.1	Identify synonyms, antonyms, and analogies.	Analyze the relationships among synonyms, antonyms, and analogies.	Evaluate the relationships among synonyms, antonyms, and analogies.
8.4.R.2	Use context clues, connotation, and denotation to determine or clarify the meaning of words or distinguish among simple multiple-meaning words.	Use context clues, connotation, and denotation to determine or clarify the meaning of words or distinguish among multiple-meaning words.	Use context clues, connotation, and denotation to determine or clarify the meaning of words or distinguish among complex multiple-meaning words.
8.4.R.3	Use word parts (e.g., affixes, Greek roots, stems) to define and determine the meaning of simple words.	Use word parts (e.g., affixes, Greek roots, stems) to define and determine the meaning of increasingly complex words.	
8.4.R.4		Use a dictionary, glossary, or thesaurus to determine or clarify the meanings, syllabication, pronunciation, synonyms, antonyms, and parts of speech of words.	
8.4.W.1	Use precise, simple vocabulary in writing to clearly communicate ideas.	Use precise, grade-level vocabulary in writing to clearly communicate ideas.	Use precise, complex vocabulary in writing to clearly communicate ideas.

Objective	Basic	Proficient	Advanced
8.4.W.2	Select language in writing to create a given effect according to purpose.	Select language in writing to create a specific effect according to purpose.	Select complex language in writing to create a specific effect according to purpose.
Language			
8.5.R.1		Recognize active and passive voice and misplaced and dangling modifiers in sentences.	
8.5.R.2	Recognize parts of speech in sentences: ● nouns ● verbals (i.e., gerunds, participles, infinitives) ● cumulative and coordinate adjectives ● vague pronouns ● singular they/them/their ● coordinating, subordinating, and correlative conjunctions ● adverbs ● interjections	Recognize and explain the impact on meaning of parts of speech in sentences: ● nouns ● verbals (i.e., gerunds, participles, infinitives) ● cumulative and coordinate adjectives ● vague pronouns ● singular they/them/their ● coordinating, subordinating, and correlative conjunctions ● adverbs ● interjections	
8.5.W.1	Compose simple, compound, complex, and compound-complex sentences.	Compose simple, compound, complex, and compound-complex sentences to add clarity and variety to their writing.	Compose simple, compound, complex, and compound-complex sentences to add clarity, variety, and contribute to the intended purpose of their writing.
8.5.W.2	Use nouns, verbs, verbals, adjectives, prepositions, adverbs, pronouns, and conjunctions in their writing.	Create clarity and/or add variety to their writing with nouns, verbs, verbals, adjectives, prepositions, adverbs, pronouns, and conjunctions.	Create clarity and add variety to their writing with nouns, verbs, verbals, adjectives, prepositions, adverbs, pronouns, and conjunctions.
8.5.W.3	Recognize and correct vague pronouns.	Recognize and correct the following: misplaced and dangling modifiers, vague pronouns, and second person point of view in formal writing.	Evaluate for and correct the following: misplaced and dangling modifiers, vague pronouns, and second person point of view in formal writing.
8.5.W.7		Use commas to separate coordinate adjectives (e.g., a fascinating, enjoyable movie).	Evaluate for and use commas to separate coordinate adjectives (e.g., a fascinating, enjoyable movie).
8.5.W.8		Use a colon to introduce a quotation from a source.	Edit for colons used to introduce a quotation from a source.
8.5.W.10	Use underlining or italics to indicate titles of works.	Use underlining or italics to indicate titles of works, thoughts in narratives, and words in a foreign language.	Edit for underlining or italics to indicate titles of works, thoughts in narratives, and words in a foreign language.

Objective	Basic	Proficient	Advanced
8.5.W.11	Use a semicolon to punctuate compound sentences.	Use a semicolon to punctuate compound and compound-complex sentences.	Edit for a semicolon to punctuate compound and compound-complex sentences.
Research			
8.6.R.1	Find and comprehend information (e.g., claims, evidence) about a topic and identify viable research questions.	Find and comprehend information (e.g., claims, evidence) about a topic, using their own viable research questions.	
8.6.R.2	Find and organize information from a variety of primary and secondary sources.	Find, record, and organize information from a variety of primary and secondary sources, following ethical and legal guidelines.	Find, analyze, record, and organize information from a variety of primary and secondary sources, following ethical and legal guidelines.
8.6.R.3	Identify the relevance, reliability, and validity of the information gathered.	Determine the relevance, reliability, and validity of the information gathered.	Evaluate information for relevance, reliability, and validity.
8.6.W.1	Identify a viable research question.	Formulate and refine a viable research question.	
8.6.W.2	Identify a clear, concise thesis statement.	Develop a clear, concise, defensible thesis statement.	Revise a defensible thesis statement based on findings for clarity and concision.
8.6.W.3	Quote and summarize findings.	Quote, paraphrase, and summarize findings following a consistent citation style (e.g., MLA, APA) to avoid plagiarism.	

OSTP Mathematics Grade 3—Range Performance Level Descriptors (Range PLDs)

Strand	Basic	Proficient	Advanced	Objective(s)
	OK Policy PLD Basic: *Students demonstrate partial mastery of the essential knowledge and skills appropriate to their grade level. Students scoring at the Basic level typically:*	***OK Policy PLD Proficient:*** *Students demonstrate mastery over appropriate grade-level subject matter and readiness for the next grade level. Students scoring at the Proficient level typically:*	***OK Policy PLD Advanced:*** *Students demonstrate superior performance on challenging subject matter. In addition to demonstrating a broad and in-depth understanding and application of all skills at the Proficient level. Students scoring at the Advanced level typically:*	
Numbers & Operations	Represent and describe whole numbers up to 100,000.	Compare and order whole numbers.	Compare and order whole numbers when numbers are given in different forms.	3.N.1.1, 3.N.1.2, 3.N.1.4
	Solve addition and subtraction problems.	Solve multiplication problems. Recognize the relationship between multiplication and division.	Assess the reasonableness of results in addition and subtraction problems.	3.N.1.3, 3.N.2.3, 3.N.2.5, 3.N.2.7, 3.N.2.8
		Round numbers to the nearest thousand, ten thousand, and hundred thousand.	Use rounding to estimate sums and differences.	3.N.1.5, 3.N.2.4
		Represent multiplication and division facts by modeling a variety of approaches.		3.N.2.1, 3.N.2.6
		Demonstrate fluency with multiplication facts.		3.N.2.2
Numbers & Operations	Read and write fractions. Apply understanding of unit fractions. Represent fractions with models.	Compose and decompose fractions.	Compare and order fractions using models.	3.N.3.1, 3.N.3.2, 3.N.3.3, 3.N.3.4
	Determine the value of a set of coins or a set of bills.			3.N.4.1, 3.N.4.2
Algebraic Reasoning & Algebra	Describe patterns.	Describe the rule for a pattern.	Create and extend patterns.	3.A.1.1, 3.A.1.2, 3.A.1.3
		Determine unknowns (represented by symbols) in one-step addition, subtraction, and multiplication equations.	Generate real-world situations to represent number sentences.	3.A.2.1

Strand	Basic	Proficient	Advanced	Objective(s)
Algebraic Reasoning & Algebra	Identify commutative, identity, and associative properties.	Apply commutative, identity, and associative properties.		3.A.2.2
Geometry & Measurement	Sort three-dimensional figures based on attributes.	Build a three-dimensional figure using unit cubes.	Count cubes to find the number of cubes needed to pack the whole or half of a structure.	3.GM.1.1, 3.GM.1.2, 3.GM.2.3
	Identify right angles.	Classify angles.		3.GM.1.3
		Determine the perimeter of polygons.		3.GM.2.1
		Determine the area of two-dimensional figures.	Analyze why length and width are multiplied to find the area of a rectangle.	3.GM.2.2, 3.GM.2.4
	Choose an appropriate instrument to measure the length of an object.	Measure length.		3.GM.2.5, 3.GM.2.6
		Use an analog thermometer to determine temperature.		3.GM.2.7
	Read and write time from a digital clock.	Read and write time from an analog clock.	Determine elapsed time.	3.GM.3.1, 3.GM.3.2
Data & Probability	Collect data.	Organize a data set using a frequency table, line plot, pictograph, or bar graph with intervals of one.	Organize a data set using a frequency table, line plot, pictograph, or bar graph with intervals other than one.	3.D.1.1
		Solve one-step problems represented with a frequency table, pictograph, or bar graph with scaled intervals.	Solve two-step problems represented with a frequency table, pictograph, or bar graph with scaled intervals.	3.D.1.2

OSTP Mathematics Grade 4—Range Performance Level Descriptors (Range PLDs)

Strand	Basic	Proficient	Advanced	Objective(s)
	OK Policy PLD Basic: *Students demonstrate partial mastery of the essential knowledge and skills appropriate to their grade level.* *Students scoring at the Basic level typically:*	***OK Policy PLD Proficient:*** *Students demonstrate mastery over appropriate grade-level subject matter and readiness for the next grade level.* *Students scoring at the Proficient level typically:*	***OK Policy PLD Advanced:*** *Students demonstrate superior performance on challenging subject matter. In addition to demonstrating a broad and in-depth understanding and application of all skills at the Proficient level.* *Students scoring at the Advanced level typically:*	
Numbers & Operations	Represent and describe whole numbers up to 1,000,000.	Use place value to compare and order whole numbers.		4.N.1.1, 4.N.1.2, 4.N.1.4
		Apply knowledge of place value to multiply a number by 10, 100, and 1,000.		4.N.1.3
	Demonstrate fluency with multiplication and division facts.	Multiply and estimate 3-digit by 1-digit and 2-digit by 2-digit whole numbers.	Assess the reasonableness of the estimation of 3-digit by 1-digit and 2-digit by 2-digit whole-number products.	4.N.2.1, 4.N.2.2, 4.N.2.3,
		Solve multi-step problems.	Apply and analyze models to solve multi-step problems and assess the reasonableness of results.	4.N.2.4
		Divide a 3-digit dividend by a 1-digit divisor with and without remainder.		4.N.2.5
	Use models to determine equivalent fractions.			4.N.3.1
		Use benchmark fractions to locate additional fractions on a number line.		4.N.3.2
	Use models to compare and order fractions with like denominators.	Use models to compare and order fractions with unlike denominators.		4.N.3.3
	Use models to add and subtract fractions.	Decompose fractions.		4.N.3.4, 4.N.3.5
	Represent tenths and hundredths with models.	Make connections between fractions (tenths and hundredths) and decimals with models.		4.N.3.1, 4.N.3.6
	Read and write decimals up to the hundredths place, including money.	Compare and order benchmark fractions. Compare and order decimals.	Compare and order benchmark fractions to decimals.	4.N.3.7, 4.N.3.8, 4.N.3.9
		Select the fewest number of coins for a given amount of money.		4.N.4.1

Strand	Basic	Proficient	Advanced	Objective(s)
Numbers & Operations	Determine change using whole dollars.	Determine change using coins and dollars.		4.N.4.2
Algebraic Reasoning & Algebra	Create an input/output table.	Determine rules and extend patterns shown in input/output tables.		4.A.1.1, 4.A.1.2
		Define the single operation rule of a pattern involving geometric shapes.	Construct models to show growth patterns involving geometric shapes.	4.A.1.3
	Use the relationships between multiplication and division with the properties of multiplication to solve problems.	Solve for a variable in an equation with addition, subtraction, multiplication, and division of whole numbers.	Analyze models to represent number sentences.	4.A.2.1, 4.A.2.2
		Determine unknown values in equivalent expressions.	Determine unknown values in non-equivalent expressions.	4.A.2.3
Geometry & Measurement	Identify points, endpoints, and angles.	Identify lines, line segments, rays, and parallel and perpendicular lines.		4.GM.1.1
	Describe and recognize quadrilaterals.	Classify quadrilaterals.	Construct quadrilaterals.	4.GM.1.2
	Identify three-dimensional figures.	Compare and contrast the similarities and differences of three-dimensional figures based on their attributes.		4.GM.1.3
		Measure angles.		4.GM.2.1
		Decompose and determine the area of polygons.		4.GM.2.2
		Develop the concept of volume.	Create models to determine volume.	4.GM.2.3
	Identify appropriate units and tools to measure length. Measure the lengths of objects.	Compare the lengths of objects.	Determine and justify the best use of customary and metric measurements in a variety of situations.	4.GM.2.4, 4.GM.2.5, 4.GM.2.6, 4.GM.2.7

