RE: Water Monitoring Plan Report, 4th Quarter 2025, for Dolese Bros. Co. Davis Quarry, Murray County, Oklahoma

Dear Mr. Tutkowski:

According to the Oklahoma Water Resources Board's Title 785, Chapter 30, Subchapter 15, Part 4, *Mines with Preexisting Exemptions*, Dolese Bros. Co. Davis Quarry qualifies as a mine with a preexisting exemption. As part of maintaining this exemption status, the regulations require us to do the following:

1. Adopt and implement a plan to monitor and report to the Board the accumulation and disposition of pit water during the previous calendar year.
 - The Davis Quarry has adopted and implemented such a plan, and the tables below serve to report to the Board the accumulation and disposition of pit water during 4th Quarter 2025.
2. Make quarterly and annual reports of the measured or reasonably estimated groundwater and surface water volumes, separately stated, entering the pit, of the water that is diverted from the pit, of the disposition of the water from the pit, and of the consumptive use of the water from the pit on or before the deadlines provided by Title 82 of Oklahoma Statutes, § 1020.2(E)(1).
 - The Davis Quarry has continued to fulfill this obligation by compiling and submitting this 4th Quarter 2025 report. The specific information requested in this section is outlined in the tables below.
3. At any time after March 31, 2015, demonstrate to the satisfaction of the Board within the pertinent report or reports that the mine has not consumptively used during the previous twelve-month period, from the mining site, an amount of groundwater which combined with any amounts used from permitted groundwater wells exceeds the Mine's Equal Proportionate Share (MEPS). Such demonstration may require providing to the Board a copy of the mine's monitoring plan and all the data collected and procedures used to support the calculations and results reported.
 - The Davis Quarry will be willing to demonstrate to the Board that the mine site has not consumptively used during the previous twelve-month period from the mining site, an amount of groundwater which combined with any amounts used from permitted groundwater wells exceeds the MEPS.

Using OWRB's Appendix C, our calculations show that Davis Quarry's total estimated groundwater consumption for 4th Quarter 2025 was -10.51 acre-feet. Our sources of "consumptive use" in order or magnitude are: water used for land application of dust suppression, evaporation from the pit, moisture trapped in material that is hauled away from the site, and water used for dust suppression on the plant.

DOLESE BROS. CO.

During the fourth quarter, the largest individual consumptive use was associated with dust suppression totaling 13.53 acre-feet. The dust suppression water is land applied along with dust suppression on the processing plant. Both sources of dust suppression account for 12.03 and 1.02 acre-feet of consumptive use respectively.

The lake-evaporation in acre-feet was calculated from the pan-evaporation for the quarter from Mesonet. The quarterly lake-evaporation was 16.11 acre-feet. This evaporation is offset by direct and indirect precipitation into the pit. Direct precipitation accounted for an addition of 8.79 acre-feet and indirect precipitation accounted for 35.08 acre-feet. 3.72 acre-feet was hauled away from the site with the sold material.

Our total consumptive use, as defined in SB597, is -10.51 acre-feet for the quarter. I adjusted the calculations on Appendix C to better represent our water use. We are allowed 237.2 acre-feet per year from 1,186 acres of land that overlies the ASA. We often combine this water right with our water right from our Davis Quarry when evaluating water use in the ASA for the year.

An annual summary of Davis' consumptive use, using OWRB Appendix C, is shown below.

Table 1: Annual Summary of Inflows and Outflows to the Mine Pit

Quarter	Pit Water Used (acre-feet)	Net Water Entering Pit (acre-feet)	Reported Consumptive Use (acre-feet)
1 st	-	-	4.01
2 nd	9.02	459.88	13.73
3 rd	12.28	13.95	-33.05
4 th	13.53	27.75	-10.51
2025 Total	41.39	1.01	43.20

As we have stated for many quarters in our reports, water management always has been and continues to be very important to us at Dolese Bros. Co., especially at the Big Canyon and Davis Quarries. We understand that the Arbuckle Simpson Aquifer is a unique aquifer that must be protected. Our plant personnel make daily efforts to responsibly manage the waters within our quarry boundaries so that when they return to their nearby homes and properties, these same quality waters will be available for their personal and community uses.

Please contact me if you have any questions or comments concerning this submittal. Thank you.

Sincerely,

Dolese Bros. Co.

Remington Butler

PIT GROUNDWATER VOLUME		
1	Total volume of water pumped from the producing mine pit(s)	13.53
2	Volume of precipitation that falls onto the surface of water in the producing mining pit(s)	8.79
3	Portion of total precipitation that flows over the land surface that drains into the mine pit water	35.08
4	Other non-pit waters pumped from the producing mine pit	0.00
5	Add lines 2 through 4	43.87
6	Pit Groundwater Volume Line 1 minus Line 5	-30.34
DEFINED ELEMENTS OF CONSUMPTIVE USE		
7	Volume of pit groundwater that is driven off (by drying) the mined material transported off the mine site	0.00
8	Volume of pit groundwater that is carried away with the mined material transported off the mining site (shipped)	3.72
9	Volume of pit groundwater that evaporates from the producing mine pit, process water ponds, and lined ponds (Excluding structures used for augmentation)	16.11
10	Volume of pit groundwater that is used for other beneficial uses off the mine site	0.00
11	Defined Elements of Consumptive Use of Pit Groundwater Add Lines 7 through 10	19.83
PIT GROUNDWATER BALANCE		
12	Line 6 minus Line 11 (Added because the pit collected more stormwater than we used)	-10.51
13	Groundwater Augmentation Volume of pit groundwater returned to the groundwater basin or subbasin, pursuant to a Management Plan	Credits 0.00
14	Stream Augmentation Volume of pit groundwater discharged to a definite stream, during flow conditions that are less than or equal to 50% exceedance, pursuant to a Management Plan	
15	Precipitation & Run-off Volume of precipitation and surface run-off into a recharge pit or holding pond used for augmentation	
16	Recycled Pit Groundwater Volume of pit groundwater returned to a mine pit or holding basin (not included on lines 7 through 10)	0.00
17	Other Non-Consumptive Losses Including pit groundwater returned to the land surface from which surface runoff flows into a mine pit, and other losses (not included in lines 7 through 10)	0.00
18	Add lines 13 through 17	0.00
19	Other Consumptive Use (adjusted) Line 12 minus Line 18	-10.51
TOTAL REPORTED CONSUMPTIVE USE OF PIT		
20	Total Net Reported Consumptive Use Line 11 plus Line 19	-10.51