Strand	Basic	Proficient	Advanced	Objective(s)
Geometry & Measurement		Convert measurements of time.	Determine elapsed time.	4.GM.3.1, 4.GM.3.2
Data & Probability		Create a frequency table or line plot with whole numbers. Organize data sets to create tables, bar graphs, timelines, and Venn diagrams with whole numbers.	Create a frequency table or line plot with fractions. Organize data sets to create tables, bar graphs, timelines, and Venn diagrams with fractions.	4.D.1.1, 4.D.1.2
		Solve one-step problems by analyzing data in whole-number, decimal, or fraction form in a frequency table and line plot.	Solve two-step problems by analyzing data in whole-number, decimal, or fraction form in a frequency table and line plot.	4.D.1.3

OSTP Mathematics Grade 5—Range Performance Level Descriptors (Range PLDs)

Strand	Basic	Proficient	Advanced	Objective(s)
	OK Policy PLD Basic: *Students demonstrate partial mastery of the essential knowledge and skills appropriate to their grade level. Students scoring at the Basic level typically:*	***OK Policy PLD Proficient:*** *Students demonstrate mastery over appropriate grade-level subject matter and readiness for the next grade level. Students scoring at the Proficient level typically:*	***OK Policy PLD Advanced:*** *Students demonstrate superior performance on challenging subject matter. In addition to demonstrating a broad and in-depth understanding and application of all skills at the Proficient level. Students scoring at the Advanced level typically:*	
Numbers & Operations	Represent decimal fractions with a model.			5.N.1.1
	Recognize and generate equivalent decimals, fractions, and mixed numbers and represent whole numbers.	Compare and order fractions. Compare and order decimals.	Order a mix of decimals, fractions, mixed numbers, and whole numbers.	5.N.1.2, 5.N.1.3, 5.N.1.4
	Solve division, multiplication, addition, and subtraction problems.	Estimate and solve division problems with the remainder represented as a fraction, decimal, or whole number.	Interpret the remainder of division problems within the context of the problem.	5.N.2.1, 5.N.2.2, 5.N.2.3, 5.N.2.4
	Add and subtract decimals and fractions with like denominators.	Estimate, illustrate, add, and subtract fractions and mixed numbers.	Order a mix of decimals, fractions, mixed numbers, and whole numbers.	5.N.3.1, 5.N.3.2, 5.N.3.3, 5.N.3.4
Algebraic Reasoning & Algebra	Describe patterns of change. Identify the origin and axes in relation to the coordinates.	Graph patterns of change as ordered pairs on a coordinate plane. Use a rule or table to represent ordered pairs.	Make predictions and generalizations about patterns of change.	5.A.1.1, 5.A.1.2

Strand	Basic	Proficient	Advanced	Objective(s)
Algebraic Reasoning & Algebra	Generate equivalent numerical expressions.	Evaluate numerical expressions.	Apply the order of operations, commutative property, associative property, and distributive property.	5.A.2.1, 5.A.2.3
	Determine whether an equation involving a variable is true or false for a given value of the variable.	Determine whether an inequality involving a variable is true or false for a given value of the variable.		5.A.2.2
Geometry & Measurement	Describe and identify triangles.	Classify triangles by their attributes.	Construct triangles.	5.GM.1.1
	Describe, identify, and classify three-dimensional figures when given an image.	Using attributes, describe, identify, and classify three-dimensional figures without a given image.		5.GM.1.2
	Recognize nets for three-dimensional figures.	Construct nets for three-dimensional figures.		5.GM.1.3
		Determine volume of rectangular prisms.	Compare volumes of rectangular prisms.	5.GM.2.1
		Estimate perimeter of polygons and shapes that may include curves.	Justify perimeter of shapes that may include curves.	5.GM.2.2
	Measure angles.	Compare angles.		5.GM.3.1
	Choose an appropriate instrument to measure lengths. Measure the lengths of objects.	Apply the relationship between units to convert and compare objects to solve problems.		5.GM.3.2, 5.GM.3.3, 5.GM.3.4
		Estimate lengths and geometric measurements.		5.GM.3.5
Data & Probability		Calculate the mean, median, mode, and range of a data set.		5.D.1.1
		Create and analyze line and double bar graphs with whole numbers.	Create and analyze line and double bar graphs with fractions or decimals.	5.D.1.2

OSTP Mathematics Grade 6—Range Performance Level Descriptors (Range PLDs)

Strand	Basic	Proficient	Advanced	Objective(s)
	OK Policy PLD Basic: *Students demonstrate partial mastery of the essential knowledge and skills appropriate to their grade level. Students scoring at the Basic level typically:*	***OK Policy PLD Proficient:*** *Students demonstrate mastery over appropriate grade-level subject matter and readiness for the next grade level. Students scoring at the Proficient level typically:*	***OK Policy PLD Advanced:*** *Students demonstrate superior performance on challenging subject matter. In addition to demonstrating a broad and in-depth understanding and application of all skills at the Proficient level. Students scoring at the Advanced level typically:*	
Numbers & Operations	Represent reflective relationships between integers and their opposites. Explain the meaning of zero.			6.N.1.1
	Read and represent integers or other positive rational numbers.	Order and compare integers or other positive rational numbers.	Explain integers or other positive rational numbers.	6.N.1.2, 6.N.1.3
	Explain that a percent represents parts “out of 100” and ratios “to 100.”	Find equivalent fractions, mixed numbers, decimals, and percents.		6.N.1.3, 6.N.1.4
	Illustrate and compute the addition and subtraction of integers.	Estimate addition and subtraction of integers.	Assess the reasonableness of an answer to addition and subtraction of integers.	6.N.2.1, 6.N.2.2, 6.N.2.3
	Evaluate powers with whole-number bases and exponents.	Identify and represent patterns with whole-number exponents and perfect squares.		6.N.2.4
	Factor whole numbers.	Write positive integers as products of prime factors. Determine greatest common factor and least common multiple.	Use greatest common factor and least common multiple to calculate with fractions, find equivalent fractions, and express the sum of two-digit numbers with a common factor using the distributive property.	6.N.2.5, 6.N.2.6
	Identify ratios.	Use ratios to compare and relate quantities. Determine unit rates. Recognize that multiplicative comparison and additive comparison are different.	Apply the relationship between ratios, equivalent fractions, unit rates, and percents to solve problems in various contexts.	6.N.3.1, 6.N.3.2, 6.N.3.3
	Solve problems involving multiplication and division of fractions and decimals.	Illustrate multiplication and division of fractions and decimals. Estimate solutions involving multiplication and division of fractions and decimals.	Use estimates to assess the reasonableness of solutions involving multiplication and division of fractions and decimals in the context of the problem.	6.N.4.1, 6.N.4.2, 6.N.4.3
		Use modeling to interpret problems including money, measurement, geometry, and data.		6.N.4.4

Strand	Basic	Proficient	Advanced	Objective(s)
Algebraic Reasoning & Algebra	Graph ordered pairs in all quadrants.	Represent relationships between varying positive quantities with rules, graphs, and tables.		6.A.1.1, 6.A.1.2
	Evaluate the value of a variable in expressions, equations, and inequalities.	Model or generate expressions, equations, and inequalities.		6.A.1.3, 6.A.2.1, 6.A.3.1
	Use number sense and properties of operations to solve and graph one-step equations on a number line.	Interpret the solution of a one-step equation.	Assess the reasonableness of the solution of a one-step equation.	6.A.3.2
Geometry & Measurement	Identify and display the effect of transformations.	Describe, apply, and predict transformations and use transformations to show congruence.		6.GM.1.1, 6.GM.1.2
	Identify lines of symmetry.	Describe lines of symmetry.		6.GM.1.3
	Determine the area of parallelograms, squares, and triangles.	Determine the area of polygons that can be decomposed into triangles and rectangles.	Develop the formulas for the area of parallelograms, squares, and triangles.	6.GM.2.1, 6.GM.2.2, 6.GM.2.3
	Identify angle relationships by name.	Use relationships between angles and the triangle sum theorem to solve problems.		6.GM.3.1, 6.GM.3.2
		Estimate weights and capacities. Estimate and solve problems requiring conversion of lengths.		6.GM.4.1, 6.GM.4.2
Data & Probability		Interpret the mean, median, and mode for a set of data.	Justify which measure of center would provide the most descriptive information for a set of data.	6.D.1.1, 6.D.1.2
	Represent possible outcomes using a probability continuum. Determine the sample space of simple experiments and identify possible outcomes.	Compare possible outcomes of simple experiments.	Analyze the differences between two outcomes of simple experiments.	6.D.2.1, 6.D.2.2, 6.D.2.3

OSTP Mathematics Grade 7—Range Performance Level Descriptors (Range PLDs)

Strand	Basic	Proficient	Advanced	Objective(s)
	OK Policy PLD Basic: *Students demonstrate partial mastery of the essential knowledge and skills appropriate to their grade level. Students scoring at the Basic level typically:*	***OK Policy PLD Proficient:*** *Students demonstrate mastery over appropriate grade-level subject matter and readiness for the next grade level. Students scoring at the Proficient level typically:*	***OK Policy PLD Advanced:*** *Students demonstrate superior performance on challenging subject matter. In addition to demonstrating a broad and in-depth understanding and application of all skills at the Proficient level. Students scoring at the Advanced level typically:*	
Numbers & Operations		Compare and order rational numbers.		7.N.1.1
	Recognize equivalent representations of rational numbers.	Generate equivalent representations of rational numbers.		7.N.1.2
	Calculate the absolute value of a rational number.	Explain the absolute value of a rational number as the distance of that number from zero on a number line.	Apply the concept of absolute value to model and solve problems.	7.N.1.3
		Estimate solutions of problems involving rational numbers.	Assess the reasonableness of the solutions of problems with rational numbers.	7.N.2.1
	Multiply and divide integers.	Illustrate multiplication and division of integers using a variety of representations.		7.N.2.2, 7.N.2.3
	Solve problems involving rational numbers and exponents.	Model problems involving rational numbers and exponents.		7.N.2.4, 7.N.2.5
Algebraic Reasoning & Algebra	Identify a proportional relationship.	Identify the constant of proportionality from a graph.		7.A.1.1, 7.A.1.2
		Represent proportional relationships in a variety of ways and determine unit rates.	Translate from one representation of a proportional relationship to another.	7.A.2.1
		Solve problems involving proportional relationships.	Assess the reasonableness of solutions of problems involving proportional relationships.	7.A.2.2, 7.A.2.3, 7.A.2.4
	Solve equations.	Write equations.	Interpret equations and inequalities involving variables and rational numbers.	7.A.3.1
	Solve and graph inequalities.	Write inequalities.		7.A.3.2
	Evaluate expressions using the order of operations.	Generate and evaluate equivalent expressions.	Justify the steps when evaluating expressions.	7.A.4.1, 7.A.4.2

Strand	Basic	Proficient	Advanced	Objective(s)
Geometry & Measurement	Develop the concepts of surface area and volume of rectangular prisms.	Develop the concepts of surface area and volume of rectangular prisms with non-whole number units. Calculate surface area of rectangular prisms.		7.GM.1.1, 7.GM.1.2., GM.1.3
	Calculate perimeter of composite figures.	Calculate area of trapezoids and composite figures.	Develop the formula for area of trapezoids.	7.GM.2.1, 7.GM.2.2
		Solve problems that require conversions of weights and capacities.		7.GM.3.1
	Recognize that pi can be approximated by rational numbers such as 22/7 and 3.14. Calculate the circumference and area of circles.	Demonstrate an understanding of the proportional relationship between the diameter and circumference of a circle.	Make connections between circumference and area to solve problems involving circles.	7.GM.3.2, 7.GM.3.3
	Determine scale factors resulting from dilations.	Use scale factors to solve problems.		7.GM.4.1
		Describe similarity and compare figures for similarity.		7.GM.4.1
	Determine side lengths of similar triangles and rectangles.	Determine areas of similar triangles and rectangles.		7.GM.4.2
	Describe the effect of dilations, translations, and reflections.	Apply and graph the effect of dilations, translations, and reflections.	Apply and graph rotations. Analyze the effect of dilations and multiple transformations.	7.GM.4.3
Data & Probability			Design simple experiments and use data to draw conclusions and make predictions.	7.D.1.1
	Calculate measures of central tendency and spread.		Use measures of central tendency and spread to draw conclusions about data collected and make predictions.	7.D.1.1

Strand	Basic	Proficient	Advanced	Objective(s)
Data & Probability		Display information on circle graphs and histograms.	Interpret information from circle graphs and histograms.	7.D.1.2
		Use box plots to identify relevant data.	Analyze box plots.	7.D.1.3
	Calculate theoretical probability.	Interpret theoretical probability and draw conclusions.	Predict relative frequencies based on theoretical probabilities.	7.D.2.1, 7.D.2.2, 7.D.2.3

OSTP Mathematics Grade 8—Range Performance Level Descriptors (Range PLDs)

Strand	Basic	Proficient	Advanced	Objective(s)
	OK Policy PLD Basic: *Students demonstrate partial mastery of the essential knowledge and skills appropriate to their grade level.* *Students scoring at the Basic level typically:*	***OK Policy PLD Proficient:*** *Students demonstrate mastery over appropriate grade-level subject matter and readiness for the next grade level.* *Students scoring at the Proficient level typically:*	***OK Policy PLD Advanced:*** *Students demonstrate superior performance on challenging subject matter. In addition to demonstrating a broad and in-depth understanding and application of all skills at the Proficient level.* *Students scoring at the Advanced level typically:*	
Numbers & Operations	Translate between standard form and scientific notation.	Multiply and divide numbers expressed in scientific notation.		PA.N.1.2, PA.N.1.3
	Locate, identify, compare, and order rational numbers on and off a number line.	Locate, identify, compare, and order irrational numbers on and off a number line.		PA.N.1.2, PA.N.1.4
	Identify square roots of perfect squares.	Locate square roots that are irrational numbers between two consecutive positive integers.		PA.N.1.4
		Apply the properties of integer exponents.	Develop the properties of integer exponents.	PA.N.1.1
Algebraic Reasoning & Algebra	Simplify and generate equivalent expressions.	Evaluate equivalent expressions. Evaluate expressions.	Justify equivalent expressions.	PA.A.3.1, PA.A.3.2
	Solve linear equations.	Represent situations using linear equations.	Interpret solutions of linear equations.	PA.A.4.1
		Represent, write, solve, and graph inequalities.		PA.A.4.2
	Identify linear relationships.	Describe linear relationships.	Analyze linear relationships.	PA.A.2.2
		Recognize that a function is a relationship between an independent variable and a dependent variable.		PA.A.1.1

Strand	Basic	Proficient	Advanced	Objective(s)
Algebraic Reasoning & Algebra	Identify linear functions from a graph.	Identify linear functions from an equation.		PA.A.1.3
	Identify linear relationships between two variables.	Describe linear relationships between two variables.	Analyze linear relationships between two variables.	PA.A.1.3
	Describe linear functions with two variables.	Represent and solve linear functions with two variables.	Analyze linear functions with two variables and interpret results.	PA.A.1.2, PA.A.2.1, PA.A.2.3, PA.A.2.5, PA.A.4.1, PA.A.4.2, PA.A.4.3
	Identify slope.	Identify intercepts.		PA.A.2.3
		Predict the effect on the graph of a linear function when the *y*-intercept is changed.	Predict the effect on the graph of a linear function when the slope is changed.	PA.A.2.4
Geometry & Measurement	Calculate the surface area of rectangular prisms.	Calculate the surface area and volume of right cylinders.	Justify the formulas for volume of rectangular prisms and right cylinders.	PA.GM.2.1, PA.GM.2.2, PA.GM.2.3, PA.GM.2.4
		Use and apply the Pythagorean theorem.	Justify the Pythagorean theorem.	PA.GM.1.1, PA.GM.1.2
Data & Probability			Describe the impact that inserting or deleting a data point has on the mean and the median of a data set.	PA.D.1.1
		Explain how outliers affect measures of center and spread.		PA.D.1.2
	Collect and display information on a scatter plot.	Identify the informal line of best fit from a given scatter plot.	Interpret a scatter plot, determine the rate of change, and use a line of best fit to make predictions.	PA.D.1.3
	Identify sample spaces, classify events as independent or dependent.	Calculate experimental probability, determine how samples are chosen, and generalize samples to populations.	Interpret and predict experimental probability.	PA.D.2.1, PA.D.2.2, PA.D.2.3

Student Refusal of Accommodations during State Assessments 30

Definition & Purpose of Oklahoma School Testing Program (OSTP)/College and Career Readiness Assessment (CCRA) Accommodations

A test accommodation is a change in the way a test is administered or in the way a student responds to test questions. Similar to instructional accommodations, test accommodations are intended to offset the effects of a student's disability and to provide him/her with the opportunity to demonstrate knowledge and skills on statewide assessments.

Eligibility for Accommodations

OSTP Grades 3-8 & Grade 11 CCRA: Science & U.S. History Content Accommodations

The right of a student with a disability to receive allowable accommodations on statewide assessments is protected by both federal and state laws. The student's current Individualized Education Program/Section 504 Plan must specify precisely which test accommodation(s) they will receive. In cases where an IEP/504 Plan is under development, the school personnel responsible for writing the plan must have already met and agreed upon the necessary accommodation(s) before a student may be provided the accommodation(s).

A student who does not have a documented disability or is not served by a current IEP/504 Plan is not eligible to receive accommodations on statewide assessments, except for Emergency Accommodation situations.

Scribes may be provided for any student (with or without an IEP or Section 504 Plan) who has a short-term medical condition that affects his/her physical dexterity which impedes his/her ability to respond to the assessment format.

Accommodations

For a student to receive an accommodation for statewide assessments the accommodation needs to be utilized by the student in the classroom daily. The accommodations listed on an IEP/504 Plan for statewide assessments should mirror the accommodations listed under classroom accommodations as closely as possible. If changes need to be made to accommodations, please try to make changes prior to pre-code.

Universal Accessibility Features

Universal Accessibility Features are tools and supports that are available to *all* students who are assessed on the OSTP computer-based test platform or provided by a test administrator on the computer-based assessment.

Universal Accessibility Features Available to All Students

Computer-Based Testing
Highlighter tool
Guideline tool   Masks text so only part of the text can be viewed at one time
Answer masking  Student selects which answer choices will be shown on the screen
Sketch   Use the sketch tool to sketch, highlight, or underline text on the screen.
Blank scratch paper for notes or calculations

Designated Accessibility Features (DFs)

Although most students will be tested in their general education classrooms according to the guidelines and schedule intended for all students, principals have the flexibility to test any student, including non-disabled and non-EL students, using the designated accessibility features described below, as long as all requirements for testing conditions, test security, and staffing are met.

Designated Accessibility Features available to any student, at the principal's discretion

If a student has an Individualized Education Plan (IEP) or 504 plan and require accommodations that are listed below in the Designated Accessibility Features, it should be documented in their plan.

Designated Accessibility Features
Small group test administration (Best practice is no more than 5 students, but the absolute maximum is 10 students.)
Individual (one-to-one) test administration (Student must be tested in a separate setting.)
Separate or alternate test location
Seating in a specified area of the testing room, including the use of a study carrel

ACT Accommodations

All students enrolled in the 11th grade will participate in the College- and Career-Readiness Assessment (CCRA), which includes the ACT plus writing, **except** students participating in the Oklahoma Alternate Assessment Program (OAAP).

ACT requires an approval process for accommodations. ACT considers accommodation requests for examinees who have a valid, current IEP or Section 504 plan. Accommodation needs and requests must be based off documented student characteristics, classroom/instructional supports, and accessibility needs. Accommodation needs should be addressed during the development of the student's IEP/504 Plan or through an amendment process as necessary.

Accommodation requests must be submitted to ACT during the designated window and approved before a student can be provided their ACT specific accommodations. Assessment accommodations requested on behalf of the student must be regularly used in classroom instruction and documented in the student's IEP/504 Plan. Accommodations not approved by ACT will result in an invalid attempt with no score.

For more information visit:

- ACT Accommodations
- ACT Accommodations vs. State Testing Accessibility Supports
- Oklahoma ACT Website
- OSTP Accommodations, Section IV
- The District Test Coordinator at your local school district

Assessment accommodations must correspond to the instructional accommodations described and provided to the student per the student's IEP/504 Plan and be in accordance with best practices for student testing.

ACT Accommodation(s) Request Process

IEP/504 Team determines accommodations.

Conduct detailed conversations during IEP/504 Team meeting concerning the ACT accommodations approval process and utilize the ACT accommodation guidance to direct conversations.

Be very thorough and detailed when completing the ACT Request.

ACT will only approve accommodations that are regularly used in a classroom setting.

District/School submits accommodation request to ACT.

ACT Accommodations

If approved:

Student takes ACT with approved accommodations.

Scores ARE vaild and college-reportable.

If NOT approved:

Student takes the ACT with **NO** accommodations.

Scores ARE valid and college-reportable.

Assessment accommodations must correspond to the instructional accommodations provided to the student per the student's IEP/504 Plan and be in accordance with best practice for student testing. Accommodations not approved by ACT will result in an invalid attempt with no score.

Definition of Standard and Nonstandard OSTP Accommodations

For the purposes of the OSTP, a **standard accommodation** is defined as a change in the routine conditions under which students take OSTP tests that does not alter what the test is intended to measure. Standard accommodations are grouped into the following four categories:

- Setting: for example, administering the test in a small group or a separate setting
- Timing or scheduling of the test: for example, administering the test in short intervals or at a specific time of day
- Presentation: for example, using a large-print or Braille edition of the test
- Response: for example, dictating responses to a scribe

For the purposes of the OSTP, a **nonstandard accommodation** is defined as an accommodation that is needed for the student to access the assessment but not included on the allowable list of accommodations and requires OSDE approval for use on OSTP assessments.

General Requirements for the Use of Standard and Nonstandard Accommodations

All accommodations require adherence to test security protocols, including the presence of both a Test Administrator and a Test Proctor during periods requiring access to secure testing materials (e.g., human read- aloud). IEP/504 teams determine annually which accommodations will be needed and update the IEP/504 Plan accordingly. If the IEP/504 team believes that an OSTP accommodation listed in the student's IEP/504 Plan should be removed because it is no longer necessary or appropriate for the student, the team must amend the IEP/504 Plan accordingly prior to testing.

If a **nonstandard accommodation** will be provided, the student must meet all of the eligibility criteria for that accommodation, and a Nonstandard Accommodation Application must have been:

1) submitted by the DTC through the Nonstandard Accommodation Application on the Single Sign-On website,

2) approved by the OSDE before the accommodation may be used.

The use of accommodations is based on the individual needs of a student with a disability and may only be provided when **ALL** of the following conditions have been met:

1) The student's IEP/504 Plan accurately reflects accessibility needs related to the student's medical or health diagnosis/diagnoses or, in the case of an IEP, areas of need in specific academic content area(s).

2) The student uses the accommodation routinely (with rare exceptions) during classroom instruction and assessment in the subject, both before and after the OSTP assessment is administered.

However, use of a nonstandard accommodation during instruction does not necessarily qualify a student to receive the same nonstandard accommodation during OSTP testing; the student must meet additional eligibility requirements to receive a nonstandard accommodation on an OSTP assessment.

3) The accommodation is documented on both the State/District Accommodation and Class/Activity Accommodation sections of the student's current IEP/504 Plan.

4) The student requires the accommodation in order to participate in OSTP testing.

5) The accommodation is listed as a current accommodation in this appendix (or, prior to testing, the district or school has consulted with the OSDE and received permission to use a unique accommodation not included in this appendix).

Accommodations **may not:**

1) Alter, explain, simplify paraphrase, or eliminate any test question, reading passage, writing prompt, or multiple-choice answer option;

2) Provide verbal or other clues or suggestions that hint at or give away the correct response to the student;

3) Contradict test administration requirements or result in the violation of test security; for example,

- Test questions may not be modified, reordered, or reformatted in any way for any student;
- Tests may not be photocopied, enlarged, altered, or duplicated;
- English-language dictionaries are not allowed for any student on any test.

If the above five conditions have been met and the IEP/504 team determines an accommodation is necessary, then it must be provided to the student during OSTP testing. If an accommodation is provided that does not meet the conditions stated above, the student's test score may be invalidated.

Test Formatting Options	Paper	Online
Grade 3-8, OSTP ELA & Math Grades 5 & 8, OSTP Science Grade 11, CCRA: Science & U.S. History Content	X*	X
Braille Tests	X*	
Large Print tests may be provided in paper format for Online tests.	X*	

*These test formats are only available for students with an accommodation that has been appropriately documented in their IEP/504 Plan.

Oklahoma Accommodations Guide

IEP/504 teams can refer to the Oklahoma Accommodations Guide for examples of accommodations broken down by student characteristics if teams need extra guidance.

Paper & Pencil Test Formats

IEP/504 teams should include rationale or evidence in the Present Levels of Performance that states why paper and pencil testing is best for the student.

If the team decides that paper-based testing is appropriate, a student can take the paper and pencil assessment for all subject areas. However, teams may also decide based on the needs of the student that they may only need the paper and pencil version for one subject area. Please note that all sections in a subject area must be taken using the same format (paper/pencil or computer-based).

OSTP Accommodations (See Section IV for ACT ELA & Math)

I. Setting/Timing/Schedule	Procedures & Guidelines
S1. Individual Testing	This accommodation is required for many presentation or response accommodations and is intended to reduce student distractions. Students must be actively monitored to maintain test security.
S2. Small group testing **Best practice is no more than 5 students, but the absolute maximum is 10 students.**	This accommodation is intended to reduce student distractions and may be required for certain accommodations. Students must be actively monitored and may use a testing carrel or test in a special education resource room or other location that maintains test security. Students in the group will have matching accommodations and/or similar testing needs. **Students should be tested with their non-disabled peers to the greatest extent possible.**
S3. Preferential Seating	Students may need this accommodation for various reasons, including but not limited to, allow the student to see or hear more easily, have access to more physical space, or have access to special equipment.
S4. Separate location	Separate location would be appropriate if this is needed to meet the needs of the tester. The separate location should be a different testing location, or a different testing time as compared to the majority of students in that grade/subject area.
S5. Provide special lighting	Specify type (e.g., 75-Watt incandescent, light box, etc.).
S6. Provide adaptive or special furniture	Students may need accommodations to provide better access to test materials (e.g., slant board, stander, etc.).

I. Setting/Timing/Schedule Continued	Procedures & Guidelines
T1. Flexible schedule same day **Student test book(s) must be secured between sessions.**	Students are scheduled to allow for the best conditions/timing for their performance, and/or may be allowed to take the test during more than one sitting during a single day. Students are not allowed to study for or discuss tests between sessions. This is not intended for lunch or recess breaks. **(S4)** must be selected for this accommodation. **Students with this accommodation selected must finish the session in the same school day.**
T2. Administer test over several sessions or "chunking" (except writing tasks/sections) **Student test book(s) must be secured between sessions.**	The test may be separated into smaller sections and administered over several days within the state testing window. Student may only work in one separated section at a time and may not go to previous sections or work ahead. **(S4)** must be selected for this accommodation. It is best practice to determine the amount of questions a student will answer before the testing session begins. For example, the student will only work on questions 1-10 in the first chunk of time. Once they end that session they will not be able to go back to the questions from that session. The Test Administrator will need to enter the proctor password to allow the student to continue the test during their next session. This is not exclusive to paper/pencil testing. This accommodation can be provided in the online testing platform through the use of a proctor password. Please note that a student may not go back and visit previously viewed items once they exit the testing platform.

I. Setting/Timing/Schedule Continued	Procedures & Guidelines
T3. Allow frequent breaks during one test session (**maximum 10-15 minute duration**) **Student test book(s) must be secured during the breaks.**	Students must be monitored during breaks and may not have access to instructional materials or any electronic devices. Students may not view/change previously answered questions after a break. Students are allowed to take short breaks as requested or at predetermined intervals. Breaks of more than 20 minutes will prevent the student from returning to items already answered by the student. The Test Administrator will need to use the proctor password to allow the student access to the test but all items the student has seen will be locked. **(S1, S2, or S4) may be selected if frequent breaks will disrupt the general education testing environment. This accommodation is not intended for lunch or recess breaks—students must complete a section before being dismissed.**

II. Presentation	Procedures & Guidelines
P1. Alternate Formats a. Large-Print Version (Instructions provided within kit.) This can be administered in small group or large group as long as the student is marking their answers in the test booklet and the Test Administrator transcribes the answers after the test session. The directions from the Test Administration Manual must match the type of test the student is taking. b. Contracted Braille Version (Instructions provided within kits) c. Large-print through Online Testing Client (Screen Zoom)	Large print documents will be printed in a minimum of 18-point type. Check with the assessment vendor for exact specifications. The Test Administrator must transcribe student answers verbatim into the standard answer document/test book that was provided in the large- print (paper/pencil) or Braille kit. Braille test formats will be provided on paper using contracted Braille and Nemeth code for numbers and formulas. Large print formats may be configured in the online testing client for certain assessments.
P2. Color Contrast	Students who have a visual impairment may require this to access the computer screen. If a student needs this accommodation, we highly encourage the student to view the practice test. The Test Administrator can note which color contrast the student needs.
P3. Use of aids or assistive technology (AT) devices or supports (e.g., color overlays, magnifier, pencil grips, auditory amplification devices, noise buffers, wedge for positioning, fraction tiles, and multiplication table/chart, hundreds chart). If you are marking this accommodation, please also include it under Supplementary aids on the IEP.	The specific device or support should be specified in the IEP/504 Plan, be routinely used by the student, and not alter the construct being measured. **(S1, S2, or S4)** may be appropriate for this accommodation as some AT devices or mathematics manipulatives may be distracting to other students.

II. Presentation Continued	Procedures & Guidelines
P4. Text-to-Speech, Human Reader, or Sign Language Interpretation ***P4 applies to all Math, Science, and U.S. History test sections and Grades 5 & 8 ELA writing/extended constructed response sections only** a. Text-to-Speech is built into the online testing client, requires the use of earphones, and may be administered in individual, small group, or general education classroom setting. (All Math, Science, U.S. History tests, and Grades 5 & 8 ELA Writing only.) b. Human Reader reads test directions, test items, and answer choices. This is limited to small group or individualized testing. c. Sign Language Interpretation may be accomplished by using a separate test booklet in a separate location. For additional information, please refer to the Protocol for Human Readers.	Online tests have built in Text-to-Speech functionality. Earphones are required. Students may test with nondisabled peers. **Please note: A student should be familiar with the accommodation prior to testing and if they do not use it for benchmark or other online testing platforms throughout the year it may not be appropriate.** For online tests, if a Human Reader is required for a student, then the test must be read from the computer screen verbatim. **(S1 or S2)** is required when utilizing a Human Reader for Online tests. For paper tests, tests **(test forms must be the same)** are read by a Human Reader. Test Administrator uses separate test booklet or reads over a student's shoulder. Small group testing **(S1 or S2: 8-10 maximum)** is required and test forms must be the same. **Students may request items be read more than once.**
P5. Use of a Secure Braille Note-taker (students with a visual impairment)	An electronic note-taker, which may have a Braille or QWERTY-type keyboard, is an adaptive device similar to a PDA. This device may have built-in speech output and/or a refreshable Braille display. **(S1 or S2)** must be selected for this accommodation.
P6. Simplification/repetition/signage of directions	Students may ask for clarification, simplification, signage of directions. This does not include test questions or answer choices. Students may have directions reread for each page of questions.
P7. Turn off Universal Tools/Accessibility Features	Disable any tools that may be distracting to a student, tools a student does not need to use, or tools a student may be unable to use.

II. Presentation Continued	Procedures & Guidelines
P8. Use of an abacus	Students who have a visual impairment/blindness or access mathematical calculations tactilely may use an abacus.
P9. Use of a calculator on Grades 3-5 Mathematics *For additional information, please refer to the OSTP Calculator Policy.*	Only basic four-function calculators with square root and percent are allowed. Calculators must be provided to students and are not integrated within the online testing interface.
P10. Provide cues (arrows, stop signs) on answer form	This applies to Paper Only tests. Cues may not clue a student to a correct or incorrect answer.
P11. Use masking or templates to reduce the amount of visible print	Masking involves blocking off content that is distracting to the student. Students are able to focus their attention on a specific part of a test item by masking. This feature is built into the online testing client.
P12. Secure paper to work area with tape or magnets	This applies to Paper Only tests. Please be cautious when adhering tape to the test booklet or answer document by avoiding the tracking marks (black bars) for the scoring process.
P13. Student may read the test aloud or sign the test to himself or herself.	This requires individual testing (even if student is reading aloud quietly). **(S1) must be selected for this accommodation.**
P14. Placeholders, templates, or markers to maintain place	This applies to Paper Only tests.
P15. Audio Calculator	This requires earphones for group testing. A non- embedded calculator for students needing a special calculator, such as a Braille calculator or a talking calculator, is currently unavailable within the online assessment platform. **(S1, S2, or S4)** may be appropriate for this accommodation.
P16. Paper & Pencil Test	Students unable to access an OSTP computer-based test must also receive classroom assessments, benchmark assessments, and districtwide assessments in this manner. A student on an IEP/504 Plan does not automatically receive a paper & pencil test format.

III. Response	Procedures & Guidelines
R1. Student marks answers in test book and not on an answer document, for later transfer by a Test Administrator to an answer document.	The Test Administrator, with the Test Proctor present, must transcribe answers verbatim into the standard answer document. **Does not apply to Grade 3 tests.** This accommodation applies to Paper Only tests.
R2. Human Scribe ELA, Mathematics, Science, U.S. History: a. Student dictates response to a scribe who records responses on an answer document or through the Online Testing Client by Test Administrator or Proctor. b. Student signs response to a scribe who records responses on an answer document or through the Online Testing Client by Test Administrator or Proctor. c. Student tapes or records response for a writing portion of the test for verbatim transcription by Test Administrator or Proctor. *For additional information, please refer to the Procedures for Scribing Student Responses section of this manual.*	A scribe is a Test Administrator or Proctor who writes down what a student dictates by speech, or through an assistive technology communication device. Students who have documented significant motor or processing difficulties that make it difficult to produce responses may need to dictate their responses to a human, who then records the students' responses verbatim. The use of this support may result in the student needing additional overall time to complete the assessment. **The guiding principle in scribing is to assist the student in accessing the test and responding to it. (S1)** must be selected for this accommodation.
R3. Use computer or other assistive technology device to respond. a. Student utilizes an electronic input device without the "help" features, such as spell check, an electronic dictionary, a thesaurus, or access to the Internet. *For additional information, please refer to the Procedures for Scribing Student Responses section of this manual.*	Students may use an external device to respond such as a computer, typewriter, or other assistive technology device to respond. This may include software dictation or dictation devices the student uses during routine instruction. Extended written responses must be printed off for transcription. Return the original typed student response for secure materials submission. The Test Administrator must transcribe words verbatim into an answer document/test book or Online Testing Client. The electronic responses or recordings must be destroyed or erased by District Test Coordinator. **(S1 or S2)** must be selected for this accommodation.

III. Response Continued	Procedures & Guidelines
R4. Test Administrator monitors placement of student responses on the answer document or the online testing client.	Test Administrator may redirect students. Students may not be directed to correct or incorrect answers in any way.
R5. Brailler/Secure, Braille Note-taker/Abacus (students with a visual impairment)	The Test Administrator must transcribe answers verbatim into the standard answer document/test book that was provided in the large-print (paper/pencil) or Braille kit. **(S1, S2, or S4)** must be selected for this accommodation. We have Braille practice tests available on request. Please contact the Office of Assessments (assessments@sde.ok.gov) to request this.

IV. ACT ELA & Math

The ACT accommodations provided below represent typical or common accommodation(s) requests that are appropriate to produce valid, college-reportable scores. Please utilize this list as a starting point as ACT considers requests for utilization of accommodations on a case-by-case basis. **For more information, please see the following link: ACT Accommodations**

ACT (ELA/Math)

Timing/Setting

- Extra time
- Breaks
- Multiple Days
- Food or Medication
- Special Seating/Grouping
- Location for Movement
- Individual Administration
- Administration at Optimum Time of Day
- Administration from Home or Care Facility
- Audio Amplification
- Special Lighting
- Adaptive Equipment or Furniture
- Wheelchair Accessible Room
- Personalized Auditory/Visual Notification of Remaining Time

Presentation

- Text-to-Speech (screen reader, text-to- speech on Reading assessment, etc.)
- Read Aloud
- Unified English Braille (UEB)
- Large Print
- Browser Zoom Magnification or Magnification
- Line Reader
- Talking Calculator
- Color Contrast (Online or Overlay)
- Abacus

Response

- Respond in Test Booklet or on Separate Paper
- Large Block Answer Sheet
- Dictate Response
- Computer for Writing Essays and Constructed Responses
- Speech-to-text

Requirements for the Use of Nonstandard Accommodations

IEP and 504 teams may request the use of one or more of the following OSTP nonstandard accommodations (ELA Read-Aloud or Unique Accommodation) only when all of the criteria are met, as described within OSTP Nonstandard Accommodations table. For a **nonstandard accommodation** to be provided, the student must meet all of the eligibility criteria for that accommodation, and a Nonstandard Accommodation Application must have been:

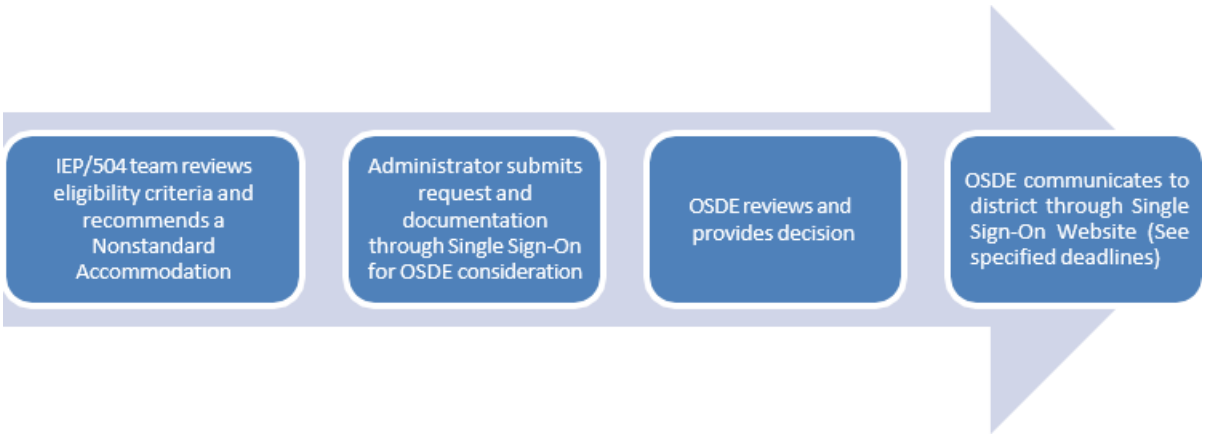
1) submitted by the DTC through the Nonstandard Accommodation Application on the Single Sign-On website,
2) approved by the OSDE before the accommodation may be used.

The decision to use a nonstandard accommodation is recommended by the IEP/504 team based on the nonstandard accommodation eligibility criteria. Nonstandard accommodations for use on OSTP assessments must be approved annually by the OSDE. The nonstandard accommodation can only be provided to a student with a disability on an OSTP assessments when it is documented in student's IEP/504 Plan under both the State/District Accommodations and Class/Activity Accommodation sections. The use of a nonstandard accommodation during instruction does not necessarily qualify a student to receive the same nonstandard accommodation on an OSTP assessment.

The **ELA Test Read-Aloud accommodation (NS1)** request for grades 3-8 may only be submitted when all three prongs of the eligibility requirements are met as described on within the OSTP Nonstandard Accommodations table. The OSTP ELA Test Read-Aloud Protocol will be used by the IEP/504 team to document all three prongs, including submission of any documents or evaluations to the OSDE. The protocol must be submitted through the Nonstandard Accommodation Application on the Single Sign-On website for consideration by the OSDE.

A **Unique Accommodation (NS2)** is an accommodation that requires changes or alterations to the test materials/booklet or media presentation. The unique accommodation must be one that is regularly used by the student for classroom instruction, must be on the student's IEP/504 Plan, and must not alter the underlying content of the assessment. The unique accommodation request must be submitted through the Nonstandard Accommodation Application on the Single Sign-On website for consideration by the OSDE. Please refer to NS2 section of the OSTP Nonstandard Accommodations table, Form U, and the Overview: Non-Standard Accommodations webpage for specific requirements.

IEP and 504 teams are encouraged to make consistent, defensible, and appropriate decisions for each student, and to amend the IEPs and 504 Plans of students who do not meet the nonstandard accommodation eligibility criteria. The OSDE will continue to review the number of students with disabilities who receive nonstandard accommodations in each district. Nonstandard accommodation requests must be approved by the OSDE before a student may use the accommodation on a state assessment. The use of a nonstandard accommodation on the OSTP without OSDE approval may result in a testing invalidation. Please do not submit a request if the student does not meet the specific eligibility criteria listed within the OSTP Nonstandard Accommodations table.



OSTP Nonstandard Accommodations

Nonstandard Accommodation	Eligibility Requirements
NS1. ELA Read-Aloud (Grades 3-8) Text-to-Speech, Human Reader, or Sign Language Interpretation Accommodation for the OSTP English Language Arts Assessments. a. Text-to-Speech is built into the online testing client, requires the use of earphones, and may be administered in individual, small group, or general education classroom setting for Grades 3-8. b. Text-to-Speech now available for all parts of the Grades 5 & 8 ELA Assessment. If a student is not approved for the NS1 accommodation, the student may receive Text-to-Speech on the OSTP ELA Writing Test for Grades 5 & 8. c. A Human Reader may be utilized in place of Text-to-Speech for any student who is approved for this accommodation. This is limited to small group or individualized testing. d. Sign Language Interpretation may be accomplished by using a separate test booklet. Test directions, test items, and answer choices must be read verbatim. Students may request items be read more than once. **Due Date for Requests:** **Requests must be submitted to the OSDE through the Nonstandard Accommodation Application on the Single Sign-On website by February 1st for the Spring testing window and responses will be provided on a case-by-case basis no later than March 15th.**	This accommodation must be determined by the following 3-pronged approach: 1. The student has a specific disability that severely limits or prevents him/her from decoding printed text at any level of difficulty, even after varied and repeated attempts to teach the student to do so (i.e., the student is a non-reader, not simply reading below grade level); **and** 2. The student can only access printed materials through a screen reader (assistive technology) or Human Reader, and/or is provided with spoken text on audiotape, CD, video, or other electronic format during routine instruction (includes Sign Language Interpretation), except while the student is actually being taught to decode; **and** 3. The IEP/504 team will utilize and provide the required documentation from the OSTP ELA Test Read-Aloud Protocol, which includes the use of the Protocol for Accommodations in Reading (PAR) or the AEM Navigator for deaf or blind students. This documentation must be uploaded into the Nonstandard Accommodation Application in the Single Sign-On website for consideration by the OSDE. Paper tests are read by a Human Reader. (**S1 or S2)** is required, and test forms must be the same. Online tests: If a Human Reader is utilized, they must read the assessment verbatim from the computer screen. **(S1, S2, or S4)** is required. **The request will be submitted annually through the Nonstandard Accommodation Application in the Single Sign-On website.**

NS2. Unique Accommodations (Grades 3-8 ELA/Math/Science and Grade 11 Science & US History) **Students with disabilities who have IEPs/504 plans are eligible for consideration for unique accommodations on state assessments (e.g., allow projection of test for students receiving the Sign Language Interpretation accommodation in small groups, manipulatives, special devices, etc.).** **A unique accommodation is an accommodation that requires changes or alterations to the test materials/ booklet or media presentation.** **The unique accommodation must be one that is regularly used by the student for classroom instruction, must be on the student's IEP, and must not alter the underlying content of the assessment.** **If a student would benefit from the use of a fidget the team would need to submit a Form U for OSDE approval.** **Tactile Fidget: A student uses a fidget for self- regulation to help with focus, attention, calming, and active listening. Examples include: squish ball, focus cube, or pencil topper. The tool must be free of anything that may give an advantage during testing or reveal any test content.**	A request may be made (pursuant to the IEP/504 team's determination) for a unique accommodation utilizing Form U for a student with a disability on any specified subject area(s) of the OSTP. The Form U must be submitted: • Due to the student's need for an accommodation that would enable the student to access the state assessment. • Through the Nonstandard Accommodation Application in the Single Sign-on Website. • With completed student information and any other requested information. • Form U is required when students have an electronic glucose monitor that will need to be with the student in the testing session. **The requested accommodation must not impact the reliability or validity of the test, and the request may not exempt a student from taking any portion of the OSTP test(s).**

Calculator Policy

The items on the Grades 6-8 Math, Grade 8 Science, and Grade 11 CCRA: Science Content assessments are designed so that all tasks can be solved without the use of a calculator. However, certain tasks are more difficult if a calculator is not available. More information regarding calculator use can be found in the OSTP Calculator Policy. For ACT calculator requirements, please see the ACT Calculator Policy.

Before the first day of the test, students using a calculator for any Math and Science assessment should be familiar with the use of the specific calculator that can be utilized. Students should be consistently instructed throughout the school year in the use of calculators; otherwise, it may hinder students' performance on the assessment.

Protocol for Human Readers

A Test Administrator (Human Reader) who provides the verbatim reading accommodation to a student must comply with the following procedures when working with a student in a testing situation:

- Human Reader: A state-certified educator who reads orally to a student.
- All Human Readers must receive Test Administrator training by the local district, and the district must retain documentation, which may be requested by the OSDE at any time.
- **A test proctor who is employed by the school district is required**. Small group (8-10 maximum) or individual testing required.
- Human Readers must sign the Test Administrator Test Security Form.
- Human Readers must read from the computer screen for online test formats or from a separate test booklet or over the student's shoulder for paper/pencil formats (log test booklet serial number on NDA)
- Only students receiving the Human Reader accommodation and taking the same grade-level subject area test may be tested together in the same location.
- If students are taking a paper test, the students grouped together must have the **same paper test form.**

Verbatim Read-Aloud Procedures for Human Reader Accommodators

To ensure uniformity in presentation of standardized tests in Oklahoma, **built-in Text-to-Speech software on the secure online testing client** should be used whenever possible. If students are taking online tests, the students can be grouped together using the "Read Aloud" form. This form is enabled in the testing portal by configuring Text-to-Speech.

Human Readers must follow the procedures outlined below:

1. Human Readers must read, verbatim (word-for-word), only the words in the test book or on the computer screen, without changing or adding words, or otherwise assisting the test-taker in any way to influence the test taker's selection of a response.
2. Human Readers must speak in a clear and consistent voice throughout the test administration, using correct pronunciation.
3. Human Readers may not clarify, elaborate, or provide assistance to students.
4. Human Readers must give special emphasis only to words printed in **boldface**, *italics*, or CAPITALS and tell the test-taker that the words are printed in that way. No other emphasis or special vocal inflection is permissible. Readers should use even inflection so that the student does not receive any cues by the way the information is read.
5. Human Readers must be patient and understand that the test-taker may need to have test items repeated several times.
6. Human Readers must not attempt to solve problems or determine the correct answer to an item while reading as this may result in an unconscious pause or change in inflection which could be misleading to the test-taker.

7. Human Readers must maintain a neutral facial expression and must not smile or frown which may be interpreted by the test-taker as approval or disapproval of the student's answers.
8. Human Readers must recognize that test-takers who are blind or who have low vision may also have additional special tools or equipment (e.g., abacus, brailler, slate, stylus) that have been approved for use during the test.
9. Human Readers must be familiar with the student's IEP/504 Plan and know in advance the exact type of verbatim reading accommodation required by the student. The test-taker may require all or portions of the test to be read aloud, depending on his or her particular set of accommodations.
10. If a Human Reader finds an unfamiliar word or one that he or she is not sure how to pronounce, advise the test-taker of the uncertainty about the word and spell the word.
11. When reading a word that is pronounced like another word with a different spelling, if there is any doubt about which word is intended, readers must spell the word after pronouncing it.
12. Human Readers must spell any words requested by the test-taker.
13. When reading passages, readers must be alert to all punctuation marks. Human Readers may read the passage through once so that the test-taker can grasp the content of the passage. Some test-takers may ask for the passage to be read through a second time with punctuation marks indicated. When required or asked to read with punctuation, read the specific lines within a passage and indicate all punctuation found within those lines.
14. When test items refer to particular lines of a passage, reread the lines before reading the question and answer choices. For example, a Human Reader might say, "*Question X* refers to the following lines…" Reading the lines referred to would then be followed by reading *question X* and its response options.
15. When reading selected response items, readers must be particularly careful to give equal stress to each response option and to read all of them before waiting for a response. The test-taker will record the answer or provide the answer to the test scribe, who will record it for the test-taker.
16. If a Human Reader is also serving as a scribe, and if the test-taker designates a response choice by letter only ("D," for example), the Human Reader must ask the test-taker if he/she would like the complete response be reread before the answer is recorded.
17. If the test-taker chooses an answer before the reader has read all the answer choices, the Human Reader must ask if the test-taker wants the other response options to be read.

18. After a Human Reader finishes reading a test item, the Human Reader must allow the test-taker to pause before responding. However, if the test-taker pauses for a considerable time following the reading of the answer choices, say: “Do you want me to read the question again . . . or any part of it?” In rereading questions, readers must be careful to avoid any special emphasis on words not emphasized in the printed copy by italics or capital letters.

NOTE: For ACT, please refer to the ACT Accommodations section on page 4.

Special Guidelines for Reading, Mathematics, and Science Content

Mathematical expressions and science vocabulary must be read precisely and carefully to avoid misrepresentation. For mathematics items involving algebraic expressions or other mathematical notation, it may be preferable for the reader to silently read the entire question before reading it aloud to the test-taker. Use technically correct yet simple terms and be consistent in the treatment of similar expressions.

Sign Language Interpreters

Test-takers who are deaf or hard of hearing may require the services of an interpreter. The interpreter typically provides support to the student in understanding test instructions that would otherwise be read aloud to all students.

- Discussions with the interpreter on testing procedures should be conducted with the test-taker present before (and not during) the test session.
- Before the session, the interpreter must become familiar with the test instructions and the terminology used in the test that he or she will be interpreting.
- An interpreter always lags a few words or phrases behind the person who is speaking. Allow short pauses for the test-taker to respond or to ask questions.
- As the test administrator, remember to speak directly to the test-taker even when an interpreter is present.
- Courtesy requires that test examiners not say things to the interpreter that they do not want repeated to the test taker. (For example, do not ask the interpreter’s opinion about the test taker or the situation.)
- An interpreter may also provide a verbatim read-aloud accommodation for students who require this accommodation, as listed in the student’s IEP/504 Plan.

NOTE: For ACT, please refer to the ACT Accommodations section on page 4.

Procedures for Scribing Student Responses

Overview

A scribe is a Test Administrator or Proctor who writes down what a student dictates by speech, or through an assistive technology communication device. The guiding principle in scribing is to assist the student in accessing the test and responding to it. **Alterations or changes to OSTP tests are not allowed and will result in test invalidation.** Any variation in the assessment environment or process that fundamentally alters what the test measures or affects the comparability of scores is considered a modification. For ACT, please refer to the *ACT Accommodations section on page 4.*

A scribe must be a currently employed educator/paraprofessional, must be familiar with scribing, must have been trained as a Test Administrator or Proctor, and must have on file a signed Test Administrator/Proctor Security Form (See Test Preparation Manual). Individuals who serve as scribes need to be carefully prepared to ensure that they know the vocabulary involved and understand the boundaries of the assistance to be provided.

Scribes must be impartial and experienced in transcription. It is preferable for the scribe to be a familiar person, such as the teacher who is typically responsible for scribing during regular instruction. Scribes will review the test security procedures and will sign all statements required of Test Administrators/Proctors.

Scribes must fulfill the following duties:

- Sign a test security form acknowledging that they will ensure that the content of the written responses directly represents the independent work of the student.
- Sign a Test Administrator/Test Proctor Test Security Form.
- List the names and enrollment grades of the students whose responses were transcribed and send the form to the Building Test Coordinator (BTC) upon completion.
- Demonstrate proficiency in signing (ASL and/or signed English) if serving as both the interpreter and scribe.
- Test in a location where examinees are not able to hear or see other students' responses.
- Remain silent while students are dictating or signing.
- When needed, ask students to repeat a word or phrase for understanding.
- Indicate when they are unable to understand the student's oral or signed response.
- Record the interpreter's response.

Produce legible text so that the written portion of the test can be scored.

- When transcribing from a handwritten or word-processed response, record punctuation, capitalization, and spelling as provided by the student

Refrain from:

- Communicating verbally or nonverbally whether the response is correct or incorrect.
- Prompting the student in any way that would result in a better response or essay.
- Influencing the student's response in any way.
- Editing student work or completing a student's incomplete essay.
- Discussing the student's essay with the student or any other person.

Scribing Multiple-Choice Questions

The scribe should confirm the student's response before recording the student's answer on the answer document or entering the student's response into the secure online testing platform. If the scribe cannot understand a student's pattern of speech, or it is barely audible, large cards, each indicating one of the response options (e.g., A-D), can be used. The student can then choose the card that indicates the student's desired response to the multiple-choice question. For ACT, please refer to the *ACT Accommodations section on page 4.*

Scribing Constructed/Extended-Response Questions (Writing Tasks)

The scribe should determine the preferred mode of recording the student's response ***before*** the date of the test. At testing time, the student may then dictate the constructed/extended response directly to a scribe. A student with disabilities must be given the same opportunity as other students to plan, draft, and revise the constructed/extended response. The scribe's responsibility is to be both accurate and fair, neither diminishing the fluency of the student's response nor helping to improve or alter what the student asks to be recorded. This means that the scribe may write an outline or other plan as directed by the student. For online/computer based tests, transcribing involves the transfer of a student's written response into the secure testing platform. For ACT, please refer to the *ACT Accommodations section on page 4.*

The student does not have to specify repeatedly spelling and language conventions once the student has demonstrated knowledge and skills in the use of these spelling and language conventions. The scribe may apply these conventions automatically. Examples include the following:

- Once a student has demonstrated the knowledge of indicating the beginning of sentences with a capital letter, the student does not need to specify this throughout the remainder of the constructed/extended response. That is, scribes can automatically capitalize the first letter in the beginning of a sentence if the student has indicated punctuation ending the previous sentence. If the student has not indicated punctuation ending the previous sentence and says, "The dog ran. The dog jumped," the scribe would write "the dog ran the dog jumped."

- Homonyms and often-confused words should be spelled by the student each time they are used. For example:
    - "to," "two," and "too,"
    - "there," "their," and, "they're"
    - “than” and “then”

Scribing Procedures

To maintain the student’s fluency of thought and to allow the student to demonstrate the requisite knowledge and skill in English Language Arts conventions, the scribe should adhere to the following process:

1. The student dictates the response without interruption directly to the scribe or electronic recording device.
    a. Students may punctuate as they dictate. For example, when stating the sentence “The cat ran.”, the student may say, “The cat ran period.”
    b. Students may dictate more than one sentence at a time and add punctuation after the fact, when given the scribed sentences to proofread.
    c. The scribe transcribes a draft of the student’s response exactly as dictated without including any conventions other than spelling. Probing or clarifying questions are not allowed except in the case of classifiers for students using American Sign Language (ASL). Scribes may not question or correct student choices. Scribes may draw a diagram or a picture described by the student if the student is unable to draw the diagram or picture. The student may not yet view this written transcription.
2. The scribe reads the draft to the student without vocal inflection that would indicate punctuation or alert the student to possible mistakes.
3. The student then provides letter-by-letter spelling for each word in the response that the scribe has determined must be spelled by the student. The scribe edits the draft of the constructed/extended response as spelled by the student.
4. The student views the draft and/or listens to the scribe as the scribe reads the draft of the constructed/extended response (i.e., written transcription). Students MUST be given the opportunity to review their responses in the way that the student prefers:

a. Scribes may read back the dictation for proofreading to the student; or

b. Students may review the written or typed response on paper or on the computer screen after having indicated word-for-word spelling according to these guidelines.

5. The student indicates additional edits to the scribe, including but not limited to paragraph structure, capitalization (for proper nouns, acronyms, and so forth), wording, spelling, and punctuation. The scribe will make those changes exactly as dictated by student, even if incorrect.

6. The scribe records the final written response. Scribes may handwrite (there is no penalty for cross-outs and insertions), type, or use a laptop to record the student's work. If the scribe types and prints out the student's responses, the responses need to be transcribed into the response booklet for paper-based tests or typed directly into the secure testing client for online tests. The transcriber must copy the student's marks or responses exactly as he/she has written—including all errors in grammar, mechanics, spelling, etc.

If necessary, proofread the student essay with another scribe before word processing the student response.

- ✓ If the student is using a tape recorder or videotape for later transcription by a scribe, it is required to have two people listen or view as a reliability check for accuracy.
- ✓ For an accuracy check, scribes may record the session on audio or videotape for playback.
- ✓ Corrections of exclusively Braille errors will be at the discretion of the scribe. Braille errors are those errors that occur specifically to that population due to recording medium. An example could be the result of the physical typing on a Braille machine, such as typing an 'f' as opposed to the intended 'd' due to finger misplacement. The transcriber has the option to verify student response with another examiner trained in Braille.
- ✓ To increase accuracy, it is advisable to have one person reading the student's responses as another transcribes them into the test booklet. The persons then switch roles to check the transcription. Transcriptions must take place in a secure environment and, whenever possible, under the direction of the BTC. Please note that all test material—including the test booklet the student originally used—must be returned to the testing vendor.
- ✓ Collect scratch paper, rough drafts, and login information immediately at the end of the testing session. These items are considered secure material and must be collected and shredded by the BTC at the end of the testing session.

NOTE: For ACT, please refer to the ACT Accommodations section on page 4.

Oklahoma Alternate Assessment Program (OAAP)

The OAAP is a component of the OSTP and is designed for students with the most significant cognitive disabilities and adaptive behavior deficits. The OAAP mirrors the general assessment system in regard to grade levels and subjects assessed and utilizes the Dynamic Learning Maps (DLM) Alternate Assessment System. The academic achievement of students participating in the OAAP is based on alternate academic achievement standards, which differ in complexity from the Oklahoma Academic Standards (OAS) of the general state assessments.

In order to participate in the OAAP, students must require alternate achievement standards in all content areas and must have an IEP containing rigorous, measurable goals that include short-term benchmarks/objectives. In addition, students must meet the criteria identified in *The Criteria Checklist for Assessing Students with Disabilities on Alternate Assessments,* and the IEP team must determine an alternate assessment is appropriate for the student. The Every Student Succeeds Act (ESSA) mandates that no more than 1% of all tested students may participate in an alternate assessment. IEP teams should discuss the accommodations needed for students to participate in the general assessment prior to considering eligibility in the alternate assessment. For additional information on the OAAP, visit https://sde.ok.gov/assessment or contact the Special Education Office at (405) 521-3351 or Office of Assessments at (405) 522-1677.

Protocol for Emergency Accommodations on State Assessments

If, prior to or during testing, the school principal (or designee) determines that a student requires an emergency accommodation (e.g., broken hand), **Form EA** must be completed and submitted to the District Test Coordinator (DTC) for approval. A copy of this form must be filed in the testing archives, and a copy must be retained by the DTC at the central office.

Student Refusal of Accommodations during testing

If a student refuses to use an accommodation listed in his or her plan during testing, the school should document in writing that the student refused the accommodation and keep the documentation on file at the school. The student should be told that the accommodation will remain available during testing should they need it. The student should *not* be asked to sign an agreement acknowledging that they have refused an accommodation, nor should they be asked to waive their right to receive an accommodation that is listed in their IEP or 504 plan. A sample form for documenting a student's refusal of an accommodation is available in the Supporting Documents listed below.

If a student refuses an accommodation, and the IEP team agrees that the listed accommodation is no longer needed by the student, the accommodation should be removed from the plan at the next scheduled meeting (or listed in the plan "as requested by the student"). Written approval must be obtained from the parent/guardian (or student over 18 years of age) for new or amended IEPs before a change in accommodations can go into effect.

Similarly, 504 plans must reflect only those accommodations that are required by the student as determined by the educators familiar with the student.

Introduction

Cognia's test security policies and practices are designed to protect examinee data privacy, test data security, and the security of test content. We organize our planning and execution of test security measures around a framework for comprehensive test security systems: *Prevention, Detection, Investigation, and Resolution* (PDIR; Ferrara, 2017). We rely on collaboration with our clients to protect test security and data integrity, working together with them to encourage and support rigorous, professional investigations if security issues should arise and to resolve any issues to the degree possible following such investigations.

In this report, we provide statistical detection findings from two techniques for detecting possible test security violations: inordinate response similarity analyses and inordinate score gain analyses. **Statistical detection findings** provide initial indication of whether additional follow-up may be required to determine if a test security violation may have occurred. **Inordinate response similarity analyses** enable us to detect evidence, in the form of inordinately similar item response patterns, of possible security threats from prior exposure of test items to educators and examinees, educators supplying answers to test items to examinees during administration, educators changing examinee answers after test administration, or examinees copying answers to test items from one another. **Response change analyses** enable us to detect evidence of inordinate numbers of response changes in an examinee group's test performance.

The highest probability threats to the security of OSTP and CCRA are the exposure of test items and stimulus material (e.g., reading passages) before test administration, helping students respond to test items during test administration, and changing student responses after test administration.

We use the statistical results to flag possible evidence of a test security violation or other testing irregularity that may require follow-up. Statistical evidence by itself does not indicate that a test security violation has occurred; however, it signals the need for additional consideration to determine if a violation is likely and whether additional investigation is necessary. When one of the two statistical flags indicate the need for additional follow-up, this process could include examining results from the other statistical analysis, examining reports of test administration irregularities, and conducting informal conversations with people who may have firsthand knowledge of a situation. When initial evidence indicates the need for more formal follow-up investigations, these may include professional investigative interviews, requests for relevant documents, the examination of examinee online log files, and scannable answer documents. Cognia can provide advice and other support for investigations after delivery of the statistical detection report.

Statistical Detection Methods

Data Sources

The inordinate response similarity analysis required the examinee's response option selections (i.e., a, b, c, or d—not 0 or 1), along with the correct answer key for each item. Those response options were accompanied with the examinee's school ID to identify all possible pairs of examinees in a grade and content area, and to assign examinees to examinee groups for group-level analysis after the individual-level analysis. Similarly, inordinate response change analysis required the response option selections for examinees accompanied with the examinee's school ID to identify school and district assignment for group-level analysis. We planned all the data handling in advance with clear specifications and dealt with small data issues when they arose.

Procedures

Both the inordinate response similarity analysis that produced the ω-index and the inordinate response change analysis using independent two-samples t-test were done on the corresponding individual level data first. It's important to note that by the nature of the analysis and the structure of the data, the analysis units of the inordinate response similarity on the individual level are all possible pairs of examinees in an examinee group (i.e., grade and content area in a school), while the analysis units of the inordinate response change analysis on the individual level are all the individual examinees in an examinee group. The output result of the first analysis is the list of flagged pairs of examinees or the list of examinees. Those flagged individuals were used to calculate the proportions of flagged pairs or examinees in a grade and content area within a school in the group-level analysis. In the case of inordinate response change, students were grouped by school and then all individuals in each group were used to compare to the entire state (excluding the group in question). The result of the group-level analysis illustrates the list of all examined schools with details on whether such groups with inordinately high proportions of flagged examinee pairs or groups were marked for further investigation.

Inordinate Response Similarity Analysis: Examinee Pairs

Inordinate response similarity analysis focuses on the agreement between two examinees' response patterns by taking their ability into account. Inordinately high response similarity suggests a violation of independent test-taking behavior. Non-independent test-taking could be caused by many factors, such as the prior exposure of test items, examinees copying answers from each other, test administrators supplying answers during test administration, or test administrators changing answers after test administration.

Inordinate response similarity analysis is implemented by calculating the ω-index (Wollack, 1997) for every pair of examinees within an examinee group on their responses to multiple-choice items. The ω-index is a commonly used statistic in the literature of inordinate response similarity detection. Previous research (Wollack, 1997, 2003; Wollack & Cohen, 1998; Sotaridona & Meijer, 2002) suggests that it performs just as well as or better than other statistics and the statistical properties of ω are not much affected by examinee sample size or error in item parameter estimates. The ω-index is based on the total number of matched responses, M_{CS}, between a pair of examinees, *C* (potential copier) and *S* (potential source). To determine whether M_{CS} is large enough to be considered suspicious, the expected value of M_{CS} is calculated under the null hypothesis that examinees *C* and *S* worked independently. With examinee *S*'s responses treated as fixed, the expected value of M_{CS} is equal to

$$E(M_{CS}|\theta_C, U_S) = \sum_i P(U_{iC} = u_{is}|\theta_C, U_S)$$

where θ_C is the latent ability of examinee *C*, U_S is the response pattern of examinee *S*, *i* is the index for item *i*, U_{iC} and u_{is} are the response on items *i* by examinee *C* and *S* respectively. $P(U_{iC} = u_{is}|\theta_C, U_S)$ represents the probability that examinee *C* chooses the same response as examinee *S*, given *C's* ability. The variance of M_{CS} is equal to

$$Var(M_{CS}|\theta_C, U_S) = \sum_i P(U_{iC} = u_{is}|\theta_C, U_S)(1 - P(U_{iC} = u_{is}|\theta_C, U_S))$$

The ω-index is calculated by taking the standardized form of M_{CS}:

$$\omega = \frac{M_{CS} - E(M_{CS}|\theta_C, U_S)}{\sqrt{Var(M_{CS}|\theta_C, U_S)}}$$

The ω-index follows a standard, normal distribution as the number of items becomes infinitely large (Wollack, 1997), and large positive values lead to the rejection of independent test-taking behavior.

Calculation of the ω-index requires estimating the probability that *C* chooses a particular response option. This probability is usually estimated by fitting a nominal response model to the data. However, based on our experience, the estimation of the nominal response model is sometimes unstable; the estimation either does not reach a converged solution after a large number of iterations or gives unreasonably large parameter estimates for low-discriminating items. Even if stable estimation is obtained, the fit of a nominal response model to some datasets may be unsatisfactory. To overcome these problems, we used nonparametric item response models to calculate the response probabilities. Nonparametric estimation provides a more flexible modeling tool, as it does not assume a parametric form for the item characteristic curves (ICC). Douglas (1997) has demonstrated that, under mild assumptions, the curved smoothed "ICC estimates and ordinal ability estimates simultaneously converge to their true values" (p. 19). Specifically, kernel smoothing is used as the nonparametric estimation technique, due to its computational simplicity and wide use in nonparametric regression, and examinee ability *θ* is estimated using the same procedure as described in Douglas (1997).

The ω-index was initially developed to identify potential copiers given a known source. However, the source is unknown in our analysis, as in most situations, and the calculation typically yields different results depending on which examinee in a pair is treated as a source. In our analysis, the examinee with a higher raw score is treated as the source in each examinee pair, so that there is only one value of ω for each pair of examinees.

A pair of examinees is flagged if the right-tailed *p*-value of the ω statistic is smaller than the nominal level for these analyses, 0.01. The nominal level is the *p*-value threshold for rejecting the null hypothesis. The use of 0.01 in a right-tailed test ensures that we flag only largely positive and statistically significant ω values, which is part of our effort to minimize false positive flagging errors.

Inordinate response change analysis is only conducted at the group and state levels.

Group Level (School) Response Similarity and Response Change Analyses

The focus of these statistical detection analyses is to identify grade-level examinee groups within a school with inordinately high numbers of examinees with inordinately (a) similar response patterns, and (b)

inordinately great numbers of wrong-to-right (WTR) response changes.[1] To evaluate whether a grade-level examinee group within a school should be flagged for additional consideration, the response similarity individual pair-level results are aggregated to the school level. As hypothesis testing is conducted for each examinee pair or each examinee, the Type I error at the school level may be inflated due to the multiple comparisons in a school. To control for the inflated Type I error rate (or false positive error rate) at the school level in the response similarity analysis, a three-step procedure is used for school-level detection:

a. Calculate each statistic for all pairs of examinees or all individual examinees in each school and flag a pair or an examinee if the statistic falls into the rejection region, which is done in the individual level analyses.
b. Calculate the total number of flagged pairs or examinees (n_F) in each grade within a school.
c. Compare n_F to the Binomial distribution, *Binom*(*N,* α), where *N* is total number of pairs or examinees in a grade within a school and α is the nominal level used in step.
d. If the right-tailed *p*-value associated with the n_F under the Binomial distribution is smaller than 0.01, a school is flagged.

Inordinate response change analysis focuses on the number of items where a respondent erased or deleted an incorrect response and replaced that response with one which was scored as correct. The proportion of WTR answer changes is calculated at the school level and then each school is compared to the entire state (excluding the school in question) using independent two-sample hypothesis testing. This approach is commonly used in erasure and response change analysis (e.g., Wollack & Fremer, 2013), testing the null hypothesis that the population means related to two independent, random samples from an approximately normal distribution are equal.

The formula for pooled variance s^2 and statistic *t* for detecting inordinate response change are calculated as:

$$t = \frac{\bar{x}_1 - \bar{x}_2}{\sqrt{s^2\left(\frac{1}{n_1} + \frac{1}{n_2}\right)}}$$

$$s^2 = \frac{\sum_{i=1}^{n_1}(x_i - \bar{x}_1)^2 + \sum_{j=1}^{n_2}\left(x_j - \bar{x}_2\right)^2}{n_1 + n_2 - 2}$$

where $\bar{x}_1$ and $\bar{x}_2$ are the sample means, s^2 is the pooled sample variance, n_1 and n_2 are the sample sizes.

Schools are considered for flagging if the right-tailed *p*-value of the t statistic is smaller than the nominal level for these analyses, 0.01. The nominal level is the *p*-value threshold for rejecting the null hypothesis. Any schools meeting those criteria would be ranked using Cohen's d as an indicator of effect size, and those schools with $d \geq 0.3$ flagged for potential further investigation.

[1] *The preferred level of analysis is testing group rather than all students within a grade level with a school. Testing group assignment is not available in these data.*

Results

In this section of the report, we summarize the numbers of schools flagged in the inordinate response similarity and response change analyses. The summary tables list numbers and percentages of schools flagged in each analysis and count flagged schools according to numbers of examinees in different-size grade level examinee groups.

Full results from pair and individual analyses and school analyses are provided in a separate Excel file. Descriptions of the tables provided in the Excel file are appended at the end of this report.

Inordinate Response Similarity

Table 1 lists the numbers of schools within grade levels that are flagged for inordinately similar responses to the 2024 OSTP and CCRA test items and the percentage of the total number of schools within a grade level.

Table 1. Inordinate Response Similarity Analysis Results for 2024: Numbers of Flagged Schools by Examinee Group Size

Grade	No. of Schools Flagged (% of Total Schools)	No. of Examinees in the School				
		1–5	6–10	11–20	21–30	Greater Than 30
English Language Arts						
3	31 (3.7)	0	0	5	2	24
4	9 (1.1)	0	0	1	0	8
5	9 (1.1)	0	0	0	0	9
6	7 (1.1)	0	0	1	0	6
7	20 (3.4)	0	0	0	2	18
8	11 (1.9)	0	1	1	0	9
Mathematics						
3	13 (1.6)	0	2	2	0	9
4	36 (4.4)	0	0	8	4	24
5	35 (4.4)	0	0	4	1	30
6	48 (7.8)	0	0	2	6	40
7	184 (31.4)	1	4	27	19	133
8	164 (28.1)	0	1	24	19	120
Science						
5	19 (2.4)	0	0	2	4	13
8	14 (2.4)	0	0	4	0	10
11	94 (20.3)	0	2	5	6	81
US History						
11	40 (8.7)	0	1	7	2	30

As Table 1 indicates, in the inordinate response similarity analyses:

- Higher percentages of schools are flagged in Mathematics than in English Language Arts (ELA), Science, or US History.
- In ELA, as few as 1.1% of schools (grades 4, 5, and 6) and as many as 3.7% of schools (grade 3) were flagged. These data represent a slight increase (between 0.5% and 1%) for grades 3–6, and a slight decrease (between 0.8% and 1.2%) for grades 7 and 8 when compared to the previous year. In Mathematics, there were increases in group flagging percentages for grades 3–7

compared to the previous year, while grade 8 remained similar. The range of percentages for Mathematics is 1.6% (grade 3) to 31.4% (grade 7). In science, the range is 2.4% (grades 5 and 8) to 28.4% (grade 11). The findings within science and US History show a negligible to moderate decrease across all grades compared to the previous year.

- Higher numbers of schools are flagged in testing groups with more than 30 examinees.
- Few schools are flagged for smaller examinee group sizes.

Inordinate Response Change

Table 2 lists the numbers and percentages of schools within grade levels that are flagged for inordinately high response changes in 2024 and the percentage of the total number of schools within a grade level.

Table 2. Inordinate Response Change Analysis Results for 2024: Numbers of Flagged Schools by Examinee Group Size

Grade	No. of Schools Flagged (% of Total Schools)	No. of Examinees in the School				
		12–20 *	21–30	31–40	41–50	Greater Than 50
English Language Arts						
3	23 (2.7)	3	1	6	2	11
4	15 (1.8)	2	1	1	3	8
5	14 (1.8)	4	4	1	1	4

US History						
11	7 (1.5)	1	0	0	2	4

** Schools with examinees <12 are not subject to flagging for inordinate response change.*

As Table 2 indicates, in the inordinate response change analyses:

- Slightly greater percentages of schools are flagged in ELA and Mathematics grades 3 and 4 compared to the other grades in those two content areas. Similar percentages of schools (lower than in the previous year) are flagged in the other grades for Science, Mathematics, ELA, and US History.
- Most flagged schools are in testing groups with fewer than 51 examinees.

- Slightly more schools are flagged among those with smaller examinee group sizes.
- In ELA, the flagging percentages range from 1.5% in grade 8 to a maximum of 2.7% in grade 3. In Mathematics, the flagging percentages range from 1.4% in grade 5 to 2.4% in grade 3. In Science, the flagging percentages range from 1.6% in grade 5 to 2.6% in grade 8. In US History, 1.5% of schools were flagged.

Discussion and Recommendations

In this report, we have summarized statistical detection findings from analyses of inordinate response similarities and inordinate answer changes. We selected these analyses from a range of other statistical detection techniques because they focus on the highest probability threats to the security of OSTP and CCRA: exposure of test items and stimulus material (e.g., reading passages) before test administration, helping students respond to test items during test administration, and changing student responses after test administration.

We use the statistical results to flag possible evidence of a test security violation or other testing irregularity that may require follow-up. We emphasize that statistical evidence by itself does not indicate that a test security violation has occurred. It signals the need for additional consideration to determine if a violation is likely and whether additional investigation is necessary.

When one of the two statistical flags indicate the potential need for further analyses, initial follow-up investigations could include examining results from another statistical analysis, examining reports of test administration irregularities, and conducting informal conversations with people who may have firsthand knowledge of the administration. When initial evidence indicates the need for more formal follow-up investigations, these may include professional investigative interviews, requests for relevant documents, and examination of examinee online log files and scannable answer documents. Cognia can provide advice and other support for investigations after delivery of the statistical detection report.

The results show slight decreases in all grades of Math and most grades of ELA for group flagging percentages due to inordinate response similarity over 2023. Cognia recommends, in cases where other evidence suggests violations of test security, that investigators do not solely rely on group (school) detection flagging for additional evidence. In these cases, examining clusters of flagged examinee pairs where an overlap of respondents is indicated within a school, may be a more powerful indicator of testing issues. These raw data details are provided along with this report.

The 2024 administration represents the fifth time inordinate response change has been analyzed. Because of the gap in testing between 2019 and 2021, the confounding effects of changes to instruction and learning, the differences in 2019 test mode for some grades (paper vs. computer), and the relative lack of longitudinal data, year over year comparison of this analysis may not be appropriate or interpretable.

Appendix A—Description of the Tables in the Output Files

A-1. Inordinate Response Similarity Analysis Output

Response Similarity – Student

- All possible pairs were constructed within the school unit for the purpose of the analysis.
- Only the flagged pairs of examinees are listed in the output.

Subject.Grade

- Specific subject and grade combination associated with the current examinee pair (e.g., ELA03)

ID.District

- Identification number of the district where the school and the pair of examinees belong

ID.School

- Identification number of the school where the pair of examinees belongs

DistrictName

- Name of the district where the school and the pair of examinees belong

SchoolName

- Name of the school where the pair of examinees belongs

ID.Examinee.1

- Identification number of the first examinee

ID.Examinee.2

- Identification number of the second examinee

Score.Examinee.1

- Raw score of the first examinee

Score.Examinee.2

- Raw score of the second examinee

Observed.Matching

- Number of matching response options between two examinees (missing responses were not included in the analysis.)

Omega

- Answer similarity index

p.value

- Probability of getting the omega index at or above the observed value under the null hypothesis

Flag.at.0.01

- Whether a pair is flagged at the nominal level of 0.01: 1 indicates flagged, and 0 indicates not flagged.

School.Flag.at.0.01

- Whether the school where the pair of examinees belongs is flagged at the nominal level of 0.01: 1 indicates flagged, and 0 indicates not flagged.

Response Similarity – School

- All available districts and schools are listed.

Subject.Grade

- Specific subject and grade combination associated with the current examinees pair (e.g., ELA03)

ID.District

- Identification number of the district where the school belongs

ID.School

- Identification number of the school

DistrictName

- Name of the district where the school belongs

SchoolName

- Name of the school

Number.Examinees

- Number of examinees in the school

Proportion.Flag.at.0.01

- Proportion of examinees flagged in the school at the nominal level of 0.01

p.value.0.01

- Probability of getting the proportion at or above the observed value under the null hypothesis

Flag.at.0.01

- Whether the school is flagged at the nominal level of 0.01: 1 indicates flagged, and 0 indicates not flagged.

A-2. Inordinate Response Change Analysis Output

Response Change – Glossary of Terms

Wrong-to-Right (WTR), Right-to-Wrong (RTW), and Wrong-to-Wrong (WTW)

- There is an indication that the examinee changed their response from an incorrect answer to the correct answer (WTR), from the correct answer to an incorrect answer (RTW) or from an incorrect answer to a different incorrect answer (WTW).

Response Change – Student

- Examinees are not flagged for inordinate response changes at the student level. All analyzed examinees are listed for each flagged school, and descriptive information provided regarding examinee response changes. For computer-based administrations, process data has been collected indicating an answer was changed prior to the final recorded entry.

Subject.Grade

- Grade and subject for the listed examinee analysis

ID.District

- Identification number of the district where the examinee belongs

ID.School

- Identification number of the school where the examinee belongs

DistrictName

- Name of the district where the school is located

SchoolName

- Name of the school identified by ID.School

Booklet.Number

- Identification number of the booklet taken by the examinee

ID.Examinee

- Identification number of the examinee

N.Answered

- Number of multiple-choice items where the examinee indicated a scored response

N.Erasure

- Number of answered items indicating a response change has been made

Avg. Erasures

- The ratio (in decimal form) of erasures made to items answered

SD. Erasures

- The standard deviation of N. Erasure

N. Erasure Type (WTR, RTW, WTW)

- Number of answered items indicating a response change of the type detailed above

Avg. Erasure Type (WTR, RTW, WTW)

- The ratio (in decimal form) of the indicated erasure type to items answered

Erasure Type Ratio

- The ratio (in decimal form) of the indicated erasure type to response changes

Response Change – School

- All available districts and schools are listed. Schools with analyzed examinees < 12 are not examined for aberrative response change using statistical methods; however all other descriptive statistics are still shown.

Subject.Grade

- Specific subject and grade combination associated with the listed analysis (e.g., ELA03)

ID.School

- Identification number of the school

DistrictName

- Name of the district where the listed school is located

SchoolName

- Name of the school analyzed

N

- Number of current year examinees analyzed for the listed school

Descriptive Statistics

- Averages of examinee-level statistics aggregated at school-level (Answered, Erasures, WTR, RTW, WTW)

Cohen's D

- A measure of effect size. Significant comparisons between WTW response changes at the school and state level are flagged based on effect size.

p.value

- Probability of getting the proportion at or above the observed value under the null hypothesis

Flag

- Whether the school is flagged for inordinate response change behavior: 1 indicates flagged and 0 indicates not flagged.

APPENDIX L
OSTP AND CCRA
23-24 EQUATING REPORTS

Oklahoma School Testing Program

2023–2024: EQUATING REPORT—DRAFT REPORT

2023 - 2024 Oklahoma School Testing Program

Equating Report

The purpose of this document is to summarize the equating results obtained from Cognia for OSTP. Presented in this report are various program summary statistics and specific results related to the equating study.

The results of this report are organized as follows:

1. Aggregate Results
    1. Percentage of Students by Performance Level Categories
    2. Theta Cuts and Scaling Constants
    3. Calibration Report
    4. Equating Item Summary Statistics
2. Grade Subject Results
    1. A/A, B/B, Delta, and Cumulative Scale Score Distribution Plots
    2. Cumulative Scale Score Distribution Tables
    3. Tabled Delta Analysis Results
    4. Tabled B/B Analysis Results
    5. Final Item Parameters
    6. Fit Plots of Watchlist Items

The final results of this equating will be included as part of the 2023 - 2024 OSTP Technical Manual.

Section 1.3

Calibration Report

Calibration Report—Executive Summary

PARSCALE 4.1 was used for all analyses. All command files were set up in a way that all general settings were identical to last year. For example, the calibration statement reads:

CAL GRADED,LOGISTIC,CYCLE=(150,1,1,1,1),TPRIOR,SPRIOR,GPRIOR;

Thus, a 3PLM was used for all MC items, and a Graded Response Model was specified for the polytomous items. The logistic version of the IRT models was used, and default priors were used for all parameter estimates. Each item occupied its own unique block in the command file, and for most items initial guessing parameters were set to 0.22.

The resulting parameters demonstrated excellent model fit. In particular, the largest change in parameter values (from one iteration to the next) was monotonically decreasing and tended to flatten out towards the end of the calibration process. The number of Newton cycles to conversion for each grade/content for the initial calibrations are listed in the following table:

Table 1.3.1
Number of Cycles to Convergence

Subject	Grade	Initial Cycles
Science	Grade 5	51
Science	Grade 8	42

Two methods of evaluating the suitability of the equating items were used: delta analysis and b/b analysis. For both delta and b/b, the flagging criteria value is 3.0 (i.e., any item with a delta or b/b value greater than 3 is flagged for item drift and removed from the equating analysis).

As a result of these analyses very few items were removed from the equating analysis. Results such as this are very common particularly, given the number of grade/content combinations, and the number and types of items in the program. Results from these analyses are included in Section II of this report.

Items flagged by the delta, b/b, or any item that required intervention during the calibration process, were compiled and placed in our item watch list, which includes the final actions taken on these items. Note that items flagged for item drift will be referred to the content team for further review. The final watch list is presented in the following table:

Table 1.3.2
Final Items Watch List

Subject	Grade	ItemID	Reason	Action
Science	5	188334A	b/b analysis	removed from equating
Science	5	188334A	delta analysis	removed from equating
Science	8	788058	delta analysis	removed from equating

The Stocking and Lord procedure was used to transform parameter estimates onto the operational scale. This procedure results in constants which were applied to the resulting IRT parameters for each grade/content. These transformation constants were found using the STUIRT program which can be found at the CASMA website: http://www.education.uiowa.edu/casma/. The Stocking & Lord transformation constants that were used in the equating process are listed in the following table:

Table 1.3.3
Stocking and Lord Constants

Subject	Grade	Slope	Intercept	Num Eq Items	Num Eq Items Rem
Science	5	0.96	-0.11	45	1
Science	8	1.03	-0.16	45	1

Oklahoma College and Career Readiness Assessment

2023 - 2024: EQUATING REPORT—DRAFT REPORT

cognia™

2023 - 2024 Oklahoma College and Career Readiness Assessment

Equating Report

The purpose of this document is to summarize the equating results obtained from Cognia for CCRA. Presented in this report are various program summary statistics and specific results related to the equating study.

The results of this report are organized as follows:

1. Aggregate Results
    1. Percentage of Students by Performance Level Categories
    2. Theta Cuts and Scaling Constants
    3. Calibration Report
    4. Equating Item Summary Statistics
2. Grade Subject Results
    1. A/A, B/B, Delta, and Cumulative Scale Score Distribution Plots
    2. Cumulative Scale Score Distribution Tables
    3. Tabled Delta Analysis Results
    4. Tabled B/B Analysis Results
    5. Final Item Parameters
    6. Decision Accuracy and Consistency (DAC)
    7. Fit Plots of Watchlist Items

The final results of this equating will be included as part of the 2023 - 2024 CCRA Technical Manual.

Section 1.3

Calibration Report

Calibration Report—Executive Summary

PARSCALE 4.1 was used for all analyses. All command files were set up in a way that all general settings were identical to last year. For example, the calibration statement reads:

CAL GRADED,LOGISTIC,CYCLE=(150,1,1,1,1),TPRIOR,SPRIOR,GPRIOR;

Thus, a 3PLM was used for all MC items, and a Graded Response Model was specified for the polytomous items. The logistic version of the IRT models was used, and default priors were used for all parameter estimates. Each item occupied its own unique block in the command file, and for most items initial guessing parameters were set to 0.22.

The resulting parameters demonstrated excellent model fit. In particular, the largest change in parameter values (from one iteration to the next) was monotonically decreasing and tended to flatten out towards the end of the calibration process. The number of Newton cycles to conversion for each grade/content for the initial calibrations are listed in the following table:

Table 1.3.1
Number of Cycles to Convergence

Subject	Grade	Initial Cycles
Science	Grade 11	70
History	Grade 11	59

For some items the guessing parameter was poorly estimated. This is not at all unusual as difficulty in estimating the c-parameter has been well documented in the psychometric literature. This often happens when item discrimination is low (e.g., less than 0.50).

Two methods of evaluating the suitability of the equating items were used: the delta analysis and the b/b analysis. As a result of all these analyses very few items were removed from the equating analysis. Results such as this are very common particularly, given the number of grade/content combinations, and the number and types of items in the program. Results from these analyses are included in Section II of this report.

Items flagged by the delta, b/b, or any item that required intervention during the calibration process, were compiled and placed in our item watch list, which includes the final actions taken on these items. The final watch list is presented in the following table:

Table 1.3.2
Final Items Watch List

Subject	Grade	ItemID	Reason	Action
Science	11	824654	b/b analysis	removed from equating
Science	11	832324	delta analysis	removed from equating
History	11	143295A	b/b analysis	removed from equating

The Stocking and Lord procedure was used to transform parameter estimates onto the operational scale. This procedure results in constants which were applied to the resulting IRT parameters for each grade/content. These transformation constants were found using the STUIRT program which can be found at the CASMA website: http://www.education.uiowa.edu/casma/. The Stocking & Lord transformation constants that were used in the equating process are listed in the following table:

Table 1.3.3
Stocking and Lord Constants

Subject	Grade	Slope	Intercept	Num Eq Items	Num Eq Items Rem
Science	11	0.94	0.23	60	2
History	11	0.98	0.02	50	1
